NUCLEAR ENERGY

Satellites on Patrol

If the Russians plan to try clandestine nuclear tests deep in space, they now have less chance than ever of getting away with it. Last week the U.S. orbited two vigilant satellites loaded with sensitive instruments capable of measuring X rays, gamma rays and neutrons from any source and any direction. Taking positions 65,000 miles up and on opposite sides of the earth, they joined a similar pair that was launched last October and has been performing far better than its builders had hoped.

The Department of Defense, which ordered the satellites from Space Technology Laboratories, and the Atomic Energy Commission, which supplied their instruments, insist that they are only innocent research devices aimed at learning how to detect atom tests in space. They are, in fact, a nuclear testing control system already in successful operation. The satellites launched last fall have been working perfectly three months longer than their expected life; their builders think they will stay on the job for at least nine months more without giving trouble. The two that were fired aloft last week should have an even longer life, and they carry more and better instruments.

Dr. Robert Frosch, director of the Pentagon's Advanced Research Projects Agency, is sure by now that the present level of solar activity cannot confuse even the earlier satellites into giving a false alarm. But this is the sun's periodic quiet period; when it goes back into its active condition in a few years, blossoms with sunspots and flares and bombards the earth with streams of high-energy particles, the satellites may send in some puzzling reports. "There are still a number of ambiguities that we know nothing about," says Frosch.

Those first satellites, which orbit high above the normal Van Allen radiation belt, says Dr. James J. Coon of the AEC's Los Alamos Scientific Laboratory, have detected peculiar cone-shaped clouds of negatively charged particles, presumably electrons, that trail the earth to an unknown distance, circling at the same speed with which the earth turns, so that they always remain on the side away from the sun. No one knows where they come from or why they follow the earth. Instruments on the newer satellites are designed to find out more about them.

Both the Pentagon and the AEC are sure that no nuclear test has been exploded in space since the first detector satellites were tossed into orbit. Their instruments would have detected even a small (20 kilotons) explosion 100 million miles away and distinguished its effects from all kinds of natural radiation. This is believed to be a modest estimate of their capabilities. "How much better we can do now," said an AEC official, "we're not telling."

SPACE DETECTIVES
A way to beat cheating.

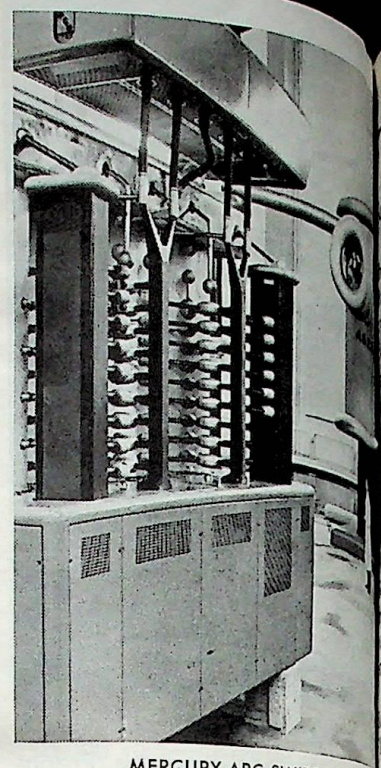
ENGINEERING

D.C. on the Wires

Housed in a compact building near Boulogne, France, a row of 10-ft.-high steel cylinders feeds high-voltage electricity into cables that cross under the English Channel to link the power networks of two nations. The same sort of tubes will soon be at work in New Zealand and Japan, and the U.S. Department of the Interior hopes to hook them to a pair of 750,000-volt lines more than 800 miles long that will carry surplus hydroelectric power from the Pacific Northwest to consumers in California and Arizona.

For all their size, the power-pushing cylinders are first cousins of the fragile vacuum tubes that glow in TV and hi-fi sets. But for all their futuristic appearance, they are a long reach into the past. They deal in electricity that always flows in the same direction—the same direct current that Thomas Alva Edison used in 1882 when he built his first primitive power system in downtown New York.

Slim Cables. Alternating current, which changes direction some 60 times per second, is far more versatile because its voltage can be raised or lowered easily by simple, cheap transformers. Modern generating plants produce AC at comparatively low voltage, and for long-distance transmission, transformers step it up to several hundred thousand volts so that it will pass through cables of reasonable size without too much loss.* When it reaches its destination, transformers reduce the voltage for use in homes and industries.



MERCURY-ARC SWITCHES
A reach into the past.

Despite DC's virtual disappearance from general use, engineers have kept with the nagging knowledge that the way current is better for the long hauls. DC transmission lines carry more power and are cheaper to build. The smooth stream of electricity is easier to control and to blend with current from other sources in a network. Trouble is, DC cannot be handled by transformers, what was needed to fit it for the high time was a practical method of manufacturing it from high-voltage AC current at the generator end of the line and of converting it back to AC at the customers' end.

Steady Flow. This is the job that has been taken over by the big steel cylinders, otherwise known as mercury-arc valves. Perfected for high-voltage use by Dr. Uno Lamm of Sweden's ASEA company, they are filled with hot mercury vapor and act like instantaneous switches. High-voltage AC from step-up transformers runs into them, and whenever the current changes its direction it is switched to the opposite pole of the DC transmission line. A bank of valves switching in unison produces a steady flow of current.

At the far end of the transmission line, the same valves are used in a different hookup. The current flows through their mercury vapor is stopped and started by a control-voltage applied to a grid. This second switching produces alternating current that can be fed into transformers and reduced to the low voltages needed by the customers.

* When the voltage (electric pressure) of a transmission system is increased, its amperage (current) is reduced proportionately, so there is less energy loss in the line.

ARCHITECTURE

Superhighway Church

In a secular age, long removed from the centuries that built the great cathedrals, a church still remains a profound creative challenge for an architect; clergy and congregations are among the most open-minded of clients. Yet they do not often concede the degree of freedom given to Italian Architect Giovanni Michelucci, 73, in his new Church of St. John the Baptist. His client was a governmental superhighway authority (modeled on the New York Port Authority) that built the Autostrada del Sole from Milan to Naples. It wanted a memorial to dead highway-builders, and put no limitations of time, size, form or budget on Architect Michelucci.

The church stands strangely inside a cloverleaf of the expressway near Florence, and serves as a spiritual halfway house for travelers. "The general form is that of a tent," explains Michelucci, who designed its swaybacked curves with architectural as well as spiritual freedom in mind. He spent hours daily on the job, changing details in concrete and carpentry.

St. John's takes an informal stance in its structure. The main altar faces across the narrowest part of the nave toward an upper chapel, so that in effect the nave's long dimension becomes a transept, terminated east and west by smaller altars. Architect Michelucci has also departed from custom by enclosing the narthex, or entrance portico, in a gentle cloister; the church hollows its own entrance. The whole is asymmetrical, forcing the worshiper into the relaxed mood Michelucci desired. As he says, "This church is a little city in which men should meet and recognize in each other the common hope of finding each other again."

PAINTING

Bright Orpheus

In his long lifetime, Frank Kupka moved from painting Pre-Raphaelite madonnas, dress designing, and drawing anarchistic caricatures to luminous cauldrons of color; at the 1904 St. Louis World's Fair, he won a gold medal with a straightforward painting of two horses ridden by naked girls on a beach. That distant honor, and learned footnotes in art history books, have been the sum of his recognition until now. But two new shows in Paris, one by Dealer Louis Carré, who years ago bought scads of the artist's works for peanuts, and another by the Galerie Karl Flinker, reveal that Frank Kupka had thought through and defined abstractionism as early as anyone.

The Sound of Color. Kupka was 40 before he produced his first abstract paintings called *Nocturne, Fugue in Red and Blue,* and *Warm Chromatic.* Born in 1871 to a Bohemian village clerk in what is now Czechoslovakia, he began drawing statues in the town square, entered art school in Prague at the age of 16. He delighted in the new philosophies of Nietzsche and Schopenhauer, who exalted unconscious will and intuition over reason. He was entranced by their thought that music is the most abstract and therefore highest art—and decided to challenge it in paint.

As years passed, color rang in his work like chimes. His palette brightened past the impressionists, past the Fauves. Kupka frequently visited Chartres Cathedral, where he sat hour on hour soaking in the rainbow radiance of its stained-glass windows. He studied Newtonian color theory, and like Kandinsky, who was five years his senior, he quit coloring nature and began illustrating the nature of color. He wanted anything, he wrote, but "the postcard photograph."

In 1913, Kupka gave his manifesto to a New York Times correspondent. "I have come to believe," said he, "that it is not really the object of art to reproduce a subject photographically. Music is an art of sounds that are not in nature and almost entirely created. Man created writings, the airplane and the locomotive. Why may he not create in painting independently of the forms and colors of the world about him? The public certainly needs to add the action of the optic nerve to those of the olfactory, acoustic and sensory ones. I am still groping in the dark, but I believe I can produce a figure in colors as Bach has done in music."

Bouncier than Bach. That poetic arbiter of artistic taste, Apollinaire, promptly dubbed Kupka's work "Orphism," and paired him with the French colorist Robert Delaunay. Although he rejected the association, Kupka churned out whorls of saturated color, dazzling fingerprints of the spectrum. With his paintpots, he set cubism on fire.

World War I put an end to Kupka's optimistic colors. He fought in the French army, later returned to help establish independent Czechoslovakia. After the war, like Léger and the Dadaists, he painted imaginary machines in a commentary on dehumanized mankind. He did a series called *Hot Jazz,* trying to make his lyrical art more bouncy than Bach, but the verve of his youth seemed gone.

Orpheus had apparently looked backward. Kupka's reputation became that of a faceless pioneer, and he seemed not to care. Shortly before his death seven years ago, Kupka received a visit from the Museum of Modern Art's Alfred Barr Jr., who bought a batch of gouaches. "You have to thank her," said Kupka, pointing to his wife. "Without her, all of this would have been burned." Barr turned to Madame Kupka and kissed her.

MIDSUMMER NIGHT'S DREAM IN WASHINGTON
A capital monument to the bard.

SHOW BUSINESS

THE STAGE

The Shakescene

It is a bad year for the Philistine fringe. For summer theatergoers who cannot stand Shakespeare, avoiding him is all but impossible in this season of the 400th anniversary of Shakespeare's birth. There seem to be even more Hamlets in the country than Smiths. Herewith a selective survey of Shakespearean productions in the U.S. and Canada.

• ASHLAND, ORE. The Oregon Shakespeare Festival is the oldest in the U.S. (1935). In the remote forests, casting has to be done by questionnaire rather than audition, but Producer-Director Angus Bowmer has in the past discovered actors like Hollywood's George Peppard (*Breakfast at Tiffany's*) and Off Broadway's Joyce Ebert (*The Trojan Women*). This summer he has a witty, elegant Portia, a sunlit Viola, and a really arachnid Regan, all in the person of Elizabeth Huddle, a 25-year-old actress from San Francisco. Richard Coe, drama critic of the Washington Post, recently came away from Ashland proclaiming her "the finest young undiscovered actress in America."

The Oregon group does *Henry VI, Part 1* as well as *Lear, Twelfth Night* and *The Merchant of Venice*, and does them all with fluid skill. Rigorously Elizabethan in style, the company offers no intermissions and performs in a simulacrum of 17th century London's Fortune Theater. "This is a stepping-stone between the academic and professional theaters," says Bowmer. "We use Shakespeare because we think he's a damned good theater man."

• ATLANTA. The Southern Shakespeare Festival occurs in a converted Baptist church before audiences that have sometimes achieved levels of unsophistication reminiscent of the sort of people who watched Shakespeare's plays when they were originally performed. "He went thataway," a bloodthirsty young man once shouted over the footlights to Macbeth, indicating where the thane might corner King Duncan. But this year the Atlanta group has a really outstanding Hamlet in Jonathan Phelps, whose considerable technical facility is matched by a scholarly understanding of his subject, resulting in a performance of unusual balance.

• HIGHLAND PARK, ILL. The Ravinia Shakespeare Company may prove to be the best performing in the U.S. this summer, but this remains to be seen, since its opening night is Aug. 18. The group consists of 25 English Shakespearean actors, many of them graduates of the Old Vic. Assembled in London by Peter Dews, who produced and directed the BBC's *An Age of Kings*, the company will give 52 performances in the open air of Ravinia Park. King Henry V and Hamlet will be played by Robert Hardy, who played Laertes to Richard Burton's Hamlet at the Old Vic in 1953-54 and became one of Burton's favorite friends. The Ravinia Shakespeare Company has been imported as a result of the efforts of a Chicago advertising man, who thinks of Anacin by day and dreams of anapaests at night.

• LAKEWOOD, OHIO. The Great Lakes Shakespeare Festival has a fine *Hamlet* too, notable mainly for the breadth of its excellence. Hamlet himself is adequately played by Dennis Longwell, who finished at Yale four years ago, has earned a graduate degree in dramatic art at Northwestern, and has worked two seasons with the excellent Equity repertory company at Princeton. Perhaps too close in age to the academic world, he still has a lot of living to do before he can become a fully rounded Hamlet. Mario [illegible] Polonius is consummately aeolian [illegible] ery Battis, once of Broadway (*W* *Victory*) and now a history profes[illegible] at Rutgers, plays King Claudius [illegible] all the high colors of evil, villainy [illegible] cowardice that the role could poss[illegible] be made to display.

The Great Lakes group also d[illegible] *Henry VI* (a compression of all [illegible] parts), *Antony and Cleopatra*, Ric[illegible] *III*, *Much Ado About Nothing* and *T[illegible] Taming of the Shrew*. The consi[illegible] high level of its productions is [illegible] achievement of Director Arthur L[illegible] gow, long a professional man-ab[illegible] Shakespeare, whose players are alw[illegible] well-drilled and speak their lines as [illegible] they understand the characters they [illegible] playing.

• LOS ANGELES. Morris Carnovsky's King Lear, first seen at Stratford, Con[illegible] last summer, has become an institu[illegible] in itself, said to be even better th[illegible] Paul Scofield's. Carnovsky-Lear is pr[illegible] ently mounted in a straightforward a[illegible] well-paced production staged by J[illegible] Houseman for Hollywood's Pilgrim[illegible] Theater. The cast as a whole fully s[illegible] ports Carnovsky, and the outdoor s[illegible] ting is stunning. He shouts, "Bl[illegible] winds, and crack your cheeks! R[illegible] Blow!" at the sheer parapets of the H[illegible] lywood Hills—at least they turn m[illegible] sheer parapets under the magical l[illegible] ing of Broadway's Jean Rosenthal.

• LOUISVILLE. Like New York, Louisv[illegible] has free Shakespeare in its Central Pa[illegible] with 1,500 permanent seats and spa[illegible] space for folding chairs, stools an[illegible] blankets. Equity actors are the nucle[illegible] of the Carriage House Shakespeare[illegible] Repertory Company, which this summ[illegible] is doing *The Taming of the Shr*[illegible] *Macbeth*, *As You Like It* and *Ju*[illegible] *Caesar*. So far, the Courier-Journal h[illegible] described the group's work as "vita[illegible]

PETER SMITH

HUTT'S RICHARD II
An Ontarian Humbert Humbert.

hile the Times has limited its praise, ving only that "several scenes were ilfully, imaginatively staged."

MINNEAPOLIS. Given the tendency of Director Tyrone Guthrie to bejazz his productions, the present Henry V at the Tyrone Guthrie Theater might have been expected to whip out a .45 at Agincourt. But he does not—and *Henry V* is a palpable hit (TIME, May 22), more memorable for Guthrie's overall staging than for the at times unkingly performance of George Grizzard.

• NEW YORK CITY. Richard Burton's Hamlet will continue to run for two more weeks on Broadway; during its extended run, Burton's stand-by, Robert Burr, played Hamlet for Joseph Papp's free Shakespeare group in Central Park in a production that, with Julie Harris as Ophelia, outdistanced the one on Broadway in nearly every respect save the performance of Burton himself. Papp's group is still doing a successful, broad-laugh presentation of *A Midsummer Night's Dream* from a collapsible mobile theater touring the five boroughs* (TIME, July 10), and at present in Central Park an excellent production of *Othello*, with James Earl Jones as a hip-swiveling, primitive Moor. The staging is bold. In the bedroom scene, for example, Desdemona (Julienne Marie) does not just wait to be strangled. She makes a desperate effort to get away. Othello chases her, catches her when she trips on a flight of stairs, carries her, struggling, back to the bed, where he falls on her and chokes off her life.

• SAN DIEGO. In Balboa Park, the replica Globe Theater contains productions this summer of *Measure for Measure*, *Macbeth* and *Much Ado About Nothing*. The first is notable chiefly because the actors wear codpieces, but San Diego audiences do not comprehend the play's intricate fornications. The second features a good performance by Charles Macaulay, a discovery from television. And the third is memorable because it was directed by B. Iden Payne, 82, a formidable figure in professional and bush theater for more than 60 years. His *Much Ado* is literal, straightforward, underdirected and one-dimensional, which will indicate to any former Payne student that the master has not lost his grip. Some of the actors in *Much Ado* strike poses like various Barrymores. Small wonder. B. Iden Payne directed Ethel in *Déclassé* and John in *Justice*.

• STRATFORD, CONN. This is the tenth season for Stratford-upon-Housatonic, which once tried to enrich its box office with stars like Jack Palance and Robert Ryan, apparently hoping that audiences would confuse qualitative accomplishment with mere surprise that the stars could say the lines at all. Then in 1962 the Ford Foundation gave $503,000 to Stratford to help finance a wintertime school in speech, dance, fencing and so on, designed to develop a permanent company with all the depth, facility, and technical skill of an English group.

To some extent this paid off in Morris Carnovsky's 1963 *Lear*, but for the most part the American Stratford is still disappointingly inept. Someone named Tom Sawyer is playing Hamlet there this year. The poor fellow may very well know how to get a fence painted, but he certainly has no idea how to sit on one. Left alone on the stage for soliloquies, he is wooden, stiff-legged and ill at ease. His fencing lessons have resulted in a dual scene that might have been fought between Mrs. Warren Harding and the lady in Ohio. Considering the Gertrude, the Laertes and the Ophelia that surround him, Sawyer is at least letting no one down. The highlight of the production occurs when a procession of supernumeraries enters bearing long poles topped by huge, flaming, antlered skulls. There is no other fire in this *Hamlet*.

Stratford's *Richard III* is equally unsettling. As Douglas Watson plays him, Richard is monstrously twitchy but uncomplicatedly gleeful, a modern rather than a medieval sicknik, never giving the sense that he really loves evil for its own sake. The company's *Much Ado About Nothing*, on the other hand, is the best evening for sale at Stratford this summer. Riotous and briskly paced, with leafy sets, garden-party costumes and lighthearted acting, it goes some distance toward being the dish of sherbet that *Much Ado* should be.

• STRATFORD, ONT. A Shakespeare memorial summer seems an odd time for the Stratford Shakespearean Festival Foundation of Canada to present two plays by other authors, but that is what is happening in Ontario, where Wycherley's *The Country Wife* opened early this week and Molière's *Le Bourgeois Gentilhomme* is already playing. *King Lear* and *Richard II* are playing too. John Colicos, who looks much like Paul Scofield in the role, is an able and imperial Lear in a production skillfully but somewhat sentimentally staged by Stratford's Artistic Director Michael Langham. The star of the summer, however, is William Hutt, 44, who is probably the best of Canada's actors. A deeply trained Shakespearean, he novelly plays Richard with strength at the start, gradually shading him into weakness. He is also candid about the shortcomings of earlier actors in the role. Alec Guinness, he says, "was impressive without being definitive." Michael Redgrave "played it like Barbara Stanwyck with a mustache." Gielgud? "I guess he thought Richard was a neurasthenic who could cry at the drop of a crown." As for the play itself, in which Richard's queen is a young child, Hutt says: "It out-Humberts Humbert. It should be retitled *Take Her, She's Nine*."

• WASHINGTON, D.C. Begun three years ago, the Shakespeare Summer Festival is staged on the sloping lawns that lead up to the Washington Monument, and is in itself something of a monument to the determination of a housewife named Ellie Chamberlain Galidas, whose husband is a General Electric systems analyst. She decided that the capital should have free, outdoor, summer Shakespeare, and she brought it off. Her actors are partly Equity and partly amateur, plus 20 ballerinas from the Washington School of the Ballet. They do one play a season, and this summer's production of *A Midsummer Night's Dream* is just right for its setting —full of pageantry and horseplay and Mack Sennett chases.

GYNECOLOGY

Intra-Uterine Devices: A New Era in Birth Control?

It has been known for a century that a foreign body in the uterus can prevent conception—at least in animals. But how could such a process work and be put to safe human use? Even though modern medical men have no sure answers, the cautious and respectable Planned Parenthood Federation of America announced last week that its medical advisers are now giving "strong, though preliminary" approval to the newest form of birth control. Information accumulated from more than 10,000 women during 90,000 woman-months of observation, said P.P.F.'s medical committee, "indicates that the modern intra-uterine contraceptive devices are both safe and effective."

Said P.P.F.'s president, Dr. Alan Guttmacher: "Intra-uterine devices are being subjected to as much scientific testing as the birth control pills." And it appears that they are almost equally effective. If their sponsors' hopes are fulfilled, IUCDs, as they are called, may soon be the most useful and prevalent contraceptive. They cost only pennies to manufacture; the cost of insertion is no more than a doctor chooses to charge, which may be nothing at a health station in India or the fee for an office visit and examination in the U.S. A woman who wants another child can usually become pregnant within a couple of months after the IUCD's removal. Most important, IUCDs can be left in place for months or years without thought or attention.

Silk to Silver. The man who did most to demonstrate the effectiveness of IUCDs did not live to see the dawn of the new age that he pioneered. German Gynecologist Ernst Gräfenberg, born in 1881, began inserting rings in the wombs of his patients in the 1920s. He first used rings made of surgical silk, but soon switched to silver wire. The insertion of wire required dilatation of the cervix, but Dr. Gräfenberg reported few complications and fewer unwanted pregnancies. Yet when other doctors decided to follow his example, there were many complaints—mainly excessive bleeding and inflammation in the pelvis. The rings fell into disrepute. After Dr. Gräfenberg settled in the U.S. in 1940, he gave up the use of IUCDs.

Research went on elsewhere. The late Dr. Willi Oppenheimer of Shaare Zedek Hospital in Jerusalem, who began working on the devices in 1930, thought that something like the gut used in surgical sutures would be less likely than metal to cause bad reactions. He went back to Gräfenberg's rings made from the surgical silk. His 329 patients had a few unwanted pregnancies, but no miscarriages and no malformed babies. There were no cases of permanent sterility, and no diseases, including cancer, that could be attributed to the ring. In Yokohama, Dr. Atsumi Ishihama recorded a total of 19,000 [illegible] en fitted with IUCDs; his choice [illegible] ring made from a spiral of [illegible] plastic, and with a disk in the [illegible] suspended from three points.

Hong Kong Queues. The [illegible] an IUCD, however, seems hardly to [illegible] ter. Nor does the nature of the [illegible] provided only that it is inert enough [illegible] cause little or no reaction in the [illegible] an's tissues. Several IUCDs are [illegible] such as those of plastic (a special [illegible] ethylene), silk or nylon thread, [illegible] usually be inserted without dilatation [illegible] the cervix. Even so, insertion must [illegible] done by a doctor, and preferably [illegible] specialist in gynecology. Insertion [illegible] metal ring, with dilatation of the [illegible] definitely calls for specialized skill.

IUCDs are now being studied in [illegible] least a dozen countries, including [illegible] eral in Latin America. In Hong Kong, [illegible] Taiwan and Korea IUCDs have been [illegible] enormously popular; women formed [illegible] queues outside family-planning [illegible] in Hong Kong, waiting to be fitted. [illegible] extensive test program is getting [illegible] way, though slowly, in India.

In the U.S. at least 15,000 women have been fitted with IUCDs at 40 medical centers. Four principal types of devices are being tested:

▶ A ring, slightly less than an inch in diameter, made of stainless-steel [illegible] under study since 1949 by Dr. Hen[illegible] H. Hall of New York Medical College.

▶ A polyethylene spiral, designed by Dr. Lazar C. Margulies of Manhattan's Mount Sinai Hospital, can be inserted through a straight tube, and carries a threadlike "tail" punctuated with plastic beads.

▶ A double-S loop of plastic, equipped with a tail, developed by [illegible] Jack Lippes of the University of Buffalo.

▶ A "bow tie," or double triangle, devised by Dr. Charles H. Birnberg of the Jewish Hospital of Brooklyn, which like the rings ordinarily has no tail, but is made of a plastic that shows on X ray.

Still No Clue. The biggest immediate difficulty with IUCDs is that one woman out of ten expels hers—usually within two months. And she may not notice that she has lost it until she becomes pregnant. It is to guard against unsuspected loss of the devices that many of them carry a plastic tail. A woman can then easily examine herself to make sure that the device is in place. Only a few women have intermittent bleeding or difficulties that prompt their doctors to remove the devices.

Although no one yet knows just how IUCDs prevent conception, it is certain that—unlike the diaphragm, which covers the cervix—they do not prevent passage of the sperm into the uterus. [illegible] along the Fallopian tube to meet the egg. Since they definitely trigger excessive contractions of the uterine muscle and of the Fallopian tubes, they may cause displacement of the egg before it has time to be fertilized or to settle in the wall of the womb.

WALTER DARAN

There is no doubt about IUCDs' relaly high effectiveness. If 100 wives no contraceptives, 90 will become gnant in a year; with the rhythm hod, 40 will, and with diaphragm or ndoms, from two to 20. Among 100 men who can retain IUCDs, there is, the average, only one pregnancy a . That is as near perfection as the ection from the pills.

SURGERY

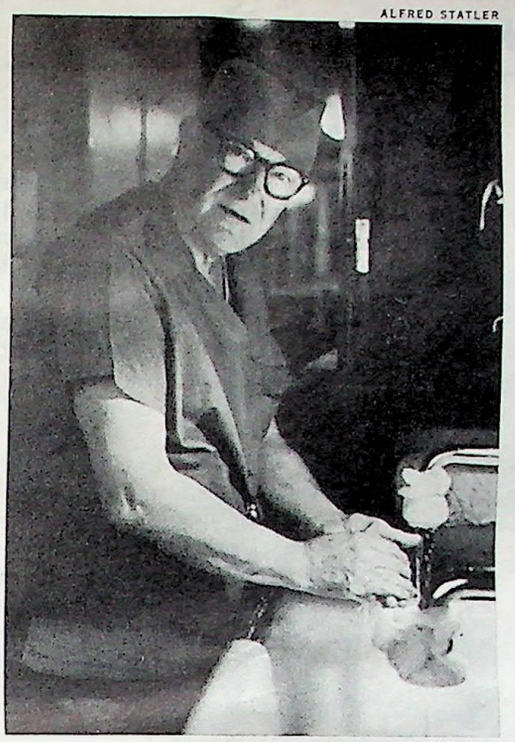
Most Radical Operation

r. Alexander Brunschwig of Man- an's Memorial Hospital has literally mboweled hundreds of patients dur- the past 17 years. In almost every , the list of organs he has removed uld seem to be a surely lethal loss. t Brunschwig's eviscerations—or pel- exenterations, as surgeons prefer to the incredibly drastic operations— ve been a startlingly successful effort save lives after all hope was gone.

In a newly published French mono- aph, *L'Exentération pelvienne*, Dr. unschwig reports that no fewer than 6 of his 562 patients have lived five ars or longer after the operation. Vir- lly all have been glad that they mitted to the extensive amputation, en though many have had to wear a g strapped to their waists to collect ine and feces. Some have been able work for years, with no outward n of their condition.

Touring & Swimming. Dr. Brun- chwig, a surgeon and gynecologist, de- ided as long ago as 1934 that some ncer patients for whom all other eatment had failed might be kept alive r several years by operations more astic than any so far attempted. He gan, usually in cases of stomach can- r by removing most of the stomach, rt of the left lobe of the liver, the body d tail of the pancreas, the spleen, e transverse colon and part of the dominal wall. Of the first 100 pa- ents, 19 lived for one to ten years, in- uding a laborer who went back to do- a full day's work (TIME, March 7, 1947).

Among women there were even more ere cases in which massive cancers d spread from uterus to large bowel d bladder, or from bowel to uterus d bladder. For them Dr. Brunschwig ved a still more radical operation, moving not only the vagina, cervix d uterus, but much of the lower colon d also the bladder. This necessitates ing an artificial bladder from a sec- of small bowel, or leading the ure- into the colon, which then empties urine and feces into a "wet co- tomy" bag. After more conventional erations for rectal cancer that has read widely, only fecal matter through the "dry colostomy" ening in the abdominal wall, because bladder and urethra are left in- . Since no two patients' diseases are e, Brunschwig operations vary in the number of organs and length of bowel removed.



ALFRED STATLER

DR. BRUNSCHWIG SCRUBBING UP

OPERATING FOR CANCER

Startling success from a seemingly lethal loss.

One man was well enough to make a transcontinental tour eight years after exenteration for cancer of his rectum and bladder. A woman of 35, whose operation spared the lower part of her pelvis, was having a normal sex life and went swimming seven years after surgery. Dr. Brunschwig's most extreme case was a woman who lost many internal organs, including the left kidney, plus all related lymph nodes, along with her left leg and hind quarter. Eight years later she is living happily and doing all her own housework.

Still Not the Answer. Astonishingly, Dr. Brunschwig's "five-year cure rate" of 20% for these supposedly hopeless patients is just about the same as the survival rate for all patients after their first and much less drastic operation for cancer of other internal organs. But for all his encouraging results, Surgeon Brunschwig still does not feel that such surgery is the answer. Exenteration, he says, "is a brutal and cruel procedure." He looks forward to the day when researchers will put him out of business by discovering the drug that will kill cancer cells.

TOXICOLOGY

Beware the Woolly Worm

Most adults dislike caterpillars for vague, undefinable reasons, while most children like to stroke their cute, fuzzy backs. The adults are right. At least 50 species, among the hundreds of caterpillars in the U.S.,are a hazard to health simply because some of the long and often colorful hair on their backs is irritating or even poisonous to the touch.

The worst offender, say Dr. Campbell W. McMillan and Dr. William R. Purcell in the *New England Journal of Medicine*, is the caterpillar that grows into one of the flannel moths, *Megalopyge opercularis*. Country folk use so many other names that they have confused the issue. In North Carolina it is usualiy the "woolly slug," in Texas it is often "woolly worm," and in between it may be the puss caterpillar, possum bug, or Italian asp. In Mexico it becomes *el perrito*, or little dog. By any name, it stings.

Houston doctors report that there seem to be epidemics of woolly-worm stings every four or five years, when the moths, and therefore their caterpillars, are especially numerous. In one recent year, Houston area doctors reported 2,130 cases; almost every one involved severe local pain and local swelling. One patient out of three had swelling of the lymph glands and a headache too severe to be relieved by aspirin. One in 20 went into shock, and eight patients had to be hospitalized, mainly for convulsions. Children are not the only victims: a Houston man was stung by a woolly worm's long back hairs when he picked up his golf bag; soon his whole left arm was throbbing with pain up to the armpit. Even with Demerol and Benadryl, he was still in pain and had a headache the next day.

The woolly slug is concentrated in eleven states from Maryland to Missouri and Texas, but it has close kin in the Northeast: the caterpillar of the white moth, *Lagoa crispata*. Other common stingers are the range and saddleback caterpillars, and those of the buck, Io, tussock and brown-tail moths. Where the caterpillars are especially abundant, their hairs may fly through the air in such numbers as to bring on asthma attacks in children who never even touch the beast directly.

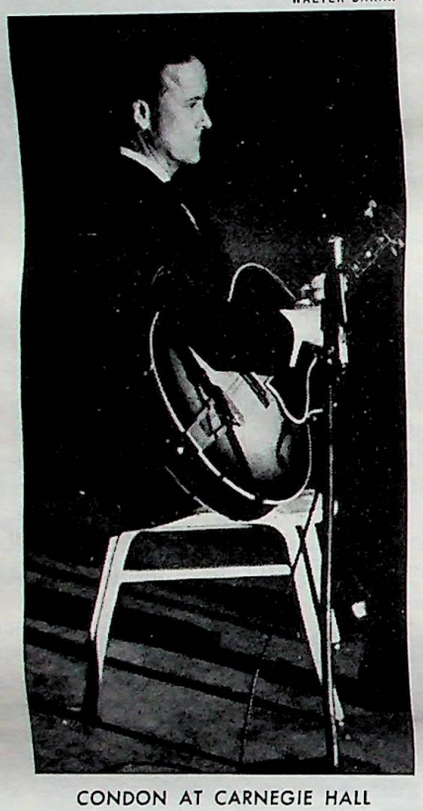
JAZZ

The Grand Old Man

Cutty and Zutty were there. So were Peanuts, Woody, Yank, Wingy, Red, Pee Wee and Willie the Lion.* Sammy Davis Jr. was supposed to come, but he pleaded "fatigue" at the last minute and didn't show. Just as well; he would have seemed out of place at this reunion of jazz's elder statesmen, come to celebrate one of their own.

They called it "A Salute to Eddie Condon," the famed, feisty guitarist who has reigned for some 25 years as public defender of "old style" Dixieland.

WALTER DARAN



CONDON AT CARNEGIE HALL
A salute from the survivors.

Staged at midnight in Manhattan's Carnegie Hall, the event had all the makings for a Great Moment in jazz history. Bob Crosby and Johnny Mercer came in from the West Coast. Woody Herman and his 16-piece band were bussed uptown between shows at a Times Square jazz emporium. All told, 43 musicians gathered to pay homage, many of them the founding fathers of "hot jazz," ragtime's carefree child born in the backrooms and basements of Chicago in the mid-1920s.

Out of the Cellar. Trumpeter Wingy Manone got the audience of 1,800 tapping their feet with a blistering *Tailgate Ramble*. Trumpeter Billy Butterfield chimed in with a sweet and solid delivery of *Singing the Blues*. Crosby led ten enlistees through a lively, give-and-go session of *Royal Garden Blues*. But betwixt and between, *le jazz hot* tended to run lukewarm, and when it was over at 3:20 a.m., the Great Moment had never quite happened. M.C.s Crosby and Mercer did their best to keep the music flowing as freely as the whisky backstage, but the profusion of talent was largely wasted in the confusion of an erratic format.

Condon was the first to insist that Dixieland jazz was worthy of being lifted out of the dingy cellars and onto the concert stage. He helped inspire the whole cult of jazz critics, who could spin out columns on the flittering trumpet solos of Bobby Hackett. To prove his point, in 1942 Condon promoted a highly successful series of jazz "concerts" at Manhattan's Town Hall. During cool jazz's dominance, Condon doggedly ran his own club in Greenwich Village. He organized the bands, promoted Dixieland indefatigably, arranged for the recording sessions.

"Up and Leapin'." At Carnegie Hall, Condon appeared to lead his crusty cronies through some "up and leapin' music." "Eddie's the guy who got us the jobs when we needed them," says Bass Player Bobby Haggart. The Carnegie Hall "salute" was, in fact, a benefit for Condon, 58, who will use the proceeds ($2,700) to help pay his hospital bills for a recent operation. "The youngest guy at Carnegie's Hole," says Condon, "was the doorman. There are not many young guys around who are interested in playing the old unconfined jazz. Music has survived some strange invasions but we've done an awfully good job of being relevant for quite a few years. We've raised some hell in our time." As an elder statesman, Condon is probably too gloomy. Fact is that Dixieland music is experiencing something of a renaissance. At debutante balls and bar mitzvahs, on campuses and at country-club dances, Dixieland bands are discoursing anew on an old theme that Eddie Condon kept alive.

Bossa Nova Nova

Most people thought bossa nova was dead, and most were glad to have simply survived the hucksterized flood of bossa nova dances, bossa nova shoes and sweatshirts, boogie bossa nova, soul bossa nova.

But last week a packed audience at San Francisco's Jazz Workshop listened raptly as slim, meek Astrud Gilberto, 24, stood before a microphone and sang *The Girl from Ipanema*, in a voice so soft and introverted that it barely cut the smoke. Behind her, Stan Getz wove wispy filigrees on his tenor sax to produce the most infectious "new sound" around—the bossa nova nova.

Eloquent Sermon. It all started a ago, when the easy charm of bos had been drowned in a din of drums, maracas and raucous bands. Getz met with Singer-G João Gilberto, Brazil's "pope of sa nova," and decided to cut one bossa nova album. Gilberto's wife trud, who had never sung outsi kitchen before, was enlisted as an thought to sing the English lyrics *Girl from Ipanema* that João Portuguese. This spring, when felt that the odor of the butchered had cleared, the Getz-Gilberto was quietly released. To the tonishment, the record soared the top of the bestseller lists.

Most of the melodies are provi

SHEEDY AND

ASTRUD IN SAN FRANCISCO
A filigree from behind.

Antonio Carlos Jobim, Brazil's lead bossa nova composer, who also backs the lead duo with sensitive piano p ing. The result is an eloquent sermon what the bossa nova was originally about. The relaxed, almost flat styling of João sounds as if he whispering in your ear, and it is quisitely embroidered by the echo solos of Getz's lyrical tenor sax.

Six, & Adding. Two months ago as João and Getz were about to a countrywide tour, João develop "cramp in his playing arm" and bow out. Astrud replaced him and denly found herself a star. Astrud self a girl from Ipanema, a sec Rio de Janeiro's sparkling beach who came to the U.S. two years with João. Last week, with the edition of *The Girl from Ipanema* ing up the teen-age record mar trud Gilberto was trying to get her new billing—at least to the six-song trying to add to her

TIME, JULY

* Trombonist Robert ("Cutty") Cutshall; Trumpeters John ("Yank") Lawson, Henry ("Red") Allen, Joseph ("Wingy") Manone; Drummer Arthur ("Zutty") Singleton; Clarinetists Charles ("Pee Wee") Russell, Michael ("Peanuts") Hucko; Bandleader Woodrow ("Woody") Herman; Pianist Willie ("The Lion") Smith.

MILESTONES

Born. To Tony Curtis, 39, kiss-curled cinemactor (*Captain Newman, M.D.*), and Christine Kaufmann, 19, honey-haired German-born starlet (*Taras Bulba*); their first child, a daughter; in Hollywood.

Married. Kim Stanley, 39, Broadway actress (*The Three Sisters*); and Joseph Engel, 35, her lawyer, the man who bulges Kim by insisting on stage contracts of no longer than nine months ("After that," she claims, "it sounds like a recording to me"); she for the fourth time; in Mount Vernon, N.Y.

Married. Maurice Herzog, 45, leader of the 1950 conquest of the Himalayas' 26,502-ft. Mount Annapurna, now director of De Gaulle's physical fitness program; and Countess Marie Pierre de Lassé-Brissac, 39, French noblewoman; he for the first time; she for the second; in Paris.

Divorced. George Capron, 79, Los Angeles real estate tycoon (860 acres in Laguna Beach); by Ednah Race Capron, 74, who until now ran his household on a budget of $300 a month; on grounds of cruelty (he denied her a purse last year when she broke her leg); after 55 years of marriage, no children; in Los Angeles. Settlement: half his fortune, or $16 million, highest award in California history.

Died. Herb Sheldon, 51, impresario of radio and TV kiddie shows, who forswore the clownish costumes and childish twaddle of his colleagues, instead gave pre-teen audiences the scoop about building muscles (spinach helps), crossing streets and watching too much TV, becoming one of NBC's highest-paid stars at $250,000 a year in the 1950s; of a heart attack; in Manhasset, N.Y.

Died. Harry Grossinger, 76, founder and proprietor of New York State's famed Catskill resort, who for 50 years ably attended to the details while his wife Jennie established herself as one of the country's best-known hostesses, seeing their original seven-room guest cottage grow into a $15 million investment with so much of everything (ski tows, heated pools, 18-hole course, a staff of 700 employees) that the 660 rooms were generally full winter and summer; of an acute coronary thrombosis; in Liberty, N.Y.

Died. Stella Stagg, 89, wife of Football Patriarch Amos Alonzo Stagg, 101, who married Stagg in his second year at the University of Chicago's coach, herself became a leading female author-on the game by attending his every scrimmage and chalk talk, diagramming plays and exercising an uncanny eye for ferreting out the opposition's weaknesses; of cancer; in Stockton, Calif.

"let's see what ASEA can do"

for MOVING GOODS. ASEA locomotives haul some of the world's heaviest trains, used for iron – ore transport inside the Arctic Circle. The ASEA silicon rectifier locomotive now being built for railways on the European continent, can be easily adapted to any power system. Automation on rails is provided by the ASEA autopilot, controlling Stockholm underground trains.

ASEA deck cranes improve cargo-handling efficiency on modern vessels sailing the seven seas. And automation goes to sea too. The propulsion machinery of both turbine and diesel ships is now being manoeuvred direct from the bridge by means of ASEA remote control.

The ASEA Group produces a full line of materials handling and transport equipment: cranes, hoists, trucks, lifts, escalators. The multi-rope friction-drive hoist has been introduced by ASEA into most countries with mining industry of any importance; the reference list includes units for both the heaviest load and the largest winding depth in the world.

So, everywhere within the vast sphere of activities relating to the movement of passengers and goods, be it within a workshop or between continents, you too will find that it pays to see what ASEA can do.

U.S. BUSINESS

THE ECONOMY

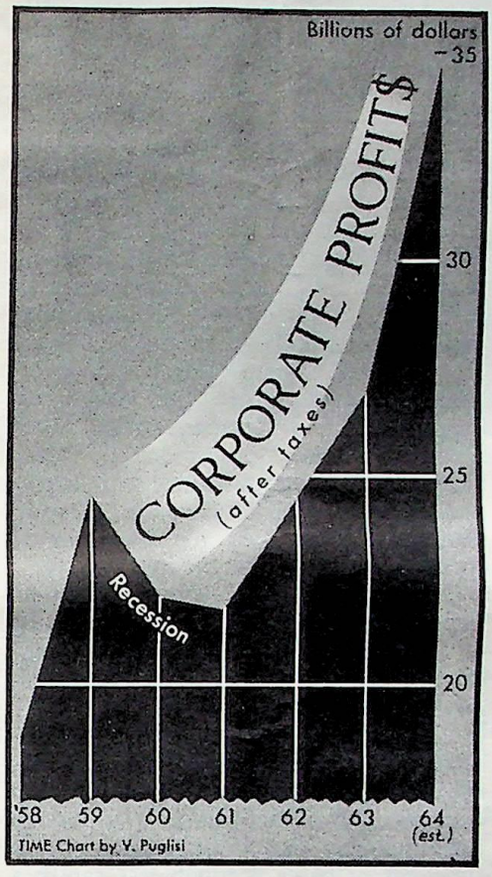
Record-Smashing Record

Sports lovers have debated in recent years whether athletes could go on breaking records indefinitely, but there seems to be no question about continuing record-breaking when it comes to business. For 41 months now, businessmen have watched record after record crumble with computer speed until economic tidemarks have become the rule rather than the exception. Since the economy, like the athlete, gets bigger and stronger over the years, there seem to be no practical limits to its performance. Never has it performed better than in the first six months of 1964.

Faster than Sales. The first-half returns that came flooding in last week broke scores of records, and nearly every segment of the economy contributed its share. As has come to be almost expected, giant General Motors led the field by announcing, for the third quarter in a row, the highest sales and earnings of any company in history. The impressive total: first half sales of $9.8 billion, profits of $1.1 billion. Ford and Chrysler also reported alltime high earnings for the half.

New profit highs were also reached by such varied companies as Du Pont, Motorola, Texaco, Sun Oil, Minnesota Mining, United Air Lines—and those that did not set new marks contented themselves with hefty hikes. B. F. Goodrich raised profits 15.5%, and Reynolds Metals 25%. The nation's second largest railroad, the Pennsylvania, was up more than 500% in the first half, and the third biggest road, the New York Central, turned a $4,400,000 loss into a $107 million profit. If the second half continues at the first-half pace—which is ahead of all estimates—U.S. corporations will earn between $34 and $35 billion in 1964, a performance that would outshine 1963's record by more than 25%.

While the 1964 tax cut has undoubtedly helped profits some, it is a minor reason for the upswing; so far, it has lowered corporate tax levels only 2%. The fact is that, for the third successive



year, profits for many U.S. corporations are increasing at a faster rate than sales. Among last week's headiest profit gainers: Chrysler, up nearly 50% on a 22% sales rise; Motorola, up 76% on an 11% gain in sales; American Airlines, up 86% on a revenue increase of 10%.

Coquettish Hovering. A main force behind the profit swell is U.S. industry's increasing use of excess capacity as the economy expands, a movement that gradually lowers production costs. Management also knows better than ever before how to wield the two most powerful tools in its possession: automation and cost control. A growing use of computers has made possible more exhaustive market research, closer control of inventories and production, and a greater awareness of a company's potential. Cost consciousness has become so strong in industry that businessmen are much readier than formerly to eliminate unprofitable parts of their business, and more reluctant to add to their labor force as business rises.

The giddy rise in profits is showing up on more than corporate balance sheets. Though the market has been coquettishly hovering around the 850 resistance level on the Dow-Jones average, having grown so used to good news that it has discounted much of it, 426 new company highs were registered last week *v.* only 58 new lows. Profits are also helping to fuel the record $44 billion capital expansion undertaken this year by U.S. industry and the $5 billion more it is spending on research and development. The most tangible impact is on the nation's 17.5 million stockholders. Last week the Commerce Department reported that cash dividends by corporations in June reached $2.5 billion—the highest monthly payout in the nation's history and an indication that dividends in 1964 will pass the $17.5 billion mark to set—as one might suspect—another alltime record.

GOVERNMENT

The Headless Branch

Though they are not provided for in the Constitution, they make important policy, execute it and sit as judges. There is hardly anyone in the U.S. who is not in some way affected by one or another of their acts. They fix the price of milk and electric power, decide where airlines can fly and pipelines snake, police the stock market and determine the content of a tube of lipstick. They are the nation's 30 federal regulatory agencies—and their great powers over American life and business have become increasingly controversial. Senator Everett Dirksen calls them "the headless fourth branch of government."

Last week a Senate judiciary subcommittee began intensive hearings aimed at revising drastically the way the regulatory agencies handle their work. Whatever the committee decides, its hearings are sure to add further to the argument over the federal agen-

cies. The Senate is already considering creation of a permanent administrative body that would serve as a watchdog over the entire regulatory process. The Republican platform singles out "power-grabbing regulatory actions" as a campaign issue, and Lyndon Johnson has made it plain that he wants the agencies to concentrate on "more cooperation with, instead of more regulation of business."

Tough Watchdog. The most influential, and consequently the most controversial, of Washington's alphabet soup of agencies are the Big Seven independents—the Federal Trade Commission (FTC), Federal Power Commission (FPC), Federal Communications Commission (FCC), Interstate Commerce Commission (ICC), Securities and Exchange Commission (SEC), Civil Aeronautics Board (CAB) and the National Labor Relations Board (NLRB). In addition, the Food and Drug Administration must clear all prescription drugs and the Federal Aviation Agency, whose annual budget of $775 million is the largest of the agencies, sets safety standards and regulates the design and production of aircraft. The agencies spend about $1 billion and conduct 40,000 hearings annually.

By suggestion, threat or litigation, the agencies can shake and reshape industries. The SEC in particular has recently been a tough watchdog on Wall Street. FTC's summary order to cigarette makers to put health warnings on packages and in their advertising has raised a storm that is headed for the courts. The ICC has so far held up the badly wanted merger of the Pennsylvania and New York Central railroads, and the CAB has turned thumbs down on the plans of American and Eastern airlines to merge.

Molasses-Slow. Starting with the ICC, established in 1887 to regulate railroads, the agencies were called into being to correct abuses that industries and institutions could not or would not correct themselves. But as the agencies have grown in number and power, they have also grown their own faults. Molasses-slow bureaucracy is the chief of them: it can take three years to settle an ICC case, five years for the FPC to act on a gas pipeline rate change and 70 days for the SEC to process a new stock issue. One FTC case cost a company $285,000, and by the time it was finally settled—after six years of delay—the company had gone out of business.

Inevitably, the regulators are targets of aggressive lobbying, and occasionally they get involved in a scandal with a Bobby Baker or a Sherman Adams. One of their traditional weaknesses is that many appointees come with little firsthand knowledge of the fields they will regulate. The men who regulate million-dollar industries are not highly paid—commission chairmen get up to $21,500 and powerful examiners get about $13,000.

A rundown of the men who head the Big Seven:

▶ CAB's Alan S. Boyd is a lawyer and former Florida utilities commissioner whose tough efficiency has made him the Government's indisputable "Mr. Aviation." He has turned the CAB into one of the best-run agencies.

▶ SEC's Manuel Cohen, a Brooklyn-born career lawyer for the commission, was recently appointed successor to William L. Cary. But no change is expected in the 1,500-man agency's vigorous policing of the stock market.

▶ FPC's Joseph Swidler, a former New Dealer and TVA general counsel, preaches the advantages of a dual system of public and private utilities. Since 1961, he has helped clear up the overwhelming backlog of 4,000 rate cases, expanded the 1,200-man agency's enforcement authority.

▶ FCC's E. William Henry is a Memphis lawyer who succeeded Newton Minow, and echoes his "wasteland" criticism of TV, is still feeling his way.

▶ FTC's Paul Rand Dixon, another Tennessee lawyer and former antitrust investigator for Senator Estes Kefauver, has become a noisy but erratic defender of the little consumer.

▶ ICC's Abe Goff, an Idaho Republican and former Congressman, holds the chairmanship this year under the commission's annual rotation system. In the unwieldy 2,500-man agency, the turnover of cases is much less rapid: a decision in the Pennsylvania-New York Central merger is not expected until well into 1965.

▶ NLRB's Frank McCulloch is a strong-minded Illinois Democrat, under whom the board has rarely risen above routine in handling the massive paper work of some 22,000 cases a year involving complaints of unfair labor practice and union jurisdictional disputes.

Once a month the chairmen of the regulatory agencies get together ... informal meeting, which they po... call "The Tightrope Club." Co... seems to feel that the men in the ... rope Club could stand a little ... regulation themselves, and the ... Senate hearings open a drive fo... first major overhaul of the agencies ... 18 years.

FOREIGN TRADE

An Urge for the Yankee Label

U.S. businessmen don't care ... inflation at home, but they have ... reason to cheer when they see it ... other fellow's yard. The reason ... good for U.S. exports. Right now ... rope is plagued by inflation; ... Marjolin, the Common Market's ... president, last week warned the ... member nations that "severe mea... will have to be taken to halt it. Ca... in a wage-price spiral that this ... alone has boosted wages 19% in ... Netherlands, European manufac... are no longer able to cover increa... expenses out of their earnings, ins... are raising prices. One result is that ... ports from the U.S., even after marki... of as much as 40% to cover transp... tation costs and duty, are becom... increasingly competitive in Europe.

For the first quarter of 1964, ... exports to Britain and the Com... Market rose 25% to $1.5 billion ... for all of 1964 they are expected ... reach a record $8.5 billion—an increa... important both to the vitality of ... U.S. economy and to the U.S. balan... of payments (whose deficit, the Gov... ernment reported last week, was r... duced to $800 million in 1964's fi... half, compared with twice that amou... in previous years). The vigor of t... trade is fed, of course, by the vita... of improved U.S. technology, a wi... of new products, and a harder sell...

businessmen—plus the fact that
sperous countries tend to increase
r imports. But to a larger degree,
products are also benefiting from
pe's rising prices.

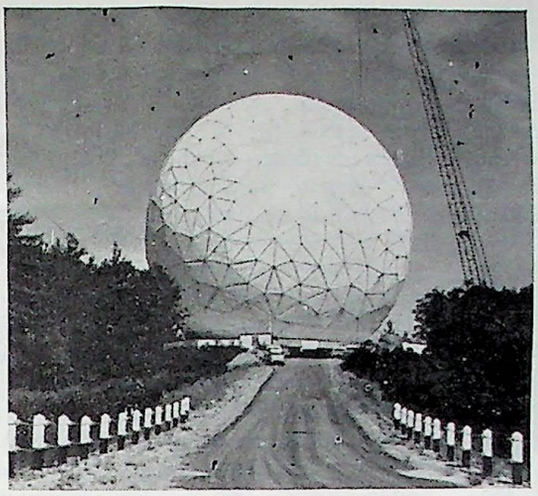
Status Appeal. Prices are not the only
traction, since few U.S. goods yet
mpete directly in price in Europe.
as the gap narrows, the selling
ts of U.S. products become more
ctive: better quality, smarter de-
, less need of servicing, speedier de-
ries than can be made by many Eu-
an competitors, who are already
king at full capacity. In many cases,
erican manufacturers offer goods
Europeans only recently realized
wanted. Barbecue grills and gadg-
are selling fast among Frenchmen,
have lately discovered *le week-end*
portunities for *le camping, le barbe-*
, and *le pique-nique*. And just as
ent Americans buy Pucci blouses or
lls-Royces, Europeans have taken to
ossing imports for the status appeal
a "Made in U.S.A." label. Says
ench Planner Pierre Massé: "We are
ning after the U.S., of course."

European prosperity has produced a
ong demand for U.S. capital goods.
estinghouse International, which once
nsidered Latin America its best mar-
et, has shifted sights to Europe and
w does one-third of its business there
everything from tiny electronic parts
steel mill machinery and atomic pow-
plants. After only four years of con-
ntrated marketing in Europe by bi-
gual salesmen, Milwaukee's Koehring
o. now has sales of $6,000,000 an-
ally in machines that do anything
om die casting to ditchdigging.

"This Is the Time." Now consumer
oods have become the second wave of
ports. In both Britain and France,
merican appliances sell well because
ey are available in more imaginative
zes and shapes for different kinds of
itchens. Demand is rising for such dis-
parate items as colonial furniture and
ower curtains, for air conditioners
nd suntan lotions, and for such soft
oods as sportswear, bathing suits, chil-
en's dresses, lingerie and men's pa-
mas. In Germany, of all places, the
les of U.S. photo equipment—notably
e new Kodak Instamatic camera—
ve jumped nearly 300% in the past
ar, to $1,400,000.

American firms have also profited
m Europe's increasing fascination
h self-service machines. Vendo Co.
Kansas City exports automatic dis-
nsers for German beer and wine;
estinghouse and Whirlpool both are
ing coin-operated laundry and dry-
aning equipment; and a small Green-
le, S.C., firm called Barbecue King
pects to double European sales of res-
urant barbecue equipment this year
$600,000. "This is the time to go in
ere," says Barbecue King President
bert Wilson. "They really want to
American goods."

The urge for the Yankee label has
economists like Marjolin worried. West-



RADAR UNDER FIBER GLASS DOME
New fillip for filaments.

MODEL IN GLASS GOWN

ern Europe has a $5 billion trade balance deficit. More than this, the inflow of U.S. goods—especially of those on which tariffs are high or haulage is expensive—encourages development of U.S. plants in Europe that can compete on even tighter terms. Last year alone, for every $1 worth of goods arriving from the U.S., $3 worth were already there, made and sold by Americans.

INDUSTRY

The Material with 33,000 Uses

Moviegoers chuckled some years ago when Alec Guinness, as *The Man in the White Suit,* invented an indestructible garment, only to be frustrated by businessmen shocked at its non-obsolescence. The indestructible suit is still a fantasy, but something almost as good is on the way. This one will not stretch or shrink, is impervious to stains and moths, goes from soaking wet to bone-dry in seconds, holds a press and defies wrinkles. It will be made of fiber glass, a versatile material that is beginning to be used in hundreds of consumer items after years of narrow specialization.

From the Phoenicians. Filaments spun from hot silica sand were used to make ornaments 3,000 years ago by the Phoenicians, but the modern fiber glass industry is only 25 years old. In that scant time, it has grown into a $340 million business. Almost 80% of its sales are made by Owens-Corning, a company controlled jointly by Owens-Illinois and Corning Glass. Owens-Corning did much of the original research on commercial fiberglass fibers, owns the well-known Fiberglas trademark. Under a 1949 consent decree, the company agreed to release some patents and license others. Fiber glass, as a result, is now produced by Johns-Manville, Pittsburgh Plate Glass, and several other companies.

Fiber glass used as insulation still accounts for 70% of sales, but the development of other products has been stepped up by the invention of a double-nozzle spray gun that shoots fiber and liquid resin simultaneously, thus creating an easy and inexpensive method of spraying fiber glass onto molds. One new product, in fact, almost wrecked the industry. Boats made of plastic reinforced with fiber glass became a quick success, and before long, dozens of boat companies were building them. The supply of fiber glass got so scarce that it had to be allocated while the firms rushed new production facilities. Unfortunately, many of the boat builders were inexperienced and undercapitalized; when they floundered, the fiber glass companies were left with excess capacity, were forced to make price cuts. This year, however, the rising demand for fiber glass in new products has finally led to price increases. Owens-Corning's first-half earnings of $8.2 million on sales of $139 million, announced this week, are 62% better than last year.

Changing the Sea. So far, researchers have found 33,000 ways in which fiber glass could replace steel, aluminum, wood or cloth. Fiber glass now goes into ladders and luggage, pipes and Polaris missiles, building sidings and shotguns. Some manufacturers are developing it for dresses, and the Canadians are making fiber glass igloos for north woods sportsmen. Automobile bodies, when runs are limited to 50,000 cars of a specialized model, can be made more economically using fiber glass instead of steel. Fiber glass makers hope eventually to replace steel or nylon cord in tires, and thereby take over a $400 million-a-year business. There are signs that fiber glass may even become a wonder worker: a desalinization technique is being tested in which sea water is run through an inexpensive membranous fiber glass pipe, which allows the fresh water to pass through but retains the salt.

IRON CURTAIN

An Economic Mess

The Communist bloc's economic news was pretty bad last week, even by Communist standards. There was the Soviet Union, admitting that its industrial production has not risen as fast as planned (*see* THE WORLD). In Cuba, where the economy has tumbled to 80% of pre-Castro levels, the government moved to halt the decline by making President Osvaldo Dorticós economics minister and central planning board chairman. That was not all. Communist China's economy has produced more bad news than goods, and Russia's growing difficulties with Rumania are largely the result of its efforts to impose an unwanted economic straitjacket on that country. Marxism has made a mess of economics.

The mess has been nowhere more significant than in Czechoslovakia, where last week officials fretted publicly over fall-offs in food canning, dairy production and even the supply of Pilsner beer. As Communist satellites go, Czechoslovakia is something special. It is the most industrialized and the most intellectualized country in the Russian orbit. By all accounts, it should have been an Iron Curtain showplace—and for a while it was. But after running at an annual growth rate of between 8% and 11% in the late 1950s, Czechoslovakia's gross national product has remained almost static at about $18.5 billion since 1961. The heavily controlled economy is now falling so far short of targets that its five-year plans have been abandoned.

Seeds of Shortage. Czechoslovakia's economic troubles stem from the inflexible imposition of Marxist rules on the economy. Prewar Czechoslovakia was famous for sophisticated consumer goods, from Skoda automobiles to Bohemian glass; its living standard was among Europe's highest, and the country emerged from the war relatively undamaged. Then the Communists, who seized power in 1948, gradually switched much of the country's economy over to heavy industry.

Before long, heavy goods represented 60% of all output. New steel mills grew up everywhere, but they depended on Soviet mines for half their ore. In turn, the steel was hammered into diesel locomotives and river barges that were then exported to Russia—even though the Czechs' own railroads and river fleets were antiquated. Increased costs forced planners to forgo reinvestment and research. The demand for factory labor trimmed the country's farm population from 3,300,000 to 1,300,000, often left the farms to be run by women, and helped sow the seeds for chronic crop shortages.

The switch stopped economic growth, and also stunted the life of the ordinary Czech. Prices have soared 20% while purchasing power has fallen. Deliveries are slow, queues long and goods faulty; Radio Prague recently admitted that half the output of 650 kinds of industrial products are "below world levels" of quality, and that rejects cost $200 million a year. Prague, once called "the Golden City," is a mangy metropolis of sooty streets and faulty plumbing. Everywhere signs warn *"Pozor pada omitka"* (Beware of falling plaster). Railroads cannot haul all the coal needed for power. "What did we use before candles?" runs a favorite joke. The answer: "Electricity."

Trimming the Bureaucracy. Post-Stalin liberalism in the bloc is bringing self-criticism and some slow improvement. The Czech government is turning back to private ownership in such small enterprises as tailor shops, laundries and hat-check concessions. The instinctive desire of a union bank ...r full employment has led B.F.G. ...o several unorthodox but rewarding ...nsactions. While most other banks ...d aside, B.F.G. last year purchased ...veral companies left insolvent in the ...pse of the Hugo Stinnes industrial ...re (TIME, Oct. 18, 1963), is keep...them in operation until they can be ...ld. When the owner of a huge ...nberg photographic mail-order ...e was arrested recently on sus...ion of tax fraud, B.F.G. saved his ...many by putting up more than ...,000,000 to bail him out. By such ...sures, the bank has preserved thou...ds of jobs, also reaped dividends of ...good will and new accounts in the German business community.

Considerate in a Way. B.F.G.'s labor proprietorship is symbolized by its board of supervisors, which is headed by German Trade Union Federation Boss Ludwig Rosenberg, 61, one of the few Jews now in high positions in Germany, and studded with the names of other labor leaders. The bank is actually run by easygoing President Walter Hesselbach, a professional banker who has never worn a blue collar, usually arrives at work an hour late "so that I don't disturb my colleagues in their morning chat and coffee hour." Such considerate treatment by Hesselbach extends only to his employees. B.F.G.'s hard-pressed competitors have learned that they cannot bank on it.

BRITAIN

Flying Under Pressure

To the despair of British taxpayers, government-owned British Overseas Airways Corp. seems unable to decide whether it should be a profit-making enterprise or a showcase for the country's aircraft industry. Until 1963, when it turned a $16.8 million profit, BOAC had flown in the red since 1959. Last week it found itself in the center of some political turbulence that is almost certain to cause it further financial trouble. Criticizing the airline's management, Labor M.P. Roy Jenkins summed up BOAC's unhappy times: "The trouble started three aircraft types, four chairmen, five ministers of aviation and 80 million pounds of deficit ago."

The Plane Drain. That goes back to 1954, when BOAC's bid for competitive leadership in the jet age went down after a series of crashes of its much-touted Comet-1 jetliner. With all the Comets grounded as unsafe until 1958, BOAC concentrated on Britannia turboprops, at the government's insistence buying only British planes. By the time the Britannias were flying the all-important North Atlantic run in 1958, competing airlines had already taken off in the bigger, faster, U.S.-made long-range pure jets. Eventually BOAC got permission to buy 20 Boeing 707s—but only on the condition that it order at least 20 of the new VC-10 jets developed by British Aircraft Corp.

Despite the Super VC-10's improved air conditioning, spacious seating and new safety features, the plane has the disadvantage of costing more to operate and maintain than the U.S. planes. It is also slower, has a shorter range and carries only 175 passengers (*v.* 189 in the newest Boeings). So far, not a single non-British airline has placed an order for the plane.

When Sir Giles Guthrie took on the thankless job of BOAC chairman last year, he was stuck with an order for 30 unwanted Super VC-10s. In an effort to make BOAC a paying proposition, Sir Giles recently demanded cancellation of the entire order—and the purchase instead of seven Boeing 707s. That, he said, would take care of BOAC's needs through 1968. Aircraft producers let out a "Buy British" howl, and workers from British Aircraft Corp.'s Weybridge plant marched on Parliament carrying placards: FIRST THE BRAIN DRAIN—NOW THE PLANE DRAIN. Aviation Minister Julian Amery said that Guthrie's proposal "would inflict extensive injury on the British aircraft industry."

LONDON DAILY HERALD

BOAC'S GUTHRIE

THE VC-10 IN FLIGHT

After three aircraft types, four chairmen, five ministers, a $224 million loss.

No Better Than No Worse. The compromise solution worked out last week pleased no one, and left BOAC's troubles unresolved. The government let BOAC off with the purchase of 17 of the 30 Super VC-10s; the Royal Air Force will take three, and production of the remaining ten will be suspended. To meet the payments of $9,000,000 per VC-10, BOAC now needs a larger handout, or perhaps even a write-off of part or all of its accumulated $224 million deficit. Said Sir Giles: "The government will ensure that financially we will be in no worse a position as a result of taking on these aircraft." That was rather negative assurance. Hard-pressed BOAC announced stiff reductions in operating expenses, including staff cuts and the elimination of such unprofitable routes as the one to the east coast of South America.

How to go native in Europe

Fly Qantas with the happy band.

The happy band of Qantas travellers feel at home wherever they go. Because they're with an airline that takes delight in seeing people relax and enjoy it all—whether it's playing a french horn with an oomp-ah band in Frankfurt, dancing to the Zeimbekiko in Athens, feasting at a luau in Hawaii. Qantas knows where all the fun is in any of the five continents the Qantas fleet of mighty V-Jets flies to. Wherever in the world you fly with Qantas you fly with that special sense of enjoyment Qantas likes to put into travel. And you'll appreciate the efficiency which has distinguished Qantas service for 43 years. Start planning travel you'll *really* enjoy with Qantas or your Qantas Travel Agent today.

BELMONDO IN "CARTOUCHE"
Low jinks, lettuce, and a fondness for hay.

iod Parody

artouche. Robin Hood, as history Hollywood have depicted him, was ump. He stole from the rich, gave he poor, and what did he keep for self? An invincible virgin named id Marian. Fortunately, they do these gs better in France. According to film, a fellow named Cartouche, Robin Hood of 18th century Paris, from the rich, gave to the poor, what did he keep for himself? udia Cardinale.

"All you need to be happy," Claudia urmurs at him seductively, "is hay." r Cartouche (Jean-Paul Belmondo) ot convinced. He is obviously fond hay, but he is also fond of lettuce. a series of dramatic robberies he quires so much of it that he becomes power in the kingdom: a state within state, a law without the law. At his mmand men kneel and women lie own. "Paris is mine!" he cries.

Not all of Paris. Like most men who ve everything, Cartouche wants mething he can't have: the police ief's wife (Odile Versois). Poor Clau- a is heartbroken, and of course Odile rns out to be a mantrap. At that point e gang is willing to let its leader hang, good old Claudia lays down her life save her friend, and at the fade artouche sets his face to the foe and epares to join her in death.

No sniffling, please. This isn't a ro- antic tragedy. It's a costume comedy. was made by Philippe de Broca, the e French director who recently em- yed Belmondo in a travesty of a er called *That Man from Rio*, and e *Cartouche* is seldom as funny as *Man*, it nevertheless comes off as eless but carefree and occasionally ous parody of a period piece.

the way of parody the film wildly erates the usual low jinks and high —in one scene, for example, Bel- o insouciantly ignores a veritable f pursuers to make cozy conver- with Cardinale. "My dear," he esses tenderly as the bullets buzz his ears, "you must give me a She smiles weakly and replies: if it's all the same to you." And on the side of spectacle the picture provides plenty of snazzy swordsmanship and some attractive Eastman Color. In the last reel, indeed, the screen divulges an image of luminous splendor: in death the pallid Claudia, swathed in red velvet and shimmering with stolen gems, lies sleeping in the moonlight in a golden carriage, lies sleeping like a princess in a legend while her glowing hearse rolls richly through the darkness and sinks down down down into the still black crystal of a forest pool.

A Minor Hitch

Marnie. When Marnie (Tippi Hedren) confronts a bouquet of crimson gladioli, the screen goes red. When she spills red ink, she flees. Red coats at a hunt, red dots on a jockey's colors panic her. Why is she so terrified of the color red? Too much like blood, maybe?

That's too easy, of course. Confidently, viewers settle back expecting old Master Spooksmith Alfred Hitchcock to splash some real surprises on the screen. Visions of *Spellbound*, *Rear Window* and *Psycho* dance in their heads. But all that develops is that red equals blood and *Marnie* equals the straightforward case history of a frigid kleptomaniac, a bookkeeper who burgles but won't bundle. Marnie's boss (Sean Connery) finds her out, then forces her to marry him so he can pursue his interest in "instinctual behavior." He learns that Marnie's hot little hands and cold blood date back to One Horrible Night during her childhood. The Thing That Happened is revealed in a gory but awkward flashback, replete with tidy psychological insights and a long-awaited corpse.

Unfortunately, the deadest characters in *Marnie* are the live ones, for they are only skeletons fleshed with syndromes. As the patient husband, Connery performs with pallid competence, uncertain whether his role requires him to be a compulsive armchair analyst or a sadist in love. He seems to yearn for the patently farfetched heroics he has enjoyed as James Bond in *From Russia With Love*. Actress Hedren, obviously groomed for stardom by the Master, zips through some 32 costume changes without seriously ruffling her composure. Hitchcock's elegant cinematic style, evident here and there, seems wasted in a mélange of banal dialogue, obtrusively phony process shots, and a plot that congeals more often than it thickens.

When an unknown director turns out a suspense melodrama as dreary and unconvincing as this, moviegoers revel in the thought of what it might have been if Hitchcock had done it. It is disconcerting to come away from *Marnie* feeling precisely the same way.

Vintage Violence

The Killers, nominally based on a vigorous short story by Ernest Hemingway, seems to borrow most of its inspiration from the Marquis de Sade. In 1946, the Hemingway story triggered a crisp crime thriller starring Burt Lancaster as the willing victim gunned down by hired assassins. The latest version, with John Cassavetes, was designed as a full-length feature for television, then was bucked along to theater exhibitors when NBC decided that its burly blend of sex and brutality might loom rather large on the home screen.

In an opening sequence that roughly sets the tone, two hoods, contracted by Con Man Ronald Reagan, show a fine flair for menace as they trail Cassavetes to a school for the blind, where they pummel a winsome blind receptionist. In another scene, they threaten to parboil a man sweating off pounds in a steam cabinet, thus warming up for the moment when they thrust leggy Angie Dickinson headfirst out the window of a skyscraper hotel room, trying to make her tell what happened to the $1,000,000 swag from a mail robbery.

Perhaps the sole justification for turning a fine old movie into a just passable new one can be summed up as Angie Dickinson. Playing the tawny, amoral triplecrossing swinger who lures Cassavetes from auto racing to a life of crime, Angie isn't a subtle actress. But she somehow suggests to every male in the audience that this is a girl more inviting, and more dangerous, than a custom Ferrari idling on a fast track.

REAGAN & DICKINSON IN "KILLERS"

SOVFOTO

ALEXANDER PUSHKIN
A first masterpiece.

Great Performance

EUGENE ONEGIN *by Alexander Pushkin. Translated from the Russian with a commentary by Vladimir Nabokov.* 4 vols. 1,850 pages. *Pantheon.* $18.50.

Educated Russians of the pre-Communist era could be expected to know long passages of Pushkin's *Eugene Onegin* by heart. The romantic (and mock-romantic) novel in verse about Onegin, the bored fop, Lenski, the pup-poet he kills in a duel, and Tatiana, the good girl who grows up, was the first masterpiece of the modern Russian language. But until now an American who did not read Russian could only nod politely when told that the poem was a work of genius, and wonder, after looking at the translations available, whether a fondness for *Onegin* were not merely one more Tartar mania.

It has taken the formidable Vladimir Nabokov, scholar, poet, literary puzzlist and possessor of the most elegant 19th century English prose style still at large, to present enough of the poem to the nonreader of Russian so that the rest is guessable.

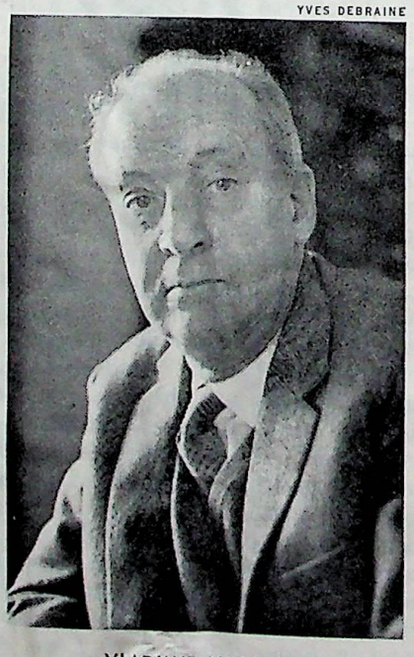
A reader who has known *Onegin* (pronounced Oh-*nyay*-gin, with a hard *g*) only as a Tchaikovsky opera finds to his surprise that Pushkin himself is one of the novel's main characters. He bustles through its pages like a genial host, seeing to it that each reader has a glass of champagne and has been properly introduced to the characters. His chatter—ironic remarks about the shortcomings of his friend Onegin, or an elaborate digression about the feet of pretty women he has known—has both awkwardness and charm. It also has an important literary purpose, in that it allows Pushkin to maintain the balance between involvement and detachment and participation and comment that his lightly ironic tone requires. Thus when the melodramatic plot has largely unwound (Onegin has rebuffed the lovestruck Tatiana and out of contrariness flirted with Olga, her sister and Lenski's fiancée; Lenski has foolishly challenged Onegin to a duel and has been shot for his trouble), Pushkin is able to brighten the mood by keeping himself between the characters and the reader. Ah well, yes, it is a great pity, his attitude suggests when the reader expresses sympathy, but then that is what happens to Lenskis.

Feudist of Caliber. Other English translations exist. The trouble with these, explains Nabokov, a literary feudist of Dr. Johnson's caliber, is that they are "unfortunately available to students." Another trouble is that they are rhymed. Brilliantly modulated rhyme is one of the high delights of the poem, but Nabokov argues heatedly that it is not possible to rhyme a translation and remain true with any exactitude to the meaning of the original. The English word that is needed for sense will not, except by happenstance, have the structure and ending that is needed for rhyme. Consequently the rhyming translator is led into paraphrase and thus, Nabokov argues—taking an extreme view in a dispute that will never be satisfactorily settled—into blurred sense and fudged detail.

After apologizing for the translations of others, Nabokov uncharacteristically apologizes for his own, in a rhymed, 14-line stanza that imitates the form invented by Pushkin for *Onegin*:

What is translation? On a platter
A poet's pale and glaring head,
A parrot's screech, a monkey's chatter
And profanation of the dead.
The parasites you were so hard on
Are pardoned if I have your pardon,
O Pushkin, for my stratagem.
I traveled down your secret stem

YVES DEBRAINE



VLADIMIR NABOKOV
Fortunately available to students.

TATIANA & ONEGIN*
Ah yes, a great pity.

And reached the root, and fed
Then, in a language newly learned
I grew another stalk and turned
Your stanza, patterned on a sonnet
Into my honest roadside prose—
All thorn, but cousin to your rose.

Actually, it is something between prose and poetry that Nabokov used—he has retained Pushkin's tetrameter—and the result is a recognizable and respectable cousin to a Russian raised on the original poem. Nabokov's version naturally lacks the music, but retains much of the rhythm and at least does not (as do the cloyingly previous translations) mute Pushkin's music by the clumsiness of imitation. The sense is as nearly exact as translation permits.

Horned or Cornute. Nabokov's enormous word skill gives the translation felicity. But his very range of language allows him to choose words which, although exact in meaning, do not give the flavor of the original, generally because they are too high-flown or arcane. The simple Russian word for "horned" (Ch. 6, XXXIX) becomes "cornute," which means horned but is not a simple English word. So with words for "sweetness" and "juvenile," become "dulcitude" and "juvenescence" in English (Nabokov excuses himself somewhat abashedly by pointing out that the sense of the couplet—a lament at moon-June versifying—requires that in this case the words rhyme).

But a reviewer must look hard for lapses. Notably, there is happily no feeling that the translator, who may be the greatest living performer—but necessarily writer—in English, is giving a performance.

It must be said that this rare impression of the Nabokov literary personality is limited to the translator himself, and that the translation could

We park the big ones right in our own backyard

(One of the ways we work with steel)

Even 70,000 ton freighters drop anchor right at Sumitomo's Wakayama steel mill. It's one of the few mills in the world that contains its own modern port facility with a 46-foot-deep harbor. The blast furnaces are only steps away. ☐ The result: important savings in freight costs. That's half the story. Finished products, too, go free of mill-to-port transportation charges. You'll find the time, labor and expense this convenient port saves in the Sumitomo price lists. ☐ Efficiency like this is a habit at Wakayama, newest of four Sumitomo steel mills. Designed by Kaiser Engineering and supplied by United, Abbey Etna, Mannesmann, Mesta, Sack and Krupp, this ultra-modern mill turns out 2,300,000 tons of steel per year (5,000,000 projected by 1968). ☐ For superior steel competitively priced—tubes, pipe, sheets, plate, wire rods, cast forgings and rolling stock parts—y right with Sumitomo.

...y part of one volume of a four-vol... work. Most of the remainder is a ..., outrageous, scholarly, funny, in... and wholly characteristic mass ...tive and wholly characteristic mass ...notes, offering 1) an exhaustive, line... ...line commentary on the text, vari... ...of the text, and the difficulties of ...slation; 2) an exhaustive, line-by... ...digression from this commentary, ...which an elegant three-page defense ...pedantry is typical; 3) a complete ...se in Russian and English prosody; ...learned if somewhat irritable gloss ...19th century literature; 5) a great ...of biographical information about ...kin, which would be more helpful ...were collected in one chunk, not ...reled about the entire work; and ...repeated masterly demonstrations of ...art of literary insult. Dostoevsky, ...instance, is described as "a much ...rrated, sentimental, and Gothic nov... ...of the time."

Occasionally (as when Nabokov solemnly offers as a talisman the lines that happen to fall at the exact center of the work), the notes are extreme enough to be worthy of Professor Kinbote, the fictioned footnoter of Nabokov's own *Pale Fire*.

Scholar's Craft. But such scholarly bickering should not obscure the worth of Nabokov's commentary. The translation can be enjoyed but not really understood without it. And Nabokov, who learned his craft during years of professing at Wellesley and Cornell, is not merely a translator; he is also a truly remarkable teacher. He keeps the students awake.

Doubtless Nabokov will not win the war against paraphrased translation, which is his main concern. Perhaps it should not be won—not all paraphrases are profanations—but certainly it should be fought. But translators should be reminded that uprooting a masterpiece is not a job to be undertaken lightly. "Poetry is what is lost in translation," Robert Frost once observed); students, for their part, should be warned that translation must never be read with complete trust.

...anity Vindicated

FRANCE REBORN *by Robert Aron.* ...0 pages. *Scribner.* $8.50.

Everyone knows how exasperating ...harles de Gaulle was during World ...r II. Arrogant and aloof, he de...ided his own way, and when he did ...get it he sulked. At times he seemed ...irritate F.D.R. more than Hitler or ...o, and Churchill grumped that "My ...gest cross is the Cross of Lorraine." ...French Historian Robert Aron con...ds that the Allies never understood ...at De Gaulle was up to.

Conquest by Coup d'État. It was not ...ere vanity that motivated De Gaulle. ...his obstinacy had a political purpose. ...e Communists, Aron convincingly ...ows in this superlative account of the ...eration, were about to seize power ...many parts of France. They made up a great part of the Resistance, and no one could fault them for their courage during the Occupation. De Gaulle realized that only by appearing as an utterly uncompromising, incorruptible leader could he win the confidence of Frenchmen and stave off a Communist take-over.

The Allies had refused to recognize De Gaulle as the head of a provisional French government, had even toyed with the idea of creating a "third force" in France, minus De Gaulle. They kept him in the dark about the Normandy invasion, allowed him to set foot on French soil only eight days later. But De Gaulle was unperturbed. As soon as he landed in France, he declined an

ROBERT CAPA

DE GAULLE'S RETURN TO PARIS (1944)
Pride with a purpose.

invitation to lunch with Field Marshal Montgomery. "We have not come to France to have luncheon with Montgomery," he said scornfully, and headed straight for the first sizable town to be liberated—Bayeux. He promptly took over and installed his faithful deputy François Coulet as administrative head of the region. Coulet promptly fired the incumbent Vichyite subprefect, whom the British had instructed to stay on the job, and replaced him with a Resistance fighter. It was a simple *coup d'état:* when the infuriated British came to protest, Coulet banged his fist on his new desk, shouting: "My presence here has nothing to do with you. I'm here on De Gaulle's orders." The British retreated.

Calculated Insults. De Gaulle pursued the same tactics throughout France. He was followed by what Aron calls his "Trojan horse," a column of administrators specially trained in London and Algiers to take over the French government. In southern France, the Communists had seized power in major cities, but De Gaulle's well-schooled lieutenants eased them out with a minimum of bloodshed. De Gaulle went out of his way to insult the Communists publicly, no matter how bravely they had fought in the Resistance. In Toulouse, when a Communist in proletarian overalls casually introduced himself, De Gaulle snapped: "Stand to attention when you are speaking to a superior officer." When De Gaulle finally entered Paris amid jubilant cheers, he was all calculation. "How far have you got with the purge?" were his first words to his newly appointed prefect.

De Gaulle's later maneuvers obscured his victory over the Communists. In December 1944, he traveled to Moscow to sign a pact with Stalin. Later, as head of the provisional government, he brought some Communists into his Cabinet. But by then he could afford to be conciliatory, for the Communist threat had receded. For all the praise and blame heaped on De Gaulle, little has been made of this particular triumph. Robert Aron has finally given it the scholarly attention and admiration it deserves.

Ostrea Edulis & Others

THE OYSTERS OF LOCMARIAQUER *by Eleanor Clark.* 203 pages. *Pantheon.* $4.95.

Was one Sergius Orata the noblest and least appreciated Roman of them all? While more militant Romans were battling the Cimbri along the Rhine toward the end of the 2nd century B.C. and the poet Lucilius was pouring out his satires, Sergius Orata was pouring his considerable fortune into his single passion—the cultivation of the oyster. The ups and downs of that bivalvular mollusk ever since are the subject of Novelist Clark's book—a witty blend of fact, fable and fine poetic nonsense.

Author Clark, wife of Novelist Robert Penn Warren, became an oyster addict while living in the village of Locmariaquer on the coast of Brittany, chief breeding ground of the world's most prized oyster. The Locmariaquer oyster is known to science as the *Ostrea edulis.* To the locals it is known simply as the *plate* (the flat one), to distinguish it from the bumpy Portuguese oyster, which is sometimes foisted off on innocent diners as a true *edulis,* and which ostreophiles regard as little better than a mussel or even a clam.

Fathers & Mothers. *Ostrea edulis* is fast disappearing from the Atlantic coast of Europe. But the diner lucky enough to encounter one will not soon forget it: "Intimations of the ages of man, some piercing intuition of the sea and all its weeds and breezes shiver you a split second from that little stimulus on the palate. You are eating the sea and are on the verge of remembering something connected with the flavor of life itself."

When she can muzzle her metaphors, Author Clark is a mine of oyster lore. Millions of years older than man, the

Marion 7900 Walking Dragline at work in coal fields in southwestern U.S.A.

MARION 7900

WORLD'S LARGEST WALKER*

*outside U.S.A. *in phosphate

A Marion 7900 Walking Dragline will begin working next year in Moroccan phosphate fields of North Africa. It will be the largest walker outside the U.S.A. as well as the largest dragline in phosphate anywhere. Marion's 8800, an 85-cubic-yard walker at work in the U.S.A., is the world's largest.

The Marion 7900's 45-cubic-yard bucket on a 225-foot boom, the 6,500 horsepower of its combined electric motors and its 4,000,000-pound working weight are indications of its size and capacity.

This Marion will be equipped with Marion Statitrol control, combining Ward Leonard electrical control and silicon-controlled rectifiers in a system that is establishing new records for long, low maintenance performance and significant savings in power costs while applying maximum speed and usable power to machine performance and automatically protecting machinery from overload.

Marion Walking Draglines are walking to work all over the world. For 20 years, they have proved repeatedly their ability to move big yardages at lower costs on many different types of work. Get the complete story on Marion Walkers (from 5 to 100 cubic yards) from your Marion Distributor.

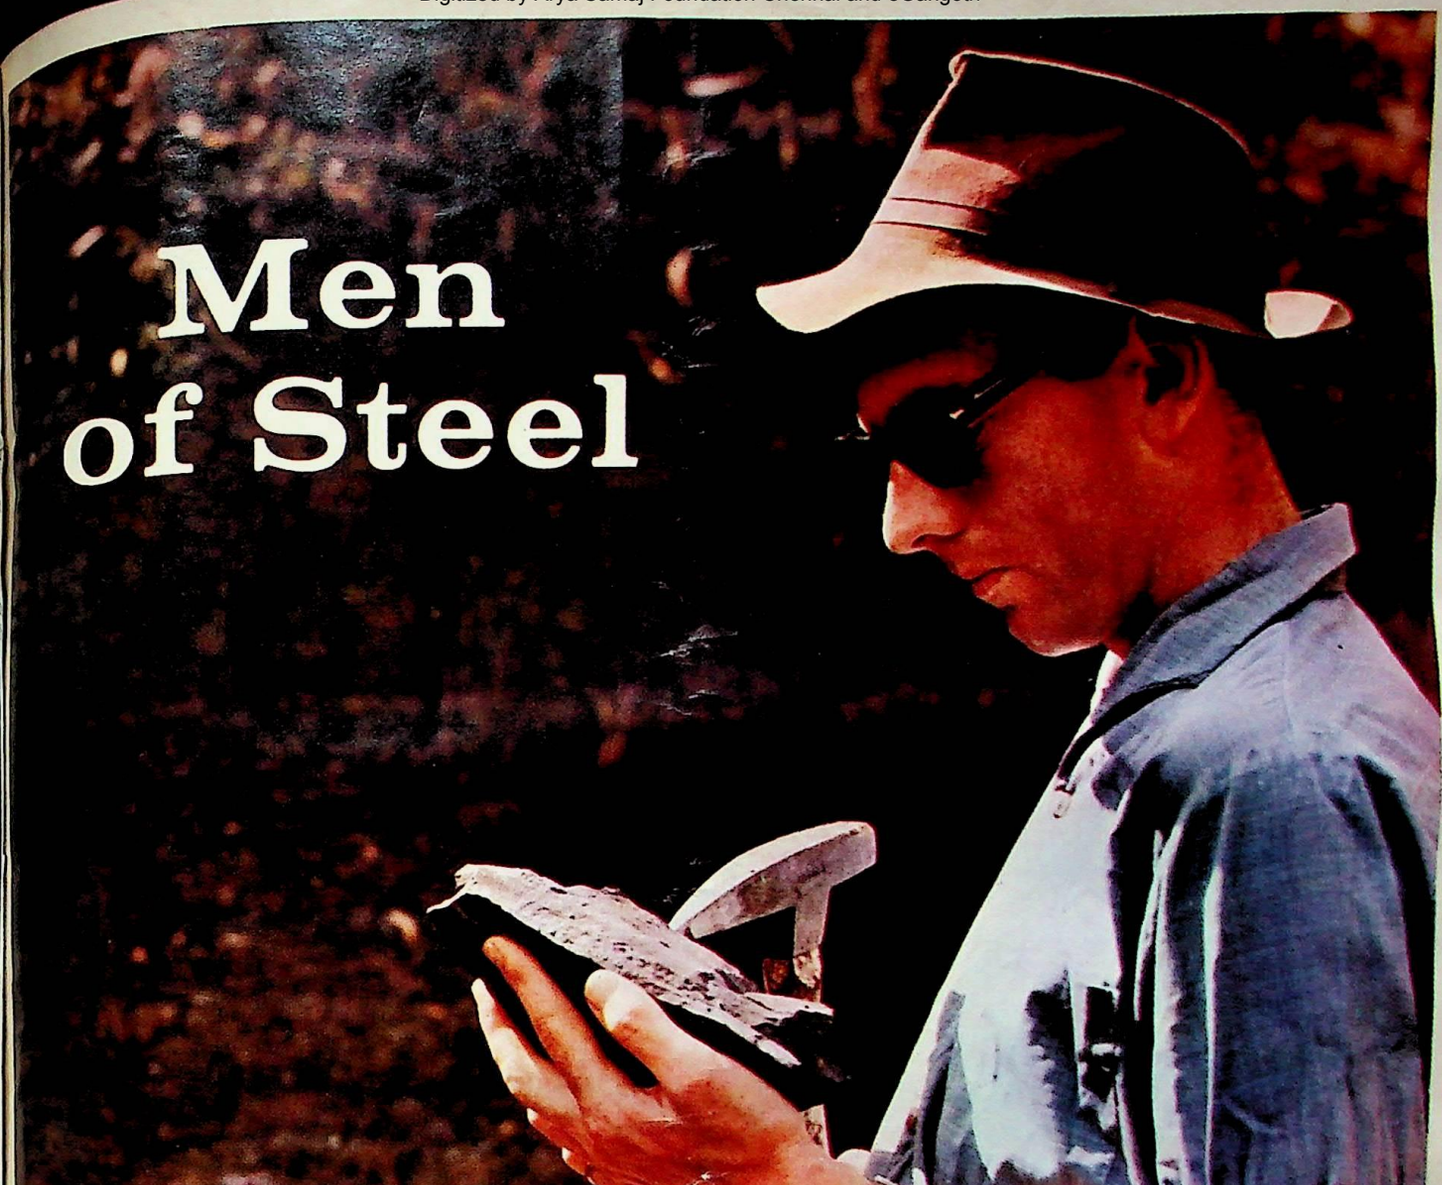
Men of Steel



The Geologist

Exploring a continent is the daily task of B.H.P. field geologists. The ever increasing demand for raw materials for Australia's rapidly expanding steel industry has made B.H.P. Australia's biggest prospecting organisation.

B.H.P. — a public company with forty-four thousand employees, is owned by some ninety-seven thousand shareholders. During 1963 the equivalent of almost one hundred million U.S. dollars was invested in new capital works.
Current output of B.H.P. steel is at the rate of five million long tons of steel ingots a year. And increasing.

The Broken Hill Proprietary Company Limited and subsidiaries: a group of companies engaged in a complete operation comprising mining and shipping of raw materials and the manufacture of iron and steel.

Look South for Steel

HEAD OFFICE: 500 Bourke Street, Melbourne, Australia. Resident representative for South East Asia located in Singapore, and distributors in Hong Kong, Indonesia, Malaysia, the Philippines, and Thailand.

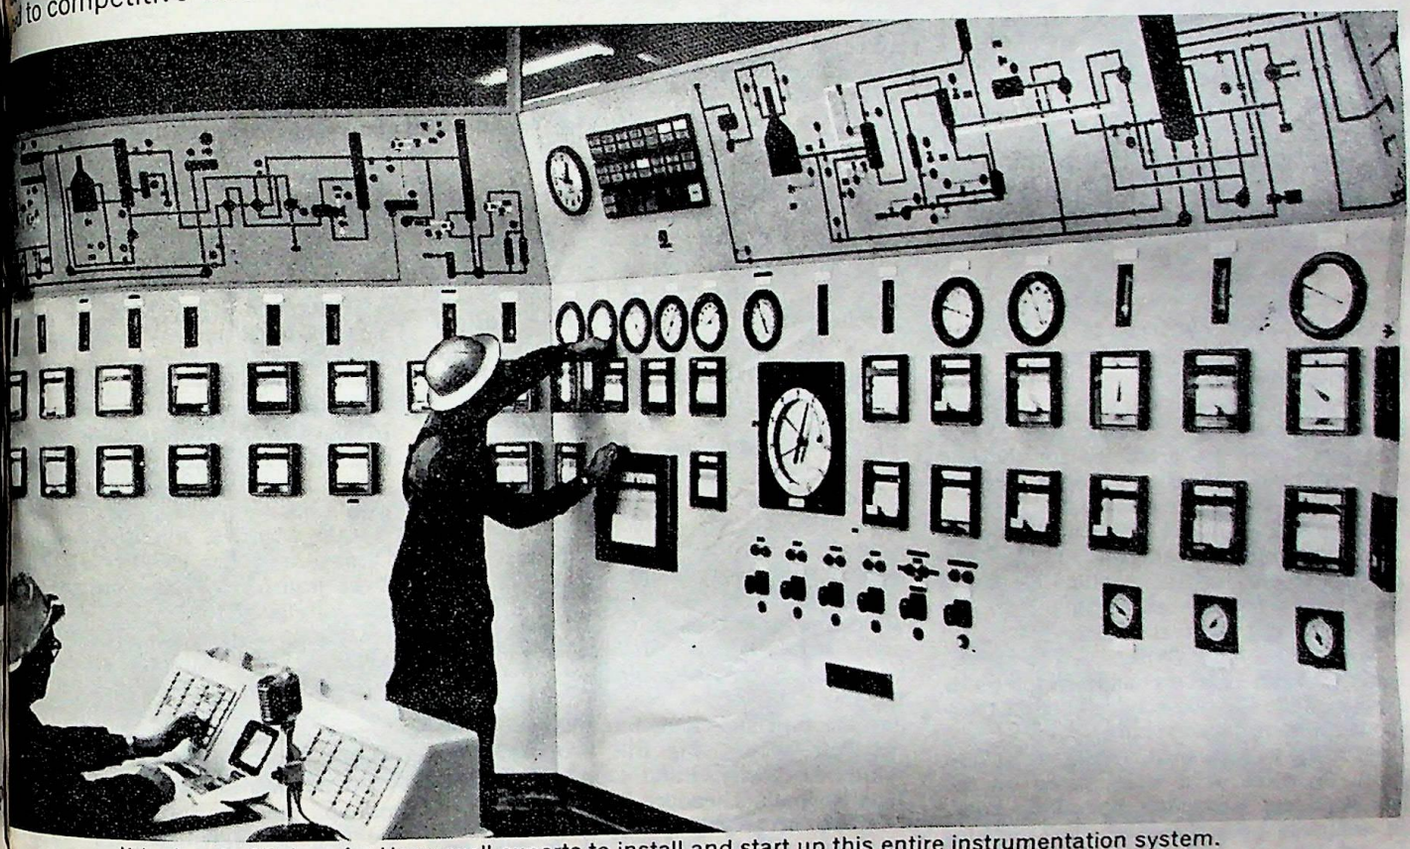
PROCESS AUTOMATION REPORT FROM HONEYWELL

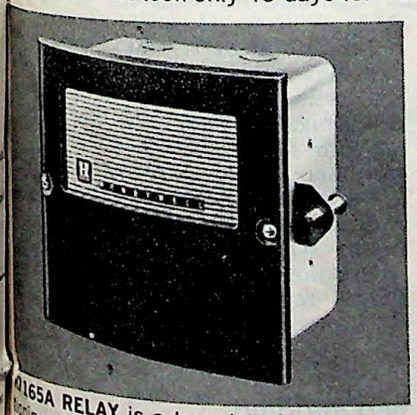
Automatic controls bring greater product yield

Higher recovery rates and lower plant costs can be achieved for any process with new super-accurate control systems. For example, the Honeywell-built system shown below enables a large oil refinery to control the blending of high-octane gasolines so accurately that yields are increased and prices held to competitive levels.

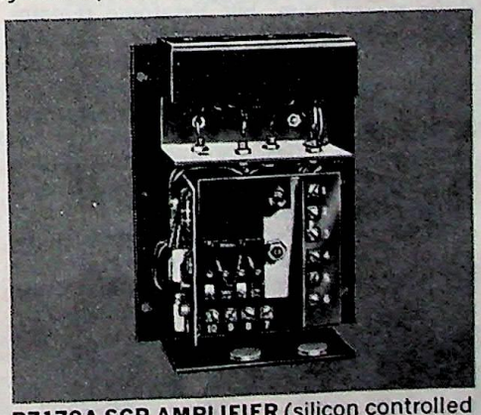
Practically any process involving control of temperatures, pressures, humidity, liquid levels or flows can be made more efficient and profitable with Honeywell controls or control systems. For free information and catalogs on everything from simple non-recording control devices to fully automated systems, write to address below.



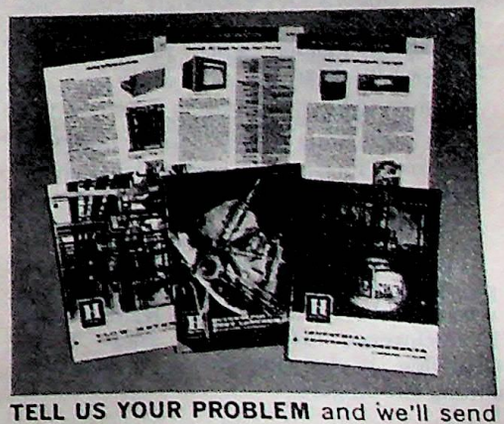
It took only 45 days for Honeywell experts to install and start up this entire instrumentation system.



Q165A RELAY is a transistorized proportioning controller for reversible motors. It may also be used as an alarm device to indicate a deviation from set point in a controlled medium. Flush or surface mounting.



R7170A SCR AMPLIFIER (silicon controlled rectifier) accepts unipolar, floating-ground DC input and converts it to proportional AC or DC output to drive saturable core reactors for electric furnaces, other uses.



TELL US YOUR PROBLEM and we'll send you complete information on the controls you need. Write Mr. R. Hubley, Honeywell International, Wayne & Windrim Avenues, Philadelphia 44, Pennsylvania, U.S.A.

TIME LISTINGS

TELEVISION

Wednesday, November 4

POST-ELECTION SPECIALS (CBS, 7:30-8:30 p.m.; ABC, 10:30-11 p.m.; NBC, 11:30 p.m.-12:30 a.m.).* The three networks' political commentators analyze the results.

Thursday, November 5

BEWITCHED (ABC, 9-9:30 p.m.). Witch Samantha is stirred to jealous and witchly japes when her husband is interviewed by a pretty high school girl reporter.

Friday, November 6

NEW YORK PHILHARMONIC YOUNG PEOPLE'S CONCERT (CBS, 7:30-8:30 p.m.). Leonard Bernstein explains the sonata form, conducts excerpts from Mozart's *"Jupiter" Symphony* and sings *And I Love Her*, the hit song from the Beatles' movie *A Hard Day's Night*. Season première.

BOB HOPE PRESENTS THE CHRYSLER THEATER (NBC, 8:30-9:30 p.m.). Anne Bancroft stars in Playwright William Inge's first television play, which involves the marriage of a baseball has-been and the daughter of a socially prominent St. Louis family. Color.

Sunday, November 8

LAMP UNTO MY FEET (CBS, 10-10:30 a.m.). The Broadway cast of *Oh What a Lovely War* presents excerpts from their hit antiwar show.

CAMERA 3 (CBS, 11-11:30 a.m.). Bertolt Brecht's dramatic exercises for Shakespearean actors are presented for the first time on television. Lotte Lenya demonstrates the exercise for *Romeo and Juliet*.

DISCOVERY (ABC, 11:30 a.m.-12 noon). The program debunks the myths surrounding many of the popular heroes of the Old West such as Buffalo Bill, Bat Masterson and General Custer.

WILD KINGDOM (NBC, 5-5:30 p.m.). Hosts Marlin Perkins and Jim Fowler explore the 130,000-acre Philmont Boy Scout ranch in New Mexico.

PROFILES IN COURAGE (NBC, 6:30-7:30 p.m.). Première of a series based on the late President Kennedy's bestselling book. In tonight's program, Alabama's Senator Oscar Underwood knowingly ruins his chances for the 1924 Democratic presidential nomination when he denounces the Ku Klux Klan.

Monday, November 9

THE JONATHAN WINTERS SHOW (NBC, 9-10 p.m.). First of six "specials" starring the zany comedian.

Tuesday, November 10

BELL TELEPHONE HOUR (NBC, 10-11 p.m.). Henry Fonda hosts a program devoted to the lyrics of Oscar Hammerstein II. Florence Henderson, John Raitt, Gretchen Wyler and Susan Watson are among the singers.

THEATER

The new season is setting Broadway marquees ablaze again, though some were darkened almost as soon as they were lighted. *Cambridge Circus*, *Traveller Without Luggage*, and *The Last Analysis* flashed their lights and are now gone. Holdover shows still predominate. Of the long-runs, *How to Succeed in Business Without Really Trying* is still incontestably the best of the musicals, and *The Subject Was Roses* the best of the straight dramatic plays. The top comedy distance runners are *Barefoot in the Park* and, if there is anyone left who hasn't seen it, *Mary, Mary*.

OH WHAT A LOVELY WAR is an animated documentary that grins like a skull at the follies of World War I. Adding humor and song to pity and terror, *Lovely War* achieves a catharsis hardly to be believed of a musical. The hand that guides it is Joan Littlewood's; the guiding spirit is Bertolt Brecht's.

FIDDLER ON THE ROOF. This evocative musical discovers gentle sorrow and infectious gaiety in the story of Tevye and his five daughters in a Russian village prior to the 1905 revolution. Zero Mostel is a million rubles' worth of joy.

ABSENCE OF A CELLO. This amusing farce breezes along on the proposition that the corporate image is a fright mask.

RECORDS

Folk Music and Blues

PETER, PAUL AND MARY IN CONCERT (2 LPs; Warner Bros.). P. P. & M. have now reached the status of Artur Rubinstein. They can record the same music over again and expect it to sell as well as it did the first time. Actually, the repeats (including *If I Had a Hammer, 500 Miles, Blowin' in the Wind*) are the best part of this package, which is burdened with a lot of tomfoolery, including twelve minutes of something called *Paultalk* and a sing-along section by an audience that should be fired forthwith.

THE FOLK BOX (4 LPs; Elektra). A sprawling anthology that includes a few songs from the British Isles and Africa but concentrates on American music. Most of the fine folk singers of today and yesterday are on hand, including Woody Guthrie, Pete Seeger, Big Bill Broonzy, Josh White, Leadbelly, Blind Lemon Jefferson, Jean Redpath, Theodore Bikel.

HARRY BELAFONTE: BALLADS, BLUES AND BOASTERS (RCA Victor). The folk scene shifts around him, but Belafonte remains poised and onstage. He almost mechanically puts a satin sheen on a pretty ballad, but he can also tighten throats with a lullaby ("I'll take you to a land where you can lift your head") and summon up red-blooded jubilation when he boasts, "Come on over to the front of the bus, 'cause I'll be riding up there."

BUFFY SAINTE-MARIE: IT'S MY WAY! (Vanguard). The guitar-twanging, sing-it-yourself segment of folk fans does not insist on professional singing even in others. To these earnest ones, Buffy Sainte-Marie's emotional involvement in her songs counterbalances her unsure delivery. She writes and sings about war, drug addiction, a lover's desertion and, in *Now That the Buffalo's Gone*, the wrongs of the American Indians, her own people.

JOHN HAMMOND: BIG CITY BLUES (Vanguard), in spite of its title, consists largely of country blues. But Hammond is one of the new breed of young, city-rooted white singers who are borrowing the Negro blues. Although he is an imitator, Hammond gets inside the songs, and his voice is live and versatile, equally at ease in a plaintive, long-lined lament like *M... Hour Blues* and in the up-tempo acrobatics of *My Babe*.

GALE GARNETT: WE'LL SING IN THE SHINE (RCA Victor) is the pop ... this folk album, one of five ... Garnett herself. Only 21, she ... a busy though not very folksy ... write about, having acted off-... at 15, sung at the Blue Angel at ... low, husky voice sounds best in ... gallant loneliness, like *Wanderin'*.

Take time out to discover Malaysia

Be it business or pleasure, Malaysia offers you the best of both worlds. For the business man this young nation presents a golden opportunity to establish new and prosperous markets. For the vacationer Malaysia offers unsurpassed opportunities to enjoy a relaxed and memorable holiday.

Here you can laze away the days on the golden sands of Penang's tropical beaches, explore the Historical ruins of Malacca or discover the picturesque beauty of the East Coast villages.

For the bolder spirit the National Park, where the law of the jungle still prevails, except that the camera has replaced the rifle. Or eighteen holes of golf in the Cameron Highlands, Malaysia's famed hill resort.

In Kuala Lumpur, the nation's capital, overseas investors and local industry have combined to build a prosperous economy. The generous financial rewards offered by Government legislation have encouraged many international market leaders to establish local production plants.

You, too, can find the best of both worlds in Malaysia. For further details and illustrated literature write to Department of Tourism, P. O. Box 328, Kuala Lumpur, Malaysia.

Malaysia

his recent *Life Studies*, these poems sue Lowell's preoccupation with ty, madness, marriage and his heritage in tough, masculine verse.

MY AUTOBIOGRAPHY, by Charles lin. Hollywood's comic genius writ quently about his pitifully poor child but prefers name-dropping to telling his later artistic achievements. The for this autobiographical lapse is on every page and saves the book his fame, the penniless child in still marvels at the attention of the

PATTON: ORDEAL AND TRIUMPH, by las Farago. In the best-documented raphy yet of World War II's con troversial commander, Farago argues General Patton was a tactician bold gambits saved many lives.

THE BRIGADIER AND THE GOLF by John Cheever. In these chill stories, the fall from corporate grace merger, the personal scandal that stop the money, are the demons Cheever uses to speculate about the fears aried suburbanites.

REMINISCENCES, by Douglas Mac In a style that is more restrained usual baroque eloquence, MacArthur idly recounts his trials and his triumphs.

HERZOG, by Saul Bellow. In this awaited novel, Bellow's hero is a search of a new life amid the rubble wrecked marriage. His conclusion appointingly flat ("I am what I am in the process of reaching it, H Bellow ranges wittily, learnedly and ceptively over nearly all the dilemmas major, minor and plain absurd—of century man in a virtuoso display a constant delight.

THE WORDS, by Jean-Paul Sartre ways a brilliant but negative mind Sartre has focused his critical powers himself as a child and dislikes what sees. From this graceful, simple memoir the cast of a powerful, angry mind was to reject all symbols of tradition from God to the Nobel Prize, can be traced.

THE ITALIANS, by Luigi Barzini. Foreigners often love Italy for the wrong reasons thinks this brilliant Italian journalist goes on to consider his countrymen damaging detail.

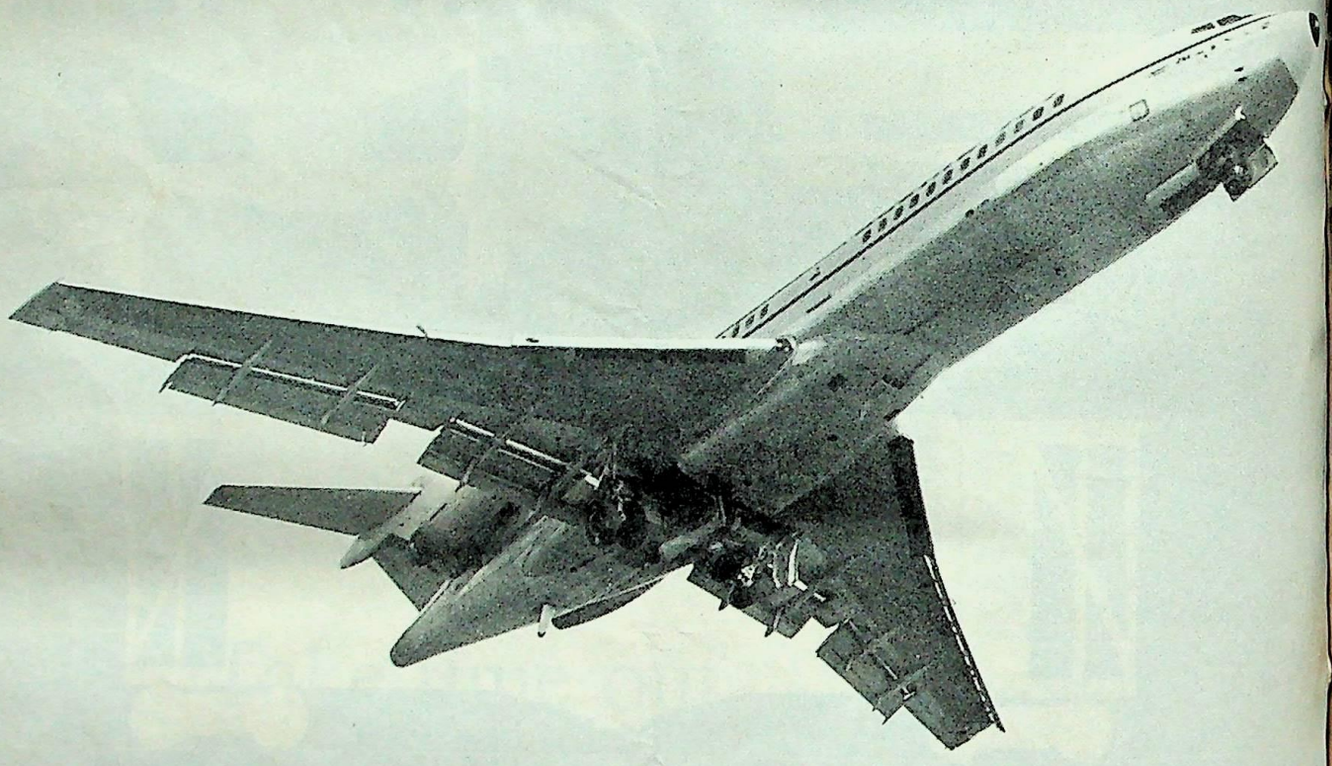
Airport: La Paz, Bolivia
Altitude: 13,358 ft.
Takeoff run: 7600 ft.
Takeoff: one engine cut at V_1



Plane: Boeing 727

Continuing its phenomenally successful ways, the Boeing 727 recently flew into La Paz, Bolivia, to become the first jet ever to operate from "El Alto," the world's highest commercial airport.

The 727 made exceptionally short takeoffs and landings, even in the rarefied air at La Paz's 13,358-foot altitude. As it reached V_1 speed on takeoff, Pilot Jack Waddell cut one engine. The 727 took off in a steep climb with only two engines operating. Gross weight was 126,000 pounds. The flights, according to Waddell, were "routine and uneventful."

The Boeing 727 has now demonstrated its superior performance on all inhabited continents and in 31 countries. But even more important, the 727's superior performance, reliability and passenger appeal are proving it an outstanding profit-maker in day-to-day commercial operations. It flies higher, faster, farther than predicted. Performance, in fact, is as much as 12% above Boeing's origin guarantees.

These fourteen leading airlines h already ordered 225 Boeing 727s: Nippon, American, Ansett-AN BWIA, Eastern, JAL, Lufthansa, tional, Northwest, Pacific South South African, TAA (Australia TWA and United.

LETTERS

Fate of Leaders

Sir: The world was saddened to read of the passing of Herbert C. Hoover [Oct. 16]. In an adjoining column of your magazine, we also read a report of Nikita Khrushchev's being under house arrest. What a contrast in the treatment shown former leaders, controversial though they were! Need anyone ask the difference between democracy and Communism?

MRS. GRANT VEVANG

Palos Meadows, Ill.

Sir: Every recognized expert on Soviet affairs was greatly surprised at the sudden removal of Khrushchev, but they could not have been had they read your cover story of last Feb. 21. You as much as predicted the eventual rise of Brezhnev to the premiership.

BERNARD G. BREINING

Long Beach, Calif.

London's Aide

Sir: The Walter Jenkins case [Oct. 30], aside from being a personal and national tragedy, also shows a tragic side of our society. Homosexuality is cloaked in some of the most deluded ideas of our "enlightened" times. We treat it as men treated certain sicknesses in medieval times. We ignore information that has been provided by Kinsey and others and go blundering down the same old trails of judgment and excuse. Aside from the legal aspect, a Christian organization like the Y.M.C.A. has no business making a final judgment on a man's life. We are presently involved in a search for some positive answers to this problem in Philadelphia. Christianity has always stumbled and fallen in the mud when it has tried to be the judge of a man's worth and morality. Our successes have only been in pointing to the way and helping men find redemption and wholeness.

RICHARD A. EASTBURN
Director of Adult Program
The Young Men's Christian Association
Philadelphia

Sir: Before I drown in the flood of tears for Walter Jenkins, may I ask if I am alone in feeling that he forfeited his right to sympathy when he chose to ignore the vulnerability of his position, even after it became a matter of record? Presumably intelligent, he could have resigned in dignity and privately sought psychiatric treatment. He preferred to lay his family, friends and country on the line.

MRS. O. A. ERENSEL

St. Paul

Sir: Since when does sending flowers to a sick friend become a curious act? I was taught that it is a charitable act.

MARY MARGARET SUGRUE

Detroit

Pook Spaghetti

Sir: I was heartened to see your article on the Pook's Hill Interchange [Oct. 30]. As an everyday commuter along this route, I am gratified to know that I am not the only driver confounded, cantankerous and confused about this ineptness and lack of forethought of highway planning. If the cut-ups at the U-turns continue, it'll be "Pook's Hill" instead of Pook's Hill. In spite of this mess of spaghetti, they produced a heck of a meatball.

DAVID M. DEANS

Rockville, Md.

Contested Abbey

Sir: Re the destruction of the abbey at Monte Cassino [Oct. 30], the monastery, although part of the famous "Gustav Line," was not, as you reported, "being used as a German stronghold." The German commander, Kesselring, forbade, on pain of death, any of his troops' being anywhere near the monastery. It was only after the Allies bombed and destroyed Monte Cassino, on the erroneous assumption that it was being used as an observation post, that the German troops occupied the position. Then, using the rubble as a defensive position, the Germans had a very sizable tactical advantage.

G. ROLF SVENDSEN

Colgate University
Hamilton, N.Y.

▶ *The Allied commanders responsible for military action in the area split over the decision to bomb the monastery, and later differed about responsibility for the orders to do so. U.S. General Mark Clark wrote after the war that he had been opposed to the bombing. The Germans denied having occupied the monastery buildings, and the Abbot-Bishop of Monte Cassino testified that "only three military police occupied the monastery."*—ED.

Active Bishop

Sir: As an indignant son, may I say that you do our retiring Presiding Bishop of the Protestant Episcopal Church, the Rt. Rev. Arthur C. Lichtenberger, a great injustice when describing him as being "wasted by Parkinson's disease" [Oct. 23]. True, the bishop's voice is affected. He has, however, lost little mobility, and this past summer could have been found trout-fishing in Vermont streams, no easy undertaking for any 64-year-old bishop. Now that he has retired as Presiding Bishop, he will become professor of pastoral theology at the Episcopal Theological School in Cambridge, Mass., as an active teacher.

ARTHUR T. LICHTENBERGER

Westfield, Mass.

China's New Threat

Sir: Since China's knowledge and possession of an atom bomb is a certain threat to India's security [Oct. 23], it is high time that she gave up her sterile policy of nonalignment and entered into a military alliance with the U.S.A., which proved to be India's true and good friend when it rushed to India's aid during the dark hour of China's naked aggression two years ago. As things are now, it will be fatal for India to remain complacent about China's growing strength.

ANTHONY PARAKAL

Bombay

Those Successful Olympians

Sir: Every man, woman and child in the U.S. owes a vote of thanks to the American athletes who participated in the Tokyo Olympic Games [Oct. 30]. Oerter's and Roth's performances were made of the stuff that wins Congressional Medals of Honor. Lieut. Mills's run will not only make the descendants of Sitting Bull proud; it makes us all feel better about losing at Little Big Horn. But I seriously suggest that the U.S. withdraw from the 20,000-kilometer walk. Halfway around the world is obviously too much. You meant to say 20,000 meters.

DITMAR H. BOCK

Buffalo

Poetic Steroid

Sir: Perhaps TIME readers will enjoy the scientific name for "the steroid nucleus" [Oct. 23]: Cyclopentanoperhydrophenanthrene. Its dactylic meter is worthy of Virgil.

RALPH S. WOLFSTEIN, M.D.
Cedars of Lebanon Hospital
Los Angeles

Thomistic Debate

Sir: Thanks to Dr. Kreyche [Oct. 23] and thinkers like him, Catholic universities may now evolve as more than mere purveyors of Thomism. Too long have these philosophy factories produced students who resemble simian creatures able to quote the hylomorphic theory* in their sleep. The problem, however, has been not so much with the abused "angelic doctor" as with the cataleptic Thomists themselves. They merely recite Thomas and fail to think him.

VINCENT J. GARZILLI

Glen Rock, N.J.

Unselect Schools

Sir: You state that Harold Wilson is the first British Prime Minister who is a "'grammar-school boy'—meaning he did not attend one of the country's select private schools [Oct. 23]." The first part of this statement may be correct, though it should be explained what the British grammar school is. It is very broadly equivalent to an American high school.

* Aristotle's view of matter as a union of basic substance and substantial form. The first remains the same throughout change; the latter varies with the movement and interaction of elements in the universe.

but entry is confined to pupils reaching a certain academic standard. Although Harold Wilson may be the first Prime Minister to have attended this type of school, neither Lloyd George nor Ramsay MacDonald attended a "select private school." Going back farther into history, you will probably find that some Prime Ministers were educated by tutors and did not attend any school.

J. K. JACKSON

Istanbul

Not All Hatred

Sir: Your justifiably friendly review of Malaparte's *Those Cursed Tuscans* [Oct. 30] makes me recall how Kurt Erich Suckert explained to me in Rome in 1926 why he had chosen Curzio Malaparte as his pen name (and later as his own name). "Buonaparte," he said, "won at Austerlitz and lost at Waterloo. Malaparte loses at Austerlitz and wins at Waterloo." I knew him from 1925 until his death, and even wrote a "fictitious reminiscence" about him. I can assure you that the hatred and contempt were of his last writing period alone and never in his personal relations.

PERCY WINNER

Washington, D.C.

Another Buddhist Hoax?

Sir: That so-called highlanders' rebellion [Oct. 2]—is it only the word of the Viet Cong? Or are we witnessing another "Buddhist"-type hoax in which the Viet Cong agents are agitating while the policy-makers of the State Department are encouraging them in an attempt to exploit the situation as a pretext for taking advantage of their position as "allies" to install some kind of military or political bases more strongly in the highlands, in default of being able to do so in the lowlands? At any rate, it would be a hoax equivalent to the "Buddhist" hoax—and one which can only help those who want to "divide and conquer" us, from wherever they come—if the world swallowed the line now being peddled by the American press to the effect that a "traditional hatred" exists between the Vietnamese of the highlands and those of the lowlands.

Those who would "teach" us how to treat our "minorities" would do better to tend to their own.

MADAME NGO DINH NHU

Rome

A *Burka* for Snow

Sir: You ran Sir Charles Snow's photo in a shaggy, angular Russian coat and called it a "special Russian academic garb" [Oct. 30]. You were wrong. It is the well-known Caucasian *burka* (pronounced boor-kah), an everyday, all-purpose sleeveless coat originated by the Circassians, Chechens and other mountaineers of the northern Caucasus. In October 1963, Sir Charles visited Russia to receive from the University of Rostov an honorary doctorate of philological sciences, and to be Mikhail Sholokhov's personal guest. It must have been on that occasion that Sir Charles wore the *burka* as a bit of local color, but certainly not to march in any academic procession.

The degree was arranged for Sir Charles by Sholokhov as a return compliment for the role Sir Charles had played in the bestowing of an honorary doctorate on Sholokhov at Scotland's Saint Andrews University in April 1962, the first Russian writer to be so honored in a British university since Turgenev's honorary doctorate at Oxford in 1879. I was born and grew up in Rostov. That coat of felt and goat's wool is surely familiar to me, even though it does not at all belong in the groves of academe.

ALBERT PARRY

Colgate University
Hamilton, N.Y.

Biblical Weather Report

Sir: In his attempt to update the Bible [Oct. 23] so that it reads like today's newspaper in a common-denominator prose, Translator Speiser sacrifices much along with poetic diction. The opening lines of *Genesis* sound like a weather report on Hurricane Hilda instead of the image or symbol of the active power of God brooding over dumb creation and awakening a response.

CYRUS J. PEERY

White Plains, N.Y.

Sir: Comparing the King James Version with the version cobbled up by the American Bible Press, Mr. Webster might justifiably say that they have transformed, transfigured, removed, changed, transported and astonished the story of the Bible.

A. J. BALDERMAN

San Diego

Boomp

Sir: Jim Phelan apologizes "to Tom Lea for having stolen a vivid line from you—two months before you wrote it [Oct. 7]." But for technique and style you both owe at least a nod to the old English primer book. The comment seems to have been inspired by the lines in the litany: "From Ghoulies, and Ghosties, and three-legged beasties, and things that go boomp in the night, Good Lord, deliver us."

ALLAN W. WENT

Columbia, S.C.

Ask for Men of Balanchine

Sir: Once I was a devoted fan of the New York City Ballet, but I have attended a few performances in past years. Your article unconsciously explains why [Oct. 16]. George Balanchine has drained ballet of all its theatricalism and has left us with a series of impersonal ballet exercises and pseudo-acrobatic routines danced by equally impersonal technicians. Nowhere in your article does Mr. Balanchine or your writer give any hope for the sexually lacking male segment of the company. Are the "ballerinas" all that Mr. Balanchine is interested in? Tall ones at that. What about the tall men needed to partner them? As for Mr. Balanchine's statement that any of his ballerinas would be a prima ballerina with any other company—I find this highly improbable. Ballerinas are far more than impersonal technicians. They are highly individual personalities. Mr. Balanchine's girls are not.

RICHARD MEALEY

New York City

Uncoveted Neighbors

Sir: Omphaloskepsis, then, is no longer the *métier* of only the Buddhists [Oct. 23]. The difference is that instead of regarding our own, we are apt to be concerned with that of our neighbor's wife. But perhaps this is only a passing navelty.

NEAL HOPKINS

Annapolis

Sir: How do you compliment the girl who has her navel on display? Your Hawaiian readers should surely tell you. A cordial solution is their traditional salutation, *"Pehea ká piko?"* That is to say, "How's the navel?"

GURNEY BRECKENFELD

BAKER, BACON, AUCHINCLOSS & FABER IN PHILADELPHIA

A letter from the PUBLISHER

Bernhard M. Auer

WE feel rather close to the subject of urban renewal, taking considerable pride in the fact that Time Inc. has played a key role in major rehabilitation of an area in the world's greatest city. In 1957, when work was started on the new TIME & LIFE Building on Manhattan's Avenue of the Americas between 50th and 51st Streets, this new extension of Rockefeller Center was in a neighborhood scarred by shabby old buildings dating back to the era of the Sixth Avenue Elevated. During the seven years since then, 16 other major buildings have been completed or started at nearby locations which, before TIME ventured across the avenue, were considered the other side of the tracks. Among the new neighbors: the Equitable Life Assurance, Sperry Rand and Columbia Broadcasting System buildings, and the New York Hilton and Americana hotels.

With such a big urban renewal story going on right outside the window, it did not necessarily take any long-distance perspective on the part of the editors to decide that here was a subject for a cover story. Choosing the city and the individual and the right time was not quite so easy, but the happy choice came to Philadelphia, Edmund Bacon and this week.

The major reporting for the cover story was done by a bona fide expert in the field: Gurney Breckenfeld, former managing editor of HOUSE & HOME and co-author of *The Human Side of Urban Renewal* (Ives Washburn; 1960), who recently joined the TIME staff. While Breckenfeld spent eight days casting a critical eye on old and new Philadelphia, Senior Editor A. T. Baker, Writer Douglas Auchincloss and Researcher Nancy Gay Faber made a one-day foray into the city, and TIME correspondents reported on renewal progress in a dozen other U.S. cities.

As the MODERN LIVING cover story and the four pages of color photographs show, the story of urban renewal is one that develops over a period of years and spreads all across the country. With a sidelong glance at his front-of-the-book colleagues who were preparing to get out our Election Extra edition this week within hours after the polls close,* Editor Baker said: "Urban renewal is slow news but it is big news, and it might just have more to do with the way we live than the election."

* It will go to press some 80 hours after this issue, will be sold on newsstands, distributed as quickly as possible to subscribers in the U.S. and Canada, and will be bound into next week's regular overseas editions.

Why this KLM captain in Amsterdam is impersonating a radar operator in New York

Because he's helping the trainee pilot next door plot a course in thick fog over John F. Kennedy International.

How can the trainee be over New York and in Amsterdam at the same time?

By sitting at the navigator's table on the flight deck of one of KLM's million-dollar flight simulators.

These are electronic devices which give a fantastically realistic reproduction of weather conditions, navigation signals and radar beacons along any route in the world.

So why is the pilot being trained as a navigator?

Because every pilot must serve nine months as a navigator before he's allowed to take over the controls as a co-pilot.

After 12 years hard work, if he's good enough, he might become the captain of a DC-8.

That's one of the reasons why the collective experience of the flight crew aboard a KLM DC-8 averages about 76 years.

KLM is careful. That's why so many experienced travellers believe that KLM is the most reliable airline in the world.

THE U.S.

THE CAMPAIGN

The Wonderfulness of It All

With the fervor of an evangelist picking out pockets of heathens, Lyndon Johnson in the last week of his campaign for election, went into those states where he thought the race with Barry Goldwater might be close. He barred through Florida, Georgia and South Carolina in the Deep South, through Indiana, Illinois and Kansas in the Midwest, through New Mexico, Utah and California in the West.

Tinsel Dreams. Considering himself assured of victory, Johnson often seemed carried away by the wonderfulness of it all. In San Bernardino, Calif., he made a sentimental journey to the Pratt Building, where he operated an elevator as a boy 39 years ago, but his remarks about Goldwater were decidedly unsentimental. It would be awful, he said, if both Barry and Red China had the atomic bomb at the same time. "I admire a brave man," he went on, "but some people have got more guts than brains." Embroidering his charge that Goldwater would send the U.S. "to hell in a hack" by tearing down programs that have been built up over the past 30 years, he added: "Any jackass can kick a barn down, but it takes a carpenter to build one."

In Pittsburgh, Lyndon offered 13,000 partisans a storybook view of the future according to L.B.J. "So here's the Great Society," he cried. "It's the time —and it's going to be soon—when everybody in this country is poor. It's the time—and there is no point in waiting —when every boy or girl can have all the education that boy or girl can put to good use. It's the time when there is a job for everybody who wants to work. It's the time when every slum is gone from every city in America, and America is beautiful. It's the time when man gains full dominion under God over his own destiny. It's the time of peace on earth and good will among men."

In Los Angeles, where tinsel dreams are mass-produced, Lyndon sounded every bit as utopian. "We are going to have to rebuild our cities," he said. "We are going to have to reshape our mass transit facilities. We have to purify our air and to desalt our oceans. We are going to make all the deserts bloom."

Think Positively. Just how would all this be done? Never mind the details, said Lyndon in effect. Just think positively. "All we need to do now," he cried, "is to go around and talk about positive things. About the issues, about peace, about prosperity, about social security, about jobs, about medical care."

But most of the time he wasn't talking about issues. He just rambled on about anything that popped into his mind. Sample quotes:

▶ "Let's always be nice. When your neighbor comes over to your house, and he has been living there alone for a long time and he gets lonesome, and he comes to visit you, even if he does kind of start doing all the talking, you be nice to him and courteous, because everybody is entitled to associate with good company every once in a while."

▶ "Love thy neighbor as thyself; do unto others as you would have them do unto you. No matter how long it may take, no matter how difficult it is, this above all else is the great horizon toward which we march united."

▶ "Let's keep a smile on our face, let's keep faith in our heart, let's keep hope in our vision, let's move on to conquer unknown frontiers."

▶ "I have traveled around the world and I have been in many countries and I have seen the glories of art and architecture. But the most beautiful vision that these eyes ever beheld was that American flag in a foreign land. Let's see if we can't take a little pride in that flag, and let's see if we can't have a little feeling well up in us, and see if we can't get down on our knees some time during the night and thank God that I am an American."

▶ "We want every boy and girl born under that flag, when he or she discovers America and comes in squealing, we want him to know that he has the right to all the education that he can absorb. If we are going to compete with the Soviet Union, we are not only going to have to have the best heels and the best hearts that we can, but we are going to have to have the best heads. You don't want some boy that went to a red schoolhouse and dropped out in the third grade and went off as a road hand like I did when I ran off to California when I finished school, you don't want him to be in your spaceship with John Glenn orbiting the earth. You want somebody that knows where the buttons are and how to mash them and touch them."

UPI

L.B.J. IN MILWAUKEE
Peace on earth—but never mind the details.

Mouth in Motion. He talked, talked, talked. During one day-long period, from Tuesday night to Wednesday night, one newsman estimated that he had talked publicly for eight solid hours. Much of it was pure corn, or just plain tasteless—as in Los Angeles, when he referred to "the man who watches over

CC-0. In Public Domain. Gurukul K...

UPI

GOLDWATER RALLY IN MADISON SQUARE GARDEN
A full house for that empty feeling.

us in heaven this afternoon, John Fitzgerald Kennedy." At one point, he had talked so long that Lady Bird sent a note to the podium telling him it was time to stop. In Pittsburgh, people in the back rows began sneaking out halfway through his address. In Milwaukee, Lyndon missed his lunch, made up for it by stopping at William Balsmider's grocery and asking for "a little hunk of baloney" and half a dozen peppermint sticks. He had to borrow $1 from a Secret Service agent to pay for it.

In his breast pocket, close to his heart, he kept a mimeographed consensus of the latest polls, showing him winning 481 electoral votes out of a possible 538. All he needs is 270 to win, but Lyndon wants more than a mere victory, and so he exhorts listeners at every stop to get out "your uncles and aunts and cousins" to vote for him. "I hope nobody in this country wakes up Wednesday morning," he said, "and looks at their wife or their kinfolks around the breakfast table and says, 'Gee, I just wish I'd tried a little harder.' "

The Underdog Underdog

"I'm the most underdog underdog there is," said Barry Goldwater to a Las Vegas airport audience. Yet as far as audience reaction was concerned, Barry had perhaps the most momentous moments of his whole campaign.

In New York City's Madison Square Garden, 18,000 clamorous fans gave him a roaring ovation for 28 minutes, interrupted his 35-minute speech more than 100 times with applause. In Cleveland's Public Hall, a near-capacity crowd of 15,000 yelled, screamed, honked horns and rang bells for eleven minutes before Barry finally got them quiet by holding up a silver pocket watch. In Pittsburgh, 15,000 jammed the Civic Arena, raised the roof for 19 minutes before letting the candidate open his mouth.

On the Offensive. Still, even among the ovations, there were reminders that all is not well between Barry and a lot of leading Republicans. In New York, neither Governor Nelson Rockefeller nor Senator Kenneth Keating showed up to share the platform. In Cleveland, Ohio's Republican Governor James Rhodes and Senate Candidate Bob Taft were both absent. During a day-long tour of western Pennsylvania, Republican Senator Hugh Scott was nowhere in sight. In Illinois, Gubernatorial Candidate Chuck Percy thought it best to ignore Barry's visit to Belleville.

Reporters accompanying Barry said that a defeatist attitude pervaded the whole Goldwater entourage. But Barry certainly did not sound defeatist in his public utterances. If nothing else, he was on the offensive. Said he to the Madison Square Garden throng: "It is a fact that Lyndon Johnson and his curious crew seem to believe that progress in this country is best served simply and directly through the ever-expanding gift power of the everlastingly growing Federal Government. One thing we all know, and I assure you I do: that's a much easier way to get votes than my way. It always has been. It's political Daddyism, and it's as old as demagogues and despotism."

Democrats, Barry charged, "are driving and confusing you with the basic dishonesty that permeates so much political campaigning. I speak of peace. Your interim President tells you I want to start a war, which is ridiculous, and you know it, and he knows it. I speak of strengthening the social security [illegible] and your interim President tells [illegible] want to destroy it, which is ridi[illegible] and he knows it, and you know it.

A Fourth World War? In Te[illegible] Goldwater cried: "During the [illegible] days, Lyndon Johnson frankly [illegible] the American people that he [illegible] satisfied with just an election—[illegible] to be crowned. He has asked for a [illegible] date. He wants total trust, total [illegible] total power over your total lives, [illegible] body, and it's got to be you, sho[illegible] mind Lyndon Johnson just [illegible] lives. This is America. This is [illegible] mythical kingdom conjured up [illegible] to play with."

In Cleveland, Goldwater re[illegible] his position against the Civil Rig[illegible] of 1964. "No person," he said, "[illegible] government official or private [illegible] should violate the rights of some [illegible] der to further the rights of others. [illegible] are being asked to destroy the rig[illegible] some under the false banner of pro[illegible] ing the 'civil rights' of others."

At week's end Goldwater wende[illegible] way West, turned his guns on the [illegible] son Administration's handling of [illegible] eign policy, which, he said, has [illegible] "our great alliances in shambles", [illegible] "American prestige has been sli[illegible] slowly out of sight." Johnson, [illegible] charged, "worries more about the [illegible] he's going to get than the boys we [illegible] in Viet Nam." To a Cheyenne, W[illegible] crowd Goldwater declared: "I be[illegible] that unless we keep our military stre[illegible] high we are doomed for a third [illegible] war—for a fourth one—because [illegible] may be in the beginning of the [illegible] one now in South Viet Nam."

Johnson & the Jenkins Case

Emerging from his presidential [illegible] at San Diego's airport one night [illegible] week, Lyndon Johnson stopped to [illegible] with newsmen. When one of the [illegible] porters referred to the Jenkins [illegible] the President suddenly exploded: "[illegible] ident Eisenhower had the same type [illegible] problem with his appointments sec[illegible] tary. The only difference is, we Dem[illegible] crats felt sorry for him and thoug[illegible] was a case of sickness and disease. [illegible] we didn't try to capitalize on a [illegible] misfortune. We never mentioned it."

Lyndon's comment sent repo[illegible] scrambling for phones, caused many [illegible] eyebrow to arch in puzzlement—inc[illegible] ing Dwight Eisenhower's. Leaving W[illegible] ter Reed Hospital after treatment [illegible] a respiratory ailment that resulted [illegible] sinus and ear infections, Ike decl[illegible] when newsmen questioned him [illegible] Johnson's statement: "I can't reca[illegible] I never heard of it."

Enormous Differences. Ike's ba[illegible] derment was understandable. The [illegible] men who heard Lyndon's remarks [illegible] leted the reference to "appointee [illegible] secretary" for fear of libeling the [illegible] men who actually worked for Mr. [illegible] that post—Robert Gray, Thomas [illegible] phens and Bernard Shanley, who [illegible] year is running for the U.S. Sena[illegible]

New Jersey on the G.O.P. ticket. The fact is that all three were fully cleared by security agents before they took their posts, and by no stretch of anyone's imagination could any of them have been the man Johnson was talking about.

Actually, Johnson's reference was to a man who had worked faithfully for him during the 1952 campaign and was, indeed, designated by the President-elect to fill the post of White House appointments secretary. But, immediately after the election, Ike had all of his White House appointees subjected to security checks. Only days before the inauguration, it was learned that the man had a homosexual history. He was quietly dropped from the presidential staff even before Ike took office.

The differences in the two cases are enormous. Unlike Walter Jenkins, one of Lyndon's closest confidants for a quarter of a century, the man dropped from Ike's staff had worked only briefly for him. Unlike Walter Jenkins, he never served in the White House, thus had no access to the kind of secret documents that Jenkins handled almost routinely. Unlike Walter Jenkins, who was given a slipshod security screening by the Secret Service after Lyndon became Vice President in 1961 and no screening at all after he became President, Ike's aide underwent a stringent screening and thus was filtered out before he ever served a day.

Oblique Swipe. Far from putting the Eisenhower Administration in a bad light, Lyndon's blunder in bringing up the case only highlighted some grave defects in his own security and personnel procedures. Still, Lyndon seemed confident that the Jenkins case could do him no harm, pointed to those reassuring polls in his coat pocket as proof. Even the week after Jenkins' resignation, one nationwide survey showed that Lyndon's popularity had gone up—not down—two points.

Johnson's confidence was reinforced by 44 leading clergymen, many of them accredited liberals, who took a gratuitous, though oblique, swipe at Barry Goldwater and the whole Republican party for using the Jenkins case "as a weapon in this campaign." In a 350-word statement issued by Union Theological Seminary President John C. Bennett, vice chairman of New York State's Liberal Party, the clergymen complained that "nothing justifies the smears" being circulated on the Jenkins case.*

"A few episodes involving personal immorality are allowed to obscure fateful moral issues related to public life . . . moral issues such as the full civil rights of all citizens, the shameful squalor and poverty in our cities and the danger of nuclear war," said the statement. "We see the Jenkins episode as a case of human weakness. If there is a security factor involved, let that be dealt with on its own terms and let it not serve chiefly as an excuse for dwelling on this one episode to cater to the prurient curiosity or to the self-righteousness of part of the public."

The Day After. The clergymen's statement appeared the very day after Lyndon himself had revived the Jenkins case with his own dirty dig at the Eisenhower Administration, and on the very day after Barry Goldwater protested about "the clerical spokesmen who now become loud advocates of President Johnson" and suggested that they "get back to their business" of protecting the nation's morals.

FOREIGN RELATIONS

Sticky Wickets

Washington last week played host to a diplomat with an unhyphenated double-barreled name: the new British Labor government's Foreign Secretary, Patrick Gordon Walker, 57, who came calling for a getting-to-know-you chat with top U.S. officials. Both President Johnson and Secretary of State Dean Rusk were understandably anxious to find out what difference the British electoral turnover might make in Anglo-American relationships. The conclusion, after talks with Gordon Walker: the Labor government intends to demonstrate that it has a strong, independent mind of its own—but it hasn't quite made up its mind about specific policies.

More Time. The ostensible purpose of Gordon Walker's trip was to lay the groundwork for a visit from Prime Minister Harold Wilson in December. High on Wilson's agenda will be a discussion of North Atlantic Treaty Organization problems and the proposed creation of a multilateral nuclear force (MLF); this one has been fretting both the U.S. and Britain for years, and no one is really satisfied with the U.S. proposal, outlined in May by Under Secretary of State George Ball, for a fleet of 20 Polaris-armed surface ships manned by mixed allied crews. Britain's Tory government had succeeded in fending off any firm conclusions on the question. Would the Labor government now take a stand?

That was a question put to Gordon Walker at a press conference following his talks with Johnson and Rusk. What, he was asked, was the U.S. reaction to present British proposals for MLF? Replied Gordon Walker evenly: "I don't know what the British proposals for the MLF are." Indeed, all the British seemed to be requesting was more time to develop a position.

Over another sticky wicket, the question of Red China's admission to the United Nations, the U.S. Administration found little cause for comfort. Like the Tories, the Labor government advocates seating the Communist Chinese—but the Laborites are almost certain to be more activist in achieving their aim. The British are also eager to bring Red China into disarmament discussions. Britain, said Gordon Walker, will "consider very favorably" the suggestion by U.N. Secretary General U Thant that the nuclear powers get together with the Chinese Communists for talks on the matter—this despite a U.S. rejection of the idea only a few days before.

Rhodesia? In one area, the U.S. was quick to come to Britain's aid. In Rhodesia, the white minority leadership threatened to declare its independence from Britain, and in so doing destroy London's plans toward establishing Af-

rican self-government in that troubled country (*see* THE WORLD). After a warning to the Rhodesian whites from Prime Minister Wilson, the U.S. State Department issued a supporting statement, noting that Wilson's message "makes clear some of the serious consequences that could befall all Rhodesians. The U.S. hopes that the Rhodesian government will continue to discuss with the United Kingdom government ways to achieve a satisfactory solution."

Why should the U.S. be taking a stand on Rhodesia, of all places? The Administration apparently hopes that the new British government will return the favor some day.

DIPLOMACY

Come to the Party

Adlai Stevenson once said of Marietta Tree, "When you find someone closely identified with the intellectual and aristocratic communities who is also a positive, active, working Democrat, it tends to encourage everyone in the party."

Mrs. Tree, 47, is a willowy (5 ft. 10 in., 135 lbs.) blonde patrician, the granddaughter of Dr. Endicott Peabody, founder of Massachusetts' Groton School. Once divorced, she is now the wife of British Investment Magnate Arthur Ronald Lambert Field Tree, a grandson of the original Marshall Field.

Marietta would be an addition to most any party, certainly not excluding those that she throws herself. She uses her opulent New York town house and her impeccable British butler, Collins, to entertain Democratic intellectuals and rank-and-file alike.

A tireless party worker, she has addressed envelopes and rung doorbells just like anyone else. In 1954, while managing a losing congressional campaign for Anthony B. Akers in New York's 17th Congressional District, she slipped away from a lavish reception for Britain's Queen Mother Elizabeth, changed to street clothes in her Rolls-Royce while riding to Democratic headquarters on election night. In 1956 she headed the Volunteers for Stevenson committee in New York; in 1958 she ran another losing campaign for Akers; in 1960 she was deputy chairman of the Citizens Committee for Kennedy; and in 1961 President Kennedy named her the U.S. representative to the Human Rights Commission of the United Nations' Economic and Social Council.

Last week Loyal Democrat Tree got another reward from her grateful party. She was sworn in as U.S. representative to the U.N. Trusteeship Council, which oversees such places as the Mariana Islands, Nauru and Northeast New Guinea, with the rank of ambassador. The job pays $24,500 a year and makes Marietta Tree, once a LIFE researcher, one of just three women who currently hold a full ambassador's position.*

* The other two: Katharine White in Denmark and Margaret Joy Tibbetts in Norway.

INVESTIGATIONS

Death Wish

In terse, flat language, a Civil Aeronautics Board investigative report last week laid down its chilling conclusion: "The total evidence clearly indicates that the captain and first officer of Flight 773 were shot by a passenger. As a result, the uncontrolled aircraft began the descent which ended in impact with the hill."

Forty-one passengers and a crew of three, on Pacific Air Lines Flight 773 bound from Reno to San Francisco, died in a pyre of flaming gasoline one morning of last May 7, when the plane plunged into a hill near San Ramon, Calif. Amid the wreckage, investigators found a .357 Smith & Wesson magnum revolver containing six empty cartridges. Soon they learned that the weapon had been purchased in San Francisco the night before by Francisco Paula Gonzales, 27, a San Francisco warehouse man long besieged by mental and financial problems.

Naming the Dates. As they dug deeper into the warped world of Francisco Gonzales, investigators discovered that he had been bent on suicide and had broadcast the fact far and wide. "Mr. Gonzales had advised both friends and relatives that he would die on either Wednesday, the 6th of May, or Thursday, the 7th of May," said the CAB report. "He referred to his impending death on a daily basis throughout the week preceding the accident."

They learned that when he left San Francisco for Reno the evening of May 6, he was carrying the revolver and that he had purchased $105,000 worth of insurance at the airport. They learned that during his night of gambling in Reno he reached Reno, he had told a casino employee that he didn't care how much he lost because "it won't make any difference after tomorrow."

When Flight 773 took off from Reno at 5:54 the next morning, Gonzales was aboard. During the flight, Pilot Ernest A. Clark, 52, and Copilot Ray E. Andress, 31, radioed reports of routine conditions. They landed on schedule in Stockton, Calif., took off again at 8:06 a.m. after two passengers had departed and ten had come aboard to finish the trip to San Francisco. For ten minutes out of Stockton, all went normally. Then, reports the CAB, "at 06:45:51 a high-pitched message was heard and recorded on the Oakland Approach Control tape." It was garbled. The controller snapped: "Say again." There was no answer. Even after laboratory analysis of the radio tape, the best the investigators could do was come up with a message: "Skipbers shot. We're all shot. Tryin' ta help."

Looks ... oil or gasoline fire." At the scene, ...estigators found the cockpit had been ...nolished. But on a bit of tubing from ...e pilot's seat, they discovered a small, ...discarred dent caused by a bullet. ...d the report: "Measurements place ...e bullet indentation directly in line of ...between the captain's back and any... ...anding in the aisleway between ...slightly to the rear of the captain's ...first officer's seats."

...o the CAB there could be no ques... ...Frank Gonzales had shot both ... from behind and he had gratified ...emented wish to die that day in a ...rifying act of multiple murder.

ARMED FORCES

...dern Spanish Armada

...U.S. Navy Skyhawk darted above ...calm waters off Spain's Mazagón ...h, its lights flashing in the early ...n. On that cue, 84 U.S. Navy ships, ...U.S. merchant ships and 14 small ...ish vessels began churning about in ...largest military landing operation ...e World War II. This was Steel ...e I—the Navy's attempt to prove ...old-fashioned assault by sea still ...s some advantages over the modern ...d toward movement of men by air.

...or two hours, 95 helicopters took ...from the decks of the carriers *Gua...nal*, *Boxer* and *Okinawa* to fly ...0 sorties over the beach, land U.S. ...ines and light equipment behind the... ...tical enemy lines. Some 100 Sky... ...ks and Phantoms flew protective ...er as hundreds of amphibious craft ...ged toward the yellow sand to dis... ...rge their troops. A giant causeway, ...embled at sea, was towed ashore by ...nches. Aircraft even took off from ...rtable aluminum runways laid down ...the sand by Seabees.

"Incredibly Complex." The landings ...ntinued throughout the morning as ...e troops pushed inland to seize as... ...ed objectives. In all, 28,000 U.S. ...rines and 2,000 Spanish marines ...re deployed. High atop a yellow cliff, ...Spanish admiral looked down at the ...ooth flow of men and machines and ...rmed it "an incredibly complex, per... ...tly organized and flawless operation." It was not entirely flawless. Marine ...out. Colonel James B. Ord, at an in... ...d command post, noted a column of ...oke twisting over pine trees on the ...zon. Grumbled Ord: "Some damn ...l started a forest fire. I hope they ...t it out quickly." Then his walkie... ...kie man reported: "Two helicopters ...ve collided and crashed." The H-34 ...hoppers, carrying 22 men, had ...mashed together some 600 ft. above ...ound. One burst into flames in the ..., the other burned after crashing into ...small ravine. Nine enlisted men died. ...next day, a Navy Grumman aircraft on antisubmarine patrol from the carrier *Lake Champlain* crashed at sea, killing all four crewmen.*

Change of Plans. Navy admirals grumbled that they needed faster transport vessels; they had been able to move across the Atlantic at a top speed of only 14 knots. But they proudly pointed out that they had put 28,000 men ashore at a cost of $10,300,000, given them enough supplies to fight self-sufficiently for nearly a month. The Air Force's Operation Big Lift in October 1963 had required $20 million to fly some 15,000 soldiers in 63 hours from the U.S. to Europe, where they picked up pre-positioned supplies.

Perhaps more significantly, this 1964 Spanish Armada, operating in the same area from which Columbus sailed on his discovery voyage in 1492, demonstrated anew the extent of U.S. military cooperation with Spain. The U.S. has also completed a deal to deliver non-nuclear Hawk antiaircraft missiles and some 1,400-m.p.h. F-104 jet fighters to Franco. All of this is at the displeasure of NATO allies of the U.S., who do not want Franco's Spain in NATO, and who last week canceled their plans to send observers to Steel Pike I.

CRIME

The Museum Jewel Robbery

New York City's American Museum of Natural History is a marvelous place. It is filled with all manner of wonders, from prehistoric bone-yard relics to magical performances of the galaxies held in the darkened planetarium.

Not far from the Ice Age Mammals on the fourth floor is the Morgan Hall of Gems and Minerals. It is far from being the most popular place in the museum; indeed, the rest rooms have been known to receive more traffic than Morgan Hall. The museum does not publicize the fact that the glass cases in Morgan Hall house some of the most valuable jewels in captivity.

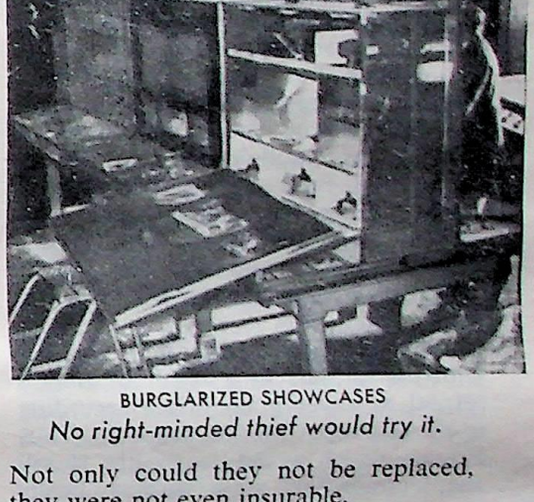
Obviously, no professional thief in his right mind would try to steal any of those gems. They would take for granted that burglar alarms are stretched like invisible fish nets across the room, that sharp-eyed guards march hither and yon on everlasting alert, and that at the very least the windows are locked.

Well Ventilated. But the right-minded thief would have been wrong. The burglar alarm has been disconnected for years—for no apparent reason. The museum has also been short of son. The museum has also been short of night watchmen for some time. The big windows have been left open two inches every night for the sake of better ventilation in Morgan Hall.

And so, late one night last week, some stupid crooks got into Morgan Hall and went to work. Next morning, the caretaker discovered the results. Gone were 22 gems, which amounted to one of the biggest hauls in history.

Most notable was the famed Star of India Sapphire, weighing 563.35 carats, the world's biggest stone of its kind (about the size of a golf ball), donated to the museum by old J. Pierpont Morgan himself. Also taken was the De-Long Star Ruby, 100.32 carats, the world's most perfect star ruby, and J. P. Morgan's Midnight Sapphire, weighing 116.75 carats. Museum officials put the value of the 22 stones at more than $300,000, but the fact was that the three big pieces alone were *priceless.*

RUBY, STAR OF INDIA, MIDNIGHT SAPPHIRE



BURGLARIZED SHOWCASES

No right-minded thief would try it.

Not only could they not be replaced, they were not even insurable.

Right. Police reasoned that the great jewel theft was the work of amateurs. The famed gems were obviously unfenceable. The thieves ignored displays containing hundreds of thousands of dollars worth of diamonds and other gems that could be readily disposed of. Thus, with a fair certainty that they were dealing with greenhorns, the detectives called in the FBI and went to work on their own underworld contacts.

Their work paid off fast. From "confidential police sources" the cops picked up the thieves' trail quickly. Within 48 hours, the FBI hauled in two men in Miami and two in New York. The two arrested in Miami, charged with transporting stolen jewelry across state lines, were skindivers; one of them, a chap named Jack Murphy, 27, also a skilled surfboarder, is known to his friends as "Murph the Surf." There was a good chance that there were other accomplices, since the stolen jewels were yet to be found.

* In other U.S. military air accidents last week, a Navy jet bomber buzzed California's El Centro Naval Air Facility in a Navy Day show, clipped a power pole and slammed into a recreation center. Nine persons were killed. Two Army transports collided in maneuvers near Augusta, Ga., killing three crewmen in each aircraft.

EUROPE

In Gear Again

It takes considerable patience, but among those who follow the oracular pronouncements of Charles de Gaulle it is axiomatic that in the long run he is usually right. Two years ago, when he braked Europe's march toward political integration by excluding Britain from the Common Market, he acted in the belief that *les Anglos* are fundamentally more interested in strengthening the Atlantic Alliance than in making common cause with Europe. Besides, reasoned De Gaulle, Britain's pro-European Tory government would soon be replaced by Laborites who are basically antagonistic to the booming, unabashedly capitalistic Common Market, and suspicious of Europeans as well. Last week in London a Labor government was busily proving De Gaulle right on both counts (*see below*).

Against the Grain. However, De Gaulle's prognostications are often more successful than his policies. Two years ago, in hope of establishing Franco-German dominance in European affairs, De Gaulle signed his treaty of cooperation with Bonn. In practice, the entente has been mostly verbal: the Germans have refused to cooperate in joint weapons production, want no part of De Gaulle's incipient nuclear force, and have further provoked *le grand Charles* by enthusiastically endorsing U.S. plans for the mixed-manned NATO surface fleet, MLF, which Paris ridicules as the *force de farce*.

At home, De Gaulle is in trouble with his farmers as a result of Bonn's refusal to lower grain prices according to the Common Market schedule. Thus France, which would dearly like to sell the Germans its grain surplus, finally announced last month that if the problem was not settled soon, it would "cease to participate" in the Common Market—a typically Delphic threat that could mean anything from the "empty chair" technique to outright repudiation of the Rome Treaty. Last week, with a grand Gaullist flourish, the French initialed a $700 million trade agreement with Moscow, further irritating its Common Market partners by giving Russia easy credit terms that most other NATO nations consider strategically unwise.

Spaakistan. From the headlines, the dream of a united Continent seemed more illusory than ever. In fact, it looked last week as if Europe's long-stalled political machinery was in gear again. For one thing, the Labor victory in England has persuaded pro-British Europeans that there is no longer much point in holding out for British membership in the Common Market before discussing political integration. As for Bonn, De Gaulle's unassailably correct stand on grain prices may give Ludwig Erhard just the leverage he needs to reform his nation's inefficient agriculture. For while Germany economically is less dependent than France on the Common Market, politically and psychologically it is even more deeply committed to European unity.

While De Gaulle has insisted all along that the only feasible political union must be a loose confederation of sovereign states, convinced Europeans such as Belgium's Paul-Henri Spaak have clung to the ideal of a single, truly supranational U.S. of Europe. ("Spaakistan!" snorts De Gaulle.) Recently, however, Spaak has come round to the Gaullist approach, at least as a practical first step toward ultimate integration. Moreover, at week's end there were signs that Charles de Gaulle might also be in a mood for compromise. After an hour's chat with his old antagonist at the Elysée Palace, the ebullient Belgian Foreign Minister pointedly refrained from his usual barbed quips at De Gaulle's expense. The most significant omen to date was De Gaulle's decision last week to call in an even more influential critic of Gaullism, Jean Monnet, the ailing father of the Common Market. Clearly, something big was stirring—something as big as Europe.

GREAT BRITAIN

"An Honorable Government"

Living up to his campaign slogan LET'S GO WITH LABOR, Britain's new Prime Minister went, went, went. In a few whirlwind days last week, Harold Wilson issued a series of edicts and exhortations that clearly proclaimed both the pragmatic aims and no-nonsense style of his administration.

Wilson's first big decision in office was as bold as it was desperate. In an urgent attempt to close Britain's critical trade deficit, he abruptly decreed an extraordinary 15% tax on imports, doubling Britain's tariffs overnight (see WORLD BUSINESS). Though Wilson insisted that the tax was only a stopgap measure, Britain's trading partners throughout the world protested that it was a backward-looking move that might jeopardize years of patient progress toward lower tariffs. Wilson's rebuttal was contained in his next major policy pronouncement, a detailed White Paper emphasizing that the solution to Britain's economic ills does not lie in "old-fashioned, restrictionist ideas," as he puts it, but in stem-to-stern reform of backward industries and restrictive labor practices.

The Prime Minister expanded

KEYSTONE

WILSON IN CABINET ROOM AT 10 DOWNING STREET
Limousines, green telephones and no-nonsense style.

s theme in a TV fireside talk from 10 Downing Street. In a Yorkshire-accented echo of John F. Kennedy's inaugural address, Wilson urged: "We've got to think less about what we can get out of the economy and a great deal more about what we can put into it. We need to think more about earning money and less about making it."

By way of putting more into the economy, Wilson sent Board of Trade President Douglas Jay to Moscow and Peking to drum up new trade. Aviation Minister Roy Jenkins hurried to Paris for a critical reassessment of the Concorde. Then, when the Labor government had been in office barely a week, it was pushed by Rhodesia's Prime Minister Ian Smith into its first diplomatic crisis (*see* Rhodesia). Off to Washington flew Britain's new Foreign Secretary, Patrick Gordon Walker, to explore Britain's prized "special relationship" with the U.S. From the breezy days of conversation, it was plain that on most major issues Britain still sees eye to eye with the U.S. (see THE U.S.). There are obvious areas of disagreement as well; the most imminent is Labor's longtime advocacy of a U.N. seat for Peking. While the Tories also favored Red China's admission, said Gordon Walker, "they didn't push hard. The Labor government is an honorable government; we will push hard for what we stand for."

The Loyal Opposition

The pomp and perquisites of office evaporate almost as swiftly in London as in Moscow. Within 24 hours of Labor's victory at the polls, Sir Alec Douglas-Home had to rent a car to move his household out of No. 10 Downing Street. For his Tory ministers, many of whom had held office far longer than Sir Alec, it was even more wrenching to adjust to life without liveried government limousines, green scrambler telephones, deferential aides. "It's like a bereavement," sighed one ex-minister. "Alone, no one to talk to, nothing to do."

For Sir Alec, there was plenty to do. With a toughness seldom displayed while in office, he called members of his former Cabinet together on the blue Monday morning after elections, impressed on them that he would nip in the bud any impending challenge to his leadership of Her Majesty's Loyal Opposition. In his clipped and cocky manner, Home told them, as he told the British people on TV: "I'm leading the Conservative Party—and I mean to go on doing so as long as I am useful in that position." He then proceeded to reshuffle his Shadow Cabinet—the "leader's committee," as he prefers to call it—to reunite and reinvigorate the party.

Sir Alec established his able former Chancellor of the Exchequer, Reginald Maudling, 47, as his No. 2 man and, in effect, deputy leader of the party. A short quarter step behind came Edward Heath, 48, the Tories' tough-minded, troubleshooting economics expert, who will be responsible for the party's policy planning. Back from self-imposed exile came Renegades Iain Macleod and Enoch Powell, who had refused to serve in Sir Alec's administration after the unseemly struggle for succession to Harold Macmillan's premiership just a year ago. Macleod's job: leading the Tory attack against Labor's program to renationalize the steel industry. Right behind Maudling and Heath in authority Sir Alec installed Selwyn Lloyd, 60, onetime Foreign Secretary and a highly regarded party stalwart who was sacked by Macmillan as Chancellor of the Exchequer in 1961. Lloyd's job: to drill the backbench battalions for the counteroffensive against Labor in the Parliament that opens this week.

The man who was chiefly responsible for the Conservatives' return to power in 1951, and thereafter, will no longer roam the corridors of power. Shadow Foreign Secretary Rab Butler, 64, who twice lost out for the premiership (in 1957 and 1963), and has groomed such potential Prime Ministers as Maudling, Heath and Macleod, was relieved of his job as deputy Prime Minister and the party's most dynamic idea man. Butler's demise seemed inevitable after a pre-election newspaper interview in which Sir Alec's old rival had sardonically hinted at a Tory defeat.

RED CHINA

How Good a Thing?

If glee could ever infiltrate that frozen phiz, Chou En-lai would have come on like Danny Kaye. As it was, speaking to four Filipino newsmen in the Great Hall of the People at Peking, Red China's dyspeptic Premier had a hard time choking back a chortle. What, the visitors asked, did Chou think of Nikita Khrushchev's ouster? "In one word," snapped Chou, "it is a good thing."

That was more than one word, of course, and quite possibly less than objective. To be sure, Peking could hardly be expected to mourn the demise of its archenemy. The Chinese could reasonably assume that the barnyard bellicosity of Sino-Soviet exchanges in the Khrushchev era would now be replaced with a more mannerly dialogue. But demonologists the world over wondered whether K's exit alone could possibly close the political and ideological abyss between Communism's rivals.

Basking in the glow of Red China's first atomic explosion, Peking's newspapers refrained from anti-Soviet diatribes. Like everyone else, Red China's boss, Mao Tse-tung, was waiting to see who really was calling the shots in the Kremlin. If, as some reports had it, Mikhail Suslov is Moscow's new Red Eminence, Mao can have no illusions. Suslov, who confronted China's top theoretician, Teng Hsiao-ping, during acrimonious exchanges last year, is more deeply hated by the Peking regime than Khrushchev. At the same time, Mao knows that the new Soviet leaders cannot push as hard as Nikita for collective Communist censure of Red China: Moscow's own sphere of influence, Eastern Europe, is disunited enough without risking new fissures. However, to show that he hadn't gone mushy overnight, Mao let his Albanian puppets keep up the vituperation.

The truce, if that is what it is, may prove short-lived. Mao can no more afford to temper his violent faith in worldwide war on capitalist imperialism than Khrushchev's successor can risk repudiating peaceful coexistence and "goulash" Communism. Neither side seems likely to give way in the squabble over the 4,000-mile border that separates them. The Russians can hardly risk resumption of military and economic aid to China, for fear of accelerating Peking's ability to build delivery

Digitized by Arya Samaj Foundation Chennai and eGangotri

systems for its bombs. Of course, if Chou En-lai is to be believed, the world has nothing to worry about. After assuring the Filipino journalists that Peking's bomb is bigger than those dropped on Hiroshima and Nagasaki, Chou added: "Our bomb is small, but from the day of its birth it joined the struggle for peace."

RUSSIA

How Nikita & Nina Came Back To No. 3 Granovsky Street

It looked and smelled like snow. Thick, milky clouds piled high over Moscow, and a sharp northern wind stripped the last leaves from the birches. The year's biggest, brightest holiday, the 47th anniversary of the Bolshevik Revolution, was at hand, but somehow the holiday mood refused to ignite. There was one cheerful note. Russia's new regime announced that for the first time in 13 months of grain rationing, everyone would be issued 4½ extra lbs. of flour for the cabbage pies that seem vital to the Russian soul. With a bumper crop almost in, Nikita Khrushchev's successors, Leonid Brezhnev and Aleksei Kosygin, could afford the gesture. "Well," said one Russian woman, "I guess this shows that —what's his name?—oh yes, Kosygin —is all right."

The Explainers. Khrushchev's sudden ouster has seemingly stirred little emotion among the Russian people. But shock and indignation have mounted in Communist parties abroad, and the task of soothing the foreign comrades left Russia's new B. & K. team red-eyed with fatigue. Into Moscow swept platoon after platoon of insistent commissars—French, Italian, Austrian, Danish, Indian, Mongolian—all clamoring for explanations. Why had Khrushchev been ousted? How could the new regime justify its *coup d'état?* What were Moscow's new policies—particularly vis-à-vis Red China? And, ahem! was Nikita all right? "In fact," said one old Moscow hand, "the problem is that this crowd came to power without a program and is now having to improvise like mad."

BASSET—N.Y. WORLD-TELEGRAM & SUN

"COMRADE KHRUSHCHEV, THE NO GOOD BUM . . . NEVER HEARD OF HIM"

First they tried out their answers on Wladyslaw Gomulka, Khrushchev's crusty crony whose approval Brezhnev and Kosygin greatly needed to placate other satellite leaders. Meeting Gomulka halfway, in the primeval depths of Bialowieza Forest on the Russo-Polish border, they conferred in a Czarist hunting lodge, while the last sizable herd of European bison stomped and snuffled outside; inside, B. & K. buffaloed Gomulka with reasons and reassurances. He went away satisfied enough to defend Khrushchev's ouster in a Warsaw speech two days later. Emboldened by their successful de-Khrushchevization, Brezhnev and Kosygin released to visiting Communists a 40-page "justification" that purported to explain why Nikita had to go.

Nikita's Sins. The catalogue, which was evidently compiled by Ideologist Mikhail Suslov, accused Khrushchev of 29 sins, immoral, illegal, or fatheaded. Basically it corroborated earlier reports that Nikita's underlings could no longer stomach his loutish, highhanded ways or condone his persistent bungling of agricultural, ideological and foreign policies. But there were some intriguing elaborations, such as charges that he tried to make Wife Nina chairman of the Union of Soviet Women, that he "antagonized intellectuals," and clung to uneconomical building plans (he insisted on five-story rather than twelve-story apartment houses, on underpasses rather than overpasses).

Khrushchev's gravest error, in his successors' eyes, lay in conducting the Soviet-Red Chinese ideological dispute as if it were a barroom brawl. He was so busy argy-bargying with Peking that he completely failed to recognize China's accelerated scientific progress, let Mao Tse-tung gain valuable prestige by exploding his bomb without warning.

The Neighbors. So where was Nikita? Moscow gossip placed him in a hospital at Rublevo, 15 miles from the capital, suffering from "blood pressure." However, Communists maintained that Nikita and Nina had retreated to their old, four-room apartment at No. 3 Granovsky Street, a section that compares unfavorably with, say, Manhattan's West Side around Amsterdam Avenue and 81st Street. But the social life should be interesting. The other tenants officially housed in the building are two potentates pushed out: Khrushchev, former Premier Vyacheslav Molotov and Red Army Marshal Georgy Zhukov, as well as several comrades who gave K. the push, including Suslov and Kosygin.

According to the Italians, Nikita has been granted a monthly pension of 1,000 rubles ($1,111 at the official exchange rate). Not so lucky was Soviet Law Adzhubei, who had been stripped of his influential job as Izvestia's editor. Despite a glittering new job offer as deputy manager of Kazakhstan's Pravda, a party blat deep in Khrushchev's virgin lands—Aleksei decided to hang around. After all, Wife Nina still had her job as an editor of a Moscow scientific journal.

It was obvious that Moscow's new leaders felt they could not immediately eliminate Khrushchev from the Moscow scene. His popularity in both the Communist world and the West would not permit such a move, even if the new regime had the stomach for it. Communists the world over were left tut-tutting over Nikita's great fall. So, for that matter, was Angelo Litrico, a non-Communist tailor in Rome. But for Angelo, he was busy making Nikita new suits for Khrushchev the day of his ouster. A single-breasted black and a double-breasted grey, custom-made for Nikita's projected visit to West Germany. The folks on No. 3 Granovsky Street may never get to see them, but the tailor his money.

SOUTH VIET NAM

A Tightwire Man

General Nguyen Khanh formally signed last week as South Viet Nam's caretaker Premier, meeting the two-month deadline imposed on him after last August's riots. He was successor by Tran Van Huong, 61, a barrel-but durable civilian of low origins but high ideals.

Born of a family so poor that he was given away in infancy to foster parents, Huong struggled to become a schoolteacher in his native Mekong Delta. After joining Viet Nam's fight for independence in 1945, he led 150 guerrillas in the Plain of Reeds, only to quit when the insurgents were taken over by Communists. But Huong refused

it aptly described his administration.

Of the top two rivals for the premiership, cool, conservative Eisaku Sato is the stronger. A career bureaucrat, he is backed by his brother, ex-Premier Nobusuke Kishi (who changed his last name when he was adopted into the samurai family of his wife), as well as by another influential ex-Premier, Shigeru Yoshida; Sato served effectively in both their administrations. A candidate for party president in the Conservative-Liberal elections last July, Sato lost by only ten votes to Ikeda, who had appointed him to the key Ministry of Trade and Commerce. Sato subscribes to Ikeda's policies, although he favors a more realistic defense program. Pro-American—but pointedly not "servile" to the U.S.—he feels that Japan should show more independence.

Elders' Choice. Ichiro Kono is Sato's antithesis and longtime personal foe.

A brash, impulsive go-getter who won international acclaim last month for his near-faultless performance as State Minister in charge of the Olympic Games, Kono loves to be called *"oya-bun,"* the admiring title given to the most ruthless gangster lords in feudal Japan. Today, it symbolizes a political boss who inspires unswerving loyalty and obedience in his supporters.

If Sato and Kono are deadlocked, the most likely compromise candidate will be Aiichiro Fujiyama, 67, a sugar millionaire who was Foreign Minister in Kishi's Cabinet but does not now hold a portfolio under Ikeda. However, the last thing the Conservative-Liberals want is an eye-gouging, knee-in-groin political battle. At a party caucus last week, they voted to leave the choice of Premier up to two respected party elders rather than risk an open election. If they and the top contenders heed Ikeda's wishes, the decision will be made soon. Asking the party to choose his successor "amiably and speedily," the retiring Prime Minister urged that in view of "recent developments here and abroad," the government should "avoid causing the slightest sense of insecurity in the nation."

EAST AFRICA

Up from URTZ

When Tanganyika and Zanzibar felt the urge to merge last April, the nomenclatural possibilities seemed irresistible. Tanganzanziyikabar? Tangibar? Instead, the newlyweds settled for the grandly forgettable title of United Republic of Tanganyika and Zanzibar, or URTZ, as it soon became known to U.S. African hands. Last week, to the delight of map-makers and nation-namers the world over, the United Republic's President, Julius Nyerere, announced on second thought that the amalgamated nation's official name will be Tanzania.

RHODESIA

Christmas Postponed

"There will be no African rule in my lifetime," said Rhodesia's Prime Minister Ian Smith. "The white man is the master of Rhodesia, has built it and intends to keep it." In the huge African colony staked out by Cecil Rhodes, many white men agree with Smith—and with Rhodes's 19th century goal of "a whole plan of British advance in South and Central Africa." But times have changed—and so has Britain. Backed by all the 19 Commonwealth governments, Whitehall has repeatedly refused to grant the self-governing colony full independence until its 224,000 whites agree to a "peaceful transition to majority African rule" by its 3,700,000 blacks.

Unwilling even to consider such heresy, White Supremacist Ian Smith has been marching rowdily toward the point of no return: unilateral declaration of independence (UDI), the likes of which Britain has not faced since 1776. As Rhodesians prepared for the showdown, they got a crackdown instead. Tipped off by Smith's brusque refusal to discuss the situation in London last week, British Prime Minister Harold Wilson sent his Rhodesian colleague a memorandum warning direly that UDI would be "treasonable," an "open act of defiance and rebellion" that would bring swift reprisal by Britain.

Dogs & Hyenas. Actually, as onetime Finance Minister Smith knows well, Rhodesia's whites have precious little to gain from any form of independence. As a sovereign nation, Rhodesia might lose some $5,500,000 a year that Britain contributes toward balancing its budget. As a maverick state outside the Commonwealth, it would have to find new markets for more than half of its yearly exports, and would forfeit highly preferential Commonwealth tariff rates. But reason alone is no match for emotionalism, and last month Smith announced that the date for his supremacist independence had finally been set for December. Salisbury café wags warbled merrily: "Ian's Dreaming of a White Christmas." But Ian was not just dreaming.

Ignoring repeated warnings from

London, Smith last month called a special referendum of the colony's 90,000 white and 10,000 African voters, to be held this week. Even more ominously, he arranged to "take the opinion" of the other 3,690,000 blacks by calling an indaba, a powwow of their 622 tribal chiefs and headmen—most of them grizzled old men whose primary loyalties are to their government paychecks. For five solemn days the chiefs listened to official promises of increased pay, paid tribute to their importance, cursed Rhodesia's suppressed black nationalist parties as "wild dogs and hyenas," and occasionally inquired why the Queen hadn't come down from London. At the end of it all they learned that they had just voted 622 to 0 "to cut the strings that tie us to Britain."

No Tea Party. That was enough for Harold Wilson. In a final ultimatum to Smith that was also released to the press to make sure that Rhodesians got the message, he warned: "The decision to grant independence rests entirely with the British government and Parliament and they have a solemn duty to be satisfied that before granting independence, it would be acceptable to the people of the country as a whole." If Rhodesia proclaimed independence, Wilson pointed out, it would be excluded from the Commonwealth, and its people would be stripped of British citizenship. Apart from the "disastrous" economic effects, he concluded, Rhodesia would be left "isolated and virtually friendless in a largely hostile continent."

It was, noted British papers, the sternest message of its kind since the Boston Tea Party, and for the time being at least, it was certainly more effective. Amid a flurry of warnings from politicians and business leaders, Smith backed down. He promised the Parliament in Salisbury that he would not declare sudden independence, and personally sponsored a motion declaring this week's referendum would be purely academic. "The British government's moves have upset everything," he said plaintively on TV. Well, not quite everything. The white man is still master of Rhodesia.

SUDAN

Bringing Down Father

In many unspectacular ways, the six-year military dictatorship of Lieut. General Ibrahim Abboud was a Pan-African success story. When he seized power in 1958, the Sudan had suffered under three bungling governments in less than three years of independence. Pledging his regime to "realization of the country's paramount interests," Abboud dragged the country out of economic chaos. He brought in massive industrial capital, pushed ahead with ambitious hydroelectric projects, doubled the Sudan's rich cotton lands by expanding the vast, British-built Gezira irrigation complex.

The Sudanese, historically renowned for their martial prowess, revered Abboud as the greatest warrior of them all. Sandhurst-trained, anglicized down to his swagger stick and Bond Street shoes, Abboud in World War II led the Sudan Defense Force into battle against Rommel's Afrika Korps, wound up with two dozen combat ribbons on his chest. A benign, incorruptible, father figure, Abboud alone could have rallied his freedom-loving, free-and-easy countrymen to his own austere goals of discipline and diligence.

Single Vestige. In the end, he betrayed their faith. Despite repeated promises to restore civilian government, he could not bring himself to relax tight control of the press, prohibition of political activity, heavyhanded restriction of assembly, discussion and the press. Last week the lid blew off.

Led by a hastily formed national front of students, professional men, labor unions and the old political parties, the Sudanese arose barehanded a week of bloodshed, drove the back to their barracks. By the was all over, at least 30 Sudanese lost their lives and parliamentary was restored. Only one vestige from the old Abboud regime: ly, dusky figure of Ibrahim Abboud who stayed on as President, shorn of effective power.

Savage Reprisals. Paradoxically was Abboud's first experiment mocracy that led to his downfall the days of the ancient Arab ers, the Sudan has been split inherently hostile ethnic and groups: the sophisticated, Arabs of the Moslem north, strong; and, south of the 12th some 4,000,000 backward Negro men without a political voice. met frequent black incursions stern, often savage military that only fed the flames.

Last month, as rebellion flared the three Negro provinces, reached a curious decision. Without ing off his troops, he created a commission to listen to the rebels' ances; then, for good measure encouraged press and public debate the Sudan's southern The free discussion touched off dent riot, which started the which restored democratic rule Sudan. The nation may not, be ready yet for Western-style racy. The obvious alternative is Abboud.

mb on a Bullock Cart

Of all the Asian nations affected by
king's nuclear explosion, India has
most to fear. Since Red China's
miliating walk through the Himala-
s in 1962, the Indians have been
essed by fear of renewed Commu-
aggression. Thus, though India was
recently the anti-nuclear Cassan-
of the nonaligned world, the na-
n last week was earnestly debating
ether to build A-bombs of its own.
Chief problem for India's nuclear
ocates, of course, is their nation's
p emotional attachment to the prin-
es of nonviolence, as practiced by
ndhi and internationally canonized
the late Jawaharlal Nehru. In a
eech to students last week, Lal Baha-
r Shastri, Nehru's successor, loyally
ested: "We cannot change our con-
ction because of China's action."
India's scientists, who think differ-
ly, are confident that they can ex-
plode a nuclear device within 18 months. A Canadian-built reactor is in operation near Bombay, another is under construction, a third is on order. The only potential obstacle is an Indian pledge to Canada that reactor products—notably the plutonium needed for nuclear weaponry—would be used solely for peaceful purposes. Dr. Homi J. Bhabha, chairman of India's Atomic Energy Commission, even maintains that the price is right. In a recent broadcast, Bhabha said that less than $21 million would buy a stockpile of 50 atomic bombs; for an additional $10 million, India could build 50 two-megaton H-bombs. Western experts agree with Bhabha's figures.

Disingenuously, perhaps, many influential Indians argue now that membership in the nuclear club would increase their stature in the eyes of the world. Frank Moraes, astute editor of The Indian Express, reasons that an Indian bomb "would be a moral boost not only for this country but for all the free countries of Asia." And to underline Moraes' contention, The Statesman observed that "only a few weeks ago Ceylon protested against the presence of nuclear-armed U.S. warships in the Indian Ocean. But in the face of the Chinese outrage, Colombo is eloquently silent."

Few Indians, however, seem to realize that a nuclear stockpile would not in itself confer parity with China. Communist airbases in Tibet are only 500 miles from key Indian targets, while India's northernmost base is 2,500 miles from major Chinese cities. Asked one skeptic: "What would we use to deliver an atomic bomb? A bullock cart?"

THE SATELLITES

Marxmen All

Boors may not always thrive under Communism, as Nikita Khrushchev so sadly learned—but boars do fine. So do bears, stags, hares, fallow deer, and every other Eastern European game species. As a result, scores of Western sportsmen last week were crossing the Iron Curtain for an annual shotgun wedding of East and West in which commissars pile up tourist dollars and jaded capitalist hunters bag big-game thrills.

"Royal Weekend." All details of the satellite safari are, of course, handled by state-run tourist agencies. The payoff comes from "shooting fees"—each type of game bird or animal is assigned a price tag, which varies according to size, age and trophy value. At the end of a shoot, the tourist bureau tots up the value of game shot, and the hunter forks over. In the Koprivnica area of Yugoslavia last spring, a Düsseldorf status seeker shelled out $12,500 for a 660-lb. European brown bear. That was just a warmup; Koprivnica gamekeepers are carefully pampering an even bigger bruin for the same hunter to pot this fall—at a cost of $15,000. A run-of-the-hill red stag costs about $350 in Yugoslavia, but a Swiss hunter who was lucky—or unlucky—enough to bag a "world class" stag got socked with a $10,500 bill.

Even the birds do their bit for the classless society. On de luxe partridge and pheasant shoots on the old Habsburg preserves in northern Czechoslovakia, hunters stay in luxurious castles; black tie for dinner is *de rigueur*. In the mornings, hundreds of peasants fan out through the brush to drive the birds into range. Daily bags run as high as 140 birds per gun. Cost of a "royal weekend," as Red tourist folders unashamedly put it: $400.

Between the Horns. At those prices, hunting behind the Iron Curtain demands a certain self-discipline. In Yugoslavia, it costs $500 just to wound a bear, while a clean miss is priced at $200. Hungarians and Rumanians are nicer about it—$50 to $100 for flubbing a shot.

Western visitors are also well advised to bone up on local folklore. In the Yugoslav mountains, a stag shoot is followed by a quaint little ceremony in which the hunter bends over with his head between the horns and tries to answer three riddles posed by the guide. "Why does the rabbit go over the mountain?" the guide asks. "Why is a giraffe's neck so long?" "Why is a lion's head so big?" (Answers: "Because the mountain won't go over the rabbit." "So he can reach the ground to eat the grass." "So he can't stick it between the bars of his cage.") For each wrong reply, the guide gets to whack the hunter on the rump with a willow branch. Smart Westerners can always retaliate with a few Red riddles of their own. One that is currently bouncing around the satellite circuit asks: "What did Aleksei Adzhubei learn when his father-in-law lost his job?" Answer: "That he married for love."

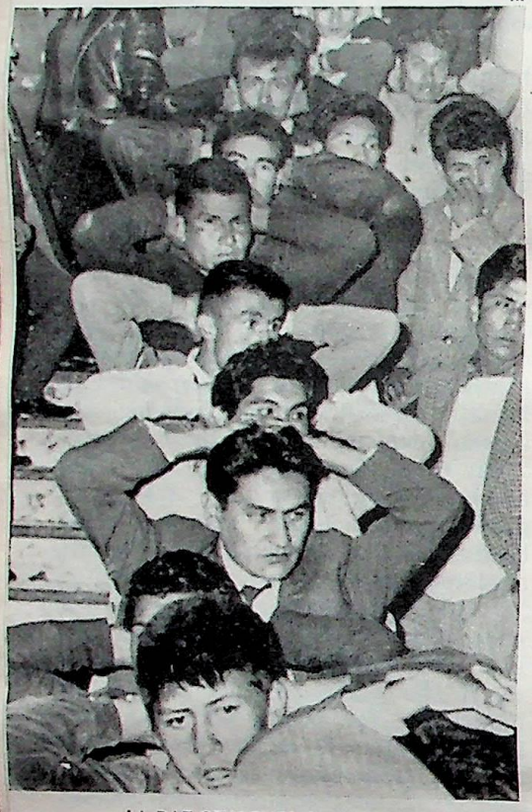
BOLIVIA

View from the Volcano

Bolivia's President Víctor Paz Estenssoro, 57, lives on top of a volcano. In his three terms of office since 1952, he has made so many political enemies that he is a virtual prisoner of his bodyguards. He dares not leave the country for fear of a revolution, and he spends so much time keeping order in his bleak and violent Andean nation that he cannot really concentrate on the basic economic problems that cry for attention. Last week his volcano blew sky-high.

AP



LA PAZ STUDENTS SURRENDERING
Make way for the clergy.

Preaching Hatred. The warning rumbles have been growing ever since the May election in which Paz won another four-year term over the bitter opposition of two erstwhile allies: former President Hernán Siles Zuazo, 50, and Juan Lechín, 51, leftist boss of Bolivia's tin miners. Siles has been packed off to exile in Uruguay. But Lechín is still around, preaching hatred and focusing Paz's opposition.

Fortnight ago, in Cochabamba, Bolivia's second biggest city, either police or pro-Paz *campesinos* fired into a mob of rioting students, killing one of the youths. That was all it took to trigger an open revolt by students, miners and agitators of every stripe. In mining centers, union radios crackled with calls for "popular rebellion" against "the bloody tyrant and assassin Paz Estenssoro." Lechín's well-armed miners fought pitched battles with government troops, and the first casualty reports told of some 50 dead.

In towns throughout the country, howling student mobs stormed through the streets, fighting police and—as always—attacking U.S. property. In the capital, La Paz, 600 students holed up in the university, for three hours exchanged rifle and submachine-gun fire with police. That it ended when it did was due to the courage of Monsignor Andrew Kennedy, 50, U.S.-born Vicar-General of La Paz. "Students!" the police shouted. "Stop firing! Listen to Monsignor Kennedy!" With two doctors, the stubby, grey-haired clergyman marched through the firing line and into the university. There he found 16 wounded, one dead. Finally, the students laid down their arms and were prodded off to jail.

Crucial Pivot. President Paz accused Communist Czechoslovakia of playing a major role in the riots, claimed evidence that the tin miners had been "armed with weapons made in Czechoslovakia." Denouncing "this interference in Bolivia's internal affairs," Paz immediately broke all relations and ordered the Czech diplomats home.

For Paz, the crucial pivot that keeps him in or out of power will be the Bolivian army and his own armed followers. So long as they remain loyal, Paz will probably weather the storm. It is in the best interest of the hemisphere that he do so. He is an able economist of considerable vision; he has a deep appreciation of inter-American relations and the U.S. role in Latin American development. And he is probably the only man strong enough to hold together his seething land.

ARGENTINA

Perón: This Is the Year

The message from Madrid to Buenos Aires sounded confident enough: "I have irrevocably decided to return in the year 1964." Juan Domingo Perón, 69, Argentina's exiled dictator, has been talking about returning for nearly ten years, but never before had he set a definite time limit or made such extensive plans.

According to Perón's plan, *Operación Retorno* will take him before Dec. 31 to either Paraguay or Uruguay, where he will wait while an emissary goes on to Buenos Aires to announce the imminent return of *El Líder*. Then if Argentina's 3,000,000 Peronistas react as Perón hopes they will, the old dictator will move on to Buenos Aires and demand immediate presidential elections, which he reckons he would easily win. Should serious opposition develop, Perón says: "Sometimes in history a civil war has been the only way to save a sinking nation."

New Tune & "Tourists." Until a few months ago, such talk was laughed off by most Argentines. Fewer are laughing now. An intelligence evaluation prepared for the Argentine army high command concedes: "The return of Perón does not appear an impossibility." Under pressure from more moderate advisers, Perón has changed his tune. No longer rants about ruling as a strong man, but says rather that his role should be to unite the country's warring factions. The inability of President Illia's weak-willed regime to cope with the country's deepening economic problems makes many Argentines want a more aggressive government.

Some retired army officers and even still active ones in the lower ranks may be willing to make a deal with Perón. Many politicians also seem willing to make deals; police estimate that 3,000 Argentine "tourists" are now in Madrid seeking to see the onetime dictator. Most important, President Illia has declared that "Perón's return is up to Perón."

Devious Scheme? Still, Perón faces tremendous opposition. Alarmed by reports of Perón's preparations, Argentina's chief of naval operations, Admiral Benigno Varela, last week declared: "The navy will not permit the *retorno* under any circumstances." Anti-Perón civilians have organized a commando band to storm the airport and harbor if Perón tries to land.

Perón's chances of regaining power are, in fact, remote. Some observers think another ploy may be in the wind. They have a sneaking suspicion that the present exercise is a devious scheme into which Perón has been drawn by his top lieutenant in Argentina—Andrés Timoteo Vandor, 41. Known as *El Lobo*, The Wolf, Vandor has already proved his cunning by shouldering aside old-line Peronista bosses for control of the Peronista organization. He believes in "Peronismo without Perón," and if Perón fails to return after setting such a specific deadline, his newly appointed followers may finally throw off their old hero. In that case, Vandor would be in position to convert himself from Perón lieutenant to genuine leader of the largest political force in Argentina.

GUATEMALA

Booming Toward Elections

The grey haze of industry billowed up from Guatemala City on the valley floor below, and the impatient tooting of traffic jams sounded far into the hills. "I remember when there were only two cars in Guatemala—both Packards," said Lee Whitbeck, 82, a Utah-born dairyman who went to Guatemala in 1916 and now operates a farm outside the capital. "They used to ... down those cobblestone streets alone." Nowadays, Whitbeck ... goes into town unless he has to. ... can't find a place to park," he grumbles.

Nineteen months after the ... President Miguel Ydígoras Fuentes ...

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

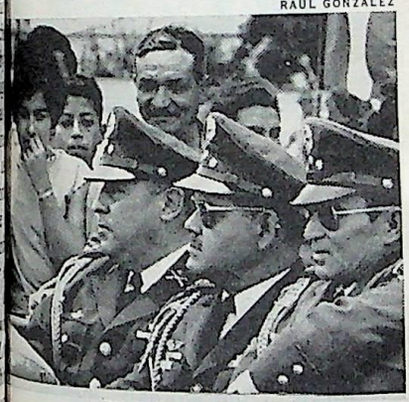
establishment of military rule, Central America's biggest capital is also busiest. The streets are choked autos—Mercedes-Benzes, Peu- Volkswagens, Ford Falcons. walks are filled with bundle-laden ers, and store windows beckon imported washers, steam irons, re- rators and TV sets. Outside town, ot peasants pad along the dusty with $40 Sony transistor radios over their shoulders. "Prices are admitted one merchant, "but what people are paying."

Prosperity Is a New Experience. Prosperity is a new for Guatemala, which along for years in the banana- image—without industry, un- import what it wanted, or even for what it did buy. During the of cantankerous old Ydígoras, and inefficiency, those standard American ills, cut the country's reserves from $72 million in 1957 28 million in 1962. The foreign in- who might have helped stayed —which was hardly surprising, student riots in Guatemala City grumbling peasants in the country- Then, in mid-1963, Juan José Are- 60, Guatemala's Communist-cod- onetime President (1945-51) and baiter (*The Shark and the Sar-*), was allowed to return to stand election. That was the final straw. military sacked Ydígoras. Into his went Army Colonel Enrique Pe- Azurdia, 56, an austere career nicknamed *"el Buddha."* So far has proved a pleasant surprise.

RAUL GONZALEZ



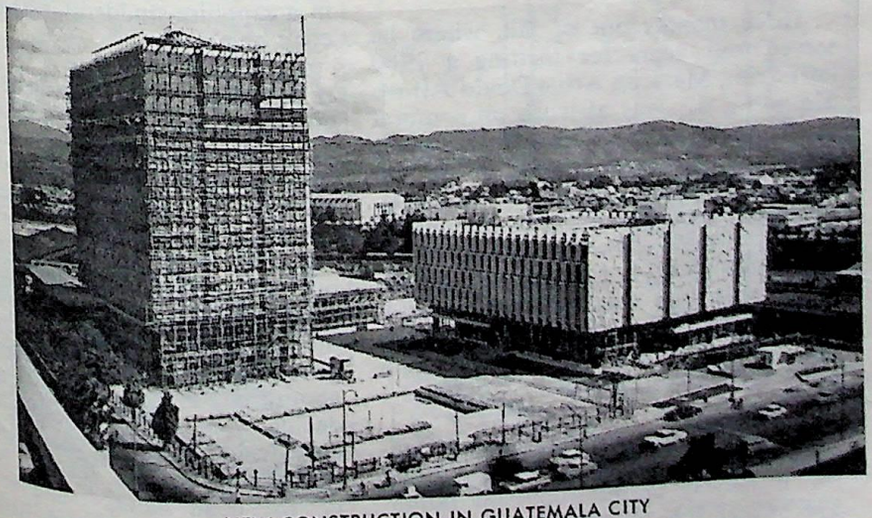
COLONEL PERALTA (LEFT) & AIDES

Peralta turned to the country's businessmen, asked them what to do, and took their advice. He promoted new trade agreements with his neighbors, offered low-cost credit to farmers, expanded cotton production on Guatemala's rich Pacific slope. "That land is so rich in nitrogen," says one cotton grower, "that you could sack it and sell it for fertilizer." This year's income from Guatemala's major crops—coffee, cotton and bananas—should reach $134 million, 35% more than 1962.

Basis of Democracy. Publicly obsessed with the need for industrial development, Peralta told everyone who would listen that free enterprise "is the basis for the democratic development of our national economy." He held out the lure of low taxes, cheap labor and liberal tariff treaties with Central American common market countries. Business responded. Arrow Shirts, Colgate-Palmolive, and General Mills, for example, plan expansion of their facilities. And there are newcomers. International Nickel hopes to set up a $60 million strip mine, Texaco is building a $10 million refinery, and Kern Foods is making Guatemala its distribution center for Central America.

Since the economy was already experiencing a slight boom, all this helped. Last year the G.N.P. rose 7% to a high of $1.2 billion, and in the last eight months alone savings deposits climbed 26%. Some money is actually going begging. "There's one bank in Guatemala," says Banker Julio Veilman, "that has $5,000,000 in excess funds that it can't place."

Certainly, Guatemala is not without social and political problems. Of its 4,500,000 people, 3,900,000 still live in the country's corrugated outback. They are mostly broad-faced descendants of the Maya Indians, and every year more and more of them drift into Guatemala City, creating new urban pressures. The military draws fire for its heavy-handed security checks. In one clumsy swoop last week, 200 men and women were arrested for failure to carry identification papers. Yet Peralta has promised elections before Sept. 15, 1965. Meanwhile, the boom keeps going.



NEW CONSTRUCTION IN GUATEMALA CITY
Some money goes begging.

PROPOSED CANADIAN EMBLEM
Some 1,200 designs later.

CANADA

Flag by Committee

Few Canadian parliamentary issues have generated more heat and less light than the fight over a national flag. In May, Liberal Prime Minister Lester Pearson unfurled his choice for a flag —three red maple leaves on a white ground, bounded by two blue bars. And for the next six weeks, Canada's House of Commons argued about it in a nerve-frazzling filibuster led by Tory Opposition Leader John Diefenbaker. At last Diefenbaker wryly allowed as how the debate was going nowhere. So why not submit the issue to a 15-man committee whose "unanimous decision" would be binding? Since the Liberal minority government was not strong enough to do anything else, Pearson reluctantly agreed.

Last week, after 45 meetings spent studying some 1,200 designs, the committee submitted its choice to Parliament: a red maple leaf on a white field with heavy red bars on either side. As expected, the vote was not unanimous—therefore not binding. Yet it offered Pearson the first real hope in weeks that he might finally get a national flag to help give his fractious country a sense of nationhood and unity.

Pearson's new source of hope springs from a sudden weakening in Diefenbaker's Conservative leadership. Diefenbaker has long argued that Conservatives would never accept a flag that left out the Union Jack as a symbol of Canada's historic ties to Great Britain. He expected that the five Conservatives on the flag committee would vote accordingly. Four did—but not Quebec's Théogène Ricard, and the final committee vote was 10-4 (the chairman would vote only in case of a tie). Furthermore, all ten Quebec Conservatives in the House of Commons appear fed up with Diefenbaker's obstructionist tactics at a time when pressing legislation is awaiting Parliamentary action. After hearing the committee report, they caucused and announced that they will go their own way, supporting the committee flag.

If Pearson can marshal a few more Conservative votes and get around another Diefenbaker filibuster, he may yet have his national flag—without calling for a vote of confidence and risking a general election.

Speedy shape-up.

that would attract me to Hollywood," she added demurely, hitching up her skirt for photographers like any Western starlet, "would be a really interesting part."

• • •

Five-star admirals don't even necessarily fade away. Presiding over the 25th annual pistol match between San Francisco's Olympic Club and the U.S. Naval Air Station at Alameda, retired Fleet Admiral **Chester W. Nimitz**, 79, World War II commander of the U.S. Pacific Fleet, took a Colt .45 automatic in hand to fire off an "honorary" clip of five at 25 yds. Rooty-toot-toot, he scored three bull's-eyes, two near-misses, promptly tucked the target under his arm to take home, "because my wife wouldn't believe it if I just told her." Why should she? Though he had a pistol range outside his Honolulu office for recreation during the war, he hasn't laid a finger on a gun for the past two years.

• • •

As they cleaned the trash from the cellars of the Philips record-company offices in Paris, workmen found a battered box containing 45 master records (78s), pressed between 1940 and 1942 by Chanteuse **Edith Piaf**, who died a year ago at 47. Made in her prime, before illness and alcohol dulled her voice, the records include melodies, such as *Fais-Moi Valser* and *Le Vagabond*, that "the Sparrow" made famous onstage but was never known to have cut. "It's a miracle," said a Philips executive. "We don't know how they got there. Perhaps a technician had to dump them in the Occupation. Perhaps they were even considered rejects."

• • •

Disdaining his rightful line in the *Social Register*, he raised black Angus cattle on his 350-acre Virginia estate, where he was known to the horsy set for the tack shop he ran as a hobby. And so quietly did he die of a liver ailment at the age of 24 in Manhattan on Oct. 4 that not a line made the news columns. But when the will of **Robert Vanderpoel Clark Jr.** was probated last week, it showed an estate of $26,554,200, held principally in trusts and bequeathed equally to his mother and wife of 2½ years. Clark was a great-grandson of Singer Manufacturing Founder Alfred Corning Clark, and he inherited the bulk of his fortune when his great-uncle died last February.

NEWSPAPERS

Curious Detachment

The final weeks of a presidential campaign can usually be counted on to generate a crescendo of press partisanship. But there has been little that can be said of it usual about the 1964 campaign. And as it drew to a close last week, the press coverage, while as comprehensive as ever, reflected a curious and almost complete note of political detachment. It was as if the newspapers, in an effort to be scrupulously impartial, had centered their attention to the candidates with a ruler.

Reporters and columnists alike might seem to have been making amends for earlier sins of excess, for the extra emotion that once showed so strongly in story after anti-Goldwater story. Or perhaps the press was just plain bored by a dull campaign, had lost interest in interpretation. Newsmen traveling with both Johnson and Goldwater may have decided that there was no longer any point at all about who was going to be the winner, that further displays of partisanship on their part were unnecessary and redundant.

This did not mean, of course, that the editorial pages stopped taking sides. But even there, the pattern was not familiar. *Editor & Publisher*, announcing final results of its Who's for Whom poll, reported 440 papers, with 27 million circulation for Johnson, against 359 papers, with 9,000,000 circulation for Goldwater. Johnson's percentage of 64% came nowhere near the 67% registered by Eisenhower in the magazine's 1952 poll, but it was a long way from the mere 14% support that went last year to Democrat Adlai Stevenson —who understandably raised the charge of a "one-party press." This year's tabulation demolished Stevenson's accusation with statistical authority.

About the only pattern that endured was stitched by those papers that took no sides at all. About half of the nation's newspapers refused to choose. One last-minute entry in this neutral rank was the New York Daily News—which up to last week had been neutral for Goldwater. The largest daily in the country is not known for its reticence; it gives its readers advice on everything from love problems to safe driving. But in the end the only recommendation that the News had for its readers was to vote. "The Goldwater campaign has been so clumsily conducted that one wonders how capable a President he would be. On the other hand, we wonder whether the country could stand four more years of Johnson." With that, and "with great regret," the News boldly came out for neither man.

A Cause for Mirth

However disappointing the campaign might have been, at least one editorial hand found plenty of cause for mirth. New York Herald Tribune Staffer Harry Marsh, whose duties include rounding up and reprinting editorials from other papers, was jolted by a wry campaign observation in the Buffalo Evening News. "A good turnout can be expected at the polls in November," predicted the News. "Most voters used up their apathy watching the conventions." Could it be, Marsh wondered, that the lusterless campaign had provided a setting for editorial whimsy? By last week, with publication of the second of two editorial samplers, the Trib's Marsh had made his point:

• The Louisville Courier-Journal noted that a local Republican office-seeker was blaming Lyndon Johnson for everything from the mess in the Congo to De Gaulle's recognition of Red China: "Our candidate has not yet mentioned that it was during the Kennedy-Johnson years that the blue whale became commercially extinct."

• The Wichita, Kans., Eagle affected dismay after Johnson kissed a baby: "Is it proper for the President to expose himself to the afflictions which beset the nursery crowd? Measles or whooping cough in the White House could have repercussions for the whole free world."

• The Washington Star was amused by the Johnsonian declaration that "for the first time in history, profits are higher than ever before": "With the above offering, the Chief has taken his place alongside those forgotten orators who reminded us that 'The future lies ahead,' and that 'The boys of today will be the men of tomorrow.' "

• The Philadelphia Bulletin detected a new earnestness of rhetoric in the campaigns last week: "Until Election Day, Voltaire's famous remark is amended to read, 'I will defend to the death your right to say what you have just said, but if you say it again, I'll poke you one in the kisser.' "

CARTOONISTS

Not Mad at Anybody

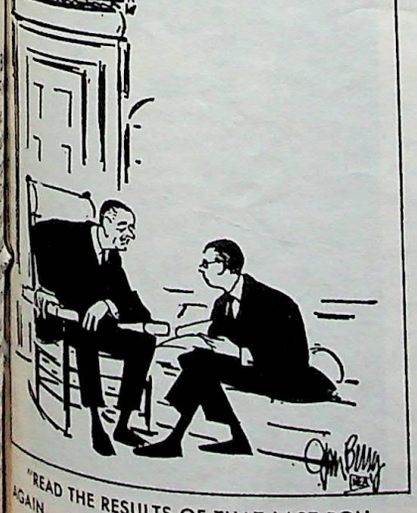
• "We're alone, dear," says Lady Bird Johnson, seated at the breakfast table with her husband. "You can refer to him by name instead of 'my opponent.' "

• Gushes the sweet young thing to her studious male escort: "I guess I am to you what Cuba is to Russia—friendly, but expensive!"

• To the police sergeant, the patrolman explains a fact of modern life: "You can tell the delinquents who come from affluent families—instead of razors they use electric carving knives!"

These needle-sharp political gibes are the work of James O. Berry, 32, whose cartoon feature, *Berry's World*, is syndicated by the Newspaper Enterprise Association, a New York affiliate of Scripps-Howard newspapers. They go to 570 papers throughout the U.S., and since Berry's cartoons come as part of

JIM BERRY—NEA



"READ THE RESULTS OF THAT LAST POLL AGAIN . . . I FEEL LIKE BEING OVERCONFIDENT!"

"IS THIS THE FIRST TIME THEY'VE SIGHTED A CHIPMUNK DURING A PRESS CONFERENCE?"

"MAYBE WE COULD MAKE 'THE GREAT SOCIETY' EVEN GREATER BY HAVIN' EVERYBODY MOVE ON DOWN TO TEXAS!"

Digitized by Arya Samaj Foundation Chennai and eGangotri

a package, none of N.E.A.'s clients are under any obligation to run them. It is a considerable tribute to Jim Berry's satire that more than 400 do.

More often than not, his cartoons appear on the editorial page, where they seem almost like modest postscripts to the regular editorial cartoon. A Berry panel never shouts. None of the characters are ever directly identified, and the point of the joke is sometimes kept as deliberately small as the cartoon itself, which runs two columns wide to the typical editorial cartoon's three columns. "I find if I draw large, there's a tendency to put in too much detail," says Cartoonist Berry, himself a bulky and heavily detailed 210-pounder who stands 6 ft. 3 in.

Berry's forte is good-natured whimsy and a talent for deft deflation that is particularly effective when he sights in on his folksy cartoon image of Lyndon Johnson. His approach contrasts sharply with the generally aggressive comment of his cartoonist colleagues. "We get enough of the angry stuff," says Berry. He considers himself a "middle-of-the-roader" and prefers to keep his political preferences a secret for the ballot box. "I'm not really mad at anybody," he says. "Satire comes naturally to me, and I prefer to take potshots at anybody and anything."

PUBLISHERS

The Man Who Snatched Away a Meal

The occasion was scarcely expected to be lively. It was the annual shareholders' meeting, in Glasgow, of Scottish and Universal Investments Ltd. (SUITS for short), the holding company for Sir Hugh Fraser's vast assembly of Scottish and British department stores. Nor did the chairman's report seem like a call for Scottish cheer. By paying out some $10 million, said Sir Hugh, he had acquired controlling interest in George Outram & Co., Ltd., a prosperous Glaswegian publishing house that had not really been for sale. But once they heard the expensive word, the SUITS shareholders burst out in un-Caledonian glee. "For he's a jolly good fellow," they sang, in tribute to the man who, by buying Outram, had succeeded in his assigned task of preventing the world's hungriest press lord from sitting down to his next chosen meal.

Landing in Edinburgh. The appetite belonged, of course, to Canadian-born Roy Thomson, 70, Lord Thomson of Fleet, who already owns more newspapers (113) than any other man. Perhaps because of his Scottish ancestry—his great-great-grandfather was born in Dumfriesshire—Thomson particularly fancies Scottish possessions. When his Canadian-based publishing empire crossed the Atlantic in 1954, it landed first in Edinburgh, where Thomson bought The Scotsman, a morning daily. Since then, between forays on Fleet Street, London's newspaper row, Thomson has added three more Scottish papers and an 80% interest in Scottish television to his empire.

SIR HUGH FRASER
Scotland for the Scots.

When Thomson made clear that he meant to buy up Outram, which publishes the Glasgow Herald (circ. 254,000), and half a dozen smaller papers, Outram's board became more determined than ever that their Scottish papers should be owned by Scots. Sir Hugh Fraser was brought in for the express purpose of figuring out the tactics that might keep Thomson at bay. A Glaswegian by birth and heir to the family drapery, Sir Hugh had already proved his business cunning by expanding his inheritance into a chain of 70 stores all over the United Kingdom.

Until two months ago, Sir Hugh had little to do. Then Thomson abruptly bid $2.80 per share, in cash, for Outram stock—a figure about 60¢ above the market and one that set a price tag on Outram of $15 million. Before long Thomson raised his bid to $18 million.

Invoking a Shade. Over the next two months, Roy Thomson confidently raised his offer to an apparently unmatchable $25 million. But by then, although Thomson did not know it, the battle was ended. Over the same period, in his capacity as head of SUITS, Sir Hugh had been quietly buying Outram stock. Now he was the owner of a controlling 51%.

"If Sir Hugh Fraser has won," said Roy Thomson, with more vexation than grace, "the shareholders, Outram and Scotland itself will certainly have lost." But this was a minority view. "What most impresses the Scots," said London's Financial Times, "is that Sir Hugh is prepared to lose money in Scottish causes." Exulted Glasgow's weekly Investors Chronicle: "Shades of Bannockburn!"—thus invoking for all patriotic Scotsmen the glorious memory of Robert the Bruce's historic defeat of the British in 1314.

d-degree murder, but that requires proof of intent to kill an individual. See- no other choice, the prosecution ally allowed Weissman to plead guilty second-degree manslaughter on the ory that he would still get a rap of to 15 years. But the D.A. guessed ong. Accepting Weissman's plea, ate Supreme Court Justice Frederick cker mulled over a psychiatric report d gave Mike Schaffer's killer 3½ to en years.

COURTS

ose Kennedy Judges

It was no accident that John F. Kenedy appointed more federal judges than y other President. For years, congresnal Democrats had refused to expand e overworked federal bench—saving r a Democratic Administration a mper crop of 73 judicial nominations. ut all that judicial patronage was libally sprinkled with problems.

Because they deal largely with the w of the state in which they sit, and ey understandably reflect the domiant social patterns of that state, dist judges are drawn from their own calities. The judges were approved by ttorney General Robert Kennedy, but e knew that all candidates, and especially those for the Southern bench, ould have to be "traded out" with the enate Judiciary Committee chaired by Mississippi's Segregationist James O. Eastland.

Even so, Kennedy may have thought he was doing well. His first district judge, for instance, Mississippi's William Harold Cox, took office in 1961 with the American Bar Association's highest endorsement of "exceptionally well-qualified." The tall, stern son of a County Sheriff, Cox was a stickler for detail and had been a first-rate trial lawyer in Jackson. Other Kennedy appointees seemed equally qualified, and the Administration heaved a sigh of relief.

Rearguard Justice. Unhappily, some of those promising district judges have turned out to be so devoted to segregation that they may be the greatest obstacle to equal rights in the South today. Now entrenched for life on Southern benches are such men as Louisiana's Judge E. Gordon West, who has upheld the Supreme Court's 1954 school ruling while calling it "one of the truly regrettable decisions of all time," and Georgia's Judge J. Robert Elliott, who once said, "I don't want those pinks, radicals and black voters to outvote those who are trying to preserve our segregation laws and traditions."

Armed with tight control over their calendars, certain Southern district judges have delayed civil rights cases for months and years, played cat and mouse with the Fifth Circuit Court of Appeals and mocked the Supreme Court. Where possible, they remand cases for endless adjudication by state courts. When reversed, they take back the same case and start all over. Little can be done short of impeachment—a tactic successfully used only four times since 1789.

One measure of the result is that last week Mississippi's Judge Cox coolly tried to jail not only U.S. Attorney Robert E. Hauberg in Jackson but also his boss, Acting Attorney General Nicholas Katzenbach.

It was a strange contempt proceeding that threatened Negro voting throughout Mississippi, but it should have been no surprise. Once on the bench in a state where only 5% of adult Negroes are registered to vote, Judge Cox, 63, has consistently refused to find any pattern of discrimination. Moreover, he has filled trial transcripts in rights cases with gratuitous obiter dicta. At a hearing last March, he referred to a Negro voting registration drive as "grandstanding"; he repeatedly described 200 applicants as "a bunch of niggers" and called them "chimpanzees" who "ought to be in the movies rather than being registered to vote."

Fit for Jail. The latest case to cast Cox as a judicial Horatio at the segregation bridge began in 1962 when two Negro witnesses told of being denied the right to register seven years before. They said that on that day they had seen a white man allowed to sign the registration book. As it turned out, the white man in question had been present, but he had actually registered elsewhere. "Outraged" at this revelation, Judge Cox accused the Negro witnesses of perjury.

The Government declined to prosecute on the ground that the Negroes were guilty only of an insignificant slip of memory. But Cox persisted, and last fall the Negroes were indicted by a state grand jury. The Government countered by arguing that states cannot prosecute alleged federal perjurers. Cox tried a new tack when a federal grand jury began looking into civil rights violations throughout Mississippi. Somehow that jury was persuaded to see things Cox's way. It indicted the Negroes, and then Cox ordered U.S. Attorney Robert E. Hauberg to prepare and sign the indictment.

With tears in his eyes, the towering Mississippi-born Hauberg "most humbly" refused on direct orders of Acting Attorney General Katzenbach. "I do judge you to be in civil contempt," intoned Cox, ordering Hauberg to jail "until you decide to comply." Cox then ordered Katzenbach "to show cause why he should not be adjudged guilty of contempt."*

Irreparable Damage. Faced with an unprecedented challenge, the Justice Department last week petitioned the Fifth Circuit Court of Appeals for a writ of prohibition against Cox's order on the ground that the U.S. Attorney General has sole authority for initiating all federal prosecutions. This does not prevent Cox's grand jury from issuing indictments with an outside lawyer's help, but it does free the Government from participating in "unwarranted indictments" against the very Negroes it seeks to help. In short, says the Justice Department, Cox cannot usurp the U.S. prosecutor's job.

The appellate court, having granted a stay, will now hear Cox's argument. As the judge sees it, Rule 7 (c) of the Federal Rules of Criminal Procedure commands that all federal indictments "shall be signed by the Attorney for the Government." If his judicial superiors agree, Cox would then be protected by Rule 48, which says that the Government can drop indictments only "by leave of court"—in this case, Judge Cox. To argue these subtleties, Cox has enlisted three high-powered Mississippi lawyers, including State Attorney General Joseph T. Patterson.

There is more involved than what the Justice Department calls "irreparable damage" to Government authority. And the case is more than "merely a question of perjury," as Cox puts it. If the indictments go through, says one civil rights worker, "our voting drive will be cut back fantastically. The Justice Department now has about 16 voting registration suits going in the state, and they would be smashed. We couldn't get anyone to testify."

* If convicted, Katzenbach has one small consolation: all federal prisoners are officially in the custody of the Attorney General. "If I'm going to jail," he cracks, "I might as well go in my own custody."

AUTO RACING

With a Nudge for Luck

The Ferrari snarled down the straightaway past the finish line, coasted through a slow-down lap, and eased into the pits. What's this? wondered Driver John Surtees when mechanics swarmed round, hugging, kissing, pounding him on the back. Then they began chanting *"Campione del mondo! Campione del mondo!"* and Surtees finally got the message. "Oh," he said. "I did it, didn't I?" It was enough to confuse anybody. In one of the wildest finishes in racing history, Britain's Surtees became the 1964 Grand Prix champion—by the humbling margin of a leaky oil line and a bent exhaust pipe.

Going into the tenth and final race at Mexico City last week, three drivers were still battling for the championship, and it would have taken a mathematical wizard to figure all the possibilities. Under the complicated system of Grand Prix scoring (nine points for a first place, six for a second, four for third, etc.), Britain's Graham Hill was leading with 39 points, Surtees was second with 34, and Scotland's Jimmy Clark, the 1963 champion, had 30. Now, if Hill won, it was all over. But if Clark won and Hill and Surtees were out of the money, or if Surtees came in second while Clark and Hill—oh, never mind.

Fist in Anger. The starter's flag had barely fluttered when Clark shot into the lead, opening up a gap of 18 sec. over the U.S.'s Dan Gurney, who had no chance at all for the championship. Hill was a careful third, and Surtees, off slowly, was fifth, hopelessly out of the running. Or so he thought.

Then luck took a hand—with a nudge from Surtees' teammate, Lorenzo Bandini. Running fourth, unable to pass Hill on the straightaways, the Italian picked the worst turn on the course, a tight hairpin, as a likely spot to make his move. Four times he tried to slip past; four times he failed—coming so close to Hill's B.R.M. that the Briton shook his fist in anger. On the 31st lap he tried again—and this time he slammed into the B.R.M., bounced it clear off the track into a fence. Tail pipes bent, title hopes shattered, Hill limped into the pits and exploded with rage: "Rank amateur driving. Inexcusable."

That put Surtees fourth, but after 63 laps, Clark's Lotus was still far ahead, and the championship was surely his. Suddenly a shout went up. Clark was merely coasting. An oil line had snapped. The Lotus was out of the race—just two laps from victory. Now all Surtees had to do was finish second behind Dan Gurney. Ferrari mechanics frantically signaled Bandini to slow down. Obediently, Bandini lifted his foot and Surtees shot past, crossing the finish line 69 sec. behind Winner Gurney.

Tired of Thinking. That gave Surtees 40 points and the championship—not bad for a man who drove his first four-wheel race in 1960. The son of a South London motorcycle dealer, Surtees, 30, grew up gunning bikes around the countryside, won his first world motorcycle racing championship in 1956, his seventh in 1960. Grand Prix drivers still shudder at his first attempts to corner a racing car. "First you would see one side of the car," says Stirling Moss, "and then the other, and then the front, and then the back." "Coordination," says Surtees, was his trouble: "On a bike you do all the work with your hands, but in a car your feet have to work as well. That meant I had to think all the time, and that was very tiring."

Plagued by mechanical troubles, he spent the first half of the 1964 season watching gloomily while the Lotuses and B.R.M.s whizzed past. Once, the exquisite machines of Italy's Enzo Ferrari had dominated Grand Prix racing, but the British took over, and now experts were suggesting that old (66) Enzo had lost his touch. Then the bugs departed—to feast on other people's metal. Surtees won the German Grand Prix at Nürburgring, followed that with a victory in Italy, a third in Belgium, a second in the U.S. race at Watkins Glen, N.Y. And last week in Mexico City, by the slimmest possible margin, he overhauled everyone to give Ferrari its sixth championship in the past 13 years.

Riding the Washboard

One of these days, they may have to put traffic lights on the Bonneville Salt Flats.

The silly season had barely started when Illinois' Tom Green showed the speed-jaded Bonneville buffs by exceeding Walt Arfons' *Wingfoot Express* with a new record of 413 m.p.h. It lasted just three days—until Walt's brother Art, 38, clocked 434 m.p.h. in his jet-powered *Green Monster*. That was fast enough to bring Old Bonneville Ace (407 m.p.h. in 1963) Craig Breedlove hustling back to the flats for another try in his three-wheeled *Spirit of America*. Breedlove soon boosted the mark to 526 m.p.h.—and nearly killed himself when *Spirit* clipped through a telegraph pole, soared 35 ft. over a dike, and dived into a 20-ft.-deep drainage ditch.

Last week it was Art Arfons' turn again. His homemade *Green Monster* was nicknamed "the Garbage Truck" —because it was the ugliest and noisiest thing around. It cost Arfons only $3,000—$5,000 for the aluminum body and $5,000 for a J-79 jet engine (just like the one in F-104 supersonic fighters) that the Air Force apparently forgot about, put up for surplus sale. And brother, could it ever go.

Lying prone in a cockpit perched on *Monster's* side, Art yowled past the timers at 515.98 m.p.h. on his first run, turned around and headed back. Down went the throttle, up climbed the speedometer speed indicator—to 500, to 550, to 575 m.p.h. At that speed, the seemingly smooth salt flats felt like a washboard, and the 6,500-lb. car bucked and yawed. The needle touched 600 m.p.h. and—pow! The right rear tire [illegible]

...ported; Firestone had warned him ...ot to top 550. Arfons popped his brak... ...ing chutes, fought *Monster* to a shud... ...dering stop, clambered unsteadily from ...the cockpit. "Whew!" he said. "This is ...an animal, not a car."

On his second run through the meas... ...ured mile, clockers caught Arfons at ...559.179 m.p.h.—for an incredible av... ...erage of 536.7 m.p.h. Now he began ...talking about doing 600 m.p.h., or even ...cracking the sound barrier—about 720 ...m.p.h. at Bonneville. Nobody knows ...what will happen if a car ever does go ...faster than sound, but Arfons is game. ...He only used 12,000 horsepower this ...time," he says, "and there's 5,000 more ...horses in that engine."

PRO FOOTBALL

Any Time, Any Place

There are three things a businessman can do about competition. He can fight it. He can join it. Or, like the National Football League, he can pretend it isn't there. But the five-year-old American Football League is getting too big to overlook. With half the 1964 season still to go, attendance in the eight-team A.F.L. is already nearing the 1,000,000 mark, and next year, a new TV contract will dump $900,000 a season into each club's coffers. Maybe all that money is going to their heads. Last week the New York Jets offered to take on the N.F.L.'s New York Giants "any time, any place." And up in Buffalo, where 39,621 frantic fans somehow squeezed into the 38,167-seat War Memorial Stadium to watch the home-town Bills walloop the Jets 34-24, the battle cry was: "Bring on the Baltimore Colts!"

Slightly Nuts. Buffalo fans have always been slightly nuts. As far back as 1949, 25,000 of them signed a petition promising to buy season tickets if the N.F.L. would give them a team. The N.F.L. only snickered—but Buffalo got its team anyhow, when Insurance Man Ralph Wilson Jr. bought an A.F.L. franchise in 1959. The fledgling Bills promptly lost their first three home games. That wasn't exactly what the fans had in mind, and when the Bills wound up last in the Eastern Division in 1961, they took to demonstrating their displeasure by pelting the players with beer cans. But then came Coach Lou Saban, a man whose own record was nothing to brag about: he had been fired by the Boston Patriots. He spent two years rebuilding the squad, and by last week the jeers had turned to cries of glee. Victory over the Jets ran the Bills' season's record to 7-0, making them the only unbeaten team in pro football.

Maybe they could handle the Colts at that. The Bills lead the A.F.L. in scoring, total offense and total defense —averaging 415 yds. and 33 points, holding opponents to 243 yds. a game. Most teams have one topflight quarterback, if that. The Bills boast two: Jack Kemp, 29, who led the San Diego Chargers to two straight Western Division championships before going to Buffalo on waivers for $100; and Daryle Lamonica, the ex-Notre Dame star, who has engineered winning touchdown drives in four of the Bills' seven games. On defense, Buffalo's "front four" make most N.F.L. linemen look like underfed schoolboys: bulwarked by massive Tackle Jim Dunaway, a Mississippi All-America in 1962, they average 265 lbs. per man. But that is only half the story. The other half is Carlton Chester ("Cookie") Gilchrist, 29, who at 6 ft. 3 in. and 251 lbs. is the biggest back in all of pro football.

Daddy Called Him Doughnut. Cookie Gilchrist ("My mother called me 'Cupcake,' my father called me 'Doughnut,' so we settled on 'Cookie' ") has been a pro ever since he was a 185-lb. teen-ager playing for Har-Brack high school in Brackenridge, Pa. "Guys would shake hands with me, and there would be bills in their palms," he remembers—and sometimes the take ran to $150 a week. The N.F.L.'s Cleveland Browns signed him at 18, shipped him off to Canada for seasoning. Cookie liked it so well he decided to stay. By 1962, when he quit and shuffled off to Buffalo, Cookie was the No. 1 back in Canadian football and a $20,000-a-year man with the Toronto Argonauts.

In his first season at Buffalo, Gilchrist gained 1,096 yds., was voted Most Valuable Player in the league. Crippled by injuries last year, he still put on the greatest one-man exhibition in pro history: in a final game against the Jets, he carried the ball 36 times, scored five touchdowns, and gained 243 yds. "When you weigh 251 lbs.," he says, "there's no sense in trying to run around smaller people. I just run through them." Against the San Diego Chargers earlier this season, Gilchrist caught a swing pass from Quarterback Kemp. Nobody was fooled. One after another, four defenders piled on top of Cookie. He finally went down—after staggering 25 yds. What's more, unlike many top pro runners (including Cleveland's great Jimmy Brown), Gilchrist is a superb blocker. With Cookie picking off the blitzers, Buffalo's quarterbacks have had to eat the ball only six times all season.

SCOREBOARD

Who Won

▶ Kelso: the $108,600 Jockey Club Gold Cup, for the fifth straight year, by five laughable lengths at New York's Aqueduct race track. Clipping one-fifth of a second from the U.S. two-mile record he set when he was three, Mrs. Richard C. duPont's seven-year-old gelding picked up $70,590, boosted his lifetime earnings to $1,803,362. That broke Round Table's alltime record, made Kelso the biggest money winner in thoroughbred racing history.

▶ Unbeaten Notre Dame: a lopsided 40-0 victory over Navy, at Philadelphia. Led by Quarterback John Huarte, who threw TD passes of 7 yds., 55 yds. and 74 yds., the No. 2-ranked Irish won their sixth straight, handed the Middies their worst defeat since 1949. Top-ranked Ohio State hardly lived up to its notices, edging Iowa by two points (21-19) and 8 in.—the distance by which the Hawkeyes missed a running conversion attempt that would have tied the score. Purdue, beaten only by Notre Dame (34-15), won its fourth in a row, walloping Illinois, the preseason Big Ten favorite, 26-14.

SPACE

Mystery from Way Out

One of those far-out fantasies that have long been a staple of science fiction is now a serious subject for scientific discussion—with the Russians taking it to new extremes. Two unusual radio "stars," wrote Astronomer Nikolai S. Kardashev in the *Astronomical Journal* of the Soviet Academy of Sciences, may be "supercivilizations" deep in space, calling attention to themselves by transmitting vast amounts of energy on peculiar, and therefore conspicuous, radio frequencies.

EXTRATERRESTRIAL BEING (SKETCH)
For power, a whole star.

The two radio sources, catalogued as CTA-21 and CTA-102, were first detected by radio astronomers in 1960. Both are pinpoints in the sky, which means that they are either very small or very far away. But the most remarkable thing about them is the radio energy they emit: it is strongest at about 900 megacycles. This frequency, says Kardashev, is the best for long-distance space communication.

Spherical Shell. If the radio transmissions from CTA-21 and CTA-102 are actually attempts to communicate, they must come from supercivilizations with incredibly vast amounts of energy at their disposal. But this does not trouble Kardashev. He points out that the total energy generated on earth is only about 4 billion kw., which is only a tiny fraction of the energy transmitted by the two radio sources.

The earth, he says, has only a crude "Type One" civilization. If its energy output continues to grow at 3% to 4% per year, in a few thousand years it will become a "Type Two" civilization producing 400,000 billion kw. This is just about the amount of energy given off by the sun. It might be generated handily, Kardashev thinks, by a civilization clever enough to rearrange the matter from its planets into a spherical shell around its central star. The outside of such an artifact would give no light, but conceivably it could be made to transmit an enormous amount of radio-frequency energy.

Type Three. Are Type Two civilizations the highest peaks that life can reach? Not at all, says Kardashev. A properly ambitious form of superlife would not be satisfied with a single captive star; it would surely proceed to capture a whole galaxy containing billions of stars. Once it had control of an encapsulated galaxy, it would rank, says Kardashev, as a Type Three civilization and would probably try to communicate with other galaxies.

Many non-Soviet astronomers suspect that life may indeed be common in the universe, and if so, its higher centers may be trying to communicate with man's young civilization on the earth, but few will accept Kardashev's theory that CTA-21 and CTA-102 are actually stars hitched to radio transmitters. "Extremely unlikely" says U.S. Radio Astronomer Frank Drake of the National Radio Astronomy observatory in West Virginia. Drake admits that the signals from CTA-21 and CTA-102 are impossible to explain at present, but he does not consider them at all suitable for trans-space communication. For the present, he says, those signs must remain among the mysteries that abound in space.

PALEONTOLOGY

The Monster in the Accelerator

The two-mile tunnel that slices through the rolling countryside behind Stanford University in Palo Alto, Calif., was built for one purpose only: to house a linear accelerator with a beam of 20-billion-volt electrons that might knock stubborn secrets out of atomic nuclei. The accelerator is not yet complete, but its construction has already led to a striking discovery in the unexpected field of paleontology. A bulldozer digging a trench at the end of the tunnel veered a few feet from its line and uncovered a ponderous prehistoric peculiar skeleton.

Paleontologist Earl Packard, professor emeritus of Oregon State College who now lives in Palo Alto, was called in to identify the ancient bones. He knew at once that he was looking at something special. "I've waited 40 years for a find like this," he said.

The perfectly fossilized bones are remains of *Paleoparadoxia* ("Ancient contradiction"), an amphibious mammal bigger than a rhinoceros that wallowed in the shallows 15 to 20 million years ago when California's Coast Ranges had not yet risen and the site of inland Palo Alto was still under the sea. *Paleoparadoxia* belongs to a wholly extinct order, the *desmostylians*, which lived the lives of salt-water hippopotamuses around the shores of the North Pacific. It was first found in Japan, and the Palo Alto skeleton is the only one found in North America.

The Palo Alto specimen probably died nonviolently, then its body sank to the ocean floor. A few shark teeth were found among the bones, suggesting that sharks may have had a few bites at *paradoxia's* plentiful flesh before a storm or flood covered the body with sand. Then sediment from the sea covered it deeply, and a mountain range pushed upward between its grave and the ocean. At last big-brained primates, which had not evolved during its long time, brought it into the sunlight while searching for the secrets of infinitesimal matter.

PALEOPARADOXIA REMAINS
For the sharks, a few bites.

ELECTRONICS

Flight by Microwave

The 9-ft. bowl-shaped antenna pointed straight up. Above it floated an object that looked for all the world like a small, square bedspring with a tiny helicopter attached. The rotor blades whirled with a thin whine, and the helicopter strained at the guy wires that

PRIZES

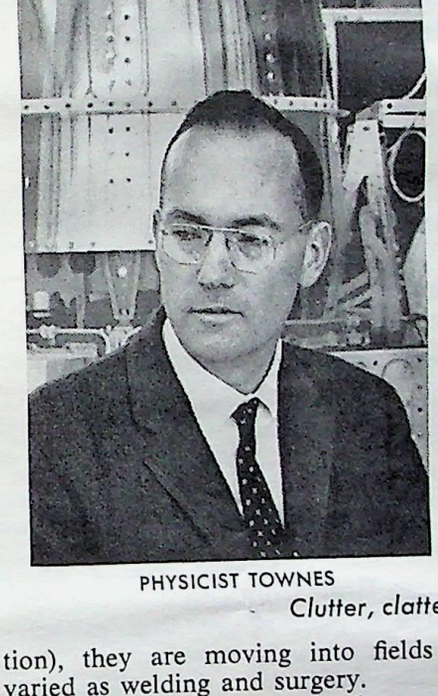
Split Award

It began on a park bench. Physicist Charles Hard Townes was idly admiring nearby azaleas while he puzzled over the problems of generating microwaves. Suddenly, it occurred to him that molecules and atoms are nature's original broadcasters. They transmit on their own characteristic frequencies whenever they change from one energy state to another. Why not put nature, instead of vacuum tubes, to work?

Last week, 13 years later, Townes's answer to that question won him half the Nobel Prize in physics. The Royal Swedish Academy of Sciences called his achievement a triumph of "quantum electronics," which was another way of saying that Townes's work had pointed the way toward masers (an acronym for microwave amplification by stimulated emission of radiation). The other half of the $53,000 payoff went to Drs. Aleksandr M. Prochorov and Nikolai G. Basov, who independently developed a somewhat similar maser at Moscow's Lebedev Institute of Physics.

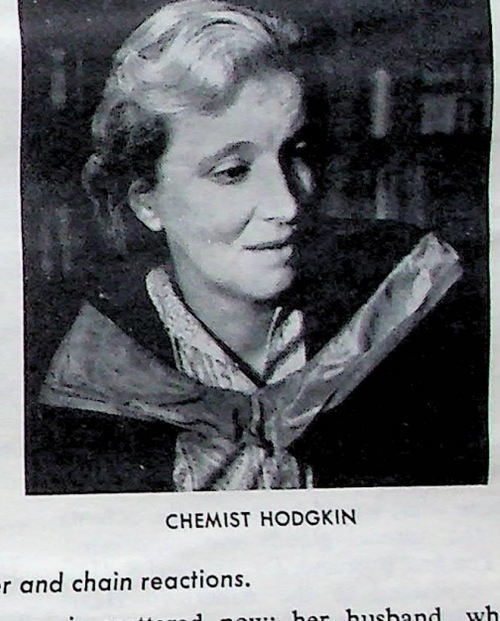
Wide Variety. Working half the world apart, the maser men learned how to use radio microwaves to induce molecules and atoms to give up their stored energy. That newly released energy starts a sort of chain reaction, and the amplified electronic wave that results has since been tamed into a powerful scientific tool. "Masers," says Dr. Townes, "give us one more control over electromagnetic waves, including radio waves and light waves. We have used them to develop an atomic clock which is very precise; in 30,000 years it would gain or lose one second." Now that scientists have learned to use Townes's technique to build lasers (light amplification by stimulated emission of radiation), they are moving into fields as varied as welding and surgery.

JULIAN WASSER



PHYSICIST TOWNES

LOTTE—MEITNER—GRAF



CHEMIST HODGKIN

Clutter, clatter and chain reactions.

That very variety, as much as anything else, also characterizes Townes. Now provost of Massachusetts Institute of Technology, he might well be teaching in the humanities rather than science. He was a whiz kid at Furman University in Greenville, S.C., where he spent much of his time studying languages. He still has some working competence in French, German, Spanish, Greek, Russian and Latin. But eventually he settled for science. Now, even the demands of his administrative job and his work in the laboratory must share time with mountain climbing, skindiving, and the raising of African violets.

Proper Share. "The Russians managed to weasel their way into that one," said Townes's loyal wife in an interview on WNEW, a Manhattan radio station. "They don't deserve it." But her scientific husband was more scientifically detached. "They are fine scientists," he said. "They have done important work in this field and quite properly share in the prize."

The Chemistry-Minded Mother

If Nobelman Charles Townes came close to being a linguist, Nobelwoman Dorothy Crowfoot Hodgkin, 54, of Oxford, third woman ever to win the chemistry award,* came even closer to being an archaeologist. Born in Cairo while her father was Director of Education for the Sudan, she spent her early school holidays in digs in the Near East. But soon after she entered Oxford's Somerville College in 1928, she got caught up in the exciting mysteries of chemistry. By her second year, she was already concentrating on the intricacies of X-ray analysis of large, complicated molecules—the work that won her a Nobel award.

Dorothy Hodgkin's singular achievement was born of a peculiar amalgam of scholarship and domesticity. Her family is scattered now; her husband, whom she married in 1937, is director of the Institute of African Studies in Ghana, where she is now visiting. Her three children are spread among Algeria, Zambia and India. But her old Victorian house in north Oxford still buzzes with her sister's collection of five kids.

Mrs. Hodgkin's orderly mind seems to thrive on a diet of clutter and clatter. After graduation from Oxford, when she went into research, her first lab was in a dingy basement under the university museum. It was her precarious exercise to climb a ladder to a gallery while carrying the delicate crystals with which she worked. But whatever the circumstances, she maintained an elegance of appearance and achievement. No distraction was enough to spoil the work that led to a thorough knowledge of the penicillin molecule, and to the discovery of the structure of Vitamin B-12, the recalcitrant molecule with a cobalt atom heart that is essential to human life.

* The other two: Marie Curie, 1911, and her daughter Irène Joliot-Curie, 1935.

CARDIOLOGY

Blood for Fight or Flight

When a man gets angry, his body prepares for a fight, and his heart speeds up. When a man is frightened, his body prepares for flight, and his heart speeds up. This much is familiar medical fact. But a group of researchers at Ohio State University Hospitals wanted to know whether the body, in its responses to stress, distinguishes between anger and fear. And since it is known that the body's arousal mechanism depends heavily upon an outpouring of adrenalin, the researchers also wanted to know what would happen if the activity of the adrenal glands was suppressed.

The first problem, Dr. Willard S. Harris explained to the American Heart Association, was to devise an acceptable experimental setting in which volunteers could be subjected to forces inducing anger and fear. The Columbus team decided to do it under hypnosis. They got nine volunteers, eight of them graduate students at Ohio State and one a hospital patient. Each one had to have a plastic tube threaded through an arm vein into the heart, and a needle positioned inside an artery in the arm. In a half-dark, quiet room, the subjects were hypnotized. For ten to 15 minutes at a time, they were given suggestions calculated to make them angry or fearful. They had 45 minutes in which to relax and then they were awakened from hypnosis.

Fear and anger, Dr. Harris reported, produced the same sort of changes in the subjects' heart rate (up, on the average, from 65 to 98 beats a minute), breathing rate (up from 15 to an average of 35 and as high as 68 a minute), the heart's output of blood per minute (up an average of 33%), blood pressure (slightly elevated), and blood flow through the extremities (markedly increased). The only noteworthy difference between the effects of fear and anger was that in some subjects fear caused a somewhat greater increase in heart rate and output.

What would happen if the effects of adrenalin were blocked by another drug? The researchers found that the human body is resourceful enough to meet the emergency. If it does not speed up, the heart manages to increase total blood output by the simple device of increasing its output of blood per beat. The effect is the same: to give both brain and limbs an added supply of oxygen for fight or flight.

RESEARCH SUBJECT UNDER HYPNOSIS
Ten minutes of fearful suggestion.

PEDIATRICS

Those Tired Children

The 30 patients, aged three to twelve, had two things in common: they lived on U.S. Air Force bases; and they were suffering from nervousness, continuous fatigue, headaches, loss of sleep, bellyaches, and sometimes vomiting. The medics at both Fairchild A.F.B., near Spokane, Wash., and Lackland A.F.B. in Texas asked all the obvious questions of both the kids and their parents; they did all the usual tests for infections and childhood illnesses, checked the food and water supply—and found nothing to account for what they called "the tired-child syndrome."

In desperation, the medics went back to questioning the parents about their children's habits. Only after several interviews did the truth come out. The youngsters were spending from three to six hours watching TV every weekday, and six to ten hours on Saturdays and Sundays. Captain Richard M. Narkewicz and Captain Stanley M. Graven told the American Academy of Pediatrics in Manhattan last week that some of the younger children were spending a quarter of their waking hours watching TV. Yet their parents had not volunteered this information. It was only in response to the insistent, direct question, "How many hours a day does your child watch TV?", that the facts emerged.

In each of 30 cases, the doctors prescribed total abstinence from TV for a while. In twelve cases the parents enforced the rule, and the children's symptoms vanished in two to three weeks. In 18 cases the parents cut the TV down to about two hours a day, and the children's symptoms did not go away for five or six weeks. But in eleven cases the parents later relaxed the rules, the kids were again spending long hours in front of the picture tube—and they were as sick as before.

It is not that TV in itself is necessarily bad for children, said Dr. Narkewicz. But some youngsters, usually those with an introspective and sensitive nature, become addicted to it. They fall into a vicious cycle in which long hours of viewing leave them too tired to do anything more strenuous than sprawl and do more viewing. The ultimate cure is as simple as it is radical: send the kids out to play, and after dark give them a book to read.

CANCER

Latest Statistics

There was a little cheer but no chilling news in the latest statistics released by the American Cancer Society. The overall number of cancer deaths is increasing slightly: 285,000 last year, 290,000 estimated in 1964, and 295,000 expected in 1965. Different kinds of cancer are increasing at different rates. Lung cancer, once relatively rare, is increasing fastest, and now for the first time displaces tumors of the colon and rectum as the most frequent cause of cancer death.

In 1965, predict the A.C.S. statisticians, 47,000 Americans (40,400 men and 6,600 women) will die of lung cancer, with 52,000 new cases expected to be diagnosed. Cancer of the colon and rectum is still more common, with 73,000 new cases anticipated, but less deadly—43,000 deaths expected. Even if lung cancer is detected before it has spread, only 21% of victims survive five years after surgery. If the cancer has already spread at the time of operation, the five-year survival rate drops to 3%.

The uterus used to be the most common site of fatal cancer in women. Today, thanks mainly to early detection with the Papanicolaou smear, it is much less deadly. With 44,000 new cases expected next year, there will be an estimated 14,000 deaths. The A.C.S. believes that an annual "Pap" smear for all 58 million women in the U.S. would save most of these lives. So far only about 28 million women have ever had a Pap test, and fewer than 10 million have one annually. Cancer of the breast, with 62,000 new cases and 26,000 deaths expected next year, has displaced uterine disease as the most cancer threat to women.

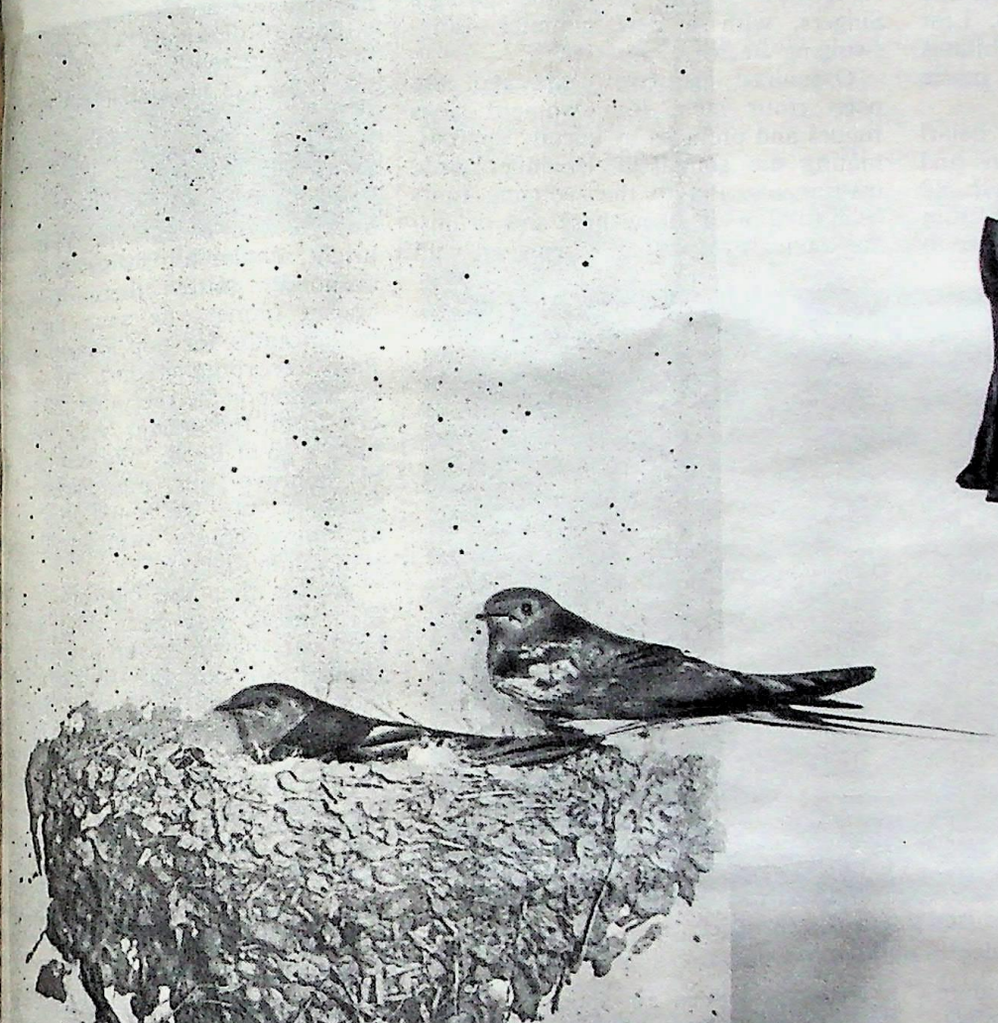
Binders for Builders?



Colors for Clothes?

HOECHST HAS IT

Building your own house may be strictly for the birds, but the materials that go into its construction are very much your concern. They must withstand wind and rain and sun. Hoechst has many products vital to the design and construction of a house. For example, ®MOWILITH as binder for paints, concrete, fillers and adhesives, as base material for insulating compounds and for many other applications – indeed a raw material with a 1000 uses, in cosy nests and stately buildings alike.

Stately buildings were once designed to match the magnificence of regal robes – or vice versa. Today, fabrics in the most splendid colors with outstanding fastness properties are available to everyone. Thanks to Hoechst ®REMAZOL dyes. Remember, from a basic building material to a textile dye . . . Hoechst has it.

Farbwerke Hoechst AG.
Frankfurt/M. Germany

Hoechst can help you in over 100 countries.

HOECHST A century of Chemistry

Hoechst products: dyestuffs, textile auxiliaries, intermediates, pharmaceuticals, sera and vaccines, chemicals, raw materials for the paint industry, solvents, plastics, fibers, films, fertilizers, plant protection agents, design and construction of chemical plant.

DANCE

On from Iconoclasm

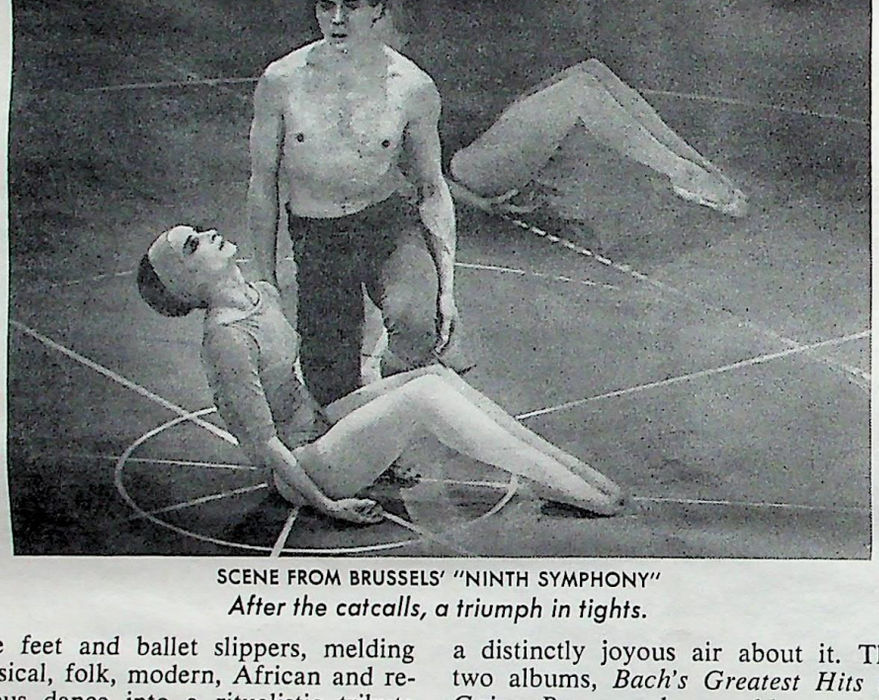
"Bé-jart! Bé-jart!" thundered the audience in Brussels' Royal Circus. And right there and beating time to the chants, were Belgium's King Baudouin and Queen Fabiola. For French Choreographer Maurice Béjart, 37, the royal welcome was sweet relief from the catcalls, fistfights and lawsuits that have swirled in the wake of his iconoclastic creations of the last few years. Last week's première was his most ambitious production yet: a ballet to the music of Beethoven's *Ninth Symphony*.

For the epic undertaking, Béjart amassed more than 200 musicians and singers on the circular stage with 80 dancers from 24 nations, ranging from Japan to Jamaica. They performed in bare feet and ballet slippers, melding classical, folk, modern, African and religious dance into a ritualistic tribute to the brotherhood of man.

Clad in brown, gold, red and white tights, the dancers moved across a starkly lit stage that was virtually bare of scenery. In the first movement they awaken timidly from fetal positions, groping skittishly through the anguish of birth and early life. The playfully exuberant dancing in the scherzo abruptly shifts to an anti-racist theme in the third movement, in which racially mixed couples court and embrace, reject and reconcile. In the triumphant final movement, the entire troupe joyously marches and swirls about the stage while the chorus sings "*Alle Menschen werden Brüder* [All men become brothers]."

Critics declared it "a real triumph," "a revolution." Enthused Paris' Le Monde: "Here is the masterpiece of all symphonic choreographies." Said Béjart coolly: "I didn't say anything Beethoven didn't say."

R. KAYAERT



SCENE FROM BRUSSELS' "NINTH SYMPHONY"
After the catcalls, a triumph in tights.

CHORUSES

Swing, Swung, Swingled

Bach swings. So well, in fact, that jazzmen have been spinning out variations on his music ever since the 1930s, when Benny Goodman's band started belting such numbers as *Bach Goes to Town*, and since then Bach has been through more modern translations than the *Iliad*. Now from Paris comes an eight-voice chorus called the Swingle Singers, with a new gimmick—sing-swinging Bach.

Organized just two years ago, the octet (four men, four women) sings fugues and preludes by vocally approximating the sounds of chamber-music instruments. Put to the swinging four-beat rhythm of string bass and drums, the sound is surprisingly engaging, with a distinctly joyous air about it. Their two albums, *Bach's Greatest Hits* and *Going Baroque*, have sold more than 250,000 copies and won for them this year's Grammy Award as the best new recording artists of the year. Last May they were imported for a presidential concert at the White House.

"Oodla-Oodlee." Far from paling at the effrontery of it all, most Bach men like the gently swinging translation. And some, like Pianist Glenn Gould, are downright ecstatic: "They're just fabulously good! When I first heard them, I felt like lying on the floor and kicking my heels, that's how good I thought they were."

The Swingle Singers' musical idiom is onomatopoeia, otherwise known in the trade as scat. Scat is like baby talk with a beat and is as old as singing in the shower. Rendered by a jazz stylist like Ella Fitzgerald, who reels off such breathless improvisations in *Flying Home* as "oodla-oodlee-ooblee-day-lay-do-dee-a-din-doi-oodlay-a-din-doi-dan-zoit-boy-hem," scat can be a highly fined art.

The Swingle Singers, however, straight in the most elementary dialect—mainly "da-ba, da-ba" "doo-boo, doo-boo," with an occa "papa-da, chin-chin" or "waap" in for special accents. While the re up tempo calls for a certain amo vocal gymnastics, they stick faith to the score and never improvise fact, their allegiance is much mo Bach than it is to jazz. Their app is restrained, respectful, and marke finely honed precision and musician

Bach Outswung. The eight Swingle Singers, currently on their first tour the U.S., are all classically trained sicians. All are French, except leader, Ward Swingle, 37, who is of Mobile, Ala. A graduate of C nati's College Conservatory of M Swingle went to Paris in 1951 on a bright scholarship to study piano eventually settled there. To pick pocket money, he sang the "do backgrounds for pop singers in va Paris recording studios. As an e on weekends, he recruited the best ers from the studio vocal group have a go at Bach. "We were just to improve our musicianship," Swingle, "but we found that we all spontaneously swinging the m We couldn't help it."

Aware that the curiosity fact their music may wear thin, Swing busy varying the group's repertory Handel, Vivaldi and Mozart. "M took us months to master," says S gle. "But now we find he swings easily than Bach. If the interest up, we plan to proceed chronolog from composer to composer. Bee may pose some problems, but we to give him a try."

INSTRUMENTALISTS

And Now the Sitar

It was more a musical séance th concert. The air was hazy with acrid aroma of burning incense three barefoot musicians sat cr legged on an Oriental rug onstage audience at the University of Penn vania's Irvine Auditorium last week equally exotic—a curious mingling Indians in turbans or saris, bea jazz musicians, leather-jacketed bea and college students. Racing his sp fingers across the steel strings of sitar, Ravi Shankar invoked a wh chorus of quavering, sensuous mu in intricate interplay with the sh galloping cross-rhythms of the m (drums). Soaring above the drone of an unfretted lute called a boura, Shankar finished in a furious play of virtuosity that brought ing ovation from the audience.

At 44, Shankar is India's most traditional musician. In the past dozen years, through a series of ra ings and globe-girdling tours, Sh has proved to jazz fans that his

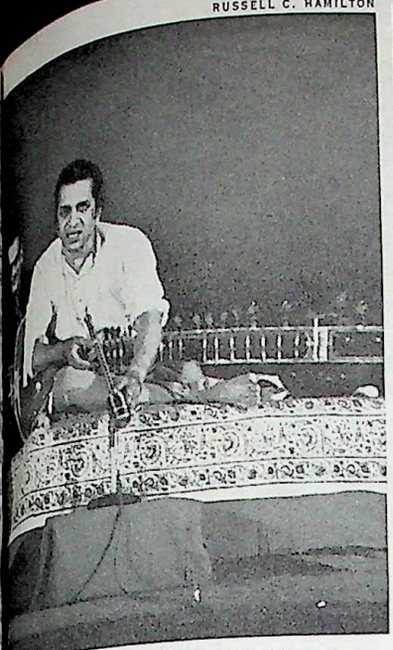
RUSSELL C. HAMILTON



SHANKAR IN PHILADELPHIA
The jazzmen dig his strings.

visational flights have an exciting ship to modern jazz.

Joy, Eroticism. Part of the appeal is extraordinary range of sounds that be coaxed out of the awkward- ing sitar, from deep guttural sighs piercing cries. Fashioned 700 years , the sitar has six or seven playing ings, 19 "sympathetic" resonating ings, so sensitive that they must be ned while being played, and two bous gourds at either end for sound tes. Shankar's sitar artistry has influ- ced such jazz innovators as Pianist ve Brubeck and Saxophonists John trane and Bud Shank. At the end of s U.S. tour, Shankar will begin a six- k course in Indian music at C.L.A.; local jazzmen are standing fine to enroll.

The basis of Indian music is a melodic m called a *raga*, a series of notes on hich the musician improvises. There e thousands of *ragas*, each conveying specific mood—joy, eroticism, lone- ess, etc. Says Saxophonist Shank: verybody says how free our music but in comparison with Indian mu- we are terrifically restricted. It's end- ss what a musician like Ravi can do."

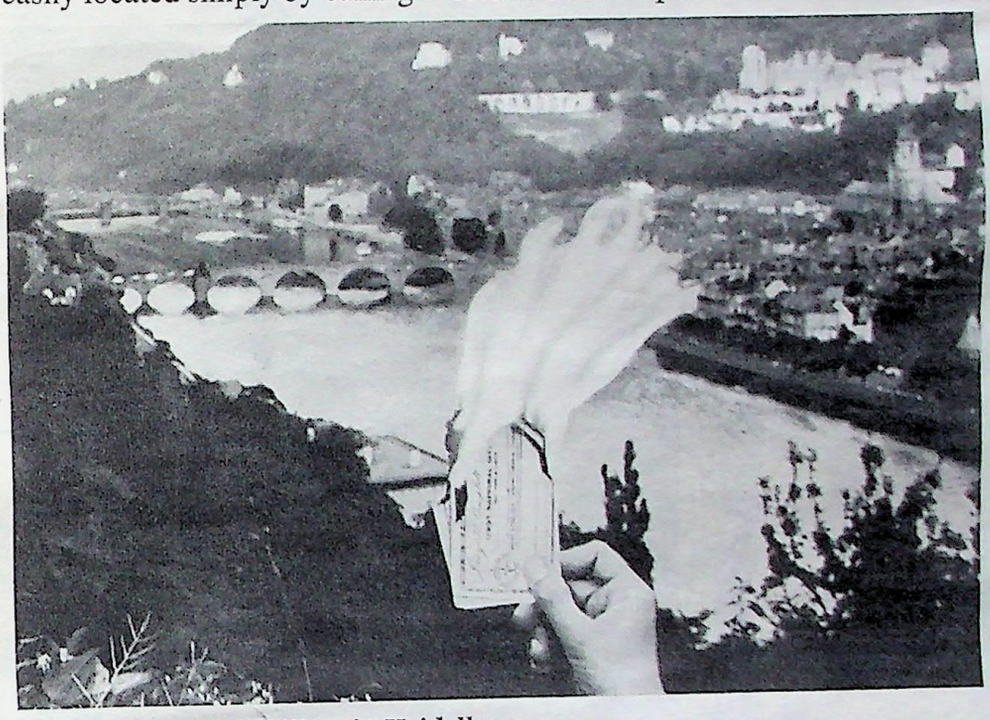
Transported. Shankar began as a ncer with the famed Indian troupe aded by his brother, Uday Shankar. t 18, he disposed of all his worldly ssessions and settled in a remote vil- ge to study the devilishly difficult sitar ith a guru. He practiced slavishly 14 urs a day for seven years before he lt ready to perform professionally.

Shankar finds the concert circuit a bit strating because of the restrictions of me. The real joy of improvising on a *raga*, which he says is a form of yoga, s to play as long as the spirit moves him. This can mean hours, even days. Though he consciously holds himself in check while on tour, at a concert in Manhattan three years ago he became "completely transported" and plucked away until 4 a.m. "The audience stayed right with me," he says proudly.

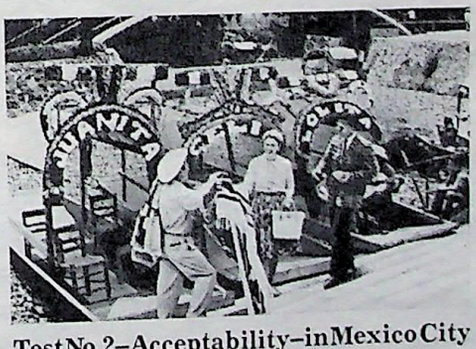
These 3 tests prove First National City Travelers Checks are "Better Than Money"®

National City Travelers Checks are the best way to carry money. Actual tests, shown below, demonstrate three specific reasons: *ready availability ...immediate acceptability...on-the-spot refundability*. In case of loss, there are thousands of refund points throughout the world...leading hotels can direct you to the nearest one.

In the United States, no Travelers Check is more spendable, more readily available than these famous checks backed by First National City Bank. And, in case of loss, there are many thousands of U.S. refund points... easily located simply by calling Western Union Operator 25.



Test No. 1—Refundability—in Heidelberg
Businessman George W. Campbell of Casper, Wyoming made this test by actually burning $1200 worth of National City Travelers Checks. He was directed by his hotel to a nearby Heidelberg bank where a full refund was promptly arranged. No red tape at all.



Test No. 2—Acceptability—in Mexico City
Pay for a guided tour? Buy a colorful serape? No trouble for the Richard M. Sibleys, of Connecticut, who used National City Travelers Checks throughout Mexico.

Test No. 3—Availability—in Montreal
Dorsett Walsh, of Montreal, buys National City Travelers Checks at The Mercantile Bank of Canada. It's quick and easy at banks everywhere.

EXHIBITIONS

Carnegie's 43rd

For those who had the time and the air fare to taste and compare, 1964 has already proved a vintage year for big art festivals. By coincidence, three famous periodic exhibitions fell in the same year that London's Tate Gallery put on its bold survey of a decade of invention. That exhibition introduced a host of young Londoners. Venice's 32nd brassy Biennale gave official acclaim to U.S. pop. Germany's didactic Dokumenta III then launched op. The 43rd Pittsburgh International, better known as the Carnegie, fails to find any new avant-garde, but makes up for this lack with a rich platter of hearty helpings: 401 paintings and sculptures.

The art, selected from 35 nations, is a catholic spread of styles, quite untainted by politics. The reason for the wide variety is that Carnegie Institute's diligent new director, Gustave von Groschwitz, 58, picked the whole shebang by himself. "Von," former curator of prints at the Cincinnati Art Museum, spent the better part of two years routing out his choices.

"I tried to work for a balance," says Von Groschwitz. His rough rule was to give a third of the show to Americans and the rest to foreigners. The result shows how abstraction still rides high everywhere except in the U.S., where the strongest entries belong to the schools of pop realism and California figuratives. But balance does not suffice to explain the small numbers of young British artists and optical painters at the exhibition, especially in the face of bulky crops of Spanish, Italian and German artists.

Von Groschwitz introduces 99 foreign artists and 54 U.S. artists to the Carnegie. None of the newcomers won prizes, although, of course, a jury went through the dismal ritual of choosing and awarding. The jury, composed of former Baltimore Museum Director Adelyn Breeskin, Abstractionist Hans Hartung, and British Picasso Expert Roland Penrose, gave $2,000 apiece to six unadventurous choices. France's abstractionist Pierre Soulages, 45, won with an unevocative work titled *24 November '63*. Spain's slashing Antonio Saura, 34, scored with an *Imaginary Portrait of Goya*. Hard edge got the nod as the jury's candidate for successor to abstract expressionism. The U.S.'s Ellsworth Kelly, 41, and Britain's Victor Pasmore, 56, won prizes with undistinguished glops of color. Sculpture prizes went to Jean Arp, 77, and Eduardo Chillida, 40.

Certainly most of the artists on display in Pittsburgh will be remembered longer than, say, Gaston La Touche, a 1907 winner, or 1947's Zoltan Sepeshy. But it is disconcerting to recall that in its time the Carnegie managed to omit from its internationals work by Cézanne, Modigliani, Demuth, Gauguin, Henri Rousseau, Mondrian, Juan Gris and Toulouse-Lautrec.

THE CITY

Under the Knife, or *All* For Their Own Good

(See Cover)

The status symbol among U.S. cities these days is the bombed-out look. Every self-respecting city seems to want to be hideous with rubble and raw earth, crawling with helmeted workers, snorting earthmovers and angular cranes. These are the signs and portents of the biggest civic building boom the U.S.—or any other country—has known. It goes by the name of urban renewal, but it might also be called emergency surgery. The metaphor is thoroughly consistent. Considerable pain is involved, and sometimes shock. There is inevitable destruction of healthy tissue, the operation is sometimes a failure, and the patient is really sick or he wouldn't be there in the first place.

Death at the Heart. Professional critics such as Lewis Mumford have long warned that the U.S. city in general had something more than a slight case of congestion and aching joints. But most people thought of the problem only in terms of slum clearance and better housing for the poor—a worthy but not exhilarating objective. Only gradually did it become clear that the sickness of the cities was a kind of heart disease; they have been dying at the center, where the great stores and great buildings and great enterprises are supposed to be. The suburban sprawl, in leeching the center city's lifeblood, was imperiling the whole urban organism. Suddenly everybody—bankers, businessmen, politicians, newspapers and civic associations of all shapes and sizes—found themselves united in a new concern for the city in a mustering of community forces unparalleled in recent times.

Boston, for instance, has laid waste to 60 slum acres in the center of town and is erecting there a $200 million Government center; Washington has turned a 560-acre jungle south of the Capitol into a paradise of gracious living; New York City has so much private building that the streets are all but impassable, and with the help of Government funds, has rehoused a population that, taken together, would make the 28th largest city in the U.S. Chicago has 27 redevelopment and four conservation projects that in five years will have transformed 514 city blocks; even Los Angeles, a laggard among the U.S.'s major cities, has 17 projects on 917 acres under way. St. Louis has miles of riverfront teeming with bulld... and unfinished dreams; San Fra... is ripping and riveting at the ra... about $1,000 a minute; Cleve... trying to turn itself completely ar... to re-embrace the waters of Lake ... (*see color pages*).

The process involves a delicate ... of drawing board and bulldozer, ... and ballot box, bludgeon and cr... ball. Technically, every time an e... prising builder tears down an old ... ing and replaces it with a new o... is urban renewal. But only in re... years has the process been conc... in terms of an overall plan to re... the city.

Trigger for the whole thing w... Housing Act of 1949, which a... the Federal Government to pa... for at least two-thirds of the dif... between the cost of acquiring and ... ing a blighted area, and the price ... land brought when sold to a p... developer. The act's chief aim w... clear slums, but it was quickly re... that slums were not all the city ha... worry about. BOMBED-OUT LOOK AND SOARING SKYSCRAPERS IN MANHATTAN

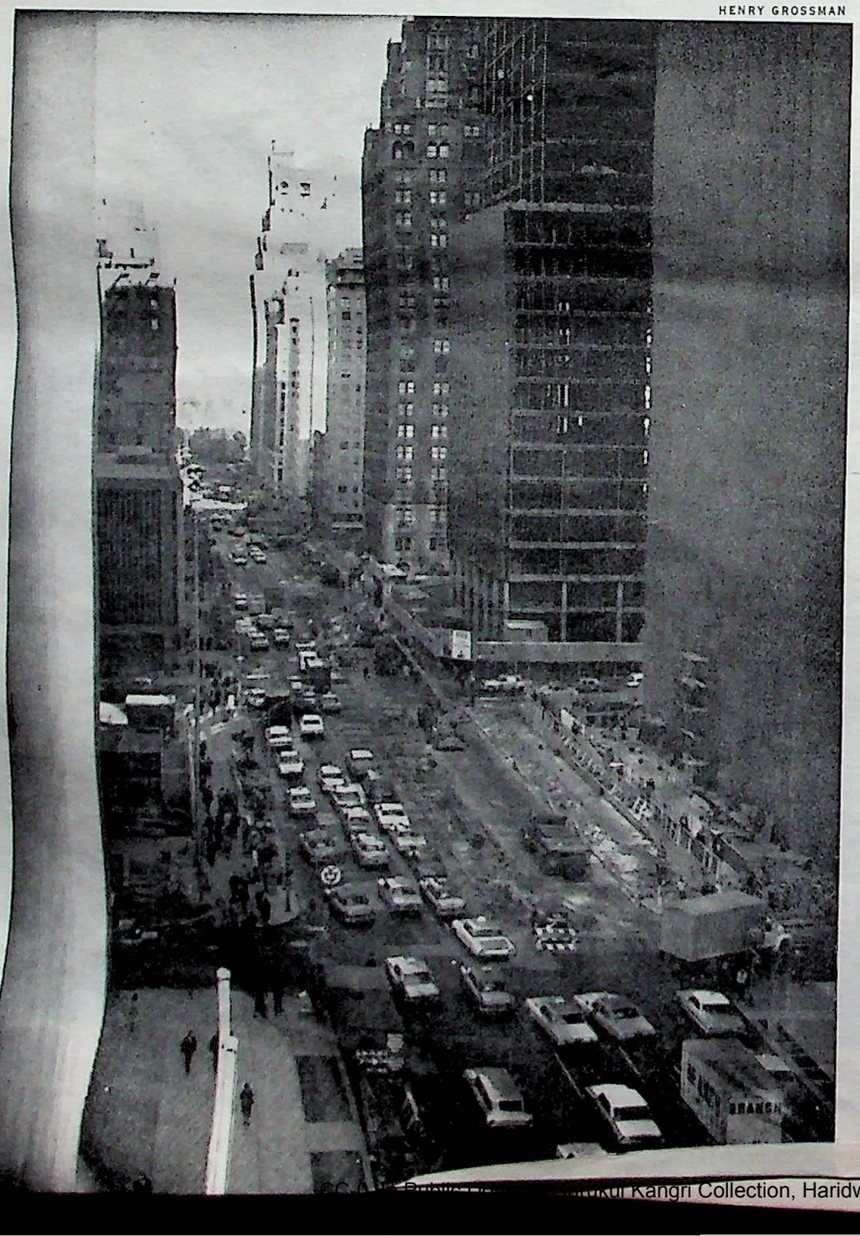
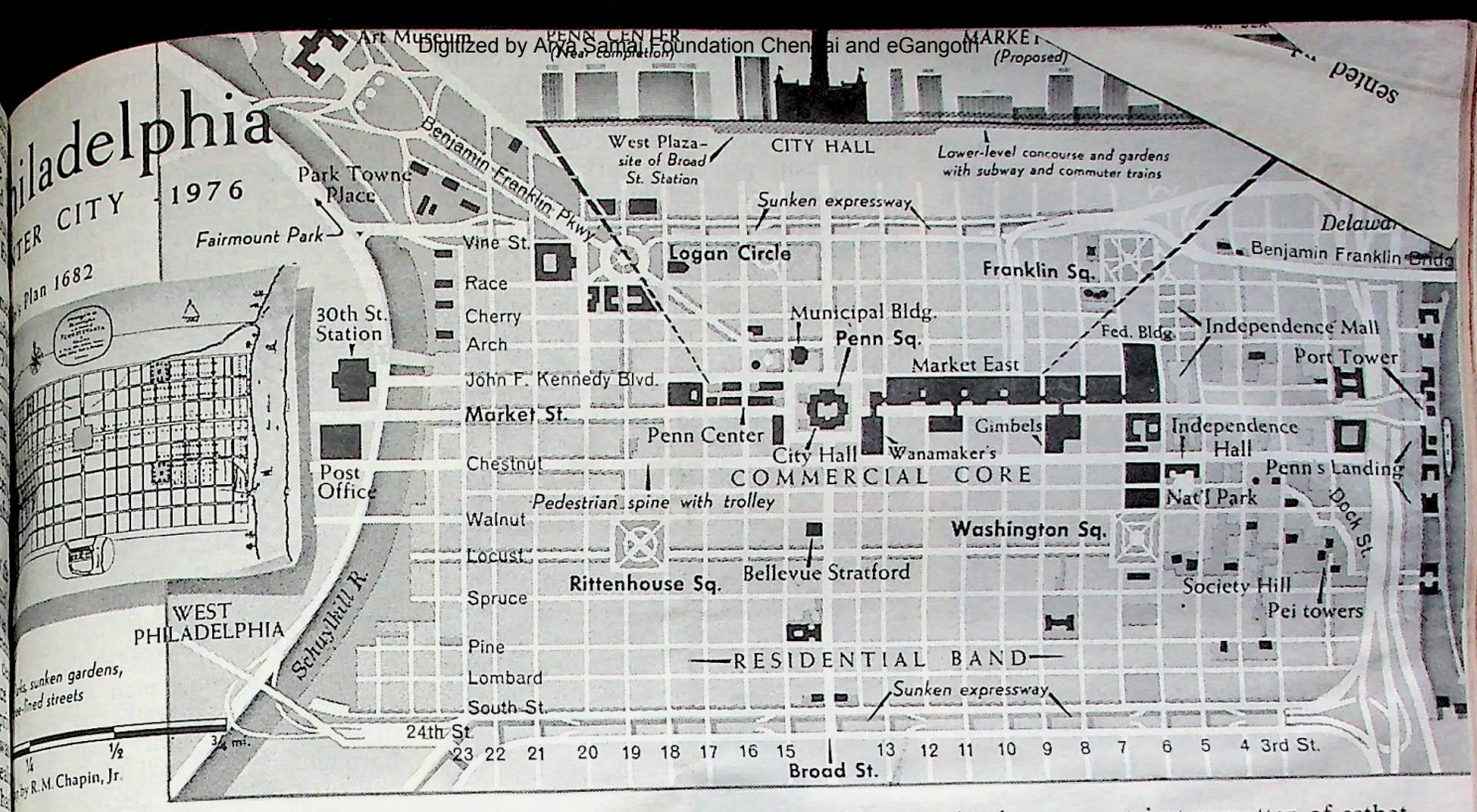
HENRY GROSSMAN



CC-0. Panini... Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



Near by an underground garage was ing shape in a block-square crater, a stone's throw down Benjamin nklin Parkway a crane was hoisting rble panels onto the top floors of a w circular apartment building.

Just over a mile away, at the edge of e oldest part of town, a power shovel wed out a hole for a swimming pool side the most elegant recent addition Philadelphia's skyline, the three So- ty Hill apartment towers by Archi- t I. M. Pei. Around them, through at was a disheveled market area e years ago, stretch the broad lawns a five-acre plaza, and in this historic ighborhood, remodelers were busy storing to their original elegance doz- s of 18th century row houses that d most recently been seedy boarding- uses. To the southwest, work began a new shopping center at Eastwick, 2,508-acre city-within-a-city that is ing in what was recently a wasteland marshes, junkyards, trailer camps d crumbling shacks.

The list could go on, through some federally aided urban renewal proj- s that Philadelphia has completed or s in the works, plus 21 others that d not involve direct federal cash.

Cutting Teeth. One man coordinates, dvises and stimulates all this activity— d the array of civic groups, politi- ans, architects, builders and real es- te men necessary to keep it going. dmund Norwood Bacon, 54, is a tall 6 ft. 2 in.), thin (160 lbs.) Philadel- hian with sharp blue eyes and an in- ensely intellectual air that hardly seems he right equipment for moving and haking a major city. But his total dedi- ation to his special art and to his native own—plus an impressive gift of gab— s changing the look and feel of the own that was once the butt of comedi- ans as the sleepiest city of them all.

Bacon's concern for cities in general and Philadelphia in particular began early. His senior thesis, as an architectural student at Cornell in 1932, was on "Plans for a Philadelphia Center City." After graduation, he used a $1,000 legacy to bicycle through Europe, walk through Greece and sail up the Nile. He got his architectural start working as a designer under Architect Henry Killam Murphy in Shanghai. "It's a good idea to cut your teeth where the product won't be around to haunt you later," says Bacon. Back in the U.S. after a year, he wrote to the late great architect and city planner, Eliel Saarinen, asking for a fellowship at Saarinen's Cranbrook Academy of Art in Bloomfield Hills, Mich.

"Eliel Saarinen was my great master and teacher," says Bacon. "He emphasized design as the relationship of form and space; so the real design problem is the city. Saarinen taught us that harmony of form and mass doesn't stop at property lines but continues." The Bacon generation at Cranbrook included such notables of arts and architecture as Designer Charles Eames, Sculptor Harry Bertoia, Eliel's late son Eero, and Designer Florence Knoll.

"At Cranbrook in our time, everybody was talking about what a wonderful thing the suburbs were going to be—discussing civic centers, working, shopping and living centers—that sort of thing," recollects Eames. "It was all quite new, and we were full of hope for the pastures. We were all gliding out of town on the freeways. But Ed Bacon looked at the first seep of city rot and saw the real crisis."

After leaving Cranbrook in 1936, Bacon served for two years as a city planner in nearby Flint, then landed a job back in Philadelphia as managing director of the Philadelphia Housing Association. It was one of the earnest but powerless organizations that existed in many cities across the land before cities realized that their inner renewal and reshaping was not just a matter of esthetics but of vital budgetary economics.

By the 1950s, the city's businessmen recognized that Philadelphia was a city in a state of collapse, to use Bacon's phrase. Industries were beginning to move out, sales in the center city were declining, and stores were moving to the suburbs, or talking about it.

The businessmen did not wait for the Federal Government. They organized themselves into the Citizens Council on City Planning. Bacon and Architect Oscar Stonorov mounted an elaborate display of their notions for reconverting downtown Philadelphia in a complete-scale model with animated parts. The exhibit drew 385,000 people when put on display at a downtown department store. Bacon personally visited 13 public schools and encouraged schoolchildren to work up models of how they would like their local district to look. Result was a climate of enthusiasm for improvement and change that ranged through the whole community, from self-interested businessman to self-interested slum dweller. In 1949 Bacon was made executive director of the Philadelphia City Planning Commission.

Fallen Wall. But Bacon's breakthrough happened only by chance—or at least by the kind of chance that only total preparation makes into a real breakthrough. The 1952 election installed a new, reform-minded mayor, Democrat Joseph Clark, and a new city charter, in which the planning commission was given real authority. A few months later came an announcement from the Pennsylvania Railroad that it had at last decided to tear down the inner city's historic eyesore: the old Broad Street station and the mile-long stretch of elevated tracks behind it that had been known as "the Chinese Wall."

At the same luncheon when the railroad announced its decision, Bacon pre-

CC-0. In Public Domain. Gurukul K

Digitized by Arya Samaj Foundation Chennai and eGangotri

what he called "a challenging proposal" for development of the entire area. "If you wait until someone else does a plan, you're licked," says Bacon. "We always have a proposal ready." The plan, worked out with a young architect named Vincent Kling, called for a sunken garden concourse three blocks long, lined with shops, bridged by the cross streets and straddled by three 20-story office buildings.

In those less planning-conscious days, this scheme seemed like something out of Jules Verne—after all, the railroad owned the land, which was already zoned for profitable high-rise office buildings. But prestigious Robert W. Dowling of New York, successful developer of Pittsburgh's Gateway Center and Manhattan's Stuyvesant Town and Peter Cooper Village, came to the rescue. Called in by the railroad as a consultant, he approved the superblock with underground connections to the rail transit outlets—the Pennsylvania suburban station and a stop on the Market Street subway—and added the idea of a bus terminal at the west end of Penn Center to anchor it.

Respect for Dowling's business acumen carried the day. But Dowling felt the office buildings would have to cover 45% of the ground space to produce enough rent to make them pay, instead of the 30% envisioned by the Bacon-Kling plan. The extra 15% would not permit the office buildings to be oriented on a north-south axis across the sunken esplanade, and the concourse would have to be covered. "We were very crushed by this," says Bacon, "but instead of sulking, we tried to figure out how much we could salvage."

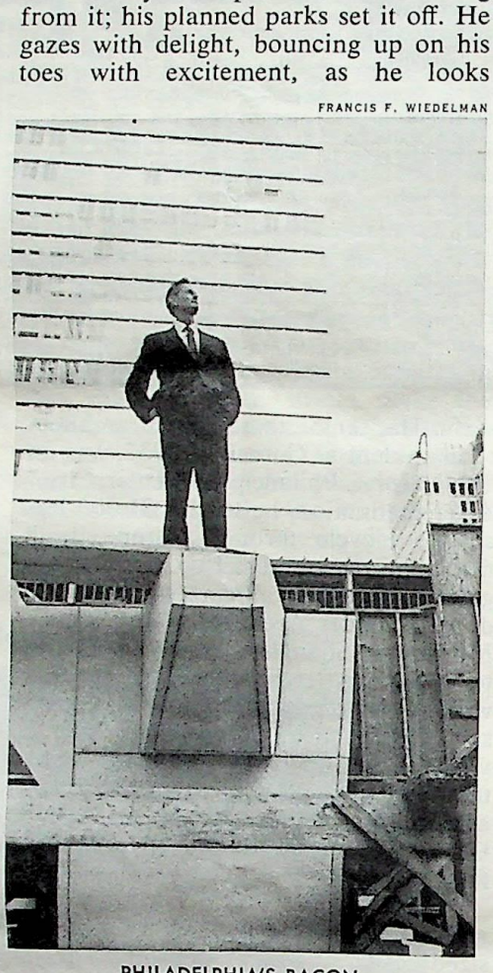
In the end, he managed to get a series of holes punched through to the underground. A skating rink fills one of them; a pleasant garden facing a subterranean restaurant occupies another. The city is now filling a third with a landscaped garden next to the Penn Center subway station. Subway passengers will step out into a garden as their entrance into the central city.

The Idea. Penn Center was not everything Bacon had wanted it to be. But it was a great beginning, a source of what he calls—capitalizing the words as he says them—the Power of an Idea. A valid planning idea, he feels, has a life of its own. His hero is Pope Sixtus V (1585-90), who was inspired to erect an obelisk before three of Rome's churches of obligation for pilgrims and to connect them with roads. These obelisks established axes and "thrusts of space" that hundreds of years after Sixtus' death were still shaping the ideas and actions of Rome's architects and builders. Bernini constructed his marvelous colonnade around the one that Sixtus had planted outside St. Peter's.

Axis for the Old. Old Philadelphian Bacon starts with a vision and a memory. His memory is of William Penn's "greene countrie towne." It was laid out on a grid at the narrowest point between Philadelphia's two rivers (see map) and anchored by an axis crossing of the two central arteries, Market and Broad streets, where City Hall now stands. In each of the resultant quadrants Penn placed a park. Latter-day developers enhanced this basic plan with the dynamic diagonal Benjamin Franklin Parkway, leading from City Hall to the 4,076-acre Fairmount Park.

Bacon's vision cherishes the old and adapts it to the new. He particularly likes the baroque City Hall as the pivot of the city. His planned vistas swing from it; his planned parks set it off. He gazes with delight, bouncing up on his toes with excitement, as he looks

FRANCIS F. WIEDELMAN



PHILADELPHIA'S BACON
The Chinese Wall came down.

through a two-story-high window in Kling's new Municipal Services Building at City Hall and the complementary façade of the Masonic Temple.

His new plan keeps Penn's axis and provides new anchors. One anchor is the three Pei towers on Society Hill, which he thinks of as an equivalent of Pope Sixtus' obelisks. Another, still unbuilt, will be the Port Tower at the Delaware River. The tower will command the eye of any traveler down Market Street, and also provide the focus for a redevelopment area, which Bacon hopes will restore the waterfront to Philadelphians as a place to saunter, sun themselves, or just watch the bustle of a busy harbor.

Back to Feet. The inner city, he is convinced, as are most planners, must be restored to the pedestrian, and there are plans for parking garages at the center's edge. Unlike some city theorists, Bacon does not try to talk the automobile out of existence. "The automobile must be treated as an honored guest," says Bacon. But he does feel that the entrance to the city must be ... tive, and the vistas must be visu... citing, designed to lead the visitor ... the heart of the city. He cites the ex... sion of the spirit that any walker ... periences in Venice, emerging fro... crowded alleyways into the huge ... space of St. Mark's Square. It is ... shared experiences, says Bacon, ... give citizens a sense of belonging ... concern for their city. And wi... them, the city withers.

To bring Philadelphians back ... suburban shopping centers to the ... stores and little shops in the cen... town, Bacon is promoting a $2... lion plan for a gigantic terminal ... City Hall on Market Street, whi... unite the city's two suburban ra... in a single terminal, and also ... one of the basic goals of city plann... the separation of wheeled traffic ... pedestrian. Bacon's plan also inc... widening the sidewalks of Ches... Street, the city's other main sho... thoroughfare, and making a traffic... mall of it, with little electric trolle... carry shoppers.

Renewers of the city want not on... bring people back from the subur... shop, but back to town to live. P... delphia is now devoting 50% of it... newal outlay to residential work ... involving major demolition, and s... of Bacon's most interesting labor on... level is to be found in Society Hi... so-called after the Free Society of T... ers, which originally bought 20 ... acres there from William Penn, ra... than the *Social Register*. On the Table. Across the U.S., planners are carving up other U.S. cities, with varying degrees of success but invariably accompanied by cries of civic outrage (the cheers may come later). After all, you are operating on a live patient," says one planner. "And the longer you keep him on the operating table, the worse it is for him."

In Boston the patient almost died on the table. In 1960, when newly elected Mayor John F. Collins called Edward Logue to be the head of Boston's redevelopment, the city was clearly in a bad way. Its symptoms included: 1) a central business district tottering toward skid row, where 14,000 jobs and $4 million of taxable assessment had evaporated in a decade; 2) a moribund waterfront; and 3) two fumbling attempts at renewal by Collins' predecessors that had turned out to be unmitigated disasters.

One disaster was the bulldozing of a 60-block, 41-acre low-rent neighborhood to put up a tasteless cluster of high-rent apartment houses. The other was the John F. Fitzgerald Expressway built by the state. This concrete hombre to the automobile effectively screened the city from its historic waterfront, as though the sight of running water were something obscene.

Logue, who began life as a lawyer, made his mark in urban renewal by running New Haven's topnotch, $200 million program for Mayor Richard Lee. He is an expert at using the inside outs of the Federal Housing Act to finance a big program with a little cash. The public cost of the projects he now has in the works will come to about $180 million, of which the Federal Government will put up about $120 million and the state of Massachusetts about $30 million. Boston's share is the other $30 million, and the city is getting a considerable run for its money. Items:

▶ A multimillion-dollar Government Center to replace the flophouses, burlesque theaters, bordellos and tattoo parlors of the Scollay Square area with a complex of handsome federal, state, city and private office buildings.

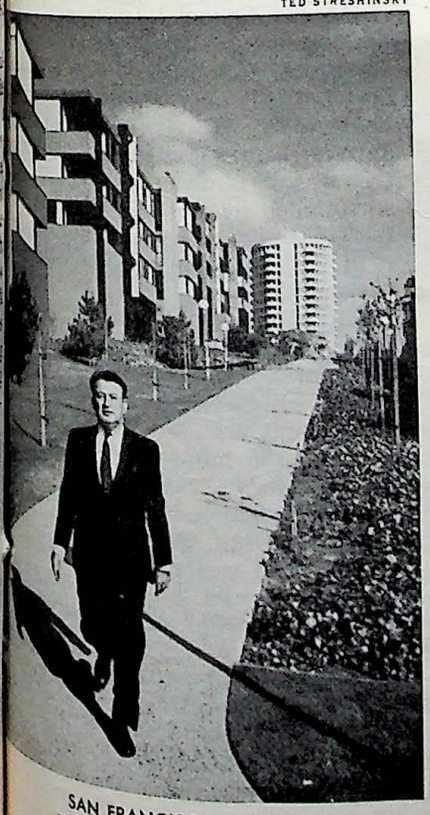
▶ The rehabilitation of many of the century-old granite buildings on the waterfront, converting them into handsome apartments which command a superb harbor view.

Like most planners, Logue blames many of the city's woes on the automobile—aided and abetted by federal construction of highways and superhighways that encouraged people to move out of town. But he feels that automotive overcrowding at shopping centers, commuter stations and the approaches to town will bring them back to their own two feet and the city again, if the planners play their cards right. "They'll never solve the traffic jams," opines Logue. "What we lack in open space, we will make up in convenience."

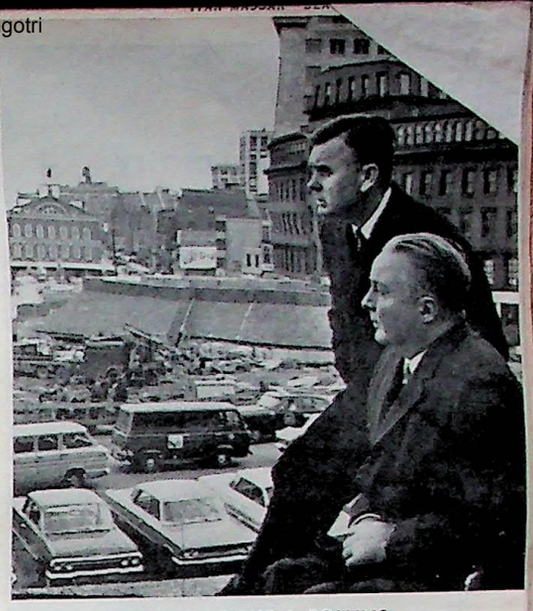
Two Stories High. The third of the three top urban renewal men in the U.S. is San Francisco's pragmatic, perceptive and somewhat excitable M. Justin Herman. San Franciscans were shocked into action by the state-built Embarcadero Freeway, which they discovered was barreling along the edge of town, cutting off the view of their cherished waterfront. The resultant outcry halted the expressway (which now leads to nothing in particular), and incidentally aroused the city's leaders into more organized and enlightened planning. Herman presides over 991 acres of new projects that total $655 million in private investment, $81,720,400 in federal grants, $79,996,000 in noncash grants-in-aid and tax credits from the city.

Herman's most sweeping project is the "Western Addition" just west of the downtown business district, where a Negro slum, eleven by four blocks, is being leveled and replaced by apartment houses, office buildings, a hospital, a medical building, garages, a Japanese Cultural and Trade Center and a Roman Catholic cathedral, and a 299-unit, successfully integrated cooperative. But more conspicuous is the Golden Gateway project at the foot of Telegraph Hill. On the site of the fragrant old Central Market, which was moved, like Philadelphia's, to more efficient, truck-oriented quarters far from the center of town, three high-rise apartment houses have gone up with a cluster of little blue-roofed town houses in between. Both the houses and the apartment buildings rise from a platform two stories high; the covered area underneath will be used for parking, and will also serve as a pedestrian *galleria* of shops. San Francisco also has its own conservation program for neighborhoods of old houses that are going downhill, though not yet seriously substandard. In the first of these, the Pacific Heights area, almost all of 146 blight-touched buildings are now completely restored.

TED STRESHINSKY



SAN FRANCISCO'S HERMAN
The cutoff raised an outcry.



BOSTON'S LOGUE & COLLINS
The patient nearly died.

Mid-Century Urbanity. Spending the taxpayers' money is a heady pastime, and no town is too small to hanker after a bit of sprucing up when the price is as right as the URA makes it. Cape May City, N.J., for instance, has applied for funds to restore the old Victorian mansions that were built in the 19th century when the place was a stylish summer resort. Portsmouth, N.H., has a grant to restore the town's colonial atmosphere. But certain cities can be taken as exemplary.

• HARTFORD has recently completed what may well be, in a relatively small compass, the most successful redevelopment of a central city area. Constitution Plaza is a complex of five office buildings and a hotel surrounding a pedestrian terrace — an arrangement that produces a pleasantly cloistered effect. But it almost did not come off. There was considerable opposition to reclaiming the area, which was not really substandard, though a number of flophouses there were attracting more and more derelicts. Then there was trouble raising the money to develop the land after buying and clearing it with URA assistance. At this point, the Travelers Insurance Co. stepped in to bankroll the whole $35 million needed. Its motives were solidly self-interested; Travelers' own nearby building, the tallest in town, gave the company a stake in the central city area, which had been rapidly losing business of all kinds to the suburbs.

Constitution Plaza has successfully reversed this desertion. Hartford's biggest retailer, G. Fox, added a $12 million annex to its store just across the street, and Korvette's decided to occupy a long-vacant store near by. The Phoenix Mutual Life Insurance Co., which had been planning to move to the suburb of West Hartford, changed its mind and built a graceful, green-glass ship of a building, connected to the plaza by a bridge, that is the handsomest

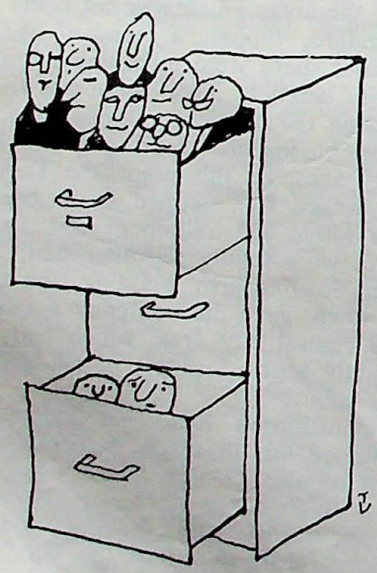
How many TIME International readers in business hold executive or managerial positions?



8 out of 10.

structure of them all. The completed project is a dramatic demonstration of one of the important corollaries of urban renewal; if a central area is rehabilitated, it upgrades the areas around it, and inspires new building by hard-headed businessmen.

• ST. LOUIS, like many of the U.S.'s older cities, was a port centered on the waterfront, and in the day of the truck, bus and automobile has found its waterfront fallen into slums. Today, along the Mississippi riverfront, Eero Saarinen's graceful Gateway Arch is rising—the focal point of two other projects. One is an $89 million complex with a 55,000 capacity stadium by Architect Edward D. Stone, plus a motel, restaurant, bowling alley and offices with garage space for 7,400 cars. The other project along the northern edge of the arch area is a private development called Mansion House after a famed St. Louis inn where Lafayette was entertained (it later became a bordello). Mansion House will consist of three 28-story apartment houses, between which will nestle three low-rise commercial buildings, an interdenominational chapel, and a 500-room motel. And farther to the west, the old slum of Mill Creek Valley is being transformed into a master-planned subcity of offices, factories, stores, hotels, apartments and houses, at a cost of some $200 million in private investment, $23 million in federal funds, and $11.4 million in municipal money.

• CLEVELAND, another city with a waterfront, had let its Lake Erie shoreline disintegrate into 30 squalid blocks of cheap hotels, dingy bars, pawnshops and shabby rooming houses. In a plan developed by I. M. Pei, the area will become 163 acres designed for lakeside living and working, of which the first 96 acres have already begun to take shape with the completion of the $29.5 million Erieview Plaza building and its reflecting pool, convertible to an ice-skating rink in winter. By the end of 1966, there will also be more than $150 million worth of office and luxury apartment buildings in Erieview One, as the area is called, with a tax valuation up to $100 million from a pre-renewal $11 million.

• BALTIMORE has made good use of one of the key principles of urban renewal: the advisability of concentrating at the beginning on a single project in order to stimulate the interest and enthusiasm that can only come when there is something tangible in evidence. The idea came from Architect-Planner David A. Wallace, who worked for Bacon for 4½ years in Philadelphia. His first proposal after Baltimore hired him in 1957 was a new plan for Charles Center, a unified grouping of office buildings, a 1,500-seat theater and a hotel, to be located between the financial and shopping districts. No fewer than 355 businesses had to relocate or close—some of them hardship cases, like the brand-new $1,400,000 parking garage, and the store that had just spent a millio[n] lars on redecoration. But Wallace was voted unanimously, and though it is still about five years completion, its presence has brou[ght] new atmosphere of optimism [in] business community.

Baltimore has also worked a miracle of rehabilitation in a district, 32 blocks of 2,000 dila[pi]houses known as Harlem Park cleaning out old shacks and wh[ere] once servants' quarters, the ci[ty] each block the choice of wh[ere] wanted to use the liberated spa[ce] playground for children or as a stamp park for adults. Hous[es] were given expert advice and floating loans and making repa[irs] improvements. The result has be[en] matic. "Harlem Park is no G[he]town," says Richard L. Steiner [of] of the Baltimore Renewal and H[ou]Agency. "Generally speaking, the still poor people. But there is a change. In the past it was an area person to get out of, if he could it. Now it's a place to stay in."

The Beautiful Cities. The urb[an] newal operation, always painful a[nd] always a success, requires a solid sensus of civic opinion and ener[gy] Buffalo, for instance, a $15 milli[on] newal program has been stalled tracks for a year and a half while iticians bicker over which deve[l]should get the job. But most renew still slum clearance, and slum clea[r] has critics aplenty. The far ri[ght] right naturally attacks it as a new of Communist takeover. The le[ft] tacks it as displacement of the "Urban renewal," the slogan goes Negro removal."

On the financial level, critics the bulldozer has been overw[rit] They note that Pei's towers on Sc[ott] Hill are still only 21% rented. In Francisco's Western Addition, apartments are still tottering along the reason is clear enough. They surrounded by slums, and tenants tate to settle in a depressed area send their children to a school th[at] 95% Negro.

Last Chance. But a start has made somewhere—it all takes time. new development in a slum area only slowly inspire reconstruction of other slums around it. And it has 30 years or more for instance, Philadelphia's upper- and middle-families considered living in the of town. Until Bacon started its newal, there was precious little why they should. But Bacon and U.S. planners are, and properly sh[ould] be, thinking in terms of the long to make the city attractive and stim[u]lating again—creating new neighb[or]hoods, bringing old ones back to seeding the streets with sudden opening up unexpected views, and ing men room to work and stroll play and talk. To rediscover, in the pleasures of urbanity.

Showman in Knee Britches

Ben Franklin in Paris is a title in search of a show. This Ben (Robert Preston) is no American Renaissance man but a Broadway showman in knee breeches who treats his inventions—the Franklin stove, the lightning rod, the rocking chair—as enticing props to con the rubes of Louis XVI's court. The scene is ostensibly Versailles, but the real milieu is the chandelier-lit ballroom of half a hundred interchangeable musicals in which girls in flowing period gowns go swirling into musical-comedy oblivion.

In a show as synthetic as *Ben Franklin in Paris*, it scarcely matters whether the history is true or false. Librettist Sidney Michaels credits Franklin's successful pursuit of French funds and official recognition to a species of boudoir statesmanship. Despite his celebrated gynecophilia, rare Ben is, after all, 70 years old in 1776, and his torpid romancing of Louis XVI's mistress (Ulla Sallert) has to consist mostly of gallant leers and one balloon ascension.

Attacking English with a French accent, Swedish Actress Sallert is a lip reader's delight; baffled playgoers may feel that she is singing in tongues. As it happens, missing the show's lines is a fringe benefit, unless one relishes lame quips ("For someone who was a postmaster-general of North America, you should have written"), exclamatory archaisms ("By thunder, I know the wench!") or arch witticism ("I invented bifocals because I thought a man should be able to see the girl in his arms at once and the same time as her husband coming in at the far door").

The book gets no lift from Mark Sandrich Jr.'s music-to-yawn-by, and Director-Choreographer Michael Kidd unleashes his dancers only once for some sword and gun play. No one could coax a poor performance out of Robert Preston, but his hard-sell charm, snap and gusto create the curious impression of a history-book minstrel man in whiteface. Still, he could save the show if there was one to save.

Love in the Mind's Eye

A Severed Head, by Iris Murdoch and J. B. Priestley, plays a game of musical beds with three men and three women, but it is not about sex. It is a witty, ironic, urbane, satiric, unsettling, elusive, philosophical comedy about the nature of reality.

A British wine merchant, Martin Lynch-Gibbon, comes home from his mistress, Georgie, one late afternoon to be told by his wife that she wants a divorce. Antonia knows nothing of Georgie, but she has fallen in love with her American psychoanalyst, Palmer Anderson. Far from abandoning Martin, Antonia and Palmer demand his love, and they are quite shattered to learn of his mistress. One of the more richly comic scenes in the play is that of Martin apologizing to Antonia and Palmer for Georgie.

In short order, Martin develops a tingling interest in Palmer's half sister Honor Klein, an eerie anthropologist given to such parlor tricks as decapitating a kabuki doll with one swish of a samurai sword. Even more unnervingly, she turns out to be sleeping with her half brother. By this time, Georgie has taken up with Martin's brother, a sculptor. The final curtain finds Palmer with Georgie, Antonia with the sculptor, and Martin with Honor Klein.

As sheer bed-living room farce, *A Severed Head* is manipulated cleverly and performed with skill. Heather Chasen as Antonia cat-licks laughs off her lines, and Paul Eddington as the pietistic psychoanalyst arcs his body in gestures of helpfulness, as if he were physically proffering mental health. As the anthropologist, Sheila Burrell looks like a shrunken head that has been restored to life-size, and Robin Bailey's Martin, while a trifle actorish, is very much the passive modern vacuum-hero into whose life trouble rushes.

But the surface of this play is its shadow, and its substance is shadowed in moral and mythical ambiguity.

Miss Murdoch, from whose novel *A Severed Head* is adapted, does not moralize. The point of her characters' behavior is its pointlessness. The only place sleeping around gets them is into bed. Breaking all the rules merely traps them in the bondage of incessant repetition. This is inherent in their own natures. Martin, for example, is submissive to his wife, who is an older woman, a child-to-parent relationship, and protective to his mistress, who is about 20 years younger, a father-to-daughter relationship. At play's end he is repeating his submissive role to an even more aggressive personality, Honor Klein.

BAILEY, CHASEN & EDDINGTON IN "HEAD"
Swish from a samurai sword.

On the mythic level, the play is more opaque. Two characters seem more like gods than people, gods of the modern mind. Palmer, the psychoanalyst, is the contemporary god of reason, restoring order amid emotional chaos. Honor Klein, the anthropologist, is the primordial goddess of instinct, violence, and what D. H. Lawrence called "the blood consciousness." These occult beings appear in rooms whose doors have not been opened, but a more tangible proof of godhood is their incestuous relationship, which sets them apart from the others and constitutes normal behavior only among gods. By making Honor the more powerful of the two, Miss Murdoch seems to attest the primacy of blood over brain. As for the symbolism of the severed head, it may signify the neurotic tyranny of intellect over instinct, or it may denote the divorce of mind and body that has split modern man's psyche.

A Severed Head is a complex entertainment of a sort that Broadway is seldom lucky enough to get. If it fails to find an audience, it will be a judgment on New York theatergoers and not on a most sophisticated play.

Down from Mediocrity

The Changeling by Thomas Middleton and William Rowley. The Lincoln Center Repertory Theater is working its way from mediocrity to absurdity. This season's starter is an Elizabethan plotboiler full of sex, gore and lunacy. As Beatrice, a noblewoman of Spain, Barbara Loden is not on speaking terms with her lines, and the rest of the cast is unspeakable, except for Barry Primus, who plays Beatrice's low-born hatchetman and seducer. The message of the evening seems to be that a girl may love the man she loathes. It does not hold for a playgoer.

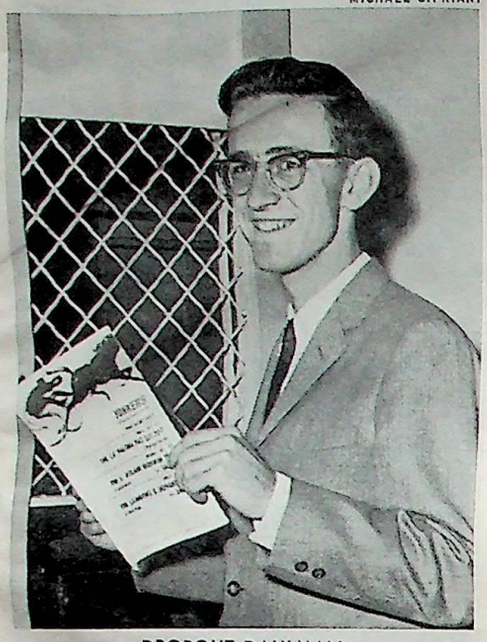
MICHAEL CIPRIANI



DROPOUT DAHLMAN
A scholarly knack at the track.

STUDENTS

Success on the Oval Campus

Ernest Dahlman Jr. has rare scholarly attributes: a tenacious memory, a sense of judgment, a knack for making fast decisions, a willingness to study hard, and a near-perfect attendance record. So Dahlman, 21, dropped out of New York City's Wagner College this fall and began to devote full time to the pari-mutuel teaching machines on the oval campus of Yonkers Raceway. His discriminating bets on the trotters soon put him $15,000 ahead, surely enough to make him an honor student among dropouts. Then, fortnight ago, he broke the record at Yonkers U., picking twin-double winners two nights in succession and walking off with $176,482.20 in prize money (half the lifetime earnings of the average college graduate).

Dahlman, a former economics major, at once got a lesson in Government tax policies, which will leave him with only about $42,000. But at the same time, he has neatly solved the commonest problem of the dropout: unemployment. Last week he became a professional twin-double handicapper for the New York Post. Dahlman picked one set of winners (out of four races) on his first day, which among the more scholarly students of racing psychology earns him a very respectable B.

COLLEGES

Claremont's Sixth

"She's a big, tall, strong blonde," a Pitzer College admissions officer scrawled enthusiastically, in summing up the qualifications of a bright and idealistic student applicant. Personal evaluations count heavily at California's intensely informal Pitzer, where the teachers lecture in shirtsleeves, barefoot girls pad into class carrying Cokes, and the janitor speaks his mind at faculty-student meetings so tumultuously democratic, says President John W. Atherton, "that the only way I can restrain myself from yelling is to walk out with great dignity."

Destruction of Innocence. Endowed by Orange Grower Russell K. Pitzer with a $1.2 million trust, the school nestles on a plain beneath the rugged San Gabriel Mountains 35 miles from Los Angeles. Dedicated this week, Pitzer is the sixth sibling in the distinguished cooperative family of Claremont Colleges* and the first independent U.S. college for women since Bennington was founded in 1932.

The school is sure of its goal—the study of the behavioral and social sciences—but in its first hectic weeks it is engagingly unsure of how to get there. Pitzer's 156 students and ten faculty members are alternately merry and moody as they strive to reduce chaos to confusion. "I'm just completely, totally in ecstasy over this whole thing," bubbles Student Taffy Squires. "But the hardest part is that there is nothing concrete to hold on to."

The most concrete aspect of Pitzer is its first two buildings, a dormitory and a combination administration-classroom building, which are wired for closed-circuit television and tape recordings designed to transmit lectures, panel discussions and dramatic productions right into the girls' rooms. Teaching methods are mostly experimental. Anthropologist George Park has set out to prove that "education is the destruction of innocence," envisions a race-relations course that will generate understanding of the motivations behind the White Citizens Councils. Psychologist Ruth Munroe is enthusiastic about a student who is analyzing according to whether they observe Ten Commandments. "I don't know she'll come out with a statistical says Teacher Munroe, "but she have a different view of social and, perhaps, literature." Added band Lee Munroe, like his wife from Harvard: "Right now don't know the difference between cial work and social science. But time they're seniors, they will be use the computer to analyze data." til that happy day, instruction is up by established courses at other mont colleges, which "Pitzies," new breed is known, can attend.

Instant Tradition. Pitzer aims to pand its enrollment to 600 girls five years. In the meantime, and faculty have formed a unique nership to produce an instant tradi At weekly "Town-Hall Meetings" debate issues that range from the girls should be required to skirts at meals to writing a school stitution. On the theory that a ought to be a model democracy, has demolished the sanctity of meetings and invited elected representatives to take part. A checks and balances remain, Dean Charlotte Elmott recently a unanimous student vote for a curfew on dormitory visits; ing to the deadline at all-girl the witching hour for Pitzies is 11

Pitzer's biggest asset is that its inventive enthusiasm is teamed in

* The others: Pomona, Scripps, Claremont, Harvey Mudd, and a jointly run graduate school.

...ptions of schools they never visited.

The *Comparative Guide to American Colleges*, by James Cass and Max Birnbaum ($8.95; paperback, $3.95), is a recently published ambitious consumer's guide to 1,132 colleges, with descriptions that are fair, yet frank, avoiding the dishonesty and exaggeration of some school catalogues and the dry statistical shorthand of other compilations. It details admission standards, thus helping students eliminate wasted applications, and goes on to describe the academic environment at each college so that applicants will not learn too late whether a school is intellectually lazy, dangerous, or so tough that the dropout rate is alarmingly high. Cass and Birnbaum examined such matters as the number of full professors in a department to judge its real strength, rated the faculty by the quality of schools where they got advanced degrees, discovered solid and improving regional colleges that are anxious to acquire a national student body. Campus religious and social life was investigated as carefully as intellectual standards on the theory that the chief stimulus for student achievement comes from other students.

Where world trade meets

Hamburg lies at the intersection of the European economic areas of EEC, EFTA, COMECON and the overseas world. For generations prominent trading houses have maintained close trade relations with partners in all parts of the world. Hamburg is also a centre of banking and insurance, and the seat of 58 consulates — more than there are in any other city of Europe.

Dozens of other whirring and g machines demonstrated how simulate Gemini space flights, bal- million-dollar corporate ledgers in second, or tap out a frighteningly n message—"Oh, that tickles"—in onse to a rap on the keyboard. Such

G.M.'S AUTO-DESIGNING COMPUTER
Helping to make more decisions.

s the scene at the semiannual Joint mputer Conference, where many of 5,000 producers, programmers and ers in attendance boasted that their achines now can do any job that can defined.

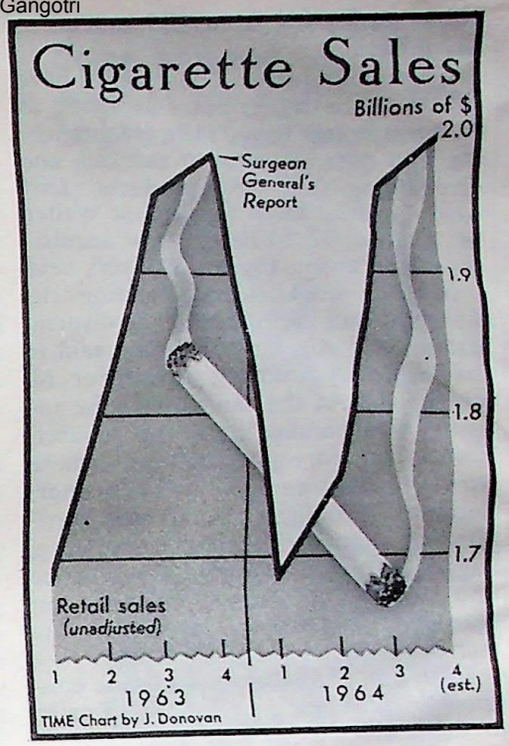
U.S. industry is eagerly putting them the test. An electronic computer ds crewless auxiliary locomotives on g Louisville & Nashville freight ins. The New York Stock Exchange stalling a computer system that can swer brokers' questions, keep track floor transactions at each trading t, and feed quotations to the ticker the rate of 16 million shares a day. ore than 100 companies control their ventories with computers, which re- rd every sale and tell managers when d how much to reorder. Borrowing idea from the airlines, Long Island's arkson Electronics Co. plans by next ly to link 5,000 hotels, travel bureaus d car-rental outlets in a computer- ed reservations network.

Houses & Horses. This year Government and business will spend a record $2 billion for electronic data-processing gear, ranging from $90,000 small computers to $5,500,000 machines capable of 2,500,000 calculations a second. So broad is the variety of computer users that there are more than 1,000 programming "languages"; last week RCA Chairman David Sarnoff urged that the scientists put their minds to devising a standard system to replace the "technological Tower of Babel." That will be difficult if only because computer technology is changing so rapidly. Most important, computers are being brought into the executive suite, are helping to make more and more executive-level decisions.

Computers now analyze the sales potential of new products, schedule complex production runs, and solve design problems. Before making investment decisions, many bankers and brokers consult Standard & Poor's Compustat system, whose computer has standardized and "memorized" 30 financial details about 625 corporations, including sales, cash flow and price/earnings ratio of stocks. A New Jersey builder recently relied on a computer to choose the house plans, prices and financing arrangements for a large suburban project. Even Kentucky horse breeders depend on a computer, primed with race results and the physical characteristics of 200,000 thoroughbreds, to serve as a breeding guide.

At the San Francisco meeting General Motors demonstrated how one of its computers, built by IBM, helps engineers create automotive designs. An engineer feeds instructions and preliminary drawings to the machine, which then produces a line drawing of a car or its components on a TV-like console. The machine also can "read" and store up lines from engineering drawings, communicate back and forth with the operator, and turn out permanent drawings.

More Power to Them. Though some managers have lost their jobs to computers, higher-echelon men will not be replaced but simply reoriented to accommodate the machine. At companies such as Lockheed and Westinghouse, young executives are trained in computerized management in night school courses that are a cross between the Pentagon's war games and Monopoly; competing teams of executives use the machines as aids in determining the likely effects of changes in prices, inventories, styles or advertising. In a sense, the computer enhances the executive's powers by cutting through all the statistics and presenting several alternatives, which the executive can act upon. But in the growing dialogue between man and machine, the man who controls the computer has a huge amount of influence in the company.



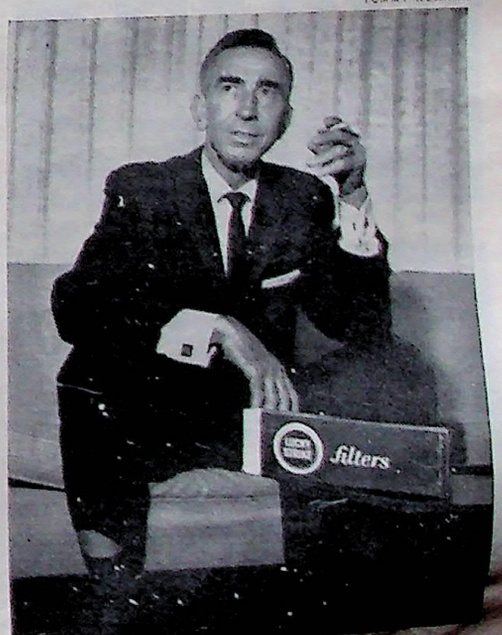
TOBACCO

Back to High Levels

If 1964 looked like a sad year for any industry, it was the badly burned U.S. tobacco business. Sales plunged immediately after the U.S. Surgeon General's report last January linked cigarette smoking to cancer and heart disease. But the smoker's habit is stronger than his fear. Cigarette sales started to rebound within three months, by last week had returned to the high levels of a year ago and were still on the rise (*see chart*).

Now the latest earnings reports are as golden as well-cured burley. American Tobacco, P. Lorillard and Philip Morris broke third-quarter records, and Liggett & Myers is running 27% ahead of last year. The only down note came from the industry leader, R. J. Reynolds (maker of Camel, Winston, Salem),

TOMMY KOHARA



LUCKY STRIKE AUCTIONEER KIGGS
Habit is stronger than fear.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

whose profits fell from $35 million to $31 million.

Capricious Tastes. Tobaccomen have not taken the cancer scare as lightly as their customers have. They are branching into different tobacco markets and diversifying into new products. Last week Lorillard hired Consultant Walter M. Aikman, 37, to head a new acquisitions department. Liggett & Myers held a special stockholders' meeting to change bylaws in order to allow diversification, and American Tobacco said it was "seriously studying a number of companies." At the same time, the industry is expanding into the tobacco business in foreign countries, where growth is faster and doctors are quieter. Lorillard is rolling its Kents and Newports in Hong Kong and Luxembourg, Liggett & Myers its L. & M.s in Mexico and Switzerland. Philip Morris has just opened Europe's most modern cigarette factory in Neuchâtel, Switzerland.

Back home the cigarette makers continue to introduce new brands to cater to the capricious tastes of 70 million U.S. smokers, with big emphasis on filters. Liggett & Myers is testing a charcoal filter menthol brand called Devon, and Philip Morris is marketing a charcoal filter called Galaxy in Texas. Filter cigarettes now hold about 70% of the U.S. market, but the charcoal filters, which account for some 7% of sales, have had uneven success.

Pall Mall First. According to Analyst John C. Maxwell Jr., who keeps the most reliable count of this secretive market, American Tobacco's king-size Pall Mall is still the fastest seller, closely followed by R. J. Reynolds' Winston. Unfiltered Camel and Lucky Strike, which vied for first place until the late 1950s, are steadily losing favor. In a comeback attempt, American is test-marketing Lucky Strikes with a tobacco-flavored filter, has sent out Luckies' veteran, quick-tongued radio auctioneer, "Speed" ("Sold American!") Riggs, to promote them in stores throughout the South.

CORPORATIONS

Up from Scratch

President Bert S. Cross of the 3M Co.—nee Minnesota Mining & Manufacturing—called up a vice president to ask a question: "Say, just how many divisions do we have now?" The answer is 21, and the otherwise precise president should be forgiven for not knowing, because his company has been going and growing like sixty. Sales have tripled since 1955, and last week Cross announced that volume for this year's first nine months jumped 10%, to a record $664 million.

Profitable Leaps. This bewilderingly diversified and remarkably creative company has become a darling of Wall Street by poking inquisitively into a bunch of unlikely products that stick, slip or scratch. Founded in 1902 to mine corundum for use in abrasive wheels, 3M struggled into the manufacture of

PETER MARCUS

3M'S CROSS
Bugs in the basement.

sandpaper and then into masking tape. Its big breakthrough was the familiar Scotch Tape, which 3M invented originally as industrial masking tape. Scotch Tape still accounts for 17% of the company's sales, has led to 400 other varieties of tape, the latest of which, introduced to the public in September, is a nonirritating bandage that comes off the skin without pulling or pain. The firm also produces magnetic tape for recorders and movie sound tracks, turns out much of the nation's video tape. Altogether, it makes 27,000 products in 17 countries.

Leaps from one unusual product to another are commonplace. "It's like Columbus sailing for a certain Indies," says Dr. Charles Walton, research vice president. "He didn't find the one he set out to find, but he did find a pretty good one." At 3M, researchers have gone from ordinary tape to reflecting tape to reflecting "paint"—and from that to a new liquid called Velvet Coating, which absorbs light and is useful for glare-proofing signs. One tinkering scientist in 1949 devised a method of making ies of documents by using infrared ation which literally bakes images heat-sensitive paper. The co christened the process Thermo-Fax it has carried 3M into second behind Xerox in the rapidly expa copying-machine field, has led t acquisitions of such firms as Re Camera, Dynacolor film and, last mer, Italy's leading photographic Ferrania.

Compulsive Competitor. Tho seeks to acquire products and m from other companies, 3M is mos terested in inventing its own. It ports 2,500 scientists and technic 44 laboratories, and each scie spend at least 15% of his time on any project that he wishes. are going to live within our philo says Dr. Walton, "we have to allo a certain degree of experimenta thorized or not, as long as the imenters don't blow the place up company gets more bright ideas bangs. One of the most profitable rently is the Scotchpak polyester in which frozen foods can be co Originally designed for shipping g covered mechanical parts, the bag a hit with such food processors as C Giant and Birds Eye, which were with it to add special sauces and se ings to their foods.

Under the close control of 59-old Bert Cross, a compulsively com tive executive who seldom relaxes is practically debt-free, this financed $60 million in capital imp ments out of earnings. Cross origi made his name as manager of the products department, still likes to home promising products, work bugs in his basement workshop. S other 3M executives. One vice presi covered his basement with a ru nylon carpeting called Tartan T added a hole to turn it into a h marketable indoor putting green.

IN-THE-BAG COOKING WITH SCOTCHPAK
A little like Columbus.

INDUSTRY

Let's see Z.D.

In today's complex defense ind tries, penny-ante mistakes often es late into million-dollar fiascos. $1,000,000 Jupiter missile, for ex ple, exploded because of one fau soldering connection that cost no m than 50¢. To catch the human m takes that account for as much as two thirds of the failures in defense pro ucts, the Pentagon estimates that c tractors employ 200,000 inspectors but the average inspector misses h of the mistakes. Now the defense dustry is busily promoting a new safe system that reaches past the in spector and goes back to the manu the line, emphasizing prevention o stead of cure. This uniquely simp system is part common sense, p snow job, and wholly successful. M than 200 major U.S. companies h adopted it, and last week it was

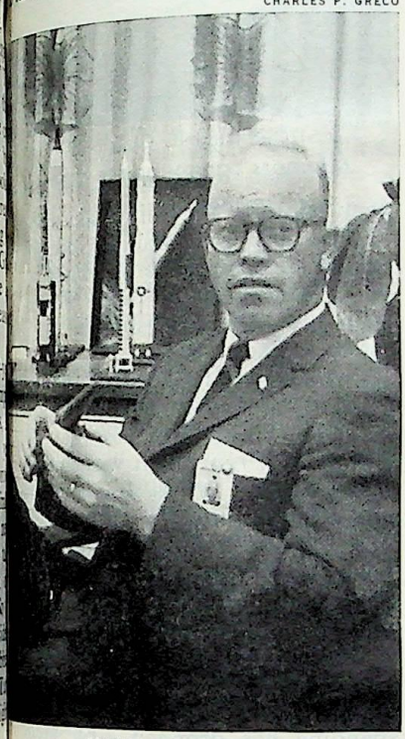
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

duced in defense plants by Lockd Aircraft and RCA.

Feeling Wanted. Though the system es by several names, it is commonly known as "Zero Defects," or Z.D. The idea, as expressed in Z.D. posters sprouting in defense plants everywhere, is simply "Do It Right the First Time." That is more easily said than done, of course. But managers have found to their astonishment that it can indeed be done if workers 1) are informed that absolutely no errors will be condoned, 2) are made to understand that every little bolt tightening and wire stringing job is important, and 3) are given recognition for quality work. Litton Industries credits the system with having cut defects one-third in seven months. By spreading the system back to its own suppliers, General Dynamics

CHARLES P. GRECO



MARTIN'S CROSBY
How to stop errors.

es reduced rejects of components from % to ½%. Douglas Aircraft reports vings of $32 million; Martin Marietta s trimmed defects from 1.5% to %. Says Martin President William Bergen: "As a rule, any effort deigned as a management tool is susect. But Z.D. really works."

Naturally, the plan must be deftly erchandised to the work force. Last ek Astronaut Gus Grissom pinned a Z.D. award pin on the workshirt of a Martin janitor, James Meyers, in recgnition of his "100% performance" brooming up around the Titan assembly pad, where dirt could cause disaster. To get across the idea that workers dare not even comb their hair Sperry Gyroscope's clean rooms, the company has created "an outer space mystique": flashing red lights outside, shadowless lighting inside, and whooshing air ducts that brush off everyone before entering. Says the company's director of reliability, Frank McGinnis: "The main principle of Z.D. is to make the worker feel important."

In addition to praise, plaques, publicity—and an occasional dinner with a vice president—the plan encourages workers to find and eliminate causes of trouble. Employees at General Electric pointed out no fewer than 4,500 potential problem areas, and the company accepted 3,900 of their suggestions. Sample: an assembler spied a metal staple inside a delicate engine bearing, suggested that G.E. shift from stapling to heat sealing its protective plastic covers on the engines.

Perfect Missile. A stern word from a boss started the whole Z.D. idea three years ago. At Martin Marietta's plant in Orlando, Fla., a quality control engineer named Philip Crosby had succeeded in cutting defects on Pershing missiles to half the acceptable level—but his boss complained that that was still too high. Incensed at first, Crosby soon began to agree: "If management tolerates a low standard, people work to that standard. Well, why not a no-defects job?" He persuaded workers in his department to sign no-defects pledges, soon surprised the Army by delivering a Pershing missile two weeks ahead of schedule with no detectable defects among its 25,000 parts.

Still a bigger payoff could lie ahead. U.S. industry spends $35 billion a year on quality control—almost all of it to detect and correct mistakes after they occur. If Z.D. can continue to motivate people to better craftsmanship, it could save much of that.

AUTOS

Ford Rent-A-Car

Traveling businessmen and vacationers have been the mainstays of the nation's 75,000-car, $370 million auto-rental business. Lately, rental by the "neighborhood" customer—who needs another car when his own is being repaired or his son comes home from college—has become an important factor. To tap this market, which has grown from 1% of daily rentals in 1960 to 16% today, Ford Motor Co. last week drove into the rental field.

More than 500 of Ford's 6,500 dealers have signed agreements to lease a minimum of five cars from the company, rent them out. Dealers will set their own rates, which are expected to be somewhat below those of Hertz, Avis and National. A Ford dealer in Michigan has begun to rent Falcons for $5 a day and 8¢ a mile, Fords for $8.50 and 12¢, T-Birds for $9 and 12¢. Perhaps optimistically, Ford Division Chief Lee Iacocca says that the major rental-car companies, some of his biggest customers, should not be disturbed by Ford's invasion. Reason: while Ford dealerships are ideally located for neighborhood trade, there are few in downtown areas and none at airports—locations where car-rental companies do most of their business.

BRITAIN

Watching the Action

Britain wears a deceptive look of prosperity. Cash registers are ringing merrily in the nation of shopkeepers, and consumer credit is on the rise. Less than 2% of the work force is unemployed. Construction is booming. Though overall industrial production has been bobbing along a plateau, steel output is heading for a record 26 million tons this year, and auto production will rise almost 25%. But there is one dangerous, debilitating weakness. It is axiomatic that Britain must trade to live—and this year, as in many recent years, the country is living beyond its means in world markets.

Double Tariffs. Imports have been rising three times faster than exports, and Britons have been investing capital abroad at a considerably greater rate than foreigners put money into Britain. Result: Britain's trade gap topped $1 billion in this year's first nine months, and the country has been heading toward a 1964 payments gap almost equal to its entire gold reserves. Throughout the postwar era, Britain's inability in periods of domestic prosperity to export enough to pay for its imports has meant recurring payments crises, pressure on the pound, and credit-tightening moves that have restricted economic growth. As a consequence, France and Germany have lapped Britain in terms of production and personal income.

Last week the activist economists in Britain's Labor government (*see* THE WORLD) put through a stern pound-protecting program. A new 15% tax on manufactured imports will have the effect of doubling tariffs, adding 28¢ to a bottle of sherry and $225 to a Volkswagen. The government also started to "re-examine" the joint Anglo-French projects to build the Channel tunnel and the Concorde supersonic jet transport (the French feel certain that Britain will try to pull out of the Concorde). On top of that, the government announced a tax kickback for exporters, amounting to 1.5% of the value of goods shipped.

Encouraged by Incentives. British businessmen, having expected something worse, seemed surprisingly unruffled about Labor's first major show of economic activism. Stocks rose on the London market, and many businessmen echoed the sentiments of Leyland Motors Managing Director Donald Stokes: "We are encouraged by the new measures to provide incentives to exporters." Though businessmen felt more comfortable with the Conservatives in power, many of them had grumbled about the Tories' more-talk-than-action approach to exports. Economics-trained Harold Wilson quietly mended his fences in the City with a series of pre-election private lunches in corporate board rooms. Britain's businessmen have not wholly bought his ideas, but in something of a honeymoon mood, they are willing to see whether he can and will help them to make British industry more modern, more aggressive and more competitive.

WESTERN EUROPE

Where the Tourists Went

In its schema on the Church in the Modern World, the Vatican Council should take note of the ecumenical value of tourism "because it is a new phenomenon and one capable of producing much good." This proposal last week by Bishop Giuseppe Garneri of Susa, Italy, could only be applauded by Europe's businessmen, though they are more interested in economics than ecumenism. They are totting up the results of a season that, while sunny for some of them, shows the need for some new approaches by others. In the 20 European nations that entertain two-thirds of the world's 80 million foreign tourists, tourism generally increased this year, but growth rates slowed and spending declined in some of the best showplaces.

re decisive as tourism spreads to the
er income groups."

to Growing Pains

Europe is an automaker's dream. It
300 million increasingly affluent
ple, but only one in 15 owns a car
one in three in the U.S.), leaving
tremendous potential for growth. Eu-
pean automakers will produce 7,000,-
0 cars this year, expect to overtake
S production by 1970. But there is
tch: Europe has more than 50 auto
nufacturers, and no market is big
ugh to support so many. Everyone
pects a round of mergers, alliances
d dropouts.

Last week France's sixth ranking
o company, Facel-Vega, went out of
siness. Meanwhile, the two largest
rman-owned auto companies, Volks-
gen and Daimler-Benz, put through
partial merger. In an agreement that
reshadows further pooling of re-
urces, Volkswagen anted up $20 mil-
n for half interest in Daimler-Benz's
to-Union subsidiary.

U.S. Competition. Many Continental
to producers have run into sharp
mpetitive curves and bumps in the
ad. In Italy, auto sales are down 10%
far this year, largely because of such
vernment anti-inflation measures as
gher auto and gasoline taxes and re-
rictions on installment buying. In
rance, where auto sales are off 5%,
Renault, Peugeot, Simca and Panhard
ve reduced their work weeks. By
ntrast, auto production this year will
t alltime highs in Britain (2,000,000)
nd West Germany (3,000,000).

Everywhere, Europe's old-line pro-
ducers are being pressed by well-
anced local subsidiaries of U.S. com-
panies. France's fastest growing auto firm is Chrysler-controlled Simca, which has increased sales 25% this year. General Motors' Opel and Ford's German subsidiary have closed in on Volkswagen, increased their combined share of the German market from 32% in 1962 to 41% last year. In Britain, Ford has captured 31% of this year's market, a new high. Ford is invading Italy, too, last week introduced the Anglia Torino, a small sedan that will be assembled and sold in Italy.

Volkswagen Chairman Heinz Nordhoff and Citroën's Pierre Bercot have both expressed alarm at growing competition from "American giants" in the European market. Fiat's Chairman Vittorio Valletta has openly called for a cartel of European producers, and Renault's President Pierre Dreyfus favors government protection against the U.S. subsidiaries.

Roomier & Racier. Taking a cue from the U.S. competition, the Europeans are bringing out more new models and moving to somewhat greater size. Despite the Italian slowdown, Fiat is doing better than last year because of the success of its recently introduced "850" model, which is roomier, racier and more luxurious than the standard small Fiat; sales have reached 1,000 a day. British Motor Corp. has brought out a new Austin "1800" model to compete against Ford's Cortina and G.M.'s Vauxhall Viva. In Germany, the larger Volkswagen "1500" has made up some of the sales that the old beetle-back has lost. The French auto industry, which has not introduced a new model all year, looks forward to a lift next spring, when Renault and Peugeot will bring out fresh designs.

SOUTHEAST ASIA

Working It Cool

The days-of-empire tales of Southeast Asia by Somerset Maugham and Joseph Conrad pulse and perspire with descriptions of the region's searing heat and sapping humidity. Southeast Asia's weather hasn't changed—Bangkok's November temperature still averages 80°, and in Singapore the humidity stays at 84%—but it is being dealt with in a way that might have forced Maugham and Conrad to rewrite some torrid passages. Air conditioning has come to Southeast Asia in force, cooling public places and some homes, changing ways of life, and coining money for the entrepreneurs who work it cool.

Climatized Clients. In Hong Kong, where air-conditioning sales this year will surpass $6,500,000, Engineer James Wu, 43, last week worked on a $2,500,000 third plant for his growing air-conditioner manufacturing business, the biggest in Asia. Wu's China Cold Storage & Engineering Co. turns out Weatherite air conditioners under license from the U.S.'s Westinghouse. His is a rare operation; nearly 90% of the equipment sold in Southeast Asia is im-

PROTESTANTS

ing the Church ere the People Are

ll of us are obsolete," Dr. Truman ass told a meeting of the United ch Board for Homeland Ministries Louis last week. "The new world erging demands a new style of and leadership for which we repared." Perhaps more than er U.S. Protestant body, the ent-minded United Church of (membership: 2,100,000) is ing for a new style, testing means dern evangelism to reach people have lost touch with, and faith in, ized Christianity. Dr. Douglass, tive vice-president of the United ch Board, describes these experi- as "unstructured ministries."

e theory behind these unstructured tries is that Christianity can no r sit back and wait for people in a formal service-every-Sunday th, and must actively seek them Thus, in Chicago, the Rev. Donald elly conducts an "agora" (from Greek for marketplace) ministry in arcade of the Oakbrook Shopping er's professional building. Kelly and lay assistants present no formal ces, instead concentrate on making act with the unchurched who work e center or in nearby factories and es. The value of this "ministry of ing," Kelly hopes, is that "we will hearing about things that people t say in a church meeting or to pastor. We will be talking to peo- who have become disenchanted with church."

Desk Clerks & Beats. The daily rou- of the United Church's other lis- ministers is far removed from of most clerics. In Las Vegas, the Richard Mawson is a full-time clerk at the Sands Hotel, and s after hours with the people he meets in the hotels and casinos along The Strip. The Rev. Frank Evans, a topflight amateur skier, lives and works at California's famed Squaw Valley ski resort; his tactful counseling has helped save dozens of faltering marriages. On San Francisco's North Beach, the United Church sponsored the widely publicized, beat-directed Bread and Wine Mission of Pierre Delattre (TIME, June 29, 1959). Also working in that bohemian area with a cell of dedicated lay assistants is the Rev. Donald Stuart, who spends long hours in taverns and coffeehouses on a ministry to the "night people"—nightclub entertainers, skid-row alcoholics, homosexuals.

Douglass, who has championed these experiments despite opposition from more traditional clergymen, believes that the church "must meet people where they carry on their most vital tasks." In Detroit, United Church, Presbyterian and Episcopal ministers jointly carry on an industrial mission at 30 factories, visiting both workers and management during lunch hours. Last week, the Homeland Ministries Board approved the assignment of a minister to live and work in one of Pittsburgh's new high-rise apartment buildings. His "church" will be the laundry room, the sundeck, the lobby—anywhere that residents gather to talk.

Another new experiment in ministry is taking shape in Rochester, N.Y., one of the northern cities hit hardest by race riots last summer. There, a Christian "peace corps" of college students and seminarians is moving into the slums of the Third Ward, to work on education and social rehabilitation programs. These laymen will be helped by ten ministers, who have been assigned to start new storefront chapels.

Costly Experiments. The listening ministers argue that the value of their work must be measured in the quality rather than the quantity of their contacts. Dealing with the alienated and the unchurched, they must be more concerned with helpful personal service than with saving souls, counseling rather than conversion. They also must be—and are—conditioned to abandoning ideas that prove wrong. "These are costly experiments," says Chicago's Kelly. "We must be open to the possibility of failure as well as success."

SEMINARIES

Joining the Theologians for Thrift & Tolerance

In pre-ecumenical days, neighboring seminaries of different faiths used to eye each other warily, like hostile fortresses. But the barriers of confessionalism are falling fast—and nowhere faster than in California's Bay Area. There, seven divinity schools ranging from Roman Catholic to Unitarian have joined to create a unique Graduate Theological Union offering doctorates of theology and philosophy.

The G.T.U. started in a modest way: with two deans and one student, who flunked out. Now in the third year of operation, it has 24 doctoral candidates and a faculty of 54, drawn from the participating schools. Its students must meet the academic requirements of the nearby University of California and can enroll in university courses.

Geography & Excellence. Geography helped make the Union possible. Five of the seven seminaries are within a few minutes' walk of one another on what Berkeleyites call "Holy Hill"; the others are within easy driving distance. But what made the Union necessary was the high cost of academic improvements. Although the individual seminaries have plenty of topflight teachers —Old Testament Scholar James Muilenberg at the Presbyterian San Francisco Theological Seminary, Systematic Theologian Keith Bridston at Pacific Lutheran Theological Seminary—none of the schools ranked among the nation's best. Only two had doctoral pro-

TED STRESHINSKY

BERKELEY'S HOLY HILL*

A fiery exchange of ideas.

grams, and their libraries ranged from average to inadequate. Back in 1959, the seminary presidents began meeting to discuss the possibility of exchanging teachers and pooling library resources, eventually worked out the common doctorate program. "No one can do things independently any more," says G.T.U. Dean John Dillenberger, 46. "It has become too expensive to create academic excellence."

The Union has led to a fiery exchange of ideas as well as of books and teachers. Last year Dean Dillenberger, a United Church of Christ minister, was the principal graduation speaker at St. Albert's College of the Roman Catholic Dominican Fathers. He currently teaches one class with Episcopalian Theologian Edward Hobbs; next quarter he will teach one with Father Kevin Wall of St. Albert's.

Theological University. The success of the Union so far gives promise that it will grow. G.T.U. officials are currently discussing the possibility of bringing in Southern Baptist, Jesuit, Mormon, Missouri Synod Lutheran and Jewish institutions. They are also thinking of an interfaith program in advanced pastoral studies. Eventually, they expect there will be some common courses on the undergraduate level, and that the participating seminaries will, in effect, become member colleges of the nation's first theological university.

ROMAN CATHOLICS

No More Galileos

Three of the Vatican Council's most influential bishops pleaded last week for some modification of Roman Catholic objections to birth control.

"We should affirm," said Paul-Emile Cardinal Léger of Montreal, "that the intimate union of the marriage partners finds its end in love as well as procreation. May this Council clearly proclaim the two ends as equally good and holy." Belgium's Leo Josef Cardinal Suenens said that the church has for too long based its marital teaching on the Biblical injunction "Increase and multiply," while ignoring an equally important Scriptural imperative: "They shall be two in one flesh." Suenens proposed that the Council commission responsible for Schema 13 ("The Church in the Modern World") should work with a recently appointed papal team of birth-control experts to frame a doctrine on marriage that would take into account new medical discoveries. "We have learned many things since Aristotle," he said. "I urge you, brothers, let us avoid a new Galileo case—one is certainly enough in the history of the church."

Even more explicit was Maximos IV Saigh, the Melchite Patriarch of Antioch. Speaking, as always, in French rather than the Council's official Latin, the Patriarch admitted that "the immense majority" of Catholics did not practice what the church teaches on birth control. "Shouldn't the official position of the church in the matter be revised in the light of modern science?" he asked.

When the day's discussion ended, many moral theologians in Rome hailed it as a "watershed" and a "turning point" in the life of the Council and the history of the church.

* Top left: the interdenominational Pacific School of Religion. Center foreground: the Episcopalian Church Divinity School of the Pacific, with its flat-roofed library, chapel, and long, narrow dormitory. Gabled building across street from the dormitory is the office of Graduate Theological Union, and the building just to the left of G.T.U. is Unitarian Starr King School for the Ministry. Other members of the Union, not in picture: Berkeley Baptist Divinity School, Pacific Lutheran Theological Seminary, the Presbyterian San Francisco Theological Seminary at San Anselmo, and St. Albert's College of the Roman Catholic Dominican Fathers.

MILESTONES

Free Love in Free Form

A Woman Is a Woman is an unbashed display of cinematic bravura by French Director Jean-Luc Godard, whose first big success was *Breathless*. Breaking completely with the down-beat, darkly evocative themes that made his reputation international, Godard has brought off a flashy little show-biz spoof full of daring artifice and visual

KARINA & BELMONDO IN "WOMAN"
In and out of fiction.

horseplay that it cannot fail to divide viewers into two camps: those who find its excesses unforgivable *v.* those who find its successes unbeatable.

Loosely shaped like a musical sans songs, and almost sans plot, the film plunges headlong into the life and loves of Angela (Anna Karina), a stripteaser who shares her top-floor flat with a bicycle racer (Jean-Claude Brialy). Their relationship has obviously been built on the shaky base of too many Hollywood double features. One day Angela announces: "I think I'm alive." Suddenly she wants to have a baby, but the bicycle rider does not share her *idée fixe*. She then decides rather casually to turn to his ne'er-do-well chum (Jean-Paul Belmondo).

Such trivia would hardly suffice for an 80-minute comedy, except that Godard uses story merely as a springboard into a series of gay, giddy improvisations. Filmed in 1961, *Woman* shows Godard's easy mastery of the style later used to antic effect in Tony Richardson's *Tom Jones*, for he bends his narrative into brightly colored free forms that glow with spontaneity. His three youthful misfits will not stay put as creatures of fiction. They keep popping in and out of it, sharing their secrets with the camera, affecting musical comedy poses, cracking movie "in" jokes, letting off steam, then back again to play the youthful games that seem so much nicer in the movies—all set to background music that rattles along in cheerful parody of several dozen of the earnest scores for vintage Hollywood spectaculars.

During one lively, choreographed quarrel, Godard abruptly freezes the frames to announce in titles: "It is because they love each other that things will go wrong for Emile and Angela." Later, Brialy soliloquizes: "I don't know whether this is a comedy or a tragedy—but it is a masterpiece." It isn't, really. But for fans of offbeat films, it will seem a pungently detailed and disarmingly original effort by a man who makes his joy in his work contagious.

At Bay in Africa

Guns at Batasi. In an unnamed African nation, newly promoted to Commonwealth status, Colonel Jack Hawkins and Colonist Cecil Parker are discussing the military coup headed by a rebel leader, Jobila. Not a bad sort, really, Jobila. Spent five years in jail. "Used to take care of my garden," Parker harrumphs. "He was a lousy gardener. I hope he'll make a better president."

Obviously, the wind of change wafts through this tart topical melodrama, an updated version of the old favorite about a group of decent, civilized folk marooned in a jungle outpost among hordes of savages. The comforting strains of *There'll Always Be an England* are but dimly heard, and the tribal chieftains have evolved into smartly uniformed officers with English accents and political ambitions.

Batasi is best when it doesn't take its enlightened spirit too seriously. Sexy U.N. Secretary Mia Farrow (daughter of Maureen O'Sullivan, Tarzan's favorite Jane in the Africa that was) turns the coup into a coo with John Leyton, a stranded British private. Flora Robson adds snap as a visiting lady M.P., but the pick of the lot is Richard Attenborough. As a starched and polished relic of the Kipling era, hopelessly out of keeping with the age of Kenyatta, Attenborough turns a cliché into a memorable character sketch—etched most sharply when he raises his glass in a brusque farewell toast to the glories of Empire, then hurls drink and all at a portrait of the Queen.

WALTER DARAN

ATTENBOROUGH & ROBSON IN "BATASI"

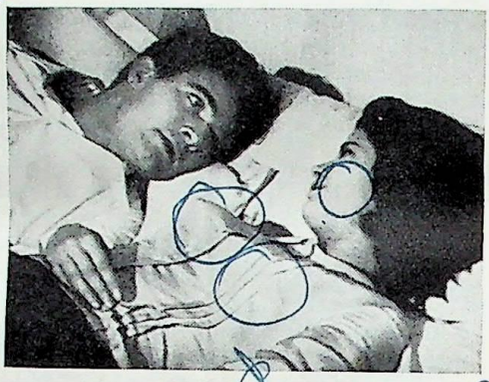
Reel-Life Scandal

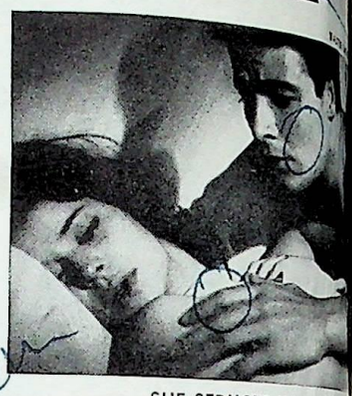
Where Love Has Gone. "Somewhere along the line the world has lost all its standards and all its taste," snaps Bette Davis. But don't let her dictum fool you. Miss Davis is merely throwing in the opening ball for a few innings of big league smut scraped together from the bestselling novel by Harold Robbins (*The Carpetbaggers*).

This time, Robbins' story bears certain unmistakable but less than libelous resemblances to the real-life tragedy of 1958 in which Lana Turner's teen-age daughter, Cheryl, killed her mother's lover. Producer Joseph E. Levine has dressed it up as what used to be called "a woman's picture." Amidst [illegible] ous settings, supposedly inhabited the *haut monde* of San Francisco, oine Susan Hayward plays a famous "sculptor, pagan, alle who detests her domineering (Davis), betrays her war-hero unwittingly shares a gigolo daughter until one calamitous when the kid picks up a chisel and

What follows is a custody some gamy dialogue, and numerous tidy revelations, none of them teresting. "With you," observes Susan's playmates, "art and sex go in hand." Maybe so. But in movies *Where Love Has Gone*, they cancel each other out.



HE SEDUCES HER?
Two sides . . .



SHE SEDUCES HIM?
. . . to every tale.

Vive la Différence!

"It takes two to make a marriage," the late Fred Allen once observed. "Yourself and somebody to blame it on." From this cozy connubial notion, French Director André Cayatte (Tomorrow Is My Turn) *has extracted a novel cinematic idea: it takes two movies to describe a marriage—one to give his version, one to give hers. Studied simultaneously, the plots of both pictures provide matter for ironical reflection.*

My Nights with Françoise. Two students meet in the park. He is intelligent and handsome; she is silly but beautiful. He seduces her. She asks him to marry her. He says: "Depend on me. I'll take care of you." At first they are happy, but soon she frivolously takes a lover. Though he hates to leave Paris, he hurries her away to a small town, where she is bored and makes his life hell. Determined to get back to the gay life, she disgraces him in public, and they have to leave town. Back in Paris, she wangles him a job with a notorious shyster. To escape the wifely routine, she goes to work for an ad agency. Several men pursue her hotly, and she accommodates all of them. Fortunately, he finds out what is going on, and he walks out on the bitch, who is left with her nose out of joint.

My Days with Jean-Marc. Two students meet at a party. She is intelligent and beautiful; he is weak but handsome. She seduces him. He asks her to marry him. She thinks: "I have enough strength for us both." At first they are happy, but soon his lack of drive becomes a problem. Though she hates to leave Paris, she loyally goes to live with him in a small town, where she is bored but does not complain. Determined to rescue him from obscurity, she disgraces him in public, and they have to leave town. Back in Paris, she wangles him a place in a prominent law firm. To help with expenses, she goes to work for an ad agency. Several men pursue her hotly, but she is faithful to her husband. Unfortunately, he imagines she is not, and he abandons the poor woman, who is left with a broken heart.

Cayatte's fundamental conception, to present a twice-told tale in the form of a double feature, is mildly stimulating. Unhappily, the marriage his movies describe is immoderately dull. She is a rat fink, he is a mouse fink, and their life together is stinking cheese. After inhaling Anatomy of a Marriage *(as the films are collectively called) for almost four hours, an audience can only numbly wonder how Cayatte could imagine that two bad movies would make a good one.*

Hegel's Road to Walden

COLD FRIDAY by Whittaker Chambers. 327 pages. Random House. $5.95.

Whittaker Chambers spent his life searching for final answers. Spurred by "the need for truth" and "the fear of error," his search carried him into what Albert Camus called "those waterless deserts where thought reaches its confines."

After the glaring publicity of the Alger Hiss trial and the 1952 publication of his own confessional autobiography *Witness,* Chambers withdrew to the seclusion of his Maryland farm. Often his first waking thought was, "Must I live through another day?" This posthumous book, made up of diary excerpts, letters, extended reflections on himself and his time, is the fruit of those years. Edited by Duncan Norton-Taylor, managing editor of FORTUNE, who had been a close friend of Chambers ever since the days he worked at Time Inc., *Cold Friday* records the despair, illness, and especially the courage of Chambers' last years.

In Disgrace. Part of Chambers' loneliness was the fact that he was a philosopher in an unphilosophical nation. He was a Hegelian, seemingly unaware or uncaring that Hegelianism had been in philosophic disgrace for half a century. Hegel believed that history moved in terms of a set of abstract forces said to be in "contradiction." These, by the workings of another abstraction called the dialectic, would resolve themselves into a great and final synthesis in which man would become perfect within a perfect state. The attractions of such a view of history are, of course, obvious. But it forced Chambers' thought processes into a rigid either-or frame that, once accepted, he could never escape—and it led naturally to a trust in Marxism. He was incapable of dealing with ideas as an intellectual game. "For me," he confessed, "an idea was the starting point of an act."

He entered college in the early '20s as a sobersided conservative who thought Calvin Coolidge was the greatest Republican since Lincoln, and he left college convinced that the walls of civilization had cracked and were at the toppling point. "I felt that the world was too old," Chambers wrote, "that it was late in its night, that that night was very dark, man was far from home, he lacked inner strength to make the effort, and, besides, the right way was lost." It was this deeply felt mood of young man's pessimism that led him to abandon religion and embrace Communism. To Chambers, "the crux of this matter is the question whether God exists. If God exists, a man cannot be a Communist, which begins with the rejection of God. But if God does not exist, it follows that Communism, or some suitable variant of it, is right."

No Escape. Despite such entrapping juxtapositions, Chambers finally rejected Communism because it was ineradicably evil, but he wrote: "I have found that the mood of Communism (despite its atrocious features) is a mood of hope, while the West (despite its gracious features) promotes a mood of despair."

FARMER CHAMBERS & WIFE
Ideas were not games.

In his letters, he struggled valiantly to define his beliefs, but again paradox overwhelmed him. Chambers wrote to William Buckley, editor of the *National Review,* that he stood within no orthodoxy, either religious or political, and that he was not a conservative. Chambers added: "I am a man of the Right because I mean to uphold capitalism in its American version. But I claim that capitalism is not, and by its essential nature cannot conceivably be, conservative." Yet Chambers was struck by the fact that U.S. big businessmen are charmed and impressed by Communist leaders when they meet: "They find that they speak the same language, *i.e.*, the language of power and action stripped of intellectual baggage." And he noted: "The West believes that man's destiny is prosperity and an abundance of goods. So does the Politburo."

This is not to say, he added hastily, that the opposed ideologies are identical, but only that opposites grow alike as they contend for victory. The victory, as it seemed to him to be ... ing, was something that Hegel ... envisage, and that Chambers ... welcome. He was left with the ... conviction that both capitalism ... Politburo wanted and probably ... get the nightmare world of *1984*. ... fact, Chambers concluded gloomily ... "the whole technological development ... of civilization was a wrong turn ... and that "the only possible solution ... presently to be made by the Bomb."

Of Wind & Sparrows. Too ... answer for a man who was fundamentally on the side of life? Probably ... compensation, Chambers turned ... and more to the daily tasks of ... and the cyclical change of seasons.

The finest writing in this book ... passages in which the fields and ... of Pipe Creek Farm become a ... for this man who had wandered ... places. Muses Chambers: "The ... hog loved the light. The sparrow ... the light. Night falls. I often found myself thinking very concretely of ... I have known who have long been dead. You wonder what their ruinous remains look like after so long a separation, whether they have passed the corruption of plain corrupting horror and have reached a skeletal minimum that produces only a mild repugnance. After all, you wonder that they are completely forgotten. I may think of them ... in a year, in ten years. They are an reality that once lived, though it is possible to grasp why, to what purpose ...

Not Solutions but Pyres. The book's title derives from the farm. "Cold day" is the farthest field to the north and the one Chambers conceived ... his last stronghold, where he was determined to root the lives of my children." It was on the farm, three years ago, that Whittaker Chambers was stricken with a heart attack and died.

In his confrontation with the world, Whittaker Chambers both sinned and suffered greatly. But he was a man who took ideas seriously, and was willing to dare greatly for them. No one less daring can be wholly self-righteous about either his sins or his suffering. And sometimes there is a sense that he is resigned to both. In his apologia, he wrote: "There are no more solutions, no argument. . . . There are only mandoms, which are never solutions, and pyres, whose flicker is addressed ... primarily to the present, but to a posterity that has not yet cohered out of chaos and old night."

American Gothic

NOTHING PERSONAL by Richard Avedon and James Baldwin. Atheneum. $12.95.

For over a decade, Photographer Richard Avedon's elegant, epicene fashion pictures have set the slick pace for *Vogue* and *Harper's Bazaar.* Now it turns out that all along Avedon has been disgusted by the affluent America he celebrates. To register his revulsion, he ... together with James Baldwin (who ...

AVEDON'S MONROE & STEVENSON
A record of revulsion.

his old classmate in The Bronx's prestigious De Witt Clinton High School) to plan a work that would "expose the corruption in American life. I am fascinated by decadent faces." Baldwin's brief text is oddly irrelevant, obviously hasty, too often drawn on by his sheer flow of language into shrill overstatement: "No one is happy here." The 54 Avedon photographs are something else again: a chilling, engrossing display of ferocity.

Avedon is possessed of a lens that is a subtler, crueler instrument of distortion than any caricaturist's pencil. Washington Hostess Perle Mesta appears whiskered and wattle-throated; Dwight Eisenhower looks like his own corpse; simple people getting married at City Hall look bloated, ugly, foolish; Adlai Stevenson looks tired, disillusioned, a little sly; Playwright Arthur Miller looks scruffy, torn by anxiety.

When Avedon lets up on the extremes of technique, he can catch a masterpiece of self-satire such as a group photo of eleven plump, prim, grim generals of the Daughters of the American Revolution. His unaffected snap of a drooping, slightly disheveled Marilyn Monroe may be the most psychologically inward picture ever taken of her. But the slippery bias of the book is best shown by the inclusion of one picture: a so-so photo of Major Claude Eatherly, slyly captioned to perpetuate the oft-disproved legend that this disturbed man was the pilot who dropped the first atomic bomb.

The Irrepressible Force

THE FINAL CHALLENGE *by Dale Van Every.* 378 pages. *Morrow.* $6.

By the 1790s the Western movement had reached the Mississippi, and the frontiersmen saw nothing in the way of a final push to the Pacific except Blackfoot Indians, grizzly bears and federal bureaucrats. Though President James Monroe in 1825 had forever prohibited any U.S. settlement beyond the upper Mississippi and the present states of Missouri and Arkansas, the frontiersmen paid no attention. By the time Monroe's proclamation reached the frontier, it had been pushed as far west as Spanish Texas and Santa Fe. The grizzlies were similarly surmountable. Pathfinder Jedediah Smith jerked his mangled head from the jaws of one and went on to discover the South Pass gateway through the Rockies and the last missing link in the Oregon Trail. The Plains Indians, who were some of history's toughest cavalrymen, also found their match in Smith and his "mountainmen." One of them kept on trapping for three years with a 3-in. arrowhead embedded in his back.

The secret was fighting firewater with firewater. The frontiersmen became indistinguishable from the Indians in their drinking habits, their beaded buckskins, and war paint. If anything, says Dale Van Every in the fourth and final volume of his *Frontier People of America*, the paleface invaders were "morally more savage than their Indian victims." On one occasion, a trapper found rivals following him to learn the most lucrative beaver streams. His solution was to lead them through the country of the Blackfeet, who ambushed and dismembered the rivals' leader.

The author concludes that it was all for the best. If the mountainmen had been a less irrepressible force, the U.S. might never have amounted to anything more than "another Holland or Portugal."

The Unferocious Negro

SHADOW & ACT *by Ralph Ellison.* 317 pages. *Random House.* $5.95.

According to James Baldwin, LeRoi Jones, Malcolm X and any number of other writers and seers, the U.S. Negro is consumed with hatred of whites and is on the verge of doing some foul and desperate deed. Negro Writer Ralph Ellison's coolly reasoned essays are a timely rebuttal of this extravagant thesis. In clean, brisk, unapocalyptic prose, Ellison denies that "unrelieved suffering is the only 'real' Negro experience, and that the true Negro writer must be ferocious. . . . What an easy con-game for ambitious, publicity-hungry Negroes this stance of 'militancy' has become."

Separate & Superior. Ellison is no Uncle Tom; his credentials as a "militant" are all in order. He has written what is generally agreed to be the U.S. Negro novel—a good novel by standards—*The Invisible Man.* In these essays, written over two decades and covering matters of race, literature, music and his own upbringing, Ellison asserts that Negroes have a monopoly on tragedy. Life everywhere, he writes, is a "mixture of the marvelous and the terrible." To romanticize a particular people as special sufferers is a form of escapism.

Ellison, no less than Baldwin, knows slavery and segregation for the deep wounds that they have inflicted on the Negro. But he does not believe that the Negro's life in the U.S. has been a complete horror story. In spite of beatings, beatings and everyday indignities, the "harsh discipline of Negro life" instilled in Negroes certain admirable qualities that are lacking in most men: patience, humor, a "rugged sense of life." Ellison's own life in Oklahoma City, he reminisces, was happy and vital, even though it was segregated, even though his mother was thrown into jail several times on various pretexts because she insisted on living in a white neighborhood.

Early in life, Ellison developed a passion for music, black and white, classical and jazz. He was fired with ambition by a wonderful integrated assortment of boyhood heroes: jazzmen, scientists, cowboys and Renaissance

RALPH ELLISON
No monopoly on tragedy.

ists. He read voraciously, thanks to a Negro who tried to integrate the Oklahoma City public library. The other others were so shaken that they opened a separate Negro library and stacked it with every book they could lay their hands on.

Integrated Songs. However, while white America has tried to segregate the Negro, mentally and physically, he has not stayed segregated. His novel, his poetry, his music (which Ellison fondly explores in a number of

ght Essence

POETRY AND POWER, *edited by*
A. Glikes and Paul Schwaber.
pages. *Basic Books.* $5.95.

month before he was assassinated,
sident Kennedy took time out to
ment on poetry at the dedication
e Robert Frost Library at Amherst
lege: "When power leads man to-
d arrogance, poetry reminds him
is limitations. When power narrows
areas of man's concern, poetry re-
ds him of the richness and diversity
is existence. When power corrupts,
etry cleanses."

The poets have now repaid the com-
ment. Not since Lincoln's assassina-
n has an American's death inspired
much poetry, the best of which has
n collected in this volume. Estab-
ed poets—W. H. Auden, Richard
rhart, John Berryman, among oth-
—lent their usual talent; lesser-
own poets rose to more than usual
quence; and all expressed an admira-
n for J.F.K. that undoubtedly would
e shocked him: Robert Hazel
President I love as my grandfather
ed Lincoln"); Ruth Yorck ("We
y stop worrying./ Our best man
d./ We know of no one now we
not spare"); John Tagliabue ("pre-
politician of such steadfast shaking
minosity"); Edward Pols ("There,
your bright incontinent essence/
lines to its own completion, still/
apes almost its own actuality, still
ntrives/ Some reason, measure, hu-
in our lives").

Most of these poems are restrained
n compared with Walt Whitman's
sive *When Lilacs Last in the Door-*
d Bloom'd. Nor are they elegiac in
e usual sense. In poetry as elsewhere,
e sea of faith has receded, and poets
o longer have recourse to the tradi-
nal symbols of comfort and deliv-
ance. The poems are for the most
rt stoical, terse, plain-spoken. But all
f them bespeak a grief as great as any
oetry of the past.

Some are simple tributes to a beloved

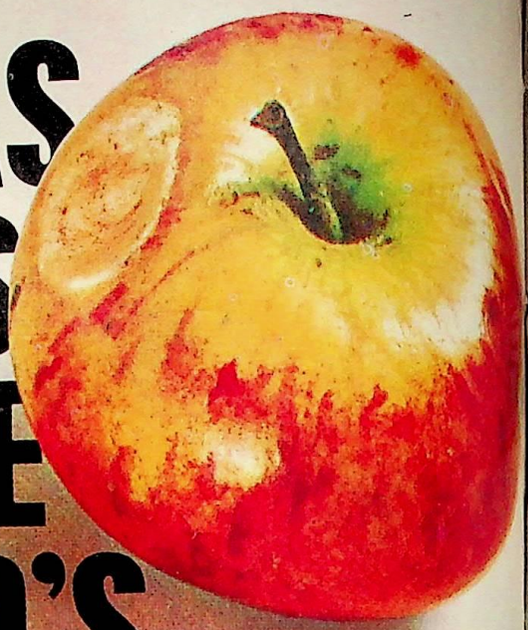
'THE BIG IDEAS ALWAYS FIND THE MAN WHO'S LOOKING FOR THEM'



–that's the MF 'stay first' philosophy

People get hit on the head by apples every day.
It takes a head like Isaac Newton's to make a profit out of it.
Same with baths and Archimedes, stale cheese
and Fleming, weight transfer and Harry Ferguson.
The Massey-Ferguson weight transfer system
came about as the result of years of research
into tractors and the jobs they do.
Massey-Ferguson intend to be first with the next
big advance in mechanised farming, too.
In order to ensure this, they spend millions
on development and research
throughout the world.
Hush! There's an apple dropping somewhere.

Massey-Ferguson

On the sunny side of our mail If you run an airline that serves five continents—if every four minutes one of your planes takes off somewhere in the world —if you extend to many thousands of guests a year—you are bound to have some complaints in your mail. At times, we have.

Reason to be discouraged, or even angry? Never! We trace and scrutinize the origin of our guest's disapproval. Then we take all possible measures to make sure that the same mistake is not made again. And, of course, we contact our guest and apoiogize. We know there's no end to refining our service.

Now that the clouds have drifted by, let's bask in the sun. Last year was a particularly sunny one. We were honoured by 2875 compliments. In black and white!

You know that displeasure is brought to paper much sooner than satisfaction. Yet in 1963 we gathered a high pile of satisfaction, 2875 letters in all.

We consider it tangible proof that an independent airline—modern, reliable, friendly—always succeeds in giving you the best there is in everything. Find out how much it means on your next flight with us: A warm welcome awaits you on board!

TV for Samoan schoolchildren. A new educational television system, using General Electric cameras and transmitters, is expected to benefit both children and teachers in American Samoa, the South Pacific island group. Distance has tended to isolate school systems there. With television teaching as the core of instruction in the first eight grades, the level of teaching will be uniformly high, and all teachers will be exposed to the latest techniques at once. Programs now originate live from a single, G.E.-equipped studio; eventually there will be four studios. The programs are transmitted from a mountaintop a mile away by three G.E. transmitters. *Write for bulletin GEA-7850.*

Automatic rail-haulage system. General Electric apply a completely automatic rail-haulage syste your plant to reduce operating costs and improve transportation efficiency. An automatic haulage sys can be especially helpful in operations where there complexity of movement between two or more motives, poor visibility or hazardous cargo. The system cuts the time lag in material flow. It elimina slowdowns and accidents. And it lets you get *up to per cent more use* out of your rail operations. It c sists of rail equipment, integrated Directo-Matic* c trol and communications systems. Write for Bulle GEA-7638. *General Electric Company, Dept. 111-32 159 Madison Ave., New York, N.Y. 10016, U.S.A.*

*Trademark of General Electric Company, U.S.A.

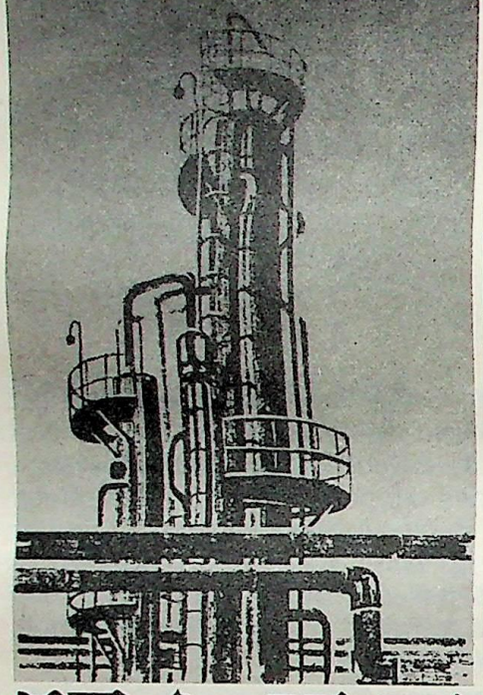
WHAT'S IN A NAME



昭和電工

SHO WA DEN KO

This is the way Showa Denko, the name of a leading Japanese chemical and metal manufacturer, is written in Japanese.

"Showa" is a proper noun—the name of the period under the reign of the present Emperor of Japan. Thus, in Japan, 1964 is known as the 39th year of Showa. "Denko" means electrical industries. It was originally adequate because the company started out as a manufacturer of electrochemical and electrometallurgical products. As a result of continued expansion in these sectors, today it consumes more electricity than any other enterprise in Japan.

With its rapid advance into petrochemicals in recent years, however, Showa Denko has outgrown its name. The petrochemical products now manufactured by Showa Denko and its subsidiaries include polyethylene, synthetic rubber, carbon black and propylene glycol. It also uses petrochemistry in producing vast amounts of ammonia.

There has been much advice to the contrary. But we're holding on to the name, because it has become synonymous to so many people both inside and outside Japan with products of uniformly high quality.

Main Product Lines

Aluminum
Ferroalloys
Electrodes
Abrasive Grains
Organic Chemicals
Inorganic Chemicals
Chemical Fertilizers
Nuclear Reactor Materials

TELEVISION

Wednesday, November 11

CBS REPORTS (CBS, 7:30-8:30 p.m.).* Both Nationalist China's and Red China's positions in the world are assessed by India's Prime Minister Lal Bahadur Shastri, Nationalist China's President and Madame Chiang Kai-shek, Pakistan's President Ayub Khan, Britain's new Prime Minister Harold Wilson and other leaders.

Thursday, November 12

SOPHIA LOREN IN ROME (ABC, 10-11 p.m.). The beauty that is Italian is on display as Sophia Loren tours the Eternal City. Color.

Friday, November 13

MISS TEEN-AGE AMERICA PAGEANT (CBS, 10-11:30 p.m.). More than 50 adolescent finalists vie for a $10,000 college scholarship and the honor of wearing the Miss Teen-Age America crown.

Saturday, November 14

WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). Floyd Patterson analyzes the Nov. 16 Liston-Clay Heavyweight Championship Fight.

ONCE UPON A MATTRESS (CBS, 8:30-10 p.m.). In this musical-comedy adaptation of *The Princess and the Pea,* Carol Burnett re-creates her off-Broadway role as a swamp girl who swims the castle moat and is courted by a prince. Richard Rodgers' daughter Mary composed the score.

Sunday, November 15

DISCOVERY (ABC, 11:30-12 noon). The mysteries of heredity are explored, showing how chromosomes and genes combine to make some blossoms crimson, some cats calico, and each of us what we are.

PROFILES IN COURAGE (NBC, 6:30-7:30 p.m.). The story of Mary S. McDowell, a Latin teacher who, at the beginning of World War I, refused on religious grounds to sign a loyalty oath.

WALT DISNEY'S WONDERFUL WORLD OF COLOR (NBC, 7:30-8:30 p.m.). Two cartoon productions. The first, *Ben and Me,* is narrated by a mouse who credits himself with originating many of the inspirations for which Ben Franklin is famous; the second, *Peter and the Wolf,* is narrated by Sterling Holloway and brings to life Prokofiev's enchanting music. Color.

SUNDAY NIGHT MOVIE (ABC, 9 p.m. to conclusion). *Bird Man of Alcatraz.* Burt Lancaster plays Robert Stroud, a convicted murderer whose 43 years of solitary confinement were spent studying and writing about the habits of caged birds.

Tuesday, November 17

THE LOUVRE (NBC, 10-11 p.m.). The greatest of all art treasuries, the Louvre, displays its masterpieces and architectural grandeur. Charles Boyer narrates. Color.

THEATER

On Broadway

A SEVERED HEAD, by Iris Murdoch and J. B. Priestley, is a most unusual play to encounter on Broadway. It is a sex farce adapted from a novel by an Oxford University professor of philosophy (Miss Murdoch), and its true subject is the nature of reality. It is acted with uncommon skill, and it is a delectable repast for eye and thought.

OH WHAT A LOVELY WAR. Period sketches, gauze-clad music-hall girls, blown-up film stills have the comic impact of an artillery barrage in Littlewood's biting satire on World War I.

FIDDLER ON THE ROOF. Zero Mostel seems almost to physically expand on the stage with yeasty joy, pain and mystery in this musical based on Sholem Aleichem's tales of a poor Jewish dairyman, his family and friends in 1905 Russia.

ABSENCE OF A CELLO is a bright, every-other-minute comedy demonstrating that a free-spirited scientist cannot be stamped into a cog-sized mold.

Off Broadway

THE SECRET LIFE OF WALTER MITTY has been boldly extrapolated from the celebrated James Thurber story. The adapters have not been cowed by the memory of the master, and the clever lyrics, musically oriented songs and infectious *joie de vivre* of the cast make this a thoroughly pleasant musical evening.

CAMBRIDGE CIRCUS. A rock-'n'-roll number, *I Wanna Hold Your Handel,* pairs the composer and the Beatles, is one of the highlights of this revue imported from the campus on the Cam. The fun flows when the men manic but unassuming Britons stick to tickle a rib rather than wash a tub.

RECORDS

Orchestral

BARTÓK: THE MIRACULOUS MANDARIN (London). Intended for a dance-mime, this is some of the most unusual music ever written. A mandarin, lured by a prostitute and mortally stabbed by her accomplices, finds his lust stronger than death and miraculously lives until his passion is spent. Budapest-born George Szell, once a student of Bartók's, whips the London Symphony Orchestra into a musical frenzy that the music has the power to ignite, a thunderbolt and the illuminating lightning.

RICHARD STRAUSS: SYMPHONIA DOMESTICA (Columbia). Strauss once declared that he found himself as interesting as Napoleon and equally worthy to be the subject of a symphony. He generously included his wife and baby in the scenario when he wrote this tone poem about a day at home. The baby is put to bed as the clock chimes 7 and there is some love music as the happy parents that one imaginative critic has found pornographic. The musical themes are not the most memorable that Strauss ever wrote, but the orchestration is magnificent; and George Szell and the Cleveland Orchestra make the music glow with color.

SCHUBERT: SYMPHONY NO. 9 (Deutsche Grammophon). Robert Schumann called it the "symphony of heavenly length." Karl Böhm and the Berlin Philharmonic just let it flow. There is no feeling of thrust; the rhythmic divisions are as natural as breathing, and Schubert's greatest symphony emerges clear and grandly melodious.

HANDEL: THE TWELVE CONCERTI GROSSI, OPUS 6 (4 LPs; Angel). Using the

THE ROLEX "DAY-DATE"

Most remarkable achievement in watch-making, the Rolex Oyster Perpetual "Day-Date." Available only in 18-ct. gold or platinum, with matching "President" bracelet.

Like all Rolex chronometers, every "Day-Date" is now awarded the highest distinction of the Swiss Institutes for Official Chronometer Tests, the mention 'Especially good results.'

Its superlative accuracy is protected by the famous Rolex Oyster case, made in Geneva by Swiss craftsmen and guaranteed 100% waterproof, and its movement is selfwound by the Perpetual rotor. The date and the day of the week, written in full, change instantaneously every midnight.

ROLEX
A landmark in the history of
Time measurement

basic means—two violins and a cello set against a small orchestra—Handel achieved widely different moods. Yehudi Menuhin plays one of the violins in the trio and conducts the Bath Festival Orchestra with the same scholarly fidelity and high musical spirits that he displayed in his recent recording of the *Water Music*. Every detail is luxuriously provided for; for example, Virtuoso George Malcolm plays the relatively minor but fundamental role of harpsichord accompanist in four of the concertos.

BRITTEN: YOUNG PERSON'S GUIDE TO THE ORCHESTRA (London) usually has a commentator to introduce the woodwinds, brass, strings and percussion. This performance without words, conducted by the composer, shows that the piece, with its inventive variations on a theme of Purcell's, is more than just a stunt. The virtuosos of the London Symphony Orchestra make the most of their uninterrupted chance to show off. For those who want a spoken explanation, there is also a new version by the Boston Pops, with Hugh Downs emceeing the instruments (RCA Victor).

CINEMA

MY FAIR LADY. Audrey Hepburn seems delightfully right as the cockney flower peddler transformed into a lady by Professor Rex Harrison, and the happy news is that this lush, eye-filling adaptation of the Lerner-Loewe musical delivers a round $17 million worth of elegant escapism.

TOPKAPI. Melina Mercouri and Peter Ustinov make larceny laughable in Director Jules Dassin's cheerfully amoral comedy about a jewel caper in Istanbul.

WOMAN IN THE DUNES. This powerfully filmed allegory from Japan translates the search for self into a vivid metaphor about a man and a woman endlessly digging to survive in a sandy hellhole.

THE LUCK OF GINGER COFFEY. An affable Irish phony (Robert Shaw) who can't face the truth about himself loses his wife (Mary Ure), who cannot live with a lie.

MARY POPPINS. Amidst a whirl of sticky-sweet Walt Disneyism, Julie Andrews and Dick Van Dyke transform a modern juvenile classic into jolly good fun.

SEDUCED AND ABANDONED. Youthful indiscretions set off a sunny Sicilian nightmare in this savage tragicomedy by Italian Director Pietro Germi (*Divorce—Italian Style*).

A HARD DAY'S NIGHT. In an often hilarious comedy, John, Paul, George and Ringo demonstrate that Beatlemania, taken as they take it—with a grain of salt—can be quite a tolerable affliction.

GIRL WITH GREEN EYES. Britain's Rita Tushingham, shrewdly guided by Director Desmond Davis, brings warmth, wit and wonderful variety to this portrait of an Irish colleen who falls in love with a man more than twice her age.

THE NIGHT OF THE IGUANA. At a sunny resort for shady people, Ava Gardner, Richard Burton and Deborah Kerr reach the ends of their ropes while untangling some of Tennessee Williams' best lines.

BOOKS

Best Reading

COLD FRIDAY, by Whittaker Chambers. Looking back on his earnest years at Columbia, his falling out with the Communist party and with the ideologies that shaped his life, Chambers shows warmth and detachment missing from *Witness*. In particular, the intellectual zeal of the thirties, which demanded that an idea become conviction and that conviction turn into action, comes alive through Chambers' reconsideration of his motives and acts.

SHADOW AND ACT, by Ralph Ellison. The author of *The Invisible Man* turns his attention to the situation of the Negro in America, but is wise enough to reject easy solutions or histrionic demands.

OF POETRY AND POWER, edited by Edwin Glikes and Paul Schaber. A collection of poems written about the death of President Kennedy. The contributors and their feelings range from religious poetry through existential stoicism to beat anger.

MARKINGS, by Dag Hammarskjöld. The late U.N. diplomat kept constant counsel with himself throughout his demanding life by recording the outlines of his mind and soul in these journals. It is an astonishing and often eloquent testament of a God-obsessed Christian who measured his actions against his creed.

FOR THE UNION DEAD, by Robert Lowell. These very personal poems reflect Lowell's old preoccupations—madness, genius, love—but the despair of his anguished early work has been replaced by a balance that adds a new dimension to Lowell's already considerable powers.

THE BRIGADIER AND THE GOLF WIDOW, by John Cheever. In these short stories, the author keeps a strangle hold on his own creatures of exurbia: the proletariat of vice presidents, the charming, irrelevant aristocracy and the winning eccentrics who compose swimming-pool society.

HERZOG, by Saul Bellow. A complex, demanding novel about divorce, a custody case, and a gentle man's slow recovery from the brutalization of both. Bellow's writing is consistently brilliant, but his extended reveries slow the pace and keep it from being a unified work.

THE WORDS, by Jean-Paul Sartre. Always a brilliant but negative thinker, Sartre has focused his critical power on himself as a child, and dislikes what he sees. From this graceful, simple memoir, the cast of a powerful, angry mind that was to reject all symbols of tradition, from God to the Nobel Prize, can easily be traced.

Polysar researchers struck oil when they started looking for a way to cut compound costs!

TAKTENE is a high cis 1,4 polybutadiene which is capable of carrying high filler and oil loads without loss of properties. New TAKTENE 1250 is oil-extended to help manufacturers take advantage of this ability. It can reduce compound costs by as much as 16% without sacrificing quality. Tire manufacturers have found, for example, that TAKTENE content can be increased to 50%—which means tires with superior abrasion resistance and no tendency to groove cracking at substantial savings in material costs. And footwear manufacturers are able to produce tougher, harder-wearing soles at less cost than before. If your company manufactures a product in which high abrasion resistance, excellent low-temperature properties or resistance to cracking are important, then perhaps new oil-extended TAKTENE 1250 can help you to cut costs, too. Why not talk to your nearest Polysar technical representative? A letter to Polysar International S.A., Fribourg, Switzerland will put him in touch with you.

Every fifth PIA passenger a new one

While growth in passenger traffic for all airlines averaged 11% over the past five years, PIA's passenger traffic has gone up 25%. These results reflect not only PIA's dramatic expansion, but also PIA's own high standards of operation—again, well above the industry average. It is this sort of vigorous growth and imaginative enterprise which last year brought to this consistently profitable airline over 14% more passengers, and explains why travellers say PIA are great people to fly with.

DOUGLAS CRANE
Publisher, West Coast Edition
...ld
...s Angeles

...r: Your state-by-state presidential ...ntdown [Oct. 30] proved to be ex... accurate. All the states were called ...tly except Georgia and Wyoming. ...ct your predicted electoral vote was ...t on the nose. Truly a job well done.

JEFFREY P. COHEN
...klyn

...ME's predicted electoral vote: 495-43. ...actual vote: 486-52.—ED.

...n with a Mandate

...r: We got our choice—he got his echo.

RICHARD A. REINGOLD
...thampton, Mass.

...r: I am proud of my country, not only ...rejecting racism and extremism, but ...giving a mandate to Johnson to create ...se programs so desperately needed by ...Americans. I'm confident that he will ...ve to be a great President.

ROSEMARY FAIRBAIRN
...w York City

...r: Barry Goldwater promised the peo... the greatest upset in American politics. ...kept his promise. He upset the Ameri... people so much that they went to the ...s in overwhelming numbers to cast ...ir ballots for Lyndon B. Johnson.

DIANE L. GALLAGHER
...od-Ridge, N.J.

...r: Probably the worst disservice of the ...dwater candidacy was to compel the ...rwhelming majority of American vot... to give Lyndon Johnson a victory that, ...istory will note, he did not deserve.

(MRS.) REGINA M. ZACHARIAH
...lder, Colo.

...r: Senator Goldwater convinced me ...t he is honest, sincere and moral. Sheer ...or overwhelmed me when I considered ...possible election.

MARJORIE BEATY
...w York City

...r: Mr. Goldwater succeeded in at least ...thing. He succeeded in undermining the respect for the man the American people must elect President.

ARTHUR P. LUSBY
Providence

Sir: Since extremism in the expression of one's mood is no vice, I am extremely elated that Barry Goldwater and all he stands for have been so roundly rebuked.

BENTON BERMAN
Bloomfield, Conn.

Sir: Pity the beloved protector of our "Great Society!" He has 1,460 nights to go wondering whether those 26 million voters will *ever* love him.

A. J. VALOIS
North Andover, Mass.

Grand Old Tattered Party

Sir: In '68, Scranton, Romney, Murphy, Knowles—please let's have a chance—to hell with the choice.

GEORGE A. PARKINS III
Mount Prospect, Ill.

Sir: I hope that all Republicans, independents, and enlightened Democrats will get their Romney buttons now and avoid the rush later.

THOMAS E. KLUNZINGER
East Lansing, Mich.

Sir: It is still almost inconceivable that a large group of intelligent Republican delegates would meet at San Francisco and overwhelmingly nominate a weird and controversial character. There ought to be, there must be, a better way of selecting candidates for national office.

J. F. WILLRETT
DeKalb, Ill.

Sir: I understand that Rockefeller, Scranton and Romney are meeting to rebuild the Republican Party. These men are responsible for tearing it down—they did not support the convention's choice. Now 26 million people will never support them. We conservatives will form our own party. Let them join the Democrats—they can't win without us. We are resting a few days; then we will get busy. We will fight Johnson's "Great Society" (socialism) forever!

(MRS.) BETTY C. HERTENSTEIN
Columbus

Sir: Extremism must be shed, and conservatism should act as a brake, not an engine. It is insulting to America to make pompous, chauvinistic claims of patriotism that imply that all others are traitors. It is hypocritical to bleat for more freedoms and at the same time force minorities to enter the back door of society. The traditional role of a conservative is to act as a sea anchor on the ship of state, keeping it pointed in the proper direction but not halting its forward progress. Nations are known by whether or not they think their best days lie ahead or in the past. Let's get to work on the problems of the future.

K. L. JOHNSON
San Jose, Calif.

Those Dragged Down

Sir: The greatest tragedy of Nov. 3 was not Goldwater's defeat, but the irreparable damage to the Republican Party in the unnecessary election losses by many fine and capable G.O.P. public servants, who were dragged down to defeat with him. One man—who led a minority faction of the party—hurt so many good Republicans, who were deserving of better fates.

CARROLL W. LUCAS
Wyckoff, N.J.

Sir: What bothered me is that such good men as Keating, Percy, Taft, Scott and many others either lost or narrowly won their offices, whereas, under an effective national ticket, they would have won handily. I must admit that I voted for Goldwater, in a sincere hope that the Republican Party would not be hurt too badly. But as the results indicate, I feel it is time to replace such men as Dean Burch at the top of the party and reconstruct it with the Scrantons, Romneys and Hatfields.

DONALD CONKLIN
Princeton, N.J.

Sir: Re Salinger and Murphy: it just goes to show that it is more important to know Shirley Temple than it is to know Caroline Kennedy.

MRS. HAROLD LANDSMAN
Chicago

Sir: You are so right when you say Percy was a "highly touted comer"—by you and the Chicago newspapers. But Kerner gained the support of powerful downstate newspapers and many Republican voters. The majority of the voters believe that Kerner has done a good job. Percy could not convince them otherwise—in fact he wore out his welcome downstate.

MARGUERITE A. PORTER
Evanston, Ill.

R. J. HAMILTON
Philadelphia

Urban Renewal

Sir: In this period of controversy about urban renewal, your cover story [Nov. 6] was outstanding. By emphasizing the role of city planning, you make a signal contribution—one which is yet to be fully appreciated. I especially appreciated your stress upon local action and local programs, for it is at the local level that urban renewal must succeed or fail.

ROBERT C. WEAVER
Administrator

She has all the appeal:

Quality, beauty, price — the perfect watch.

There are good reasons why Tissot is one of the leading watches sold, even in Switzerland, the watch-making country *par excellence*.

Tissot offers you, at an unrivalled price, the superb quality and elegance of an exclusive selection enthusiastically acclaimed by connoisseurs throughout the world.

All round you and in Jewellers' display windows, Tissot models stand out for distinction and attractive prices. Look closely and compare... Like everybody else you will agree that this "beauty" has all the appeal. Tissot is the perfect watch for you.

Worldwide Sales and Service.

Tissot — Treasured Watches Since 1853.

chiefly among forward-looking business men. Indeed, a most heartening sign about urban renewal is the degree of involvement in city problems that is generated among business leaders and groups, many of whom ACTION represents as a national headquarters, will find this outstanding article a timely and needed tonic.

JAMES E. LAS

ACTION Inc.—The National
Council for Good Cities
New York City

Sir: As one who was active in the "Better Philadelphia Exhibition," which you mentioned, we think the most revealing part of this show was the fact that each person left the exhibition, having asked whether he would be willing to have his taxes increased in order to make possible those improvements in Philadelphia. The figures were overwhelmingly in the affirmative, indicating that without question, people are willing and anxious to have their cities improved—and what's more, will pay their share of the cost.

Out-Earped?

Sir: Too bad Acting Attorney General Katzenbach is too young to remember that there was a time when U.S. Marshal James McShane [Oct. 23] was out-Earped and faltered under fire. Didn't an accused spy by the name of Dr. Robert Soblen successfully poison himself while in Marshal Shane's custody?

JOHN HOUSTON
Danville, Calif.

▶ *Soblen was not in McShane's custody during their flight from Israel to London in 1962 when Soblen stabbed himself with a steak knife on the El Al Airline flight. The marshal had returned to the U.S. before Soblen successfully poisoned himself in London.*—ED.

Sir: My respects to you for praising where praise is due. Too often news media editorialize solely against the "bad guys" and forget to pat the "good guys" on the back. Chief Marshal McShane on the back.

A letter from the PUBLISHER

Bernhard M. Auer

GAVIN SCOTT, our Buenos Aires bureau chief, was sipping a *pisco* sour in Santiago and planning to attend the inauguration of Chile's new President when the news of trouble began to come in from Bolivia. That country's Vice President was in open rebellion against the government, and other military men were siding with him. With his knowledge of Bolivia, which is part of his over-the-mountains territory, Scott knew that the government there needed support of the military to continue in power, and recognized the situation as a symptom of serious difficulty.

After asking a friend to call his wife in Buenos Aires to tell her that he would not be home for the weekend after all, Scott caught the next jet to Lima, Peru, which promised the best connection into Bolivia's capital of La Paz. While he was in the air, the Bolivian situation was indeed coming apart, and TIME's stringer there, Walter Montenegro, who had gone back to his native country in the past year after twelve years on the staff of LIFE EN ESPAÑOL in New York, was dodging rifle fire to keep New York informed of the coup in progress.

On the ground in Lima, Scott learned that President Víctor Paz Estenssoro had fled Bolivia, and he immediately began to speculate on where Paz might go. Before long one of his sources tipped him off to exactly where. Scott rushed back to the Lima airport and there saw Paz dashing away from the terminal in a Cadillac. He traced Paz to a suburban Lima hotel, and was soon getting a whimsical greeting from the exiled President, who wanted to know why Scott hadn't made it to Bolivia before the coup began. "Where were you?" he joshed. "What happened? Did you miss a plane?"

After he got the exiled President's side of the story, Scott's next aim was to get to La Paz to join forces with Montenegro. Following a considerable delay because all flights had been canceled, Scott finally touched down at the 13,358-ft.-high airport in La Paz, his 18th landing there in the last 18 months. Before long he was talking with the new head of the government, General René Barrientos, who had once jokingly told Scott: "If you come here much more often, we're going to nationalize you." Scott found Barrientos uncertain about the specifics of the new government's course, but quick to take the position that "we are going to concentrate on economic plans, and this is the point of the U.S. program here."

WALTER DAPAN

REPORTER SCOTT

In New York, using the cabled reports from Scott and Montenegro, Hemisphere Editor George Daniels and Writers Philip Osborne and David B. Tinnin sandwiched the Bolivia story in between analyses of recent coups in Latin America and the changing role of the military. While the biggest news of the week was made in Moscow, where our cover story in THE WORLD originated, Gavin Scott and the boys in THE HEMISPHERE section felt that it had been quite a week on the Andes beat too.

PICTURE OF A MAN GOING TO BREAK A DAM

Poised over the new physics building at England's Nottingham University, an Atlas Copco portable compressor is easily hoisted to the point of work.

It all began some eighteen Swiss dams ago with the 283ft-high Dixence. A big dam, then, but today fated to lie submerged in the alpine waters stored by the new Grande Dixence—the world's highest dam, 932 feet to its crest.

Height, however, is one thing. Utilizing it fully is another. For each time the reservoir was drained the old upstream dam appeared above the surface, checked the flow of water, and cut the kilowatts to be won. A massive hole needed to be blasted low in the structure of the *old* dam to let more water through to the new.

Ironically, just when the old dam was above water, the road to it was inaccessible. So, to help on the job-site, an Atlas Copco compressor became airborne high in the Swiss Alps. Mind you, these compressors are unequalled in weight-to-power ratio—which is why they have also been reported "flying" over America's Rocky Mountains and Norway's snowbound fells.

This, of course, is a far cry small workshops, shipyards duction plants and mines have one thing in common— Copco's experience in the equipment for the many app tions of compressed air.

THE WEEKLY NEWSMAGAZINE
November 13, 1964 Vol. 84, No. 20

THE U.S.

THE PRESIDENCY
e Work That Faces Us"

ll grey with campaign fatigue, some ewsmen and White House staffers d around the L.B.J. ranch at l's heels. Victory—vast victory—cleared the President's face of its t worried lines; he seemed fresh as sy and frisky as a colt.

the hip pocket of his tan twill ers, Lyndon carried Barry Gold-r's belated and somewhat snarly am of concession. It said: "Con-ulations on your victory. There is to be done with Viet Nam, Cuba, problem of law and order in this try, and a productive economy. mmunism remains our No. 1 ob-e to peace, and I know that all ricans will join with you in honest ions to these problems." The Presi-had replied in good nature that he d well afford: "I thank you for expressed desire to cooperate in work that faces us all in the days weeks ahead."

ndown & a Cedar Fire. Vice Pres-elect Hubert Humphrey, just ar-d at the ranch from Minneapolis, ped gamely along at Johnson's side, ing a pair of size 11 cowboy boots his size 8 feet and a five-gallon hat hat appeared to be a six-gallon . Just as manfully, he smacked his with great gusto after partaking rbecued spareribs. The President d for a couple of horses, mounted and suggested that Hubert climb rd the other.

umphrey proved to be a better estrian than onetime Press Secretary e Salinger had been—but not by . After the ride, he returned to firma with a heavy sigh of relief, unced that he would do anything ohnson but: "No more horses."

he President haw-hawed, later shep-ed a few people, including Hubert Muriel Humphrey, on a leisurely own tour of the ranch, drawled ntedly about the soil, the rain, the virtues of the U.S. voter. At anch after dinner, Lyndon and Hu-kidded about their pre-election pre-ions: Johnson had said 44 states for Democrats, Humphrey had guessed Depending on how Arizona came either could have been right. Any-they had a most amicable jawing n in front of a blazing cedar fire well after midnight.

But all good things must come to an end. After only a few hours of sleep, Johnson was at his massive mahogany desk at the ranch, dealing with problems that had been deferred until election's end, talking by telephone to Secretary of State Rusk and Defense Secretary McNamara about fresh outbursts of long-burning problems.

Some Static. It almost seemed as though the world had waited for the U.S. election results to resume its normal hell raising. In South Viet Nam, the new civilian government began to break apart less than 24 hours after it was formed. De Gaulle's France warned that a U.S.-sponsored multilateral nuclear force including West Germany would be considered as an affront to France and demanded a reorganization of NATO itself. In Berlin, the Russians set off a small dispute about commercial airlines' use of air corridors over East Germany. And in Moscow, the new Soviet regime gave a warm welcome to Red Chinese Premier Chou En-lai when he arrived to help celebrate the 47th anniversary of the Bolshevik Revolution (*see cover story in* THE WORLD).

At home, there was some static too. United Auto Workers struck nine Ford Co. plants, affecting 25,500 workers. Militant labor leaders are expected to lobby hard in the liberal 89th Congress to amend the Taft-Hartley law so that state right-to-work laws can be abolished. This would infuriate some segments of business, and Lyndon's dilemma will be to try to satisfy both sides.

On the civil rights front, Martin Luther King Jr. announced that the pre-election moratorium on demonstrations was over, and he was ready to attack in Alabama and Mississippi. Said King: "Now that the election's over, we will naturally move back into some of the areas where we have been working to be sure that the civil rights bill has been implemented in all of its dimensions."

Task Forces at Work. Beyond these immediate points of concern, Johnson must get on to the weighty business of drawing up next year's budget and drafting legislation for the new Congress. Within the month, stacks of detailed reports will begin to pile up on his desk. Platoons of specialized task forces have been working for months to compile information on subjects ranging from civil rights to U.S. transportation tangles.

All these reports relate to Johnson's vision of "the Great Society," which he will now have to reflect on and then expand in his State of the Union message.

DON HESSE—ST. LOUIS GLOBE-DEMOCRAT

HE SHOT THE ARROWS INTO THE AIR AND . . .

REPUBLICANS

In There Fighting

Republicans, at long last, were really in there fighting with tooth and nail. There was only one problem: in all too typical, traditional style, they were *doing all the fighting* among themselves, not against the Democrats.

In the depths of disaster, the big pitch of the party consensus was to remove not only Barry Goldwater but all of his henchmen from any position of power in the Republican hierarchy.

"This Goldwater ideology, the thing he called conservatism was beaten," cried Kansas' outgoing Republican Governor John Anderson, who did not stand for re-election. "It lost in every state. In the South, prejudice voted, not his philosophy, and in Arizona they voted home-town. These Goldwater people have got to roll over. They're beaten." Kentucky's Senator Thruston Morton, a former Republican National Committee chairman who paid loyal lip service to Barry during the presidential campaign, said that if the Goldwaterites don't get out of the way, "there probably will be some blood spattered around."

Avoiding Labels. Barry Goldwater did not appear to be at all anxious to remove himself from the pinnacle of G.O.P. leadership and influence. In a post-election statement, he made the point that "more than 25 million people" had voted "not necessarily for me, but for a philosophy that I represent, a Republican philosophy that I believe the Republican Party must cling to and strengthen in the years ahead." Concluded Barry: "Being unemployed as of January 3 or thereabouts, I'll have a lot of time to devote to this party, to its leadership, and to the strengthening of the party, and I have every intention of so doing."

Among moderate Republicans, there were all sorts of plans and plots to take over once again control of the party machinery—and philosophy. At the instigation of Idaho's Governor Robert Smylie, Michigan's George Romney, and Rhode Island's John Chafee, the 17 Republican Governors and Governors-elect have tentatively scheduled an early December meeting to talk over ways of revitalizing the G.O.P. as a party of moderation, dedicated to peace, prosperity, private enterprise and individual initiative.

But there seemed to be no great degree of agreement even among the moderates themselves as to how all this revitalization should be accomplished. The reason was simple enough: the Republican Party no longer has any real sense of itself as a party; it is, rather, a conflicting conglomeration of ideas, ideals, factions, and personal ambitions. George Romney won in Michigan; but he not only refused to endorse Barry Goldwater, he refrained insofar as it was possible for him to do it from using the word "Republican" in any way. In a post-election statement, Romney called for "unity" and declared that he did not want to be known as a liberal-moderate. "I have undertaken to avoid labels," he said. "I would like to have people judge me by what I stand for on specific issues. I would like to be as conservative as the Constitution of the United States, as progressive as Theodore Roosevelt, and as liberal as Abraham Lincoln."

Spitting Match. Before Republican moderates undertake the bruising task of kicking Goldwaterites out of the party, they ought to reach some consensus on where they themselves stand. In the days immediately following the election, such a consensus was obviously lacking. One result was an unseemly long-distance spitting match between former Vice President Richard Nixon and New York's Governor Nelson Rockefeller. In Manhattan, Nixon held a press conference, called for party unity and a moratorium on intraparty "backbiting," then lashed out at Rocky for having given Goldwater less than enthusiastic support, describing Rockefeller as a "sport" and the Republican Party's principal divider."

Rockefeller was vacationing in Madrid, and the rain in Spain fell lightly on his pain. Nixon's "peevish post-election utterance," he replied, was "hardly calculated to advance" Republican unity. But Rocky also managed to put his finger squarely on the real Republican problem. "We don't have a Republican Party right now," he said. "We have 50 Republican parties."

Diddley-Do. The distance between the extremes of the Republican Party is no greater than it is in the Democratic Party. But Democrats have always been able to reconcile their differences in the name of the party—partly because the Democrats with some of the most backward principles have been the very ones who have continually won at the polls and provided the party with a power base for 100 years. Why Republicans don't have this similar sense of party feeling has been debated for the better part of a century. One recent result is that the only President the G.O.P. had had in the last 32 years, Dwight Eisenhower, was a great popular leader with very little sense of party organization. As Alf Landon said last week, he was "a war hero who didn't know diddly about politics."

At the moment, the G.O.P. is shorn of power and torn from its philosophical moorings. If it is to recapture power in Congress and the White House, it can do one of two things. It can permit itself to be captured by a magnetic leader who will sweep all before him, and pull a lot of Republicans in with him. Or it can develop, and inspire thousands of candidates for all offices—local, state and national—who can honestly and conscientiously make "the party" a vital part of a way of life that includes principles and country

THE CABINET

Shuffles

No sooner had Lyndon Johnson succeeded to the presidency than speculation started about what changes he would make in the Kennedy Cabinet; so far he has made none, the only departure being that of Bobby Kennedy, who resigned from the Justice Department to run for Senator in New York. Last week, in the wake of Lyndon's election, the speculation inevitably was revived. But it remains unlikely that there will be wholesale changes in the near future.

Defense Secretary Robert McNamara was a storm center during the campaign, but he is a take-charge man after Johnson's own heart, has mastered the Pentagon bureaucracy as has no Defense Secretary before him, and rates with all the Cabinet officers probably stands highest with the President. Secretary of State Dean Rusk has made gloomy sounds about leaving for financial reasons, but the President likes him and will probably stay on for a while. Treasury Secretary Douglas Dillon, the Cabinet's only Republican, also has talked about leaving Washington, but probably won't happen soon. Moving up in Johnson's esteem is Labor Secretary Willard Wirtz, who pitched in to help write Lyndon's "prosperity" speeches during the campaign. Similarly, Commerce Secretary Luther Hodges campaigned for Johnson in North Carolina, where he used to be Governor, and can probably stay on for as long as he likes.

On the other hand, Agriculture Secretary Orville Freeman has long since wearied of his frustrating job, and will presumably be replaced. To promote and administer his anti-poverty, medicare and aid-to-education programs, Johnson may want someone of higher caliber than Health, Education and Welfare Secretary Anthony Celebrezze. Interior Secretary Stewart Udall all too enthusiastically supported Kennedy for President against Johnson in 1960, and will soon be taking leave of his department. Postmaster General John Gronouski was strictly a Kennedy political appointee; Johnson will probably make his own political appointment.

That still leaves the Attorney General's job open. If Johnson does not name Acting Attorney General Nicholas Katzenbach, a Bobby protégé, to the permanent job, the most likely man is Houston Lawyer Leon Jaworski, 59, a longtime Lyndon pal.

THE VOTE

The Figures

Half the fun of elections is fiddling around with the figures afterward. Last week there were plenty of fascinating figures to fiddle with.

About 69,169,000 people voted for President. They represented 78% of the total registered vote, and 60% of the U.S. population of voting age. The popular vote broke the 1960 record of 68,839,000, but it was not so impressive as it sounds, considering population growth (this was the presidential year that the World War II babies came of age) and the fact that the District of Columbia, voting for the first time, added 195,874 to the total (167,373 for Johnson, 28,501 for Goldwater).

Johnson won history's greatest popular vote—42,328,350 compared with Eisenhower's 35,590,000 in 1956. He also set a record for the biggest plurality, 15,688,172 as against Franklin Roosevelt's 11,078,000 in 1936. Johnson's 61.2% of the popular vote topped

JIM BERRY—NEA

"YOU MEAN, AFTER ALL YOUR POLITICAL HARANGUES, YOU DIDN'T VOTE?"

F.D.R.'s 60.8% in 1936 and Harding's 60.4% in 1920.

For the first time ever, Vermont went Democratic and Georgia went Republican. Alabama and Mississippi were carried by a Republican for the first time since 1872, South Carolina for the first time since 1876. Maine voted for a Democrat for President for the second time in its history; the other occasion was 1912, the year of the Bull Moose split in the G.O.P.

Students of ticket splitting will be engaged for months by the 1964 statistics. In Massachusetts, Johnson had a 1,100,000 plurality, Democrat Teddy Kennedy one of 1,000,000; but Republican Attorney General Edward Brooke, the nation's highest elected Negro state official, won by 750,000, and Republican John Volpe was still clinging to a narrow lead for Governor. In California, Johnson won by 1,200,000, but G.O.P. Senate Candidate George Murphy was elected by 200,000. In Michigan, Johnson had a 1,000,000 plurality, and Republican Governor George Romney won by 395,000. In Rhode Island, Johnson's plurality was 230,000, Democratic Senator John Pastore's was 308,419, but Republican Governor John Chafee won by a comfortable 85,604. In New York, Johnson buried Goldwater by 2,400,000 votes, while Bobby Kennedy defeated Republican Senator Kenneth Keating by what seemed, under the circumstances, a piddling 627,795.

And so the ticket splitting went—in Kansas, Vermont, Oklahoma, South Dakota, Washington, Delaware, Wisconsin, Montana, Pennsylvania. One of these days the statisticians will compute the percentage of voters who split their tickets, and the figure should be remarkable.

THE CONGRESS

The Liberal House

Shortly before the Republican National Convention last summer, 54 conservative Republican Congressmen signed a statement urging the nomination of Barry Goldwater, arguing that his candidacy would aid Republican candidates throughout the U.S. When the new Congress convenes in January, at least 23 of those Representatives will be among the missing, either through defeat or retirement.

The next House of Representatives seems certain to be the most liberal since the early years of President Roosevelt. The Democrats, by seizing 47 Republican seats while losing to just ten G.O.P. challengers, scored a net gain of 37. The new House thus will be dominated by Democrats by at least 294 to 138—better than a two-thirds majority.*

Greater than Indicated. Impressive as they are, even these figures do not signify the full extent of the ideological shift. A majority of the defeated Republicans are conservatives who could rarely be enticed to support a Johnson Administration bill. Seven unseated Republicans in New York were conservatives, including such unbudgeable veterans as Katharine St. George and Steven Derounian. Texas lost its only Republican Congressmen, Goldwater-styled Bruce Alger and Ed Foreman. Five of Iowa's six Republican seats, held mostly by conservatives, slipped away; the survivor was H. R. Gross (TIME, June 15, 1962), who has won a reputation more as an anti-spendthrift than a conservative. On the other hand, many of the G.O.P. survivors are moderates who remained aloof from Goldwater and will vote with the Johnson Administration a good part of the time. They include such potentials toward higher office as Manhattan's John Lindsay, Minnesota's Clark MacGregor, Massachusetts' Silvio Conte and F. Bradford Morse.

The liberal gain is also greater than the Democratic pickup of 37 seats would indicate, since seven of the ten districts taken over by Republicans are in the Deep South, including five in Alabama. At least four of these Southern seats were held by conservative Democrats who consistently voted against

* The results in three races are still uncertain: Missouri's Seventh, New York's 30th, and the At-Large seat in Alaska.

the Administration, just as their G.O.P. replacements will do.

Victory Euphoria. Basking in the sunny prospects of what such a majority could produce, some Democrats are predicting that the new House—and the Democratic-dominated Senate—will submit meekly to L.B.J.'s every whimsy. Where the Administration could count on only about 170 sure House votes on major bills in the past session, and such measures as medicare, grants for school construction and expansion of area redevelopment were blocked, Democratic leaders expect to be able to deliver some 220 votes (218 is a majority) with certainty in the new House. In their victory euphoria, some even foresee a runaway House that might embark on congressional reform and propose welfare legislation on its own—thus proving to be even too liberal for Johnson's taste.

Actually, the Democratic emphasis on nose counting overlooks one stubborn fact: bills still must get out of committee before those floor votes can be cast—and the committees are still considerably dominated by Southern Democrats. Not even the L.B.J. landslide is likely to make Ways and Means Chairman Wilbur Mills like medicare, or goad Rules Chairman Howard Smith into smoothing the legislative path of liberal bills toward the House floor. Moreover, as Franklin D. Roosevelt discovered after 1936, an overwhelming legislative majority could just prove unpredictably independent of the man in the White House.

OHIO

What Beat Taft

Hardly had he been declared the winner in his fight against Robert Taft Jr. than Ohio's Democratic Senator Stephen Young announced that he was retiring from politics—in 1970 when his new term will be up and he will be 81.

There were those in Ohio last week who wished that Young had kept a similar promise made after the 1958 election. Among the disappointed, of course, was Congressman Taft, 47, who had hoped to follow in the Senate footsteps of his illustrious father.

What did Taft in, of course, was Goldwater. While he counted himself a Goldwater man in many respects, he also differed publicly from Barry on such issues as civil rights and the nuclear test ban treaty. But not quite enough Ohioans saw the distinction, and Young helped blur it by constantly tying Taft to Goldwater's bandwagon. "I am against Birch, Barry and Bob," Young would say. "Goldwaterism, Taft Juniorism and extremism are all the same commodity."

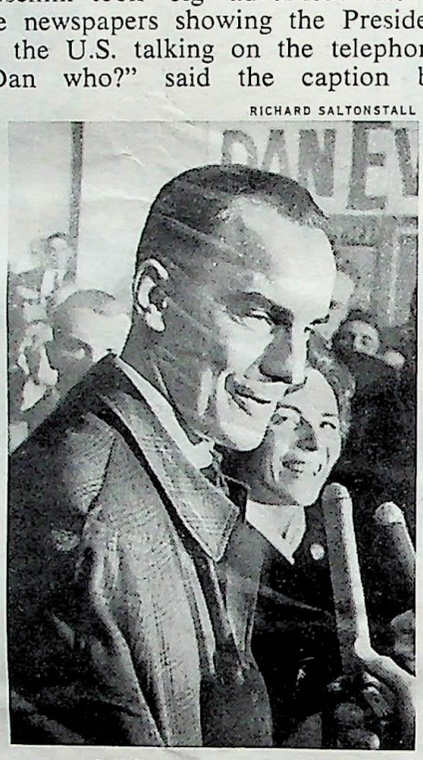
There was one other major factor: organized labor's thirst for revenge against the son of the man who co-sponsored the Taft-Hartley Law in 1947. Heavily unionized areas, such as Lucas County (Toledo), bludgeoned Taft by giving Young a 33,000-vote plurality out of 179,900 votes; Nixon lost that county by only 8,000 votes. Said young Bob in an election post-mortem: "The organized-labor vote was very effective in the Ohio campaign. It was just about the whole campaign organization. I suspect they were effective because they stayed behind the scenes and ran things quietly."

WASHINGTON

Dan Evans, That's Who

In his campaign to win a third consecutive four-year term as Washington's Governor, Democrat Albert ("Rosy") Rosellini took big advertisements in the newspapers showing the President of the U.S. talking on the telephone. "Dan who?" said the caption beneath the picture of Lyndon Johnson.

RICHARD SALTONSTALL



WASHINGTON'S EVANS
Guts and a good program.

That was Rosy's way of suggesting that his opponent, Republican State Representative Daniel Jackson Evans, 39, was a nobody and ought to remain exactly that. But on the morning after the election, it turned out that enough people had known who Evans was to enable him to beat the daylights out of Governor Rosellini in a state that went overwhelmingly Democratic in every other way.

W.O.W. Who is Dan Evans? He's a Republican to keep an eye on. A Seattle-born structural and civil engineer, he began dabbling in precinct politics in 1948, and in 1956 agreed to run for the legislature from a safe district. By 1961 he was the Republican floor leader and he was considered to be one of the most effective parliamentarians in the house.

He was credited with more guts than good sense when he decided to throw himself into the Republican gubernatorial primary this year, for his chief opponent was an evangelistic [illegible] preacher named Richard Ch[illegible] who had amassed a zealous G[illegible] following, notably including a [illegible] women who paraded around in [illegible] costumes and called themselves W[illegible] (Women on the Warpath). [illegible] mayed, Evans ran a tough [illegible] with emphasis on his earnest [illegible] siderable intelligence and a pro[illegible] brand of Republicanism. Though [illegible] pros counted him out early in the [illegible] paign, he pulled ahead and beat [illegible] tensen 308,000 to 204,000.

Running against Rosy, however, [illegible] something else again. Rosellini [illegible] as Governor was lackluster, but [illegible] known as a fine, friendly and [illegible] ble campaigner. Evans at first [illegible] withdrawn and diffident. At one [illegible] visiting a highly automated [illegible] factory, he spent more time exam[illegible] the machines than he did shaking [illegible] with workers. "My managers [illegible] push me away," Evans recalls, [illegible] wistfully: "But those machines [illegible] fascinating."

57—Count 'Em—57. As the [illegible] paign continued, Evans wound [illegible] public personality, came off to [illegible] tage in a series of debates by a[illegible] ing his moderate Republican stan[illegible] frankly suggested that he would [illegible] his administration after the sui[illegible] and vigorous record of G.O.P. [illegible] nor Mark Hatfield in neighborin[illegible] gon. He issued a 35-point "B[illegible] for Progress" that detailed fres[illegible] ects for mental health, for b[illegible] lagging tourism and industry, a[illegible] streamlining the state governme[illegible] produced photostats purporting t[illegible] that state employees had illega[illegible] licited money for Rosy's 196[illegible] paign treasure chest—a charge R[illegible] Rosellini heatedly objected but [illegible] fully replied.

Finally, Evans succeeded in c[illegible] ing the voters that he was a ma[illegible] tion. "When a Governor goes to [illegible] pia," he told his audiences, "he [illegible] nes and lan[illegible] Guadalcanal, [illegible] ched Yale a[illegible] e was recall[illegible] ained a rif[illegible] 1952 he got [illegible] political war[illegible] successful P[illegible] idate Chris[illegible] e struck ou[illegible] the state ho[illegible] wo years la[illegible] In 1962 he [illegible] As Gover[illegible] by a Demo[illegible] pushed thro[illegible] that covers [illegible] panded the [illegible] provide trai[illegible] authorized [illegible] seven wood[illegible] and provid[illegible] college.

Still, just [illegible] 55 Democr[illegible]

To make good on that man-of- [illegible] image, Evans no sooner read the [illegible] results than he established a [illegible] statehouse and appointed a com[illegible] to iron out the state's redistricting [illegible] lems. "There are two dangerous [illegible] which a Governor can do," says E[illegible] "One is to lead with knowledge [illegible] without conviction. The other is [illegible] with conviction and without [illegible] edge." Obviously, Dan Evans [illegible] avoid both these dangers.

RHODE ISLAND

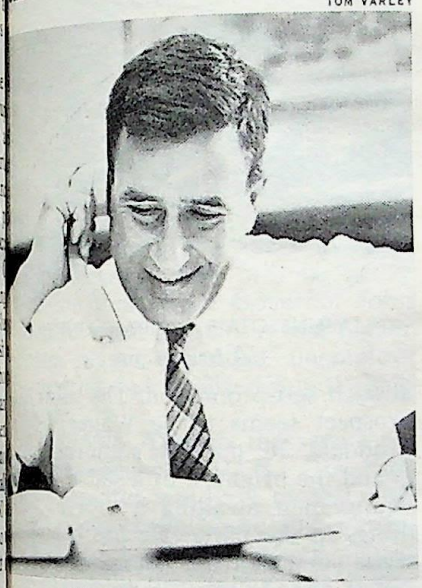
Highly Employable

In the tiniest state in the Union, tucked away on the rocky New England coast, a young and, in national terms, little-known Republican Governor emerged last week as one of his party's most potent vote getters. He was John Chafee, 42, who was re-elected to a second term in Democratic Rhode Island with a plurality of 85,604 votes.

Assault in Three Ways. Chafee comes naturally by his political interests. His great-grandfather, Henry Lippitt, was Governor of Rhode Island from 1875 to 1877. A great-uncle, Charles Warren Lippitt, was Governor from 1895 to 1897. His uncle, Zechariah Chafee, a noted Harvard law professor, ran for the Providence board of aldermen in the early 1900s, took what Governor Chafee calls a real "shellacking."

Chafee himself, a product of Providence Country Day School and Deerfield Academy, left Yale at 19 during his sophomore year, enlisted in the Marines and landed with assault troops on Guadalcanal. Back in the U.S., he finished Yale and Harvard Law. In 1951 he was recalled to the Marines and captained a rifle company in Korea. In 1952 he got his baptism by fire in the political wars as a campaign aide to unsuccessful Providence Mayoralty Candidate Christopher Del Sesto. In 1956 he struck out on his own, was elected to the state house of representatives, and two years later became minority leader. In 1962 he was elected Governor.

TOM VARLEY



RHODE ISLAND'S CHAFEE
Frugality and 55 vetoes.

As Governor, Chafee was confronted by a Democratic legislature, but he pushed through a state medicare bill that covers an estimated 45,000, expanded the state vocational program to provide training for the unemployed, authorized the acquisition of land for seven woodland and waterfront parks, and provided for a new state junior college.

Still, just over the past year he vetoed 55 Democratic bills. Some, he insists, were "dangerous" to the state. Others were downright silly. One, for example, would have provided that every car sold in Rhode Island be equipped with a device that would sound a warning when the ignition key was on but seat belts were left unfastened. Says Chafee: "There wasn't a manufacturer in the country who put out such a device."

Fee Saving. Chafee also presents an image in the best tradition of New England frugality. He saved architects' fees by designing his own home, a concrete block abode on 20 acres near Providence. Trouble is, he neglected to put in a garage to house the 1962 Plymouth station wagon that he ordinarily drives instead of the state limousine that is one of his perquisites. The father of six children, Chafee laughingly tells Rhode Islanders that he wants to be Governor because he needs the job—"I have to work for a living." On the basis of last week's returns, voters seemed willing to keep Chafee employed for quite a while.

ILLINOIS

Kerner's Winning Way

One of the surprises of last week's state elections was the solid triumph of Illinois Governor Otto Kerner against the spirited challenge of Republican Charles Percy (TIME cover, Sept. 18)—a fellow who seemed sure to go far if only he could have won last week.

To be sure, Kerner benefited tremendously from the Johnson landslide. Yet he was up against a good man, whipped him by some 200,000 votes, in a testimony to the fact that he must have something to offer on his own.

Part of Kerner's appeal is frankly physical. His blue eyes, wavy brown hair and clean-chiseled features would look great on Mount Rushmore; he has been rated by the Professional Photographers of America as the nation's most handsome Governor. He is a very pleasant, amiable and thoughtful man, as he has proved at downstate ribbon cuttings, corn-picking festivals, and beauty-contest judgings over the four years of his term.

If Kerner has sometimes seemed indecisive as a Governor, it is also true that he has deftly avoided getting any large segment of the population angry at him. He has pushed a progressive program of regional mental-health clinics, helped increase Illinois exports abroad, reduced public relief costs, firmly supported state laws to help Negroes get fairer treatment in seeking housing and jobs, knocked much administrative waste out of the State Toll Road Commission. He has notably failed to take forthright action in reforming Illinois' archaic tax system, which may yet drive the state to the edge of bankruptcy.

In any other year, with Johnson not on the ticket, Kerner would almost certainly have lost to Percy, a real go-out-and-get-'em guy. But in 1964, Otto Kerner did pretty well just by sounding as much as possible like Lyndon Johnson. And Johnson would have been proud of Kerner's post-election statement: "We must continue the atmosphere which has brought new unity to our people, a unity that knows no Cook County way to build a greater Illinois, no downstate way, but a united way."

Fine features and a landslide.

FLORIDA

Astounding Results

On election night Charles Holley, Florida's Republican candidate for Governor, sent word to Democrat W. (for Willie) Haydon Burns. "It looks like you've won," he said. Replied Winner Burns: "That's the first accurate statement he made during this campaign."

Taking his place among the South's Governors, Burns, 52, a six-term mayor of Jacksonville, will almost certainly

prove to be one of the most colorful. A native Kentuckian, he is tall (6 ft. 2 in.), trim, and known as "Slick" because of his penchant for flashy clothes. Running for the nomination last spring, he found himself confronted by bloody race riots in Jacksonville. He overcame the potential political damage by appearing on statewide television to charge that the violence had been inspired by some of his Democratic opponents to embarrass him politically.

After winning the primary, Burns kicked off his campaign against Holley by declaring that he had been traveling around Florida's institutions of upper learning and had been "astounded to find the number of pinks and the number of Commies on the campuses." Warned he: "These people know who they are. Get out before I get in, or you will be kicked out." As it happens, Florida, rightly or wrongly, is proud of its colleges, and Burns drew a barrage of damning editorials; he never brought up the subject again.

For a while it appeared that Holley, 39, a former minority leader in the Florida house of representatives, might give Burns a real run for his money. Holley gave reporters "photocopies" of bank ledgers purporting to show that Burns had a secret Nassau bank account of $1,215,690. To refute the charge, Burns flew with reporters to the island, marched them into the Bank of Nova Scotia branch on Bay Street, and proved to everyone's satisfaction that Holley's documents were phony. From then on, Burns's election was a cinch.

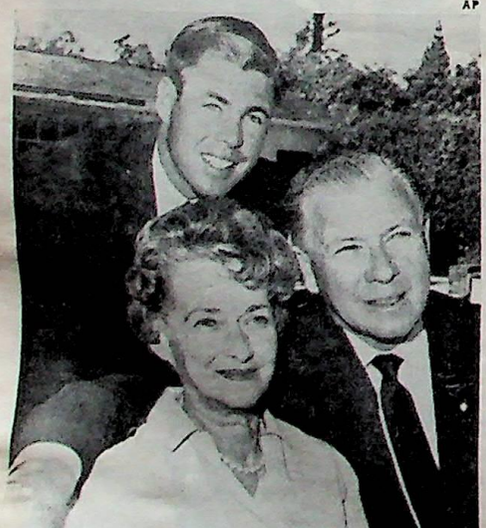
CALIFORNIA

Just Call Him Senator

Forget about all those other labels—the old song and dance man, the late-late-late-show good guy, Moppet Shirley Temple's straight man. From now on, just call George Murphy "Senator." He has more than earned the right and the job.

Murphy's victory last week over short-term Incumbent Democrat Pierre Salinger was a classic study in how to handle the California electorate. Democrats there outnumber Republicans 3 to 2. To rate even the thinnest chance of winning, Murphy not only had to hold onto all factions of the G.O.P., from rabid-right kooks to solid moderates, he also had to pick up some 20% of Democratic and Independent votes.

AP



MURPHY, WIFE & SON DENNIS
A winning script.

Blue Eyes v. Blue Jowls. His campaign was managed by Robert Finch, Dick Nixon's old stage director. And the winning script was simple enough: be bland, be affable, offend no one by taking controversial stands, and never let anyone forget that Salinger was a carpetbagging resident of Virginia when he entered the campaign. To please the right wing, Murphy endorsed Goldwater; to please the moderates, he constantly referred to his differences with Barry on the civil rights bill and foreign aid cuts. Murphy's blue-eyed good looks contrasted jarringly with Pierre's blue-jowled appearance, an important point in image-conscious California. After it was all over, even Democratic Governor Pat Brown was impressed by the Republican campaign, called it "one of the best I have ever seen."

Murphy's victory could do much to produce a badly needed change in the decibel count of the California G.O.P. —toning it down from a right-wing screech to a more moderate sound. Indeed, at one time Murphy was closely associated with the superpatriotic California crusade of Dr. Fred Schwarz. But Murphy's Senate campaign obviously convinced voters that his outlook toward such extremism has changed substantially. Said Campaign Manager Finch: "I had to find this out for myself before I went to work in the campaign. It wasn't until I was satisfied that Murph is strictly his own man—he doesn't owe anybody anything—that I agreed to lend a hand."

No Instant Sage. As a Senator, Murphy will likely push hard on issues of particular California interest, such as desalinization projects to ease the state's water problems and increased defense spending in the hope of pumping more military dollars into the plants back home. Generally, he will probably vote as a conservative on fiscal matters, a cautious liberal on civil rights, and as a selective Senator on such matters as foreign aid. Murphy may not become an instant Senate sage, however. At times he is given to sweepingly naive comments that scarcely smack of legislative statesmanship. Looking forward last week to his new job, Murphy announced: "I'm going to work to see that foreign policy is taken away from the State Department and given back to the people."

Nonetheless, Senator Murphy's move from Hollywood to Capitol Hill came only after a great deal of intense personal dedication and strong self-discipline. In the Senate, such qualities should never be underrated.

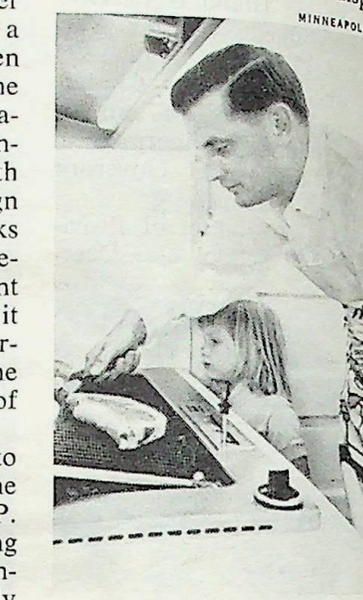
MINNESOTA

Who After Hubert?

As he moves up to the vice-presidency, Hubert Humphrey leaves [illegible] wake two important jobs to be filled, and there are plenty of eager contenders for both.

It will be up to Minnesota's Democratic Governor Karl Rolvaag to appoint someone to complete the remaining two years of Humphrey's Senate term. Rolvaag could resign and take the job himself, but he is well aware that voters often show their displeasure [illegible]

MINNEAPOLIS MORNING



MINNESOTA'S MONDALE AT HOME
A bright one.

at such self-promotion. The most likely prospect seems to be Walter ("Fritz") Mondale, 36, the state's attorney general and the brightest of a stable of bright young men awaiting a shot at bigger things in the party. He has behind-the-scene support from Humphrey.

Yet Mondale has a potentially powerful rival in the state's three-term former Governor, Secretary of Agriculture Orville Freeman. Freeman has not indicated that he wants the job, but he has let it be known that he wants to leave Agriculture. Last week Freeman was vacationing in Minnesota —his first week off in three years— some of his Washington aides thought it might be significant. Two other possibilities: John Blatnik, 53, an 18-term Congressman from Minnesota's Iron Range area, who is backed by Senator Eugene McCarthy and officials of the United Steelworkers Union; Mrs. Eugenie Anderson, the nation's first woman an ambassador (Denmark) and now Minister to Bulgaria.

In Washington, Senate Democrats must decide who their new majority whip will be. The current favorite is Rhode Island's John Pastore, one of the Senate's sharpest debaters and the 1960 Democratic Convention keynoter. Other possibilities: Louisiana's Russell Long, Maine's Edmund Muskie, Michigan's Philip Hart, Hawaii's Daniel Inouye, Connecticut's Thomas Dodd, Florida's George Smathers.

THE STATES

The Shape of the Legislatures

The vast bulk of the laws under which Americans live are passed not on Capitol Hill but in the state legislatures. Probably not one voter in 20 can name the state assemblyman from his district; yet the struggle for control of the legislatures produced some of the most remarkable results of the election. For example:

• NEW YORK. Democrats carried both houses for the first time since 1934. Down to defeat went both G.O.P. Senate Majority Leader Walter Mahoney and Assembly Speaker Joseph Carlino, both of whose names had become synonymous with entrenched power. It all spelled trouble for Governor Nelson Rockefeller, who had only one consolation: Rocky is planning to call a special session of the present legislature in mid-December to redistrict the state and may at least be able to preserve what remains of Republican strength.

• MAINE. Democrats took control of the senate by a margin of 29 to 5, the same margin the G.O.P. boasted in the last session. Democrats also won the house by a narrow edge, thus capturing both houses for the first time since 1912. In Maine, the legislature elects the secretary of state, the attorney general and treasurer, and undoubtedly there will be some new faces in those places. Moreover, there will be heavy pressure on Republican Governor John H. Reed for such legislation as a higher minimum wage, expanded unemployment security and legalized Sunday sale of liquor.

• PENNSYLVANIA. Though the senate remains Republican, G.O.P. Governor William Scranton will have to deal with a newly Democratic house (by a margin of 115 to 92). Labor, which played a major role in the Democratic house take-over, has already demanded an investigation of the state's department of labor and industry, where Scranton raised a number of A.F.L.-C.I.O. officials from high-paying jobs.

• MICHIGAN. Even in returning Republican George Romney to office, voters gave both houses of the legislature to Democrats for the first time since 1932. It was only the second time since 1890 that Democrats had captured the senate. Needless to say, it will be tough going for Romney-sponsored legislation. Democrats rule the house by a majority of 72 to 38, the senate by 23 to 15.

• WISCONSIN. Voters turned out Democratic Governor John Reynolds and installed Republican Warren Knowles. But Knowles cannot be entirely confident of a warm reception in the legislature. The senate is Republican, but the house went Democratic.

• ILLINOIS. Because of failure to redistrict, all 177 house seats were up for grabs in an at-large election. With 118 candidates of each party listed side by side on a bath-towel-sized ballot, most voters predictably took the easy way out, voted a straight ticket and elected all 118 Democrats, a two-thirds majority of the house. The senate, though, still has a Republican majority.

BILL SAURO—NEW YORK HERALD TRIBUNE

NEW YORK LOSERS CARLINO & MAHONEY
Power spelled disaster.

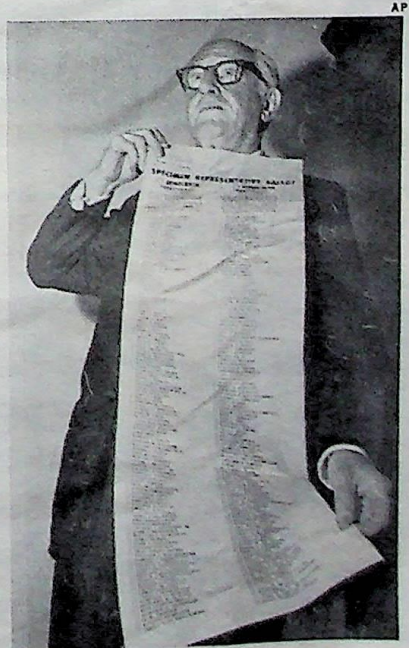
• NORTH DAKOTA. While re-electing popular Democratic Governor Bill Guy, voters also passed control of the house of representatives to Democrats for the first time ever. Republicans retain a narrow senate margin.

• INDIANA. The Johnson tide swept Democrats into both houses of the state legislature for the first time since 1936. Good news for Democratic Governor-elect Roger Branigin.

• IOWA. Democrats wrested both houses from the G.O.P., promising some smooth sailing for Democratic Governor Harold Hughes in his efforts to pass a reapportionment plan, repeal the state's right-to-work law, add a cent per gallon to the state gas tax, and abolish capital punishment.

• TEXAS. Frank Cahoon, a Midland oilman, was elected to the house of representatives and immediately named minority leader. In fact, Cahoon *is* the minority—the sole Republican elected to the 150-member house, as six G.O.P. incumbents were defeated.

AP



ILLINOIS' SUPER-SIZED BALLOT
The easy way out proved Democratic.

Referendum & Initiative

Of all the referendum and initiative measures in dozens of states last week, none was more bitterly fought or attracted more attention than California's Proposition 14 to repeal the Rumford Act (TIME, Sept. 25). Californians, by a vote of 3,656,000 to 1,894,000, overwhelmingly approved the proposition.

With that, the Rumford Act, a prohibition against discrimination for reasons of race or creed in the sale or rental of much state real estate, was wiped from the books. Moreover, future attempts to act against any sort of housing discrimination—whether by state, city or county officials—was in effect forbidden. Proposition 14 affirms the right of any Californian to sell or rent his home to whomever he pleases.

Predictably, the National Association for the Advancement of Colored People moved to challenge the proposition in the courts. Californians also rejected a plan to legalize a statewide lottery, which was to be operated by American Sweepstakes Corp. in return for 13% of the total proceeds, and approved a proposition that bans pay television in the state (*see* SHOW BUSINESS).

In other contests:

▶ Minnesota approved a state constitutional amendment to guarantee producers of taconite, a low-grade iron ore that is plentiful but expensive to refine, that their taxes will be increased no more than taxes on other industries over the next 25 years. With such enticements, the state hopes to attract new mining operations to spur revival of the sagging economy of northeastern Minnesota and the once flourishing Mesabi Range.

▶ Massachusetts okayed an increase in the span of the Governor's term from two to four years, thereby ensuring a 1966 statehouse scramble even more spirited than usual.

▶ New Hampshire finally rid the state constitution of a pre-Civil War section giving draftees the option of buying their way out of military service; because the Federal Government has long since taken over the draft, the section was meaningless anyway.

▶ Oregon abolished capital punishment. As a result, the sentences of three prisoners awaiting the state's gas chamber were commuted by Governor Mark Hatfield to life imprisonment.

▶ Rhode Island called a December constitutional convention to reapportion the legislature as required by the U.S. Supreme Court. Two consecutive sessions of the state legislature failed to reach agreement on reapportionment.

▶ North Dakota turned down a proposal to abolish the state personal-property tax and overturned an old law that forbade drinking at a restaurant table even if the place has a bar just a few steps away.

▶ Voters in 23 states approved bond issues worth $2.2 billion in the second-largest borrowing referendum in history (*see* U.S. BUSINESS).

COMMUNISTS

The Era of Many Romes

(See Cover)

A month ago he was anathema: the Yellow Peril, the shameless Pervert of True Marxism-Leninism, the terrible Trotskyite Deviationist and Splitter. Last week, as he stood bundled in a greatcoat and karakul cap atop Lenin's Tomb watching the rockets roll by, Red China's Chou En-lai presumably was still all these things to the fallen Nikita Khrushchev, who was nowhere to be seen, and possibly to many other Russians who have little love for the Chinese. But officially he was the honored guest from the great fraternal Chinese People's Republic, and this just three years after he stormed out of the 22nd Party Congress and thereby ignited China's momentous ideological feud with Russia. Now he was back, as cautious and cool as a man defusing a bomb.

When Red China's Premier accepted Moscow's invitation to the 47th anniversary celebration of the Bolshevik Revolution, it became obvious that Communism's two big powers are trying to ease their unseemly, downright embarrassing differences, which had become something of a personal obsession to Khrushchev. There is no likelihood that the split will be healed in the foreseeable future, but it will obviously not remain the same. With Chou's arrival in Moscow alongside delegations from every Communist nation in the world except Albania (which is being more Chinese than the Chinese), the post-Khrushchev era of Communism had begun.

Conference Pitch. Night was falling as Chou and his six-man entourage arrived at Moscow's Sheremetyevo Airport. With him was Liu Shao-chi, China's President. In the flare of flashbulbs, Chou's face appeared hard and unyielding. Significantly, he was greeted by only half of Russia's new diarchy, an equally sour-faced Premier Aleksei Kosygin. There were no bear hugs for Chou, though Kosygin did bring a bouquet of flowers. Party Boss Leonid Brezhnev stayed home, possibly to show that Russia was not overeager and to keep the visit a formal matter of governments, not an ideological meeting of parties.

Next day, Brezhnev addressed a jampacked audience in the Kremlin's Palace of Congress with an appeal for Communist unity, and pitched hard for a world conference of Communist parties to deal with the problem. Chou, staring indifferently over Brezhnev's shoulder, was the only man on the stage who failed to applaud. Khrushchev had called just such a meeting for Dec. 15, but with the intention of setting the stage for Peking's excommunication from the Communist movement. Since Brezhnev, Kosygin & Co. still claim to be the legitimate heirs to Khrushchevism, Chou could not readily agree to the meeting, even though Brezhnev's tone was more wheedling than warlike.

Brezhnev hewed closely to basic Khrushchevian doctrines, though he was vastly more subdued in tone. He praised peaceful coexistence and argued that "world war is not inevitable," extolled the nuclear test-ban treaty, which Peking refused to sign, and made all the right noises about better relations with the U.S. while keeping Russia's guard up. Sounding like a Western executive or politician promising that things were going to get efficient or he would know the reason why, Brezhnev proclaimed his intention "to combat resolutely red tape and window dressing." He called for "fuller use of the material incentive," meaning the profit motive, in "overcoming the lag of agricultural production." In an indirect slap at Chinese collectivization, Brezhnev announced the removal of "unfounded restrictions" on private farming—"the plots of land worked by farmers, factory and office workers"—restrictions that Brezhnev even more than Khrushchev realizes are a drag on Soviet output.

A Call on Stalin. About the only concessions Brezhnev offered to China were promises to back Peking's claims on Formosa and pledges to support "the national liberation struggle of the peoples of Asia, Africa and Latin America," thus hinting at a more militant pursuing of revolution than Khrushchev had espoused. Both Chou and Castro's henchman, Ernesto ("Che") Guevara, applauded vigorously when Brezhnev warned: "Hands off Cuba!" As to restoring unity within the bloc, Brezhnev said: "There is every objective condition for cooperation between Socialist countries to grow stronger." And at the Red Square anniversary parade, Brezhnev wound up old Rodion Malinovsky, his Defense Minister, for a rocket-rattling speech aimed as much at Chou's ears as at the West's. As the thermonuclear behemoths rumbled by —among them a submarine missile which was meant to rival the U.S. Polaris—Malinovsky darkly warned that Russia's armed forces would "protect the fatherland and all countries of the Socialist community against the plots of aggressors."

If Chou was impressed, he did not show it. To demonstrate his continuing disdain for Khrushchevian wrong-thinking, he ducked around the back of Lenin's Tomb and paid a reverential visit to Stalin's modest grave outside the Kremlin wall.

Two Empires. "Moscow is the third Rome," goes an old Russian saying. "A fourth there shall not be." The first, of course, was the Rome of Augustus; the second was Constantinople, capital of the Eastern Roman Empire after the great schism split the Roman world. The Chinese are obviously determined to prove the prophecy wrong and make Peking a fourth Rome.

The western Communist empire under Moscow is the more powerful in terms of armament, industrial potential, living standards and education. The eastern empire under Peking is far more populous, and as a revolutionary force, it has the advantages of its very shortcomings: poverty makes it more spartan; envy of the good life makes it fiercer; having less to lose may make it willing to risk more. Moscow sounds more realistic in its appreciation of overwhelming Western strength; Peking sounds more fanatical in its insistence that the West is only a paper tiger—although beneath the propaganda it is unlikely that ancient China is really as unrealistic as all that. Willy-nilly, Moscow is more committed to "polycentrism," while Peking still demands greater discipline among the Asian Communist parties in its domain.

But the fact is that nationalism, even though Communism can often exploit it,

Communism's greatest enemy; neither Moscow, nor in the long run Peking, will really be able to establish itself as a supranational, imperial center. The Communist era after Khrushchev is found to be more than ever an era of not one or two but a great many Romes.

Independent Dependencies. Brezhnev made this explicit in his speech when he said that "the choice of one or another method and form of Socialist construction is the sovereign right of each people." It was to safeguard this right that the Eastern and Western European parties had objected to Khrushchev's China policy: a Moscow crackdown on Peking, they felt, might re-establish too much of Moscow's old authority. But to safeguard that same independent right, the Western parties now also felt free to criticize Khrushchev's ouster. The most significant area of independence is represented by the Eastern European satellites, whose growing tendency to be more European than Eastern is one of the really important facts of the time. The tendency, of course, is not uniform, and some satellites are more satellitic than others. The line-up:

▶ East Germany remains as anxious as ever to please Moscow. Despite earlier muted objections to the handling of Khrushchev's ouster, Party Boss Walter Ulbricht took pains last week to show his allegiance to the new "collective leadership" of the Kremlin. He flattered B. & K. by imitating them, showed up in Moscow trailing his puppet Premier, Willi Stoph, in a show of "collective leadership" of his own. Never before had the spade-bearded Saxon shared billing with an underling at a major state function. But Ulbricht's aping of B. & K. is only to be expected as long as 20 Soviet divisions occupy his country. He is jubilant at the prospect of a Sino-Soviet *détente*, particularly if it leads to a tougher Russian policy toward the West and renewed pressure on Berlin.

▶ Bulgaria, whose tubby top-dog Todor Zhivkov was Nikita's best behaved satellite leader, has mixed feelings about both Khrushchev's fall and the prospect of a *détente* with China. Fearful of angering the new Kremlin rulers, Zhivkov refrained from putting in a good word for his ousted protector, busied himself by promising his people greater democratization and streamlining of the Bulgarian economy, which is closely tied to the Soviet's.

▶ Rumania is delighted both with Khrushchev's fall and the prospect of keeping Red China within the pale of the Communist movement. Nikita was threatening to make things hot for independent-minded Rumanian Boss Gheorghe Gheorghiu-Dej, whose refusal to turn his oil-rich nation into a "gas station" for Comecon threw Khrushchev's bloc-wide economic scheme out of kilter. Since last March, Dej has been trying to avoid a complete Sino-Soviet rupture, while believing that a complete *rapprochement* is neither possible nor desirable. Dej wants an amorphous Communist "commonwealth" in which Peking would provide steady ideological opposition to Moscow, thus permitting individual nations like Rumania to maneuver between the two poles. To show his continued independence, Dej himself stayed away from last week's Moscow meeting, instead sent Premier Ion Gheorghe Maurer, his glad-handing traveling man.

▶ Poland shares the Rumanian attitude, but is more anxious than Dej to please the new Russian leadership. Party Leader Wladyslaw Gomulka allowed himself to be talked out of his misgivings over Khrushchev's fall, was quick to endorse B. & K. Gomulka wants to preserve his country's relative "Liberalism" and fears that a final split would cancel his freedom of action. The Polish public, however, fears that a *détente* with China might encourage the influential Stalinist elements that lurk within the Polish Communist Party.

▶ Hungary, where Janos Kadar enjoyed a "special relationship" with Khrushchev, has more internal freedom and more contact with the West than any bloc nation, despite the continued presence of Red Army troops. Last year some 70,000 Hungarians traveled in the West, while 200,000 Westerners—mainly Austrians, Italians and West Germans, as well as 12,000 Americans—came in and spent money. Budapest, with its fine but expensive restaurants, its Magyar beauties in beehive hairdos, its "Rockola" jukebox parlors, its elegant Hotel Gellert surrounded by Jags, Mercedes and Alfa Romeos, is by far the most European city in the bloc. Kadar wants to keep it that way, last week struck a milestone diplomatic agreement with neighboring Austria that established a mixed commission to adjudicate border conflicts, may eventually raise the mine-strewn Iron Curtain between the two countries.

▶ Czechoslovakia, whose precariously

ANNIVERSARY LINE-UP ATOP LENIN TOMB*

How to be sovereign though a satellite.

balanced boss Antonin Novotny faces "elections" this month, was also tied closely to Khrushchev. Novotny failed to show at Moscow last week, sent his second-in-command, Party Secretary Jiri Hendrych, instead. At the same time, the Czechs announced sweeping economic reforms that effectively reject the Soviet system of centralized control, reoriented Czechoslovakia's lagging industry—once Eastern Europe's most advanced—along more Western lines. The profit motive is being given fuller play, and factory owners are permitted to work out their own supply-and-demand schedules.

Chances of Reconciliation. The satellites' continuing desire for a richer, relatively more capitalist consumer economy is one major reason why a true reconciliation between Moscow's world and Peking's world is so difficult. Mao Tse-tung's China still regards all this as a dangerous betrayal of Marxism. Thus the deep differences over economic policies, and the national and racial rivalries, remain. There is no sign that Peking will or can give up its competition with Moscow for the allegiance of the underdeveloped nations.

With the added prestige of its new atomic bomb, Peking has no reason to give an inch to the Russians. Last week People's Daily in Peking again blasted Khrushchev and "modern revisionism," which "emasculates the revolutionary working class." While Peking also urged Russia to join China "against the common enemy," Mao was not about to give up his version of Communism.

And what could Russia really do to patch the rift? B. & K. are saddled with a weak economy, cannot afford the massive economic aid that, before 1960, kept Peking tied to Moscow's side. Token technical aid could be offered, and the new Russian leaders might win some Chinese good will by showing a more aggressive face to the West.

As a result of these distinctly limited possibilities, the anniversary "summit" fell far short of being a reconciliation meeting. Still, there were soundings and sniffings to find approaches to unity. In an anniversary message, Mao called for Communist unity to make the imperialist camp "shudder." At the very least, all parties hoped to avoid a return to the vitriol and vituperation that had marked the conflict during Khrushchev's last days. Both sides could benefit from a truce. And even a semblance of unity between Communism's two empires could make the West's life somewhat more difficult. Western policymakers have become extremely fond of the Communist split: whenever they ran out of ideas, they could always bank on the troubles the Reds were having among themselves. But whatever their differences with Moscow, the Chinese are fighting the U.S., not Russia, in Viet Nam and, more or less directly, throughout Asia.

In short, no doubt Moscow will continue to have a serious China problem in dealing with Asia's tough, arrogant and infinitely patient giant. But Washington has a China problem too, and one that is considerably more serious and pressing.

RED CHINA

Waiting for Evolution

In Washington these days, there is a lot of talk about "Chirec," which is current State Department jargon for recognition of Communist China, and "Chirep," which stands for Communist Chinese representation in the U.N. Washington remains firmly opposed to both so long as "Peking won't leave its neighbors alone." Although there is growing support among U.N. members for Chinese admission, Washington is betting that it can squeeze through another year without having to accept Chirep. All very well and good. The trouble is that no one in the State Department, in the Pentagon, or anywhere, is doing very well with what perhaps should be called "Chicon," for containment, or with any other "Chipol," or policy toward Communist China.

For 15 years, since Chiang Kai-shek's tragic defeat, the U.S. has not ex... tried to ignore Red China—cert... the Korean war bitterly acknowl... its existence—but to ostracize and ... late it. Perhaps there was no real al... native, but the fact is that this att... is getting to be increasingly difficu... sustain. China today is by far the ... serious, urgent foreign-policy pro... facing the U.S. Its presence looms ... all Asia. There is, in the Far East, ... area of prosperity that is not menac... no conflict that is not affected or ... instigated by Red China. Items:

• SOUTH VIET NAM: a continuing ni... mare for the U.S.

• LAOS: three-fifths gobbled up by ... Red Pathet Lao.

• CAMBODIA: virtually a Peking sa... lite. Prince Norodom ("Prink") Si... nouk is openly aiding the Commu... guerrillas in Viet Nam by providing th... sanctuary. Last week the U.S. evacua... its embassy dependents from the C... bodian capital of Pnompenh.

• THAILAND: booming and stauncl... anti-Communist, but gravely endan... gered by the possible collapse of ... of its neighbors.

• BURMA: hell-bent on "socialism" a... chaos at home, "neutralism" abroad. ... situation made more ominous by ... 850-mile common frontier with Chi...

• PAKISTAN: still tied to the West m... tarily, but flirting with the Chinese. La... week a Pakistani delegation arrived ... Peking for a shopping spree—with ... help of a $60 million Chinese loan.

• INDIA: beset by food shortages, co... ruption and mismanagement, with Re... Chinese troops solidly dug in along ... 14,500-square-mile border area the... tested two years ago.

• NEPAL: invaded by 5,000 Commu... Chinese technicians who are nearing ... completion of a $9,800,000 road link... ing Chinese-occupied Tibet to the Ne... alese capital of Katmandu.

• MALAYSIA: solidly pro-West, but dis... rupted internally and harassed by gu... rilla raids from Peking's ally, Indonesia.

• INDONESIA: in economic shambles u... der Dictator Sukarno, with the world's ... third-largest Communist Party waiting ... in the wings.

SOUTH KOREA: kept out of Red hands
...ly by 50,000 U.S. troops.
FORMOSA: still staunchly held by Gen-
...lissimo Chiang Kai-shek, 77, who con-
...ues to insist that he will return to the
...inland but obviously has no chance
...doing so.
PHILIPPINES: firmly tied to the U.S.,
...th local Communists reduced to an
...nificant handful, but beset by eco-
...ic troubles and worried about Chi-
...e and Indonesian expansion.
JAPAN: Asia's most brilliantly West-
...ed country, which nevertheless
...kers for trade with China and re-
...es to translate its economic prog-
...s into anti-Communist political ac-
...in Asia.

On top of all this China now has the
...mb—or at least a bomb of sorts.

When Can They Deliver? The U.S. is taking a second look at that bomb. China is now believed capable of building several 20- to 30-kiloton nuclear devices a year, probably has enough fissionable material on hand to stage a second test at any time. Uranium is in good supply, as is lithium, an important H-bomb material.

Indeed China can probably deliver a bomb a lot sooner than the five to ten years that U.S. officials first believed it would take. The U.S. moved from "explosion" at Alamogordo to bomb over Hiroshima in less than three weeks. If the Chinese are thinking in terms of a crude, 20-kiloton blockbuster like Hiroshima's (10 ft. long, 28 in. wide, and weighing 9,000 lbs.), they could probably deliver it along their periphery within six months. Peking's 275 Russian-built IL-28 bombers are capacious enough to carry such bombs to targets up to 600 miles away.

Peking also has five IL-18 jet transports capable of carrying a 15-ton load 3,000 miles. Thus most major Asian capitals—Tokyo, Manila, New Delhi, Bangkok, Rangoon and others—may soon find themselves within Red China's atomic range some time early in 1965. Peking, moreover, has launched a missile program guided by Chien Hsueh-shen, 52, a 1938 Caltech Ph.D. grad and jet-propulsion specialist. Chien was chief of the rocket section of the U.S. Scientific Commission on National Defense during World War II. In 1950 he was caught trying to slip out of California, bound for Red China. He was finally permitted to leave the U.S. in 1955, surfaced immediately in Peking. The status of his missile program is obscure, but it is known that a missile range has been laid out near the Sinkiang nuclear testing ground. Some observers believe that, despite shortages of vital nickel and chromium, Red China, which already has some Soviet-designed, surface-to-surface rockets, might have a nuclear-tipped, 200-mile missile in two to three years.

Will They Use It? In view of all this, why aren't China's neighbors more worried? One experienced U.S. observer in Hong Kong says: "They aren't scaring worth a damn." They are nevertheless impressed that economically backward China accomplished the feat of building the bomb. Throughout Asia and Africa, among nations that vociferously disapproved of U.S. atomic tests, there is a certain racial satisfaction that another white man's monopoly has been broken. There is some talk that India and Japan might now try to build bombs of their own.

The question has been raised in the U.S., Australia and elsewhere whether Red China should be "enucleated" by bombing her atomic plants. The U.S. is evidently opposed to this, in the absence of some Chinese aggression. Quite apart from possible Russian reaction, the Chinese themselves could strike back simply by allowing their armies to overrun Southeast Asia and thereby involving the U.S. in a major war. At any rate, U.S. experts seem convinced that the Chinese will not use their bomb.

Despite their tough talk about aiding revolutions and wars of "liberation," they have pursued a cautious policy, holding back from Quemoy and Matsu, for instance, and never really pressing their successful invasion of India. The Chinese understand, or must be made to understand, Washington feels, that their use of the bomb could bring instant retaliation from the U.S. and with it the destruction of their major cities and industries.

SOVFOTO

SINKIANG NUCLEAR TEST
Who will survive whom?

Besides, the Chinese do not need to use the bomb. Peking's 2,500,000-man army, backed by 15 million reservists, police and militiamen, is the largest ground force in the world. Supported by four artillery and armored divisions (the latter mostly equipped with Russian T-34 tanks), the forces are presently placed in Manchuria, around Peking, along the coast between Shanghai and Canton, in South China, and in the southwest opposite India. Since early this year, they have been undergoing intensified small-unit training. Though their military equipment is largely World War II vintage and their supply lines would be vulnerable to modern air power, the Chinese could obviously overrun any of their neighbors, at least temporarily, if they chose.

Invasion or Revolution? But again the U.S. does not really expect Red China to launch invasions, believes that Peking has a reasonably healthy respect for the U.S. Seventh Fleet and the U.S. air forces stationed at island bases throughout the Pacific. China can obviously continue to rely on subversion and revolution, methods with which it is doing extremely well. This, rather than the Chinese bomb or even the Chinese army, is the basic challenge to the U.S. The key China problem thus reverts to where it was before the Lop Nor blast —how to stem Peking's slow erosion of the Western position in Asia.

Some of the best-intentioned and most experienced U.S. policymakers are

convinced that the U.S. must above all counter Red China's war of ideas. These ideas really boil down to: get rid of the foreigners and let Communism give you a better life. Successful though this crude approach is in Asia, it has yet to work anywhere without the accompaniment of subversion, political infighting, blackmail and the threat of force. From the time that Chiang Kai-shek was fighting the Communists for his life down to the present crisis in Viet Nam, the U.S. has tirelessly told itself that the Communist challenge must be met by providing an equal or better promise of a decent life, by finding enlightened non-Communist leadership, and creating stable non-Communist societies along the periphery of China. In some countries this has at least partly worked. But what if non-Communist governments were to collapse, giving way to Communist or neutralist regimes without a single Chinese soldier crossing a frontier? Obviously, the only U.S. choice then would be to pull out or to fight. What would the answer be? One psychological difficulty faced by the U.S. in Southeast Asia now is that many people doubt the answer really would be "to fight."

Basically, the U.S. plan is to avoid or postpone that choice by every device—military aid, economic and technical support, money, persuasion—for having to make such a choice would in itself be a form of failure. In the long run, U.S. policy is simply to hang on and hope for what someone in the State Department may yet call "Chinev"—the evolution of Red China. The notion is that through contacts with the outside world, China will become subject to outside ideas, gradually learn responsibility, like Russia develop a desire for a better, softer life and, as a result, take a softer line.

To judge from present-day China, this is not an impossible, but certainly an extremely fragile hope.

The Masses. Not that it has become any easier to know what is going on inside China. In the absence of published statistics, Peking watchers are even worse off than Kremlin watchers; they are reduced to gleaning shipping records from the world's docks to reconstruct Chinese production figures, and count the number of lines someone receives in a newspaper account to determine his standing in the community. While most Western newsmen, with the exception of Americans, are admitted to the Chinese mainland, they are so few and so restricted that journalism's old friend of half a century ago—"a traveler just returned from the interior"—is once again an essential source of information. With patient use of these devices plus a few other tricks, newsmen and intelligence experts do get a picture of China—but the country's innate paradoxes can be as baffling as Communist propaganda.

"This is a land so vast," reports TIME's Hong Kong bureau, "that winter snows are already howling across large areas of it while other expanses still simmer in humid tropical heat. A land so fragmented that millions upon millions of its human swarm cannot understand the dialect spoken by millions and millions more. So ancient that its past is a palpable presence, and so modern that it has jolted the world with an atomic explosion. So expansionist that its neighbors have lived in varied degrees of fear since before the birth of Christ, and so troubled internally that as often as not it has been unable to feed and clothe itself. So weak, so strong, so arrogant, so humble, so rich, so poor, so wise, so foolish. But one generalization can be made today: the majority of the people remain loyal and obedient to the Communist Party and the Communist cause. Not enthusiastic, but obedient."

Inevitably they strike Western visitors as robotlike. In Canton's main park 3,000 Communist youth at a signal begin wildly cheering a Western businessman, and at another signal, just as obediently, they stop. People seem terrified to accept even the smallest gift from foreigners, evidently for fear of being tabbed as spies. Visiting coeducational Sian University, a French Deputy asks a question natural to any Frenchman: "Does the proximity of 5,000 boys and 2,000 girls pose any problems?" There are puzzled stares, and the rector replies: "What sort of problems?" The French visitor: "Sexual problems." The rector: *"Je ne vois pas* [I don't follow you]."

Perhaps he really does not, for even hand holding is condemned as "bourgeois." Part of the reason for the puritan policy is to discourage early marriages and thus population growth (an estimated 12 million a year). Contraceptives are displayed everywhere, and free literature on the subject is available for study under the glass tops of teahouse tables.

THE NEW COMPETITION PERFORMANCE

Contessa 1300

Stile Torinese

■ Take a good look. The styling of Turin—Stile Torinese—is obvious. Designed by world-famous Italian auto stylist G. Michelotti, the beautifully executed Contessa 1300 possesses the classic look . . . with that unmistakable Italian flair.

But wait till you drive it. You'll marvel at its competition performance. Shift into low. Tramp on the accelerator. You'll rip out like an impatient thoroughbred. Roar into a turn . . . flat, fast cornering with dead-accurate steering. Speed down the highway . . . remarkable handling ease and stability, even on slick conditions. Stop! You'll do it on a dime with swerve-free, no-dive tendencies . . . thanks to exclusive Optimum Balance and extra-large brakes.

Every one of Contessa 1300's beautifully crafted components is functionally designed to combine *competition performance* with cushioned riding comfort and care-free maintenance. Extreme

THIS PLASTIC STRIP WILL KEEP A ROOM INSECT-FREE FOR THREE MONTH

Shell have perfected small plastic Pest Strips which continuously release insecticide into the atmosphere. Hang a Shell Pest Strip in a room and it controls all flies and mosquitoes for three months; there are no odours or harmful effects to betray its presence.

The insecticide in Pest Strips is Vapona, a remarkable Shell product which vaporises and actually seeks insects in all the nooks and crannies where sprays cannot reach.

Pest Strips can be used in the house, in rooms or cupboards; outdoors, in refuse cans and kennels; in farm buildings, restaurants or industrial premises. They need no maintenance and offer a unique, non-mechanical, continuous insect control system that has many valuable applications.

The range of Shell chemicals is wide and diversified. In agriculture and industry, in almost every country of the world, they are contributing to greater efficiency and lower costs. Shell are eager to give you all the help they can. If chemicals can solve your problems contact the Shell company in your country.

...inery, exports soybeans, coal, iron ...e, rice, tea and hog bristles.

In Peking last week, British Board of ...rade President Douglas Jay inaugu...ated a $3,080,000 British trade fair. ...The 230 exhibitors are offering every...thing from an aircraft instrument land...ing system to a diesel electric locomo...tive. Doing business with Peking can be ...both sweet and sour. Japanese business...men, no amateurs themselves, describe ...Mao's Marxist idealists as ruthless bar...gainers. Moreover, the Reds begin ev...ery session with an infuriating propa...ganda speech, and cannot meet at all on ...Wednesdays and Saturdays, when they ...do their own indoctrinal homework.

The Rulers. Whether trade will bring ...about prosperity and hence evolution ...remains to be seen. But one form of ...evolution—age—is taking place among ...China's leaders themselves. Mao Tse...tung, nearly 71, is panegyrized by his ...subjects as "the sun in our hearts," but ...he is setting fast. Though his mind is ...evidently as Machiavellian as ever, his ...eyesight is failing, he trembles as with ...palsy and moves about feebly. During ...a luncheon for a Western visitor last ...month, Mao was helped to and from ...the dining room by nurses.

Directly under Mao, in No. 2 posi...tion, is President Liu Shao-chi, 66. Off to ...one side, but part of the government ...wing of the regime, is Premier Chou ...En-lai, 66. Off to the other side, and be...longing to the party wing, is Teng Hsiao-...ping, 62, General Secretary of the Par...ty Central Committee. A jaunty, re...lentless, ex-army political commissar ...who, since 1954, has been the party's ...chief executive and hatchetman, Teng ...could well turn out to be Mao's even...tual successor.

But for the present, as his mission to ...Moscow suggests, Chou En-lai remains ...the unchallenged top troubleshooter of ...Chinese Communism. Grandson of a ...mandarin, Chou was a member of the ..."worker-study group" of young Chinese ...that Mao Tse-tung, then a librarian at ...Peking University, organized in the ear...ly '20s and sent to Paris for education ...and inspiration. During World War II, ...Chou (pronounced Joe) was the affable ...good Joe who acted as liaison man ...in Chungking—and convinced many ...Americans that his group consisted only ...of idealistic agrarian reformers. In ...more recent years he has turned up as ...Peking's shrill, belligerent mouthpiece ...at Geneva conferences on Indo-China. ...As his seamed, pasty face may confirm, ...he is reported ailing, and he disap...peared for several weeks earlier this ...year, possibly for treatment. But Chou ...has a habit of re-emerging in important ...endeavors, such as his grand tour of ...Africa last winter, after which he pro...nounced the Dark Continent "ripe for ...revolution."

The Youth. If power went to any of these three stalwarts, all veterans of the Long March, Mao's hard line would not be likely to change. But what about the younger generation? Half of Red China's populace is under 35, and Mao frankly worries about the danger that they will turn soft. "They have not known war," he says. "They have not known the landlords. They have not known combat." There is evident suspicion that at least some Chinese are getting tired of their spartan existence and the aggressive revolutionary policy it serves. The regime has launched a relentless domestic drive against "revisionism," accompanied by a campaign to create a whole new crop of "Maos," or, as the party puts it, "millions of new leaders for the revolutionary cause."

Mao has warned that the influence of Khrushchevism could "change China's color," and has declared that unless the party's next generation is as tough as the Long Marchers, "it would not be long, perhaps only a decade, before a counterrevolutionary restoration on a national scale inevitably occurred." Among children, efforts to implement "thought seedlings" are being redoubled. In a Peking nursery a French correspondent is told by the teacher that her brood is "learning to hate the class enemies." And who are they? "Landlords, reactionaries and American imperialists," chant the four- and five-year-olds. On Children's Day, parents are exhorted to nurture in their offspring a "revolutionary red heart."

But there are also some signs that not all this brainwashing is successful, that there is much indifference and some downright skepticism about party pronouncements. One recent refugee from Red China says he did not believe that Khrushchev would ever be defeated by Mao, for the simple reason that the local party secretary said he would be —and no one ever believes the party secretary. Another refugee recalls: "Every young man I talked with in Canton wishes Mao and his crowd would die soon. They say, 'Let's just see if they can live longer than we—let's just see who will survive whom.' "

Firm but Flexible. Even the most optimistic U.S. policymakers concede that it might be a decade or two before such heretical opinions really begin to make themselves felt. But they feel that if the U.S. can just hang on in Asia, time is on its side. Could the process be hastened by bringing China "into polite society" and ending its isolation, as the advocates of "Chirep" and "Chirec" argue? At present—and even if such moves could be squared with the existence of Chiang's regime on Formosa—there is no evidence that "evolution" can be brought about that readily. Peking has shown no willingness to give anything whatever in return for concessions of this sort. More than Mao's version of Marxism is at stake; behind his insistence on undying hostility against the "imperialists" lies not so much ideology as an almost visceral, vengeful attitude toward the West.

And yet it is hard to see how the U.S. can go on indefinitely along present lines. There is a nagging, exasperated feeling that somehow, some day the situation must be moved off dead center. One old China hand expresses it thus: "We must learn to be tough without being rigid. We must be firm and flexible too." Until that paradox can be translated into action, the U.S. may have to be just firm. Mao once wrote: "Political power comes out of the barrel of a gun." Americans can amend that slightly: there is also power in money, in skill, in the belief in freedom. But Mao has a point, and the U.S. must let him know that the point will not be ignored.

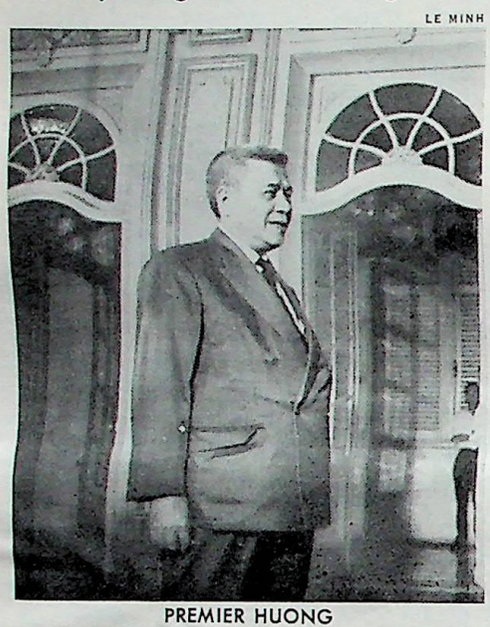
SOUTH VIET NAM

Down, Down, Down

Is South Viet Nam literally ungovernable? More than ever it looked that way last week as the latest regime was installed in Saigon, amid the usual grim expressions of resolve and the usual lofty promises of reform. Hardly had the new Premier, Tran Van Huong (TIME, Nov. 6) moved into his office when he ran head-on into the same murky obstacles that had undermined not only the government of Ngo Dinh Diem, who was murdered a year ago supposedly to clear the way for reform, but had brought down the regime of Soldier-Premier Nguyen Khanh as well.

LE MINH



PREMIER HUONG
Again, the apostles of anarchy.

To satisfy the clamor for a civilian government, Huong had put together a Cabinet of younger men (average age: 47) than had ruled before. They were bureaucrats and technicians who in general were chosen for ability, not to satisfy political debts. The Cabinet was, in Huong's words, determined to "crack down on graft and nepotism, strengthen the economy, improve housing, education and health." What could be wrong with that?

Plenty, according to powerful Nguyen Xuan Chu, 73, acting chairman of the High National Council, a group of official watchdogs known to Saigon cynics as the "National Museum." Huffing that he had not been consulted on the makeup of the government, Chu resigned. His real complaint seemed deeper than that—at least as deep as the grumbling of those apostles of ambiguity and anarchy, the Buddhists, who acidly objected to Premier Huong's admonition that "a sharp line must be drawn between politics and religion." Obviously the supposedly unworldly Buddhists do not cherish the doctrine of the separation of Pagoda and State.

Delicate Inquiries. Suddenly Saigon's press blossomed with warnings that "in critical times religion cannot let the military and the politicians have a free hand in national affairs," and from the main pagoda in Hué, Buddhist priests began warning their followers that Buddhism faced "new threats," called on loyal Buddhists to defend the faith "against its enemies."

Apart from the pressure on Huong to reshuffle his Cabinet to include direct Buddhist representation, other political factions were raising their voices. Disregarding a warning by Huong against public demonstrations, a noisy rally of the National Student Union concluded with a call for dissolution of the new government and a vow to take to the streets to enforce the demand. The politicians were also sharpening their knives for Nguyen Khanh, who had only recently stepped aside as civilian leader, but stayed on as military commander in chief. In his lurching efforts to build a workable government, Khanh had purged many powerful army officers, now was reaping the rewards. Last week various members of the High National Council slipped over to the U.S. embassy to inquire delicately what the American attitude would be if Khanh were removed as army commander. In effect, if not in so many words, the answer was that the U.S. wants Khanh.

To exasperated U.S. officials, the continued political machinations seemed destined only to frustrate the fight against the Viet Cong further. Now every day brought defeat to the government troops struggling to track down and kill the elusive guerrillas. Moreover, the Viet Cong inflicted a galling psychological defeat on the U.S. forces themselves, revealing at least part of the U.S. command as grossly careless and inept.

Tempting Target. For months, row after row of U.S. aircraft—helicopters, fighter-bombers, long-range U-2 reconnaissance planes—have stood wing to wing at the important Bienhoa airport, a dozen miles northeast of Saigon. Many Air Force officers have worried at the lack of adequate perimeter defense at the base. Especially vulnerable was the northern edge of the field, where for some reason no one ever thought to clear the bush and trees that offer concealment along a wide gentle slope not far from the barracks where U.S. troops at the base are quartered.

Bienhoa became all the more tempting to the Communists after the Tonkin Gulf clashes, when more than 30 big B-57 jet bombers flew in from Pacific bases as stand-by weapons in case a long-range attack on North Viet Nam —or even China—should be called for.

Most of the B-57s crews were asleep when a little band of Viet Cong crept to within 2,500 yards of the Bienhoa flight line, took accurate aim and blasted the barracks and airstrip with 81-mm. mortars. G.I.s ran pell-mell from their bivouac as more than 100 rounds fell onto the sleeping quarters, injuring 72 and killing four. Already, the midnight raiders had pumped shell after shell onto the B-57s, destroying six and damaging at least six more. Fire spread quickly from plane to plane because they stood so close together; sandbags would have saved many shrapnel, but such protection did exist because, U.S. officers explained lamely, there was insufficient local to fill and stack them.

As dawn broke, a tardy Vietnamese search group set off in chase, but the rebels were nowhere to be found. There remained only to clear the debris of Bienhoa's strip—blackened hulks of wrecked planes, the bodies of the dead from the barracks, and the few unexploding mortar shells that had fallen with marking "Made in USA, 1944" that were apparently part of the booty captured by the Communists when the French surrendered in 1954.

THE CONGO

The Rebels Collapse

From the depths of the Congo rain forest came the plaintive voice of Christophe Gbenye, President of the rebels' self-proclaimed People's Republic of the Congo. "I did what I could to preserve African honor," he said in a radio message to the continent's nationalist leaders, "and you have left me alone beneath the bombardments of Americans and Belgians. In the name of Lumumba, I utter a last appeal."

But not even the invocation of the martyred leftist was likely to help. By last week the whole rebel cause was collapsing. Incredible as it seemed, Moise Tshombe's chaotic army was advancing furiously on all fronts. Spearheaded by white mercenaries, and operating under the air cover of U.S.-supplied B-26 fighter-bombers, government troops had marched to within striking distance of the rebel capital, Stanleyville.

More Punch. The turning point came in August, when a loyalist garrison drove back a major rebel assault on Bukavu after three bloody days of street fighting, giving Tshombe's disciplined army its first real victory. Even more important, however, were 450 white mercenaries—mostly South Africans, Rhodesians and Belgians—recruited by Tshombe to give his army more punch. The mercenaries were organized into small units and sent to shore up besieged garrisons, and to lead—and

...—attacks on strategic rebel towns. ...wly, sporadically, Tshombe's forces ...gan to close in. By taking Boende, ...y halted a rebel drive toward Leo-...ville. By seizing Albertville and ...vira, they all but cut off the rebel sup-...lines from the Communist Chinese ...bassy in Burundi.

Last week the drive suddenly grew ...a major offensive. Along the Ugan-...border, a government column shook ...rebel hold on the northeastern Con-...by recapturing the towns of Beni ...d Lubero. In the west, another force ...ded unopposed from Boende all the ...w to Ikela, a vital road junction 185 ...es from Stanleyville. But the main ...ce came from the south. There, led ...a Belgian colonel and 250 merce-...ies, the 2,000-man 5th Mechanized ...ade clanked out of its staging area ...Kongolo one morning, rumbled 250 ...es in four days, conquered the rebel ...munications center at Kindu almost ...hout firing a shot, and found itself a ...re 250 miles south of Stanleyville. ...e brigade's principal tactical weapon ...ng the way had been the telephone: ...each town it stopped long enough ...phone a warning to the rebel garri-...in the next town to get out while it ...ld. Unfailingly, the rebels fled.

Deadly Game. In Stanleyville, Gbe-...e's government—which from the be-...ning had been so disreputable that ...t even the Chinese Communists would ...ognize it—appeared to be on its last ...gs. Food supplies were running out, ...d the few remaining scraps were be-...black-marketed at many times their ...rmal worth. Rebel savages, hopped ...by dope and voodoo spells, pillaged ...e city almost unchecked. And from ...e surrounding rebel countryside came ...les of kangaroo courts that forced ...eir victims to swallow gasoline, then ...ced them open and ignited them. ...Through it all, the rebel leaders quar-...led and bickered among themselves; ...e Foreign Minister even hinted to a ...ss conference that President Gbenye ...d sold out to the Americans.

If he had, the Americans would like ...hear about it. For the desperate Gbe-...e had turned to a deadly game of ...lackmail. Announcing that he had tak-...n hostage all 60 Americans and 800 ...Belgians who had been stranded by the ...rebel invasion of Stanleyville, he de-...manded an immediate end to U.S. and ...Belgian aid to Tshombe. Threatened ...Gbenye, in a broadcast on the official ...rebel radio in Stanleyville: "We can ...no longer guarantee the lives and prop-...erty of Belgian and American citizens." ...Gbenye may have been bluffing, but ...Tshombe obviously would rather not ...have to put him to the test. At week's ...end, as his army paused to regroup, the ...Premier broadcast "a solemn appeal to ...the rebels to lay down their arms" and ...arrest Gbenye and his cohorts. Added ...Tshombe: "We insist particularly that ...all foreigners held hostage must be ...freed, and ask the entire civilian popu-...lation to protect them until our army ...arrives."

CENTRAL PRESS

WILSON & HOME LEAD PARLIAMENT TO HEAR QUEEN

In the first hour, cries of "shame."

GREAT BRITAIN

Cruel to Lepers

In a crystal coach drawn by six white horses, Queen Elizabeth rode in state last week to the Palace of Westminster for the ceremonial opening of a new Parliament. Seldom has that arcane ritual seemed more at odds with reality. Elizabeth's "most gracious speech from the throne," written for the monarch by the first Labor government in her eleven-year reign, was a catalogue of welfare statism that immediately challenged the Tories' disposition to let the new administration "play itself in." Gambling its slender, five-seat majority in the House of Commons, Labor declared its determination to renationalize the steel industry, one of the few issues likely to rally the nine Liberal M.P.s behind the solidly opposed Tories in coming months.

As it turned out, the Commons had been in session hardly an hour when it was convulsed by an interparty melee that was as un-English as it was unprecedented. It had nothing to do with steel.

"Squalid Campaign." Early in his first speech as Prime Minister, Harold Wilson expressed his regret that Foreign Secretary Patrick Gordon Walker, who was unseated in last month's general election, could not take part in the debate (he will probably be reelected from a safe Labor constituency by year's end). Stung by chuckles from the Opposition benches, Wilson looked up from his notes and tore into a vitriolic attack on his predecessor, Sir Alec Douglas-Home, as well as on Peter Griffiths, the Tory candidate who defeated Gordon Walker at Smethwick, a Midlands industrial suburb that has colored immigrants.

Over a rising storm of protest from the Opposition, Wilson declared that Griffiths had won Smethwick with "an utterly squalid campaign" based on racial prejudice. Charging that the Tories would bear "a lasting brand of shame" for Sir Alec's reluctance to condemn such tactics, Wilson shouted that Griffiths should "serve his term here as a parliamentary leper." After a shocked pause, surging, howling, gesticulating M.P.s from both sides of the House silenced Wilson for 15 tumultuous minutes. Never before had a new Prime Minister stirred such hostility in the Commons. Amid shouts of "Shame!" and "Disgraceful!" 25 Opposition M.P.s stalked out; a motion to censure Wilson was later signed by 50 Tories.

Pies into Pence. Even in the heat of debate, Wilson's attack on Home was hardly warranted: the Tory leader had specifically deplored racism during the campaign. For that matter, few M.P.s believed that Wilson, who is one of the coolest, wiliest tacticians in the Labor Party, delivered such a diatribe on the spur of the moment.

In fact, over the next few months, Wilson's aim may be deliberately to provoke impassioned Tory opposition to Labor's vote-catching legislative goals, which range from free medicine under the National Health Service to bigger welfare benefits for a sixth of the population. Then, before pie-in-the-sky turns into shillings-and-pence in taxation, Wilson may go back to the people for a less precarious mandate. Meanwhile, four Labor backbenchers filed a tongue-in-cheek motion censuring the Prime Minister for describing Smethwick's M.P. as a "leper." Wilson, they declared, had thus cast "a cruel and unmerited slight on lepers."

RUSSIA

Lara's Return

"The riddle of life, the riddle of death, the enchantment of genius, of unadorned beauty—these things were ours," wept the beautiful Lara over the body of her lover, Dr. Zhivago. "But the small problems of practical life—things like the reshaping of the planet—these things, no thank you, they are not for us." Soon afterward, the heroine of Poet Boris Pasternak's great novel was arrested by Soviet secret police "and probably died somewhere, forgotten as a nameless number on a list that afterwards got mislaid, in one of the concentration camps of the north."

VADIM BIRYUKOV

OLGA AT PASTERNAK'S FUNERAL (1960)
"The small problems are not for us."

Lara's fictional fate was prophetic. In 1960, after Pasternak himself died, Soviet secret police arrested Olga Ivinskaya, the handsome blonde poetess who had been Pasternak's great love, soul mate, literary agent and secretary—and his model for the tender and generous Lara. It was the second time Olga had had to pay for her devotion: after the Stalin regime accused Pasternak of intellectual heresy, she spent four years in a concentration camp, was released only in the amnesty following Stalin's death in 1953. Last week, possibly as a consequence of Khrushchev's ouster, Olga, at 59, was again free.

After a fashion. During her four years as librarian of the Potma Work Camp in Siberia, she had written a sheaf of poems—but she needed government permission to publish them. To keep herself alive, she hoped to return to her work as a translator of foreign poets, but that too required government approval. Since her small apartment on Moscow's Potapov Street had been [illegible] she was given dependent on the state for new quarters.

But the small problems of practical life were no more for Olga than they had been for Lara. She spent her first day in Moscow at Pasternak's grave.

EUROPE

To NATO's Brink

On the surface it looked like a case of megalomania aggravated by logic.

The megalomania seemed to be De Gaulle's, determined as he was to be the leader of Europe and apparently ready to wreck both the Common Market and NATO if they stood in his way. The logic was provided by his Foreign Minister, Maurice Couve de Murville, who was full of brilliant French arguments about how a true partnership between the U.S. and France required two entirely separate policies. On closer examination, however, the megalomania was perhaps not quite so maniacal and the logic not quite so logical.

No Mood for Patience. On the Common Market, the French position was, on the whole, unassailable. All Paris really wanted was for West Germany to stick to a previously reached agreement for the reduction of agricultural prices. Because Germany's inefficient subsidized farmers want no part of this and because Chancellor Ludwig Erhard faces an election next year, Bonn was dragging its feet. A more sympathetic character than Charles de Gaulle might have understood and been patient. De Gaulle understood, all right, but he was in no mood for patience. There were renewed threats that unless he got satisfaction on the issue, he might pull out of the Market entirely.

Would he really do it? "France will look twice before making a fatal move," declared Le Monde, pointing out that thanks to the Treaty of Rome, French industrialists have broken with a long tradition of protectionism and have been building industrial strength on a multinational scale—the only way to meet American competition. Yet Premier Georges Pompidou was quoted by friends as saying, "*Nous partirons.*" He could of course be talking of a limited departure—perhaps absence from sessions of The Six for a few weeks.

French Reasoning. On NATO, the French position is considerably less logical. Basically, De Gaulle holds that to be truly sovereign today, a nation needs its own atomic deterrent, and he insists that France must have its *force de frappe* rather than rely on the U.S. But what about other European countries, notably West Germany? To them he says blandly that they can always rely on France. In short, he treats the rest of Europe the way he says Washington treats him.

For that reason he opposes MLF, the U.S.-backed scheme for internationally manned, nuclear-equipped surface ships that would give European nations a sense of participation in nuclear defense but still leave with the U.S. President the actual decision [illegible] the missiles. At an eleven-hour [illegible] policy debate in the French [illegible] Couve de Murville in effect argued [illegible] MLF is a phony, that it would [illegible] and not unite Europe. He was particularly angry at Bonn, which had accepted MLF as well as virtually every other U.S. plan, while being increasingly cool to De Gaulle's policies.

Where French reasoning [illegible] down is that MLF would give the Germans at least a squeeze on the nuclear trigger, while the French *force de frappe* would give them, in effect, nothing. The point was perfectly expressed in a recent conversation between a German and a French official. The dialogue went something like this:

Frenchman: We need you [illegible] *force de frappe*. An atomic arsenal is expensive, and German cooperation would be to both our advantages.

German: But your offer is much more costly than MLF. Who would have ultimate say in the use of the weapons under your plan?

Frenchman: Well, of course, we would expect to maintain control.

German: You are saying that we should invest much more money in a tiny atomic force that you control rather than less money in an enormous atomic force that the Americans control. We would get more of our money's worth with the Americans.

Frenchman: Ah, *mon ami*, you do not understand the Americans. We only fought against them in two wars. They were our allies. And let me tell you, they always come late.

Stirring Gestures. The only alternative to 1) MLF and 2) a French-controlled nuclear force would be a truly integrated European army with its own nuclear capacity. But De Gaulle dislikes the idea of such integration, and Washington dislikes the idea of giving up the nuclear veto. If the U.S. persists with the MLF scheme—which Britain's Labor government may accept, although with modifications—the French hint that they might pull out of NATO.

Just how France would go about it is of course interesting. All the way? Limited withdrawals? Probably the latter, with such starting gestures as pulling French officers out of supreme headquarters near Paris or out of the NATO standing group in Washington. If that didn't have sufficient effect, there might come the withdrawal of the two ground divisions or the 27 fighter-bomber squadrons that operate as part of NATO's central command.

Whether this is what De Gaulle actually has in mind, no one can be sure. Chances are, however, that he is merely trying to push things to the brink of chaos and then have the pieces reassembled more to his liking. Said Pompidou: "The Atlantic Alliance must be rethought. It must be remolded, reorganized." Probably true, but how? Neither Pompidou nor Couve nor anyone else in France so far has made any practical suggestions.

Why Lufthansa has added a new route to its world-wide system

Take another look at the Lufthansa system and you'll find a new route: the Polar route to the Far East.

With this route we meet the needs of passengers who want to fly comfortably and quickly between Europe and the Far East. In only 20½ hours a Lufthansa Boeing Jet 707 Intercontinental links the Japanese Capital with the city of Frankfurt.
More new routes are planned. We are continually expanding our system, continually improving our services and always making sure that our fleet of jets is right up to date – for you, our passenger.

POLITICS

Continent of Upheaval

When John Kennedy stood before the world in 1961 and proposed his *Alianza para el Progreso*, his dream was a partnership that would strengthen the economic and democratic institutions of Latin America. Since then, the U.S. has sunk $3.7 billion into Latin America. Yet it remains a continent of upheaval, swept by persistent revolution that betrays a discouraging inability to maintain a stable government. Last week's revolt in Bolivia marked the ninth time a military regime has taken power by force in the last four years.

LINARES

BARRIENTOS
Alone on the balcony.

Counting the brutal dictatorships in Cuba and Haiti and the more or less benevolent ones in Paraguay and Nicaragua, 13 of the Hemisphere's 20 nations have been ruled by military force at one time or another since the *Alianza* was born.

Whether Bolivia's new rulers prove better or worse than the civilians they deposed remains to be seen. Recent military regimes in Latin America have established that they cannot immediately be presumed to be bad. They represent a different breed than the medal-jangling "strongman" epitomized by Argentina's exiled Juan Perón and Venezuela's imprisoned Pérez Jiménez. Today's soldiers are deeply disturbed about Castroism, disgusted by graft, inefficiency and thoughtless political warfare. Right or wrong, they claim to have seized power to prevent chaos. In most cases, they seem content to return to constitutional government after imposing at least a semblance of order.

Cooling the Tempers. Two years ago in Peru, the army stepped in after an inconclusive election threatened to divide the country into warring camps; when tempers cooled, Peru had another election, and now President Fernando Belaúnde Terry is successfully working to develop the country. In Ecuador, the military retrieved the country from the boozy, embarrassing excesses of President Carlos Julio Arosemena and pressed on with a sobering program of austerity and fiscal reforms. In El Salvador, burly Army Colonel Julio Rivera took power three years ago; he has now been freely elected constitutional President, is breaking the hold of the aristocracy and improving the lot of the peasants. "Only by giving liberty with reforms," says Rivera, "can we demonstrate that Fidel is a fraud." Guatemala's junta of colonels has given the country its biggest—and most surprising—boom in history. In Brazil, the question was not whether Leftist João Goulart would lead Latin America's biggest nation into civil war—but when. Under Humberto Castello Branco, a retired army general, the country finally seems pointed toward stability, if the reforms continue and the revolutionaries can keep from fighting among themselves.

Far less successful were the Argentine generals who ousted Arturo Frondizi in 1962 only to compound their country's problems and transfer the mess to a weak President Arturo Illia. In the Dominican Republic, the military overthrew the inept Juan Bosch, then turned over power to a triply inept civilian triumvirate. And in Honduras, the army officers who toppled President Ramón Villeda Morales last year are slowly running the country's faltering economy into the ground.

Continuing Rumbles. Of the handful of nations that have escaped recent revolution, Mexico continues to flourish under its one-party "guided democracy." Chile, which has gone 32 years without a revolution, inaugurated a new President last week—Christian Democrat Eduardo Frei, a 53-year-old former attorney who defeated a Castro-lining Marxist in the country's September elections. Wealthy little Costa Rica, with its long tradition of law and order, also seems secure. Venezuela owes its stability to the fiery determination of President Rómulo Betancourt and the growing statesmanship of his successor, Raúl Leoni.

But the rumbles of discontent are growing loud in Colombia, which was once regarded as the showcase of the *Alianza*. President Guillermo León Valencia was chosen two years ago as a compromise candidate of the ruling coalition of Liberals and Conservatives. Yet he has little taste for the job, spends much of his time engrossed in poetry or hunting ducks. The economy is stagnating and the coalition is splintering apart. Colombia's military men are openly critical, while opponents of the regime in Congress even talk about voting an "alternate" President in case Valencia "steps down."

BOLIVIA

A General in Charge

The conferences in the presid- palace continued almost without a b for 48 hours as the military re spread across the country. Finally, r er than risk a full-scale civil war, V Paz Estenssoro, 57, President of B climbed into his bulletproof Cadillac a tire-screeching ride to La Paz's Alto Airport. There, pale and scowl he followed his beautiful wife M Teresa, 32, and four children abo military C-47 and flew off to exi Lima, Peru. The camera of the photographer who snapped the de

THE MILITARY

A Changing Role

The military men of Latin America ...have long been more interested in pres...tige and political power than in the real ...business of soldiering. Now, while they ...are still ready, willing and able to pull a ...coup—as they did in Bolivia last week ...—they are placing new emphasis on ...a practical military problem.

They are a surprisingly large force. Since World War II, Latin American nations have kept an average 500,000 men under arms, and spent some $1.6 billion annually on their care and feeding. Much of the money has gone for such status symbols as Caracas' $10 million officers' club; millions more went into early pensions. Proudest symbols of all are some expensive toys of war. Venezuela's air force boasts a fleet of British Canberra jet bombers and U.S.-made F-86 Sabre jets. Because Peru bought four submarines, little Ecuador hurried out and got three Canberras. In 1956 Brazil spent $36 million on Latin America's first aircraft carrier (without a single plane to put aboard), so Argentina naturally added a surplus British carrier to its fleet.

Latin America's military men stoutly insist that such heavy equipment is necessary in case of war. But the last Latin American war was fought from 1932 to 1935 between Paraguay and Bolivia over a scrap of wasteland known as the Chaco. There seems little likelihood of another such territorial struggle; nor is there much chance that any World War III could be fought in Latin America.

Learning about Guerrillas. The one future war that Latin Americans are likely to fight is quite a different sort. It is against the flitting Castroite guerrillas, who promise to "liberate" the people. This is the kind of war that Latin armies have only recently begun to learn about.

Some 1,500 guerrillas already operate in Venezuela, defying the best efforts of the army to root them out. There are will-o'-the-wisp Communist bands in the Andean hills of Colombia and Peru, in the jungles of Honduras and Guatemala. The guerrilla potential elsewhere is described by one top U.S. policymaker as "something that is going to keep us awake at night in the next ten years."

The guerrillas openly sneer at clumsy pursuit by tanks and jets. With a nudge from the U.S., Latin American military budgets are starting to call for Jeeps, mortars, radios, helicopters, coastal patrol boats and other mundane articles that would have been sniffed at a few years ago. Hundreds of enlisted men and officers attend the U.S. anti-guerrilla training schools in the Panama Canal Zone. They study guerrilla tactics and jungle survival, learn how to strangle a man with a bootlace, operate communications equipment, camouflage themselves and shinny up rope ladders like spiders.

From Bully to Friend. Latin America's soldiers are also learning about "civic action"—the needful art of winning *campesino* support before the guerrillas do. One of the reasons Fidel Castro survived in Cuba's hills was that the peasants despised Dictator Fulgencio Batista's bullying troops. By contrast, the Bolivian army runs eight experimental and educational farms for *campesinos*. What popularity Bolivia's new junta chief René Barrientos commands stems partly from the fact that he is an ardent supporter of *Acción Civica*. Peru's army labors mightily building roads into the undeveloped eastern lowlands. In Guatemala, troops have built football fields, made Christmas toys, turned ammo cases into school desks, and built public bathhouses.

The new emphasis is most noticeable in Colombia, where 90% of the nation's army is committed to anti-guerrilla warfare. Colombia's war began in 1948 as a political feud between the country's liberals and conservatives, soon degenerated into a senseless episode of banditry that has cost 200,000 lives in 16 years. Not until two years ago when Major General Alberto Ruiz Novoa became War Minister did the government make any headway.

Ruiz Novoa splintered his unwieldy divisions into tiny, mobile hunter-killer groups and sent them out to play hide and seek with guerrillas. *La violencia* has been cut 80%, and the number of bandits killed climbed to almost 800 last year. At the same time, civic action hands out medical aid, helps peasants build schools, push through roads and expand farm output. "The Colombian peasant is the soldier's friend now," says an army commander, "and we can't let him down."

Not so long ago, Britain's **Harold Wilson**, 48, was barking "I'm not a performing seal!" at lensmen who tried to photograph him drinking tea. But times do change, and in Hampstead the Prime Minister obligingly teed off to cozy up his image. It was billed as a pause in the day's grind. "I unwind quickly in the fresh air," Wilson offered, adding, in case the photographers couldn't tell: "I'm not very good at golf." Feet too close together, knee locked, arms carefully flexed, he poised to drive—er, ah, maybe it was supposed to be the other way around. Well, anyway, there wasn't a ball in sight, and as the columnist in the London Daily Mail observed, "I've never heard of a golfer shoving the stem of his pipe into the roof of his mouth during a swing!"

Harry S. Truman and **Dwight D. Eisenhower** haven't been in agreement on too many topics. But some subjects clearly transcend old animosities. This week the Planned Parenthood–World *Population federation announces in* Manhattan that the two ex-Presidents will become co-chairmen of its Honorary Sponsors Council.

• • •

"I do not collect," said Washington's Gwen Cafritz. She meant paintings, since she was a guest, not a hostess, at the Manhattan society opening of 32 landscapes and still lifes by French Artist **Bernard Buffet**, 36. The gallery was filled with art inexperts. "Buffet paints a variety of styles!" remarked one black tie, eying some Picassos hanging near by. But Peter Duchin's band was playing, the buffets were laden with filet mignon and champagne, and even the upper-case Buffet felt decidedly à la mode. Already 20 of his oils—which he simply dashed off—were sold at Dom Pérignon prices ($7,000 to $12,000).

When a Russian thinks of an American novelist, he thinks of serious types, social historians like Theodore Dreiser and Upton Sinclair. But the Wapshots' chronicler, **John Cheever**, 52, having updated the U.S. picture, was busy catching up on the Soviets too. In Moscow, at the end of a month-long tour of the Soviet Union, Cheever heard Poet **Evgeny Evtushenko**, 31, recite his verse, after which Evtushenko took Cheever, another visitor, Novelist John Updike, and several pretty comrades off to a country *dacha* for some tonic research into suburban Soviet vodka parties. Cheever concluded that Evtushenko's lyric performance was "the most exciting thing I've ever heard," but he admired even more how Soviet writers have accepted their role as "leaders in life and love and art."

A letter from the PUBLISHER

Bernhard M. Auer

THIS WEEK'S REGULAR ISSUE

FOR *the second time in its history,* TIME this week is sending two editions onto newsstands and into subscribers' mailboxes across the U.S. and Canada. The regular issue, dated Nov. 6, has Philadelphia City Planner Edmund Bacon on the cover, and features—along with all the other sections—a comprehensive story and eight pages of color pictures in MODERN LIVING on the dramatic progress of urban renewal in the U.S. That issue went to press some 60 hours before the polls opened for the presidential election of 1964 and was delivered on the regular schedule.

This extra edition, which started coming off the presses the morning after election, follows the precedent established in 1960 when we published an Election Extra with President-elect John F. Kennedy on the cover. For this issue's cover, Artist Henry Koerner turned political reporter and traveled with President Johnson for several days sketching campaign scenes. His drawings formed a frieze for a characteristic picture of the victory-bound President taken by Staff Photographer Walter Bennett. The whole edition was written, edited and produced by a New York staff of about 140 people working through election night and into Wednesday morning. Key members of that staff were some 30 editors, writers and researchers who interpreted what the voters had *said*—calling on their background *knowledge*, press association dis*patches*, other general sources of information and the special reports of 179 TIME correspondents and stringers spread over all 50 states.

While this extra follows the 1960 tradition, it is in some important respects quite different. Perhaps the biggest difference is the use of color for the cover. The cover was designed and laid out in New York and printed in advance in Chicago and shipped to other plants to be bound with the black-and-white pages at press time. Since we were aiming for greater speed as well as quality, the project called for considerable expansion of our production and delivery system. Normally, all type for TIME is set in Chicago, and film or plates are sent from there to other plants. For this issue, type was set in Washington, Albany and Los Angeles as well. In addition to our six usual printing locations in the U.S. and Canada—Montreal, Chicago, Washington, Albany, Los Angeles and Old Saybrook, Conn.—this issue was printed in San Francisco and also bound in Hartford and Concord, N.H. Massive airlift was used to speed the copies to newsstands and post offices, utilizing both chartered and commercial planes.

All of our 2,977,200 subscribers in the U.S. and Canada are getting this issue as a bonus, and more than 600,000 copies were printed for newsstand sale. Readers of the more than 500,000 copies that are distributed overseas are receiving it as a supplement bound into the next regular issue, dated Nov. 13. It is our hope that both at home and abroad it will contribute to the understanding and appreciation of the U.S. elective system at work in 1964.

THE 1960 PRECEDENT

TIME is published weekly, at $9.00 per year, by TIME Inc. at 540 North Michigan Avenue, Chicago, Illinois 60611. This extra issue is for the purpose of communicating news received too late for insertion in the regular issue. Second-class postage paid at Chicago, Illinois and at additional mailing offices.

THE ELECTION

THE VOTE

Mandate, Loud & Clear

The dimensions of Lyndon Johnson's victory were staggering. He won every one of the East's 142 electoral votes, becoming the first Democratic President ever to carry Vermont, the first since 1912 to win Maine. He made a clean sweep of the Midwest, the Mountain and Border States, the West Coast, appeared to have lost only Arizona in the Southwest. Only in the South did Barry Goldwater score a breakthrough, capturing Alabama, Georgia, Louisiana, Mississippi and South Carolina.

Remarkably, the pattern of Democrat Johnson's victory was strikingly similar to Republican Dwight Eisenhower's in 1956—only with the party loyalties reversed.*

The Clingers. After a numbingly dull campaign, election night promised to be almost as dreary. As soon as the first returns trickled in from Kentucky, Indiana and Ohio at around 7 p.m. (E.S.T.), it became clear that Lyndon was headed for a big victory. The only question was: How big? By 9 p.m., when Vermont had plopped into the Democratic column and television's psephologists flatly declared Johnson the winner, the answer became obvious: very, very big. In fact, TV's impatient forecasters were projecting final results with almost impudent haste: CBS suavely announced Bobby Kennedy's victory over Ken Keating in New York with no votes showing at all.

Johnson's electoral margin of 486 to 52 votes (assuming he loses Arizona's five) fell short of Franklin Roosevelt's record 523-to-8 victory over Alf Landon in 1936, but it was the second best in history. Moreover, when the final returns are tabulated, Johnson seems certain to be credited with the greatest popular-vote margin in U.S. history —some 61% of the record 70 million votes cast, and a plurality of some 15 million votes. In 1936, F.D.R. won 60.8% of the vote and had an 11,078,204-vote plurality.

By themselves, the statistics were impressive enough. But even more impressive was what they meant to coattail-clinging Democratic candidates for Congress, governorships and state legislatures. Only ticket splitting of incredible proportions saved moderate Republicans such as Governor George Romney of Michigan and Governor-elect Daniel Evans of Washington from defeat; despite considerable splitting, New York's Ken Keating, Illinois' Chuck Percy, Oklahoma's Bud Wilkinson went down. In the Senate, Democrats were assured of retaining their lopsided majority of 66 to 34, or even of increasing it. Thanks to Lyndon's sturdy coattails, Democratic gubernatorial candidates won in Indiana and West Virginia.

Cashing the Checks. "I want the mandate of this election to be written strong and clear," said the President, "so that none will mistake the meaning." As far as figures are concerned, the mandate could hardly have been written more clearly. But since the figures meant anti-Goldwater as much as pro-Johnson, carrying out the mandate will not follow automatically.

During the campaign the President handed out blank checks to dozens of disparate groups, and cashing them will require a miracle of political statesmanship. Johnson promised a Government "both thrifty and progressive"; it will have to be both if he is to balance his budget and still put across wide-ranging medicare, education and anti-poverty programs. Big steel is pressing for higher prices; Lyndon's resistance could turn some businessmen against him. Ford's 130,000 United Auto Workers Union members threatened to strike by week's end; Johnson's newly won prestige will be damaged if they do and the strike is long.

Deferred Decisions. With the campaign over, Johnson must also make some long-deferred decisions. "More of the same" may not keep Viet Nam afloat much longer. Laos and the Congo remain dangerously explosive. Domestically, the President must cope with impatient Negro leaders, who agreed to call off civil rights demonstrations during the campaign, but will be on the march again if their demands are not met.

Abroad, the President faces a ply of problems. De Gaulle's of NATO further French de- and the uncertainty over Britain's de- up the need for defense posture

AP

LYNDON, LADY BIRD & LYNDA BIRD AS THE LANDSLIDE ROLLED

Now the task is to merit the tribute.

* Eight years ago, Ike lost only Alabama, Arkansas, Georgia, Mississippi, the Carolinas and the Border State of Missouri to Adlai Stevenson.

major repairs on the Atlantic Alliance. Johnson's task is complicated by the shaky underpinnings of so many governments. In Britain, Prime Minister Harold Wilson has a fragile five-vote majority in Parliament, which began its new session as the U.S. was voting. Wilson is expected in Washington next month, but one of his first acts was to propose the nationalization of steel, and if he keeps pushing such controversial legislation, he may not be around for too long.

In Moscow, a new B. & K. diarchy is in power, but unless Brezhnev and Kosygin manage to work in tandem more effectively than Bulganin and Khrushchev did, an internal power struggle may grip Russia and becloud efforts for an East-West *détente*. Peking's atomic blast may make it more difficult than ever for the U.S. to keep nations along the periphery of Red China from falling under its influence. In Latin America, Johnson must take up the unfinished business of Fidel Castro, not to mention such trouble spots as Bolivia.

Finding the Way. Despite the problems, Lyndon Johnson is now able to act with the confidence that he is President in his own right. He has overwhelming encouragement to move and an overwhelmingly Democratic Congress to help him move. But in moving, he must be prepared to make enemies, unless he can somehow keep business and labor, moderates and liberals, dozens of often conflicting interests happily balanced.

"I do not accept Government as just the 'art of the practicable,'" the President told a crowd in Austin on the eve of his election. "It is the business of deciding what is right and then finding the way to do it." There is little doubt that if Lyndon Johnson wants desperately to do "what is right," and if he finds the way most of the time, he will grandly merit the astonishing tribute paid him this week by his fellow citizens.

Anatomy of Triumph

When the land suddenly slides, most of the old familiar patterns are obliterated—and Johnson's triumph was achieved by smashing across regional, economic and ideological lines that had long held firm for the G.O.P. At the same time, he drew massive support from all of the traditional Democratic voting blocs and metropolitan machines to rack up huge pluralities in the big cities.

Only a massive defection of Republicans to Johnson—based generally on the fear that Goldwater was simply too unpredictable to be trusted with one of the highest positions of leadership in the free world—could account for Johnson's sweep of New England and the Midwest.

Town & Country. The small Protestant towns of New England had long been strongholds of Yankee conservatism; yet Johnson knocked them off consistently. Verona, Me., (pop. 435) went for Johnson 139 to 55—almost an exact reversal of its 1960 margin for Richard Nixon. Of Connecticut's 169 towns, Johnson won all but eleven —a feat unmatched even by Roosevelt. While conservative on economic and domestic matters, New Englanders tend to be international-minded—and Goldwater's trigger-happy image hurt him there. So did his confused stance on social security, particularly since it was so publicly aired by Fellow Republican Nelson Rockefeller in the New Hampshire primary.

The widespread fear that Goldwater might slash farm price supports and downgrade the Rural Electrification Administration helped lead to his sorry showing in the rural Midwest. Johnson almost wiped out the big G.O.P. margins traditional in downstate Illinois.

proved far more concerned about TVA and social security than the race issue, voted for L.B.J. He even carried Gary, Ind., where racial tensions were taut and Alabama's Governor George Wallace had scored heavily in a presidential primary.

The Johnson landslide also destroyed Republican theories that there might be a large "silent vote" cast by conservatives who had not voted regularly before and who did not want to tell pollsters they planned to vote for Barry. Nor did large numbers of voters pass up the presidential race out of apathy or coolness toward both candidates. The presidential vote broke all records. The magnitude of the President's conquest also swept many other Democrats, such as Governor Otto Kerner in Illinois and, most notably, Senate Candidate Robert Kennedy in New York, to victory.

Yet perhaps the most fascinating facet of the election was the amazing amount of ticket splitting, as voters chose L.B.J.—and then skipped down the ballot to vote for deserving Republican candidates (*see The Senate and The Governors stories*).

In the end—with the possible exception of salvaging his home state of Arizona—all that Goldwater and his devoted band of active amateurs got out of their many months of hard work was the distinction of sufficiently upsetting the voting patterns in the South to carry five states. And he triumphed in those states mostly on the voters' belief that he would slow the Negro revolution—a stance which now seems to have little future in U.S. politics.

REPUBLICANS

The Party Future

What does the Republican Party do now? Plainly, it must start picking itself up, which will take time and cause pain. But the pattern that eventually emerges will almost certainly be designed by moderate men of the center.

On a personal level, Goldwater's future as a party power seems bleak indeed. In Republican history, only Thomas E. Dewey managed to suffer defeat (in 1944) and remain the dominant man in the party through the next election. But unlike Goldwater, Dewey had a powerful, well-oiled machine. Moreover, Dewey was beaten in 1944 by Franklin Roosevelt, a wartime hero of incomparable stature, and many people felt that Dewey should have another chance. Again, such is not the case with Goldwater.

So Complete. In a broader sense, the conservative cause whose championship Goldwater assumed suffered a crippling setback. For a number of years, the conservative and moderate wings of the G.O.P. had taken increasingly divergent paths, with the moderates dominating. Conservatives cried out constantly that if they were but given the chance, the G.O.P. would not only be stronger under their leadership, but would win decisively. This year they got the chance. Certainly, Barry represented them badly, but the humiliation of their defeat was so complete that they will not have another shot at party domination for some time to come.

Thus, the Republicans who emerge as leaders from the catastrophe of 1964 are veterans of the moderate wing. Some were not up for re-election and were essentially unscarred by the Democratic juggernaut—such as Governors Scranton and Rockefeller and former Vice President Richard Nixon. But of the G.O.P. candidates who breasted the anti-Goldwater tide, the strongest man in sight is Michigan's Governor George Romney, who won re-election in spite of an overwhelming Democratic victory in his state. If Romney wants to make a bid for the 1968 presidential nomination, his credentials will be impressive. His business background as president of American Motors, plus his proven ability to draw solid support from Negro and labor voting blocs, make him a top G.O.P. prospect.

AP

ROMNEY & WIFE IN VICTORY
Stronger than an elephant.

From the Clutches. Of course, the contest between moderates and Goldwaterites for control of the party machinery could well become a brutal fight before it is resolved. The National Committee's leadership, notably Chairman Dean Burch, was hand-picked by Goldwater. The moderates badly need to take over the committee as a power base, will probably pressure Burch to quit soon after the first of the year. Some state organizations, too, must be wrested from the clutches of Goldwater men. And in Congress, symbols of the right wing like House Minority Leader Charles Halleck of Indiana and Minority Whip Les Arends of Illinois may find themselves threatened by young moderates bent on revolt.

Whatever the mechanics of change to come, one thing is certain: Barry Goldwater and his type of conservatism have had their moment in the sun.

THE PRESIDENCY

A Different Man

(See Cover)

In Texas throughout Election Day, Lyndon Johnson, so overwhelmingly loquacious in past weeks, was understandably subdued. Now and then, as newsmen caught up with him, the President uttered only soft-toned commonplaces, totally noncommittal, often downright diffident. Only once was he caught off guard. Had he consulted with any of his political advisers? Replied he, in one of those remarks that somehow jar the image of the presidency: "The only political adviser I talked to I slept with."

"Hold Your Potatoes." On through the day, Lyndon and Lady Bird moved, almost ritualistically, as in a stately saraband. To the old Johnson homestead they went, to reminisce a while about Lyndon's boyhood and to sit in the porch swing. Later they visited at the ranch of A. W. (Judge) Moursund, Lyndon's old friend and trustee of his financial interests. The President sat slumped in a living-room chair for a while and watched the election returns on television. Then, by helicopter, he and his party flew to Austin's Driskill Hotel, waded into the bedlam of newsmen, TV cameras and well-wishers who attended Johnson's every movement. Solemn, scarcely smiling, he shook hands with several people, at length slipped into a suite, where again he checked the TV election roundup.

But Lyndon couldn't sit still. Periodically during the evening, he emerged into full view of waiting TV cameras. Now it was to the gubernatorial mansion to visit with Governor John Connally, now to the election headquarters of Senator Ralph Yarborough, now back to the Driskill, now to the Municipal Auditorium. Each time, reporters caught him to cadge a fresh word, a hint of triumph, and each time the President managed to wear a properly somber expression. Yes, he felt well. No, he would have no statement till later. "I'll have a statement if you'll just hold your potatoes," he said.

"'I Cannot Fail.'" To many who watched him, Lyndon Johnson's mien was a fascinating thing to see. The man who was President-by-accident had suddenly realized that he was now President-by-choice, an achievement gained by whatever forces were at work for him during the campaign, but gained, nevertheless, on his own. Thus, as he stepped before the TV cameras at the Municipal Auditorium at 1:40 a.m., he spoke as a man confident of his powers to lead.

"Tonight," he said in reserved tones, "we must face the world as one. Tonight our purpose must be to bind up our wounds, to heal our history, and to make this nation whole. This victory is a tribute to the program begun by our beloved President John F. Kennedy. It is a mandate for unity. It will be a Government that provides equal

opportunity for all and special privileges for none. It is a command to build on those principles and to move forward toward peace and a better life for all our people. I promise the best that is in me for as long as I am permitted to serve. I ask all those who supported me and all those that opposed me to forget our differences, because there are many more things in America that unite us than divide us . . . We will be on our way to try to achieve peace in our time for our people and try to keep our people prosperous. I would like to leave you tonight with the words of Abraham Lincoln: 'Without the assistance of that Divine Being who ever attended us, I cannot succeed. With that assistance, I cannot fail.' "

Wide Swath. There was a time not too long ago when President John Kennedy, relaxing with friends in the oval office, would grin innocently and murmur, "Say, whatever became of Lyndon Johnson?" That crack always got a good laugh, for it was a succinct expression of the oblivion into which Johnson had fallen as Vice President.

Then came the oath of office on Nov. 22, 1963, and Johnson was a different man. Thoroughly schooled in the traditions of government, sobered by the climactic events of that day, Johnson managed the transition of office with such swiftness, determination and efficiency as to make the nation and the whole world marvel at the orderliness of the U.S. political system in crisis.

In the months that followed, he marshaled the energies and patriotism of disparate forces in the Government and gunned ahead with the policies of the New Frontier. He was, and to a great extent still is, an uncertain hand at mastering the intricacies of the U.S. role in foreign affairs. But he brought much of Jack Kennedy's domestic program to fruition with great skill. The tax cut, the civil rights bill and the federal pay raise—all were products of the resoluteness with which Johnson assumed his unaccustomed leadership. That leadership paid him a dividend: the respect and confidence of a wide swath of the U.S. business community, which recognized in Johnson a strong strain of prudence in economic affairs.

From these successes—from out of the shadow of Jack Kennedy—emerged still a different, a bolder man, whose aim it was to imprint the Johnson character on the one year remaining to him as President. At Ann Arbor, Mich., in May, Johnson established the theme on which he planned to build his quest. The new goal for America, he declared, was to be called "the Great Society." Said he: "For half a century we called upon unbounded invention and untiring industry to create an order of plenty for all of our people. The challenge of the next half century is whether we have the wisdom to use that wealth to enrich and elevate our national life—and to advance the quality of American civilization."

Sure Touch. Precisely how the U.S. was to achieve this utopia, Johnson never spelled out in detail. Nevertheless, it was with that pronouncement that he launched his campaign for election. It was a campaign that never succeeded in rising above the promise of a dream.

Emboldened by a burgeoning prosperity, and by the failure of Goldwater to make a reasonable and acceptable case for his own brand of conservatism, Johnson played the electorate like a mighty pipe organ. He drowned out concern over the Bobby Baker scandal

AP

LUCI DANCING AT RALLY
Daddy couldn't sit still either.

and the war in Viet Nam with platitudes about peace, prosperity and prudence. While Goldwater ranted about TVA, social security, the Supreme Court and conventional nuclear weapons, Johnson issued the soothing assurances of a benign protector who promised to save the nation from the welter of international chaos with the sure touch of sober responsibility.

In Detroit, he roused his audience with a declamation about control of nuclear weapons. "Any man," cried Lyndon, "who shares control of such enormous power must remember that 'He that is slow to anger is better than the mighty; and he that ruleth his spirit is better than he that taketh a city.' "

Hunger. As the campaign progressed, Johnson took to carrying around a sheaf of reports from pollsters; he pulled them out and leafed through them at the slightest provocation. His walks on the White · House grounds, with reporters chasing in full tilt, took on the aspect of a circus performance. His wife scoured the countryside for votes, while Luci Baines did her part frug-dancing up a storm wherever went. More and more, Johnson eyed back and forth across the drinking in huge draughts of adtion from the crowds, shaking sands of proffered hands until his bled. Each foray into the crowds ated him only for the moment, such experience was a narcotic that quired constant renewal.

And as he hungered and fed, Johnson found himself steeped deeper and deeper in sentimentality. He became folksy Texan who brought the dency to the street corners of the tion, who left the issues of moment hind and instead doled out intimacies of humility and provincial innocence. "Yes," he drawled in Peoria one "all day I have seen your smiling faces. All day I have looked into your countenances. All day I have seen family life, the mothers and the children of America here in the heartland of great state of Illinois, and those voices sound powerful to me. They sound clear. They sound free. And when I return the White House, and the policeman turn the keys on those locks on the big black gates, and I get to those acres that are back of our house, I going to be folks like you that sustain me in my labors and my thoughts."

It was much the same Lyndon Johnson who late on election night returned through a driving rain to his ranch on the banks of the Pedernales. He invited everybody—well, almost everybody—to join him and Hubert Humphrey there the next day for a great barbecue, a fitting, folksy feast to celebrate a great popular victory.

THE VICE-PRESIDENCY

The Happy Warrior

It was drizzling when Hubert Humphrey awoke in Minneapolis on Election Day morning, but nothing could dampen his spirits. "When we get to Waverly," he told his wife Muriel during the 40-mile drive to their home town, "there will be no rain. This is St. Hubert's day."

Humphrey was right. To vote, the Humphreys went directly to the one-room township hall, where they stepped in adjoining booths and marked their paper ballots with pencils. Afterward, talking with reporters outside, Humphrey said: "I woke up some time back and realized if I were elected Vice President I wouldn't be Senator for Minnesota any more, and that made my heart ache a little."

Mandatory Days. At his lakeside ranch house, Humphrey changed into sports clothes, whiled away the afternoon talking to Minnesota friends on the phone. Later, he and Muriel returned to Minneapolis, went to a Sheraton-Ritz Hotel suite to listen to returns. There the South Dakota druggist's son

THE GOLDWATERS AFTER VOTING
Then an avalanche of rejection.

and 20 minutes in bright sunlight, joking with schoolchildren. At one point he playfully marked a ticktacktoe square on his wife's neck, refused to "look left" for a photographer, exclaiming in mock horror, "We don't have such directions around here." He even managed to startle reporters when he emerged from the polling booth, saying, "I split my ticket—I always split it" (presumably for Democrats for local office). As far as anyone could see, Barry Goldwater was the most relaxed man in Arizona. "Oh, it's a horse race," he said mildly. "You win it or you lose it. Whatever the Lord wants—I'll live with it."

Issues That Backlashed. Barry Goldwater carried his home precinct—the 23rd—by better than 3 to 1, but his neighbors' approval was cold comfort against the avalanche of rejection that roared across the nation. Why was it that the truths that seemed so self-evident in the clear desert air—that the growth of big government would result "in the ultimate destruction of American freedom"—had backlashed into disastrous defeat?

Almost every issue Goldwater had laid his hand on seemed to turn into a sorcerer's-apprentice broom, mastering Goldwater before he could make his position clear.

He tried to defend "extremism." In arguing for a stronger national defense, he got himself indelibly branded as someone who had an itchy finger on the nuclear trigger. A vote against civil rights legislation, which Goldwater cast on narrow constitutional grounds, hurt him everywhere except in the Deepest South. The one issue Goldwater had going for him all the way—the lack of probity in public life—blurred as Barry ...self dipped into the barrel to hurl ...ms of "fascist" and "soft on Com... Goldwa...against his opponents. Even ...dition of ...roof positive, with the ad... Billie Sol Estes, Jenkins to the trio of ... by Baker and Matt McCloskey, was ... how buried by momentous world event... from the ad... vent of a socialist government in Britain and change in the Kremlin to atom bombs in China. As a result, the candidate too powerful to need to conciliate in San Francisco became by campaign's end a kind of pariah to be kept at arm's length for many Republican candidates who wanted to survive the holocaust.

Lulled Partisans. Perhaps the compounding error his fellow professionals were least likely to forgive Goldwater was the utter lack of coordination of his campaign. He could boast that he had put the G.O.P., which in August was some $600,000 in the red, back in the black. The more pertinent fact was that the organization that had maneuvered the conservative wing into power in San Francisco had turned into a bumbling, disorganized wreck when faced with conducting a full-fledged campaign on a national scale. And the greatest bumbler of them all was Barry, who repeatedly took audiences of superheated partisans and all but lulled them to sleep, who chose to attack public power in the TVA heartland, social security before audiences of oldsters.

"You know we conservatives are great believers in the fact that human nature doesn't change," Barry explained at the beginning of the campaign. "The only thing you can do about history is try to make it better the twelfth or 20th time around." But for the vast majority of voters, one time around was enough. On election night, Barry Goldwater went to bed early, his message unheeded.

Off the Treadmill

The man in the Homburg hat, the Chesterfield coat, the blue suit and the shirt with French cuffs was back driving his Cadillac to his salmon-pink summer house on a bluff overlooking Lake Ontario. Behind him were two months of exhausting campaigning, a 60,000-mile trail that had led him into 148 cities in 40 states. William Edward Miller, 50, the bantam gut-fighter who had been put on the ticket "because he drives Lyndon Johnson nuts," had come home to roost, and not a day too soon

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to suit him. "The British have the right idea," he said. Presidential election campaigns have become "too long, too expensive, too arduous and too boring for the public."

Miller should know. Initially, he had envisioned a month of talking to G.O.P. groups, binding up the post-convention wounds as only a former G.O.P. National Committee chairman with acquaintances throughout the party could do. Then an all-out campaign to woo independent and Democratic votes, backed up with a heavy nationwide TV coverage. Instead, Miller found himself on a weary treadmill, trying to explain the various positions taken by his standardbearer.

Early he settled on a basic stock pitch, made it over 150 times until he groaned, "God, I'm tired of hearing that same speech." Week after frustrating week he was scheduled into small rural towns across the nation, carried on with grim determination to do his mediocre best, until the spark had gone, the acid evaporated, and only a handful of home-town cronies aboard the silver-and-blue campaign plane were left to dispel the gloom. "I know exactly what I'm going to do if I lose," he quipped to a friend, "but I don't know what the hell I'll do if I win."

THE SENATE

Junior to Teddy

It was the most watched U.S. Senate race of 1964, and he surely will be the most observed junior Senator in many a term. Democrat Robert F. Kennedy, 38, put an end to the 18-year congressional career of New York Republican Liberal Kenneth Keating, 64, and joined his brother, Teddy, in the Senate.

From the day Bobby began his campaign two months ago, the Kennedy name worked its magic. The carpetbagger issue faded. In towns where Keating drew only 25 people, the former U.S. Attorney General pulled 2,000. In Buffalo, 100,000 turned out. Many were squealing teen-agers—but there were also throngs of voting-age women. In the background, a smooth, tough Kennedy machine worked like a greased piston. And the Johnson coattail helped. In upstate New York, where Republicans normally outvote Democrats two-to-one, Kennedy won half the votes and robbed Keating of a crucial 700,000-vote cushion he had counted on. Then in metropolitan Manhattan, Kennedy drop-hammered Keating with a 500,000-vote margin that Keating could never erase. His statewide margin: reaching for 600,000.

It was, said Senator-elect Kennedy, "an overwhelming mandate" for the policies of John F. Kennedy, "and, of course, Lyndon Johnson."

In other key Senate races:

▶ Robert Taft Jr. has a name that has magic in Ohio, but it took more than magic to buck the Johnson tide, which peaked at better than 700,000. The Republican Representative Taft, 47, problem was not just incumbent Senator Stephen M. Young, an aging (75) [illegible] too echo of Lyndon Johnson. A great obstacle was the all-too-likely possibility that voters might not be able to distinguish between conservative Republicanism Taft-style, and Goldwater style. Taft was honest enough to say that he agreed with Goldwater in [illegible] areas, particularly fiscal. But he went on to insist that he was a "middle-of-the-roader on education, health and welfare, and a liberal on civil rights. Whether Taft had got the point across depended on the outcome of a [illegible] hanging vote count.

▶ George Murphy, 62, the old Hollywood song-and-dance man, left Pierre Salinger, 39, California's incumbent Democratic Senator of three months, a step behind. The early odds—and [illegible]—had been with former Presidential Press Secretary Salinger. Among California's 8,000,000 registered voters, Democrats hold a 1,500,000-vote edge. But Murphy built up an early lead in populous Los Angeles County, and Pierre's upstate strength proved to be too late. A onetime promoter of right-wing causes, Campaigner Murphy suddenly became the soul of moderation, around moderates—yet kept the conservatives happy. Then when Pierre came out against a proposed amendment which, in effect, would repeal state and local anti-discrimination housing laws, Murphy kept his lip buttoned. The proposition won. Then there was the carpetbag issue, and a TV debate that only proved what late-night TV viewers knew all along—Murphy is still the good guy.

▶ Pennsylvania's Republican Senator Hugh Scott, 64, may have been [illegible] amused—at first. Running against what was a 51-year-old spinster named Genevieve Blatt, the state's secretary of internal affairs and a liberal Democrat addicted to flowery hats. She had won the Democratic Senate primary by a mere 491 votes. But Scott had a few unlaughing moments as he tried to [illegible] on to his seat. A moderate Republican, he was slow to embrace Goldwater, never appeared on the same platform with him, but the Goldwater camp hounded him. The lead seesawed for hours, until Scott finally eked out a slight lead in a race that still [illegible] decided by the absentee ballots.

▶ Wisconsin's Senator William Proxmire made a series of speeches in 1959 and 1960 castigating Lyndon Johnson's "dictatorial" tactics as majority leader. In the 1964 campaign he made it clear that he was [illegible]

Washington	*Albert Rosellini*	Daniel Evans
West Virginia	Hulett Smith	Cecil Underwood
Wisconsin	*John Reynolds*	Warren Knowles

bygones be bygones, but Proxmire's
ferences with the President persisted
at the polls. During anxious early
hours, in which L.B.J. began rolling up
huge majority in Wisconsin, Bill Prox-
re, 49, trailed his moderate Republi-
an opponent, Wilbur Renk, 55. Prox-
e finally won, but his victory was
s a reflection of his own popularity
n of rural distaste for Goldwater's
m policies.

Joseph D. Tydings, 36, will follow
e path of his stepfather, Maryland's
me Democratic Senator Millard
dings (1927-50). A self-styled "Ken-
dy Democrat," Joe Tydings was a
K. crony and appointee (U.S. At-
ney for the District of Maryland),
d Marylander Eunice Kennedy Shriver
chairman of his "Citizens for Tyd-
s" organization. For Incumbent Re-
blican Senator James Glenn Beall,
a lackluster moderate who spent
years in the House and another
lve in the Senate, the defeat was
first ever.

Fred Harris was less of a name than
d Wilkinson, the former Oklahoma
iversity coach. But Democrat Harris,
had "my friend" Lyndon Johnson's
,000-vote margin blocking for him
wnfield. And that, plus a good record
a state senator, was enough to stop
publican Wilkinson. Harris won with
margin of 14,000 of the state's 900,-
senatorial votes, will complete the
two years of the term of the late
S. Senator Robert Kerr.

THE GOVERNORS

Among Them, Romney's Ramble

Michigan's Republican Governor,
orge Romney, emerged unscathed,
eed enhanced, from the Johnson
dslide. He did it by reason of his own
markable, evangelistic campaigning,
ich convinced more than 700,000
chiganders—independents and Dem-
rats, auto workers and Negroes—that
ey should fractionate their feelings.

Romney refused to don "the Gold-
ter albatross," concentrated on his
ord (he turned Michigan's chronic
ficit into a $57.1 million surplus), thus
even better in Detroit's Democratic
yne County than he had two years
. In doing so, the canny car builder
ied a ride on Lyndon's coattails to
mocratic Congressman Neil Staebler
o was held to about 53% of the
yne County vote, *v.* Johnson's 71%).
was enough to let Romney ramble,
d he may yet ramble a lot further.

Other key gubernatorial races:

Republican Daniel Jackson Evans, 39,
rously charged Washington's Demo-
tic Governor Albert ("Rosy") Ros-
ini with the unfair use of notes in a
debate. Evans needn't have worried:
ring two terms of Rosy's administra-
n, Washington voters had pegged him
an affable, backslapping do-nothing.
Evans campaigned on a 35-point "Blue-
int for Progress," also profited from
estions raised about Rosellini's "ille-
gally obtained" campaign funds, his connections with the patronage-ridden State Liquor Control Board. A Seattle civil engineer and state representative, Evans was cool to Goldwater, won both moderate and conservative support, stripped Rosy's petals 563,900 to 454,000.

▶ Chuck Percy's luck finally ran out. He had accused Illinois' Democratic Governor Otto Kerner of being a stooge of Chicago Boss Richard Daley. So Daley went right ahead to deliver Chicago, where Negro voter registration was up by 31,000 to 346,000. Moreover, the incredibly complex Illinois ballot encouraged straight-ticket voting as President Johnson won the state overwhelmingly. As a result, moderate Republicans lost one of the highly touted comers they had depended on to help rebuild a tattered party.

▶ Roger Branigin, 62, a prosperous Indiana corporation and utilities attorney, making his first try for elective office, appeared dust-dry compared with smooth Republican Lieutenant Governor Richard Ristine, 44. But Ristine was at first strongly for Goldwater, then backed away and thereby got the worst of both worlds. Newcomer Branigin easily upset Ristine.

▶ Warren Hearnes, 41, Missouri's Democratic candidate, scorned his G.O.P. rival Ethan Allen Hitchcock Shepley, 68. Said Hearnes: "He has only one chance to win, and that's if Goldwater is a sensation." Hearnes was right, won in a walkaway over Shepley, former chancellor of St. Louis' prestigious Washington University and the strongest candidate fielded by the G.O.P. in more than a decade. The Governor-elect is a West Point graduate who served ten years in the state legislature and the past four as secretary of state.

▶ Republican John Chafee, 42, won in Rhode Island by a mere 398 votes in a 1962 race that was not officially decided for weeks. This year, in the generally Democratic state, Chafee was opposed by two-term Democratic Lieutenant Governor Edward P. Gallogly, 45. Chafee urged voters to split their ballots and in that effort received aid from an unusual source. The state election board, with two of its four-man membership appointed by Chafee, publicized its own instructions about how to split the Rhode Island ticket naming Johnson and Chafee, who won with the largest plurality of any Governor in state history.

▶ Orval Faubus saw no reason to change the tactics that had won for him five consecutive two-year gubernatorial terms. So the "po' boy from Greasy Creek" unloaded corn pone on the electorate and calumny on the head of his Republican opponent, Winthrop Rockefeller, Nelson's younger brother. Rockefeller's energetic campaigning and well-financed organization were not enough, and Faubus won by a country mile.

▶ John A. Volpe, 55, a former Republican Governor, campaigned with vigah in Massachusetts, claimed greater administrative experience than his rival, Lieutenant Governor Francis Xavier Bellotti, who had upset Incumbent Democrat Endicott ("Chub") Peabody in the primary. Both Italians, the candidates tried to ensnare one another in a spaghetti bowl of corruption charges and sales-tax arguments (Volpe for, Bellotti against). Volpe spun his pasta fastah, won in a close one.

THE CONGRESS

Lyndon's Full House

The House went sweepingly, spectacularly Democratic. Despite Republican raids in the Deep South, the Democrats gained a net of some 35 seats. The 89th Congress will line up roughly 290 Democrats against 145 Republicans.

In states as distant and disparate as Colorado, Texas and Connecticut, the Democratic congressional candidates swept clean. By latest count—subject to last-minute change—they had picked up 16 seats in the Midwest alone, including three in Ohio, two in Indiana and Wisconsin, one each in Illinois, Nebraska and North Dakota. The Democrats won at least six of Iowa's seven seats; many of the victors were young upstarts, notably **John Culver**, 32, former aide to Teddy Kennedy. The Democratic phalanx marched from Maine, where at least one out of two Democrats triumphed, to Washington, where the state's congressional composition changed abruptly from 6-to-1 Republican to 5-to-2 Democratic.

Connecticut's only Republican Congressman, Abner Sibal, lost narrowly to the lawyer he had beaten in 1960, **Donald J. Irwin**. Four New Jersey Democrats defeated Republican incumbents, giving that state its first Democratic congressional majority (eleven seats to four) in 52 years. Louisville's former Democratic Mayor **Charles Farnsley**, a lanky eccentric who affects custom-made ante bellum clothes but is nevertheless a popular middle-roader, unseated Republican Incumbent Gene Snyder, who angered the district's 78,000 Negroes by voting against the civil rights bill. Across the nation, a dozen other conservative Republicans also toppled. Among them: Colorado's J. Edgar Chenoweth, Indiana's Earl Wilson, New York's Katherine St. George and Steven B. Derounian.

Dallas business leaders rallied around former Democratic Mayor **Earle Cabell**, helped throw out five-term Republican Bruce Alger, a right-winger who had opposed federal aid projects for his area, was rated in a poll of his fellow Congressmen the least effective Republican in the House.

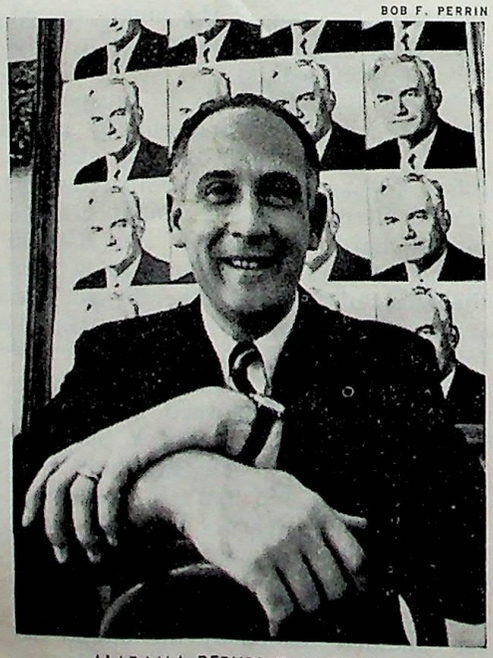
The Deep South was a different story. Not since Reconstruction had Georgia, Alabama or Mississippi sent a Republican to Capitol Hill. But in 1964, the only Republican on Mississippi's congressional ballot scored the state's greatest political upset in memory: **Prentiss Walker**, a hard-shell poultry farmer, ousted William Arthur Winstead, who had been in the House for 22 years. In rural Georgia, Republican **Howard** ("Bo") **Callaway**, a slick-campaigning textile millionaire, topped former Lieutenant Governor Garland T. Byrd, who was hurt by Johnson even though he had refused to go even halfway for L.B.J. In Alabama's eight districts, the G.O.P. put up candidates in six, won five. The victors: W. **Jack** ("Thank God for Goldwater") **Edwards**, **William L. Dickinson**, **Glenn Andrews**, **John H. Buchanan**, and **James D. Martin**, who in 1962 had come within an ace of upsetting U.S. Senator Lister Hill. All are against civil rights laws.

MANHATTAN REPUBLICAN LINDSAY
An articulate voice to be heard.

Elsewhere, the Democratic dominance of the South was undiminished. Florida's congressional lineup was unchanged: ten Democrats, two Republicans. So were North Carolina's and Virginia's, with nine Democrats and two Republicans each. Though their electoral votes went to Goldwater, South Carolina returned six Democrats, Louisiana eight Democrats—and no Republicans. The only Deep South Congressman to vote for the civil rights bill, Georgia Democrat **Charles Weltner**, benefited from a heavy Negro vote in Atlanta to pull through.

The nation's biggest city had some of its most fascinating House races. In Manhattan's 17th ("Silk Stocking") District, where everybody wears nylons, able, articulate Republican **John V. Lindsay**, 42, spurned Goldwater and captured a fourth term by a 2-to-1 ... gin over the combined totals of ... ocratic-Liberal Eleanor Clark ... and the Conservative Party's ... O'Doherty. By bagging the ... G.O.P. victory in New York, ... became a voice to be listened to ... national scene. Democrat **Adam C. ... ton Powell**, the nation's worst ... gressman according to a poll of ... ington correspondents, easily clob... three Harlem opponents. West... County, Manhattan's wealthy su... bedroom, elected a Democratic ... gressman for the first time in ... than half a century; he is Richa... **Ottinger**, former Peace Corps as... director, who beat the lackluster ... servative incumbent, Robert Barry ... also in Westchester, in the only ... test between two newspapermen, ... publican **Ogden Reid**, former p... er of the New York Herald Tr... scooped Frank Coniff, Hearst's n... editor.

BOB F. PERRIN



ALABAMA REPUBLICAN EDWARDS
A different story to be told.

Almost without exception, the ... powerful men in the House were ... turned to office. Speaker **John McC... mack** predictably cleaned up in S... Boston. Among other victors: D... cratic Whip **Hale Boggs** of Louis... Ways & Means Chairman **Wilbur ...** of Arkansas, Rules Committee C... man **Howard Smith** of Virginia, ... culture Committee Chairman **Ha... Cooley** of North Carolina. Top ... publicans also breezed in: Mi... Leader **Charles Halleck** of Indiana, ... publican Whip **Leslie Arends** of Il... as well as Michigan's **Gerald ...** Wisconsin's **Melvin Laird** and **Joh... Byrnes**, Ohio's **Clarence Brown**.

In the nation's only all-women ... Mrs. Poppy X. Mitchell, a liberal ... nois Democrat, lost to **Charlo... Reid**, a onetime singer on Don ... Neill's Breakfast Club (where her ... name was Annette King); Mrs. ... the Republican incumbent, has op... the civil rights bill, the tax cu... anti-poverty bill and the food ... program. **Patsy Mink** became the ... Japanese-American woman and ... second Hawaii Democrat (along ... **Spark M. Matsunaga**) in Co... Michigan became the first state ... two Negro Congressmen, as Demo... ic Lawyer **John Conyers** was e... in Detroit, which also re-elected ... **Charles Diggs Jr.**

Ever said "boo" to an irate goose? Someone at Ballantine's once did, and lost the argument. As a result, the Dumbarton Distillery installed a unique burglar alarm—seventy white geese. All dedicated to help protect Ballantine's against intruders.

Disturb even *one* of them and a harsh cackling ensues, summoning the entire bodyguard. Their shrill cacophony is guaranteed to petrify any trespasser and quickly alert the authorities.

A clock-round watch by the Ballantine's geese ensures that the forty-two whiskies, mostly from the Highlands, that lie in oak casks in the vast warehouses, can mature in peace; can mellow in the moist Scottish atmosphere undisturbed. Expertly blended, these whiskies will one day become Ballantine's—the Superb Scotch.

Is it worth taking all this trouble to protect Ballantine's? Try it, see what *you* think!

THE MORE YOU KNOW ABOUT SCOTCH, THE MORE YOU LIKE BALLANTINE'S

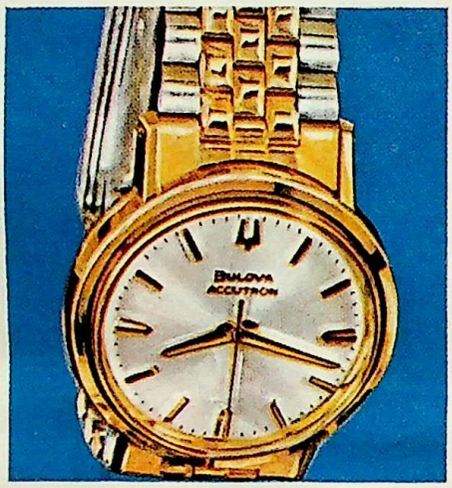
Now the Swiss split the second into 360 parts to make the world's most accurate watch



BULOVA Accutron*

TUNING FORK

Other watchmakers tried.

Now Bulova, the world's largest maker of fine Swiss watches, has produced a watch that keeps practically perfect time — where it counts — on your wrist.

This unique watch is called "Bulova Accutron".

The Bulova Accutron watch splits each second into 360 parts (your present watch divides a second into only 5 parts). It does this through the vibrations of a miniature tuning fork. 360 vibrations every second.

And the vibrations are controlled by the first electronic circuit ever used in a watch.

Compare the Bulova Accutron watch with any other.

Compare it first with the specially prepared watches entered in observatory contests. Such watches are tested under laboratory conditions (so are all chronometers). *Their laboratory performance has no relation to on-the-wrist accuracy.* Nor are these specially conditioned watches available to the public. The Bulova Accutron watch comes with a *specific* guarantee of on-the-wrist accuracy and is sold through selected quality jewellers in most parts of the world.

Prove to yourself the extraordinary accuracy of Bulova Accutron. Compare it with your own watch. Sooner or later, most watches lose their original accuracy. Loss or gain can quickly range up to 100 seconds a day. Even in quality watches. The Bulova Accutron watch stays accurate. In fact, it stays within an average of just 2 seconds a day of perfect time. Bulova guarantees this.

Now compare the number of moving parts in a watch, an indication of trouble-free performance and long life. The Bulova Accutron watch has only 9 (plus the hands, of course). Other watches (gravity-powered, self-winding or electric) have approximately 26.

Other watches need periodic cleaning. The Bulova Accutron watch requires this maintenance rarely, if ever. It will stay accurate on your wrist year after trouble-free year. Once a year you replace the power cell. As simple as changing a lighter flint. (In Switzerland the power cell costs only Fr. 2.50).

These are the reasons Bulova issues a written guarantee of specific accuracy for every Accutron watch, Remember: No other manufacturer guarantees specific accuracy. Read their "performance" guarantees, then ask yourself what "performance" means.

Now read the Bulova Accutron guarantee of specific accuracy. It states that every Bulova Accutron watch will stay within an average of just 2 seconds a day of perfect time (in fact, 1 second or none at all is more common).

Write to Bulova International Ltd., 14-16 Pedder Street, Hong Kong, for a style brochure and the name of your official Accutron agent in your country.

BULOVA International, Ltd.

ERIO PICCAGLIANI

"WAR AND PEACE" AT LA SCALA

From Red Russia, kindly aristocrats and a changed name.

OPERA

Bolshoi in Milan

When Milan's La Scala Opera invaded Moscow en masse two months ago, it brought along a boxcarful of spaghetti and enough red wine to float the Russian navy. Last week, as part of a home-and-home series, Moscow's Bolshoi Opera was in Milan. It was the Bolshoi's first excursion outside Russia in its 189-year history, and the company came 450 strong, with 40 wagonloads of scenery and costumes. But, as one Muscovite explained, "we didn't bring any special food. We don't need it. We are drunk with joy to be in the country of *bel canto*." The Italians were equally enraptured, awarded each of the Bolshoi's first ten performances a minimum of 30 curtain calls.

Caught Up. In Tchaikovsky's *The Queen of Spades*, a sumptuously staged and dramatically taut production that cast La Scala's badly mangled version into lasting shade, the dark, ringing voice of Georgian Tenor Zurab Angiaparidze dazzled the critical Italians.

But the opera La Scala audiences most anticipated was Prokofiev's rarely seen *War and Peace*, a musical epic in thirteen scenes, which even in its condensed version ran for nearly five hours. The music, brilliantly conducted by 33-year-old Gennadij Rozsdgestvenski and sung by no fewer than 54 soloists, was Prokofiev at his melodic best. The spectacle crackled with the sights and sounds of war—roaring cannons, flapping battle flags, and rank upon rank of charging soldiers. The Italians were so caught up in the drama that they burst into cheers at the entrance of the victorious Russian General Kutuzov.

Oddly enough, the only critical sniping came from the local Communists. "All the Bolshoi operas are full of prerevolutionary aristocrats, most of whom are depicted as good men and friends of the people," said one comrade. And the Communist daily L'Unità spotted a change in Mussorgsky's *Boris Godunov*. One of the aristocrats, who is beaten up by an angry mob of peasants in the fourth act, is a character called Khrushchev. In the program, however, the minor tenor role was listed simply as "A Boyar [nobleman] of Kromy." Taunted L'Unità: "They had to do some last-minute updating."

SINGERS

The Bear of Montparnasse

He looks like a big shaggy beast that has been out in the rain. Rumpled suit, tangled hair, drooping moustache, he lumbers onto the stage and stares in shy bewilderment at the audience. Rivulets of sweat stream down his face. He hikes one stumpy leg onto a straight-back chair, lazily scratches his guitar and sings. The voice is honest, pleasant, but nothing special. Yet when Georges Brassens sings, all Paris cocks an ear.

Laughless Days. Brassens, 43, known around Montparnasse as the "Bear," comes out of seclusion to sing only three months out of the year. Last week he was holding forth before jampacked audiences at Paris' Bobino Theater. He sang of the brutalities of war, the vagaries of love, the folly of politics, and the hardships of being a gravedigger ("Farewell, poor dead one; if from the bottom of the hole one sees God, tell him how much pain that last shovelful cost me"), or a streetwalker:

Even though those damned bourgeois
call them girls of pleasure,
It's not every day that they laugh,
golly, golly,
It's not every day that they laugh.

In *Brave Margot*, he told of a simple shepherdess who breast-feeds a motherless kitten, a spectacle that attracts all the menfolk in the village. His signature song is *The Bad Reputation*, which he cites as his personal credo:

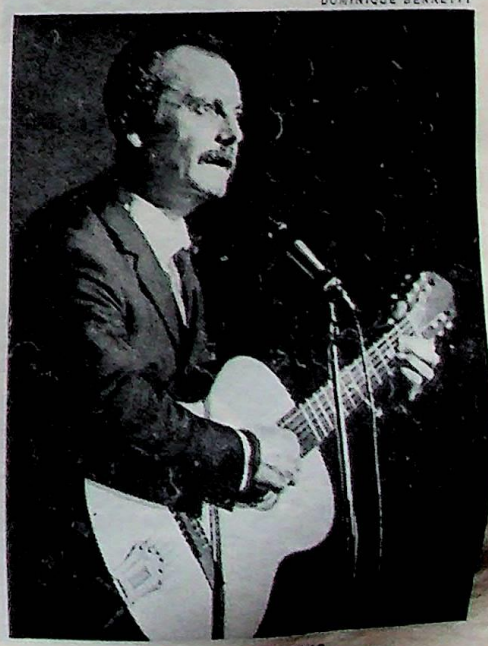
In the village, without bragging, I
have a bad reputation . . .
I do not harm anybody, going along
my own simple way,
But the good people don't like to see
One follow another road than theirs.
Everyone slanders me, save the
mutes, of course.

New Form. Everyone from taxi drivers to statesmen quotes his whimsical, rustic verses, many of which are too racy to be aired over the radio. He has sold nearly 1,000,000 record albums, as well as 50,000 copies of a $30 collection of his songs. For his opening at the Bobino, he received 10,072 letters of congratulation from his adoring fans.

Nervous, introverted, Brassens does not savor the notoriety. Son of a Flemish bricklayer, he was raised in the Mediterranean village of Sète. He quit school before graduating and, at 18, worked at odd jobs, wrote poetry and bummed around the cafés. In 1952, friends took him to a tiny club run by Patachou, Paris' famed *chanteuse*, and goaded him into singing. One week later he was the sensation of Paris.

A bachelor, Brassens lives on a dead-end alley in Montparnasse with an aged couple, who befriended him in his lean years, and a menagerie of pets. Two members of the French Academy, Novelist Joseph Kessel and Film Maker Marcel Pagnol, have been promoting the initiation of Brassens into the august Academy as "one of the greatest contemporary poets, a modern troubadour who represents a new literary form."

DOMINIQUE BERRETTY



PARIS' BRASSENS

A bad reputation.

MEDICINE

HEMATOLOGY

Heating Up the Blood

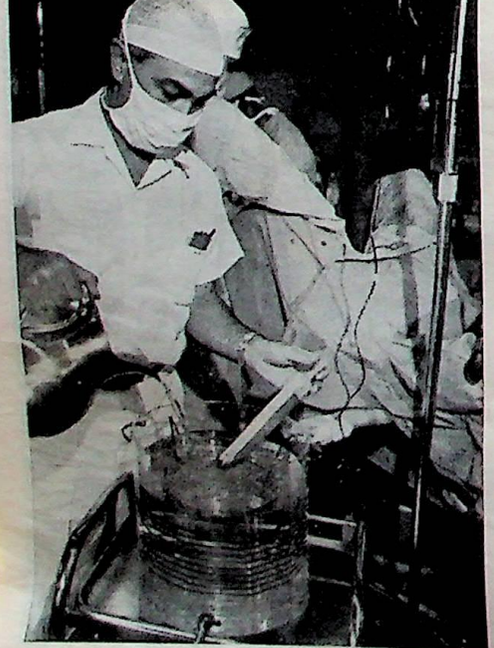
Of the 2,000,000 or more Americans who get transfusions every year, too many die on the operating table, and some as the result of a medical mistake. Surgeons and anesthesiologists, who are cautious about matching blood groups, have been ignoring the fundamental fact that circulating blood is warm; they have been pouring refrigerated blood into their patients' veins.

A single pint or two of blood that has been kept chilled to 40° F. to keep its red cells from deteriorating might do no harm. And it is usually out of the icebox long enough to warm up a little before surgery. The body can handle the difference in temperature when the volume of the transfusion is not too large. But if a surgery patient needs several pints, the shock of the frigid flood fresh from the blood bank may kill him.

The heart is the first organ that the cold blood reaches after it is dripped in through an arm vein, and the heart is sensitive to cold. Excess chilling can easily cause it to stop or go into useless twitching (fibrillation) from which the patient may never recover.

Guarding against such an accident is easy. In the *Annals of Surgery*, Dr. C. Paul Boyan of Manhattan's Memorial Sloan-Kettering Cancer Center describes a plastic coil immersed in a bath of water kept at blood heat. The blood, passing through the coil on its way from the transfusion bottle to the patient's arm, reaches his heart at just the right temperature. Heart stoppage used to occur in about 50% of patients who got six pints or more of chilled blood; it occurs in only 7% now that they get coil-warmed blood.

ALAN GROSSMAN



DR. BOYAN & COIL BATH WARMER
Cutting the risks sevenfold.

DAN BERNSTEIN

AT HOME WITH ARTIFICIAL KIDNEY
Reducing the costs by half.

THERAPY

Cleaning Up the Blood

When the kidneys fail to work and there is no hope of starting them up again, the resulting uremia is fatal in about three weeks. A hospital would seem to be the only place where victims could get adequate care. Hundreds of hospitals are equipped with artificial kidneys which are costly to install, even more costly to operate. For each of the 100 U.S. patients who regularly get lengthy treatments, usually twice a week, the cost is $10,000 a year. But now the artificial kidney is moving out of the hospital, into the home. It promises to cut costs in half.

Water from the Faucet. Two afternoons each week, a Boston lawyer leaves his office early and goes home to bed. His rolled-up left sleeve discloses two plastic tubes permanently implanted in his forearm, one set in a vein, the other in an artery. Their outside ends are connected so that blood flows freely through them. A physician from Boston's Peter Bent Brigham Hospital takes the lawyer's blood pressure. In his bedroom, near the bathroom, is a waist-high tank of stainless steel equipped with an electric motor and pump, an array of tubes, and a hose that is hooked onto the bathroom faucet.

Meanwhile, a nurse from the Brigham has put sterile coils in the tank's bath of dialysate (filtering solution) and added chemicals. She uses about 1½ pints of the lawyer's blood, stored from the last treatment, to prime the coil. Then she connects a thin hose from the artificial kidney to the artery tube in arm. He bleeds a little to finish priming and the nurse hooks an hose to his vein tube. That com the liquid circuit, and she switches the machine. When all is going well doctor leaves.

For four to six hours, while the yer can doze or read briefs, the b from his forearm artery flows thro the plastic coils in the bath. Metab poisons that should have been exc in his urine have accumulated in blood. (Uremia patients urinate. pass only a small volume of weak, tery liquid.) In the artificial kidney, poisons are leached out of the b through the walls of the cellophane ing and into the chemical bath.

Time for Homework. Dr. John Merrill, head of the Brigham's ca orenal section, says in the A.M.A. *nal* that he sees no need for a physi to be in constant attendance, pro he is within reach by telephone. thinks wives can be trained to take nurse's place, and in two cases invol Brigham patients, they have already gun to do so.

Dr. Belding H. Scribner of the S tle Artificial Kidney Unit, which h a monster machine for treating 1 tients at once under hospital cond (TIME, April 24), is also treating patients at home by essentially the technique as used in Boston, alt the equipment differs in detail. One his patients is a high school girl leaves classes early twice a week so her mother can dialyze her, while does her homework.

TELEVISION

Death of STV

Last week's political landslide was so massive that some of the buried victims went almost unnoticed. Pay television in California, for example, was extinguished.

On the California ballot was a proposition that had been put there as the result of a petition signed by over 500,000 voters. It asked, in effect, if Californians approved of legislation that had already enabled Pat Weaver's Subscription Television Inc. to go into business. Californians overwhelmingly said no.

Death Rattle. Weaver's STV, which already has over 6,000 subscribers in the Los Angeles and San Francisco areas, has been on the air since July, beaming plays, opera, lectures and ball games to clients on a pay-as-you-see basis. Over $22 million had been invested in it before Election Day. Since STV is the most advanced of all pay-TV systems to date, the California vote may have sounded a national death rattle for all of pay TV.

The organizers who clobbered STV were largely movie-theater owners and commercial TV interests, who collected signatures in theater lobbies and on street corners all over the state. The argument they offered was that pay-TV customers would one day find themselves paying to see shows they now see for nothing. And carrying the argument a bit farther, they also warned that pay TV could become just as commercial as contemporary network television. Once the existing networks had been defeated, the argument went, nothing could stop Weaver's company from introducing commercials into pay TV.

The astounding success of the California initiative could put ideas into other people's heads elsewhere. A united front of gluemakers, for example, might collect enough votes to ban the manufacture of Scotch tape. Chrysler could war on General Motors. Whichever collected the fewest votes would die a corporate death.

Public Issue. Actually, the pay-TV question was subject to public review only because STV uses telephone lines, a public utility. Last year the California Public Utilities Commission approved STV's contract with the Pacific Telephone Co., and the state assembly passed needed tax legislation. According to California law, any public issue can be decided on an election ballot if 8% of the state's voters sign a petition to put it there.

"The greatest communication innovation of our lifetime must not be denied the people through manipulation by vested interests," cried Weaver, promising to seek redress through the Department of Justice, the FCC and Congress. But meanwhile he was through in California. Last week he shut down operations and will soon remove the special adapter boxes from subscribers' sets. Californians had apparently decided that they just were not going to risk the chance of having to pay to listen to ads.

Only You, Merle Miller

Everyone in television is talking about Merle Miller, but only because he has been talking about them.

Miller, a reasonably well-known novelist (*A Day in Late September, That Winter*), wrote a pilot film for a TV series that would have premiered this fall. He failed miserably, but he has bounced back. He has just published a nonfiction, names-naming chronicle of

HENRY GROSSMAN

AUTHOR MILLER

The no-see-'ems were butchered.

his experience called *Only You, Dick Daring! or How to Write One Television Script and Make $50,000,000.*

Miller's series, called *Calhoun*, was to be the story of a county agricultural agent engaged in a week-by-week struggle against boll weevils, nematodes, no-see-'ems, and other incorrigibles of the plains. *Calhoun* may have been a dog, but Miller's book is a vivid and often hilarious account of how TV's butchers can change any script into hamburger.

Berbers Wanted. The network was CBS. There, CBS-TV President James T. Aubrey Jr. is the supreme judge. As Miller draws him, he is a kind of pretty Torquemada. It was Aubrey who conceived the county agent series one day when he leaned back, closed his eyes, and murmured: "I see a man in a dusty pickup in the Southwest." Corporate peasants were left to do the rest, for Aubrey is no writer, just a would-be writer, as Miller describes him. And would-be writers "are like eunuchs in a harem. They see the trick done every night and are furious that they can't do it themselves." In the end, after Miller had rewritten Aubrey's story at least 3,000 times, Aubrey killed it forever, saying that he had never liked the idea anyway.

Another butcher was Dick Dorso, who was the Executive Vice President in Charge of Programming at United Artists Television. Dorso considered himself the world's foremost authority on pilot films, according to Miller, and he had a standard lecture about them which begins: "In the first 30 seconds the pilot should go like this, 'Fifty thousand murderous Berbers are headed toward Cairo, and only you, Dick Daring, can stop them.' "

Dorso, according to Miller, repeatedly bragged that he had been successfully psychoanalyzed and did not need to be loved. Reacting to a fresh version of Miller's story, Dorso would always say: "I love it. It's just wonderful." Miller learned to listen for the "but." "But," said Dorso, "could I be the devil's advocate for a minute? We've got to be frank with each other at all times, don't we, and I don't have to be loved . . . What CBS wants is a kind of friendly lynch mob scene."

Beads for Sale. Miller's Jackie Cooper, who was going to play the lead in the series, is a picture of the modern actor as an "incorporated" millionaire, who seeks control of scripts, direction, and other aspects of production quite clearly out of his mental range. Cooper called Miller a great or beautiful writer about 100,000 times—then turned up one day with a new version of the script, written by someone else.

The annals of sycophancy include few scenes as good as Miller's re-creation of a meeting at which Cooper recited his new *Calhoun* story line to Michael Dann, CBS Programming Director, and an important group of executives. While Cooper talked, Dann rummaged through desk drawers, passed cigars, unpacked and repacked his briefcase and read memos. "The other executives," reports Miller, "took notes on what Dann was doing and, on occasion, glanced at Cooper." When Cooper had finished, "vice-presidential throats were cleared, vice-presidential feet were shuffled, hitherto ignored vice-presidential itches attended to, vice-presidential coughs coughed." But not a word was said—until Dann finally said that the new version was great. For several minutes the room was a hubbub of cross talk in competitive praise of *Calhoun*. "Dann asked the lesser executives if they had any criticisms or suggestions, but by that time it was clear that we were dealing with a classic of the caliber of *Othello*."

Some of Miller's victims—Cooper for one—have said that Miller will never work in TV again. Yet last week ABC announced that Miller, an obvious masochist, is writing a TV play for a new drama series. It obviously will not be drawn from *Dick Daring*, which would make a much better TV series than *Calhoun* ever could have been—and would be even less likely to get produced.

NEWSPAPERS

Sizing It Up

"It was a great victory for conservatism," said the Milwaukee Sentinel. "An overwhelming majority voted to conserve the status quo—to preserve the system of government by subsidy which the Democrats have made the American way of life. It was a setback for liberalism. The voters stated in no uncertain terms that they do not want to be liberated from paternalism." Thus last week one of the 359 U.S. dailies that had endorsed Barry Goldwater assessed the meaning of his defeat.

Avalanche's Trigger. Other pro-Goldwater papers took a different tack in sizing up the election results. The Chicago Tribune, which had endorsed Goldwater even before his nomination, took cheer from the fact that 26.6 million voters "were willing to support the spokesman of a conservative philosophy in a time of general prosperity and against an entrenched political apparatus of enormous power." The Tribune discounted the 42.3 million who voted for Johnson: "Whether they were voting for anything is extremely doubtful."

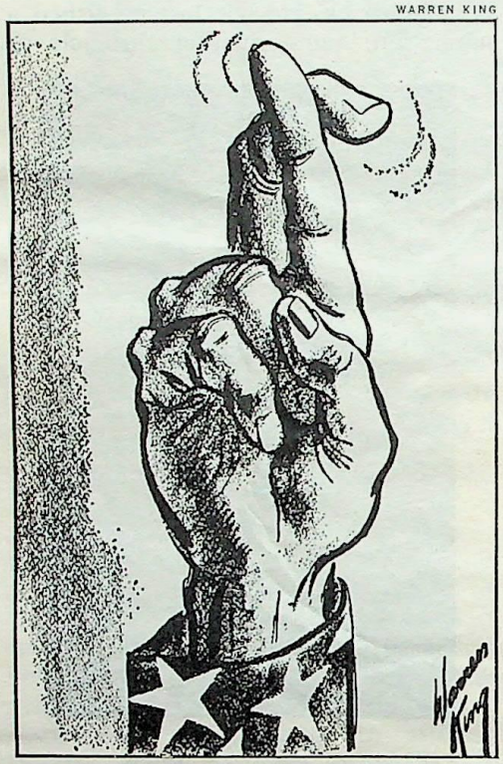
In Birmingham, the News, an early and sturdy Goldwater adherent, solaced itself with a post-mortem editorial: "Barry Goldwater was beaten. But that does not mean that what he stood for is wrong or discredited." Bill Knowland's Oakland, Calif., Tribune acknowledged the crushing statistics on Page One—LANDSLIDE FOR L.B.J. —and then explained what had triggered the landslide: "Unfortunately for the Republican presidential candidate, he received no support from leaders of his own party in several states."

Some of Goldwater's press partisans offered a more caustic analysis. "Full blame for the G.O.P.'s abysmal showing cannot yet be fully assigned," said the Los Angeles Times, which had reluctantly declared for Goldwater because it had publicly sworn before San Francisco to support whomever the party nominated. "But much responsibility must be laid to the candidate himself. In his zeal to promulgate the conservative cause, he managed to alienate the vital middle." Said the Richmond, Va., News Leader: "There is nothing to be gained from sugar-coating the pill. We got clobbered."

Notes of Composure. For the most part, papers that had backed Johnson managed to avoid an excess of jubilation. Somewhere between its overstated front-page headline (G.O.P. LEFT IN RUINS BY JOHNSON SWEEP) and the editorial page, the New York World-Telegram recovered its composure. "One hopes that the President won't let this one-sided victory go to his head," said *the World-Telegram*. "His 'mandate' *isn't all it may seem* at first glance."

The same note was struck by the San Francisco Chronicle, which had broken with its own Republican tradition to endorse Johnson: "So great a tide of votes" carries with it "the obligation and responsibility to use his new authority with bold and creative, yet prudent, statesmanship." The New York Herald Tribune, another paper that abandoned its normally Republican posture this year, found a boundary for Johnson's mandate: "the limits of consensus of the great national coalition that gave it." Among major U.S. papers, the Philadelphia Inquirer was almost alone in its unqualified enthusiasm. The Inquirer called it "a fine personal victory" for Johnson, "a manifestation of affection and respect for him as an individual and as President."

WARREN KING



NEW YORK DAILY NEWS CARTOON
"Many Americans will be hoping."

Crossed Fingers. Those papers that had declined to support either candidate sounded a post-election note of neutrality—one that leaned, though, toward the candidate they had favored but had not endorsed. The New York Daily News let a day go by ("We don't like to break in between editions with a hastily written election editorial") before summing up: "In the light of our President's strange and unsavory political past, many Americans will be hoping for the best and keeping their fingers crossed. So will we." It illustrated its position with an editorial cartoon that was even more succinctly stated than its editorial (*see cut*).

The Wall Street Journal, which never endorses presidential candidates, acted almost as if no election had taken place. On the morning after, it held its coverage to 2¼ in. on Page One—no more space than was allotted to news of a revolt against Bolivian President Víctor Paz Estenssoro. Next day the Jou... weighed in with an editorial ... seemed to lay the blame for defeat ... Barry & Co.: "Should conservatism ... be eclipsed for a time, it will not ... for defeat of its principles but defe... of its spokesmen. In that circumstan... lies such opportunity as exists, in ot... years, for other voices."

Marion 111-M with 5-yard dipper loads bauxite.

More than 30 Marion 111-Ms in Bauxite

In the leading bauxite-producing areas around the world—Jamaica, Haiti, Surinam, British Guiana, Arkansas—more than 30 Marion 111-Ms are providing owners big output, near-constant availability, low operating and maintenance costs.

A few of the reasons for this outstanding performance: the 4½ to 5-cubic-yard Marion 111-M is heavy, strong, fully powered and fast to deliver the dependability and production needed.

More than 350 of them are doing more kinds of work in more places around the world than any machine in its class. See your Marion Distributor for complete information on the Marion 111-M—for mining, quarrying, construction, special job assignments.

SPACE

Mariner Goes Wrong

The U.S. attempt to explore Mars got off to a poor start last week. The Mariner C spacecraft, launched at Cape Kennedy, did not jettison its 300-lb. wind-shroud, and the extra weight kept it from attaining the 25,600 m.p.h. speed necessary to reach the red planet. Blocked by the shroud, the spacecraft's solar panels did not open; they could not recharge the spacecraft's batteries, which soon went dead.

But failures are to be expected in so difficult a venture. A second spacecraft, Mariner D, is ready to go, and will be fired before the "window" (the favorable time when Mars is in an accessible position) closes on Nov. 30. If Mariner D fails too, Mars and its secrets will be safe for a while. Another window will not open until December 1964.

DEMOGRAPHY

The Heat Limit

Are the earth's cities getting too crowded, spreading their swarming fringes over the suburban countryside? Are highways too jammed, streams too polluted? Is the world's population explosion threatening to smother India and China under a near-solid mass of humanity? Pessimists who are wrought up about such present-day conditions, says British Physicist John H. Fremlin, have seen nothing yet. Fremlin has sturdy faith that man's ingenuity will be equal to his ever-growing need for food. But this is just the trouble. Eventually, he says, the earth will be so packed with human bodies that the heat they give off will put a final limit on their increase.

The earth's present population, says Fremlin in the *New Scientist,* is about 3 billion, and is now doubling every 37 years. For the next 260 years, this increase can be taken care of by exterminating land wildlife, by intensive use of all crop space, by elimination of meat eating, and by the efficient harvesting of sea food. If marine wildlife is replaced by photosynthetic plankton, the earth's population can keep feeding itself while doubling three more times, until it reaches about 3,000 billion in A.D. 2334. Five times as many people can be taken care of by putting up vast satellite mirrors to reflect sunlight onto the polar areas, warming the whole earth to equatorial productiveness.

For still more population increases, says Dr. Fremlin, food can be synthesized out of energy, mineral matter and waste products. Human cadavers can be homogenized for use as food, and the earth's population can rise to one million billion, with two people living on each square meter of ground.

But then a serious problem will develop. The earth will be so thickly covered with layers of people and machinery that it will generate enormous heat. Some 60 million billion people, living 120 to the square meter in air-conditioned 2,000-story buildings, will keep the earth's skin glowing orange-red.

This ultimate limit will be reached in less than 1,000 years, says Dr. Fremlin, whose tongue is only halfway in his cheek. He sees no obstacle to man's attainment of a dreadful level of existence where even his movements will be rationed because motion generates heat. "We are free to choose," he says, "at what population density we want to call a halt, somewhere between the .000,006 people per square meter of the present and the 120 per square meter of the heat limit. If we do not choose, we shall eventually reach that limit."

GENETICS

Original Sex

Bacteria normally multiply by sexless fission—they simply split in two. Still, scientists believe that some kinds of bacteria occasionally manage a kind of sexual mating. It is almost impossible to catch them in the act, though, because they have no special sex organs, and often when they cling together it is not for love. But at least one kind of microscopic bug has a sex life with a difference. Professors Pavel Nemec and Vojtech Bystrický of the Slovak Polytechnical University in Bratislava report that the *Caulobacter,* a harmless bacterium found in soil, possesses a multi-purpose organ that it often uses for a primitive kind of conjugation.

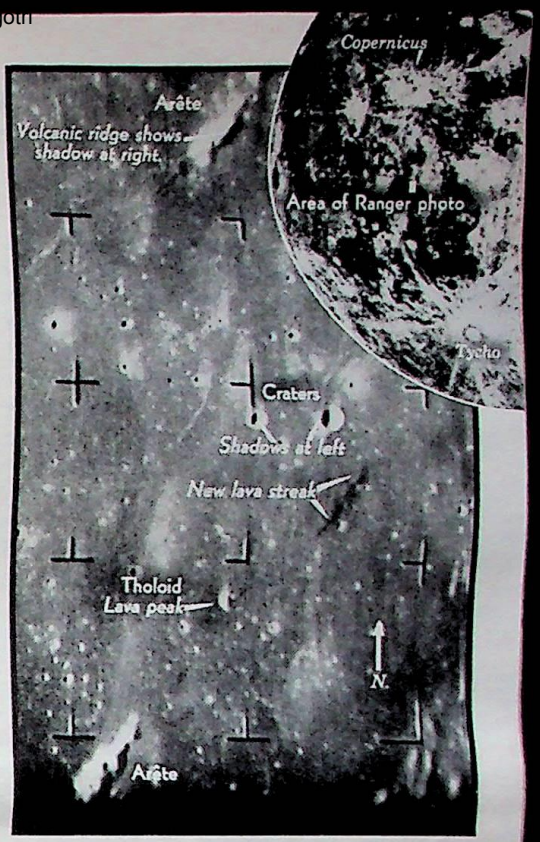
A caulobacter, say Drs. Nemec and Bystrický, is a sausagelike object with a long stalk protruding from one end. Sometimes a caulobacter attaches the end of its stalk to the body wall of a bacterium of another species and feeds by sucking out the victim's protoplasm. But often two caulobacters put the ends of their stalks together and cling for a long time while spherical grains in their stalk tips gradually fuse together.

Nemec and Bystrický believe that when two caulobacters cling together in this manner they are, in effect, mating —exchanging genetic material through their stalks. If the conjugating caulobacters belong to strains with different hereditary endowment, both may be improved by the swap. This is the great advantage of sexuality for any form of life; it permits faster evolution.

ASTRONOMY

Lunar Lava Flow

Ever since Ranger 7 shot its closeups of the moon, scientists have been studying the pictures in minute detail. They contain the most detailed information man has ever collected about his planet's nearest neighbor. And they are already shattering some long-held theories. Ranger's lunar snapshots, says Dr. John A. O'Keefe of Goddard Space Flight Center, prove that the moon has not been a dead cinder ball for billions of years, as many astronomers believe. In fairly recent times, it seems to have stirred with volcanic activity.



The best Ranger photographs, explained O'Keefe in the magazine *Science,* show a region covered by broad, light-colored streaks radiating from the craters Copernicus and Tycho. These rays are believed to be dust and fragments tossed out by the meteor impacts that blasted the two craters, and since they lie on top of most other lunar features, they are listed among the youngest parts of the moonscape. But O'Keefe also found a conspicuous black mark showing starkly against the lighter background of one of Tycho's rays. The ray had not dusted the mark with light-colored material—circumstantial evidence that suggests the mark must be more recent than the recent meteor impact that formed Tycho's crater. Dr. O'Keefe noticed, too, that the mark is in line with a set of ridges called arêtes (sharp mountain ridges), and a fainter set of markings called wrinkles. Since these are all reasonably parallel, they cannot come from random meteor impacts but are probably of internal origin like the parallel ridges of many earthly mountains.

Dr. O'Keefe has concluded that the arêtes are volcanic, are probably made of stiff lava forced out of parallel cracks in the moon's crust. Some of them may have erupted during the moon's youth. Much more recently—100 million years ago or less—one of the cracks may have opened again and oozed lava to form a cluster of low black mounds on a plain that was already thickly peppered with debris from young Tycho.

PAINTING

The Distant Witness

Pierre Bonnard called himself "the last impressionist," but in the throes of creation he was more like the first action painter. He would tack a huge canvas on a wall and, striding back and forth, begin jabbing spots of paint in a dozen places. After days of vigorous work, a nude emerged here, a still life there. Then he cut the paintings apart, stretched them into tambourines of jingling color.

Whether or not Bonnard was behind or before his time, his retrospective show at Manhattan's Museum of Modern Art,* with 83 oils and 87 other works, establishes him as the distant witness of current art.

French Milquetoast. Bonnard was headed halfheartedly for the law when, in 1890, he made a 100-franc sale of a lithograph poster for a champagne merchant. Flat, clearly influenced by the vogue for Japanese prints, it showed a giddy damsel in bubbly billows. Its appearance on the kiosks of Paris caused Toulouse-Lautrec to seek Bonnard out; it was not until a year later that the sawed-off chronicler of Montmartre made his own first poster. The sale also persuaded Bonnard's father, a war ministry bureaucrat, to let his son pursue art as a career.

A thin slice of French Milquetoast in appearance, Bonnard fell into the celebrated company of Vuillard, Vallotton and Maillol. Gauguin was chief prophet, telling them to express what they saw in colors straight from the tube. If a shadow had a bluish look, said he, the painter should use pure ultramarine. A group called the Nabis, or prophets, gathered and asserted that the imitation of three dimensions was less vital than a blatant arrangement of lines and colors. That was art; the other was slavish copying. Bonnard became "the very Japanese Nabi" for his fascination with oriental asymmetry, ascending perspective and sinuous contours.

Anatomical Outlaw. For a while, Bonnard was a *flâneur* and sketcher of Paris street life. Lithography, with its kinship to line drawing and its inherent limits of only a few undifferentiated colors, was Bonnard's proving ground. He embellished sheet music and illustrated the writings of Verlaine, Octave Mirbeau and André Gide. The flat stone's print only confirmed him as an outlaw toward perspective, modeling and rigorous anatomy.

Then a yellow, 10-h.p. Renault opened Bonnard to rural beauty. He would motor through the countryside, stopping frequently to sketch. He fled Paris for Mediterranean country villas. Yet in the end he found his true subject matter indoors. It was the domestic moment that caught his eye. Lazy, hazy days of summer—when the sun caressed the contours of a kitchen table, or of his basset hounds, or of his wife—provided Bonnard's book of hours. Critics called his work intimist. Unlike any artist since the 18th century's Chardin, he made home life into a universe.

Model Wife. Bonnard's indoor art thrived on women. He loved them in awkward, innocent postures, when they let down their shields of glamor. Women for Bonnard were his wife, Marthe de Méligny, a cute *midinette* he met when he was 28. When they were married 30 years later, he found out that she was not aristocratic, only plain Maria Boursin, but his love never left him.

It was she that he painted oftenest (*see opposite page*). Her presence borrowed color from the wall of her bath. While fauvism, cubism, even dadaism and surrealism bypassed Bonnard, he kept his eye on nature and his wife's place in it. To many, through the 1930s and 1940s, Bonnard was old-fashioned, a man preoccupied with outer rather than inner psychology. His seemed wishy-washy, facile, banal apparent sentimentality.

Spectral Tapestries. But Bonnard not concerned with psychology. can abstract beauty out of everyday he said. "A painting is a series of that are joined together and which form the object over which the wanders without obstruction." Bonnard's spectral tapestries are a abstraction that invite the eye of tourist. His imagery is so pleasing few see the tricks of color and that wrench the paintings away realism into perceptual dreams.

"God is light," said Bonnard, was an ingenious supplicant. checkerboard tiles that pattern work, the color changes to harmonize with nearby colors. Nude flesh becomes a chameleon mirror for interior light. bathtub becomes an irregular cube for the human form. Bonnard's are made of optical bewilderments caprices of color.

Bonnard's wife died in 1942; he on until 1947, painting in his south-of-France villa. When he died the age of 79, few came to bury the master of color more than he herself. For his funeral, a rare storm shrouded the spectrum that had honored so well.

An ingenious supplicant to a god of light.

SCULPTURE

Plaster Cornucopia

If an artist is judged by the company his work keeps, Peter Agostini is a sculptor. At the current sculpture exhibition in Manhattan's Jewish Museum Agostini's plaster popovers are on view across from George Segal's plaster mummies. All summer long, some of his clustered plaster balloons hung like monster grapes for a superbacchanal outside the New York State Pavilion at the World's Fair next to Robert Indiana's EAT sign, Roy Lichtenstein's cartoon, and Jim Rosenquist's billboard.

But neither by temperament, background nor age does Agostini rank himself among pop artists. At 51 he can remember working for the WPA and showing on Manhattan's 57th Street when it was still the center of the avant-garde. Brought up as a tough Hell's Kitchen kid, he recalls selling his early drawings to the sisters at parochial school when he was eleven. His later friends were abstract expressionists of a generation older than Pollock, Kline, De Kooning and Marca-Relli.

Pepperonis & Provolones. In the late 30s and 40s Agostini began making commercial sculpture. He made plaster mannequins for a fashionable Manhattan women's store. This led him to sculpt pseudo-delicatessenry for the U.S. Army Quartermaster Corps—molded polyester salamis, pepperoni and meat loaves—stuff that by pop values would be worth bundles.

* The show travels to the Art Institute of Chicago for January and February, and to the Los Angeles County Museum for April and May.

SUNSET NUDES BY THE LAST IMPRESSIONIST

PIERRE BONNARD held that "a woman's charm can reveal many things to an artist about his art," but concentrated on sensuous arrays of color in which the model—in this case a 1932 view of Wife Marthe—seems incidental.

...spacious, gracious beauties from Chrysler for '65

This year, step out of the ordinary and into the big, beautiful new world of Chrysler. You'll find a new kind of luxury, comfort and performance. Also many new engineering innovations. You'll appreciate them almost as much as the pride of ownership and intangible driving pleasures that you've come to recognize as pure Chrysler. Best of all, you'll still be enjoying these things years from now. We're sure of it. Because Chrysler products are built to last.

'65 Valiant. It's a big, wide, wonderful world in a new 106-inch-wheelbase Valiant. Valiant retains all the good things that have made it the success it is today. Room. Ride. Agility. Performance. Valiant gives you a choice of 20 models, all with color-keyed interior/exterior combinations. A choice of 4 engines, ranging from 170 to 273 cubic inches. See it soon. You'll be glad you did.

'65 Plymouth. Take another look. This is Plymouth for 1965. All new from road to roof line. With a generous 119-inch wheelbase. And the only thing that can match the magnificent styling of the car outside is the stunning beauty to be found inside. Plush carpeting. Soft, supple vinyl fabric trim. Deep foam-padded seats. Handsome, easy-to-read instrumentation. Curved side windows. A choice of 5 engines, ranging from 225 to 383 cubic inches. If all this gives you the idea that Plymouth for 1965 is the only car for you, who's to blame you? (Don't forget to see the 116-inch wheelbase Belvedere. It's all-new this year.

'65 Chrysler. The epitome of subdued elegance. The 1965 Chrysler is quiet in styling and manner, yet as exciting as a car can be. From its unique glass-covered head lamp units to its integrated rear bumper styling, everything about this car says elegance. A totally new and improved unitized body structure helps make Chrysler '65 as enduring as it is endearing. A new suspension system that rests on a 124-inch wheelbase, turns an already superb ride into an almost unbelievable experience. Even the interiors look and feel more resplendent. They are. This, indeed, is the car for the man who has everything. At least he will have when he owns a new 1965 Chrysler. Choose Chrysler power from one of three great engines —ranging from 383 to 413 cubic inches.

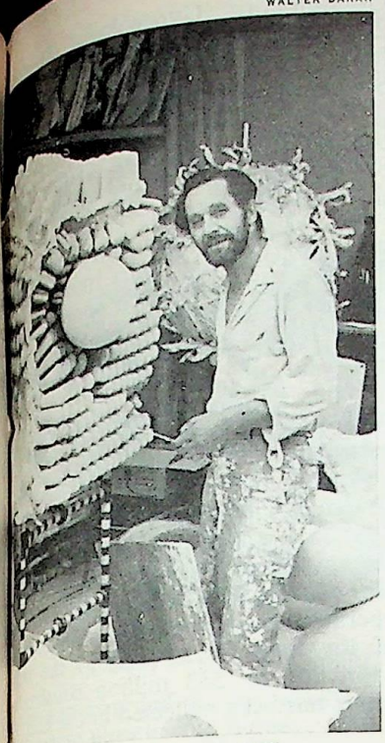
WALTER DARAN

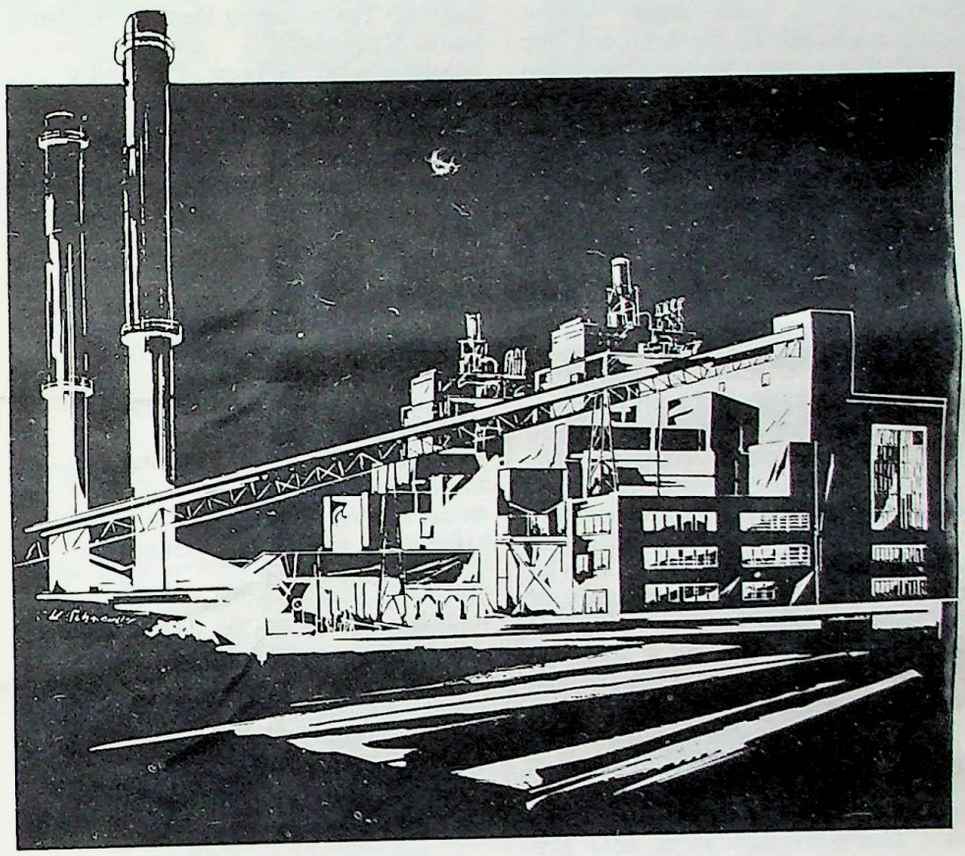


AGOSTINI & "MEAT RAKE"
Explosion in a delicatessen.

e then used only to teach recruits
w to select cuts of meat. He was
d-broke when the Galerie Grimaud
e him a show in 1959. Says Agostini:
fore that, I couldn't sell one of my
wings for 5¢."
Agostini rarely had the money to cast
s work in bronze. He began using
ck-setting plaster, which turns rock-
d in several minutes, forcing a kind
action sculpting on him. He takes
ts from crumpled aluminum, beer
s and old rubber gloves, and trans-
ms them into snow-white simula-
ms of what they once were. He may,
example, pour a mold around a rub-
r inner tube shaped by tying strings
und it. Into the negative mold—
ched inside with soapy water as a
parator—he pours more plaster,
metimes strengthened with burlap,
n cracks off the outer shell.
His fourth one-man show opened last
k at Manhattan's Stephen Radich
llery, and the main attraction is *Car-
el*, a 9-ft.-diameter abstraction of
ating horses and umbrellas, with a
sic box in the middle. *Harlequin* is
conglomeration of bursting forms
at look like eggs, gourds and provo-
e cheeses. *Meat Rake* is a curious
ce which implies ground beef bulg-
through a shredder.
Skin, Not Mystery. "I don't reject
figure. I have just found the ex-
sion of it. Feel this," Agostini says,
e pats a plaster polyp. "It's like skin,
dy to burst. I'm fascinated with the
a of explosion." Agostini arrests mo-
n, or the swelling curve, in his plaster
that everything is surface tension.
his work—and his conversation—effer-
sces like ghost champagne. Says he:
n the next five years, I want to knock
t 10,000 drawings and 5,000 pieces
sculpture. I am not involved in mys-
ry. I have no patience with that."

PROBLEMS we encounter

Local coal in Durgapur contains roughly 35 percent ash. We built the 3 largest boiler/turbine units in India to operate on just this fuel and supplied the associated coal handling plant.



POWER FROM LOW-GRADE FUELS

Inferior fuels, such as coal containing up to 40 percent ash and lignite with as much as 60 % water, will continue to provide a potential source of power too plentiful to be left unheeded.

Germany in particular has acquired much experience in this field because her power industry has long been compelled – due to the steeply rising demand for electric power – to resort to low-grade fuels that not so very long ago were dismissed as worthless.

In many cases the mixing of coal, gas or oil with various kinds of waste products will provide the most economical solution.

This is where M.A.N. come in – with a range of steam, diesel and gas power plants to answer any problem. May we send you details

EDUCATION ABROAD

Survival Through Brainpower

The grass grows wild on Mount Scopus in Arab Jordan. Rain drips through the roofs of empty classrooms. What was built before 1948 as a model campus for Hebrew University is now a forlorn and uninhabited neutral zone within sight of Israeli Jerusalem.

Once a fortnight, by United Nations authorization, a truck enters Mount Scopus, loads books from among the 250,000 that remain in the abandoned library, returns via the Mandelbaum Gate and takes its cargo to a striking new 250-acre campus that crowns the Judean Hills of Israel. There, in buildings made of pink limestone quarried on the site, Hebrew University is in the midst of a flourishing rebirth.

The student body, 870 in 1948, now numbers 10,000. Ground was broken last month for a new school of social work, latest in a series of fast-rising buildings for physics, chemistry, dentistry, law. Nearing completion is a $10 million medical school complex. The just-finished library houses 2,000,000 books and such treasures as Einstein's handwritten manuscript of the theory of relativity, a 1,600-volume collection of Lincolniana, and the private library of Serge Koussevitzky.

The Nation's Engine. In a land that lacks industrial resources, Hebrew University is the engine of the nation. "Our survival depends on the quality of our brains," says President Eliahu Elath, a noted Orientalist and former Israeli Ambassador to Washington and London. "This university must help preserve that quality or else we are lost."

Students and faculty have a sense of direction that most U.S. colleges would find awesome. Professors publish or perish on the theory, bluntly stated by Humanities Dean Joshua Prawer, that "where there is a choice between a good scholar or a good teacher, we will always take the scholar." The average freshman is 21 years old and—whether man or woman—an army veteran. Students prefer chess to soccer. The last prank took place a few years ago, when students painted a red and yellow dress on a Henry Moore sculpture. The university has no rules against drinking on campus because no one drinks anything stiffer than orange juice. "Maybe a little alcohol would liven them up," says Acting Dean of Students Esther Reifenberg.

Students at Hebrew University are mostly Israelis solemnly intent on going into government or the professions. But one in every ten is an "oriental" Jew from the Middle East, North Africa or Asia; 200 others are Arabs living in Israel, some of them fervently pro-Nasser. The largest foreign contingent is 250 students from the U.S., and 100 others come from black African nations. Students are supposed to read English, but most teaching is in Hebrew. Recently an Israeli was surprised to see two Africans conversing in Hebrew, but the explanation was logical. "He's from French-speaking Cameroun and I'm from Liberia," said one of the pair. "Hebrew is our common language."

International Flavor. Hebrew University takes its standards from a long, international tradition of scholarship. Among its founders 40 years ago were Philosopher Martin Buber and Chemist Chaim Weizmann, Israel's first President. Sigmund Freud and U.S. Supreme Court Justice Benjamin Cardozo served on the board of governors. Working at the school now are such scholars as German-born Gynecologist Ber... Zondek, co-discoverer of the A-Z ... for pregnancy; Yigael Yadin, De... Scrolls expert and former chief of ... of the Israeli Army; and Monetary ... orist Don Patinkin, one of the A... cans who comprise 10% of the ... sity's full professors.

The university has other links to ... U.S. Washington pours money ... in the form of research contracts, ... scale that many a U.S. school ... envy. The projects, worth $2,0... this year, include research in ... for the U.S. Agriculture Depart... solid state physics for the Defense ... partment, radiation for the Atomic ... ergy Commission, and improvement ... lie detector tests for the U.S. Air Fo... U.S. Jewry also contributes heavily ... the university; though the Israeli ... ernment supplies 60% of the school ... operating budget of $11 million, ... of the balance, as well as the ... chunk of its $53 million construc... drive, has been collected in the U.S.

SCHOLARSHIPS

With Strings

According to Yale legend, a scho... ship to that school awaits any son of ... Indian maharajah who cannot ... his own elephant to carry him ... the campus. Eccentrically conditio... scholarships, though deplored by ... leges, open some novel opportunities ... this time of year, when the only ... harder than getting into college is ... ting into college cost paid. Even ... schools such as Harvard, where libe... minded donors have piled up a siz... dollar pool that any needy student ... dip into, restricted funds are still ...

...ted and awarded on the theory that ...ey release unrestricted money.

Harvard President Nathan Pusey's ...dergraduate days in Cambridge were ...riched by a restricted scholarship. As ...transplanted native of Council Bluffs, ...wa, he was eligible for aid offered by ...harles Perkins, president of the Chi...go, Burlington & Quincy Railroad, ...ose trust fund gave preference to ...uths "who come from the territory in ...wa served by the C.B. & Q. Railroad." ...rinceton engineering students from ...tates served by the St. Louis-San Fran...sco Railway Co. can apply for a spe...al scholarship. At N.Y.U., would-be ...achers tap funds given by Mrs. Finley ...Shepard,* daughter of Railroad Mag...ate Jay Gould, if they happen to live ...long railroads Gould controlled.

A Switch of Ground Rules. Cornell's ...harles Green fund is reserved for stu...ents who either attended the Schuyler...ille Union Free Academy or lived at ...he Masonic Home in Utica. A Buck...ell grant, new this year, provides full ...id for students who graduated from ...Mount Carmel (Pa.) High School, lived ...n the town (pop. 10,760) for at least ...en years before applying for help, are ...ot habitual users of tobacco, narcot...s or alcohol, and have never taken ...art in "strenuous athletic contests." ...Bucknell found four qualified appli...ants. Wayne State University, on the ...ther hand, rejected a scholarship re...tricted to a student "who does not ...moke, drink, gamble, go to church or ...therwise endanger his health."

Whose many other philanthropies included ...ounded veterans of the Spanish-American ...War, the Red Cross, and Master Swindler ...Easton Bullock Means, to whom she report...dly paid at least $100,000 in 1932 for the ...source of threatening letters sent to her and ...called "Agents of Moscow." Means was never ...ried for defrauding Mrs. Shepard; he had al...eady been indicted for cheating Mrs. Evalyn ...Walsh McLean, owner of the Hope Diamond, ...of $104,000 for promising to return the kid...napped Lindbergh baby. He was sentenced to ...25 years in prison, died after six.

Some colleges ignore the letter of the law for the sake of the spirit. U.C.L.A. for several years interpreted "handicapped" students supported by the Will Rogers Fund to mean financially handicapped. Other colleges plead with donors or their heirs to liberalize the ground rules, and often win. Adelphi University on Long Island accepted a scholarship reserved for applicants named Smith from nearby Franklin Square, which proved to be short of smart Smiths. Finally the dean of students successfully appealed to the donor to limit his restriction to qualified residents of Franklin Square, and a bright lad named Montgomery won the scholarship.

California's Occidental College received an endowment intended for widows from Orange County who promised not to join any "organization with a selective membership"—meaning a sorority. After three years of looking, the school broke the condition in court. Amherst appealed to the New Jersey Supreme Court and finally won the right to $200,000 that had been reserved for "Protestant Gentile" boys who did not drink or smoke.

No Encore for Pianists. The first appeal to a court was taken by venerable Harvard—and over its first scholarship gift. In 1643, Lady Ann Mowlson, the former Ann Radcliffe and the college's namesake, gave Harvard £100 to maintain a poor scholar. Harvard took the money, but twelve years later decided to spend it instead on buildings. The court blocked the move; Harvard has not contested a grant since.

Calvin L. Crawford, financial director of Long Island University, says hopefully that the day of "giving scholarships for redheaded piano players of Scottish descent from Oshkosh is largely over." Colleges may eventually refuse all conditional gifts and break all restrictions. Until then, any students who fit the terms of a scholarship with a string attached might just as well pull the string.

TIME IS MONEY

A Deposit Account with Lombard Banking Limited means all these things:—Real Financial Stability and an interest rate of 5%—the maximum safe and sure rate for your money to earn. Immediate interest accruing day by day paid or credited half-yearly. Withdrawals are easily made subject to the terms you arrange. Deposits accepted from any country in the world. No U.K. tax deducted. Complete privacy. No charges.

To earn 5% per annum the minimum initial deposit is £100, the minimum period of deposit and notice of withdrawal is six months. Your Deposit with Lombard Banking Limited is supported by paid up capital and reserves in excess of £12,000,000. EVERY WEEK

Every week TIME's cover story puts a figure into focus—takes a newsmaker, examines his career, probes his motives, weighs his acts and opinions.

But what's the controversy boiling around him—what threshold of achievement has he taken mankind across? This is the news significance of TIME's story—the story of one individual as he affects us all.

It's one of journalism's most thorough and far-reaching explorations. You find it every week in TIME.

LAWYERS

Labor's Lord High Chancellor

Sweating uncomfortably under the incongruous TV lights, Britain's nobly dressed bishops, judges, peers and politicians jammed the House of Lords last week as Queen Elizabeth arrived in a glass coach and took her seat on a gilded throne. Up strode a graceful man in a wig, damask robe and black velvet breeches. Kneeling, he handed the monarch her speech. Kneeling, he took it back after Elizabeth had read it—thus opening Parliament with a ritual that has scarcely changed at all since the first Elizabeth performed it 400 years ago.

His task done, Gerald Austin Gardiner, 64, the Labor Government's Lord High Chancellor, returned to the 20th century and a tough legal challenge: a complete reformation of outdated British law.

UNIVERSAL PICTORIAL

CAMERA PRESS—PIX

IN MUFTI

"What system of law is this?"

Infants & Idiots. With its costumed ceremony and appointed judges, its strict division between solicitors who do office business and barristers who try cases, British law combines a reputation for incorruptible justice and maddening resistance to change. As one archaic result, British laws, which have no written constitution behind them, are now so entangled in 43 volumes of parliamentary acts going back to 1235 that finding the law on a single point may require a look at 60 different acts, 99 volumes of legislative orders and 350,000 reported cases. "What sort of system of law is this?" asks London Barrister Gardiner. "English law is in a state in which it cannot be allowed to remain."

In giving him power to prune the legal thicket, the Labor Government has chosen a barrister who is said to know more about common law than any man alive. Rarely has a new Lord Chancellor been so acclaimed. Gardiner is "probably the only left-wing lawyer unreservedly admired by a right-wing bar," says the London Sunday Times. The nonpolitical English Law Society predicts that "he will make the form of the law a living thing in the lives of the people."

Lord Chancellor Gardiner has a job centuries older than the Prime Minister's, a title once held by two English saints (Becket, More) and Francis Bacon, a $34,000 salary that is tops in the British government, and the unique power to simultaneously help make, execute and interpret the laws of Britain. As the government's chief legal adviser, Gardiner is a top-level Cabinet officer. As head of the legal profession, he appoints judges and Queen's Counsel (senior barristers). As Speaker of the House of Lords, he perches on the symbolic Woolsack, also presides when the Law Lords (selected lawyer members) act as Britain's final court of appeal. Besides all that, he is guardian of all British infants, idiots and lunatics.

Blue-Blood Socialist. The tall, brilliant son of a British shipping tycoon and a German baroness, Gerald Gardiner seemed destined to be a Tory rather than a Laborite. He grew up on a vast Kent estate, went through Harrow, the Coldstream Guards and Oxford's Magdalen College. So elegant that he used only French toothpaste, he inspired Oxonians to form the "Society for Ruffling Gerald Gardiner's Hair," won glowing tributes as an amateur actor, and debated his way into the presidency of the Oxford Union. Oxonian Evelyn Waugh later wrote that "he had then the same elegance of appearance and cold precision of phrase and enunciation that have impressed themselves on so many juries."

Avid to be an actor, Gardiner [illegible] to law only when his father [illegible] to cut him off without a farthing. [illegible] it took him three years before [illegible] profession earned him three guineas [illegible] profit, he was a noted junior barrister [illegible] well before World War II, during [illegible] which he served as an ambulance driver [illegible] In 1948, he "took silk" as a Queen's Counsel, King's [illegible] for hot preparation and cool [illegible] Gardiner was soon earning $50,000 [illegible] year in famous libel cases [illegible] litigants as diverse as Liberace [illegible] Winston Churchill. In 1960 Gardiner [illegible] won a slander suit for Randolph Churchill [illegible] ill (called "coward" by a Tory [illegible] and defeated an obscenity [illegible] against the publishers of *Lady Chatterley's Lover*. In 1961 Gardiner successfully prosecuted Communists [illegible] captured the Electrical Trades Union [illegible] by rigging an election—thus clearing up the biggest labor fraud in British history.

Had he not been a passionate opponent of capital punishment, let alone a Socialist, Gardiner would have been appointed a judge long ago. Now he can be all three. Besides pressing to end the death penalty, Gardiner is expected to lobby for tighter corporation laws, broader legal aid, improved sex education and anti-discrimination laws aimed at Britain's growing racial problems. Gardiner personally favors liberalized abortion laws and the legalization of homosexual acts between consenting adults, but he recognizes that decision on such issues belongs to the Commons. Gardiner's top priority is a permanent government commission to survey the whole field of English law and gradually try to bring it "up to date," notably in relation to science and technology. If his commission fulfills his dream, the Lord Chancellor can take credit for a legal miracle.

Face on the Courtroom Floor

Striding into an Anchorage [illegible] summer, an Alaskan state trooper [illegible] out his pistol and seized $6,000 [illegible] money belonged to the local bar association, and the trooper was [illegible] orders of the Alaska Supreme Court, which has stirred up a raging feud [illegible] effort to put Alaska's 211 lawyers [illegible] the court's tight control. So determined is the court that it has even [illegible] disband the state bar association.

Alaska's bar is now suing [illegible] bench in a three-judge federal court and is bitterly assailing such new rules as a $600 bond requirement for [illegible] seeking jury trial in a civil case. This week, with their suit still in the [illegible] of litigation, the lawyers scored an out-of-court triumph—they engineered the defeat of the one Supreme Court [illegible] who had the bad luck to be up for election this year.

Mild-mannered Justice Harry Arend, 61, a veteran of 30 years in Alaskan law, had no opponent on the ballot; all he needed was a single

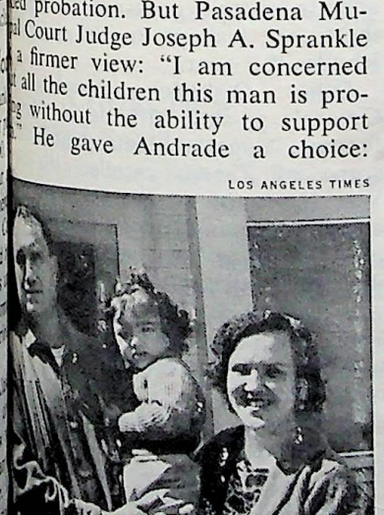
ng him last fall, Andrade's first
charged him with nonsupport. He
ed guilty, and the county recom-
ed probation. But Pasadena Mu-
al Court Judge Joseph A. Sprankle
a firmer view: "I am concerned
t all the children this man is pro-
g without the ability to support
." He gave Andrade a choice:

LOS ANGELES TIMES



PETITIONER ANDRADE & SECOND FAMILY
A plea for fatherhood.

marriage to Elma Martello and sterilization by vasectomy*—or jail.

Andrade reluctantly chose sterile marriage. He got a job washing dishes and resumed payments to his ex-wife. Now he wants more children by his new wife, and he seeks to have the vasectomy undone—a feat successful in only about 50% of such cases. No one is more surprised than Judge Sprankle, who says he has "counseled" vasectomy in several hundred nonsupport cases. Andrade, who is the first to have complained, has roused a legal fuss without precedent in California.

Constitutional Caution. Until recently, eugenic sterilization of misfits was accepted as a social benefit that did not violate the Constitution's ban on cruel and unusual punishment. Speaking for the Supreme Court in the 1927 case of *Buck* v. *Bell*, Mr. Justice Holmes upheld Virginia's sterilization of mental defectives with the classic statement, "Three generations of imbeciles are enough." But scientists now consider many human defects to be as much a product of environment as of heredity. Compulsory sterilization of so-called congenital misfits is thus legally as well as medically debatable. Although 26 states permit such sterilization, they are so cautious in carrying it out that last year's U.S. total was only 467.

Andrade's lawyer, Phill Silver, has petitioned the California Supreme Court for a writ of habeas corpus on the ground that California law permits only county superior courts to order sterilization, and only for two classes of persons—rapists of young children and state-confined sex degenerates. To Lawyer Silver, at least, a California municipal court judge has no right whatever to place fathers unable to support young children in the same category. Procedure that seemed perfectly proper to Justice Holmes in the '20s, Silver argues, is cruel and unusual punishment in the '60s.

Profane Comedy

In an age of almost complete frankness in plays, novels and movies, the question of where language becomes illegal obscenity continues to plague the courts. Groping for an answer, Supreme Court Justice Hugo Black argues that any ban on obscenity threatens free speech. Unwilling to go that far, his brethren have vaguely drawn the line at that which offends "contemporary community standards" and appeals mainly to "prurient interest."

Last week a three-judge Manhattan criminal court applied that test to Comedian Lenny Bruce, a nightclub social satirist who deliberately dips his wit in scatology. A two-judge majority found Bruce guilty of using words "patently offensive to the average person."

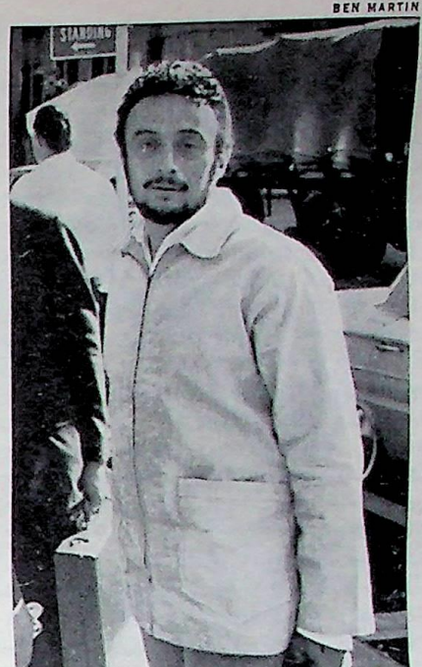
The judges broadened their definition by remarking that Bruce's language "clearly debased sex and insulted it." This very un-Victorian and quite contemporary observation points up the fact that much sexual humor in today's novels and plays is based on homosexuality, perversion and nonconsummation. In his nightclub act, Bruce used unscrubbed words that are common gutter patois for incest, sodomy and excrement. His words would hardly shock Army veterans, let alone Chaucer readers. But the two-judge majority found him guilty under a New York State law which forbids any "obscene, indecent, immoral or impure" public performances.

The dissenting judge argued that "a total absence of any guideposts" has mired the community-standards test in "judicial subjectivity"; that it forces judges to exercise the powers of "superlegislators, or indeed, of absolute monarchs." He suggested that the New York obscenity law is unconstitutional, and grandly advised that the whole question of defining obscenity should be left to "a federal constitutional convention." Meanwhile, unless a higher court reverses his conviction, Bruce faces three years in jail.

• • •

In a U.S. appellate court in Philadelphia last week, other judges had their say about obscenity as they upheld a five-year federal rap and $42,000 fine against Ralph Ginsburg, publisher of the leering (now defunct) quarterly *Eros*, whom a lower court had convicted on 28 counts of mailing obscenity. *Eros*, ruled the appellate court, was "an operation on the part of experts in the shoddy business of pandering to, and exploiting for money, one of the great weaknesses of human beings."

BEN MARTIN



COMEDIAN BRUCE
An insult to sex.

* A relatively simple operation in which a piece is cut out of the *vas deferens*, the duct through which male spermatozoa flow from the testes. It causes no change in the physiology of the sex act, merely ensuring that there is no sperm in the male ejaculation.

PRESBYTERIANS

Dr. Wednesday

One way to make a Sunday sermon attractive is to deliver it on Wednesday. In big cities, midday in midweek finds thousands of office workers hungering in the spirit as much as in the body. The foremost respondent to this need is St. Stephen's Presbyterian Church in downtown Sydney, Australia, filled every Wednesday noon to its 1,000-seat capacity, while an overflow crowd of 300 or more watches from an adjoining hall on closed-circuit television. All have come to hear the "Wednesday tonics" of the Rev. Gordon Powell, 53.

Take a Deep Breath. Powell started preaching Wednesdays in St. Stephen's twelve years ago, at the suggestion of a secretary from a nearby government office. Within a year, attendance at the yellowing sandstone church more than trebled, while collection-plate revenue soared from $6,750 a year to $2,250 a week. The services are also broadcast on 21 radio stations, reaching hundreds of thousands of Australians. Last week a record crowd was on hand at the church as Australian Runner Betty Cuthbert and Yachtsman Bill Northam placed their Olympic gold medals on a table before St. Stephen's pulpit, in Powell's version of a ceremony observed by ancient Olympic heroes, who placed their wreaths of victory on altars dedicated to the gods.

A dentist's son who was an air force chaplain in wartime, Powell served churches in Scotland and Port Adelaide before his call to St. Stephen's in 1952. No fire breather, he begins his 25-minute sermon by telling a few mild, clerical jokes and asking the congregation to take a deep, tension-easing breath: "Relax—give yourself over to God." Like Norman Vincent Peale, he spends more time analyzing modern ills than expounding theology; his chatty sermons are lightened by references to such contemporary phenomena as booing cricket umpires, which he deplores, and cosmetics, which he endorses ("God made women beautiful, and they should develop this talent"). When he recently took his text from the Sermon on the Mount—"Blessed are the meek, for they shall inherit the earth"—Powell turned it into a homily on how to live with an inferiority complex.

Free Sundays. "Dr. Wednesday," as Powell is called, estimates that only about a fourth of his listeners are Presbyterians, takes pride in the fact that six denominations are represented in his 80-voice volunteer choir. Some worshipers admittedly go to St. Stephen's, as one girl explained to Powell, in order to "get church over in half an hour on Wednesday, and then have all Sunday free." Most Wednesday regulars are devout Christians who loyally attend their neighborhood churches on Sunday, but find at St. Stephen's a spiritual pickup available nowhere else. "I've got a large number of Anglicans at my Wednesday services," says Powell, who gets along fine with other pastors, and has never been accused of congregation stealing. "The Anglican archbishop knows that I'm not taking them away from any of his services."

ORTHODOXY

Rhodes to Rome

As the burning Aegean sun climbed toward high noon, fishermen on Rhodes eyed the last of the bevy of bikini-clad tourists from Germany and Sweden stretching languidly on the island's white sands. Inside Rhodes's ancient, icon-laden cathedral, where the air was dusky with incense, a choir chanted the solemn hymns of the Byzantine Divine Liturgy, concelebrated by 14 bishops. Thus began the historic conference of the world's 14 Orthodox churches to take place in the past four years.

Ecumenical Patriarch Athenagoras of Constantinople, "first among equals" of the Orthodox prelates, proposed the conference, but, following tradition, neither he nor the other major patriarchs were present. Chairing the secret opening sessions for Athenagoras was his deputy, Metropolitan Meliton of Heliopolis, perhaps the most influential man present was Metropolitan Nikodim of Leningrad, the chief diplomat-bishop of the world's largest Orthodox body, the Patriarchate of Moscow.

Influence & Pressure. The major topic of the conference was the touchiest issue that now faces Orthodoxy: how to initiate and carry on the theological dialogue with Rome that Athenagoras and Pope Paul VI agreed to when they met in Jerusalem last January. Merely putting the subject on the agenda forced the Orthodox Church of Greece to boycott last year's Rhodes meeting, partly because the Greek bishops are fearful of Rome's power and partly because Athens' Metropolitan Chrysostomos is jealous of Athenagoras' growing influence in Orthodoxy. Strong pressure from some progressive metropolitans and from the government persuaded the Greek bishops to send delegates to Rhodes this year.

Other Orthodox churches shared Greece's go-slow attitude. At the conference, Yugoslav Metropolitan Dionisije scene of Zagreb recalled the World War II enmity of the Orthodox Serbs and the Roman Catholic Croats. Metropolitan Alexander of Emesse insisted that the Patriarchate of Antioch was worried that the Vatican Council would approve a declaration on anti-Semitism which the Arabs see as an implied German recognition of Israel. Meanwhile, Athenagoras and his deputies hoped to consider the views of the World Council of Churches—all but three of the Orthodox bodies belong—which might that serious negotiations with Rome would not lessen Orthodox interest in ecumenical talks with Protestants.

Words of Love & Peace. During the first days of discussion, the delegates disagreed on the timing of the meeting. Athenagoras and the patriarchs of Antioch, Alexandria and Jerusalem wanted the conference to set a definite time and place, as soon as possible. The Russians, on the other hand, want to wait

hat to give the church is solely up
e individual conscience—but what
body else is giving does have a
ain guideline interest. Last week the
onal Council of Churches reported
latest averages (for 1963) of Prot-
nt bodies. As usual, members of the
Holiness sects proved most zealous
pport of their churches: the 53,601
e Methodists led the nation, with an
rage of $358.17 each, and the 30,-
communicants of the Pilgrim Holi-
Church gave $264.20. Among ma-
church groups, the 937,558 South-
Presbyterians averaged $109.46,
owed by the Lutheran Church-Mis-
ri Synod with $102.26 and the Unit-
Presbyterians with $90.46. The low-
per-capita donations were reported
the nation's two largest Protestant
ies: Methodists averaged $59.60 in
ths. Southern Baptists, $53.49. Total
r $2,858,600,845, up $58 million
m the year before.

FOOTBALL

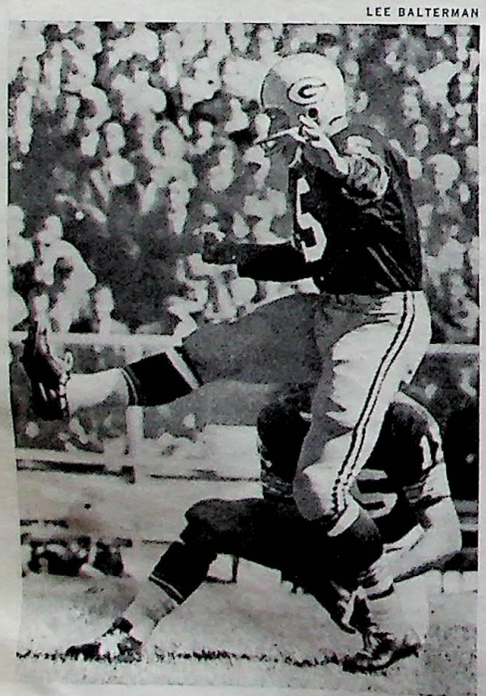
Points for Perfection

The game has changed a lot since the days when a field goal was worth five points and a touchdown only two. But the name is still football—as the folks in Green Bay, Wis., are learning, to their everlasting surprise.

Green Bay is the home of the Green Bay Packers, heavy preseason favorites to win their ninth National Football League championship. It is the home, too, of Paul ("Golden Boy") Hornung, 28, who set an N.F.L. record in 1960 by scoring 176 points—86 of them with his toe. But this year the gold has turned to brass. The first time the Packers played the Baltimore Colts, Hornung missed an extra point and Green Bay lost, 21-20. Next time he missed five field goals in a row and the Packers lost again, 24-21. Two weeks ago he tried another field goal against the Los Angeles Rams. The Rams blocked it; Safety Man Bobby Smith scooped up the loose ball, scampered 94 yds. for a touchdown, and the Rams won, 27-17.

Toeless & Barefoot. In the pros, extra points and short field goals are supposed to be automatic. Not this season. Don Chandler of the New York Giants was the N.F.L.'s top scorer in 1963 with 106 points; this year he has missed two extra points and eight out of 15 field goal attempts. Things are no better in the American Football League. After they barely edged Houston, 20-17, missing three field goals in the process, the A.F.L. Champion San Diego Chargers started looking around for a new place kicker. And whom did they come up with? Ben Agajanian, 45, a toeless wonder (he lost four toes on his kicking foot in an elevator accident) who had bounced around 14 pro teams before retiring for the third time last year. Last week old Ben kicked a field goal and four extra points as the Chargers beat Oakland, 31-17, then flew off to Green Bay to moonlight as a doctor for Hornung's ailing toe.

LEE BALTERMAN



GREEN BAY'S HORNUNG
Unimpressive.

The most exciting kicker of the year does everything wrong too—but makes it work right. A Hungarian refugee who boots the ball soccer-style—off the instep of his right foot—Pete Gogolak of the Buffalo Bills has hit on 31 out of 32 extra points, 11 out of 18 field goals. He insists that he gets "more distance, more power, more accuracy," and he may signal a whole new fad in kicking. Princeton and Maryland have soccer kickers too, and Coach Duffy Daugherty at Michigan State has imported a barefoot kicker from Hawaii named Dick Kenney. Kenney kicks the ball off the end of his bare toes. "I can tell if it's good by the way the shock goes up my leg," he says. He tied a Michigan State record by booting a 49-yd. field goal against Southern California. Says Daugherty: "We've got an electric sock for Kenney when the weather gets cold. If he makes the field goal, he gets to put his foot back into the sock. If he misses, we'll make him stick it in a snow bank."

Laces Front, Head Down. Such newfangled notions do not impress an old pro like Cleveland's Lou ("The Toe") Groza, the dean of place kickers and top point scorer (with 1,404) in football history. At 40, Groza cuts a comical figure as he waddles onto the field —belly hanging over the waist of his practically padless pants. But the players don't snicker. A proud perfectionist who boots 30 or more field goals a day in practice, Groza hit on 15 out of 23 field goals last year.

"Timing is the key," says Groza. "I put the ball into the air exactly 1.3 seconds after the center snaps the ball. If we take 1.5 seconds, chances are the ball will be blocked." That is only part of it. Agajanian, for instance, wants the ball placed precisely 7 yds. behind the line of scrimmage; 6 yds. and a big lineman can reach up to block it, 8 yds. and the ends have an extra split second to reach the kicker. Groza insists that the center spiral the ball back so the holder receives it with the laces pointing away from the kicker. "Kicking into the laces cuts your distance," he explains. The instant the ball is snapped, Groza starts forward, lands on his left foot exactly 5 in. behind the ball, locks his right ankle and knee into a rigid position, keeps his head down—and thump! Arnie Palmer should have a wedge shot like that.

Because the kicking specialist plays only a few minutes a game, shudders at thoughts of bodily contact ("They used to laugh when I'd kick and [illegible] the bench," says Agajanian), [illegible] practically no limit to how long [illegible] collect his tidy $15,000 or so each [illegible] Besides, there is no great rush of [illegible] youngsters panting after the [illegible] job. "Nobody learns how any [illegible] says Groza. "The trouble is [illegible] body has to hold the ball for [illegible] and what kid wants to hold [illegible] for somebody else?"

PRIZEFIGHTING

Playing Grownups

One thing about Cassius Cl[illegible] somebody new every time [illegible] First he was the man-child, the [illegible] chatterbox who dabbled in verse, [illegible] the girls ("foxes," he called them) [illegible] around in a tomato-red Cadillac, [illegible] made everybody laugh when he [illegible] nounced that he was going to [illegible] heavyweight champion of the [illegible] Next he was the sneering champ [illegible] Miami last February hooting [illegible] crites! Whaddya say now, huh? [illegible] the greatest now?" And then he [illegible] mysterious Black Muslim, Muhammad Ali, visiting the United Nations, [illegible] ing Africa, huddling with Nkrumah [illegible] Ghana.

What next?

Goodbye Foxes. Last week C[illegible] was in Boston training for his N[illegible] rematch with ex-Champion Sonny [illegible] ton. FRED KAPLAN—SPORTS ILLUSTRATED

CASSIUS, WIFE & CHAUFFEUR

SONNY & SPARMATE

The week before Christmas.

fight time"), he was running four miles a day (one of them backward), boxing as many as nine rounds in an afternoon, studying movies of Liston in action, hitting the hay precisely at 9 each night.

Only now and then were there flashes of the old fun and games. He was thinking, he said, about going into business—manufacturing "Sonny Liston Sit-Down Stools." He hinted at a sinister plot to cheat him out of his title. "All I want is justice," he said. "I'll have 15 people flown in from the U.N. to observe the fight." He promised to wear his championship belt into the ring, "and if I lose, I'll give it to him right there." He guaranteed a knockout, briefly reverted to verse to name the round:

Nine will be fine
If he makes me sore, I'll cut it to four.

Hello Sonny. All of which helped typo the gate and make Sonny Liston mad. One after another, would-be sparmates showed up at the Liston camp, figuring to pick up an easy $250 a week waltzing with the challenger. One after another, Liston packed them off to the hospital—one with badly bruised ribs, another with a cut that took eight stitches to close. "No more of this ain't gonna happen to me," muttered Alonzo Johnson, the seventh to quit. The hero of the hour was a pug named "Big Train" Lincoln, who managed to absorb 35 rounds of punishment before he spat out a tooth and sighed: "This is a hell of a way to make a living."

Trimmed down to svelte 210 lbs. (8 lbs. less than he weighed for the fight in Miami), Liston was in the best shape of his career—the toughest-looking 40-year-old (or so) around. "A kid hangs up his stocking at Christmas," said Liston, "and he has to wait until he wakes up in the morning to see what he got. Clay is like that kid. He'll know what happened when he wakes up." Bookmakers agreed: they installed Liston as a 1-2 favorite to become the second man in history (the other: Floyd Patterson) to regain the heavyweight championship.

SCOREBOARD

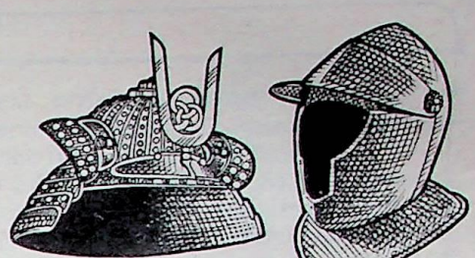
Who Won

▶ Baltimore's Hank Bauer, 42: the Associated Press poll for American League Manager of the Year. Bauer's Birds were figured as also-rans by the experts, but their granite-chunk skipper (TIME cover, Sept. 11) kept them in first place for most of the season before they finally fluttered back to third—thus earning himself 53 out of the 83 ballots cast by sportswriters.

▶ Jack Nicklaus: the Australian Open Golf Championship, with a sizzling five-under-par 67 in an 18-hole playoff against Aussie Pro Bruce Devlin. The money was measly ($1,787), but it was Jack's first win in three trips Down Under, and the first U.S. victory in the Open since Gene Sarazen won it in 1936.

▶ Penn State: the season's biggest football upset, roaring over, under, around and through second-ranked Ohio State 27-0. Only 3-4 on the season, Coach Rip Engle's Nittany Lions suddenly found their claws, held Ohio State to minus 14 yds. in the first half and five first downs all afternoon, while administering the Buckeyes' first goose egg in 45 games. Unbeaten Notre Dame hung on to its No. 1 ranking by standing off a second-half drive by inspired Pitt to win 17-15. Other scores:

Michigan State 21	Purdue 7
Maryland 27	Navy 22
Michigan 21	Illinois 6
Syracuse 27	Army 15



WHAT JAPANESE BANK IS OLDER THAN THE BANK OF ENGLAND?

The 281-year old Mitsui Bank.

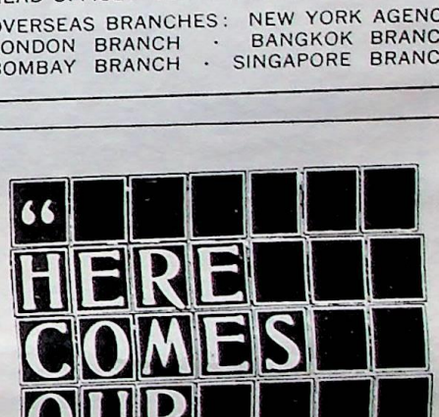
The first Mitsui Exchange House was founded in 1683. From it has grown a vast complex of industries, embracing every aspect of modern business life.

Because the Mitsui Bank still occupies a central position in this great business group, it can be of special help to you in your dealings with Japan.

We are experts in foreign trade and exchange. We are modern, fast, and conscientious. You'll find our branches or correspondent banks in every major city of the world.

THE MITSUI BANK, LTD.

HEAD OFFICE: YURAKU-CHO, TOKYO, JAPAN
OVERSEAS BRANCHES: NEW YORK AGENCY
LONDON BRANCH · BANGKOK BRANCH
BOMBAY BRANCH · SINGAPORE BRANCH



These words were once spoken of France's Jean Anouilh by a director of acknowledged ability—and doubtful foresight. TIME quoted him in a searching article on the playwright. Just such commentary gives TIME's features on famous people authenticity and bite. It's in evidence throughout the wide ranging Show Business section, which gleans theatrical news from every corner of the world. Small wonder millions of families around the world read TIME. It keeps them up-to-date on the very business there's no business like.

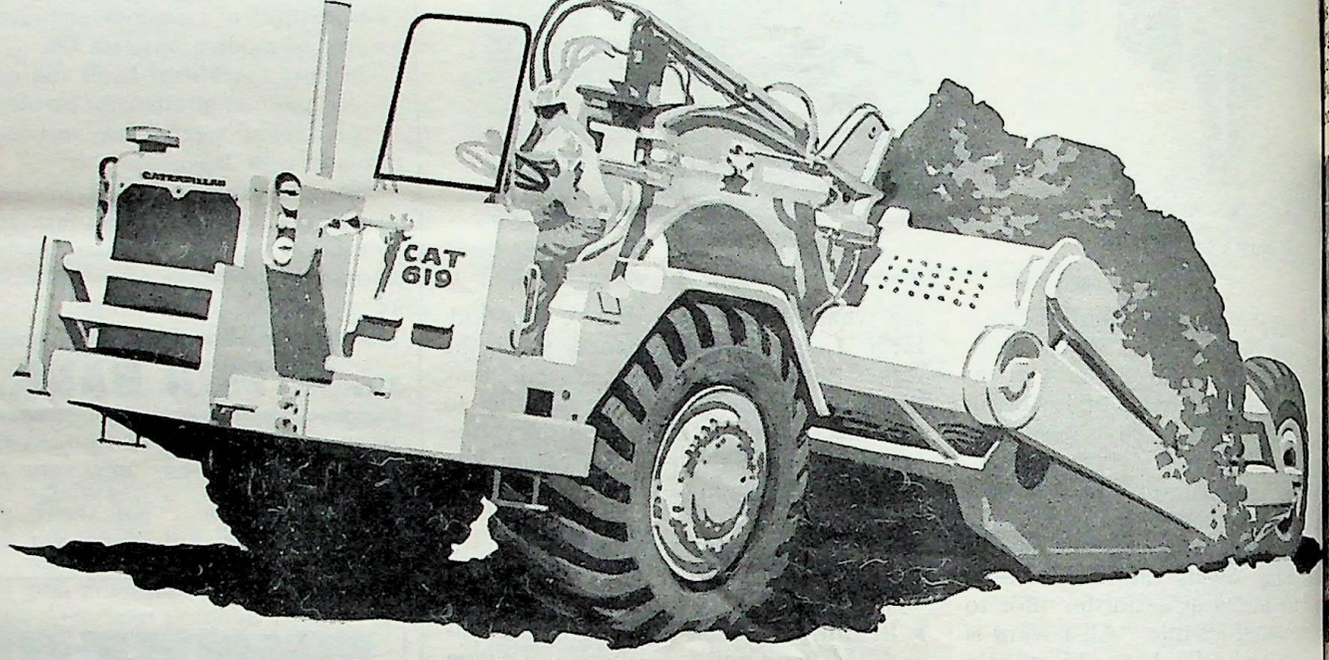
When you compare Tractor-Scrapers



Caterpillar Quality has so much more to offer

In earthmoving Quality is a measurable asset, one that means more work at less cost. It can be calculated in the seconds it takes a Caterpillar Tractor-Scraper to load . . . in the speed of its return for a fresh load . . . in the thousands of hours it works with a minimum of servicing stoppages. One such quality-built machine is the 250 H.P. (flywheel) Caterpillar 619C. The 619C is economical for the smaller jobs and fast enough for the larger projects. Study the features of this fast, productive machine—Cat power shift transmission to match conditions; top speed 31 MPH; 18 cu. yd. heaped capacity; easy maintenance and servicing; unequalled operator comfort. Features like these coupled to Caterpillar Quality give owners the highest production, greatest reliability and lowest operating costs. *There are 10 Tractor-Scrapers in the Caterpillar range with capacities from 18 to 54 years heaped. Flywheel horsepower ranges from 250 to 785 H.P.* When your plans include Tractor-Scrapers it pays to see your local Caterpillar dealer first.

CATERPILLAR

Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co.

GOVERNMENT

The Outside Insiders

Now that Lyndon Johnson has won the Presidency in his own right, U.S. businessmen—many of whom supported him—will watch closely to see what kind of economic policy he will pursue. Johnson faces the complicated problem of keeping the economy expanding and prices relatively stable while simultaneously trying to solve persistent unemployment, budget deficits and payments imbalances. Some clues to his future course can be found in the large group of private, non-Government economists he has been calling on for advice. Already at work on many economic projects for Johnson, these men versity of Wisconsin with Heller, landed his first Government job (in the Treasury) through Heller after World War II, now frequently discusses the economy with the CEA chief. Specializing at the moment in federal-state relations, Pechman this week will hand to the President a lengthy report that recommends methods for channeling a portion of federal tax revenues back to the states. "Johnson and his aides seek advice and know how to use it," says Pechman. "They have turned to consultants because they find it increasingly difficult to attract men to Government jobs."

Pechman shares honors in influence with Paul Samuelson, 49, M.I.T.'s globe-hopping author of a bestselling university economics text and a close adviser rent review of excise taxes. He has served on economic missions to countries from Burma to Germany.

▶ Edward Bernstein, 63, an international-money-policy expert who edits an economic newsletter (subscription price: $1,000 a year) widely read in the Federal Reserve System. This week Bernstein will hand in to the White House a report on how to improve balance of payments statistics so that the Government can better analyze them.

▶ Robert Lampman, 44, of the University of Wisconsin, the major economic adviser on the President's anti-poverty program. He favors greater federal tax rebates for lower-income families.

▶ James Tobin, 46, former member of the President's Council of Economic

A fraternity linked by bonds of philosophy and service.

n generally be expected to make their fluence felt in favor of higher spend-g, lower taxes, planned deficits and sy credit.

The activities of these advisers are ore or less coordinated through the esident's Council of Economic Advis-s, but they range far beyond the usual ope of the CEA. Walter Heller, au-or of the tax cut and the most influen-al chairman in the CEA's history, is pected to resign soon and return to e University of Minnesota, though the esident is eager to keep him on. Hel-r's replacement could well be Michi-n's Gardner Ackley, 49, a somewhat sister but equally activist CEA mem-r. Whoever heads the CEA, the band outside economic advisers is certain be used increasingly by the Adminis-ration. Spread from coast to coast, this aternity is linked by bonds of friend-hip, philosophy and years of service to-ether in universities and Government. Two probably rank above the rest on the influence chart. One is Joseph Pech-an, 46, the short, greying economist at the Brookings Institution, who im-portantly shaped the form of the tax cut and now is lobbying for a reduction in excise taxes. Pechman went to the Uni-to Johnson—as he had been to Kennedy. Samuelson was a moving force behind the decision to tax purchases of foreign securities, and was asked by Johnson to critically appraise details of the 1965 budget before top Government aides knew of them. At Johnson's behest, he will soon suggest an overall, long-range approach to economic policy designed to further stretch out recovery periods. He believes that "the Government doesn't usurp the role of the private economy but rather helps it to reach its potential."

Among the others who have become regular advisers to the Administration:

▶ Seymour Harris, 67, who has sought the sun at the University of California at San Diego after four decades at Harvard, now jets to Washington for about five days a month to give his advice. He has mobilized 25 top economists to brief Douglas Dillon and his Treasury officials, argues that "completely free enterprise doesn't work—it needs Government help to protect it from abuses and excesses."

▶ Richard Musgrave, 54, one of Harris' monthly consulting group, a Princeton professor who is making a major contribution to the Government's cur-Advisers, a prime Government consultant from his post at Yale. Among his specialties: consumer behavior and balance of payments. Another Yaleman is Arthur Okun, 35, a former CEA staffer who has helped to form the Government's tax policy.

▶ A Harvard group, which includes Carl Kaysen, Alvin Hansen, Arthur Smithies, and James Duesenberry. A noneconomist, Don K. Price, dean of Harvard's Graduate School of Public Administration and a former Tennessee newspaperman who became a Rhodes Scholar, is a top consultant to the Budget Bureau. Though John Kenneth Galbraith recently saw the President, he is generally less affluent nowadays in terms of influence in Washington.

Economic issues are becoming so complex, and economic statistics so overwhelmingly complete, that no Government agency feels that it has enough expertise to deal with them. The Budget Bureau, for example, needs a 33-page booklet simply to list its consultants. Many Government officials take the position that the outside economists, not bound up with existing policies, are apt to be more critical and accurate than the men who are.

LABOR

There They Go Again

The United Auto Workers do not seem to know when to stop. Having cowed Chrysler into submission, struck American Motors and General Motors, and won from Detroit's Big Four the biggest wage and benefit settlement in history, it might reasonably be presumed to be satisfied. Yet last week, while the last workers were returning to G.M. after a 31-day strike that cut October auto sales 27%, U.A.W. workers at Ford launched their own strike. Ford and the union reached a strike-free national settlement in September, but have been quibbling ever since over local nonwage issues. When the deadline set by the union arrived, 27,000 workers marched out at nine Ford manufacturing and assembly plants, and the threat of a strike hung over two other plants that were operating without contracts.

In the niggling that has been typical of auto negotiations this year, bargaining broke down over the fine print in the contract—seniority rights, job assignments, paid wash-up time, added protective clothing. The primary sticking point was overtime schedules; the union demanded that they be equalized and that workers not getting their fair share of overtime during a certain period should be paid the equivalent amount in cash even if they had not worked any overtime. Ford would have none of this, and the strike was on. It immediately cut Ford's passenger car production by 16%, its truck output by 34%. Its continuance not only would threaten the industry's fond hopes to run up another record auto year, but could trigger the dampening reaction in the economy that economists have been fearing since the beginning of the labor negotiations—which have certainly turned out to be more difficult and unpleasant than anyone could have expected.

INDUSTRY

The Big Wire

The weakest thing about the prospering U.S. television industry is its broadcast signals. Blocked by mountains, bothered by airplanes, bounced by hills and high buildings, they generate only ghosts on TV screens in many parts of the nation. To remedy this bothersome situation, a controversial industry has grown up across the U.S. Called CATV (for Community Antenna Television), or cable TV, it banishes ghosts and vastly increases TV reception by grabbing the signals of TV stations out of the air with towering antennas, amplifying the signals and piping them into homes by coaxial cables strung on telephone or utility poles. Serving mostly outlying areas, cable TV has grown into a $750 million business that includes 1,450 systems and 1.6 million subscribers spread over all states except Alaska and Rhode Island.

Inevitable Control. More companies are set up every month to bring CATV to more communities, most of them operating on local franchises that give them exclusive rights to a certain area. The biggest CATV company is H & B American Corp. of Los Angeles, which owns 30 scattered systems serving 80,000 subscribers; it is followed by TelePrompTer Corp. of New York, whose 16 networks serve 60,000 customers. Their success in the field has already attracted several major corporations: CBS, Warner Bros. and RKO General all own CATV systems, and General Electric and Litton Industries are studying the field. Of the 522 television stations in the U.S., fully half have some interest in cable TV, among them Lady Bird Johnson's KTBC in Austin, Texas. So fast has cable television grown that the inevitable is happening: the new Congress will soon get legislation aimed at putting the industry under federal control.

The Government thus far supervises only the 250 cable TV companies that are classed as common carriers because they use microwave equipment to pick up and transmit programs. Most companies use ordinary towers that require only a local franchise. Organized for as little as $250,000, CATV companies charge installation fees of $5.50 to $30, offer viewers excellent reception of up to a dozen channels for monthly rentals that average $5. The systems operate with a minimum of personnel and 98% efficiency, are expected to return investment within nine years.

From Towns to Towers. This efficiency and profitability have involved CATV in a hot debate. Though it does not generate its own programs, for example, many people see it as a form of controversial pay TV, which last week got a setback in California (*see* SHOW BUSINESS). Networks have mixed feelings about CATV, but TV stations resent its frequent disruption of local markets with outside channels. ...are. With higher dividends for the first three quarters, that will raise G.M.'s big payoff from $4 a share last year to $4.45 this year, and give some 250,000 shareholders enough for a down payment on a new Chevy or even a '65 Cadillac. While G.M.'s calculated munificence will reverberate throughout the economy, the biggest individual beneficiaries will be five elderly men who had the good sense to become the largest shareholders in the firm. All but two of them got in very early, when both the company and U.S. income taxes were modest.

Profitable Sellout. The largest dividend goes to the legendary Alfred P. Sloan Jr., 89, who merged his small New Jersey roller-bearing plant into G.M. in 1916, later became its chief executive and brought order to its chaotic divisions. Today he is a vigorous member of G.M.'s finance committee and has 688,046 shares, which will yield him $3.1 million this year. Close behind, with 645,176 shares, is John Lee Pratt, 84, who came to the company from Du Pont in 1919 and rose to become a G.M. vice president. Now a retired Virginia farmer who shuns publicity, Pratt so successfully keeps out of public view that he is not even listed in *Who's Who*.

The only member of the big five who bought into G.M. in recent times is Richard King Mellon, 65, Pittsburgh's leading banker, urban renewer, celebrated big-game hunter and U.S. Army lieutenant general (ret.). A G.M. director, Mellon owns 240,000 shares, most of which he bought when he diversified the family's investments shortly after World War II. Next to him, with 155,-000 shares that stem from his family's role of one of Canada's biggest auto manufacturing firms to G.M. in 1918, is R. (for Robert) Samuel McLaughlin of Oshawa, Ont. Though he is 93, McLaughlin still puts in several hours a day as chairman of G.M. of Canada Ltd., likes to show off his fitness by urging companions to "feel my muscle" and to punch him squarely in the stomach.

The Great Giveaway. G.M.'s fifth-ranking shareholder, Charles Stewart Mott, a spry 89, used to be its largest by far—until he gave away 1,826,421 shares to the Mott Foundation, which underwrolls just about all the cultural, social and athletic activity back home in Flint, Mich. (TIME, June 28, 1963). Not counting the 679,800 G.M. shares held in trust for his wife and children, Mott still owns 101,722 shares left over from the sale of his wheel-and-axle company to G.M. in 1906. He never misses a G.M. monthly board meeting, although he often has to fly to Manhattan from his winter estate in Bermuda. He also keeps an active hand in the management of the other properties that he endowed in the Mott Foundation, notably half a dozen water utilities and four Michigan department stores. "I prefer to be known by what I do, not by what I have," says Mott, smiling through a white mustache. So far this year, the Mott Foundation has given away $8,000,000 for children's clinics in Michigan—all of which will be covered by its 1964 G.M. dividends.

MANAGEMENT

All in the Family

In a day when U.S. business is typified and dominated by such publicly owned giants as General Motors, profits are also pouring into the coffers of quite a different kind of company: the family-owned firm. Many big and brawny U.S. companies are still family-owned—and have no intention of sharing with outsiders their hard-earned prestige or profits. They tower in fields as varied as mining, retailing, proprietary drugs and investment banking, and turn out such well-known products as S. & H. Green Stamps, Caloric ranges, Johnson's Wax, Mennen toiletries, Ex-Lax and Old Fitzgerald—the last of which has a president with the wonderful name of "Pappy" Van Winkle.

Though their numbers have gradually declined with the spread of merger-seeking corporations, firms that have stuck to private ownerships have proved that they can compete with and outdo the Goliaths by concentrating on specialty products. San Francisco's family-owned Levi Strauss & Co., the behemoth of blue jeans, has a new wrinkle—or, rather, an unwrinkle. It has just begun worldwide marketing of hot-selling "Sta-Prest" pants, which are treated with resin, then baked in 325° ovens until they have a permanent crease. Strauss President Walter Haas Jr. is convinced that almost all clothes will eventually be so treated to make them wrinkle-free.

No Pressure, No Proxies. Like Levi Strauss, which is run by four heirs of its founder, most family-owned businesses stay that way simply because the owners want to be their own bosses. There are other advantages of family ownership, of course. The family firms have the asset of secrecy, a particular plus in the brutally competitive clothing or package-goods businesses, where products are often pirated. Relieved of shareholders' probing questions and pressures to declare dividends, family managers can reinvest all their profits or, for that matter, take a bad loss without having to worry about criticism. Says Roy Goodman, president of Brooklyn's prospering Ex-Lax Co. (500 million chocolate tablets a year): "We have flexibility in the decision-making process. We can get many things done without going through a hierarchy of management."

On the other hand, family firms have some congenital weaknesses, and Wall Street has tended to play these up in its constant importuning of such businesses to go public. Among them: the problem of signing up and holding able executives who know that the sweetest plum is often reserved for the boss's son. Perhaps the worst fate that can befall a family-owned company is to have at its head a grandpa who thinks that the old ways are still the best.

MENNEN'S MENNEN

JOYCE WILSON

LEVI STRAUSS'S HAAS

My son, the president.

Profitable Intangibles. Some clannish companies eventually sell out or merge: Q-Tips, for example, recently merged into Chesebrough-Pond's, and Breck Shampoo into American Cyanamid. A much larger number of successful and independent businesses find ingenious ways to overcome the hurdles. Charles Cassius Gates Jr., president of Denver's Gates Rubber Co., has led his company abroad and diversified it so widely that it now has both egg factories and a mutual fund. To overcome the disadvantages of nepotism, Seattle's Simpson Timber has ruled that the only job open to the owners' family is the chairmanship, which is currently held by William G. Reed, 56. Racine's wax-making S. C. Johnson & Son turned the presidency over to an outsider to give 36-

Rising production and ...r costs in the old mines are par- ...y responsible, and so are cheaper ...ign coal prices; U.S. coal, highly ...mated and easier to dig out, un- ...ells German coal by $2 a ton in ...rmany, and only a miserly quota ...ps it from flooding the German mar- ... Coal's greater rival is oil, which ...been sweeping the country as a ...ting and industrial fuel at the same time that better technology has enabled such industries as steel to use less coal. In six years, the use of oil in West Germany had jumped 421%.

Bonn imposed stiff excise taxes on fuel oil some time ago, and persuaded coal companies to close 37 mines and 122 coalpits by offering aid and incentive payments. Coal's decline has continued inexorably, and mountains of unsold coal have piled up throughout the Ruhr, the Saar and other coal-producing regions. Last week's mine closings were to meet the deadline for federal aid, since most of the mine owners—even some who are operating at a profit—see little hope for the future. The government was reluctant to put import quotas on oil, as the coalmen wish, but tried to cool the crisis by giving the mines until Dec. 31, 1966—beyond two crucial elections—to begin phasing out. Though miners are reluctant to leave their trade and their homes, they should have no trouble getting new work. In prosperous Germany, jobs are still going begging.

INDIA

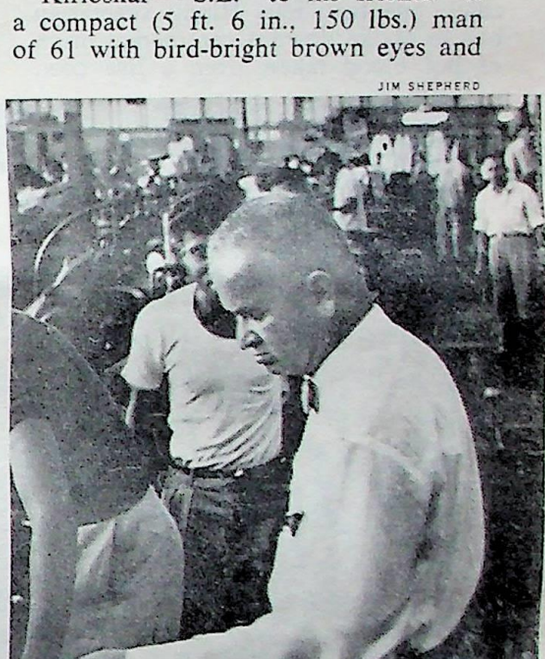
Ancient Gods & Modern Methods

While a ceremonial fusillade of firecrackers sounded outside, a black-capped Brahmin pandit recited Sanskrit prayers last week in a factory conference hall at Poona, outside Bombay. It was the time of year for worshiping Lakshmi, the Hindu goddess of wealth and prosperity, to whom all wise Indian businessmen annually offer their order books for a blessing. With his workers during the ceremony, his feet bare and his forehead glowing with a dot of vermilion, sat Shantanu Laxman Kirloskar, the U.S.-educated head of India's Kirloskar group, a seven-company combine that sells $46 million worth of farm and industrial equipment a year in 42 nations on every continent. Shantanu Kirloskar's respect for ancient rites is matched by his interest in modern and aggressive management. From the ceremonies, he set off on a flying trip to the U.S., Canada and seven Latin American cities to seek new sales outlets for his thriving companies.

Steel Plows for $8.40. The Kirloskar companies not only dominate their field at home (by producing 65% of India's diesel engines, 40% of its centrifugal pumps, 36% of its electric motors), but also symbolize the gradual change in India's old image as a mere exporter of raw materials. Nearly 20% of Kirloskar's diesels are sold abroad, from West Germany to California, and from the West Indies to the Persian Gulf. Kirloskar plants also turn out a neatly complementary array of products that range from air compressors to vertical turret lathes, from sluice valves to torque converters. But Kirloskar is proudest of his contribution to the revolution in farm methods that food-shy India so badly needs. Although four-fifths of the Indian peasant-farmers still use wooden plows, Kirloskar is busy selling them steel ones at enticingly low prices: $8.40 to $24.15. More important, he is persuading many farmers to shift from bullock muscle to diesel engines to pump water for irrigation.

Kirloskar—"S.L." to his friends—is a compact (5 ft. 6 in., 150 lbs.) man of 61 with bird-bright brown eyes and

JIM SHEPHERD



KIRLOSKAR AT POONA PLANT
Shifting from bullocks.

a penchant for gay-toned bow ties. After graduating from Massachusetts Institute of Technology in 1926, he got his little family-owned motor company to branch out into planters, seeders and harrows, invented a machine that speeded peanut shelling by 600%. Kirloskar has been branching out ever since, often by collaborating with foreign manufacturers. He runs his empire of nine scattered plants and 11,000 workers with a light hand. "I direct by invisible authority," he says. "If things are running right, I don't interfere." He keeps in touch by flying from plant to plant in his private twin-engine Beechcraft, relaxes in his Poona home by listening to Western classical music on a stereo hi-fi.

Sugar Cane & Cow's Blood. Almost alone among Indian industrial complexes, Kirloskar has no roots in textiles. Its founder, Shantanu's late father, was a Bombay teacher who began by repairing bicycles and manufacturing plows 60 years ago. So suspicious were Indian farmers about the quality of local iron-

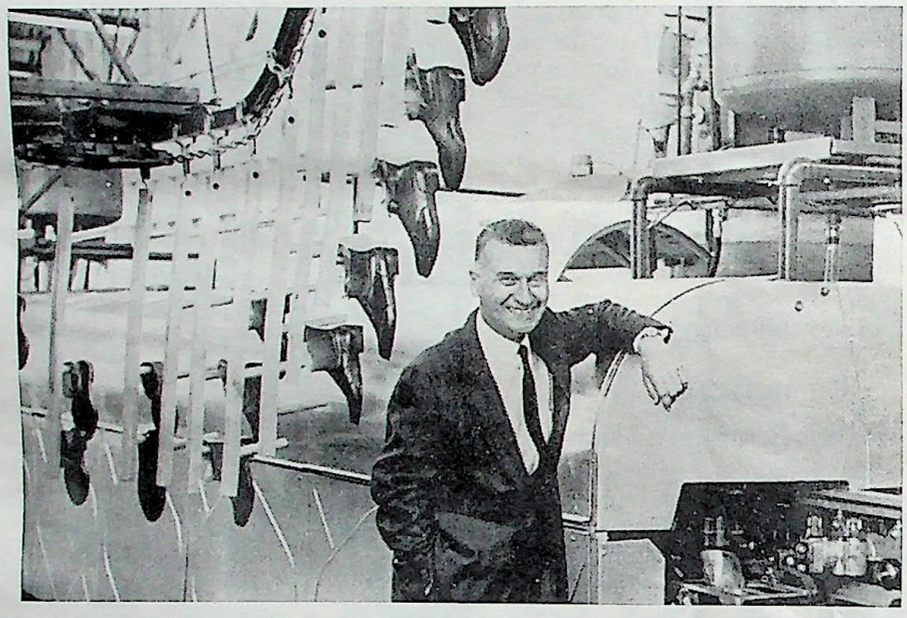
work that it took the elder Kirloskar two years and myriad demonstrations to sell his first six plows. What he learned has governed the company's sales approach ever since. Says S. L.: "The farmer is not a fool. He is a businessman. You have to prove things to him." To prove to skeptical farmers that a sugar-cane crusher he invented would extract more juice than old models, Kirloskar borrowed already-crushed cane and extracted plentiful juices from it. Sales soared. Abroad, his salesmen have surmounted even more trying obstacles. Before closing the sale of an engine to an African chief, one fastidious Hindu vegetarian had to choke down a ceremonial drink of hot blood taken from a live cow.

works and now turn out shoes for the East Bloc. In a memorable lawsuit that lasted nine years, Jan and Thomas quarreled over the remains. Jan lost but was allowed to retain Bata's Brazilian plant.

A Canadian citizen since 1942, Thomas Bata at 50 is one of the nation's most successful businessmen. He is also one of the most modest in his habits: he does not smoke, drinks sparingly, entertains mostly at business lunches, but allows himself the flair of driving a '64 Mustang. Bata alternates between his Toronto office and his principal manufacturing plant at Batawa, a small town 110 miles east of Toronto named after the company. He frequently wears odd shoes to test his own



BATA AT BATAWA
Something like Henry Ford.

CANADA

Shoemaker to the World

The world walks in everything from sandals and slippers to sabots and bare soles, but its largest shoemaker covets every foot—and aims to cover it. This year Canada's Bata Ltd. (pronounced Bot-ya) will produce 190 million pairs of shoes in 3,000 styles sewn in 80 plants scattered over 67 countries. It has opened 16 plants in the past three years, last week opened another on tiny Mauritius in the Indian Ocean, and plans to build two more soon in Uganda and France. To run this mixed shoe bag more effectively, Bata next month will move into a modernistic headquarters in new suburban Toronto.

Loss to the Nazis. Canada is Bata's adopted home. The firm was organized in Zlin, Austria (later Czechoslovakia), in 1894 by young Shoemaker Thomas Bata, who got an idea for making shoes faster and cheaper with assembly-line techniques. Bata's idea worked so well that he soon branched out, at his death in 1932 owned plants in 27 countries. His heirs, Half-Brother Jan and Son Thomas Jr., later lost part of this empire to the Nazis and then to the Czech Communists, who expropriated the Zlin against competitors', stresses the low-price policy (no Bata shoes cost more than $18 a pair, and prices range down to a 60¢ sneaker) laid down by his father. "We have the same basic idea as old Henry Ford," he says. "Turn out cheap good shoes for the mass market but give them style and quality."

Two Apiece. Bata's annual sales are estimated to be around $400 million. But the company is controlled by an interlock of trusts and foundations, and the seven regions into which Bata has decentralized operations keep separate, and secret, books. Bata himself is as interested in world affairs as in money. He reads foreign policy treatises for relaxation, travels 150,000 miles annually with his svelte wife Sonja, 38, inspecting regions and making courtesy calls on Presidents and Prime Ministers. Bata hires local labor for each plant but likes to shift key men from country to country: his Algerian plant is run by an American, a Chilean is in charge of Mexico, and at Batawa the chiefs for testing and efficiency are an Indian and a Pakistani. "We are cross-pollinators," says Bata. "We have no preferred nationality." Whatever the race or nationality, after all, all men have two feet.

An ocean-going chemical plant?

Unfortunately, no one has sent us that kind of order. *Yet*. But the idea is not without merit. No rent to pay. Ready access to raw materials. And markets. And no worry about contaminating rivers, beaches, or harbors with industrial wastes.

Until we get such a challenging order, we'll have to content ourselves with building superior ships and chemical plants. *Separately*. We take pride in our ability to use imagination in the solution of difficult engineering problems. *Example:* Our leadership in the application of modern automation systems to cargo-liners and tankers. We also excel in such fields as engines, land development machinery, electrical machinery, steel structures, and industrial machinery and equipment. May we help *you*?

A Wife's Tale

The Pumpkin Eater of the nursery rhyme put his wife in a pumpkin shell, and there he kept her very well. Giving a wry contemporary twist to Mother Goose, Penelope Mortimer's vivid first-person novel suggests that the poor creature then swiftly developed shell shock. In this slow, strong, incisive film version of the book, the ironing out of a well-kept wife's unkempt psyche is portrayed with harrowing perception by Anne Bancroft.

Actress Bancroft, the Bronxish beatnik of Broadway's *Two For the Seesaw* and the iron-willed mentor of *The Miracle Worker*, stretches her talents to astonishing breadth as Mrs. Jake Armitage, a British matron who believes that incessant procreation is what's right with the world, not what's wrong with it. This elemental drive brings her a swarm of children and several hard-pressed husbands, the last of whom (Peter Finch) jolts her out of bovine contentment by becoming a rich and famous screen writer.

Suddenly cursed with leisure, with her children away at school or looked after by servants, she sits idly thumbing the pages of *Vogue*. Her husband loses himself in enterprises inimical to home life, and amuses himself with bits of accessible fluff. One day, while shopping at Harrods, the placid wife collapses in a fit of hysterical sobbing. The doctor comes. "A beautiful woman," her husband growls, "but all she wants to do is sit in a corner and give birth." She submits to sterilization at her husband's urging, only to learn that he has got another woman with child. Her pumpkin shell bursts. Alienated from husband, family and self, she flees into a brief affair, at last learns to accept her husband as flawed, faithless, tender, selfish and, for her, inevitable.

Though *Pumpkin Eater* in outline resembles a compendium of womanly woes, it plays like a house afire, almost invariably ignited by Actress Bancroft, who could probably strike dramatic lightning from a recitation of tide tables. Having tea at the zoo, she quietly distills despair while a prurient cuckold (James Mason) spews ugly revelations about her husband and his wife. Cornered under a hair dryer at a beauty salon, she blanches, feeling her own anguish cruelly parodied in a chance conversation with a venomous, cast-off drudge. And her spectacular scenes with Finch, pitched against the din of a more or less anonymous army of progeny, are a litany of love, hate, lies, jealousy and excruciating domestic boredom.

Scenarist Harold Pinter and Director Jack Clayton (*Room At The Top*) show proper scorn for the easy tricks of melodrama. Their unsentimental aim is to take a marriage apart and nail up the bleeding pieces for honest scrutiny. Often as not, they succeed, finding lethal words and crisp images to express the timeless battle that Author Mortimer describes as "men and women who murder each other with all the weapons of devotion."

WALTER DARAN

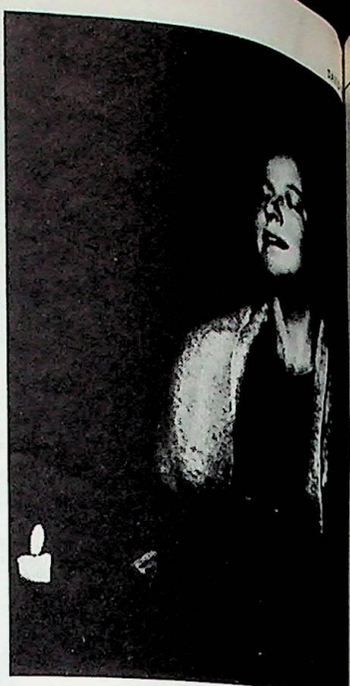
BANCROFT IN "PUMPKIN"
A litany of love, hate, jealousy.

Medium Rare

Séance on a Wet Afternoon. The medium looks like a plump 40-year-old schoolgirl whose face has the form and consistency of unbaked bread. She speaks to her timorous husband in plaintive, halting phrases, pausing from time to time to brush away some imaginary disturbance in the middle of her forehead. "Arthur wants me to be recognized for what I am. What we're doing is not . . . *wrong*, Billy."

Billy dutifully agrees. What they are doing is planning a kidnaping, though his wife prefers to call it "borrowing a child." The idea originated with Arthur, the medium's dead infant son and favorite contact on the Other Side. Once the victim and the ransom money are theirs, the medium can go to the child's parents to divine where both can be found. She will thus be assured of the fame her phenomenal powers deserve, and no harm done.

It is all very mad, very English, and very nearly preposterous. But for viewers eager to empty their minds and concentrate on such creepy business, Writer-Director Bryan Forbes (*The L-Shaped Room*) works an aura of disaster into every nook and passageway of a turreted old mansion. As the demented psychic, Myra, Kim Stanley manages so many subtle shifts of mood that she seems simultaneously sweet, bitchy, poignant, and a deadly menace. The kidnap scene is a cinematic whirlwind, with the camera cutting and lashing across the landscape to build to a moment of crisis when the victim (Judith Donner) locks herself in the back of a limousine while Billy (Richard Attenborough) fumblingly tries to



STANLEY IN "SÉANCE"
Disaster in every nook.

out his wife's instructions about chloroform.

At last the ransom is collected, the child falls ill, and Myra sends Billy to the parlor, a wild look in her eye. "I don't want to let her go," she announces strangely. "Arthur will be saying how much happier she'll be if we sent her to him—"

Up to that point, and even a little beyond, *Séance* is the kind of mind-drying thriller in which every viewer seems split. The film's climax dissolves suspense in a game of guesswork that may provoke discussion among viewers but also suggests that Scenarist Forbes may have sat down at his table and waited for someone—or something—to tap out a message that never came.

In Praise of Cowardice

The Americanization of Emily. As long as valor remains a virtue, the unheroic hero of this film, "we" will have soldiers. So I preach cowardice. Cowards run at the first shot. If everybody did, we would never get to the second shot. I'm a coward, and I say cowardice will save the world!"

Playwright Paddy Chayefsky has wrote the script for *Emily*, obviously intended a black comedy in the style of *Dr. Strangelove*, a savage sneer at war and all its bloody works. But if Stanley *love* with cheery ferocity reminds audiences that every cloud has a tium lining, *Emily* in confused conclusion manages to suggest that every man value has a wormy caramel center.

The film, praise be to Paddy, starts before it turns sweet. The coward (James Garner) is a fat cat who finds that military life in London in the years before D-day is just his bowl of cream. While millions of Britons queue for rations, the hero inhabits an Eden flowing with rivers of bourbon, steaks of sirloin and herds of gorgeous girls. He will do almost anything for a

Up until now most satellites cost millions to produce. This one is an exception.

This ITT-built satellite carries a price tag of well under $250 thousand. The U.S. now has a relatively inexpensive space vehicle with many potential uses. It could be designed for communications, or any number of scientific experiments like the measuring of radiation in the atmosphere; it can be used for pinpointing locations on earth. In fact, that's what it is doing at this moment. All 40 pounds of it is circling the earth about every hour and 40 minutes at an altitude of 600 miles. It was successfully orbited early this year by the U.S. Air Force Space System Division as part of an overall program of geodetic measurement, managed by the U.S. Army.

Working in conjunction with four ground stations, the new satellite's job is to receive and retransmit radio signals which permit determination of accurate data on the exact positions of continents, islands and other landmarks. It will eventually help eliminate the margin of error that now exists in cartographic computations.

This is another of the advances made by ITT—world's largest international supplier of electronic and telecommunication equipment. Facilities in 51 nations doing business in 115 countries and employing 179,000 people.

For information, contact your ITT representative or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: International Telephone and Telegraph Corporation, 320 Park Ave., New York, New York 10022.

EVELYN WAUGH (1929)
Pulled by the lure of the past.

Mid-Victorian in Exile

A LITTLE LEARNING *by Evelyn Waugh.* 234 pages. *Little, Brown.* $5.

I should like to bury something precious in every place where I've been happy and then, when I was old and ugly and miserable, I could come back and dig it up and remember.

—Lord Sebastian Flyte,
in *Brideshead Revisited*

Arthur Evelyn St. John Waugh is a man with a lifelong and unswerving hatred of the 20th century's industrialized, democratized ways. From his first irrepressibly comic, murderously sardonic novels (*Decline and Fall, Vile Bodies*), most of Waugh's books have had as their real subject the loss of a golden age. Looking back, the Oxford and Mayfair targets Waugh satirized in the '20s and '30s have largely vanished, taking with them half the early novels' humor but leaving the rage intact. After World War II he suddenly turned earnest: *Brideshead Revisited* is a frankly elegiac lament for the passing of a golden youth and innocence. Most readers mourned the change.

Now 61, Waugh has decided that his own time has come to dig up the past and remember. In this reticent, ironic, quietly elegant first volume of autobiography (he plans two more), Waugh takes his life through school and Oxford, ending on the eve of his first literary success. He insists that from early childhood he sensed "another age which I instinctively, even then, recognized as superior to my own." This nostalgia for "the Mid-Victorian ethos" later came to be a fixed theme of Waugh's books—and of his religion, his Tory politics, his testy and forceful prejudices.

Glow of Happiness. Typically, Waugh "follows the old fashion" of autobiography and begins not with himself but his ancestors. With warmth, wit and antiquarian zeal he traces them through four generations of the solid, comfortably moneyed professional class that saw the flowering of the British Empire. Waugh himself was born near London in 1903, given the name Evelyn "from a whim of my mother's. I have never liked the name." He borrows an anecdote from much later in life to illustrate why: "Once during the Italian-Abyssinian war I went to a military post many miles from any white woman, preceded by a signal apprising them of the arrival of 'Evelyn Waugh, English writer.' The entire small corps of officers, shaven and polished, turned out to greet me each bearing a bouquet."

His childhood in Edwardian England he remembers as idyllic, "an even glow of pure happiness." His memories of boyhood are vividly visual, from his nursery wallpaper (a pattern of medieval figures) to the beauties of the countryside and villages, which were rapidly being destroyed by urbanization in "the grim cyclorama of spoliation which surrounded all English experience in this century." He remembers loving the old-fashioned lighting, he even claims he loved the antique plumbing.

Violence & Hardships. Waugh's one-chapter portrait of his father is a charming and loving memorial. Arthur Waugh was plump, modest and kind, a publisher and man of letters in the old-fashioned sense who "genuinely liked books—quite a rare taste today." He was also unceasingly histrionic. "In greeting visitors he was Mr. Hardcastle; in deploring the ingratitude of his sons, Lear. Between these two extremes all the more likable of Dickens' characters provided him with roles." Though well-to-do, he could not sign a check without moaning: "They will bring me to a pauper's grave." He could not pass a looking-glass without recoiling from his reflection, "crying, in the tones of the ghost in Hamlet: 'O horrible! Most horrible.'" Several evenings a week, this remarkable dramatizer would read aloud to his family. "In these recitations of prose and verse the incomparable variety of English vocabulary, the cadences and rhythms of the language, saturated my young mind."

The transition to the "violence and hardships" of British public-school life was painful and severe. The experience may well have seemed unarguable evidence, the reader surmises, that change is not likely to be for the better.

Stung to Life. Waugh entered Oxford in 1922, and felt "reborn in full youth." He did the right thing by neglecting his studies almost totally, drinking heavily and getting deep into debt, just as he has described it repeatedly in his novels. It's all here: the brilliant, idle, artistic young men, the champagne, the escapades, the anecdotes, the high teas with the "honeybuns and anchovy toast" that are almost a trademark of

90 ways to skin it

You can do nearly anything in plastics today.

Even skin a cat.

And with the over 90 Monsanto plasticizers available to you, you can make that cat fire-proof, make it abrasion resistant, even make it conduct electricity.

Other Monsanto plasticizers can give you resistance to the damaging effects light has on some plastics, give you heat stability, minimum taste, resistance to extraction by oils and greases. Monsanto plasticizers give you so many different choices as to the final properties your plastic products will have that your only problem is deciding which one to use.

And even here, Monsanto can help you. We've set up the Plasticizer Council to take the results of applied research and put them at your disposal in the form of technical service to answer your specific needs.

And our technically trained local representatives can help you.

Ask them how many different ways there are to skin a cat with Monsanto plasticizers.

If you've read this far, the length of their answer shouldn't surprise you.

y is a difficult art and an al- gotten taste. But Author Lax- alt has chiseled out a narrative that is lapidary, unadorned and original. He falters at a couple of points when he slips into direct explanation. Overall, he succeeds powerfully in creating a novel that leaves in the mind a sense of truth lying in wait, with a dry rustle, coiled to strike.

A Curtain Half Lifted

MEMOIRS: 1921-1941 *by Ilya Ehrenburg.* 543 pages. *World.* $6.95.

When he was asked what he did during the Terror of the French Revolution, the aristocrat Emmanuel Sieyès replied, "I survived." If Soviet Novelist Ilya Ehrenburg were asked about his own activities during the 20-year Stalinist terror, he might well give the same answer. Considering that just about every eminent Russian writer and artist was exiled, executed or hounded to suicide by the paranoid dictator, Ehrenburg's survival is one of the most remarkable literary achievements of modern times.

No one quite knows how he did it. Ehrenburg claims it was pure chance; others say he made a deal with Stalin. Certainly he was as nimble and tricky a performer on the teeter-totter board of Communist politics as the world has seen. He was unique in being allowed to live abroad most of the time between World Wars. Back in Russia during World War II, he was Stalin's chief propagandist and heaped praise on his boss. After the war, though a Jew himself, he aided Stalin's ferocious purge of Soviet Jews by ridiculing Jewish solidarity and calling Israel a "laughable dwarf capitalist state."

After Stalin's death, Ehrenburg led the fight for freer artistic expression, and his 1954 novel, *The Thaw*, gave the new literary movement its name. In his *Memoirs*, which have been running, off and on, in the Soviet press since 1960, he has tried to present an unbiased picture of the recent Russian past. It is a gallant and encouraging try, but unfortunately—thanks to a combination of Ehrenburg's cautious temperament and official censorship—it only lifts the Iron Curtain half way.

Corruption of a Caraboid. This second volume of memoirs (the first carried Ehrenburg from his Moscow childhood through World War I) deals largely with writers and artists, good, bad and indifferent, whom Ehrenburg met in the capitals of Western Europe in the interwar years. Ehrenburg seems almost under a compulsion to mention as many as possible, as if to atone in some slight way for their "solitary, poor, nasty, brutish and short" lives. His portraits are touching, affectionate, anecdotal, but he scrupulously avoids discussing the writers' ideas. Only obliquely does he hint that many of the Russian writers were victims of Stalin, and by the time of their death thoroughly disgusted with Communism.

Ehrenburg is equally vague about himself. He expresses few of his own thoughts, has scarcely any explanation for the abrupt shifts in his career. A confirmed skeptic in the 1920s, he was dubbed "the caraboid," the name of a beetle which ejects a fine stinging spray. In his early novels, *Julio Jurenito* and *The Stormy Life of Lasik Roitschwantz*, Ehrenburg mocked Right and Left, capitalism and Communism (when *Roitschwantz* was republished in the U.S. in 1960, it was much to his embarrassment). But in the 1930s, he became a militant Communist, began cranking out "social realism" clinkers that glorified the Russian regime. His reasons are unconvincing: "I came to realize that a soldier's fate is not that of a dreamer, and that one ought to take one's place in the fighting ranks. I did not renounce what I held dear, nor did I repudiate

ILYA EHRENBURG
A nimble man on the teeter-totter.

anything, but I knew that I would have to grit my teeth and master that most difficult of disciplines—silence."

Roar of Cannon. Master it he did. When one close friend after another was hauled off to his death during the bloody purges of the late 1930s, Ehrenburg never said a word. Nor does he offer a word of reproof today.

Ehrenburg is at his best when he is simply reporting what he saw. Assigned by Izvestia to cover the Spanish Civil War, he is sharp, biting, witty. He describes how the Anarchists, numbering in the tens of thousands, caused havoc in Republican ranks. Not believing in law, order or discipline, they confiscated all cash in areas they controlled, cut off all medical supplies on the grounds that "nature is a better healer." Ehrenburg showed them Soviet films on proper revolutionary behavior, but the Anarchists laughed in all the wrong places.

Ehrenburg nevertheless shows flashes of awareness of his—and Communism's—vast errors, and he promises to say more about Stalinism in future volumes. "I shed the light of art too timidly, too meanly, too intermittently on this world

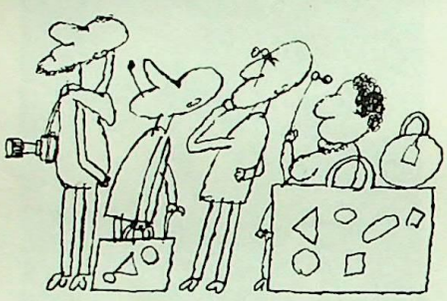
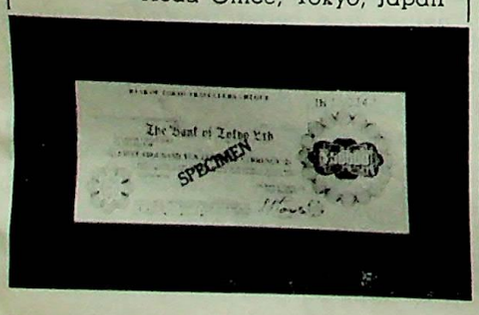
How to avoid the rush at exchange counters



The tourist season in Japan is all year. No matter when you arrive, the best way to avoid the rush at exchange counters is to convert your money before leaving your country. Bank of Tokyo has outlets all over the world where you can purchase Yen Travellers Cheques. As the saying goes, one shouldn't go anywhere in Japan without Bank of Tokyo Yen Travellers Cheques.

BANK OF TOKYO

Head Office; Tokyo, Japan



What I was depicting! I am certainties not in the quality of such gifts as I have, but in spiritual hastiness, in the fact that we were blinded by tremendous events, deafened by cannonades, by roaring, by intensely loud music, so that at times we ceased to detect the nuances, hear the heartbeats, and so lost the habit of discovering that spiritual detail which is the living tissue of art."

Also Current

DRIVE, HE SAID *by Jeremy Larner.* 190 pages. *Delacorte.* $3.95.

In winning the $10,000 Delta Prize, this short but flatulent novel was the unanimous choice of three eminent judges—Critic Leslie Fiedler, and Novelists Mary McCarthy and Walter van Tilburg Clark, who is quoted as having found it "gigantically laughable." Well, maybe. But unlike *Candy*, the bestselling pornographic novel that passes itself off as a satire on pornography, *Drive, He Said* is serious as all get out. Most of its fun is unintentional. Thus, in one chapter, Basketball Player Hector Bloom and his chick Olive spend a busy evening nuzzling each other outside a diner, are chased over hill and dale by a Cadillac jammed with knife-wielding rapists (strangely, they seem to be baddies), make passionate love to celebrate their escape. Then Hector, "in his last thought before he curled into the grip of deepest sleep, yearned for the clean true feel of a basketball."

UNFINISHED FUNERAL *by Niccolò Tucci.* 192 pages. *Simon & Schuster.* $3.95.

The reign in Spain, postulates the author, is "the cult of virility," and woman's fate is to be "enslaved and betrayed." On the reader's acceptance of this arch axiom teeters this over-suave tale. Its stagy business, and that of the Duchess of Combon de Triton, is to make her "appallingly stupid" duke the first faithful husband in Spanish history. Her scheme is to win his compassion by feigning illness and his awe by submitting to surgical cures without anesthesia or a whimper. Some 30 agonizing operations later, the duke commits suicide. Now the widow, whose "only joy is to make others stay out of their own lives," can begin to "enjoy" her two children. "You may do what you want, but not before my death, which is quite near, I feel." At the faintest threat of their self-realization, back to the operating table goes the duchess. Tucci's style and setting may be drawing-room comedy, but life, as he reports it, is theater of the absurd.

NIGGER *by Dick Gregory.* 224 pages. *Dutton.* $4.95.

In this rather premature autobiography, Comedian Dick Gregory aims to laugh the word nigger out of the English language. "Wherever you are," he writes in the dedication to his mother, "if you ever hear the word 'nigger' again, remember they are advertising my book." The trouble is that Gregory is always

HOW JOHNS-MANVILLE FILTER AIDS HELP YOU CONTROL CLARITY

Because of their unique, porous structure and highly irregular particle shapes, Celite® diatomite filter aids give liquids maximum clarity at the fastest flow rates obtainable. Celite is quarried from the world's largest and purest diatomite deposit and processed in one, closely controlled, continuous operation. You are assured of dependable, exceptionally uniform shipments, from a full selection of grades. Here, as with all Johns-Manville products, you can count on the right materials for the job, as well as on the help of your J-M Resident Engineer.

Your Johns-Manville Distributor invites queries on filter aids as well as mineral fillers, insulations, friction materials, tapes, building materials and packings. Contact the J-M Distributor in your country or write: Johns-Manville International Corporation, Box 280, New York, N. Y. 10016, U.S.A. Locations: Beirut · Buenos Aires · Goteborg · Hong Kong · Lagos · Lima · London · Madrid · Mexico City · Milan · Paris · San Juan · São Paulo · Wiesbaden.

Now! Lockheed's Hercules answers the need for a medium range, all-purpose airfreighter

Here is the commercial Hercules: A 340-mph turboprop airfreighter designed from scratch to haul heavy cargo—up to 50,000 lbs. of it, as is, where it is, where it needs to go.

An airlifter service-tested for nearly eight years, logging more than 240 million miles throughout the world, operating from low grade strips — even unpaved fields — at sea level and high altitude, from the arctic to the desert.

Now Hercules is ready to go to work for air carriers and for industry; wherever need exists for a rugged, 200-2,000 mile cargo-lifter that will drop operating costs 15-20% below comparable medium range fan jet freighters or fully depreciated piston powered planes.

Hercules loads up fast through truck-bed height, full opening rear cargo doors. It takes pallet loads, truck loads, dozers, vehicles, drill pipe, machinery, mining equipment. It swallows 8x8x40-foot standard rail-truck-ship containers. No special ground-handling equipment required for loading. Fast turn-around, too; Hercules has built-in ground support and single point ground level refueling to reduce service time.

By every standard, Hercules is the perfect feeder freighter for long range jet transports; the ideal cargo plane for industrial airlift. Available fully certificated by September, 1965.

For additional information concerning the Hercules, contact Commercial Transport Sales, Lockheed-Georgia Company, Marietta, Georgia, U.S.A.: A Division of Lockheed Aircraft Corporation.

ABC looks at the personal life as well as the political career of John F. Kennedy, features a seventh-grade teacher, a Choate schoolmate and Close Friends Lord Harlech (Sir David Ormsby Gore) and Kenneth Galbraith.

Tuesday, November 24

WORLD WAR I (CBS, 8-8:30 p.m.). Life in the trenches and the biggest battle of all—the 1916 battle of the Somme.

THE BELL TELEPHONE HOUR (NBC, 10-11 p.m.). Dancers Patricia McBride and Edward Villella, Pianist André Previn, and the Brothers Four. Color.

THEATER

On Broadway

A SEVERED HEAD, by Iris Murdoch and J. B. Priestley, is a most unusual play to encounter on Broadway. It is a sex farce adapted from a novel by an Oxford University professor of philosophy (Miss Murdoch), and its true subject is the nature of reality. Acted with uncommon skill, it is a delectable repast of fun and thought.

OH WHAT A LOVELY WAR. Period songs, sketches, gauze-clad music-hall girls and blown-up film stills have the cumulative impact of an artillery barrage in Joan Littlewood's biting satire on World War I.

FIDDLER ON THE ROOF. Zero Mostel seems to expand physically to fill the stage with yeasty joy, pain and mystery in this musical based on Sholom Aleichem's tales of a poor Jewish dairyman, his family and friends in 1905 Russia.

ABSENCE OF A CELLO is a bright, laugh-every-other-minute comedy demonstrating that a free-spirited scientist cannot be stamped into a cog-sized mold.

Off Broadway

THE SECRET LIFE OF WALTER MITTY has been boldly extrapolated from the celebrated James Thurber story. The young adaptors have not been cowed by the sanctity of the master, and the clever lyrics, melodically oriented songs, and infectious *joie de vivre* of the cast make this a thoroughly pleasant musical evening.

CAMBRIDGE CIRCUS. A rock-'n'-roll number, *I Wanna Hold Your Handel,* spoofing the composer and the Beatles, is one of the highlights of this revue imported from the campus on the Cam. The fun flows as seven manic but unassuming Britons set out to tickle a rib rather than wash a brain.

RECORDS

Ballads & Broadway Hits

FIDDLER ON THE ROOF (RCA Victor), recorded by the Broadway cast, has warm, old-fashioned songs by Jerry Bock and Sheldon Harnick. Zero Mostel, as Sholom Aleichem's earthy innocent, Tevye the Dairyman, brightens whatever he sings—the reverent *Sabbath Prayer,* the nostalgic *Sunrise, Sunset,* and the wonderful intoxicated gibberish of *If I Were a Rich Man.*

BARBRA STREISAND: PEOPLE (Columbia). Streisand has so much zest that when she sings the blues (*Supper Time*), they sound strictly temporary. Her special forte is in kindling the first flying sparks of an affair (*People*) and feeding the quickening flames with tenderness (*I'm All Smiles*) or wit (*When in Rome, Love Is a Bore*).

MY FAIR LADY (Columbia). The sculptor Pygmalion stopped after producing one fair lady, but Columbia Records has no quota. There is a *Fair Lady* to swing to (by André Previn), another to sway to (by Sammy Kaye), one to weep by (Andy Williams), and one to sleep by (Percy Faith). There is also the new movie soundtrack, which has Rex Harrison in fine, fierce fettle. But Soprano Marni Nixon, dubbing in the voice of Eliza for Audrey Hepburn, sings with more finish than fire. Lovers of Broadway's fair lady, Julie Andrews, will insist on the original-cast recording, which has sold 5,000,000 copies.

THE VERY BEST OF COLE PORTER (M-G-M) is one of a seven-disk series that includes "the very best of" Gershwin, Rodgers and Hart, Kern, Romberg, Lerner and Loewe, and Berlin. The records have too many humdrum instrumental numbers, but occasionally are brightened by the voices of singers worth listening for: Lena Horne, Judy Garland, Mel Tormé, Rosemary Clooney, Helen Traubel, Kate Smith and Maurice Chevalier. The Porter, for instance, has Louis Armstrong (*You're the Top*), Eartha Kitt (*Always True to You in My Fashion*) and Margaret Whiting (*Just One of Those Things*).

ANTHONY NEWLEY: IN MY SOLITUDE (RCA Victor). British Actor Anthony Newley has a rare knack: he sings about love without sounding either slick or lovesick. His diction is equal to his conviction, and he may well corner the more sophisticated heart market. Even tired songs (*See Your Face Before Me, For All We Know, The Party's Over*) sound fresh.

THE DEFINITIVE PIAF (Capitol; 2 [illegible]) consists of 22 fine performances, including *La Vie en Rose* and *La Goualante du Pauvre Jean.* Piaf celebrates the joys of love in a voice already pregnant with sorrow and then suffers gallantly the heartbreak she knew was coming. After all, "without a lover, one is nothing."

CINEMA

THE PUMPKIN EATER. Anne Bancroft [illegible] trays with dazzling perception a [illegible] British matron who endures three husbands, a swarm of children, and a [illegible] ous collapse before she realizes that [illegible] not well in her pumpkin shell.

SÉANCE ON A WET AFTERNOON. [illegible] by voices from Beyond, a demented [illegible] dium (Kim Stanley) and her timorous mate (Richard Attenborough) plot a kidnaping in this throat-drying English thriller that casts a spell nearly all the way.

MY FAIR LADY. The movie version of the Lerner-Loewe musical classic is bountiful, and beautiful as ever, with Rex Harrison repeating his Shavian tour de force opposite Audrey Hepburn, who is a passable flower girl and a Lady to none.

A WOMAN IS A WOMAN. France's Jean-Luc Godard glorifies the offbeat antics of a Parisian stripteaser (Anna Karina) with some gay, giddy improvisations inspired by New Wave *esprit* and a host of old Hollywood musicals.

WOMAN IN THE DUNES. A man and a woman trapped in a sand pit get down to the gritty substance of Everyman's fate in this luminous, violent allegory by Japanese Director Hiroshi Teshigahara.

TOPKAPI. Men, money and empire send Melina Mercouri on a merry chase through Istanbul in Director Jules Dassin's fastest, funniest caper since *Rififi.*

THE LUCK OF GINGER COFFEY. Robert Shaw is superb as a big, genial Irishman who swamps his life and his wife (Mary Ure) in a torrent of blarney.

MARY POPPINS. A magical London nanny (Julie Andrews) whips up some diverting fun in one of those candy-clever neverlands that Walt Disney lights in.

SEDUCED AND ABANDONED. Youthful indiscretions set off a sunny Sicilian nightmare in this tragicomedy by Pietro Germi (*Divorce—Italian Style*).

A HARD DAY'S NIGHT. In an often hilarious comedy, John, Paul, George and Ringo demonstrate that Beatlemania, even as they take it—with a grain of salt—can be quite a tolerable affliction.

THE NIGHT OF THE IGUANA. At a seedy resort for shady people, Ava Gardner, Richard Burton and Deborah Kerr [illegible] the ends of their ropes while untangling some of Tennessee Williams' best lines.

BOOKS

Best Reading

A LITTLE LEARNING, by Evelyn Waugh. In the first volume of his autobiography the great English satirist looks back on his sunny, comfortable childhood. If he does not quite pin down how he gained the mastery of prose and satire, he gives a lively account of the whims and eccentricities of his Oxford years and the remarkable companions who were to turn up in his novels.

Address changes and subscription inquiries should be mailed to TIME International, Quellenstraat 18, Amsterdam, Netherlands. TIME Asia Edition is published weekly by TIME Inc. at 540 N. Michigan Ave., Chicago, Ill. 60611. U.S.A. Second class postage paid at Chicago.

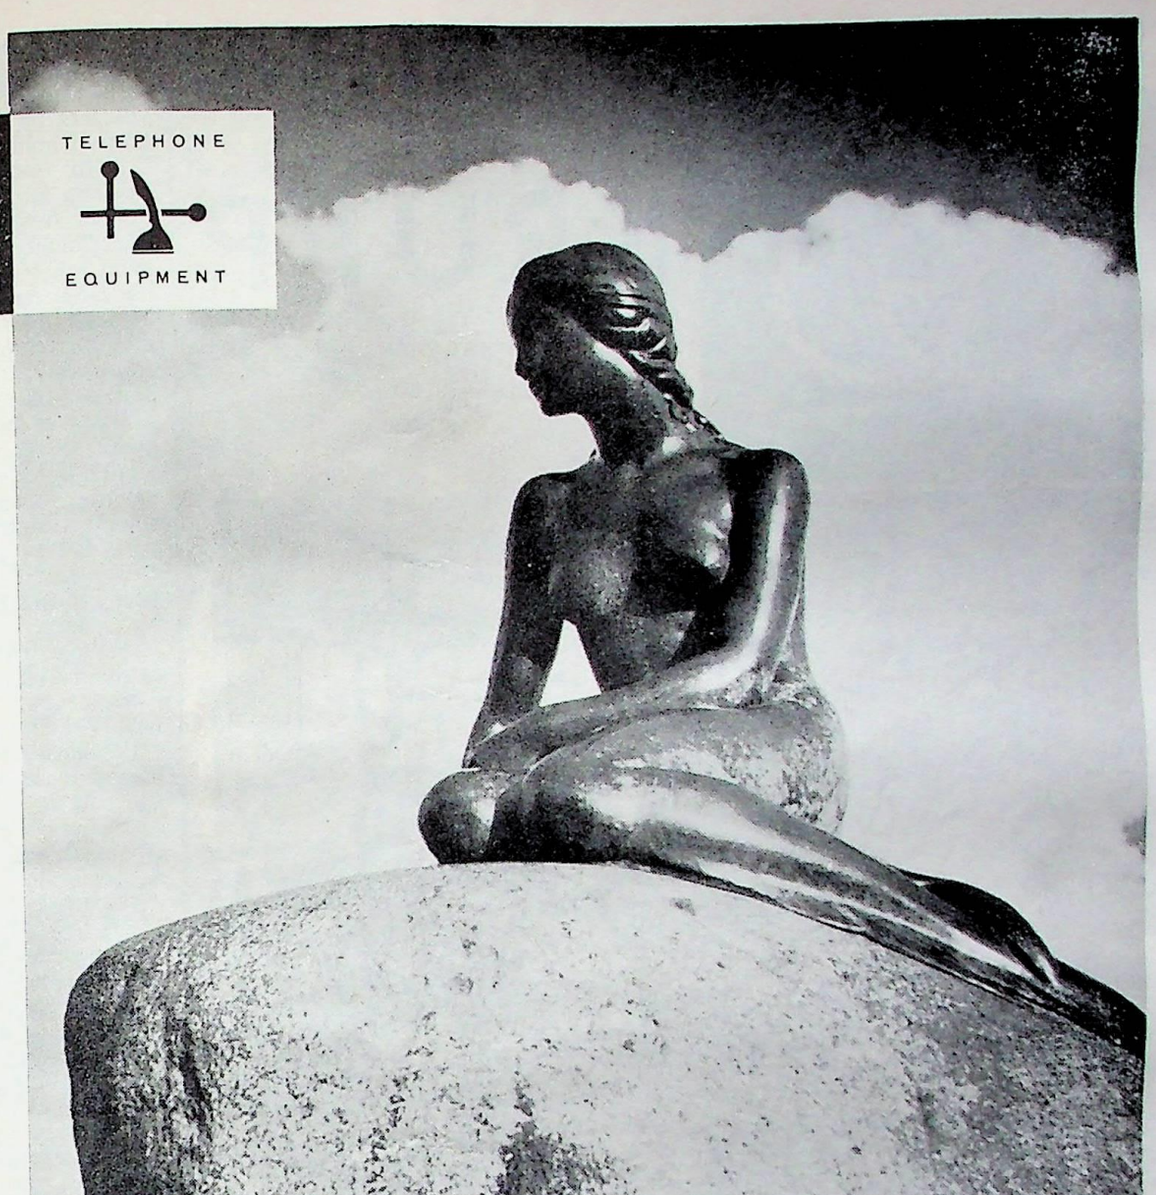
Ericsson LM

TELEPHONE EQUIPMENT



"The Little Mermaid," in Copenhagen's busy harbor

Why Four Out Of Five Automatic Telephones In Denmark Are Connected To Ericsson Equipment

Denmark's changeover to wholly automatic telephone equipment began in the late Forties. At that time Ericsson's modern crossbar switching system was selected – in competition with other leading systems – for the cities of Copenhagen and Aarhus.

Today Denmark is well along toward automatization of its telephone service. And four out of five automatic telephones are connected to Ericsson equipment.

The reliability of this equipment is a major reason why Ericsson is now delivering more than 200,000 additional lines of crossbar equipment in Denmark.

Telephone administrators in Denmark and more than 70 other countries specify Ericsson when they want the finest in modern systems or components – equipment that features realistic initial cost and negligible maintenance.

...ket, N.J.

WILLARD C. BORDEN

Sir: I do not for one moment feel that this election was a "mandate" for Johnson. It was rather a unanimous declaration of fear. We evidently have become a nation of people who would rather live on their knees in slavery than die in freedom.

(MRS.) GINNY RAMSAY

Bridgeville, Pa.

Sir: I was the Republican nominee for Secretary of State of West Virginia in Tuesday's election. As such, I polled 60,000 more votes than Goldwater and Miller. While I attribute my defeat to the head of the ticket, I still think Goldwater is right. What you have just witnessed is not the end of an era—it is the beginning of a revolution.

LOUIS REED

Elizabeth, W.Va.

Sir: Re Dean Burch: Yogi Berra's reward was being fired for not taking the World Series. What would Burch suggest for the manager of a '64 political-pennant contender who strengthened his pitching staff for the race by trading Abe Lincoln for Strom Thurmond?

LEROY WOLINS

Chicago

Sir: Oh well, we put up with one year of corn. Four more crops won't kill us.

ABRAHAM K. GEHMAN

Bally, Pa.

Sir: Goldwater's overwhelming defeat has shown the rest of the world that the U.S. has come of age.

LINA WEAVER

Nelson, New Zealand

Sir: Negroes should be very proud of our country. I am. There is no white backlash.

L. P. KIRKLAND

Pago Pago, American Samoa

Sir: As a Pennsylvania Democrat in Louisiana, I was not even reassured by the polls. However, on election night I went to sleep content to know that the rest of the country did not want to maintain segregation at the cost of annihilation, and happy to forget the unspoken undertone: "In our hearts we know he's white."

(MRS.) SUSAN M. PIVER

Barksdale A.F.B., La.

Sir: Consider me one Republican who will be happy to swap the electoral votes of Alabama, Mississippi, Georgia, Louisiana, South Carolina and Arizona for those of New York, New Jersey, Pennsylvania, Ohio, Illinois and California—for starters.

DAVID APKER

Carlsbad, N. Mex.

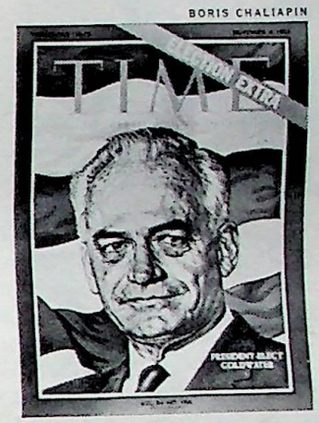
Sir: Fess up, now! For the cover of the Election Extra [Nov. 4], did you have a "stand-by" picture of, oh, what was his name?

PHIL DORLON

Stuart, Fla.

▶ *His name on the cover (see below) was President-elect Goldwater.*

BORIS CHALIAPIN



Sir: It appears that many political analysts have overlooked the most significant reason for George Murphy's senatorial victory in California. A few days before the election, Walt Disney publicly endorsed Mr. Murphy in a full-page ad printed in major newspapers throughout the state. A vote against Murphy would have been a vote against Disney. That's like voting against apple pie. Mr. Murphy was carried into office by clinging to Mary Poppins' coattails.

RAY L. LANE

Altadena, Calif.

Sir: How I envy America's having a Government with a working majority.

JAMES GOODLET

Georgetown, Ontario

The Problem of the Cities

Sir: Your excellent article on urban renewal [Nov. 9] stressed the often handsome new construction that accrues to the city after such redevelopment. However, a tremendous hidden social cost is incurred, which accounts for much of the vociferous opposition to all renewal. When large, densely populated areas are cleared, many people and businesses are displaced. Most of these people are poor, and many belong to ethnic minorities. They do not disap-

pear from the earth but, rather, crowd into other low-rental areas, creating new slums. But in many instances, the marginal businesses in the renewal areas do disappear. These businesses, often viable only because of low rents, are employers of the semiskilled and the unskilled, the self-same people forced to relocate.

Thus urban renewal will have only a cosmetic effect on our cities, and the billions of dollars invested will be lost, unless it is combined with comprehensive programs of low-cost housing, education and social services designed to bring the marginal people and businesses back into the main stream of our society.

ALAN G. RUDOLPH
School of Architecture
Pratt Institute
Brooklyn

Sir: Urban renewal causes the disruption and displacement of large numbers of small businessmen in Philadelphia. The Redevelopment Authority publicly admits that only 50% of the small businessmen in a project area survive and relocate. If the authorities in planning and programming will permit small business to participate in the planning for the entire city as well as locally, guarantee to the businesses whose properties are condemned the right to relocate, and provide adequate compensation for the loss of good will and other damage, the tragedy could be avoided.

SIDNEY MARKIND
United Business Men's Association
Philadelphia

Sir: Your inspiring coverage of urban renewal came too late to assist as additional ammunition in our efforts for the passage of Baltimore County's $3,816,000 urban-renewal bond issue. Our high hopes and three years of planning for this potentially great area have been defeated at the polls. Communities contemplating urban renewal would do well to profit from our temporary failure and wage an all-out campaign to educate and stimulate all citizens with renewed economics.

(MRS.) ADLYN F. SHERMAN
Stoneleigh, Md.

Sir: Your article on "Remaking the American City" was an outstanding example of TIME's unique ability to handle a complex in-depth story. Both its scope and depth are a tribute to the team you assigned to prepare the article. I feel sure, however, that you will forgive us for expressing some concern over the omission of the name, the Plaza, in your description of the marble-faced circular apartment building under construction on Philadelphia's Benjamin Franklin Parkway. It would be like our referring to your new home as "the top floors of a new building for a national weekly newsmagazine."

MAX WM. KORMAN
Hyman Korman, Inc.
Philadelphia

Sir: I hope those urban planners make allowance for such little things as sidewalk cafés and coffeehouses where pedestrians can relax over a 25¢ cup of *espresso* for an hour or two, absorbing all this renewal.

J. DUFFY
New York City

Sir: The greatest sin of most urban renewal is that slab-sided high-rise buildings negate the human scale. Who wants to live in an aseptic Wheaties box?

JIM MCCREA
Lakewood, Col.

The Middle Eastern Way?

Sir: Your story about vengeance in Sicily [Oct. 30] aroused thoughts of other "honorable" countries in the Middle East. Here, honor can be regained only by the slaying of the female by the nearest blood relative, without even inquiring as to the identity of the male lover. To make the "washing of shame"—as this kind of murder is called—more effective, it is carried out by a hand-wielded instrument such as a dagger, which is handed to the police, dripping with blood. Maria's fate should have been sealed by her father with a meat-cleaver knife in the dining room, where he first heard of the soiling of his honor.

JA' FAR ALI
Baghdad

Southern Justice

Sir: Your interesting article, "Those Kennedy Judges" [Nov. 6], implicitly raises important questions for the coming Congress and administration. You point out that the late President Kennedy, to accommodate Senator Eastland of Mississippi, who chairs the Senate Judiciary Committee, appointed some racist federal judges. Eastland was given this powerful post by the Democratic Senatorial Caucus. Seniority is not a law of the majority caucus and is frequently violated. Hence, morally opprobrious, the Democratic rationale that the Eastlands had to be accommodated to keep Mississippi and the rest of the South in the Democratic fold is not always valid. Eastland and Stennis of Miss. did not support L.B.J., do not support the Kennedy-Johnson program, do not support the Democratic platform, do not support the right of all Americans to vote. No committee assignments should be given to those who opposed the Democratic platform and opposed the national ticket. Let the racists follow Strom Thurmond into Goldwater country.

RICHARD ROE
Berkeley, Calif.

All That Glistens Isn't Martin Luther's Wedding Ring

Sir: The item about the discovery of Luther's wedding ring [Oct. 30] is of particular interest to us. We think that we had the authentic wedding ring of Martin Luther. Besides the engraved date and the names, our ring also has on it the Luther rose and the red stone signifying blood.

SARI [illegible]
San Francisco

Sir: In the early '40s, my brother was given a ring represented as Martin Luther's engagement ring. It had been purchased at the Jewelry Exchange in New York from a Russian refugee. Inside the band is visible "Martin Luther-Katharina von Bora," and under a magnifying glass the 1525 can be seen. We had it appraised at the time, and could find out only that the silver was old enough to date the ring correctly, that the engraving was probably done in the 16th century, and that the ruby was genuine.

ALANA M. ROSSO
La Grange Park, Ill.

▶ *Several copies of Luther's ring were made around 1817 to celebrate the 300th anniversary of the day Luther nailed his 95 theses on the Wittenberg Church door, though museum officials in Saxony are still examining the newly found ring that is believed to be Luther's original wedding ring worn by Luther's wife in the Leipzig museum.*

A letter from the PUBLISHER

Bernhard M. Auer

OCT. 8, 1956

ONE lucky thing about the Notre Dame football coach, Ara Parseghian, wrote a Midwest sports columnist last week, was that he hadn't made the cover of TIME. This wry little note took public notice of a myth that is a continuing topic of conversation among journalists —particularly sportswriters. It is known as the TIME cover jinx.

No one knows just how the myth got started, but it has persisted for 30 years. Any sports figure who gets on the cover of TIME, goes the mythology, is doomed to defeat—in a phrase, has had it. TIME Subscriber Ara Parseghian saw that jinx note in the sports column while Correspondent Marsh Clark was interviewing him for this week's cover. He smiled rather bravely and allowed that he wasn't worried. However, while there is no computerized or even uncomputerized evidence to support the myth, it can be said that someone almost always loses in sports. And so Sport Writer Charles Parmiter waited rather impatiently through much of the game last Saturday afternoon before he started putting the final touches on his Parseghian story. The cover press was running. Was the jinx at work?

Look who lost the big football game of the season. None other than Michigan State Coach Hugh Duffy Daugherty, who has had only one losing season since 1954, who hadn't lost to Notre Dame since that year and who had never lost a game to Ara Parseghian. Duffy Daugherty was on the cover of TIME, Oct. 8, 1956. Jinxed!

HMM," said the researcher, "it looks like a pan of worms." That was at an early stage of the project that produced the BUSINESS section's map of the million miles of pipelines that lie like a set of ribs under the surface of the U.S. From the idea, through the pan-of-worms stage, to the printed page this week, the map was three months in production.

Once all the data had been gathered, the big problem for Cartographer R. M. Chapin Jr. and his staff was to get it all on a two-page map and still make it clearly readable. The rather large aim was to differentiate among natural-gas, crude-oil and product pipelines, to show oil-field areas and natural-gas fields, and to rank refinery areas by size. Besides high cartographic skill, all this called for a special printing process. For the U.S. editions, the map was printed in eight colors—yellow, magenta, green, grey, gold, pink, blue and black. To get sharper differentiation between the lines and patterns, it was printed as if it were a piece of fine art—by sheet-fed offset on heavy paper—and then was bound with the rest of the magazine, which came off rotary letter presses. For the overseas editions, which are always printed offset, the problem was different: press limitations prohibited use of eight colors, so a pattern had to be devised for use of five colors—red, blue, black, yellow and tan.

So far as we know, no one—not even in the industry—has produced such a map of the U.S. pipeline network. And, considering the time, skill, care and cost involved, we're not surprised.

Pipelines for industry?

Propellants for spray packs?

HOECHST HAS IT

These pipelines are enjoyed not only by engineers. Non-technical people, too, tend to take a long look at them, especially where the liquid can be taken internally. Of course for large irrigation schemes, for the transport of liquid cement or for drainage purposes, it would probably be better to use rather more stable pipes – pipes from ®HOSTALEN, for example, the tough, reliable polyethylene from Hoechst. But perhaps pipes are not your line. Maybe you're spraying pesticides on fruit trees or "snow" on Christmas trees? Then need a spray pack – and a spray pack needs an unseen but reliable safety propellant like ®FRIGEN, which Hoechst makes for all purposes from putting on sun oil to putting out fires. Plastic for pipeline? Propellant for aerosol? – Hoechst has it.

Farbwerke Hoechst AG.

November 20, 1964 Vol. 84, No. 21

THE U.S.

FOREIGN RELATIONS

NATO's Dilemma

Of all the difficulties deferred until after the U.S. elections, none has greater implications for U.S. and free-world security than the strain within the North Atlantic Treaty Organization.

Last week, in conferences with Secretary of State Dean Rusk and Defense Secretary Robert McNamara, President Johnson discussed the NATO problem at length. McNamara also held long consultations in Washington with West Germany's visiting Defense Minister Kai-Uwe von Hassel; U.S. Under Secretary of State George Ball was in Europe trying to sell the idea of a multilateral nuclear force (MLF), and former German Chancellor Konrad Adenauer injected himself back into the discussions with a visit to Charles de Gaulle to "try to clarify existing difficulties between France and Germany."

Blame It on Charles. While recognizing NATO's problems, U.S. officials show a distressing tendency to 1) place the responsibility for solutions on the European allies and 2) blame everything on De Gaulle. Thus, Rusk said, "When one talks about NATO needing reorganization, I am sure it is quite clear in the organization that the members of NATO would study with great seriousness any proposals made for changing the organization." But, he added, "we haven't had those proposals." And he pointed the inevitable finger at France, saying: "We sometimes are puzzled by some of the things that we hear from a capital like Paris, when general expressions seem to have very little content in terms of specific ideas or specific proposals." This attitude is put more bluntly in the Pentagon, where a NATO specialist declares: "There is nothing wrong with NATO except Charles de Gaulle"—a view echoed by many U.S. cartoonists anxious to use their most savage pens (*see cut*).

All this amounts to a vast and dangerous oversimplification. To be sure, De Gaulle's blackball of Britain's proposed entry into the Common Market, his insistence upon developing his own nuclear force, his outright opposition to the U.S. plan for a multilateral nuclear force, his vision of a unified continental Europe dominated by France, all have been major irritants within the NATO alliance. Yet the full weight of NATO's problems cannot be justly heaped upon the unbending shoulders of De Gaulle.

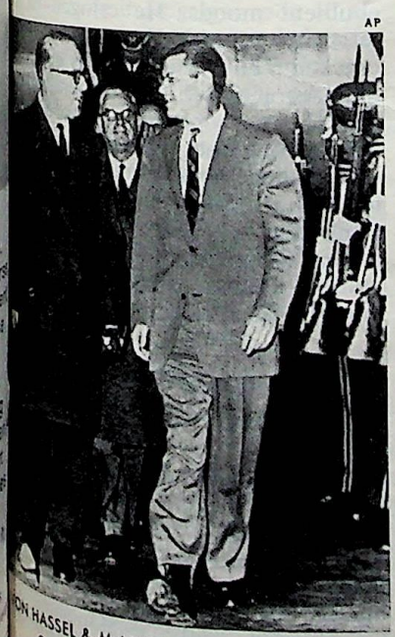
Points of Conflict. The power relationships among the allies are not nearly so simple as when NATO was created in 1949. The U.S. then was not only the sole nuclear power but the overwhelming economic power. Most European nations were still rebuilding their war-shattered economies. In the practical terms of dollars and military capability, the U.S. was NATO and NATO was the U.S., and Europe was content to have it that way. Now, nearly all of Europe is thriving. Britain and France have a nuclear capability, however limited, of their own. West Germany yearns for the same. With growing independence, new tensions are natural.

At the same time, the Communist threat against Europe has eased, and so has some of the feeling of urgency that bound NATO together. NATO's defenders insist that this is due in large part to NATO's very effectiveness. In any event, the allies now feel freer to pursue narrower national interests.

Even on matters of basic strategy, there are points of obvious conflict. France, Italy and West Germany object to the U.S. emphasis upon "flexible response" if it means that NATO would not employ even tactical nuclear weapons against Communist aggression. Bonn understandably balks at any strategy that places the Rhine as the point at which all-out retaliation would begin. Recent training exercises by French troops indicated that French generals are more interested in defending French territory than in meshing with NATO. And all the other allies shudder at the prospect of giving quarreling NATO members Greece and Turkey any sort of access to any sort of nuclear weapons.

So far, the only specific proposal to ease NATO tensions is the U.S.'s MLF concept of a 25-vessel fleet of Polaris-missile-equipped merchant ships, manned by mixed crews from NATO nations. This is aimed at reducing the resentment of the allies against U.S. veto power over the use of nuclear weapons and at checking the proliferation of such weapons. The MLF missiles would cover Communist airfields and medium-range missile sites that now threaten Central Europe.

In trying to sell MLF, George Ball offers it as only a first step toward greater nuclear cooperation, concedes that the issue of who would control the firing of missiles in such a mixed force must still be resolved, professes willingness to listen to any modifications of the whole idea. Actually, only West Germany seems at all enthusiastic about MLF, and even the Germans are caught in crossfire from De Gaulle, who hints at breaking off his recent agreement to cooperate and consult with Bonn on



AP

VON HASSEL & McNAMARA IN WASHINGTON
Some fundamental changes.

MAULDIN—CHICAGO SUN-TIMES

"WHY DO YOU AMERICANS STAY WHERE YOU'RE NOT WANTED?"

foreign policy, defense and cultural affairs if the Germans join MLF.

Whatever the fate of MLF, it is obviously no complete answer to NATO's problems. Those problems arise from fundamental changes in allied relationships. As such, they require some fundamental rethinking about the NATO edifice—and what Europe should be.

Going It Alone

A quarter-spin around the globe from NATO's Europe lies another deferred problem. Viet Nam is not an area in which the U.S. must either deal with allies or depend on them. If there is to be a solution in Viet Nam, the U.S. must pretty much go it alone.

Emerging from his Texas talk with President Johnson last week, Defense Secretary McNamara purported to see some light on the horizon. "At last," he said, "we have a civilian government, a government that gives some indication of being able to develop a consensus among the hard groups in the nation and move the nation ahead to a more effective response to the Viet Cong guerrillas who are attacking and harassing the people . . . So I think that today, compared to a month ago, we can look forward with greater confidence."

As McNamara must have known, all this begged the fact that the last previous civilian South Viet Nam government, that of Ngo Dinh Diem, was overthrown by a military junta with at least the tacit connivance of the U.S., that the new government is the shakiest anywhere in the world, that militarily the South Viet Nam war has been going from worse to worst, and that any expression of optimism was pure whistling in the dark.

How to Do It? As late as last May, before the U.S. political campaign really got under way, the U.S. had at least four options as to what to do about Viet Nam. They were: 1) to follow the advice of such men as Charles de Gaulle and join in a scheme to neutralize the war-torn area, 2) to expand the war and win it, 3) to get out, or 4) to muddle along as before, at least until after the election.

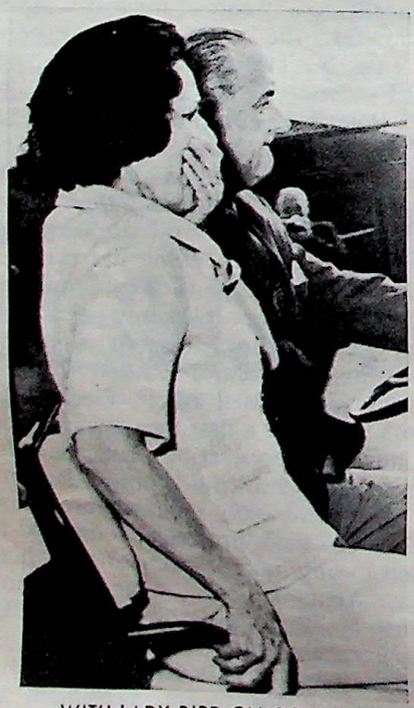
President Johnson took the fourth choice. But now that the election is over the U.S. cannot keep on muddling along, and the success-filled Communists are not likely to settle for any sort of meaningful neutralization. That leaves two alternatives: win or get out.

Getting out would be a horrifying political humiliation, particularly since President Johnson said time and again during his campaign that the U.S. would never desert its friends in Southeast Asia. And that would seem to leave just one choice: winning.

But how to do it? The President has ordered all the involved agencies of government—the State Department, the Pentagon, the CIA, USIA and AID to review and re-form each of their plans for dealing with Viet Nam. Some old ideas have been newly advanced. The most obvious answer is to extend the war to North Viet Nam with bombing raids and stepped-up guerrilla attacks. But the Administration is most reluctant to make such a move, fearing that it would bring the U.S. into a dangerously real confrontation with Red China.

Nibbling at the Edges. Thus, under apparently more favorable consideration are such notions as launching air strikes against the Laotian section of the Ho Chi Minh trail from North Viet Nam or pressuring Cambodia, which serves as a sanctuary for Viet Cong raiders, by cutting off Cambodian shipping that moves down the Mekong River through South Viet Nam to the sea. "We shall start," said a high State Department official, "by nibbling around at the edges."

Nibbling around the edges has been largely a Communist tactic in Asia, and so far it has won only for them and not for the West.



WITH LADY BIRD ON GOLF CART
A few anxious moments.

THE PRESIDENCY

Along Friendship Walk

Around the L.B.J. ranch, folks stroll along "Friendship Walks." They are paths of cement squares inscribed with the signatures of the rich and the famous who have caught the President's fancy on visits to the 400-acre spread. The walk, a sort of presidential version of Grauman's Chinese Theater forecourt, already includes the names of John Kennedy, all seven original U.S. astronauts, and Germany's Chancellor Ludwig Erhard. Last week, in a favorite ranch ritual, Lyndon added two new ones as Mexico's President-elect Gustavo Díaz Ordaz and Wife Guadalupe stooped to etch their signatures with nails in the fresh cement.

The purpose of the Díaz Ordaz visit

L.B.J. GREETING DIAZ ORDAZ
A new name underfoot.

was a round of private talks with son on trade, migrant labor, the for Progress, and the like. But they began, the Mexicans fou how extensive L.B.J. hospitality Lyndon jockeyed out to meet t Ordaz plane on the asphalt run hind the ranch house in his elec cart, the same one in which h Lady Bird a few anxious mom reening around the grounds t day (*see cut*). Díaz Ordaz wa for him, and with a grin even than the President's own, wrapp don in a bear-hug Mexican while his wife planted a kiss o Bird's cheek.

Through dinner and showtime dent Johnson was in one of h ebullient moods. He cringed in terror as Spanish Dancer Mary cracked a bull whip over his head Star Attraction Eddie Fisher go up in his microphone while croo way among the tables, it was who rushed to the rescue and un him. Then, just in case someone think that Rancher Johnson ha too citified in his ways, the show up with a demonstration of she ing by a band of hill-country co

THE ADMINISTRATION

A Tough Act to Follow

To the L.B.J. ranch from L last week came a telephone c President Johnson. The caller w ter Heller, 49, chairman of the dent's Council of Economic A who was reporting in after a Pa ing of the Organization for E Cooperation and Development ing their conversation, the P asked whether Heller would re

ING DIAZ ORDAZ
me underfoot.

ecision to leave the Government. answer was still no.
Months ago, Heller had decided to rn to the University of Minnesota's conomics department, where he was n Hubert Humphrey brought him ashington in 1960 to meet newly ed John Kennedy. Heller delayed departure until after the election, ow he was determined to go.
succeed him, Johnson named er Ackley, 49, a former Univer- of Michigan economics professor has been a member of the Council conomic Advisers since 1962. To e vacancy left by Ackley's move ohnson picked Arthur Okun, a economist and since 1961 a CEA ember.

With Influence. Heller's will be a act to follow. He was certainly ost influential chairman in CEA y, and probably had the presiden- ar as exclusively as any other sin- conomist in U.S. history. It was who, over the initial objections reasury Secretary Douglas Dillon, ssfully argued President Kennedy cking a tax cut. And it was Heller in effect changed the nation's eco- c course by winning first Kennedy, Johnson, over to the philosophy eficit spending as a stimulant for glish economy.

anything, Johnson embraced Hel- eliefs even more aggressively than edy. He has already assigned a force to study a Heller scheme to over a fixed amount of federal in- -tax money to states and localities ep the boom booming. This would n taking money from upper-income s and states and giving it to poor- es, and while that plan may never to pass, it is indicative of the omic line fathered by Heller.

While Ahead. But Ackley is ev- it as activist and liberal as Heller. s recognized as the CEA's expert omestic monetary policy, was one e leaders in urging Kennedy to at- the balance-of-payments deficit by sing an interest equalization tax. can be expected to fight for the tenance of present wage-price elines, work for continued easy t, try to devise new means of re- ng unemployment, and in general w the blueprint of his predecessor. he is cautious about predictions and ewhat wry about his promotion. lter had enough sense to get out e he was ahead," he says.

sis in Staffmanship

f all the top White House staffers have, in the last few weeks, ex- ed publicly or privately their desire get out, actually do resign, there be only one left. That will be Mc- rge Bundy, Special Assistant for Na- al Security, who obviously figures n if he hangs around long enough will get Dean Rusk's job. As for others:

Larry O'Brien and Kenny O'Donnell, the last of Kennedy's Irish Mafia, served Lyndon loyally and effectively during the campaign but have quitting on their minds.

▶ Bill Moyers, 30-year-old lay preacher who took over as staff supervisor after the enforced leave-taking of Walter Jenkins (who, it was reported last week, is out of the hospital and feeling much "improved" at home), suffers from bleeding ulcers, is anxious to get back to the Peace Corps job he once held.

▶ Jack Valenti, the Man Friday most often seen whispering into Lyndon's ear, has professed that he would like to get back to Texas to make some money.

▶ George Reedy, press secretary, seemed about to fall apart trying to keep up with Johnson in the final days of the campaign. Reedy would like to stay on but not at the breakneck pace of the past few months.

▶ Horace Busby, speechwriter, makes few bones about his intention to return to private life.

▶ Richard Goodwin, speechwriter and general idea projectionist, was a Kennedy discovery. But at 32, Goodwin is a young man in a hurry, and he has a highly developed sense of his own importance. Goodwin is still smarting at Lyndon's recent insistence that he, the President, writes every word of his own speeches.

And so it goes. Some of these men will, under Johnson's blandishments, change their minds. But more important is the fact that Johnson has no knack for getting or keeping good staffers around him. Last week he called on Washington Lawyer Clark Clifford, who helped Harry Truman and Jack Kennedy in the White House, for advice and assistance on the staff situation.

THE VICE-PRESIDENCY

Hubert's Holiday

Just before Vice President-elect Hubert Humphrey left for his post-election vacation in the Virgin Islands, he taped a television interview during which he discussed the exhausting length of the U.S. presidential race. "What we really find ourselves doing with these long, extended campaigns of two and three months is replaying old material," said Hubert. "Therefore I think that you tend to become tired, the public becomes a little tired."

But even on vacation, Hubert acted as if he wouldn't really mind if the campaign went on twelve months a year. His Caribair plane had barely set down at St. Thomas Island's airport when Humphrey burst past his Secret Service guards and began grabbing hands in the enthusiastic crowd. He made a speech, then went with his family to Laurance Rockefeller's beach house at Caneel Bay Plantation, a resort on St. John Island. There, he changed into shorts, sports shirt and straw hat.

AP

HUMPHREY & SON AFTER THE CATCH
The juices kept flowing.

He looked enormously relaxed, but he still couldn't quite turn off the campaign juices. During a shopping trip to Charlotte Amalie, he bought a can of salted nuts, a tax-free wrist watch—and strode up and down the streets all but searching for more hands to shake. He went deep-sea fishing, boated a 6-ft. 6-in. sailfish, posed afterward for bare-chested photographs with his son Bob, 20. To prove his prowess, Hubert proudly flexed his biceps too.

Thus, as tired of campaigning as he —and the public—might have been, Hubert on a holiday turned out to be little different from Hubert on the hustings.

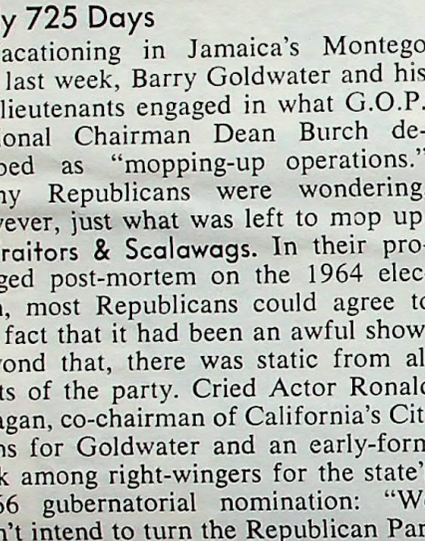
IDAHO'S SMYLIE
Talk it over.

REPUBLICANS

Only 725 Days

Vacationing in Jamaica's Montego Bay last week, Barry Goldwater and his top lieutenants engaged in what G.O.P. National Chairman Dean Burch described as "mopping-up operations." Many Republicans were wondering, however, just what was left to mop up.

Traitors & Scalawags. In their prolonged post-mortem on the 1964 election, most Republicans could agree to the fact that it had been an awful show. Beyond that, there was static from all parts of the party. Cried Actor Ronald Reagan, co-chairman of California's Citizens for Goldwater and an early-form pick among right-wingers for the state's 1966 gubernatorial nomination: "We don't intend to turn the Republican Party over to the traitors in the battle just ended." Between rounds of golf, Goldwater himself took time out to lambast such middle-roading Republicans as Governors Nelson Rockefeller of New York and George Romney of Michigan and Senators Hugh Scott of Pennsylvania and Thomas Kuchel of California as "so-called Republicans." Barry suggested that "the time has come for a real realignment of the parties," naming them "liberal and conservative," not "Democratic and Republican."



PENNSYLVANIA'S SCOTT
Throw them out.

South Carolina's Senator Strom Thurmond, whose recent bolt to the G.O.P. probably saddened more Republicans than it did Democrats, voiced the hope that the G.O.P. "eventually will become the conservative party in the nation, in spite of Rockefeller and his ilk." If not, added Thurmond, whose losing Dixiecrat defection from the Democratic Party in 1948 had apparently taught him nothing, "then some other party would have to arise."

If Thurmond was anxious to drum the liberals out of the party, some liberals and moderates were equally eager for a purge of ultraconservatives. Senator Scott, who barely survived the Johnson landslide in his bid for re-election, insisted that "Southern scalawags" and the "hard-core radical right" be thrown out of the G.O.P. "The present party leadership," he said, "must be replaced —all of it." Some moderates were upset over reports that the G.O.P. had wound up the 1964 campaign with a $1,200,000 surplus instead of the usual deficit, suggested that the money was withheld to strengthen Goldwater's grip on the party.

Trying hard to make themselves heard above all the noise, a few Republicans sensibly pleaded for unity. "We're not going to improve our situation by cutting each other up," said Iowa's Senator Jack Miller. Washington's Governor-elect Daniel J. Evans, a 39-year-old engineer who upset two-term Democrat Albert Rosellini, urged the party to "reconstruct our framework in terms that will encompass a variety of opinion." Former Vice President Richard Nixon, who had reinstituted himself as the favorite target of some cartoonists by attacks on his fellow moderate Nelson Rockefeller, now called for a centrist leadership that would make enough room for both liberals and conservatives—but not for "the 'nut' left or the 'nut' right." In case anybody was wondering who might qualify as a centrist leader, Nixon pointed out: "I'm perhaps at dead center."

A New Unity. Almost submerged in the bickering over the party leadership was an even more important question. What were the party's goals to be? From Maine's Governor John Reed, a moderate, came a reminder that while Barry Goldwater was overwhelmingly rejected at the polls, it would be unwise to jettison everything that he stood for as well. "The emphasis which he placed on restraining the growth of big government, on the importance of moral standards, on strength in the face of the Communist menace, should not go unheeded," said Reed at the Yale Political Union. What was really wrong with Goldwater's candidacy, he added, was that he and his aides "lacked the ... to compromise when party ... so essential."

LABOR

...d I Love You"

Every inch the husky, handsome, ...er-haired leader type, United Steel...kers President David McDonald ...d before 900 workers in Midland, ... and presented his case for re...tion. He wanted a new term, he said, ...t for personal pride, but because I ...e you. I can only say I'm heartsick ...r what has happened."

McDonald, 62, has ample cause to be ...k of heart: after twelve years as head ...the union dealing with the nation's ...st basic industry, he is, by every ...sent standard, a less than even choice ...retain his job in the elections to be ...d next Feb. 9. McDonald is, in fact, ...fronted by a rank-and-file revolt, ...d beneath a multitude of more formal ...mplaints festers the grievance of the ...n in the mills that their president is ...t one of them and does not really ...e about them.

To many of the fire-eating unionists ...the open-hearth and blast furnaces, ...Donald has been suspect from the ...rt. A college graduate (Carnegie ...ch, '32) who once aspired to a career ...the theater, he was a mill clerk when ...attracted the attention of the union's ...nding president, Philip Murray, with ...s organizational talents. Murray se...ted McDonald as secretary-treasurer ...the union in 1942, made it clear that ...Donald was his heir apparent. When ...urray died in 1952, McDonald ...pped almost automatically into the ...sidency.

The Good Life. His control was shaky ...om the start. He moved into an Amer...n Locomotive Co. strike early in 1953, ...gotiated a private settlement with the ...n's president—and saw his own strike ...mmittee promptly repudiate the ...reement. He further alienated the ...k and file by successfully backing a ...ny, without significant mill experi...ence, for a union vice-presidency in 1955 against the candidacy of the Buffalo district's rough-hewn Irish leader, Joseph P. Molony. The extent of the Steelworkers' restlessness was demonstrated in 1957 when Donald Rarick, a relatively unknown Irwin, Pa., local leader, protesting a union dues hike, ran against McDonald for president, polled 223,516 votes to McDonald's 404,172.

Instead of seeking rapport with his members, McDonald grew increasingly aloof. He golfed with steel executives, used his $50,000 salary (he also gets a generous expense account) to patronize nightclubs from Manhattan to Los Angeles and in many other ways enjoy the good life. In addition to his seven-room fieldstone home in a Pittsburgh suburb, he bought a second house in Palm Springs, and spent much of his time there.

High living by union leaders is a common complaint among rank and file these days (*see* U.S. BUSINESS). Yet anti-McDonald Steelworkers peg their campaign more formally to the charge that he has neglected the problems of the union's 2,600 locals. While overall wage patterns and working conditions are negotiated in union contracts with the big steel companies, locals are bound by no-strike pledges in arguing local grievances—and the grievance machinery has completely bogged down. It takes three years for some such cases to be resolved. Instead of working to soothe such gripes himself, McDonald has been in the habit of sending out his competent, hard-working secretary-treasurer, I. (for Iorworth, a name of Welsh derivation) W. (for Wilbur) Abel, 56.

Out of the Show. McDonald's loss of popularity has become "Abe" Abel's gain. "McDonald has been moving away from us for years," growls the union's Milwaukee district director, Walter J. Burke. "McDonald has attended one district conference and come to Milwaukee one other time for the dedication of a union hall. Abel's been here 30 times or more. Abel's name is a legend among the members. He eats with them, talks with them and knows their problems." Complains the Chicago-Gary area's Director Joseph Germano, head of the Steelworkers' biggest (128,000) district and a long-time loyal McDonald friend, who last week announced his support of Abel: "Our people are just not part of the show any more. They don't feel like hanging around lobbies waiting for news. Abel has always been willing to meet with the people. McDonald hasn't been available."

Abel, who occupies an office just 20 paces away from McDonald's at Steelworkers headquarters in Pittsburgh, is a onetime Canton, Ohio, mill hand and foundry worker who was one of the union's first organizers in 1936. Easy-going and modest, he was pulled to the top by Murray and has worked willingly for the flashier McDonald ever since 1953. Abel's decision to challenge McDonald represents a big personal gamble. He could have ridden out four more years in his present job and retired at $17,500 (half of his $35,000 salary) a year for life. If he loses, he will be out of a job.

JACK D. MAHONY

STEELWORKERS' ABEL & McDONALD
Only 20 paces away, but so far apart.

Although the dissidents claim that a majority of the union's 30 district directors are with them, Abel's main strength lies in the Midwest, where Germano and Burke lead younger Steelworkers who are more interested in wage increases than in McDonald's emphasis upon "total job security."

Logic & Reason. Yet Dave McDonald can muster some strong arguments in his fight for survival. Although he has not negotiated a general wage increase since 1959, Steelworkers draw an average $3.70 an hour, plus 67¢ hourly in fringe benefits—one of the highest rates in manufacturing. McDonald held out stubbornly against company demands for greater author-

*A strikingly similar situation developed after ...n Dewey's 1948 defeat. With an angry co... ...n as "a symbol of Dewey misrule" and de... ...nding his departure, then National Chair... ...n Hugh Scott called a meeting of the com... ...ittee in wintry Omaha, Neb., in January 1949. ...Scott laughingly recalls it, he deliberately ...ose an inconvenient site in hopes of reducing ...endance. over local working conditions in the record-breaking 116-day nationwide steel strike in 1959, emerged with a healthy wage hike too. He pioneered the labor-management Human Relations Committee, an approach to bargaining that other industries are studying. He recently won a 13-week sabbatical, or vacation with pay, once every five years for all hourly workers in the top half of the seniority ranks at each steel company.

McDonald turns angry at charges that he leads too soft a life, particularly in Palm Springs. "I have a perfect right as a citizen to invest in a

EVELYN STRAUS—N.Y. DAILY NEWS

FEIN & WIFE

piece of property anywhere," he declares. As for Steelworkers' complaints that he is not tough enough in bargaining any more, McDonald has a ready reply. "I've never seen anybody get a labor contract yet by pounding the table," he says. "You get it by the use of logic and reason and arbitration and by no other way."

Such reasonable talk may be deceptive. For with a power struggle going on within the union, there is little doubt that both Dave McDonald and the Abel faction will lead the Steelworkers into new militancy at the bargaining table when contract negotiations reopen this winter.

CRIME

The Madam's Mark

Poets are fond of saying that life imitates art—but does it have to imitate television? The fact that it doesn't is perhaps the reason that 32-year-old Mark Fein last week was on trial for his life.

As the prosecution told it, Fein shot his bookmaker to death in October, 1963, to avoid paying off a $23,890 World Series bet on the New York Yankees, stuffed his body into a trunk, and persuaded a bosomy, redheaded prostitute named Gloria Kendal to dump the trunk in the Harlem River for him. Somehow, the body floated clear, and when it was discovered a month after the murder, Gloria phoned Fein in a snit. "Don't you ever watch TV?" she asked him. "Didn't you ever hear of cement?"

$2,000 Tab. If Fein had no weakness for television, he had a couple of others to make up for it. As president of his father's thriving tin-can and cardboard-box business, he seemed to have everything he needed—the best clothes, a sleek, white Lincoln Continental, an eight-room Park Avenue apartment in

WITNESS KENDAL
After vodka, a glimpse of Ruby.

which he maintained his attractive wife, Nancy, and their three children. But Fein, slender, bespectacled and Milquetoast-mild in appearance, frittered away a small fortune on a pair of extracurricular pursuits—gambling and Gloria Kendal. In her 37 years, the last 16 of them spent as a prostitute and a madam, Gloria has been known by at least 13 other proper names and by any number of improper ones. Whatever her name, Fein certainly did like her game. According to the prosecution, he spent up to $700 a month "in return for the sexual favors rendered by Gloria and her girls," once ran up a $2,000 tab before paying it up.

Despite Fein's lucrative patronage, Gloria turned up last week as the star witness against him. On the stand in Room 1313 of Manhattan's Criminal Courthouse, she was a symphony of colors and curves, all sharps and no flats. One day she sported a clinging lavender suit, another a fuchsia sheath that kept the all-male jury wide-awake.

In her testimony, Gloria described in an incongruously little-girlish voice how Mark Fein had phoned her Oct. 10 in an obviously agitated state. He asked her to hurry over to the secret, $178-a-month apartment he maintained on East 63rd Street under the name Weissman to pursue his many outside interests. "I walked in and there was a big trunk in the middle of the living room," said Gloria. "What do you [illegible] is in the trunk?' " she quoted [illegible] asking. She said she did not know. [illegible] he told her: " 'It's the body of a [illegible] man, my bookmaker, Ruby.' "

Thump, Splash. Reuben ("Ruby") Markowitz was a [illegible] Brooklynite known to his more [illegible] acquaintances as a $90-a-week [illegible] clerk. But Fein knew better. [illegible] quoted Fein as saying: " 'I had to [illegible] him this afternoon to pay him the [illegible] I lost on the World Series. I met [illegible] 4 o'clock. He came up here. [illegible] talking. We had words and I [illegible] Please, Gloria, help me. You're the [illegible] one. There is nobody else I can [illegible] I can't call my family or friends.' "

Fein asked her to help him dispose of the trunk. "I took a good drink of straight vodka, and then asked him if he sure the man was dead," Gloria testified. " 'Gloria, he's stone-cold dead,' " she quoted Fein. "He lifted the lid of the trunk and I saw part of an arm. I said, 'Spare me the gory details.' " Then Gloria: "I just wanted to be assured I was not getting rid of a trunk with a live body in it."

Fein asked Gloria to get a friend to help. "Why call a friend?" she demanded. "I'm strong." "But Gloria," protested Fein, "the trunk is very heavy." Gloria called two friends—Geri Boxer, 22, who described herself as a free-lance writer with a psychology degree from Fairleigh Dickinson University, and David Broudy, 32, a onetime cab driver-hairdresser. Gloria then sent Fein home, "because he was in pretty bad shape." He drove to the Harlem River with Gloria and others and pushed the trunk in. "There was a thump and a splash," she said. When the body surfaced, there was an even bigger splash.

"I Should Say Not!" Gloria's two friends corroborated parts of her story, but not all of it. Geri Boxer, who testified she became friendly with Gloria because she is "accomplished in a lot of ways that a college girl wouldn't be," said that she helped dump the trunk but did not know what was in it. Broudy said Fein told him that someone else had shot the bookie.

After Gloria put in two days on the stand for the prosecution, Defense Attorney William Kleinman had at her. "You cannot decide this case," he had warned the jury, "until you have probed very deeply into Gloria Kendal and her friends." Kleinman got Gloria to admit that she had continued to ply her trade during two marriages, that she had once had "a romantic attachment with a female," that she had given at least two accounts of the shooting, that at one point denied to police that she had ever admitted shooting Ruby. She also seemed rattled only when Kleinman interested in how much she charged for her services, asked: "Your fee was not $5?" Replied Gloria in a huff: "I should say not!"

At week's end Kleinman was still cross-examination; the trial was expected to go on for another week or more.

EL MERCURIO

FREI
Back from ruin.

CHILE

Now to Toil

The red, white and blue inaugural ting was down from the lamp posts buildings throughout Santiago, and distinguished visitors had returned to such faraway places as Ghana Senegal. Last week Christian Dem- Eduardo Frei, 53, Chile's newly- alled president by virtue of a unding victory over Communist- ted Salvador Allende, called his first inet meeting and got down to the of pulling his country back from cliff edge of financial ruin.

Frei (pronounced *fray*) had no illu- s. "The facts cannot be cloaked," said. Chile's foreign debt is $2.3 bil- with amortization and interest e swallowing 50% of export earn- Gold and dollar reserves are down scant $160 million. And then there flation. "My great enemy," groans . "From last November to this No- ber it climbed 47%. This cannot on."

o cure the ills, the tall, scholarly has more than a few ideas. Among e in the hard-planning stage: dou- g Chile's 630,000-ton annual copper duction in six years, vastly expand- the hesitant land reform program un by his predecessor Jorge Ales- ri, building such resources as pulp- ding trees and the fishing potential Chile's endless coastline. To help , the new president has put together of Latin America's most competent inets, drawing men from the top ks of the professions, business, labor l government.

"What we need is time," Frei begs. e big U.S. copper companies in Chile m to agree, are talking about paying r 1965 taxes in advance. Even be- re his inauguration, Frei sent two top es, Senator Radomiro Tomic and Foreign Minister Gabriel Valdés, to Washington to ask that Chile be permitted to reschedule and delay upcoming heavy payments on her $350 million debt to the U.S. Chances that the request will be granted are good.

After winning 56% of the vote, Frei has a clear mandate for reform. His problem will be Chile's contentious Congress. Frei's Christian Democrats hold only 32 of 192 seats. New congressional elections are scheduled for March, and by then the President hopes his legislative programs will have won the public support necessary to gain a majority.

BRAZIL

The Early Bird

The convention hall in São Paulo rocked to thunderous chants of "La-*cer*-da! La-*cer*-da!" Brazil's revolution was only six months old, and new presidential elections are not scheduled until Nov. 3, 1966. But Carlos Lacerda, 50, the mercurial Governor of Guanabara (Rio) State, is off and running full tilt for the presidency. Accepting the unanimous nomination of his National Democratic Union, Lacerda immediately boarded a campaign "Train of Hope" for a whistle-stop tour of 18 towns, standing on the back platform and fervently promising "a land of tranquillity, a government which functions without fear of demagoguery, without fear of dictators."

Brazilians know Lacerda as a politician in perpetual motion, the man whose unceasing attacks forced Jânio Quadros to resign and focused opposition on his successor, the Leftist João Goulart. He is a hard man to feel neutral about. In blazing headlines around the country, pro-Lacerda papers took up the cudgels for his "most noble civic and moral propositions." Anti-Lacerda papers vilified him as a "murderer" and "torturer." As he neared Rio last week, political enemies narrowly missed in an attempt to dynamite his train. Brazil's three other major political parties hastily announced plans to nominate their own candidates for 1966 to combat Lacerda.

Even while they were scrambling to catch up, Lacerda went spiraling on, flew to Manhattan for a *Reader's Digest* luncheon in his honor. "We shall never present a bill for the services Brazil rendered to all peoples in destroying a Communist occupation," he said of the revolution. However, it would be helpful if the U.S. would underwrite Brazil's currency by "the immediate creation of a fund to aid our effort against inflation," and also "would accept paying a better price for coffee." Suggestions like that store up political treasure back home for campaigning Carlos Lacerda.

BOLIVIA

"State of Anarchy"

"So far as we can see," said a foreign diplomat in La Paz, "we are living in a state of anarchy." One week after President Víctor Paz Estenssoro had been toppled by a military uprising, about the only thing General René Barrientos and his junta of colonels had proved was that it is easier to foment a revolution than to run a government.

Rioters had opened the jails, spilling hundreds of criminals onto the streets. A mob ransacked Paz Estenssoro's home so completely that even the toilets were carried away. The stories circulating about the ex-President verged on the ludicrous, among them that he had stolen four times the national budget in U.S. aid funds.

In the wake of it all, Barrientos seemed at a loss about what to do, or even where to start. He kept repeating his democratic ideals and desires for economic stability. "Bolivia," he insisted, "must keep particularly close relations with the U.S." He talked about disarming both the peasant militia of Paz Estenssoro and the militant tin miners of Leftist Juan Lechín to avoid further trouble. Yet he allowed Lechín to grab control of all the country's most important unions, bowed even further by promising the unions joint control with management in running the nationalized tin mines. In the past when the miners had such a voice, they featherbedded costs so high that Bolivia was no longer able to export tin at a profit.

In alarm, Washington suspended the U.S. aid program, which has pumped more than $300 million into Bolivia since 1952. The U.S. also purposefully delayed recognizing the new regime, though most observers felt that U.S. recognition was bound to come eventually.

JAPAN

Toward Leadership

Propped up in bed in a Tokyo hospital, retiring Prime Minister Hayato Ikeda, recovering from a throat tumor, took up writing brush and rice paper. At the plea of his hopelessly deadlocked party, he stroked off a note choosing his own successor. Two hours later, Eisako Sato, 63, the dynamo of five former Cabinets, became the tenth Prime Minister of postwar Japan—and, all but inevitably, a man destined to guide his nation along a new course, for, after 19 years of penance, Asia's only fully industrialized country seems about to reclaim its place as a world power. Said Sato in his first nationwide television address as Premier: "Japan's international voice has been too small." How would it be made louder?

Natural Place. Obviously the Japanese no longer dream of empire or of the tyrannical "Greater East Asia Co-Prosperity Sphere" that led them to war. But Japan wants gradually to free itself of its dependence on the U.S. and take a role in the free world's fight for peace. Thanks to Ikeda, it is already quietly giving $600 million a year in aid to underdeveloped nations, and this summer pledged more if necessary. It would like a permanent seat on the U.N. Security Council. Its government has been considering offering Japanese troops as a permanent U.N. security force. It would like to be given a free hand with its giant cultural cousin, Red China, both to win a place in the potentially enormous Chinese market and to try to conciliate between Peking and the West.

Washington sometimes seems nervous at the thought of a too independent Japan, which is bound to the U.S. in a protective—but also restrictive—mutual security treaty that runs through 1970. Actually, given the present dangerous unbalance in the Far East, nothing could be more advantageous to the U.S. than a strong Japan resuming its natural place as the economic and political leader of Asia.

To achieve this will not be easy. Japan has many clients in Asia but few friends. Their fellow Asians consider the Japanese a strange hybrid of Oriental past and technological present. Despite Japan's impeccable—indeed, almost mouselike—postwar behavior, its very forward stride manages to recall to some the brutalities of industrialized Imperial Japan. Less than two months ago, Japan's proposal to send out its own peace corps was rebuffed unanimously in Asia—although it was welcomed in Africa.

National Pride. Above all, Japan itself is still ambivalent about playing a strong international role. By and large, the Japanese still dread the prospect of rearmament, which is the only means by which their great economic power can express itself as a political power. But amid unprecedented prosperity and new national pride, the Japanese are gradually beginning to understand the responsibilities that go with lead-

AUSTRALIA

Isolated Shape-Up

"The risks in this corner of the world have increased," said Australia's Prime Minister Sir Robert Gordon Menzies, speaking of Southeast Asia and the South Pacific. He was putting it mildly. Moreover, in the entire "corner," the country perhaps least prepared to defend itself is Australia, whose Diggers fought fighting men distinguished themselves in two world wars. In the past decade, Australia has enjoyed so much growth and prosperity that it has become known as the land without a crisis, and its defense structure shows it.

Radar 9 to 5. The speediest operational craft in the Australian air force are seven-year-old, subsonic F-86s, which are only slightly faster than modern jet trainers. The air force is even short of these monkeys, must farm out repairs to private mechanics. Australia's combat fleet consists of 14 antiquated vessels—the aircraft carrier *Melbourne*, three destroyers (there were four until the *Melbourne* accidentally sliced one in half last February), and a handful of frigates and minesweepers. The northern port of Darwin is garrisoned by only 150 troops; its coastal guns have been dismantled and sold to Japan as scrap; Darwin has no antiaircraft batteries, and until last month the single radar station operated from 9 a.m. to 5 p.m. Mondays through Fridays only. With the increasingly gloomy outlook in the South Viet Nam war, the Indonesian raids on Malaysia, not to mention the Red Chinese bomb, something obviously had to be done. The most immediate worry: Indonesia (pop. 100 million), with which Australia shares a jungled border on the island of New Guinea; since Australian troops are helping to fight Indonesian infiltrators in Malaysia, Sukarno could easily retaliate by sending infiltrators into Australian-controlled New Guinea.

Prime Minister Menzies' government has tried to shape up defenses. Standing by its Commonwealth and SEATO commitments, Australia reinforced its expeditionary force in Malaysia, increased the number of Australian military advisers in South Viet Nam to 60. To bolster home defenses, the government ordered 100 supersonic Mirage jets from France and 24 TFX (now known as the F-111A) fighter-bombers from the U.S., plus three U.S.-made missile-firing destroyers and four British Oberon submarines. Last week Menzies carried the beef-up further, announced the reinstatement of the draft, which had been dropped in 1959.

Conscription for Protection. Under the new draft, young men will register upon reaching age 20, serve two years of active duty. The first 4,200 are to be inducted during the latter half of 1965, after which inductions will continue at the rate of 6,900 men a year—which will increase army manpower from 22,000 at present to 37,500 by 1966. There are to be more equipment refinements, and two new airbases will be constructed—one in New Guinea; several other strips will be renovated across Australia's northern tier. The buildup will cost nearly $500 million over the most recent defense commitments for the next three years. But the new measures, which will take years to implement, are being criticized as too little too late. Said Arthur Calwell, leader of the Labor Opposition and longtime critic of the government's military policies: "It's taken the government 14 years to discover that Australia is defenseless."

COMMUNISTS

They Are Talking

Somehow or other, Red Chinese Premier Chou En-lai could not bring himself to leave Moscow. Perhaps it was the tonic weather—snow flurries and freezing temperatures. Maybe it was the charm of his hosts, burr-browed Leonid Brezhnev and cozy, cadaverous Aleksei Kosygin. More probably, Chou, who was closeted with B. & K. at least once a day for most of last week, felt he was getting somewhere with his Russian adversaries—not fast but fast enough. After all, Peking's great enemy, Nikita Khrushchev, had been sacrificed; now both sides could make at least limited concessions.

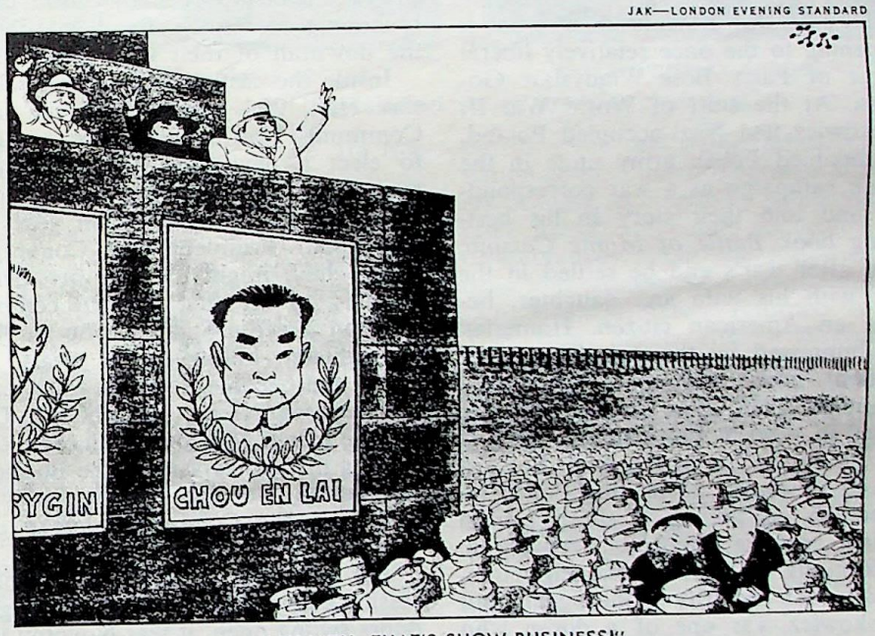
Token Aid. According to rumors filtering out of the Kremlin sessions, Chou had finally agreed to a conference of Communist parties. But the meeting, originally called by Khrushchev for Dec. 15, would now not take place until next spring, after a series of preliminary talks between Russian and Chinese ideologues. And instead of reading Peking out of the Communist movement, as Khrushchev had intended, the conclave will undoubtedly focus on restoring Red unity.

In return for the Chinese agreement to attend the meeting, however modified, there seemed to be at least token resumption of Russian aid to the Chinese. Tass reported that a 20,000-kw. turbine, built by the Russians for a Chinese hydroelectric project, would soon be delivered; Izvestia ran a photo of a Russian engineer supervising pro-Peking North Koreans building a technical school.

Russia and China evidently also agreed to stop calling each other dirty names. B. & K. even began patching up relations with Albania, Red China's vociferous ally in Europe, whose propagandists have called Khrushchev's followers "veritable criminals and sinister schemers." Radio Moscow beamed a message of good will to Tirana, praising Albania's "sovereignty and position in the world" and reiterating faith in the Soviet Union's "sublime internationalist duty" of aiding all fraternal parties. But the Albanians, cocky as always, refused to end their "open ideological war" on Khrushchevian revisionism.

Wary Hope. Western observers watched hawklike for signs of uncordiality between the Russians and their Chinese visitor; naturally there were some, and the conclusion was widespread that the talks had "failed." Actually, after years of bitterness, they could hardly have "succeeded" in one week, and the significant fact remains that they took place at all.

JAK—LONDON EVENING STANDARD



"AH WELL, THAT'S SHOW BUSINESS!"

The basic differences between Russia and Red China certainly could not be talked away, as a Pravda editorial on the day of Chou's departure indicated. Said Pravda: "The Soviet Union is firmly against all plans designed to heat up the international atmosphere." Clearly, Moscow was not ready to buy Peking's hard line—at least for the moment. But by the time Chou finished his long goodbye and flew home to Peking, a Sino-Soviet dialogue had been established for the first time in 16 months. The olive branch had been offered to all warring parties in the Communist movement, and the acute embarrassment brought about by Khrushchev's boorish intransigence had been transmuted into a glow of wary hope. How healing this might be for Communist prestige with the "nonaligned" was illustrated by the report that Algeria's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ben Bella had been driven to the brink of a nervous breakdown by the necessity of choosing between Moscow and Peking. Such emotional disturbances should at least be eased by Chou's visit.

POLAND

A Symptom

The heavy-set man in a neatly pressed blue suit and beret stepped out of Warsaw's shabby district court at 127 General Swierczewski Street into a welcoming crowd of 300, mostly writers and students. They surrounded the old man and patted him on the back. Two girls embraced him and handed him red roses. Said he: "All the nice people seem to be here." Melchior Wankowicz, 72, one of Poland's most popular novelists, had just been convicted by the not-so-nice people in courtroom No. 16 of "slandering the People's Republic of Poland."

The case was a symptom of what is happening to the once relatively liberal regime of Party Boss Wladyslaw Gomulka. At the start of World War II, Wankowicz fled Nazi-occupied Poland, accompanied Polish army units in the Italian campaign as a war correspondent, and told their story in his best-selling book *Battle of Monte Cassino*. Soon after war's end he settled in the U.S. with his wife and daughter, became an American citizen. Homesick and impressed by the new intellectual freedom under Gomulka, he visited Poland in 1958, then four years later settled in Warsaw permanently. At first he was lionized by the regime. But last March he joined 33 leading Polish intellectuals in issuing a sharp protest against growing intellectual repression.

Promptly the police obtained retractions from a majority of the signers, but Wankowicz was one of a dozen who refused to recant. Then suddenly, on the night of Oct. 5, he was arrested. Chief evidence produced at his trial was a speech critical of the government that he had written in June; he never delivered it, but had allegedly sent a copy to his daughter in Washington. Under a decree dating back to the Stalin era, Wankowicz was sentenced to three years in prison. The judge cut the sentence in half because of a recent amnesty and allowed him to go home pending appeal.

By Stalinist standards this was mild treatment, but was nevertheless clear warning to Polish intellectuals to stop their criticism. To judge, however, by Wankowicz' enthusiastic reception after the trial, at least some of them were flouting that warning.

WANKOWICZ AFTER TRIAL
Roses for the convict.

CZECHOSLOVAKIA

Disappointment in Prague

A large crowd had gathered around Prague's ancient Hradčany Castle, clearly hoping to witness the beginning of the downfall of their Communist boss.

Inside the castle's vast Gothic Vladislav Hall, 294 Deputies of the tame Communist Parliament were gathered to elect a new President. For weeks there had been hints that dour Antonin Novotny, 59, who for seven years has been both President and Communist Party chief, might lose the presidency, possibly as the first step to complete oblivion. Once a Stalinist who survived by ruthlessly killing off his rivals, Novotny had become a slavish follower of the deposed Nikita Khrushchev. During the recent Moscow ceremonies celebrating the anniversary of the Bolshevik Revolution, Novotny was noticeably absent from the Communist lineup atop Lenin's Tomb.

But when the Prague parliamentary session ended and the castle's great glass doors swung open, it was Novotny who stepped out on the balcony, having been "unanimously re-elected" for a new five-year term. He had survived once again, obviously having persuaded his critics that this was no moment for another Communist shake-up.

Capitalist Magic. The crowd outside the castle faced Novotny in grim silence —and with good reason. Under Novotny's inflexible, inept rule, potentially rich Czechoslovakia has suffered a continuous economic crisis. Industrial production has fallen, productivity has stagnated, and last week the official news agency blandly conceded that Czechoslovakia would be compelled to buy 2,200,000 tons of grain abroad because of a disastrous domestic harvest.

Such dismal conditions have forced Communist planners to resort to that old capitalist magic, the profit motive. In its latest decrees, the government encourages factories that show a profit to reward workers with pay boosts and bonuses, while enterprises running a deficit will have to lower wages to bring them in line with productivity. By year's end 162 hopelessly inefficient factories employing 60,000 workers are to be closed down. In another concession to free enterprise, the government is permitting barbers, tailors, shoemakers, locksmiths and other small entrepreneurs to open private shops.

Old Party Hacks. Like Khrushchev and his successors, Czechoslovakia's young Communist technocrats led by Economics Professor Ota Sik, 45, are apparently more concerned with increasing production than with Marxist dogma. But while the reformers have sold their economic approach to the party's Central Committee, they have not been able to bring about a shake-up in the regime's power structure.

Implementing the liberalized economic program will be difficult while Novotny remains in charge, determined to protect the old party hacks who are running most of Czechoslovakia's economy. As Novotny explained not long ago: There is no need to fire an old comrade" just because he can't co

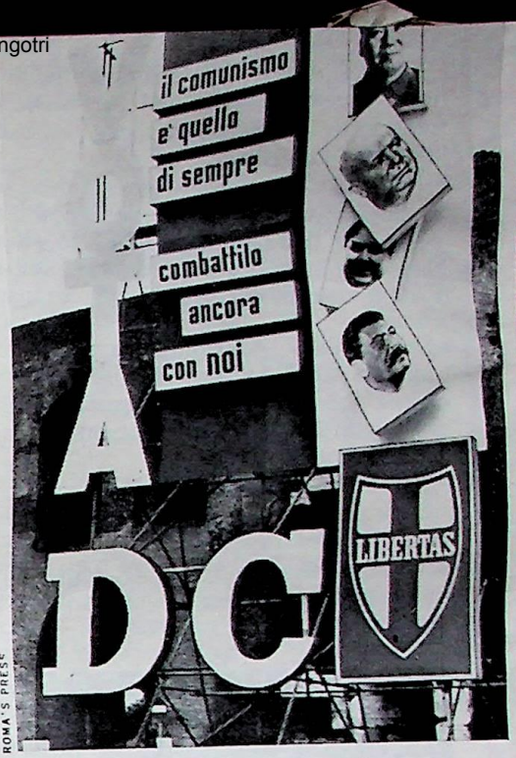
FRANCO VILLANI

MAYOR DOZZA PLAYING SOCCER



ROMA'S PRESS

ANTI-RED DISPLAY IN ROME*

Help for small businessmen, strong arms for dissenters.

...ists find it so hard to break the Red ...p on so many Italian cities and ...wns. In next week's municipal elec...ns, 6,724 communities will vote for ...cal officials, and sharp Communist ...ains could bring down the virtually ...hirty-two center-left coalition govern...ment of the Christian Democrats and ...Socialists. While Italy is beset by in...flation and strikes, the coalition parties ...e campaigning largely on the argu...nt that Communists are Commu...ts no one using Khrushchev's ouster to ...derline the point; the Christian Dem...crats even put up portraits of Khru...chev, Malenkov, Stalin and Mao ...se in Rome's Via Veneto to recall ...e jungle warfare in the Red world. ...e Communists counter by sticking to ...ir economic issues and by pointing ...Mayor Dozza and the *rinnovatori* ...(renovizers) elsewhere to show that ...Communism has indeed changed.

Shaky Church. In Dozza's pre-elec...n pamphlet, *What We Have Done*, ...e word Communist appears only ...ce in 63 pages. Dozza and his com...es are called the Gruppo Due Torri ...(the Two Towers Group), a reference ...the pair of medieval leaning towers ...the city's center which are the sym...bol of Bologna. Red election posters ...the parks and piazzas are similarly ...free of the hammer and sickle, and ...VOTA DUE TORRI!

Rocky, amiable Mayor Dozza has ...been remarkably successful in abandon...ing the conventional class struggle and ...reaching over the middle class. He had ...organized 3,000 shop owners and store...keepers into a merchants' federation, ...which helped them fight against super...market and chain-store competition. ...Red public officials have been well ...versed in Communist administration ...methods, and are qualified for their ...jobs; each is screened for personal ...honesty.

Dozza thrives on paradox. When ...Bologna's Giacomo Cardinal Lercaro ...ordered the shaky old church of San ...Giorgio torn down, it was Dozza who ...insisted on repairs to preserve it as an ...historic landmark. In 1956, when a ...Christian Democratic candidate for ...mayor tried to undercut Dozza by ...promising sweeping social-welfare pro...grams, the Red mayor branded his ...scheme financially irresponsible, and ...was re-elected by a landslide.

Created Capitalists. One of Dozza's ...lieutenants is Guido Fanti, a 39-year-...old Communist bureaucrat who boasts ...that "each year we help scores of ...Bologna workers to become small-fac...tory owners. So you see, we are ac...tually creating capitalists." Asked if ...Communism should be making capital...ists, Fanti shrugs: "Marx taught us that ...we should aim at the transformation of ...society within the realities of a given ...situation. That's what we're doing here ...in Bologna. It's not the way the Rus...sians do it, but we must be realistic." ...Each neighborhood has its own Com...munist Casa del Populo that offers ...everything from a wine cellar and li...brary to a game room. There are free ...courses in stenography and foreign ...languages, as well as clubs for everyone ...from bridge players to fishermen.

Amid all this benevolent ward-heeling, it is tempting to believe that Communists have really turned into democrats. But every so often, something happens to remind the forgetful that they haven't. One Red city councillor dared to criticize Mayor Dozza for acting too arbitrarily. Dozza agreed to a meeting at which the councillor would supposedly be allowed to spell out his grievances. But when the disgruntled comrade showed up, he found the atmosphere less than encouraging to free speech: the room was packed with tough, blue-collared workmen who closed threateningly around him. "All right, let's discuss," said the leader of the bully boys. But he did not even have to use strong-arm methods. The dissenter collapsed with a mild heart attack and was carried out feet first.

GREAT BRITAIN

Could Have Been Worse— But Is It Good Enough?

Britons love to buck the tide. While even Russia and the satellites are marching their economies away from centralization and toward the profit motive, Britain's new Labor government is charging right ahead to renationalize the steel industry.

In the House of Commons last week, the Tories were joined by the small Liberal Party in an attempt to condemn Labor for its announced steel plan. Britain's steel industry certainly needs some measures to make it more competitive in the world market, where last year it ranked fifth in output (behind the U.S., Russia, West Germany and Japan). British steel, though technologically advanced, suffers from too many inefficient small firms, and Labor economists argue that if the industry is not nationalized, a massive number of mergers, leading to monopoly situations and price fixing, are bound to occur. The Conservatives admit the problem, but deny that nationalization is the answer. Iain Macleod, lately returned to the Tory front bench after a disgruntled self-exile in journalism, called steel nationalization "the application by small and foolish men of a 19th century solution to a mid-20th century problem."

With its thin majority, Labor had to haul in M.P.s in wheelchairs and on crutches to save itself, 307 to 301. Had the motion passed, Prime Minister Harold Wilson's government could have fallen.

Still Compassionate. With the opening steel skirmish won, Wilson turned coolly to the next item on his agenda, an emergency "autumn budget" designed to ease Britain's painful $2 billion balance-of-payments deficit until the regular budget is drawn up in April. At the same time, Wilson saw a chance to nail down votes for a probable spring election by passing some promised social-welfare measures.

It was the first parliamentary test for the new Chancellor of the Exchequer, James Callaghan, 52, who tried to symbolize new approaches by carrying his speech in a plain manila envelope rather than the traditional battered attaché case. Known as "the Mod from the Treasury" because of his sharp wardrobe, Callaghan on this occasion was all business, shunned the customary tumbler of "amber liquid" resorted to by Chancellors during their long, dry budgetary speeches. But Callaghan was less of an innovator in the budget *itself*. Main points:

▶ From cough drops to corn plasters,

* "Vote D.C. [Christian Democratic]. Communism Is the Same As Ever. Fight It Again Along With Us."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all prescriptions written under the National Health Service will forthwith be free: a 28¢ prescription charge on each item was abolished.

▶ Widows' pensions were tripled (to $4.20 a week), old-age and disability payments increased by 20%, to show that even in times of economic stress, Britain can be "humane and compassionate."

▶ An already punishing gasoline tax was increased by sixpence (7¢), thus raising the cost of one "Imperial gallon" (a fifth again as capacious as its U.S. equivalent) to 75¢.

▶ Income tax, which is paid by companies as well as individuals, was raised in the higher brackets by sixpence on the pound, thus bringing the British tax rate back to approximately where it was in 1959, when the Tories cut it. A previously programmed capital-gains tax was deferred until April, to the temporary relief of businessmen.

Ledger-Demain. With an eye to foreign trade, Callaghan took care to affirm that the 15% import duties announced last month were only temporary, to be lifted when and if Britain's balance-of-payment problems are eased. All told, it was a fairly effective act of ledger-demain; the gas-tax increase was passed by a ten-vote margin, the income tax by 26. The budget's impact is decidedly deflationary, since it will take nearly $600 million in purchasing power out of the economy. Some experts believe that this is just what is needed right now.

On the whole, the British business community felt that the budget could have been worse ("Insidious but less drastic than feared," said the Daily Telegraph), and as a result the London Stock Exchange registered relief with a two-day rise. But the great danger in Labor's stopgap budget is that the deflationary tax increases might seriously reduce incentives in the British economy.

LUXEMBOURG

The Grandest Duchy

The smallest member of NATO was the one least troubled by the alarms and arguments over European defense. Although Luxembourg was for centuries fought over by France and Germany, its 153 turreted castles now serve as tourist attractions, and last week its 327,000 subjects were concerned with a purely sentimental occasion. It was one of those episodes suggesting that, despite the new Europe's growing pains, the old Europe somehow goes on.

"*Charlotte, mir hun ek guer!* [Charlotte, we love you]," cried thousands of weeping, waving burghers, crowding around the palace, right across the street from the showrooms of the capital's chief undertaker. At 68 the longest-ruling monarch in Europe, Grand Duchess Charlotte abdicated in favor of her son, Jean Benoît Guillaume Marie Robert Louis Antoine Adolphe Marc d'Aviano, 43, who promised to strive to "ban all that remains of moral and material misery" in his domain.

UPI

WIFE WATCHING NEW GRAND DUKE TAKE OATH
The old Europe somehow goes on.

The task ought not to be taxing, since under his mother's rule, which began just after World War I, Luxembourg came to enjoy the highest standard of living in Europe. There is no unemployment in the duchy's 999 sq. mi., industry is booming, and $70 million in U.S. investments has gone into Luxembourg in the past decade. Grand Duke Jean and his wife, sister of Belgium's King Baudouin, should have plenty of time for their favorite sports—skiing, swimming and golfing.

As for Charlotte, she will be able to tend her rose garden, aided by her husband, Prince Félix of Bourbon-Parma, 71. A descendant of France's Sun King Louis XIV (1643-1715), the prince long ago stopped gambling with the family fortune and in old age has turned dutiful and thoroughly bourgeois—in fact, Luxembourgeois.

SOUTH AFRICA

The Other Vast Wasteland

It is afternoon, and the Bantu boy is in the living room cleaning carpet. Someone has left the TV The boy looks up at the screen, chorus line of white girls in scanty tumes. Suddenly seized by lust, he upstairs and rapes the lady of the

The scene is hypothetical, but it been endlessly conjured up to ex why Africa's most technically ad nation still lacks mass televi white-ruled South Africa, the g ment refuses to permit TV on ground that it would corrupt both white minority and nonwhite majo Prime Minister Hendrik Verwoerd more or less put TV in a category atom bombs and poison gas. "They modern things, but that does not they are desirable. The government to watch for any dangers to the pe both spiritual and physical." Minist Posts and Telegraphs Albert He has put the government view ju bluntly: "The effect of the wron ture on children, the less deve and other races can be highly mental." He is on record with pledge: "As far as I am conce we will never have television."

The Nationalist government, posed mostly of Dutch-descen Boers, also fears that canned TV grams from the U.S. and Britain further "anglicize" South Africa, of whose white population is En speaking. Beyond that, the Nation feel that Anglo-Saxon liberalism flected in such programs could undermine *apartheid*—although a packager ought to be able to find pretty safe fare. Still, Hertzog a South Africa's English-dominated ness community, and specifically mond Tycoon Harry F. Oppenhe of plotting to bring in television, could mean "the destruction of South Africa."

Meanwhile, South Africans co themselves by going to the movies a logic of sorts the government siders the movies less dangerous TV, because at least they do not everyone's home free. Oddly, Sou ricans also keep buying TV sets— when the time comes." Popular sure for TV is growing, and closed-circuit transmissions for trial and medical groups have be mitted. Reportedly, Verwoerd the promise of TV as a vote-g device to enhance his party's ev victory in the next election. A even beginning to dawn on some born Nationalists that television, strict government control, could powerful tool to spread their gospel in black and white, and even color.

* Even though, by latest count, 15 rican countries have TV. Among ex-French Congo, Gabon, the Ivory Kenya, Liberia, Nigeria, Senega Leone, the Sudan, Uganda.

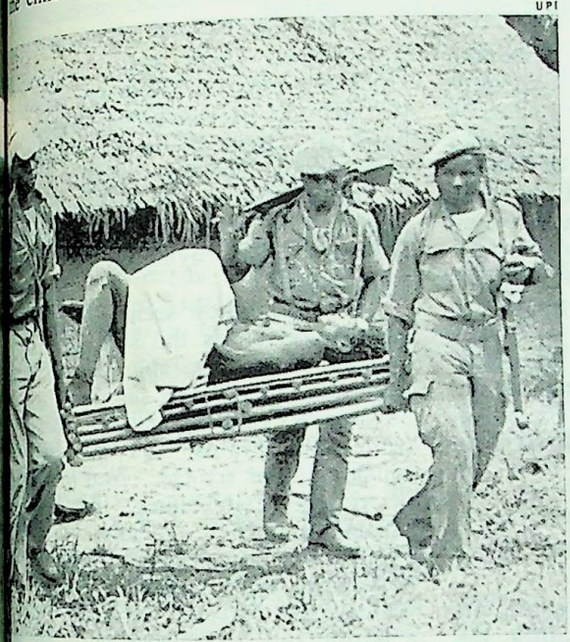
THE CONGO

The Hoodlum Rebels

"They took us outside and lined us up against the wall. This was it. But to amuse themselves they deferred to tots —no more than seven or eight years old. 'What shall we do with them?' asked the adults. The children devised a different fate for each of us. 'Cut that one's ear off and make him eat it,' or, 'Cut his stomach open,' or, 'Put his eyes out.' Two rebels kept sharpening their spears all the time. The children yelled, 'Let's get started. Kill the first one!'"

Such was the nightmare ordeal of 24 Europeans held prisoner by Communist-backed rebels in the Congolese town of Kindu, as recounted by a Belgian tin-mine employee. As things turned out, the children were disappointed, for at the last moment one of Moise Tshombe's government bombers buzzed the town, and the rebels fled. But this and other stories coming to light last week added up to a grim composite picture of the Congolese rebels.

UPI



WOUNDED OUTLAW

LLOYD GARRISON—THE NEW YORK TIMES

BELGIAN WIDOW

The children cried: "Kill the first one!"

Blackened Pavement. For all their claim of being "nationalists"—a label that in present-day Africa automatically draws a certain respect—the rebels are really just savage hoodlums on the loose. At Kindu airport, waiting to be flown out, a weeping Belgian woman told how rebel youths had speared and knifed her husband and two sons to death before her eyes in the family's backyard. In the village of Kibombo, three elderly Belgian men were murdered with shotguns.

Actually, the rebels have killed more blacks than whites. To deal with Congolese "enemies of the revolution," villagers would be assembled as a "people's court." A prisoner would be brought forward, and the crowd would be asked whether the accused was innocent or guilty. There was seldom any doubt about the verdict. In the square near Kindu's main shopping district, hundreds of Congolese were burned to death with gasoline in front of the local Lumumba monument. Following Kindu's recapture fortnight ago, government forces blew up the monument; the adjoining pavement was still cracked and blackened from the rebel burnings.

Captured documents showed that the rebel leaders themselves were having trouble with their chaotic troops. Commanders evidently had to field a steady stream of inspectors to keep the *simbas* (or "lions," as the rebel soldiers call themselves) in line. The rebels, like most Congolese, could not kick their tribal superstitions. One communiqué from a rebel officer ended with an urgent P.S.: "I beg *monsieur le colonel* to make sure that all bridges in our territory be washed with medicine to protect against bombardment."

Another guerrilla major reported that during an inspection trip he had been repeatedly arrested by leaders of the rebels' own youth wing, the *Jeunesse*, who "would not respect my rank." One loutish *Jeunesse* captain even threatened to have his fraternal superior executed for "troublemaking," until the major paid him a 3,000-franc ($20) bribe.

Do Nothing Inhuman. Of principal concern at week's end was the fate of 1,000 whites still trapped in rebel territory. Among the prisoners were 63 Americans, including the five-man U.S. consulate staff in Stanleyville, who have been held under guard for more than two months in a hotel room. With Tshombe's forces closing in, "President" Christophe Gbenye of the rebel "People's Republic" may try to use the whites as hostages to improve his bargaining position.

Kenya's Prime Minister Jomo Kenyatta, chairman of an *ad hoc* Congo Reconciliation Commission set up by the Organization of African Unity, appealed to "all authorities in the Congo to do nothing that would be inhuman toward civilians in their custody."

CAMBODIA

Trustworthy, Loyal, Helpful, Brave, Clean, Reverent & Snookie

Like the young bride always threatening to go home to Mother, Cambodia's neutralist Prince Norodom ("Snookie") Sihanouk more or less survives on the international scene by constantly threatening to break off with somebody. Last week, as Red Chinese Foreign Minister Chen Yi dropped by for Cambodian independence-day ceremonies, Sihanouk affirmed what no one doubted—that he was perfectly capable of renouncing "our monarchic and nationalist regime to adopt the Communist regime." Next thing, Snookie warned Russia and Red China that unless his economic problems are solved, Cambodia might abandon these nations and "align itself with the very rich United States so that they can meet the annual deficit of our national budget"—a suggestion that might no longer be very welcome in Washington.

Finally, Sihanouk made his gravest move of all, and this time he didn't just threaten. Drawing himself up to his full 5 ft. 4 in., Snookie solemnly severed Cambodia's relations with that well-known instrument of imperialism—the Boy Scouts World Bureau.

SAUDI ARABIA

A Brace of Kings

Long famed for its bleak deserts, eye-for-an-eye justice and profitable oil wells, Saudi Arabia last week had the added distinction of possessing two monarchs. Profligate King Saud, 62, who had reigned for eleven years, sulked in his ultra-modern Naziriyah Palace in the capital city of Riyadh. Just down the road in the Red Palace was Saud's half brother Feisal who two weeks ago was summoned to the throne by a *fatwa*, or religious edict, issued by a national council composed of 100 princes, assorted sheiks and the *ulema* (a body of learned men). At the same time the *fatwa* deposed King Saud, but he refused to abdicate, and no one knew just how to go about making him do it.

Deathbed Oath. The two men have long been antagonists. Their father, the late King Ibn Saud once said, "I wish that Feisal had been born twins and Saud had never been born at all." Nevertheless, Saud was the oldest son and was therefore named Crown Prince. On his deathbed, Ibn Saud made Feisal swear on the Koran that he would not seek the throne as long as Saud lived.

Keeping the oath was not easy. As King, Saud squandered fortunes on his pleasures, chief of which were a huge harem. Next to women, Saud liked air-conditioned Cadillacs best, and next to Cadillacs, intrigue. In contrast, Feisal was almost a puritan: though thrice married, he lives with only one wife at a time and, for the past 20 years, his consort has been Turkish-educated Princess Iffat. He speaks fluent French and English as well as Arabic, and has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tried to use his country's oil millions for the benefit of the people.

The pattern of Saudi Arabia has alternated between a few years of mismanagement and waste by nearly illiterate King Saud and then a few years of austerity under Feisal as Premier—until the King felt he could afford to get rid of him again. When Feisal was last called back to power in 1962 for another spell of reform, he decided to get tough. He cut down Saud's privy purse 30%, to a paltry $20 million a year. Cautiously progressive, Feisal also earmarked $500 million for schools, hospitals, roads and water projects. He promised to introduce movies next year, ordered the building of two TV stations and allowed female announcers on the air. As usual, Saud and his wastrel sons conspired with outraged Moslem mullahs who opposed such frivolities and protested that an educated woman is a defiled woman.

Sensible Heat. Last September Feisal attended the Alexandria conference of Arab nations and held a series of private meetings with Egypt's President Gamal Abdel Nasser to patch up the dispute between their two countries over Yemen's civil war—which last week finally headed for an armistice. Back home, Feisal was depressed to find that King Saud and his sons had been up to their old tricks. Finally, Feisal decided to break his long-kept oath in favor of the national interest. He ordered the national council convened, and while the *fatwa* was being drawn up, Feisal traveled slowly across the country in a 400-car motorcade, making repeated halts to attract maximum attention. Met with the announcement that he was to be King in place of Saud, Feisal professed astonishment but, after prayer and deep reflection, accepted.

Since then, deposed King Saud has stubbornly remained inside his palace, comforted by his numberless wives and concubines, and encouraged by his sons. The throne, he said, "was given me by God and my father, and no one can take it away from me." Some of Feisal's advisers suggested cutting off the electric power to Naziriyah Palace, which would automatically shut down the air-conditioning plant, said to be the world's largest after that of the Pentagon in Washington. The sweltering heat, they argued, would bring Saud to his senses. But Feisal refused to take personal action against Saud, declared: "He is still here, and we shall do everything possible to ensure his comfort."

INDIA

The Hungry Generation

A thousand years ago, India was the land of Vātsyāyana's Kāma Sūtra, the classic volume that so thoroughly detailed the art of love that its translators still usually leave several key words in Sanskrit. Last week, in a land that has become so straitly laced that its movie heroines must burst into song rather than be kissed, five scruffy young poets were hauled into Calcutta's dreary Bankshall Court for publishing works that would have melted even Vātsyāyana's pen. The Hungry Generation had arrived.

Born in 1962, with an inspirational assist from visiting U.S. Beatnik Allen Ginsberg, Calcutta's Hungry Generation is a growing band of young Bengalis with tigers in their tanks. Somewhat unoriginally they insist that only in immediate physical pleasure do they find any meaning in life, and they blame modern society for their emptiness. On cheaply printed paper, they pour forth a torrent of starkly explicit erotic writings, most of them based on their own exploits ("In the Taj Mahal with My Sister") or on dreams. "My theme is me," says Hungry Poet Shaileshwar Ghose, 26, a schoolteacher. "I say what I feel. I feel frustration, hunger for love, hunger for food."

Three Widows. To all appearances, their appetites are unlimited. In a short story, Bank Clerk Malay Roychoudhury, 25, tells of a starving poet who first devours his fiancée, then his poems, notebook, then a building and Calcutta's huge Howrah Bridge. A poem by Schoolteacher Ghose crows that he impregnated three widows at a time and now I am lying in bed happy. What next?"

Absurd as they seem, the hungries see themselves as the spokesmen of betrayed and miserable people. "Our frustration is not just personal," says a 28-year-old geology lecturer. "It comes from the strains, the poverty, the squalor of our society." And in a series of violent manifestoes, the hungries singled out their enemies, including hypocrites, conventional writers and politicians whose place in society is "somewhere between the dead body of a harlot and a donkey's tail." To "let loose a creative furor," the hungries last summer sent every leading Calcutta citizen—from police commissioner to wealthy spinsters—engraved four-letter-worded invitations for a topless bathing suit contest.

Done-for World. With that, the entire Calcutta establishment rose up in rage. Newspaper editorials, quoting passages from their works, proved conclusively that they were dangerous and dirty—so much so that Calcutta's reading public began to look for them. Under civic pressure, the police hauled away 26 of the "poets" for questioning. Five were suspended from their jobs and booked on charges of obscene writing and conspiracy against society.

The evidence for last week's trial was irrefutable, but meanwhile the Indian government had been approached by sympathetic intellectuals at home and abroad. Looking for a face-saving exit, the Calcutta prosecutor temporized, requested a postponement of court. To celebrate their temporary freedom, the hungering beats raided an art gallery, beat up three painters, then walked happily away to resume their pursuit of the Hungry Generation's declared goal—"to undo the dongs of the world and start afresh from chaos."

The canvases, signed with a modest F. F., are never sold or exhibited and only rarely photographed. But last week, in an official film of *El Caudillo's* life that opened in Madrid, Spaniards had their first chance to view the fruits of Francisco Franco's hobby of 25 years, stabbed in his studio at the Pardo Palace near Madrid. Shown are two tidily academic works: a storm at sea, and a fuzzier unflattering self-portrait of the Commander in Chief of the Spanish Navy in his admiral's uniform. Son of a naval officer, Franco, now 71, was destined for a nautical career as a boy, but Spain's fleet was so depleted by the Spanish-American War of 1898 that the naval academy closed down and he was forced to go into the army instead.

. . .

During the French Revolution, Madame Tussaud got her start making wax busts of victims of the guillotine, which may be why even today the folks who run the museum she founded have an occasional soft spot in their hearts for losers. At any rate, the effigy of Barry Goldwater will not be melted down. It will be put in storage, and the museum's directors even feel that "he may be useful later on."

. . .

Apprehensively, her Mum and Dad watched Miss World being chosen in London on the telly. "I seem to be a jinx when I go to her contests," explained Mr. Sidney, a Dorset butcher, who must have been one of the few viewers not phoning in complaints. Why was that grandly designed Miss France not one of the finalists? Why was appetizing Miss Italy sinisterly left out? Popular Miss U.S.A. was vetoed, snarled her manager, because "British juries are prejudiced against American girls," a Texas leaguer that conveniently ignored the presence on the jury of such non-Britons as Tab Hunter and Paul Anka. Actually, the panel had a simple problem of a whole lot of lovely girls to pick from, and if green-eyed Model Ann Sidney, 20, winner of the $7,000 title, just happened to be Miss United Kingdom, by jingo, she was also 5 ft. 8 in. of absolute wow.

REUTER

MISS WORLD
While Mum and Dad viewed the telly.

. . .

One week before the big fight, when he turned up for the preliminary weigh-in, Heavyweight Sheik Cassius Clay, 22, was romping up and down Boston's Commonwealth Avenue, stopping trolleys and autos to ask if anyone had seen the "Big Bear," also known as Sonny Liston. Three days before the fight, Clay was rushed to City Hospital in an ambulance, after becoming ill during dinner, and doctors diagnosed a hernia. Surgery was immediate, and the match was postponed indefinitely. Liston's comment: "If he wouldn't run around in the streets, he wouldn't have anything wrong with him."

. . .

Her London publishers called it "a continuation of his writing skill" when Robin Jane Wells, 32, granddaughter of Novelist-Historian H. G. Wells, dashed off a children's tale about a blue elephant, called *Tuscan and the Paint*. With that kind of billing, it was only a question of time before someone asked her what she thought of her grandfather, whose 105 tomes, from *The War of the Worlds* to *The Outline of History*, made him one of the most influential authors of the early part of the century. "I hate to admit it," she confessed, "but I don't know much about his books. I don't read them."

. . .

Give a little, get a little is a natural thing to think. Pope Paul VI, 67, had just decided to donate his gold-and-silver, jewel-studded coronation crown (conservatively worth $12,000) to be used in a fund-raising campaign for those "who suffer misery." Now, here was English Actress Dorothy Tutin, 34, holding out a 1623 First Folio edition of William Shakespeare, after members of Britain's Royal Stratford Shakespeare Company had put on a performance in the Vatican. "What a beautiful memento of this occasion!" exclaimed the Pope, taking it and passing it to an aide. Frightfully sorry, blushed Dorothy, but please would he give it back: she had only meant him to give the $60,000 volume his blessing.

. . .

Possibly the hairdos were a little moplike, and here and there a trace of baby fat still lingered. But the 52 young ladies who met in Dallas for a crack at the Miss Teenage America title were long on animal spirits. Miss Teenage Tampa appropriately won the turtle race with her pet "Knight," while dozens of girls danced the monkey and the bird. Miss Teenage Memphis disapproved, saying: "I feel I cannot live for God and participate in the vulgarity of some of the modern dances." When the feathers settled, the winner was a gleeful soprano, Carolyn Mignini, 17, a Baltimore oriole who will use her $10,000 prize to study at Juilliard.

AP

MISS TEENAGE AMERICA
While the little monkeys did the bird.

. . .

For $1,000,000 or thereabouts, he got the famous blue-and-white zebra-striped upholstery, the potted palms, and a publicity agent thrown in to make weight. But John Mills, 50, a wartime Polish commando, doesn't really need him: as soon as he bought Manhattan's El Morocco (from Edwin Perona, son of the late founder), dozens of friends dropped by for a toot, from venturesome capitalists like Sherman Fairchild to Cinemactress Merle Oberon. After all, Mills already runs a triple-barreled London establishment (casino, nightclub, restaurant) that is loaded with big game, including Prince Philip and the Sheik of Kuwait. Though Mills says "I wouldn't dare" change the zebra's stripes, he is adding a few jolly wrinkles: discothèque, a Rolls-Royce with bar, and a Bentley to carry his more diffident guests to and fro.

. . .

While flying to Manhattan to sing in a benefit concert for the Southern Christian Leadership Conference, Soprano Coretta Scott King, 37, wife of the conference's leader, the Rev. Martin Luther King Jr., 35, struck up a conversation with her seat mate, a white girl from Louisiana who recognized her. Was the topic race relations? Peaceful resistance? Well, not exactly, said Mrs. King. "We're both a middle child, and if you're a middle child and can survive, I've always said that you can survive anything."

THANATOLOGY

Death & Modern Man

Neither the sun nor death
can be looked at steadily.
—La Rochefoucauld

Modern medicine has steadily prolonged lives, slashed death rates and, for many patients, changed drastically the very process of dying. Yet, except for a handful of psychiatrists, medical men have paid only cursory attention to the problem they have thus inadvertently intensified: How are the fatally ill to be helped to face the end?

Medical scientists cannot even agree on the time when death technically occurs. Is it when breathing stops? Or the heart? Or when brain waves cease? Psychologists and psychiatrists assert that fear of death is universal, but disagree about its true nature. Freud compared it with fears of castration. Others believe that patients fear dying itself less than their own helplessness and uselessness in the process. Some believe the fear of death is the instinctual root of all other fears.

Family Attitude. From his own observations in Colorado General and Colorado Psychopathic hospitals, one thing of which Psychiatrist Richard Vanden Bergh can be sure is that patients are sometimes left terribly alone when the end is near. "All of us," he told a convention of nurses at the University of Colorado School of Medicine, "have seen the patient who is slowly dying of a chronic, debilitating illness and has been placed in the room farthest from the center of the ward. The doctors drop in briefly during rounds, glance at his chart, and leave almost immediately. The general attitude of the ward is: 'There's really nothing we can do for him—after all, he's dying anyway.'"

This attitude is as appalling to many physicians as it is to just about all ministers of religion. But what is to be done? The first question that arises is whether to tell a patient that he is dying. "Much depends," says the University of California's Dr. Alexander Simon, "on the attitude of the family and the patient's own attitude. There are some whom I would not tell about imminent death because they would panic." Another U. of C. psychiatrist, Dr. Robert D. Wald, believes that the opposite situation is more common: "The assumption is that people don't want to die. From my experience, I believe that—more often than is generally realized—people reach a point where they are willing to die." To Psychologist Herman Feifel of the University of Southern California, who has edited a book on *The Meaning of Death*, what the patient is told is less important than how he is told.

Who's Afraid? And what about the role of the family, now that so many more deaths occur in hospitals than at home? Psychiatrist Wald says tartly: "At death scenes, doctors and nurses are frightened of families. They feel accused by the relatives because they are revealed as not being all-powerful. Doctors tend to keep families away to protect their own self-esteem, though perhaps not consciously."

KOLLWITZ' "THE CALL OF DEATH"
For tearful relatives, a coaching problem.

There are, to be sure, many cases in which it would do no good to have the family stage a death watch because the patient is in a coma. And such cases are becoming vastly more numerous now that medical science has learned to prolong the body's life, or at least some signs of life, long after the mind has become irreparably clouded. But Dr. Vanden Bergh says that he, and most doctors, have seen many patients who were not only conscious but alert right up to the end. Even with a patient who is technically comatose, there is no way for an outsider to be certain how much he senses of what is going on around him.

Probably the only patients who must necessarily be deprived of the comfort of kinfolk are the growing numbers who are sent after surgery to ultramodern recovery rooms from which visitors are barred because of the danger of infection. In most cases, the presence of the family is a good thing. Even if the patient does not know the relatives are there, it is good for them to have the opportunity to learn to accept the imminent loss of a loved one. But relatives may need to be coached in deathside manners. If they have not already faced their own emotional problems, they may become depressed or tearful or even hysterical. Then, instead of their helping the patient, it is the patient who finds himself having to console his visitors.

Too often, says Dr. Wald, there is a woeful lack of communication between patient and family when death is approaching. "This," he says, "is the very time when communication could be freer and more rewarding than ever before. It is the time when old emotional conflicts can be resolved. I've attended many patients who were dying, and knew it, but had had no chance to discuss their fears with anyone. Many were glad to have the opportunity to talk."

What Is He Leaving? A major factor in all attitudes toward death is religious belief—or lack of it—in the hereafter. Some clergymen assert that such a belief is all that is needed to take the sting out of death. Others, like San Francisco's Rabbi Alvin I. Fine are more moderate. "The Judaeo-Christian tradition," says he, "offers a way of looking at death. Religious belief and understanding are definitely helpful in facing death." Psychiatrists, who tend to be agnostics, complain that the clerical attitude generally puts too much emphasis on where a person is going and too little on what he is leaving. Like Rabbi Fine, they believe that a philosophy of death is an essential part of life.

Modern skepticism is intensifying the problem of facing death, says the Rev. Joseph T. Alves, head of Boston's Roman Catholic Family Counseling. A social psychologist, Father Alves is directing a project for training "social volunteers" to help the lonely aged adjust to modern society's pressures and to comfort those who are incurably ill.

There is wide public misunderstanding, said Father Alves, of the full purpose of the Roman Catholic "sacrament of the sick." Long called "extreme unction," it is still too generally regarded as simply the last anointing before death. But in modern theology a broader and more ancient purpose has been re-emphasized. The sacrament is not only concerned with accommodation to death; it is a prayer to God to restore the patient to good health.

In the last analysis, each man must

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

make his own accommodation to death. Almost universal is the sentiment of Dr. Charles W. Mayo, recently retired from active surgery at the Mayo Clinic: "I hope that when I die, it will be quick. But if there is some delay, then I hope I'll have somebody I love with me—somebody to hold my hand."

DENTISTRY

Fluorides for Better Bites

Dentists have long been convinced that fluoridated drinking water can cut cavities in children's teeth by 60% or more. But fluorides may be even more valuable than that. At the annual session of the American Dental Association in San Francisco last week, Dr. Thomas K. Barber, associate head of Pedodontics at the University of Illinois College of Dentistry, reported that fluoridated drinking water can help eradicate bad bite—an affliction that affects more than half the 50 million children in the U.S.

Dr. Barber's statistics came from a study conducted in Evanston, Ill., after ten years of fluoridating its water. Among Evanston children in the 6-to-8 age bracket, said Dr. Barber, malocclusions were down 20%, while those in the 12-to-14 group had 17% fewer bad bites than teen-agers in nonfluoridated communities. Fluorides, explained Dr. Barber, reduce tooth decay in the important first permanent molars; early loss of these teeth may lead to bite abnormalities and eventual braces or similar tooth-straightening appliances.

The Evanston study complements similar figures from the neighboring New York towns of fluoridated Newburgh and fluoride-free Kingston. Of Newburgh's teen-agers, 35.2% have normal bites, *v.* only 12% for their Kingston counterparts. Significantly, Kingston kids lost nine times as many permanent teeth, six times as many lower first molars. Reasoned Dr. Barber: "The benefits of fluoridation can be viewed indirectly as a factor in the reduction of malocclusion."

SURGERY

Repair of a Pitching Arm

By World Series time, the coldness and discomfort that New York Yankee Southpaw Whitey Ford had often felt in his left hand became a strength-robbing cramp afflicting his whole arm. But not until after the second game when he even had trouble shaving did Ford seek medical help from Dr. Martin L. Schulman of Long Island Jewish Hospital. The diagnosis: Pitcher Ford had an apparently complete blockage of the axillary artery, which carries blood through the shoulder toward the fingertips.

The artery had become blocked, possibly by fatty deposits, under the shoulder, where muscle and bone crowd it. Ford's well-developed muscles and his pitching profession aggravated the block: every time he threw a pitch, his

LABOR

A Common Thread of Trouble

Detroit's unexpected labor turmoil this year has had an unreal, occasionally downright unbelievable quality right from the start—but last week it turned into a full-fledged nightmare for the U.S. economy. As the United Auto Workers' strike against Ford entered its second senseless week, it seemed certain that some, and perhaps much, of the damage to the economy will be lasting. Any chance that the auto industry might top 8,000,000 units for calendar 1964, said Ward's Automotive Reports, has been K.O.d." The industry has already had one of its worst introduction periods in recent history, thanks to the 91-day General Motors strike, and two poor months back to back could make their effects felt this winter not only in Detroit but around the entire U.S.

Still unwilling to settle such noneconomic matters as longer wash-up periods and the allocation of overtime, members of Ford local unions continued to walk out. The company closed 24 plants from Alabama to Minnesota, laid off 33,500 nonstrikers to bring the total of men out of work to 59,000. Ford's passenger car production is already 75% below capacity and unless the walkout ends this week, said President Arjay Miller, the nation's fourth biggest company will screech to a complete stop. The U.A.W. aggravated the problem by also striking Mack Trucks and White Motor Co.

Angry Lieutenants. In fact, as the nation looked around last week, it was faced with a sudden storm of labor turmoil. After 12 to 15 months of comparative labor calm, strikes or the threat of strikes suddenly hovered over such important industries as paper, railroads, shipping, meat packing and steel. Through many of these disparate disputes ran one common thread: a rebellion against national union chiefs by angry lieutenants, ambitious local leaders and restless rank and file. A new and independent union that recently ousted two less militant A.F.L.-C.I.O. unions shut down two-thirds of the West Coast paper industry by calling the first strike there in 30 years. In steel, the prospects of a strike next spring have been heightened by a battle for the presidency of the United Steelworkers (see THE U.S.). And it is painfully obvious that Walter Reuther has had his hands full trying to control his disputatious local U.A.W. leaders.

This tendency to defy established union leadership is caused partly by a kind of anticolonialism on the part of locals that want to play a bigger role, partly by the political and technological challenges—such as automation—that have created a climate of discontent in U.S. unions. To many in the rank and file, labor's aristocracy seems old, aloof, often tyrannical, and too busy discoursing on foreign policy or participating in university colloquia to keep in touch with grass-roots concerns. Some annoying habits of union leaders that are ignored so long as they deliver—frequent travel, conspicuously high living—begin to pall when there is less left to deliver. Unionists call this the "high-hat issue" or "uppity unionism." To escape its onus, one U.A.W. troubleshooter in Pittsburgh refuses to wear white shirts, and a top officer of a food employees union says: "I wouldn't drive a Cadillac these days if you gave me one."

Unaccustomed Challenges. Recently the heads of the American Federation of Teachers, the International Longshoremen's Association and the State County and Municipal Employees Union have been ousted. The leaders of the Textile Workers Union of America, the Building Services Union and the Communications Workers of America have been forced to fight unaccustomed challenges, and the President of the United Rubber Workers was recently rebuffed by his rank and file when he attempted to raise dues. For the first time since he founded the International Union of Electrical Workers in 1949, moody, mercurial James Carey is being strongly challenged for the presidency. The United Mine Workers' $50,000-a-year president, Tony Boyle, is being challenged by a $130-a-week miner.

Many businessmen are finding out the hard way that the secure, experienced labor chieftains are more pliable and reasonable than the local leaders who have lately vaulted to power. In union politics, where it often takes up to 30 years to rise to the top, the temptation is great to make a quick mark through excessive militancy. By any measure, the sudden wave of union power plays threatens U.S. business with the prospect of more wage demands, rugged bargaining and bothersome work stoppages.

MANAGEMENT

Watch That Man

Los Angeles Businessman Norton Simon plunges into his backyard swimming pool three times a day, but that is about the only way he ever plunges. Working from a base that includes California's $400 million Hunt Foods & Industries and heavy investments in salad oil, matches, paint and publishing (*McCall's*), Simon plans his moves with the care and strategy of a Clausewitz. West Virginia's Wheeling Steel (1963 sales: $236 million) was surprised to find a few years back that Simon had quietly become one of its biggest stockholders, controlling 145,000 shares. Last week Norton Simon was elected Wheeling's chairman, replacing William A. Steele, who resigned a few weeks ago.

Simon will leave the actual running of the steel firm to others, but his takeover at Wheeling—where he owns only 8.8% of the stock—was certainly enough to make a few other people nervous. Among them: Leonard Goldenson, president of American Broadcasting-Paramount Theaters, which a few months back turned down a bid from Stockholder Simon (controlling more than 200,000 shares) to become a board member, and Roy W. Moore Jr., president of Canada Dry, which let Simon onto its board in August after first rebuffing his bid. Simon owns a 23% interest in Canada Dry v. 2% for the company's managers collectively. He is clearly a man to watch—close

A Bird's-Eye Look At the Countryside

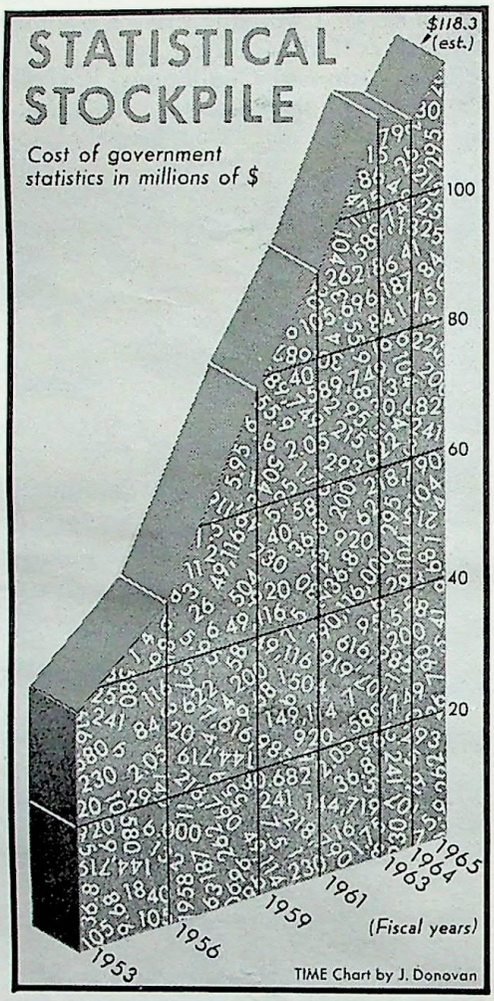
Who benefits the most when U.S. householders buy more furniture? What would happen to sales of a paint company if the Government cut back defense spending on aircraft and missiles? Which U.S. industries stand to be hurt most by Britain's new 15% levy on imports? What effect would the proposed $500 million cut in excise taxes have on various segments of the U.S. economy?

The answers to such questions have long been difficult or impossible to come by, although the Government is spending millions every year ($118.3 million this fiscal year, up 29% over three years ago) to provide the growing flow of statistics that pour from 14 federal agencies. Despite the proliferation of statistics, no one had ever devised a master plan that would pull them all together, and even the experts were largely left in the dark about how an event in one area of the economy could affect a business or industry in another.

Last week the Commerce Department proudly brought forth a major new aid that will prove invaluable in analyzing the U.S. economy and its parts. It is called the input-output table, and its 24,044 computations are the result of five years and three-quarters of a million dollars' worth of work by a 20-man staff in Commerce's Office of Business Economics. Basically, the staff divided U.S. industry into 86 groups, painstakingly put precise numbers on the intricate interplay of sales and orders among them and tied the whole works for the first time to such basic statistical yardsticks as national income and gross national product. It thus created the first really 3-D view of the U.S. economy. "Input-output," says George Jaszi, head of the Office of Business Economics, "is a bird's-eye view of the economy, like looking at the countryside from an airplane."

Fears of Regimentation. The new view will make business and Government predictions more accurate, enable a businessman to see how a change in consumer demand, Government spending or taxes will affect his own enterprise, give him a better insight into who are his customers' customers (a notoriously foggy order) and show him where he is missing markets in which his competitors are selling. It enables a paint company, for example, to figure out its sales drop on a $3 billion defense cut in missiles and aircraft. Input-output shows that the aerospace industry uses 0.245¢ of paint industry materials for every $1 of sales, and that a $3 billion drop in orders would thus mean a loss of $7,300,000 in sales to the industry. Knowing that it had 10% of the market, a paint firm could expect a sales drop of $730,000. Similarly, for each $1,000,000 rise in demand for household furniture, fabric makers can expect an extra $98,880 in sales, wood companies $182,000 and transportation and warehousing firms $65,000.

The input-output tables are the brainchild of Harvard Professor Wassily W. Leontief, whose work persuaded the Government to begin the preparation of such tables in the late 1940s. Fearing that the system would prove a wedge for Government regulation of the entire economy, a group of businessmen led by General Motors Economist Stephen DuBrul in 1953 persuaded Defense Secretary Charles ("Engine Charlie") Wilson to halt work on it. But the work got under way again in 1959 after Professor Raymond Goldsmith of Yale urged the Government to push ahead, and business fears of the tables have turned to open-armed welcome with the realization that they are an invaluable aid. Forty-five other nations are now working on their own input-output tables.



Enough Elegance. The tables will be revised every two or three years to register changes in the economy. Professor Leontief would like to see a further breakdown of the economy into 450 to 500 industries, feels that some federal statistics from which the tables are drawn are wanting (TIME, July 10). But he is pleased that his idea has been brought to the point where "the technician, not the philosopher, is needed. The tables will help end all the elegant economic theorizing that has up to now been done with too little data," he says. He is probably 85.6% correct.

Paying the Piper

Man has taken to burying many of the things that are important to him: his business records, the gold that backs his money, his nuclear missiles, and in some instances even his factories and food supply. Beneath a land that is becoming increasingly crowded on the surface, he has also buried the [illegible] through which flow much of his source of energy. Nowhere is this truer than in the U.S., where underground pipelines carry 42% of all the nation's energy fuels in a vast network that stretches four times the length of all its railroads and 3½ times that of its airline routes. The oil and natural gas that flow through this network (*see map, overleaf*) eventually turn turbines, heat buildings, power automobiles, and cook the food of the U.S. The whole process has produced a thriving pipeline industry.

Nearly 125 companies in the U.S. now transport energy by pipe. Last year they pumped 14.8 trillion cu. ft. of gas and 3.7 billion bbl. of crude oil or refined products. Snaking more pipe over rivers and bays, deserts and mountains, the industry this year will lay another 28,200 miles at a cost of $1.8 billion. The biggest of the new, the 1,600-mile Colonial Pipeline up the East Coast, last week advanced to within 500 ft. of its terminus at Linden, N.J. Trans-Canada Pipe Lines has just applied to the Federal Power Commission for approval to build a $200 million pipeline that will dip over the border into Minnesota, Wisconsin and Michigan. Three companies are competing to build a second gas line to link Texas and southern California at a cost exceeding $3 million. In Washington State the Olympic oil products pipeline is pushing southward to serve Seattle and Portland with oil from the rich fields of Canada's Alberta.

Cost & Controversy. The pipeline companies, which mostly have their headquarters in oil-rich Houston or Tulsa, are essentially transportation companies that shy from outright ownership of production facilities. The six major oil pipeline companies that move 75% of all U.S. crude oil shipments and 45% of all finished products—ranging from jet fuels to tractor fuels—are owned either by individual oil companies or by consortiums. Service Pipe Line Co., the largest (14,000 miles of pipe), is a Standard Oil of Indiana subsidiary, and runner-up Humble Pipe Line Co. (11,700 miles) does two-thirds of its business with parent Humble Oil. On the other hand, the 28 natural gas pipeline companies—led by Tennessee Gas Transmission (11,540 miles of main line) and El Paso Natural Gas (10,700 miles)—are almost all publicly owned.

With a few exceptions, pipelines are usually very profitable, although as common carriers they are closely regulated—oil lines by the Interstate Com-

and a bank; El Paso is half owner
Rexall Drug of a plastics company.

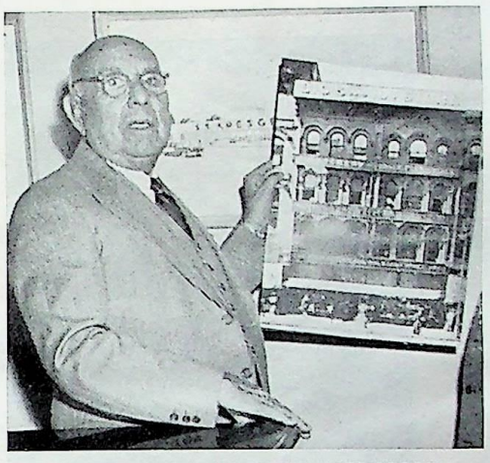
The brightest hope for improved
ings, however, lies in technological
nce. Pipeline companies this year
buy 1,600,000 tons of pipe from
companies, which have steadily
e their pipes longer, stronger and
ner-walled. The proposed Trans-
dia line, for example, would safely
45 miles of current in the Straits
Mackinac with improved pipe, and
has been laid 170 ft. deep in the
f of Mexico. By developing under-
nd storage vaults, gas companies
e also been able to keep up with
y winter demand and prop up sum-
prices. In the marshy New Jersey
adows, Transcontinental Gas Pipe
e Corp. is freezing thousands of
s of mud, scooping a hole out of
middle and filling it with gas chilled
-258° F. to liquefy it.

Hot Charcoal Aroma. The U.S. is
dly saturated with main lines now,
the rush to build distribution lines
tinues. The cost: from $100,000 a
e in rural Alabama to $1,000,000 a
e in suburban New York. The oil *v.*
competition is also heating up. The
industry already pipelines directly to
ch airports as Washington's Dulles,
w York's Kennedy and Chicago's
Hare, where jet fuel demand is heavy;
is also planning lines directly into
ighborhood service stations to replace
trucks, considering community
ts from which metered home oil
mers could draw directly as gas burn-
do. For its part, the gas industry is
ing a "total energy concept," in
ch pipelined gas will do everything
generate electricity to cool air and
water. Gas companies are already
nstrating a backyard barbecue that
ed by natural gas. It includes, they
, even the charcoal aroma.

MERCHANDISING

Strength in Variety

S.S. Kresge is a man as well as a variety store, and, at 97, he was recently called out of retirement to address the annual meeting of the chain that he forged. While stockholders applauded, old S.S. (for Sebastian Spering) got up and exhorted them to make Kresge "an outstanding five-and-ten-cent syndicate." That did not jibe with President Harry B. Cunningham's idea of his job, and he rose to his feet and said so. Smilingly, he reminded everyone that the nation's third largest variety chain (after F.W. Woolworth and W.T. Grant) has expanded far beyond its old dime-store stage and is, in fact, quite a different creature. This small semantic difference highlights a new philosophy that



KRESGE WITH PHOTO OF FIRST STORE
Replacing the tawdry with color TV.

has set all the variety chains off on their biggest spree of change and expansion.

Pheasant & Paperbacks. Most of the chains have begun to emulate the discount, drug and department stores that in recent years have lured away some of their traditional lower-priced business. This week Kresge will open seven more of its big K-Mart discount houses, bringing the total to 88 out of a chain of 870 stores. Last week Grant (1,097 stores) started building another of its huge Grant City stores, which are so much like department stores that they sell color TV sets and high-fashioned clothes. J.J. Newberry (548 stores) has opened 24 department stores under the name "Britts," and S.H. Kress is busy with plans to redesign the interiors of many of its 270 variety stores to make them look less jumbled. Declaring its intention of becoming the world's biggest discounter, giant Woolworth (4,192 stores in North America and Europe) has opened 16 "Woolco" discount stores and expects to add 11 more within a year.

The chains still stock plenty of merchandise that is tasteless or downright tawdry, but they are also selling more and more higher-quality, higher-profit items. Kresge's K-Marts now offer some 35,000 items, including such new additions as hi-fi sets and frozen string beans. Woolworth's stocks diamond rings at $99.95, electric organs at $79.95 and canned Scottish pheasant at $6.98, has become the nation's largest retailer of records (40 million last year) and paperback books (15 million). Already the world's largest restaurant chain (1,706 luncheonettes), it is also planning to serve liquor in some of its "Harvest House" restaurants outside the stores. Grant's has auto service stations and prescription pharmacies, and both Grant and Woolworth now offer 24-month credit plans.

Paint & Profits. To keep up with change, the chains are rapidly adopting self-service (Woolworth now has it in 80% of its stores) and moving toward larger stores. Grant's new centers

NEW STORE OPENING IN FLORENCE, ALA.

sprawl over 3½ acres of floor space. Woolworth is placing most of its new stores in downtown areas instead of suburbs because President Robert C. Kirkwood senses "a trend of rejuvenation in the center city." In declining fringe neighborhoods, Kresge has converted its old and unprofitable stores into small-inventory cut-rate stores that sell only limited lines—the fastest selling shades of paint, the most-in-demand sized bra (34).

Though the costs of expansion and modernization run high, the chains are profiting from their new look. Woolworth, which announced record nine-month sales and earnings a fortnight ago, expects to increase its $1.2 billion sales by 15% this year; Grant's sales are running 10% ahead of last year's $699 million. After a money-losing 1963, the McCrory chain (583 variety stores) and J.J. Newberry have pulled back into the black. Kresge's sales ($504 million last year) are growing at a rate of 25% so far this year, and the company hopes to catch up soon with second-place Grant. Nothing would please S.S. Kresge more than to see that happen to his five and tens, by whatever newfangled name anyone chooses to call them.

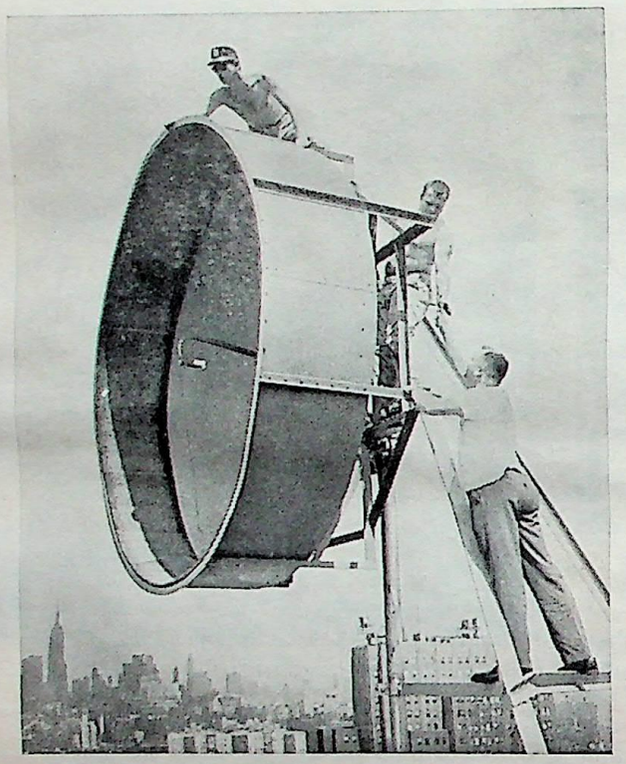
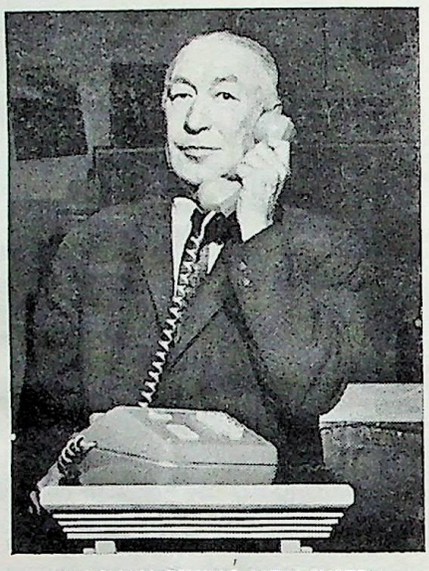
New Life in Old Wires

To millions of Americans, the 113-year-old Western Union Telegraph Co. means bicycling messengers in green uniforms, miles of wire-carrying poles along railroad tracks and yellow shafts of light from all-night offices. The telegram business still accounts for more than half of the company's revenues, but it is dwindling along with the poles and messengers. Venerable Western Union is transforming itself into a new kind of telecommunications giant, using the latest pushbutton automation to provide a range of services as broad as electronic wizardry allows. This week, from the top of its 24-story brick-pile headquarters in lower Manhattan, the company will inaugurate its biggest diversification yet: a 7,500-mile $80 million transcontinental microwave system that will transmit teletype, telephone, facsimile or computer-tape messages with equal ease.



MICROWAVE ANTENNA ATOP WESTERN UNION BUILDING



MARSHALL TRYING NEW SYSTEM

Flowers and H-bomb warnings fly through the air.

Stocks & Candy. Western Union has already gone a long way toward shedding its 19th century image. It operates a nationwide system for the Air Force designed to detect nuclear bomb explosions, an automatic teleprinter network that serves 9,129 customers in 2,000 U.S. cities and a private telephone system for the Philadelphia-Baltimore-Washington Stock Exchange. Its 30,000-mile facsimile-data-voice net serves the National Aeronautics and Space Administration, and a bigger hookup works for the Pentagon. In September, it opened a "broad-band exchange service" to 19 cities that not only combines telephone, teletype and facsimile communication but enables computers to send data across the nation.

The source of all this bustle is Walter Peter Marshall, 63, the company's $141,000-a-year president. A Brooklyn-born, Manhattan-schooled accountant who is one-eighth Cherokee, Marshall got into communications accidentally by answering a help-wanted ad by All America Cables in the mistaken belief that it manufactured cables rather than sent them. After working up to executive vice president of Postal Telegraph, he came to Western Union in the 1943 merger that gave W.U. a monopoly on domestic telegraph business. When he became president in 1948, Western Union looked ready for the undertaker. With a creaking plant, antique methods and little research, it was losing money at a $1,000,000-a-month clip.

Marshall has rescued the company by automating to trim payroll costs from 69% of revenue to 57% last year, by closing unprofitable telegraph offices and by adding such new services as flower orders, wake-up calls and candy-by-wire in the 15,000 offices that remain. The company has made money every year since 1950, last year netted $16.8 million on $297 million in sales.

Frequent Clashes. Battling to revive Western Union, Marshall has repeatedly clashed with American Telephone & Telegraph (usually protesting to the FCC that A. T. & T. rates on its private-line networks are unfairly low), but the two companies see eye to eye about one thing: the future. Says Marshall: "A. T. & T. says the data and private-line business will grow to several billion dollars by 1970. I agree, and I expect our share to be in the hundred-millions." To keep W.U. healthy, Marshall plans to push data and private-line business still harder, mesh private telegrams into his teleprinter network, and use telegraph offices as merchandise outlets. Despite such changes, one W.U. tradition is still reasonably intact: singing telegrams remain available in 285 cities.

A Voice in Dissent

And you should see the forms she typed!

Carbon paper does two things: it makes copies and it makes smudges on paper, desks, clothes, and skin. NCR Paper does only one thing: it makes copies. It doesn't smudge. It won't tear. NCR Paper makes clear, clean copies of whatever you write, type or print on the original.

Companies who have studied total forms costs find NCR Paper saves from 20% to 50% by reducing handling time. Employes stay cleaner, too. Your forms printer can supply samples and case histories of how companies, such as yours, save time, money and soap with NCR Paper.

NCR *Paper* / multiple copies without carbons

COMMON MARKET

A Question of Exceptions

For months, one of the world's brightest hopes in the field of international business has quietly been getting nowhere. The Kennedy Round of tariff-cutting talks* in Geneva, which was envisioned as the first bold step toward a free-trading Atlantic Community, has been hung up by delays and disagreements since its opening in May. The negotiations resumed this week in Geneva, where each nation presented a top-secret list of sensitive and important products that it wishes exempted from the tariff bargaining. Last week, as 45 nations prepared to dispatch their lists to the 19th century Geneva villa where Leo Tolstoy once lived, a new crisis in the Common Market once more showed that France not only is lukewarm about the Kennedy Round but could frustrate it at any time.

After insisting that Europe must reach a common agreement to cut farm tariffs before it would negotiate about industrial tariffs, the U.S. recently relented and urged that tariff talks proceed, for the time being, without a common agricultural policy. Last week France agreed to give the Germans, whose high grain prices have proved a stumbling block, more time to come to terms. That seemed very magnanimous of the French—but they had something up their sleeve. When the Common Market Commission met in Brussels and proposed that the Six adopt a compromise list of 210 exempt items involving about 12% of the Market's imports, France balked. Having neutralized the Germans by its farm concession, France now demanded that another 130 items be tacked on to the industrial list, and Italy joined in with a demand for another 68. The additions could swell the Common Market lists of exemptions to more than 20% of the Market's imports —meaning further trouble for the Kennedy Round.

The U.S. has held its own list to less than 10% of the 5,000 items under negotiation. Among its exemptions: steel, lead and zinc, glassware, stainless-steel flatware. Even before adding to the list, Europe's protectionists had called for special protection for their aluminum, textiles, watches and sewing machines. Early this week, after desperate all-night bargaining, the French and their Italian allies gave in a bit, agreed to a list somewhat short of their original demands but much above what the Germans wanted.

Although the disputes strained Europe's unity, the French seemed unlikely to go so far as to break up the Common Market—if only because they have gained so much from it. Since 1958, the six members' gross national products have grown by an average 30% (*v.* the U.S.'s 23%, Britain's 16%), and their exports to one another have doubled. France has done much better than the average; its exports to the Market countries have nearly tripled, to $3.1 billion. If France is too protectionist to want any meaningful tariff cuts, it nonetheless could turn the market into a narrow, inward-looking organization. And if it persists in its demand for a lengthy exception list, it may well bog down the Kennedy Round for many more months.

* The name originated in honor of John Kennedy, whose Trade Expansion Act gave impetus to the "round," which is only one in a series of trade talks in recent years.

WORLD TRADE

A Taste for Yankee Food

Who would have thought that canned *minestrone* could be sold to the Italians, instant *tortilla* meal to the Guatemalans, ready-to-serve treacle pudding to the British, or any culinary quickie to the French? Dr. Murdock Equen, 72, found... ...and chief of staff of Atlanta's Ponce ...Leon Eye, Ear, Nose and Throat In... firmary, who in the early 1940s came to the rescue of mothers everywhere by pioneering the use of tiny magnets to retrieve from the throats, stomachs and lungs of children all manner of metal objects previously removed by surgery or not at all; of a stroke; in Atlanta.

Died. Randall Davey, 77, leader of Santa Fe's art colony, best known for equestrian studies that convey the raw-edged excitement of race tracks with gaudy colors and slapdash compositions, but most appreciated for his brutally incisive portraits (at fees up to $10,000) of such notables as John Galsworthy and the late Defense Secretary James Forrestal; of injuries when his Jaguar overturned near Baker, Calif.

Died. Walter Deane Fuller, 82, president (1934-50), chairman (1950-57), and most recently director of the Curtis Publishing Co., business-side head of the company before its spectacular decline; of peritonitis following a ruptured appendix, just before he was to attend a directors' meeting to ponder Curtis' troubles; in Philadelphia (*see* PRESS).

Died. Montagu Phippen Porch, 87, British soldier, archaeologist and colonial civil servant, who in 1914 at the age of 37 met Lady Randolph Churchill (then 60) at a ball in Rome, married her four years later to become stepfather to Britain's future Prime Minister, Sir Winston, his senior by almost three years; in Glastonbury, England.

Died. Archbishop Joseph Francis Rummel, 88, leader of New Orleans' Roman Catholics from 1935 to 1962 and his church's most outspoken integrationist in the hard-core South, a German-born, Harlem-trained priest who shortly before his retirement found himself the target of a Ku Klux Klan burning cross and the concentrated opposition of many prominent New Orleans Catholics (he excommunicated three), nevertheless went ahead and integrated all 153 parochial schools in his archdiocese; of pneumonia; in New Orleans.

How to place your portfolio under investment management starting with as little as $5,000

If the money you have today is to grow in the future toward more income, or for education, travel, leisure, retirement, it must be kept working full time to achieve your goals.

Yet you may find that you are actually losing ground due to inflation, taxes or lack of time for investment decisions.

To help solve this problem, clients in 31 countries have turned to The Danforth Associates Investment Management Plan. It has, we believe, proved especially efficient in providing continuing capital growth supervision for portfolios of from $5,000 to $50,000—on behalf of people who recognize and can share the risks and rewards of common stock investments. The cost is modest, as low as $100 per year.

For a complimentary copy of a 42-page report describing this tested plan, its complete 8-year "performance record," and how it may help you now, simply write Dept. N-63

Mirthful Dane

Comedy in Music. Funnyman Victor Borge knows how not to deliver a line. He swallows it, and then utters small digestive burps.

His face is a pliant mask of dismay and disdain. One never knows whether he regards his props—the microphone, the piano, the piano bench—as allies or enemies. Flailing away at Rachmaninoff, he skids clean off the piano bench, pulls out a neon-blue seat belt, fastens it with frosty dignity, and resumes his musical flight. He also keeps up a running gag with a treacherous watch that tells the day, month, year and altitude ("Today it is the 39th of February, 1216 B.C., and we are flying at an altitude of four feet below sea level").

Instead of doing a one-man show as he did nine years ago on Broadway, Borge this time does a kind of one-and-a-half-man show with Leonid Hambro as co-pianist and straight man. Borge sort of excludes him in, and satirizes the egomania of stars by scraping the mike head along the floor like a vacuum cleaner during Hambro's only solo number. Later, in a howling display of virtuosity, the duo intertwine legs, arms and hands and march their fingers up the keyboard in a centipede's version of Liszt's *Second Hungarian Rhapsody*. With the election over, Borge has also decided that the White House is in humor's public domain again: "I had the great honor [muttered aside] and vice versa to meet the President of the United States—Gentleman Bird. He approached me at 70 miles per hour, lifted me up by my ears, and pronounced me a Great Dane."

And so he is.

Three for the Seesaw

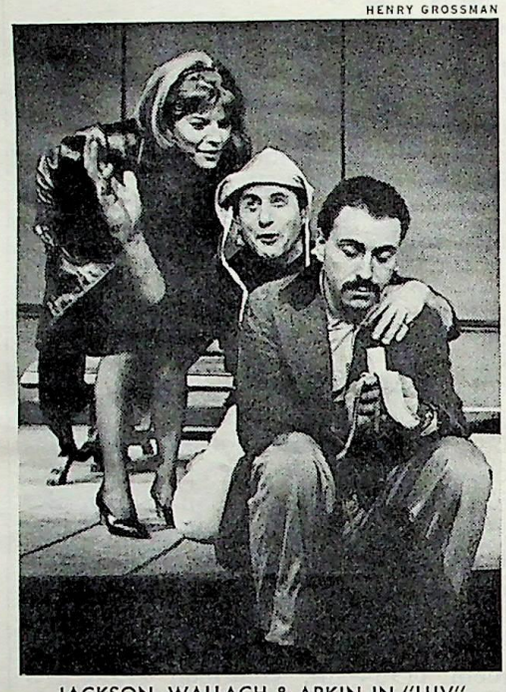
Luv, by Murray Schisgal. Three morose souls are raining laughs all over Broadway's Booth Theater. They suffer all the fashionable ills and itches that modern mind and flesh have fallen heir to. They go through an inferno of cocktail-party griefs, a slapstick, tongue-wagging, satirical jaunt of crippling hilarity.

It all takes place on a suspension bridge, and the plot is a shoestring. A beatnik's beatnik, Harry Berlin (Alan Arkin), is poised for a suicidal leap. Up comes natty Milt Manville (Eli Wallach), who recognizes him as a onetime classmate at Poly-Arts U. They swap case histories. Harry tells a tale of existential woe that started when a fox terrier mistook his pant leg for a hydrant: "I was nauseous, sick to my soul, I became aware . . . aware of the whole rotten senseless stinking deal." Mimed in outrageously funny fashion by Alan Arkin, Harry is so sick that he goes momentarily rigid with paralysis and then turns deaf, blind and mute.

Milt prates of the good things in life, but he, too, is gnawed by despair. "I'm more in love today than on the day I married—but my wife won't give me a divorce." It occurs to Milt that Harry might find a meaning in life by falling in love with Milt's wife, leaving Milt free to marry the girl he loves.

Ellen Manville (Anne Jackson) appears, and she not only has a case history but a graph to illustrate it. Vividly charted for each "seven-day period" over months and years, it shows how the number of Ellen and Milt's "sexual experiences" has plummeted. Ellen warms to Harry, even though he is a love-testing suitor who stomps on her foot, rips her dress to the waist and

HENRY GROSSMAN



JACKSON, WALLACH & ARKIN IN "LUV"

Change changes nothing.

throws her mink coat in the river. Four months later, the trio is back at the bridge, sadder still, and at curtain's drop Harry is being chased by a very persistent fox terrier.

What Playwright Schisgal has done is to turn the theater of the absurd upside down. Absurdist plays customarily use laughter to evoke despair. Schisgal uses the histrionic pretentions of despair to provoke laughter. Immeasurable credit is due Director Mike Nichols for keeping the pace on the wing and inventing cleverly apposite bits of business. One dry jump and three wet ones are taken off the bridge, all with acrobatic finesse. The performances of Wallach, Jackson, and Arkin are models of comic acting, perfect in control and timing, flawless in witty inflection of the lines.

With the traditional conservatism of comedy, Schisgal shows that where human nature is concerned, change changes nothing. Like the classic writers of comedy, he is involved with human limits, not possibilities, and with the saving common sense that mocks self-pity and self-absorption. Unlike his characters, he refuses to keep a straight face before some of the pious [illegible] sions of the contemporary world [illegible] stage—alienation, loss of identity, [illegible] ability to communicate, homosexuality, existentialism, Freudianism, self-exposure and the meaninglessness of it [illegible] In *Luv*, he devastates these themes in a holocaust of laughter.

Gabfest

I Was Dancing. Novelist Edwin O'Connor has always created characters with a tongue or two in their heads. In his first play, his hero is a retired vaudevillian, Waltzing Daniel Considine. Burgess Meredith acts, sings, and dances the part as if gazing nostalgically into the splintered mirror of a show-biz narcissus grown old.

Through Waltzing Dan's room troops his termagant sister (Pert Kelton), a scold who would rather be right than right; a mournful Jewish cronie much dismayed that a recently deceased and cremated friend might be occupying the ashtray at his elbow; a freshingly downbeat priest to whom God is all Greek and man is vile; a medical fraud who takes Polaroid pictures of his patients at each visit to trace their rate of decay. These fleshful characters are impaled on a [illegible] pick plot like canapés. The story should make the play go makes it—whether Waltzing Dan can coax long-ignored son (Orson Bean) giving him houseroom to die in.

O'Connor has a fine ear but [illegible] too much patience with the talk reveals character. If conversation drama, theater would be superfluous

Frozen Pizza

Something More! is masquerading a musical comedy. It is tune-deaf laugh-free. Lyrics like *"tortoni, moni,* and oh, my, *minestrone"* better eaten than heard. The setting Portofino, Italy, but the mood is as authentically Italian as frozen [illegible]

A middle-aged, Mineola, L.I., [illegible] elist packs himself, his wife and three children off to the *dolce* country in hopes of discovering enriched goodness that graced prose-and-life styles of Zola and Dostevsky, apparently because they had to attend the P.T.A. The soon marking time with an movie director, and the writer dallies with a local *marchesa* wickedly dots her toes with [illegible] At the moment of carnal truth, band flashes his children's photographs like an FBI agent making an and leaves, *virtus intacta.*

While *Something More!* threatens make the sleeping pill obsolete, it shake itself awake for two stagnant tering dance numbers featuring a of agile Corybantes, Paula Kelly, Jo Jo Smith. It is dispiriting to Arthur Hill and Barbara Cook, as elist and wife, dutifully pouring talents into such hackwork, but promises to be mercifully transi-

WHITNEY AT COLBY
A pinch of skepticism and a lot of money.

that television demanded, the newspapers of this country produced the same morning-after papers they produced a generation ago.

"We seem to have lost something: a spirit of independence, a spirit of our own ferocity, [and this loss] has made us captive to the press release and the gentlemanly code of going to great lengths to avoid embarrassing anyone. There is no reporter who could not produce enough copy simply by collecting what is given away."

Ferocious Fairness. "But the privileges we claim for ourselves at every step are based on the old conception of ourselves as the public's watchdog, as the men a little outside our society, measuring it with a pinch of skepticism. If the press conferences become less productive because they are more polite, the fault may be ours. To be fair is not enough any more. We must be ferociously fair.

"Our task is to cut through the junk in the public mind by seeking the order that underlies the clutter of small events; to winnow out of the apparent what is the real; to cede to television and radio the mere repetition of activities and to look behind the bare event for meanings.

"The role we can play every day, if we try, is to take the whole experience of every day and shape it to involve American man. It is our job to interest him in his community and to give his ideas the excitement they should have. These are the excellences of our craft."

MAGAZINES

Rescue Work at Curtis

Ever since last month's palace revolt at Curtis Publishing Co. forced the resignation of President Matthew J. Culligan, the company has been looking everywhere for a new boss. The directors hired Boyden Associates, a management consulting firm, to help in the search, and the names of outsiders reportedly under consideration got an almost daily workout in the New York press. The list seemed endless: *McCall's* Publisher A. Edward Miller, former Oil Company Executive Raymond D. McGranahan, former FCC Chairman Newton Minow, and Shelton Fisher, McGraw-Hill publication division president. Then last week the Curtis board of directors announced that its search had ended at last. The man had been found right at home.

Making It Official. The new president and chief executive officer is John M. Clifford, 59, who joined Curtis, at Culligan's invitation, in 1962. The two men had been associates at Radio Corp. of America. At Curtis, Clifford, who had no magazine experience, rose quickly to the rank of executive vice president—Culligan's second in command. After Culligan stepped aside, Clifford became the company's temporary head. Last week's board vote made his elevation official.

FREDERICK A. MEYER

PRESIDENT CLIFFORD
A new boss and another lawsuit.

Even as the board acted, Edward Miller and Newton Minow made announcements of their own. Miller said he was leaving *McCall's* to become president of Alfred Politz Research, Inc., a market-research firm that already counts Curtis among its clients. Minow told newsmen that he was taking a temporary leave of absence from his duties as executive vice president and general counsel of *Encyclopædia Britannica* to work on Curtis problems as a "special counsel."

Some Fresh Worries. Behind the rash of personnel announcements, though, many problems remained. The *Saturday Evening Post*, with 6,500,000 circulation, is not only Curtis' biggest magazine, but its only serious money loser with an estimated $10 million deficit this year. The board decided to make the *Post* a biweekly, effective with the first week in January, hoping thereby to cut losses drastically. The decision will also cause the layoff of 250 employees at Curtis' Lock Haven, Pa., papermaking plant. Perhaps as a further economy, the board chose not to replace the two rebel leaders, Editor in Chief Clay Blair Jr. and Marvin D. Kantor, head of the magazine division, whose resignations were demanded last month.

Still unsolved is a problem involving Curtis' Ontario timberland, which borders on the Texas Gulf Sulphur Co. copper strike. That potential asset has been tied up by a stockholders' suit charging that the Curtis directors "unreasonably and fraudulently benefited" by concealing news of the strike until they had voted themselves sizable stock options.

And to add to Curtis' worries, William C. Newberg, former president of the Chrysler Corp., last week filed a $2,000,000 libel suit claiming damage from a *Post* article about a manage-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment shakeup at Chrysler—the latest of some half-dozen actions generated during Clay Blair's "sophisticated muckraking" approach to journalism. Nor have Rebel Leaders Blair and Kantor had their last say. Both have brought suit against Curtis for the balance they claim is due them under unexpired contracts; both are collaborating on a book about Curtis' October revolution. Said Blair: "It will rock Philadelphia."

CRITICS

The Man with the Popular Mind

His column is concocted of bile and bilge. There is no barrier of good taste that he won't breach daily.

—TV Producer

The only TV critic in the nation who is rude, inaccurate, un-Christian and vengeful.

—TV Star

He's a murderer. Anyone who gives him the time of day has lost his mind.

—TV Network Executive

This man writes with his glands. I avoid him, because I would probably hit him if I saw him.

—TV Press Agent

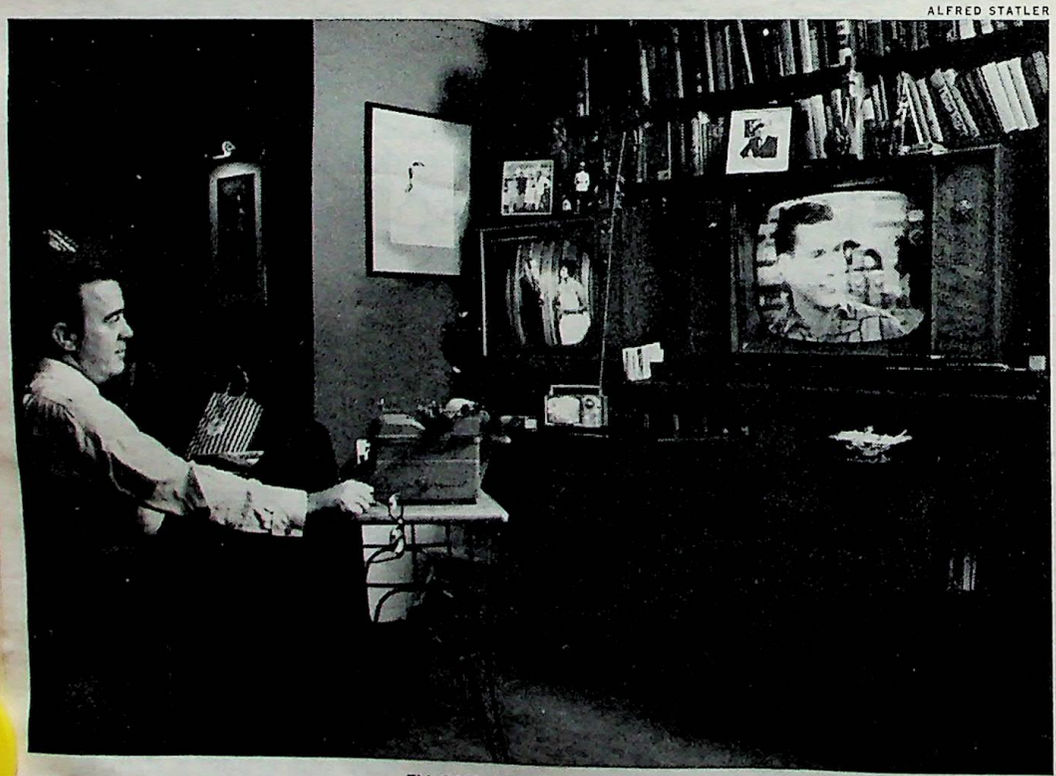
To all such acrimony, TV Critic Jack O'Brian, 50, responds with the unruffled self-assurance of a man who has managed to outstay most of his manifold detractors. His column, *On the Air*, has appeared in Hearst's New York Journal-American for 14 uninterrupted years. "I don't blame the people who hate my guts," says O'Brian. "I do have a capacity to cut very close to the bone, and these people must react. They can't very well blame themselves. So they blame me."

The Muscle. O'Brian's column ignores the conventions to which most TV critics subscribe. He seldom, if ever, indulges in lengthy think pieces; he finds he can contain his reaction to any given show or performer in brief, sharp, personal observations. And TV being TV, his prevailing attitude is aggressively hostile: he frowns on most of what he sees. Steve Allen, a TV performer who has repetitively borne the brunt of O'Brian's scorn, once assayed the critical content of a single column and counted 33 pans against only three bits of praise.

O'Brian lards his critical comment with gossipy, digressive asides. Before this year's presidential election, he solemnly informed his readers that Lyndon Johnson was Jack O'Brian's man. When Lawyer Roy Cohn, a personal friend, put in a guest appearance on TV, O'Brian seized the opportunity to describe his buddy as "articulate, poised, informed, brilliant and even humble"—virtues rarely lumped together in a description of Senator Joe McCarthy's onetime side-kick.

O'Brian's critics might forgive such departures from duty if he took a better view of them and their product. But the performers who bask in O'Brian's favor —Bert Lahr, Perry Como and Walter Cronkite, to name most of them—are vastly outnumbered by those who do not. O'Brian has excoriated Danny Kaye for 15 years on the grounds that Kaye's comic talent never escaped infancy. He is equally steadfast in his disapproval of Ed Sullivan ("Old Smiley"), David Susskind ("Little David"), CBS News Commentator Mike Wallace ("a vacuum") and scores of other performers who fall short of the O'Brian standards. "I'm not a Hessian soldier," says O'Brian. "I can't write what I don't believe. The muscle in my column is opinion, and I can't write anyone else's opinion but my own."

ALFRED STATLER



TV CRITIC O'BRIAN ON THE JOB
After six hours a day for 14 years, a hostile frown.

The Stand-In. Born in Buffalo, [illegible] the son of a New York Central [illegible] ductor, John Dennis Patrick O'[illegible] showed early signs of an incisive [illegible] taste. Soon after he joined the Buffalo Courier-Express as a cub reporter, O'Brian was assigned to audit a performance of the local philharmonic orchestra. Offended by a guest appearance of some juvenile accordionist, O'Brian took the orchestra so severely to task that the incident became a civic *cause célèbre*. When the orchestra changed hands shortly thereafter, O'Brian, with obvious satisfaction, claimed part of the credit.

Ambition brought him to New York, where the late George Jean Nathan, then theater critic for the Journal-American, helped him get a job on the paper in 1949. At the time, O'Brian had been the Associated Press's drama critic and sometime radio critic for [illegible] years. After a brief stint as a Journal-American rewrite man, O'Brian was assigned to do a radio-TV column. This was in the days when everybody who had a TV set was watching four to five hours a night and wanted to talk about it the next morning. O'Brian suddenly found himself a stand-in for millions of televiewers. "I'm no intellectual," he says. "I like what attracts me. I like the popular mind. About all I demand from TV is that it reach the targets it aims for."

Six Eyes. He has stormed at profusion and what he considers meretriciousness or bad taste. His two daughters, Bridget, 7, and Kate, 6, are not allowed to watch "shoot 'em up" shows or waste a minute on Soupy Sales' slap-sticking echo of vaudeville which appears on TV's children's hour. The first time that Ed Sullivan booked the Beatles, O'Brian praised the act. But when the air waves filled with Beatle imitators, he called a halt. "If this vast mindless wasteland, this sump, continues," he wrote in his column, "it inevitably will encourage young people to forget cleanliness, ignore barbers, bypass cleanliness and turn into a nation of slobs."

O'Brian's effect on television is hard to measured, perhaps, by the fact that few of his detractors are willing to declare publicly against him. Almost without exception, network executives and press agents fulminate from behind the refuge of anonymity. Their barbs are toward well-insulated ears. There are six TV sets in O'Brian's six-room apartment on Manhattan's 73rd Street, but they command his undivided attention at least six hours out of every day.

After 14 years, that big, multiple [illegible] has finally begun to pall. "Who ever said there should be TV 24 hours a day?" O'Brian asked last week. He is thinking seriously of switching to one of six sets, he said, in favor of some broader battleground with a column conditionally titled "Jack O'Brian at Large." In its way, that ambition constitutes Jack O'Brian's most devastating TV criticism yet.

MODERN LIVING

CUSTOMS

The Godot Game

The figures in no labor statistics, is the object of no time-motion studies, the subject of no sociological thesis. Nonetheless, taken in bulk, it probably consumes more hours out of more days than any national pursuit but television. The name of the game: waiting.

Sometimes the result is worth the term (the birth of a baby), sometimes not (the refusal of a loan). Either way, there is no alternative method for meeting a plane or departing on one, getting a tooth removed, a passport renewed, or voting. Like any routine, waiting takes its own time, has its own special rules, makes its own etiquette. The furniture, accordingly may be much the same, but the fellow who reclines expansively in a comfortable armchair while waiting an expense-account lunch guest is apt to assume a straighter posture than an identical chair when protesting outrageous alimony demands. Waiting for the P.T.A. meeting to begin, he brawls. Waiting for the loan officer to finish a phone call, he assumes the well-known suppliant's crouch, a kind of sidesaddle, lock-kneed pose designed to convey simultaneously fiscal responsibility and abject need.

A Cue in Common. Nothing defines the waiting room and the nature of its occupants more precisely than the reading matter on display. Movie magazines, out of order in a banker's office or Government agency, are run-of-the-table at Central Casting, a must at the hairdresser's. General practitioners and advertising executives stick to the better-known periodicals; so, as a rule, do psychiatrists (though many patients, fearful of being caught engrossed in the *Reader's Digest* and branded a condensed personality, bring along a newspaper instead). Opticians invest in anything, so long as the print is good and dark; while pediatricians can get away with paper towels, stapled together, since anything not bound in cast iron will be in shreds before lunch time.

Basically, there are only so many ways to wait—standing up, sitting down, leaning over, slumping, and lying flat. But customers and patients, applicants and clients, all take a cue from their common mission, find a suitable code. Couples found in adoption-agency reception rooms affect an air of simple good taste (no jewelry other than religious medals), shun cigarettes, hum strains of lullabies every now and then. The same couple, accompanying their college-aged son to the admissions office of a select university, will dress with understated dash (a necklace of wooden, hand-painted beads for her, suede elbow patches and a Dunhill pipe for him), intersperse comments on their reading ("One always comes back to Ovid as if for the first time") with reminiscences of "the old days at Chicago."

Wait-It-Yourself. Waiting isn't paid by the hour, and the minimum-wage law does not apply. And, as the song goes, nobody else can do it for you; you've got to wait it by yourself.

But suppose it could be unionized? Union members in good standing could demand undertime.

Nostalgia, roses and trailing black velvet.

FASHION

The Chelsea Invasion

Dashing as diplomats and espionage agents, grand as poets, even grander as kings, the British are notorious duds when it comes to fashion. Though endowed with better-than-average raw material, Englishwomen intent on clothes that set them off had to cross at least a channel, sometimes a sea, to find them. Left to themselves, they relapsed into the national uniform of high-necked blouses, sensible shoes, tweeds, frowned on those who, like Lady Godiva, did not. There were local designers, but they tended to turn out clothes for the Queen, or for anyone interested in dressing like her. All this has been changed by something called "The Chelsea Revolution," a group of young designers, all 30 or under, who have done more to change the shape of empire than anyone since Wellington.

Old Edwardian. Nobody was more astonished than the U.S. designers (who pride themselves on catering to the young) when the Chelsea girls invaded Manhattan in force this fall and bowled over nearly every buyer in sight. Suddenly Cincinnati looked more like Chelsea. So did Cambridge, Mass., and Carmel, Calif.

Actually, much of the Chelsea look is a revival of oldtime fashion ideas from older, more fashionable times. Nostalgia is the order of the day. Edwardian sleeves and bertha collars, ribbons, roses and trailing black velvet are the tricks of the trade. It is their high comic sense, however, that affords the Chelsea group the authority to unearth shades of the past, drop a street-dress hemline down to the ankles, cut a cocktail suit from a Victorian lace tablecloth.

It began some eight years ago, when young Mary Quant, now, at 30, the *doyenne* of the group, grew weary of wearing her cousin's castoffs, set up shop, sewing and selling her own designs. Instantly British teen-agers, themselves weary of the butch look, flocked to the tiny Chelsea workroom, emerged looking more like Cossacks and guardsmen, sailors and hockey players. Audacious in concept, vivid in execution and realistically priced ($20 and up), Mary Quant's offbeat styles (a typical dress trimmed red flannel with black lace, included a striped bodice and a quilted hem) caused such a local stir that buy-

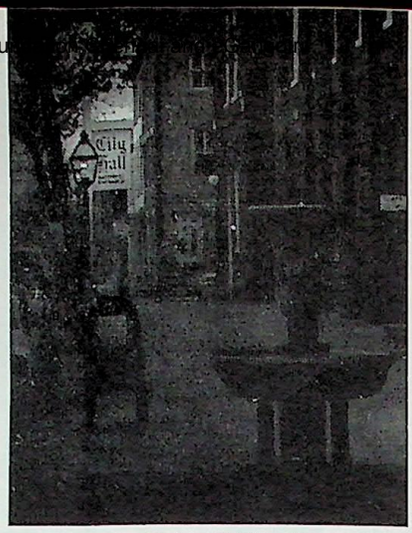
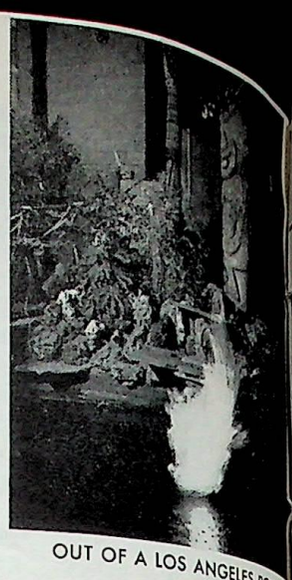
JIM MAHAN

GASLIGHT: IN A VIRGINIA DEVELOPMENT



NEAR ALEXANDRIA'S CITY HALL



OUT OF A LOS ANGELES POOL

Ladies look lovelier, the split-level more antique.

ers hurried over from abroad. Today, with a posh London office, a vast European market, and outlets in 45 American department stores, Mary Quant is a $3,000,000-a-year business.

Others were quick to queue up. Jean Muir, also 30, bolted her stockroom job at London's Liberty's, moved in on the boom with a fanciful collection of narrow coats, smock dresses and knickers that nick off just above the knee. Sally Tuffin, 26, and Marion Foale, 25, the pop artists of the group, popped up with wild prints, impossible color combinations and a dress, called "Gruyère," with holes in its sleeves.

Same Wave. But it is Caroline Charles, 22, who most precisely defines the essence of the Chelsea Look. Veteran of a peripatetic childhood (as the daughter of an army officer, she followed the campfires from Cairo to Germany to Surrey), a convent education ("I went through all the phases, from knitting to riding to weaving") and a short stint at art school, she put in an apprentice term selling dresses for Mary Quant, last year opened her own store in a Belgravia basement. Then Jordan's Princess Muna spotted her in one of her bright new coats in the lobby of the Dorchester Hotel, and Caroline found herself patronized by royalty. One commission led to another, and finally the arrival of a whole delegation from Macy's.

Currently in Manhattan to watch her newest collection take over Macy's show windows, Caroline Charles sees her success as part practical, part metaphysical. "We are all, you see," she says earnestly, "on the same wave length. We know that youth doesn't have to be kept under any more."

FADS

A New-Old Era

Onward, ever onward, sweeps technology toward a bright electronic world. And backward, ever backward, points the whimsical finger of fashion. Latest case in point: gas lamps.

That mellow old glow of mantled gas is bathing the front walks and herbaceous borders of thousands of ranch-styles, split-levels, Cape Cod saltboxes and California moderns—lending what their owners hope is a touch of antiquarian distinction in a fluorescent world. In 1914, before the miracle of cheap electricity made them obsolete, some 290,000 gas lamps illuminated U.S. streets. Today there are no fewer than 1,075,000.

The boom, not exactly discouraged by the gas companies, began in 1957 and has zoomed since then to the point where a single utility—the Arkansas Louisiana Gas Co.—is selling the old lights at the rate of 100,000 a year. Three years ago, New Jersey Natural Gas Co. had no more than 300 gas lamps in its area; today there are 20,000. The Washington, D.C., Gas Light Co. began offering lamps only four months ago, is now selling them at the rate of 280 a week.

Prices vary, ranging from about $25 for a plain colonial or modern lamp to about $500 for a refurbished antique. The lamps burn night and day, but even so, the total cost is a modest $1 to $4 a month.

Real estate developers love them. One development in Annandale, Va., called Camelot, has gas lamps in every yard with King Arthur-style spears on top of them—producing what the developer calls a "soft community atmosphere." With the new demand, suppliers are offering a variety of styles. Beverly Hills' gaslight is currently running to flaming torches—preferably crossed. An even fancier idea is to run a gas pipe up nearly to the surface of a decorative pool so that a jet of flame seems to be burning right on the water. The Houston Natural Gas Corp. has sold 30,425 of the new-old outdoor lamps —taking ads to proclaim that ladies look lovelier by gaslight: "No other illumination on earth is quite so glamorous." Another company is working on an indoor gas fixture that will save women from having to go outdoors for that glamorous look:

Obviously, it is only a matter of time before the electric light is relegated to the underdeveloped countries of the world, and the really up-to-date thing will be whale oil.

THE MARKETPLACE

New Products

Improvement, it is said, is something there is always room for, and nowhere it seems, is there so much room as the kitchen—gadgetry's chief breeding ground. A triad of the latest kitchen improvements, more meaningful than most:

▶ A new ductless hood for the stove just introduced by Puritron, uses electronics to cope with the smoke and grease that all too rapidly foul the usual hood's charcoal filter. A tiny ion tube of gold alloy releases a stream of negative ions when the hood is turned on, promptly attacking the positive ions in the air, around which the molecules of smoke and cooking odor gather. The precipitates the molecules on an easily washed aluminum filter—releasing fresh, clean air again. In three sizes and colors: $39.95-$69.95.

▶ Wall-to-wall carpeting is creeping into the kitchen—and making surprising sense there. The Roxbury Carpet Co. has developed a dense, shallow-pile nylon carpet in twelve colors, bonded to a three-sixteenths-inch sponge rubber backing that is so resistant to moisture stains that they can be easily removed with a wet sponge. Burned areas may be cut out and replaced without showing edges or a patched look. Eliminating the hazards of slippery floors, the wall of polishing to make them slippery, the breakage of any dropped plate or glass and the fatigue of the stand-up kitchen walkathon on vinyl or linoleum. The price: $10.95-$14.95 per yd.

▶ For the man in the kitchen, draft beer has been a luxury involving cumbersome kegs, bothersome deposits, troublesome returns. Now Atlanta Brewing Co. and National Can Corp. have introduced a gallon can of draft beer and a dispenser called a Tap-a-Keg Home Tap for sale at retailers in the South and Midwest. The can, which is 6 by 9 inches, is disposable; the Tap-a-Keg, a spigot and squeeze-bulb device, is re-usable. The beer is genuine draft, must be shipped and stored under refrigeration. Price for a gallon of suds: about $1.50; for the Tap-a-Keg: $4.

SHOW BUSINESS

THEATER ABROAD

The Character Speaks Out

Mining recent history for villains and
heroes has turned into a profitable in-
dustry. By implying that Pope Pius XII
was guilty—at least by omission—of
not staying the Nazi slaughter of the
German Jews, Playwright Rolf Hoch-
huth in *The Deputy*, racked the stages
of Europe and Broadway with contro-
versy. Now another play, *In the Matter
of J. Robert Oppenheimer*, by another
German playwright, Heinar Kipphardt,
is playing in Berlin and Munich, has
become the talk of Europe. One key
difference: Pius was dead and unable to
refute the charges; J. Robert Oppen-
heimer, current Director of the Institute
for Advanced Studies at Princeton, is
very much alive, and furious.

Ostensibly the new Oppenheimer play
is based on the 3,000-page transcript of
the Atomic Energy Commission hear-
ings. And at moments, real-life testi-
mony reads better than *Strangelove*
or *Fail-Safe*, as when Oppenheimer
says: "In all Russia there are only two
targets where a hydrogen bomb would
make sense—Moscow and Leningrad—
whereas in the U.S. we have 50. Before
we opened the door to this horrifying
new world in which we live today, we
should have knocked. But we have
chosen to fall into the house together
with the door."

Where the play is flawed is not so
much in inflating Senator Joe McCar-
thy, who appears as a dark, looming
cloud over Washington, but rather in
that Oppenheimer himself sharply calls
improvisations which were contrary to
history and to the nature of the peo-
ple involved." Oppenheimer branded as
false the script's statement that Physi-
cist Niels Bohr disapproved of the work
at Los Alamos because he was wor-
ried about domination by the military.
"Bohr understood and welcomed what
we were doing," says Oppenheimer.

An even graver distortion is the script's assertion that Oppenheimer felt that in making the bomb, "we have done the work of the devil." "This is the very opposite of what I think," said the real Oppenheimer last week. "I had never said that I regretted participating in a responsible way in the making of the bomb." In a letter to Playwright Kipphardt threatening suit, Oppenheimer added, "You may well have forgotten Guernica, Dachau, Coventry, Belsen, Warsaw, Dresden and Tokyo. I have not."

TRUMAN & MacARTHUR

He plain didn't give a damn.

TELEVISION

The President's Week

It was like old times. There was Harry Truman ranting away in people's living rooms, almost as if it were 1950 and the old Zenith console with the round eye was down out of the attic.

Predictably enough, Truman was vigorously booting General Douglas MacArthur all over the inside of the tube. At 80, Truman seemed somewhat short of breath, but what there was of it would have curled leather. "Some of them get the big head," he said, assessing the man he fired. "I was the commander in chief, and I had to make up my mind what I would do with an insubordinate general . . . He was trying to get himself in good with one of the big parties of the government of the United States . . . He didn't fool anybody. Least of all did he fool me."

"Lincoln had to fire five generals. In fact he had to fire McClellan twice. McClellan was about as egotistical as MacArthur—and that's giving him his due, because I don't think he was quite as smart as MacArthur . . . After the surrender treaty, I named MacArthur the head of the occupation of Japan. And that's where his egotism came out." When Truman and MacArthur met at Wake Island, "some of the boys said he didn't even salute me," Harry went on. "I didn't give a damn."

Arrogant & Conceited. Harry apparently didn't give a damn either when, halfway through taping the two-part MacArthur series last March, he heard that MacArthur was gravely ill. "I'm going to die soon too," he snapped as he ordered the show to go on. "We're both old men. This is history." This free-swinging, give-'em-hell attitude makes Truman's vendetta extraordinarily lively television, at the same time giving the whole series the somewhat dubious hue of yellow journalism.

MacArthur's career is traced in old film clips from the prewar Philippines (young Ike appears as a fresh-faced staff officer running messages for "imperious" Mac) through the Pacific and Korean wars. MacArthur's military accomplishments are somewhat grudgingly acknowledged, but to prove his thesis what Truman seizes on with evident relish are such anecdotes as that of the general who had thought MacArthur's father was the most egotistical and self-centered man on earth—*until he met* MacArthur himself.

The Trouble with Generals. *Decision* is the first series ever to star a former President of the United States, and Tru-

McKeough.

man's unreined personality is the whole show. He will be keeping it up for 26 weeks. His program, syndicated in nearly 60 cities, is his ultimate personal soapbox, on which he intends to tell his version of the story—if not for once, for all. In future weeks he will discuss everything from the atom bomb to the Berlin airlift, but mainly he will simply aim his chin at the camera and let fly.

As a historical record, the program is matchless, because no book could give a sense of it nearly so well. It shows Truman at his off-the-cuff best—and worst. In this week's show, for example, he can't resist asserting that generals in general make lousy Presidents. Not only was Grant a bad one, according to Harry, but also "the very recent one, about whom I hesitate to talk now."

He hesitates for about 1½ seconds. "His name was General Eisenhower," says Truman blinking devilishly.

The Badge of Courage

NBC saved the fall's best new television series until after the election. *Profiles in Courage*, premièred last week and based on President Kennedy's book, proves to be a bracing antidote to the plethora of two-dimensional teledramas in which tinsel laurels automatically crown the good guy. Adult in theme, effectively written and excellently acted, the series will for 26 weeks focus on characters from American history, many obscure but united by a common bond—their willingness to risk and if necessary sacrifice their careers for their ideals. Happily scheduled for early Sunday evening, a prime kiddy viewing hour, it also packs a grown-up message, articulated by Kennedy himself in a 1957 recording of the conclusion of his book: "The stories of past courage can define that ingredient—they can teach, they can offer hope, they can provide inspiration. But they cannot supply courage itself. For this each man must look into his own soul."

Ruined Chances. Disconcertingly, for those who have read the book, the series started with two figures, one of whom was given only two paragraphs by Kennedy, the other mentioned not at all. Reason is that Producer Robert Saudek, who has been responsible for much of the best in television, from *Omnibus* to the New York Philharmonic, needed fourteen more profiles than President Kennedy had chronicled. But Kennedy himself approved the additional choices.

The series opened with Oscar W. Underwood, the Alabama Senator who could have stayed in the running for nomination in the 1924 Democratic Convention but chose to push for a plank condemning the Ku Klux Klan, thus ruining his chances and subsequently losing his seat in the Senate and his whole political career.

Hot Threats. Producer Saudek has hired good actors. Sidney Blackmer, who played the defense attorney in *A Case of Libel*, was an effective Underwood, and Victor Jory was full of smoke and chalk, manning the blackboards as Underwood's campaign manager. But best of all, the Underwood program gave a beaded-forehead depression of oldtime political conventions, with 103 ballots and whispered threats in hot hotel rooms. Ironically, it was good television about the good old days before political conventions were ruined by television.

BLACKMER AS UNDERWOOD
A defined, unbreakable ingredient

This week the show profiled one of Saudek's added starters, Mary S. Dowell, a Brooklyn schoolteacher who lost her job in 1917 because she refused to sign a loyalty oath or do Red Cross work. She was a Quaker and a pacifist and she knew what she believed, even though her hope for a marriage had ended when a boy who loved her died in France. Of the two shows so far, this one was somewhat better, largely because Rosemary Harris was so gently formidable as an embodiment of unbreakable principle.

BROADWAY

Return of the Icemen

This was going to be the season of the big thaw—the melting of the \$10 million glacier of box-office ice, which is Broadway's term for ticket scalping profits. But last week Manhattan's District Attorney arrested nine ticket scalpers on charges of scalping. Tickets for *How to Succeed* were selling for \$25 apiece, and the scalpers were said to be dealing in ducats for the lowly New York Mets.

To show why ice continues to flow, the D.A. released a list of the scalpers' customers, among them some of Manhattan's most upstanding corporations: First National City Bank, United States Steel Corp., American Telephone & Telegraph Co., Kenyon & Eckhardt Advertising Agency, the Chemical Bank New York Trust Co., Leeds Music Co. and Hanes Hosiery, Inc.

THE VATICAN COUNCIL

A Mind of Its Own

Out of respect for the freedom of the Vatican Council, Pope Paul VI has stayed away from its working sessions and avoided expressing opinions on the matters before it. But because of his deep interest in the subject, he went to St. Peter's when the prelates began debating the schema on missions. Shunning the papal throne, he took a seat among the council's twelve cardinal-presidents and gave a brief speech on the schema. He pronounced it generally satisfactory and urged its approval as a basic text for further revision. The council fathers responded by rejecting the schema 1,601 to 311.

Bows & Arrows. Clearly, none of the prelates intended to affront the Pope. But as clearly, their vote indicated that the council does have a mind of its own, and that the bishops cannot be satisfied with platitudes. The schema was denounced in language so harsh that the moderator of the discussion pleaded with the bishops to be more moderate. Irish-born Bishop Daniel Lamont of Rhodesia, for example, complained: "We needed fire and they give us a candle. We wanted powerful weapons to do the battles of the Lord and they give us bows and arrows."

The harsh attack on the missions schema suggested that the third session of the council may be as unproductive, in terms of the volume of documents approved, as the second—although for a different reason. Last fall's session was frustrated by the dilatory maneuvers of the council's conservatives. This time the pace has been slowed by the progressive majority, which has called for radical revisions of every schema presented for debate. The missions document was one of seven shortened items that council authorities hoped would debate by without any trouble; the first three to be voted on were criticized so severely that they must be completely rewritten.

Reality v. Romanism. By and large, criticism of the third session's agenda has been in the interest of greater reality rather than Romanism, clarity rather than cliché. Challenging the schema on religious orders last week, Belgium's Leo Josef Cardinal Suenens attacked the "ridiculous complications" of nuns' flowing habits, "which give the impression that the church is growing old rather than trying to renew itself in order to meet the needs of the day."

Another schema, on "The Church and the Modern World," denounced nuclear weapons that have "effects greater than can be imagined" as "most wicked." Some European and Oriental prelates wanted to make this denunciation even more specific; but Auxiliary Bishop Philip Hannan of Washington and Archbishop George Andrew Beck of Liverpool argued that the schema said too much about banning the bomb and too little about disarmament controls. Beck said that the council should not be too quick to condemn governments that have kept the peace and freedom through the nuclear deterrent: "To turn the other cheek is a counsel of perfection addressed to individuals, not to governments that have a grave duty to defend the citizens entrusted to their authority." The schema was sent back for rewriting.

ECUMENISM

Turning Four Churches into One

Countless small-town main streets in the U.S. bear sad witness to obsolete ecclesiastical rivalry: once handsome Protestant churches that are closed or kept barely alive by a small, zealous congregation. In such places, low-level ecumenism and merger make spiritual sense—and how it can be done has just been shown by the 288 citizens of Schellsburg, Pa.

A peaceful farming village in the Alleghenies, Schellsburg had for more than 70 years supported four churches —St. Matthew's Evangelical Lutheran, Schellsburg Methodist, Schellsburg Presbyterian, and St. John's Reformed (United Church of Christ). But since World War II, the community's population has steadily dropped. None of the congregations numbered more than 85; none could afford a full-time minister. When the Methodist church burned in 1945, the congregation took to renting the Presbyterian church for twice-a-month services. Three of four congregations have operated a Sunday school in common since 1947.

Trial Marriage. Schellsburg was thus a classic example of the "overchurched" village, and in 1963 the Pennsylvania Council of Churches and denominational leaders persuaded the four congregations to undertake a trial marriage under the auspices of the United Church. Not only was St. John's the newest and largest of the four plants, but the United Church was able to supply a full-time minister, the Rev. Daniel Kratz, 32.

By trial and error, Kratz and lay leaders of the four congregations worked out an acceptable melding of the different church traditions. The teetotaling Lutherans of St. Matthew's were accustomed to using grape juice instead of wine at their Communion services, and were willing to adopt the other churches' usage of ordinary loaf bread instead of unleavened wafers. The Presbyterians, in turn, agreed to take Communion at the altar rail instead of in the pew. Both the Methodists and the Presbyterians accepted the phrasing of the Apostles' Creed used at St. Matthew's—Christ descended into Hell (rather than Hades), and the Holy Catholic (not Christian) Church.

To please the Presbyterians and Methodists, Schellsburg worshipers ask God in the Lord's Prayer to forgive them their "debts" at church services; in Sunday school they use the Lutheran "trespasses." For his order of worship, Kratz borrowed prayers from all four service books, and composed a few himself. Lutheran and United Church hymnals are used. At first, Methodists complained about the solemnity and intricate tonality of the Lutheran chants. Kratz satisfied their wish for more spirited songs by using revival hymns at Sunday school.

High Attendance. For a few church members, the new way of worship was too much of a shock, and they refused to attend the services. One conservative Presbyterian opposed the merger as a Communist plot. But the great majority of the four congregations liked the compromise forms and the experience of worshiping together in a large group. Except on Easter Sunday, attendance seldom averaged more than 25 for each of Schellsburg's four churches; now there is a regular congregation of 130 at the new church, including some families that previously belonged to no church at all.

Last month, after nearly a year of living with the experiment, Schellsburg's Protestants voted 101 to 25 to dissolve their four separate congregations. Next week, they will celebrate the first formal services of the newly organized United Church of Schellsburg. On hand will be officials of the four denominations and of the National Council of Churches, who believe that the give-and-take approach of the Schellsburg congregations is an example that can be followed with profit by other overchurched communities.

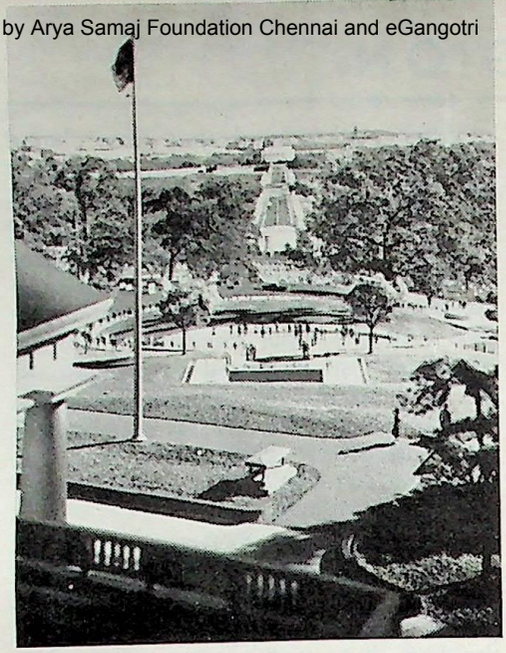
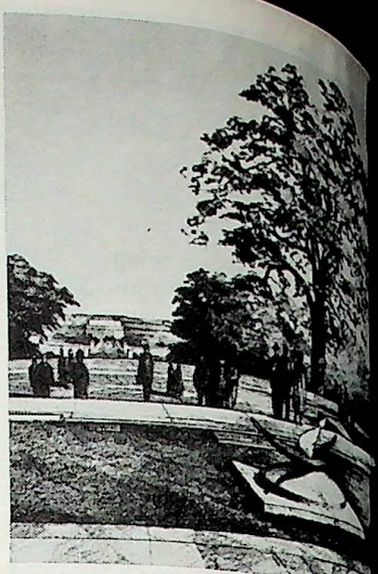
GRAVE BELOW CUSTIS-LEE MANSION



VIEW OF GRAVE TOWARD WASHINGTON
"I could stay here forever."



ETERNAL FLAME

MONUMENTS

A Tomb for J.F.K.

Almost a year to the day after President Kennedy was assassinated, plans for his permanent grave were approved. It will remain on that rolling slope in Arlington National Cemetery where he was first buried. Embellished with a minimum of architectural detail by Kennedy's friend, Architect John Carl Warnecke, the grave is far more modest than another illustrious tomb in Arlington, that of the Unknown Soldier.

Warnecke, 45, was a logical choice to design the site. Kennedy idolized his heroics as a Stanford University football hero and with his art adviser William Walton, picked him to renovate Washington, D.C.'s Lafayette Square. "This may be the only monument we leave," said Kennedy. His widow chose Warnecke to leave one more.

Approached by a circular walkway, the tomb rises a few steps above an elliptical plaza, completing a 1.3-mile axis with the large Lincoln Memorial across the Potomac. The graves, including those of his two dead infants, are marked by flat slate stones set in a grassy plot bordered by a low plinth, where the eternal flame, cupped in a modern version of a classic oil lamp, will continue to burn. Behind it, but subordinate to the classic-revival façade of the historic Custis-Lee Mansion atop the slope, is a low, short wall, flanked by flowering magnolias, which will bear the presidential seal and short quotations from Kennedy's speeches. How much the memorial will cost is not clear. "Don't know," commented Walton. "Glad I don't. Plenty."

The design is more an appreciation of a natural site than a monument of masonry. Visitors who will go there cannot avoid pondering the powerful poetry of the vista toward the capital. It was one of Kennedy's favorites. Some time before his death, he and a friend stood where he now is buried. Remarked the late President: "I could stay here forever." That came true too suddenly, but his observation has only enhanced his resting place.

ART

SCULPTURE

Toys for All Ages

The sculpture seems like the pastime of a thousand elves. Perhaps the tiny fellows actually exist in the mischievous mind of Alexander Calder, who, at 66, has all the mien of a beardless Santa Claus, right down to his habitual red flannel shirt. He has given so much to the world for so long that he is the U.S.'s best-known artist abroad. His fancies in metal strike many people as toys, but also remind them that toys are made to stimulate the imagination.

Calder began rebuilding toys for himself when he was eight. He would embellish them with a snippet of wire here and there, sometimes to give them more motion. From then on, a pair of pliers became his tool to remake the world. His toys are for all ages, and can be as ominous in their ease as fellow New Englander Robert Frost's poetry. Last week his bobbing mobile *The Ghost* and his sprawling stabile *Guillotine for Eight* met like stalactite and stalagmite in the great rotunda of Manhattan's Guggenheim Museum (*see opposite page*). Frank Lloyd Wright's architecture never had better tenants: a 361-piece retrospective that could equally well establish Calder as a wizard of the wind, a Wright Brothers' Rodin, or the greatest tinker of all time.

Ringmaster. Calder is a third-generation sculptor; his grandfather is still remembered in Philadelphia for his statue of William Penn atop the city hall. But Calder early abandoned the thousand-year tradition that insisted upon sculpture as a form-in-the-round whose contours were its boundaries. He embraced space with his mobiles, sometimes in a bear hug, sometimes in a fencer's riposte. He became known as the man who made sculpture move. Actually, the Russian constructivists and Dadaist Marcel Duchamp did it years before him, but no one has e made cubic feet dance and gambol has Calder. His work is the apothe of open form: space is his circus, three rings, all three dimensions.

The circus itself, in its seamy, g splendor, was Calder's first fascina He tried many trades, from lumber to able seaman; he was graduated Stevens Institute of Technology in as a mechanical engineer. Dra came naturally, and five years o college he signed on as an illust for the *National Police Gazette*. his delight, one day he was assigne sketch the circus. Barnum & Baile so pleased that it gave him a fre trance pass. He followed the Ame artists' trail to Paris, where he ma own toy circus in which he sat perf ing like some child Gargantua for luminaries as Fernand Léger, Miró, and Jean Cocteau.

Mondrian in Motion. Calder his restless, looping pencil line dra wire, caricaturing his audience, times with barbs. The toast of Josephine Baker, was his first portrait in 1926; her belly button h into a shimmying, shaking brass g All that was delightful, a gadge daydream, until one day Calder v Mondrian's studio.

The 1930 visit, Calder recalls, "the necessary shock." The de S studio, with its neat plane geomet primary colors (which Calder ha forth stuck to) stilled the errant kee. "But how fine it would be," thought, "if everything moved gave Mondrian wings. He bu metal cutouts on wire arms, a 1932, Duchamp dubbed them biles." Almost as much as Mond forms, the stiff nature of metal Calder toward abstraction.

Patchwork Scrapper. So p were Calder's mobiles that ma ers have since imitated them production. Calder himself has to few mechanical tools, preferring ets instead of welding, paints his biles with brushes instead of spra them. Sprung from the modern e that sees wisdom in childhood, h

COLLEGE FOOTBALL

Ara the Beautiful

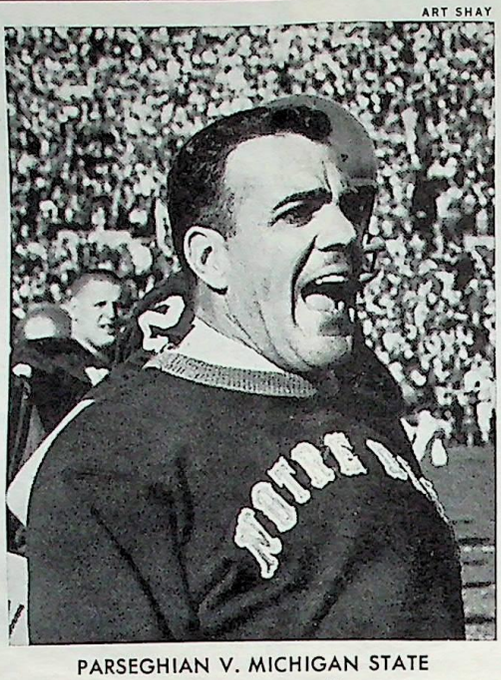
(See Cover)

Toilet-paper streamers festooned the trees. Strings of firecrackers chattered like machine guns. Signs were everywhere. SONS OF ERIN, UNITE! they said. RUB THEIR NOSES IN THE IRISH SOD! Sturdy young men stopped strangers, flashed their "Hate State!" buttons and inquired politely: "You wouldn't be a State man, now, would you?" South Bend, Ind., was no place for the faint of heart last week. Notre Dame, the No. 1 college football team in the nation, was taking on Archrival Michigan State—and the Fighting Irish were in a fighting mood.

The Irish had not beaten State in ten years; inside the Notre Dame stadium, Athletic Director Edward ("Moose") Krause surveyed the sellout crowd of 59,265 and sighed: "We could have sold 250,000 tickets to this game." He could have sold a million—to all the Americans, the vast Subway Alumni, to whom Notre Dame is and always has been the one and only college football team. To the Bronx taxi driver who has never seen the inside of a college but lights a candle to Our Lady every Friday night. To the San Francisco dock walloper who hasn't the foggiest notion where South Bend is but knows every player on the Irish squad. To the nuns in convents, whose radio-side prayers on Saturday go something like this: "God's will be done . . . but please let Notre Dame win." And what about the two Indiana priests who walked into a polling booth last Nov. 3 and wrote in the name of Ara Parseghian for President?

On His Knees. Down beneath the stands, wearing his lucky brown trousers and a blue sweater with NOTRE DAME lettered across the front, the Subway Alumni's candidate stood in the middle of the noisy locker room. "Everybody stay where you are!" he yelled. Then, pounding his fist into his palm, Ara Raoul Parseghian, 41, began to talk. "Boys (bang), you read the newspapers (bang). The predictors (bang, bang) say Michigan State is going to beat us. But we (bang) are a better team than they are. We're going out there (bang) and prove it (BANG)!" Then, along with the rest of the Fighting Irish, Coach Parseghian, a French-Armenian Protestant, sank to his knees and bowed his head. "Hail Mary, full of grace . . ."

ART SHAY



PARSEGHIAN V. MICHIGAN STATE
"More! More!"

Sportswriters had billed it "the game of the year." It was that—for Notre Dame and for the 35 million fans watching on nationwide TV, the millions more clustered around radios in bars and stores and barbershops. A good game might have been enough; a narrow victory would have sent them into ecstasy. What they got was beyond their wildest dreams.

In the next two hours, a great team systematically took a good team apart. Michigan State did not get a first down until it was two touchdowns behind. Only twice in the whole first half did a Notre Dame running play fail to gain. First it was Halfback Nick Eddy, spinning off tackle on the second play from scrimmage, racing 61 yds. for a TD—while Coach Parseghian matched him step for step, shouting "Go! Go! Go!" Then it was Fullback Joe Farrell, cracking the Spartan line on three straight plays for 15 yds. On the fourth play, he faked a line buck and zigzagged downfield to take a pass from Quarterback John Huarte. That put the ball on the Michigan State eight. Another Farrell fake, another Huarte pass—touchdown.

Ara Parseghian prowled the sideline, lips peeled back over his teeth. "Pursuit! Pursuit!" he screamed at the Notre Dame defense, and again Michigan State had to give up the ball. "More! More!" he yelled at the offense, and again the relentless Irish began to march. The massive (219 lbs. per man) Notre Dame line ripped gaping holes in the Spartan forward wall, gave Quarterback Huarte so much protection that he could have tied his shoelaces and still had time to pass. A screen to End Jack Snow gained 15 yds., a flare to Fullback Bob Metcalf picked up 26. Then he turned Nick Eddy loose. In five carries, the 195-lb. halfback racked up 40 yds. and his second TD of the day. A pass to Snow was good for two extra points, and Notre Dame led at half time 20-0.

Anything & Everything. Back came the two teams, and the excitement leaped a notch. Desperate now, the Spartans tried anything—and for a while everything worked. They shifted from the T into a short punt formation and drew the Notre Dame line off side. They caught the Irish secondary napping, with a 51-yd. pass that cut the gap to 20-7. Luck helped a lot; two Notre Dame touchdowns were nullified. But now the aroused State defense was starting to harry Huarte. Somehow he still managed to get the ball away—sidearm, underhand, any way at all. And when he couldn't pass, he ran like a halfback—ripping out of the grasp of three tacklers for 21 yds. and a touchdown that made it 24-7. After that, the spectators stole the show. Twice, play was stopped while the sheriff's deputies chased fans around the field. That was enough to frighten even Parseghian. Off came the first team; in went the subs. Another Irish touchdown. Final score: Notre Dame 34, Michigan State 7.

The victory was doubly sweet because it was the sort of thing that wasn't supposed to happen in 1964—and did anyway. It was the season of surprises. This year the experts all guessed wrong. This was the year a Penn State squad that lost four out of its first five clobbered

unbeaten Ohio State 27-0, the year Tex-
as did not win the Southwest Confer-
ence championship, the year mighty
Mississippi had to settle for a tie with
weak little Vanderbilt. It was the year
free substitution and the platoon sys-
tem came back to college football—if
the coaches were willing to take pen-
alties to get their subs into the game. It
was the year collegians outdrew the
pros—when attendance in the Big Ten
averaged 59,000 a game to 49,000
for the National Football League. And,
best of all, this was Ara Parseghian's
year, the year a restless vagabond from
Miami took over a demoralized Notre
Dame team that had spent five years
forgetting how to win—and taught
them how again.

It all started innocently enough, with
a 31-7 victory over Wisconsin. But
when Notre Dame licked Purdue to
the tune of 34-15, people began to
wonder, including Purdue Coach Jack
Mollenkopf. "They're big," warned
Mollenkopf, "as big as the pros." As
victory piled on victory, so did the pres-
sure. Everybody was laying for Notre
Dame. Air Force leaped into a 7-0 lead
on an intercepted pass. Notre Dame
still won 34-7. "That line," sighed Fal-
con Coach Ben Martin. "At first they
came like a wave and pushed the block-
ers back into our quarterback's lap.
Later they just picked them up and
threw them back." U.C.L.A. Coach
Bill Barnes thought he knew a way to
beat the Irish. "Play for breaks." Barnes
should have said a couple of Hail
Marys. Notre Dame won 24-0.

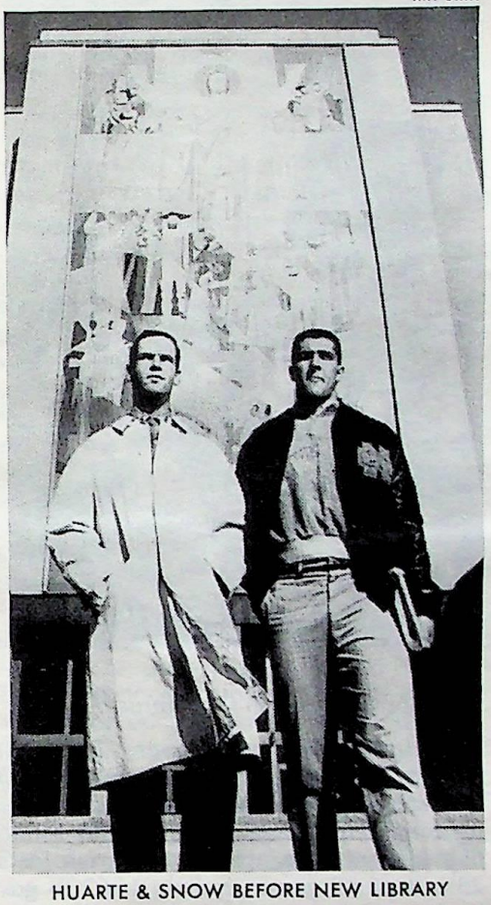
Brokenhearted. Stanford was next:
the Indians did not reach midfield in
the whole first half, did not get a first
down until 7 min. into the second, and
fell 28-6. But one tearful Irish line-
man was still dissatisfied: "I was real-
ly brokenhearted when they got that
touchdown," he said. Fully recovered
from an early-season injury, Navy's
brilliant Quarterback Roger Staubach
did his best to stop the Irish rampage
—with 19 completions in 36 pass at-
tempts. But Notre Dame's Huarte com-
pleted ten of 17 passes, and the score
was the measure of the teams: Notre
Dame 40-0.

After that, Pittsburgh figured to be
easy pickings. The Panthers had won
only two games all season. When Notre
Dame scored two quick touchdowns—
one on a pass from Huarte to Halfback
Nick Eddy that covered 91 yds.—it
looked like a rout. But then everything
went wrong. Halfback Bill Wolski fum-
bled on the Pitt two, and Snow dropped
a pass on the Pittsburgh goal line. Bang-
ing away at the Irish line, Pitt picked up
99 yds. rushing—16 yds. more than
all six of Notre Dame's previous oppo-
nents lumped together. Finally, it was
the fourth quarter, and Pitt had the
ball, fourth down and one on the Notre
Dame 16. Pitt gambled on making the
yard. The Irish held and eked out a
17-15 victory.

"Well," said Parseghian, "at least we won." With Michigan State out of the way, the Irish led the nation in rushing defense (63 yds. per game), ranked second in total offense (409 yds. per game), fourth in passing. Now, Iowa (season's record: 3 wins, 5 losses) and Southern Cal (5-3) were the only obstacles remaining in Notre Dame's path to the national championship and its first unblemished season in 15 years.

Ara Parseghian was not cheering yet. "With the kind of schedules you play today," he gloomed, "it's almost impossible to go through a season undefeated." But from Scollay Square to Fisherman's Wharf, the Subway Alumni, who thought anything was possible,

ART SHAY



HUARTE & SNOW BEFORE NEW LIBRARY
"You're gonna live with me."

sang still another chorus of the most famous fight song in the land:

Cheer, cheer for old Notre Dame,
Wake up the echoes cheering her name,
Send a volley cheer on high
Shake down the thunder from the sky.
What though the odds be, great or small,
Old Notre Dame will win over all,
While her loyal sons are marching
Onward to victory.

"Dear Sir." The nation's best-known football foundry is a Johnny-come-lately to the game. The University of Notre Dame was barely out of the log-cabin stage when Rutgers and Princeton played the first intercollegiate football game in 1869. The Fighting Irish had a school cheer in 1879 ("Rah, rah! Nostra Domina"), but they did not have a team to cheer for until 1887—eight years after the famed Golden Dome of Our Lady first cast its glint across the Indiana plains. It wasn't much of a team at that; in two years, Notre Dame lost three straight to Michigan, prompting the coach to dash off a plaintive letter to Yale's Walter Camp: "Dear Sir: Will you kindly furnish me some points on the best way to develop a good football team?" Whatever Camp's advice was, it worked: the Irish were unbeaten in 1892 and 1893; and in 1903, they ran up 292 points to their opponents' zero.

They also began to run out of opposition. Schools in the Intercollegiate Conference (today's Big Ten) flatly refused to play them, and the frustrated Irish had to content themselves with belting the likes of Franklin (64-0), Loyola of Chicago (80-0) and St. Viator (116-7). In 1913, casting around for games, Coach Jesse Harper hooked a whopper, Old Rivals Harvard and Yale had dropped off Army's schedule because the Cadets refused to sell tickets to their games. Desperate for a "filler," Army agreed to a $1,000 guarantee, and Harper's eager Irish headed East. Undefeated in four games, Army was a powerhouse—and there were chuckles all around when somebody discovered that the visitors had 18 players but only 14 pairs of cleats. Army was the overwhelming favorite: its line outweighed Notre Dame by 15 lbs. per man, and fans were so sure the game would be a slaughter that only 3,000 bothered to turn out.

The Rock. It was a slaughter all right—just like David and Goliath. In those days football was a mannerly game: teams were expected to punt on first down inside their own 20-yd. line and never, never throw a forward pass. The upstarts from Indiana punted only on fourth down—and passed the Cadets goggle-eyed. In one fantastic flurry, Quarterback Gus Dorais completed 12 in a row. His main target was a balding, bandy-legged end named Knute Kenneth Rockne, who at 5 ft. 8 in. and 145 lbs. was probably the smallest man on the field. Army defenders could not help admiring Rockne's courage; the game had barely started before he was limping noticeably. Late in the first period, with the ball on the Army 30, Dorais dropped back to pass. Nobody noticed Rockne, hobbling painfully down the sideline. Suddenly, the limp disappeared; he was running full tilt toward the Army goal, reaching up for the pass. Touchdown! Before the long afternoon was over, Notre Dame's passing attack had clicked for 243 yds. and two TDs, and the unknown Indiana school had upset mighty Army 35-13.

It had to be foreordained that Rockne would return as coach. And there he was in 1918, the son of a Norwegian carriage maker, carving his name as one of the game's enduring geniuses. He pioneered the platoon system, perfected the forward pass, lifted (so the famous story goes) the Notre Dame "box shift" from the routine of a dance-hall chorus line. His teams trav-

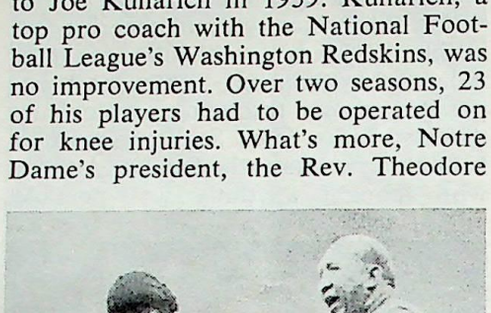
eled from coast to coast and South to the Gulf, playing 122 games and winning 105 over 13 seasons. Five times they were unbeaten; three times they won the national championship.

They called themselves Irish, but only a healthy handful were. Poles, Germans, Italians, Catholics, Protestants, Jews, everyone flocked to South Bend. One September, 90 high school captains turned out for the freshman team. No school in football history produced such stars: Frank Carideo, Marchy Schwartz, Johnny O'Brien and the incomparable George Gipp—Notre Dame's first All-America, who dropkicked a 62-yd. field goal in his first college game, gained 332 yds. against Army, and died of pneumonia at 25. There was the "pony backfield" of 1924 that averaged 158 lbs. per man and won immortality on the typewriter of Grantland Rice: "Outlined against a blue-grey October sky, the Four Horsemen rode again. In dramatic lore they are known as Famine, Pestilence, Destruction and Death. These are only aliases. Their real names are Stuhldreher, Miller, Crowley and Layden."

Then there was Rockne himself, the master psychologist who once ran the Four Horsemen behind a third-string line and shouted from the sidelines, "Show 'em your clippings! Show 'em your clippings!" He was the sly pessimist who advised, "Never tell 'em how many lettermen you've got coming back. Tell 'em how many you've lost." He was the locker-room orator who called his team together before the 1928 Army game and talked about George Gipp—his perfection, his ability to come through in the clutch, and his deathbed request: "Sometime, when things are going wrong and the breaks are beating the boys, tell them to go in there with all they've got and win one just for the Gipper. I don't know where I'll be then, Rock, but I'll know about it and I'll be happy." Notre Dame beat Army 12-6. But that was hardly surprising to Rockne: it had worked the first time he tried it—seven years before.

The Robot. Rocke died in a plane crash in 1931, and for a while it looked as if Notre Dame's football fortunes were riding the same plane: the Irish experienced their first losing season in 45 years. But in 1941, Notre Dame got a new coach—an Irishman, yet—and the leprechauns became giants again. Tough and tight-lipped, Frank Leahy had nothing in common with Rockne except a ferocious desire to win all the time. His players called him "The Robot," and he drove them mercilessly. "I want to see blood on the quarterbacks' hands when you snap the ball," he told his centers. Rival coaches accused Leahy of teaching "dirty football," of flagrant recruiting violations, of "twisting" the rulebook with his "sucker shifts" and faked injuries. But one thing nobody could argue with: his success. With such stars as Johnny Lujack, George Connor, Johnny Lattner, Leahy won four national championships, ran off a string of 39 games without a loss, retired in 1953 with an overall record of 87 wins, eleven losses, nine ties.

After Leahy, the deluge. Terry Brennan took over as coach, did reasonably well (32 wins, 18 losses)—except by Notre Dame standards—and gave way to Joe Kuharich in 1959. Kuharich, a top pro coach with the National Football League's Washington Redskins, was no improvement. Over two seasons, 23 of his players had to be operated on for knee injuries. What's more, Notre Dame's president, the Rev. Theodore



ROCKNE AS COACH
Borrowing from the chorus line.

M. Hesburgh (TIME cover, Feb. 9, 1962), was determinedly hauling up the school's academic standards, saw no reason to grant exemptions to football players. The upshot: Kuharich lost 23 out of 40 games, quit in 1962 to go back to the pros (he now coaches the Philadelphia Eagles). Finally, last year it was poor Hugh Devore's turn: he reluctantly agreed to fill in for one year as "interim" coach—and suffered through a dismal 2-7 season.

Football had not really been deemphasized at Notre Dame; it had deemphasized itself. In the golden years of Rockne and Leahy, the $500,000-a-year take from football paid faculty salaries, built dormitories and a stadium. Now, when the cost of Notre Dame's sports program was deducted, there was barely enough left over to pay the coal bill for an Indiana winter. The Irish still wanted a winning team —"We are dedicated to excellence," said the Rev. Edmund Joyce, Notre Dame's executive vice president—but not enough to pay for it. The school awards only 30 football scholarships a year, and they are strictly limited to board, room and tuition—no "walking-around money." Under those ground rules, what coach would gamble his reputation? What coach indeed—except Ara Parseghian?

"I'm the Greatest." The wonder is [illegible] it took him so long to get to South Bend. Handsome and raven-haired, Parseghian could pose for anyone's image of the spirit of Notre Dame—wearing Leahy's shoes and Rockne's suit. He has to win because the laundry bill is too high when he loses; his wife has to change the sweat-soaked bed sheets each morning. Navy Coach Wayne Hardin delights in telling of playing partners with Parseghian in a golf match a few summers ago: "We came up to the 18th hole and had to win it to take the match. Ara stuck one on the green about 40 ft. from the pin. He stepped up to putt, paused and asked: 'What state are we in?' 'We're in Pennsylvania,' I said. 'All right,' said Ara. 'Then I'm the greatest putter in the state of Pennsylvania.' He swung and, sure enough, the ball went over four or five breaks plunk into the cup."

It stands to reason that Parseghian must have been a beautiful baby. His father named him after a mythological Armenian king named "Ara the Beautiful," and his mother kept him in dresses until he was six. As soon as he graduated to pants, he started sneaking off to play tackle football with the older kids in Akron, and the only way mom could get him home was to come after him with the sawed-off broomstick she used to stir the family wash. As an eighth grader, Ara was everybody's nomination for Toughest Kid in school—even the Board of Education's. "They were having a lot of trouble with vandals breaking windows," recalls Older Brother Gerard, 43, a Toledo businessman. "So they just hired Ara to patrol the grounds. The checks came directly from the Board of Education. He was real proud of that."

At South High School, Parseghian is remembered as a kind of Jack Armstrong with Wheaties coming out his ears. "He worked like the dickens for his S," a classmate recalls. "If he saw somebody wearing a letter who hadn't participated in athletics, he'd take it away from him and tell him to turn out for the team." Ara's mother was violently against football; whenever she went to a game, she spent the afternoon hiding under the stands, praying for Ara's safety. It would have been kinder to pray for the other fellow. South High Coach Frank ("Doc") Wargo remembers one encounter against Steubenville High, an Ohio Valley team made up mostly of miners' sons. "Ara was tough. But Steubenville had a tough fullback too. On the first play from scrimmage the two of them met head-on, and you could hear the helmets crash. Both boys went down. After a few seconds, Ara jumped up. They carried their fullback out."

Call Him Hardnose. Parseghian enrolled at the University of Akron, spent two wartime years in the Navy, then back to football he went, this time at Miami of Ohio, a small school with a

PARSEGHIAN AT SOUTH HIGH
Ma hid under the stands.

the pointer by Big Saturday. On March 14, three days before Miami was scheduled to play Indiana, he deliberately dressed the Redskins in tattered old practice uniforms, sent them through a ragged workout before the eyes of the grinning Hoosiers. Next day, faultlessly attired in new uniforms, Miami upset Indiana 6-0. Frank Leahy would have approved. Next year, against Northwestern, Parseghian even sought out Rival Coach Lou Saban to plead for mercy. Saban, says a Parseghian associate, "really swallowed all that stuff." Miami upset the Wildcats 25-14, and at season's end Saban was out of a job. Who was in? Parseghian, of course.

"They'll See You." When Parseghian arrived in 1956, things were so bad that Northwestern's student newspaper was calling for the school to withdraw from the Big Ten. Northwestern had lost 27 of its last 31 conference games, had not won any game at all in 1955. The only private school in the Big Ten, Northwestern's entrance requirements were the highest in the league, while its men's enrollment (3,936) was the smallest. Why not call it quits? Snarled Parseghian: "If I thought that way, I wouldn't be here. All right, maybe it's an obsession thinking we can do what everyone says is impossible. But we *can* win." No U.S. Marine recruiting officer ever crooned a smoother pitch. To Chicago high school athletes who thought about going away to school, he said: "Your future business contacts are here in Chicago. They'll see you out there, they'll know all about you."

The Wildcats never wound up higher than third in the Big Ten, but there were plenty of moments to savor: a 21-0 victory over Ohio State that ended the Buckeyes' 14-game unbeaten streak, the 45-13 crushing of Bud Wilkinson's Oklahoma team on nationwide TV—and the four straight victories over Notre Dame that, more than anything else, convinced the Irish that Parseghian was the man to put a new coat of gold on the dome.

In the Spotlight. Parseghian's move to South Bend last January was more like a homecoming than an arrival. He was introduced between halves of a basketball game, and the students gave him a ten-minute standing ovation. In mid-February, 3,000 turned out in two feet of snow for a mammoth pep rally. If it was spirit they wanted, spirit he gave them. At spring training he whipped out a letter written by a former Notre Dame player who had been seriously injured in an auto accident. Rockne couldn't have done it better. Voice quavering, Parseghian read the letter to the spellbound team: "Being a Notre Dame football player automatically puts you in the national spotlight, more so than players from any other school. Don't let those fans down. Be honest with yourself. Give that second and third effort. Bring Notre Dame football back where it belongs."

The spirit might be willing, but it takes a powerful amount of flesh to make a football winner—and the most optimistic experts did not figure Notre Dame for much this year. The school hadn't had a winning season in five years; 22 out of 38 lettermen had graduated from last year's squad that lost seven of its nine games. Parseghian rebuilt the team as though he were running a fire sale.

Out went Notre Dame's old uniforms and pads ("too heavy," he said), replaced by new lightweight gold pants, plain blue jerseys, and helmets whose color was keyed exactly to the Golden Dome itself. Out went the old split T formation, with its quarterback keepers, replaced by the pro-style slot T and the dazzling stacked I—in which three backs line up in a straight line behind the center, then shift suddenly to one side or the other. Out, too, went the old system of calling signals in the huddle. "In the pressure of the game," explains Parseghian, "you don't have time to listen to somebody yell '32' and ponder which hole is the three hole and which back is the two back. We just describe our plays in the most accurate way possible—like 'power sweep right,' or 'belly sweep left.' And we haven't had a badly busted play all season."

In spring training Parseghian wandered around the field like an Arab horse trader. He spent hundreds of hours studying last year's game films, analyzing each man's potential. Finally one day he sauntered up to John Huarte, a quiet Californian who had played just 50 minutes of football in two years, and said: "John, you're my quarterback for the season. I don't care if you throw six interceptions in the first game. You're my quarterback. You're gonna live with me ten weeks this fall." Parseghian's next visit was with Jack Snow, the 6-ft. 2-in., 215-lb. end whom he had singled out as Huarte's No. 1 passing target. Between them, Huarte and Snow have already

ART SHAY

HESBURGH, PARSEGHIAN & IDOL
New gold on the dome.

broken practically all of Notre Dame's season passing records.

Finally, there was Linebacker Jim Carroll, a 225-lb. Georgian who was to be the key man in Parseghian's pro-style 4-4-3 defense. Last year Carroll was credited with 59 tackles; this year he has already made 120, to lead the team. He shrugged off a painful knee injury to stack up a last-ditch Pitt drive two weeks ago, and he was easily the angriest man on the squad last week when newsmen suggested the possibility of Michigan State's upsetting the top-ranked Irish. Maybe that's because he is Irish. "Listen," he growled. "We're No. 1. I've played with losing teams all my life, and nobody's going to take No. 1 away from me."

Nobody is going to take it away from Ara Parseghian either—not if the ever-living, ever-loving spirit of Notre Dame can help it. On a "Clobber Board" in the Notre Dame locker room, messages supposedly sent by rival teams are posted to stoke the fires of effort. "Your luck has run out," read one signed The Panther. "I will beat you this Saturday because I am bigger and stronger and meaner than you are." Everywhere the team goes, the coach goes—instructing, cajoling, just being there to keep an eye on everything. After the Wisconsin game, Parseghian told his wife Kathleen not to meet him at the airport—"I want to go with the team to the campus." Before the Navy game in Philadelphia, local Notre Dame alumni had a motorcade all arranged to whisk Irish officials from the airport to the hotel. Parseghian turned down the car, insisted on riding in the team bus.

For Ara Parseghian, the man who cannot stand to lose, the day begins at 5:30 a.m. with four cups of coffee, usually ends with a tranquilizer and the Late Late Show. Even when he eats, he has a pencil in the other hand, diagramming a play. Is there something he has forgotten, some minuscule detail he has overlooked, some new way to win? There has to be, there always is at Notre Dame. Last week, bone-weary, he paused in Memorial Building to confront a bust of Knute Rockne. "You," he said softly. "You started all this."

CONSTITUTIONAL LAW

Unfair Integration

The modern South has learned its lesson: there is no legal justification for systematically excluding Negroes from juries. But what if Negroes are deliberately included? Such a maneuver, it turns out, would be equally unconstitutional.

In 1960 a Negro named Woodman J. Collins was convicted and sentenced to death for the "aggravated rape" of a white woman in Louisiana's Jefferson Davis Parish. On appeal, Collins' lawyer attacked the manner in which the parish impaneled the grand jury that indicted Collins. The parish is roughly one-third Negro, and, to make the grand jury "reasonably representative," the jury commission carefully placed six Negroes on a list of 20 veniremen. From those were drawn twelve grand jurors, including five Negroes. Despite this seeming fairness, argued his lawyer, the impaneling process discriminated against Collins, denying his right to equal protection of the laws under the 14th Amendment.

Nonsense, ruled the state Supreme Court and a U.S. District Court. But the U.S. Fifth Circuit Court of Appeals found a "fatal defect" in the organization of the grand jury because "the basis of selection was race." Well attuned to local mores, the appellate court stressed the "somewhat paradoxical" effect of such selection—the widespread Southern phenomenon that fearful or complaisant Negro jurors have a tendency to be especially harsh on Negro defendants.

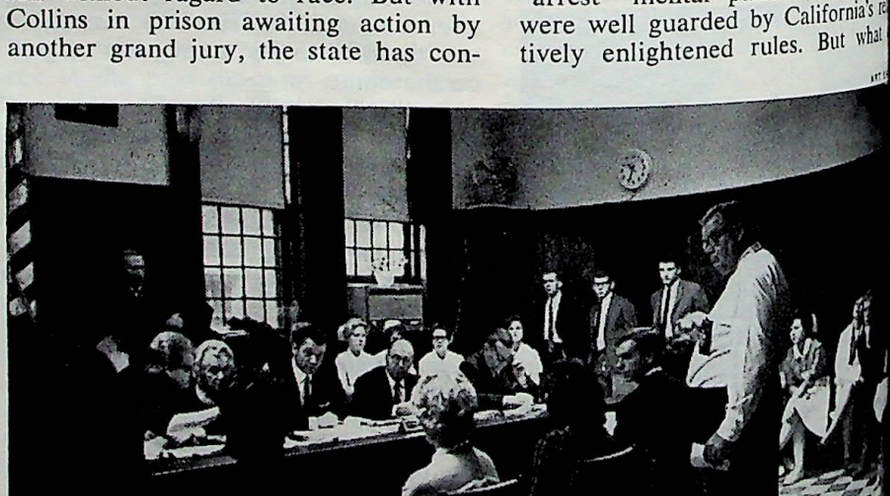
Louisiana has since enacted a law saying that grand jurors must be chosen without ragard to race. But with Collins in prison awaiting action by another grand jury, the state has continued fighting to uphold his orig conviction. Last week the state at ney general lost his last round w the U.S. Supreme Court refused to view the appellate court decision. effect, the Supreme Court thus sto by Justice Stanley Reed's 1950 d tum: "An accused is entitled to h charges against him considered by jury in the selection of which there h been neither inclusion nor exclu because of race."

COURTS

Mental Illness & Legal Remedies

To his co-workers at a Los Ang aerospace plant, Herbert Hill seem odder and odder. The angry ex-mari a purchasing expediter, refused speak, neglected his work, shoved chair at passers-by, rejected all psy atric help. Last month Hill's boss pealed to a special psychiatric cour the county general hospital. Hill arrested, examined by two court chiatrists, and diagnosed as a po tially dangerous schizophrenic. After informal hearing, at which he was resented by a public defender, the c sent Hill to Camarillo State Hosp and scheduled a jury trial to review commitment. But Hill responded well to treatment that in a few we the hospital advised the court to rel him. Now he is getting adequate vate medical care, and has a fair cha of recovery.

At some point in their lives, rou 10% of Americans will probably w up in mental hospitals—a statistic poses hard questions of civil liberty medical necessity. Though many cr vociferously decry the use of police "arrest" mental patients, Hill's rig were well guarded by California's re tively enlightened rules. But what



COMMITMENT HEARING IN CHICAGO
The defendant always wins.

in Herbert Hill's position
ers
roughout the country?
No Railroading. The ancients had
al sanctions to exorcise demons by
ching or cutting open the bodies of
afflicted. The Middle Ages permit-
even worse therapeutic tortures.
onial Americans whipped the men-
deficient. But in 1773 Virginia
ed the country's first state mental
ital, and the law soon honed the
ic standard that involuntary com-
ent is justified for persons "dan-
s to themselves or others."
was so easy to pin this label on
es or unwanted wives, however,
in the 1870s reformers pushed
gh strict judicial safeguards
st railroading. Since mental hos-
s were then regarded as fearful
s, the law's chief aim was to make
that only the truly ill were commit-
Today's most advanced screening
dures require careful precommit-
medical examination, legal notice,
informal hearings before special
rs. Some judges follow up with per-
l bedside visits; the patient's legal
dies range from jury trial to writs
abeas corpus. Says one Chicago
: "It would take a massive con-
cy to railroad anyone."

No Restraint. But a new legal prob-
has arisen as a result of the mid-
's introduction of tranquilizers that
savage symptoms. Bars, screams,
jackets—all signs of restraint are
ppearing from mental hospitals as
remedies make mental illness more
table. The law's new problem is how
t should go toward liberalizing in-
ntary commitment procedures at a
when prominent psychiatrists ar-
for earlier admission (leading to
er discharge), long before patients
me "dangerous."

Some doctors now argue that admis-
should be governed entirely by
cal boards, without interference
m lay judges and juries. But lawyers
that even harmless neurotics might
d up in institutions that are still
marily geared to restraint. The con-
sus is that involuntary admission
uld be extended to nondangerous
ons only where hospitals are fully
pped to treat early symptoms. On
other hand, state hospitals are al-
ed to discharge patients without
t intervention. In many places, non-
gerous patients who succeed in go-
over the hill and staying free for a
are considered discharged, on the
ry that they must have come to
s with society.

In such advanced states as Illinois and
w York, the admission trend is none-
ess toward maximum medical con-
. Illinois is spending millions to re-
e massive, jail-like central hospi-
s with small, decentralized facilities.
e state has also restored to all men-
patients such previously denied civil
hts as voting and entering contracts.
ntal judges in Illinois now work
closely with medical advisers that,

in general, they decide only whether a committal involves bias or unethical conduct. Boasts one Chicago judge: "This is the only court where the defendant always wins. If he is released, it means he is well. If he is committed, it is for his own good."

Earlier & Faster. In matching the law to medical progress New York will probably lead all states next year when it puts into effect a new mental-health code based on careful bar studies and long experience with the psychiatric division of Manhattan's Bellevue Hospital, the world's biggest psychiatric admission center (18,000 cases a year). Bellevue's mental patients may be held for observation against their will for up to 60 days. In deciding whether they should go on to state hospitals, the judges manning Bellevue's 7th-floor courtroom are amply served by psychiatric advice, but they need far more information about the patients' families and financial backgrounds.

The new law thus provides a fact-finding state mental-health service with trained case workers who will not only tell judges more about patients, but also keep better case records for the information of friends, relatives and patients themselves. While retaining such remedies as habeas corpus, the new law will put medical and legal interests in better perspective. Involuntary admission will be by application of relatives, friends or public officers, plus a certificate signed by two psychiatrists. Within five days of admission notice must be given to the patient and three relatives or friends. Though hospitals will still be able to hold patients for 60 days, they must then get court permission and further court review after six months, one year, and every two years thereafter.

All this aims to get mental patients in earlier and out faster. If it works, New York may take credit for a major step toward putting admission to the nation's mental hospitals on virtually the same medical basis as admission to other hospitals—*while safeguarding civil liberties for citizens who must be denied some freedom in order to handle full freedom later on.*

TRIALS

To Find His Father's Killer

For 20 years, a resolute Tennessean named Welby Lee has searched for the hit-run driver who hurtled out of the gloom on a rural road and killed his father on New Year's Eve, 1944. With only a broken bumper guard as solid evidence, Lumber Merchant Lee, now 51, traced scores of cars, braced dozens of suspects and traveled 100,000 miles before he caught up last summer with Grover Jones, 55, now an Indianapolis handyman. Lee amassed 153 pages of circumstantial evidence, and Jones was indicted for second-degree murder.

FRED TRAVIS

LEE (HAND AT THROAT) WATCHING JONES ON STAND IN TENNESSEE

Bad luck for hunter and prey.

Last week Jones went on trial in Celina, Tenn. (pop. 1,228). Outside the tiny Clay County courthouse, where Judge Cordell Hull once sat, a bearded evangelist stood on the lawn shouting for sinners to repent. Inside, sweating from the heat of two potbellied stoves, a crowd of wide-eyed youngsters and tobacco-chewing old men listened intently as the D.A. thundered: "When you hit him, did he scream?" Said Jones: "I guess he did, but I wouldn't know because I didn't hit him."

Jones doggedly insisted that he was not even in Tennessee when Lee's father was killed. But as it turned out, both hunter and prey had bad legal luck. With the all-male jury reportedly ready to acquit Jones, the prosecution suddenly requested and won a *mistrial* on the ground that two jurors were relatives of two defense character witnesses. "It ain't fair to me," complained Jones, who may be retried in June. Vowed Lee: "This is not the end."

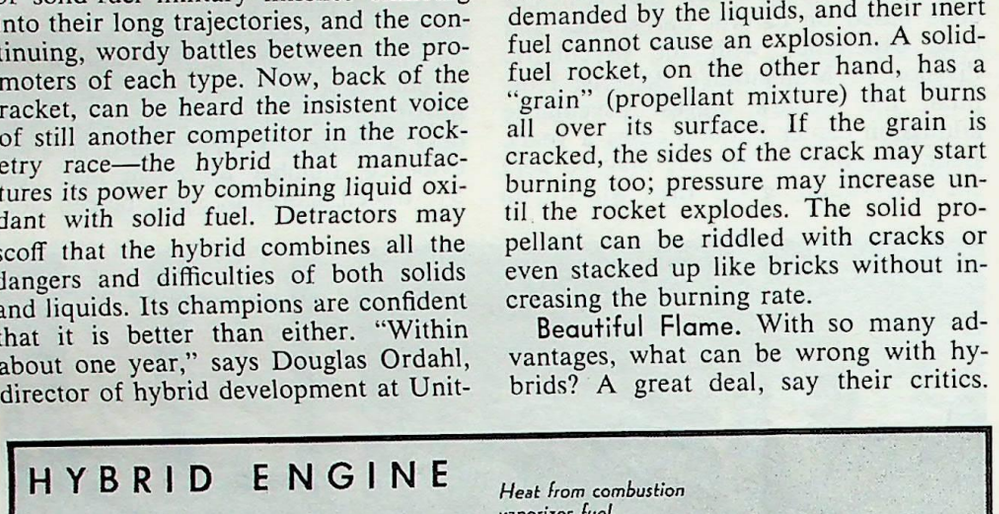
SPACE

The Late-Starting Rocket

For years, the loudest noises in the aerospace business have been the rumble of liquid-fueled boosters blasting spacecraft into orbit, the sharper roar of solid-fuel military missiles climbing into their long trajectories, and the continuing, wordy battles between the promoters of each type. Now, back of the racket, can be heard the insistent voice of still another competitor in the rocketry race—the hybrid that manufactures its power by combining liquid oxidant with solid fuel. Detractors may scoff that the hybrid combines all the dangers and difficulties of both solids and liquids. Its champions are confident that it is better than either. "Within about one year," says Douglas Ordahl, director of hybrid development at United Technology Center of United Aircraft Corp., "a hybrid will perform in orbital flight and prove that it can do all the things we claim for it."



Fierce Fluid. A typical hybrid is a comparatively simple product of a complex science. It is basically a pressurized tank for liquid oxidizer, behind which sits a combustion chamber lined with solid fuel. The two propellants are usually hypergolic—they ignite spontaneously when they come in contact with each other. A valve permits a jet of oxidizer to squirt into the rear chamber, combustion begins, and a hot, high-temperature flame roars out of the nozzle. The oxidizer valve can be used as a throttle to reduce the thrust and the engine can be stopped and started any number of times, a maneuver that is difficult or impossible with almost all other types of rockets.

In all-solid rockets the oxidizer and fuel must be mixed together intimately, a requirement that rules out many high-energy combinations that would start reacting as soon as they came in contact. Hybrids have no such difficulty. Their fuel can be hopped up with a high proportion of high-energy powdered metals or metallic hydrides, but in the absence of an oxidizer, they remain as inert as an auto tire. The oxidizer may be a fiercely reactive fluid such as OF_2 (oxygen difluoride), but since it stays in its own tank until needed, it behaves itself. When the two components come together, they burn with extremely high specific impulse, the measure of rocket power.

Best of all, say their boosters, hybrids are free of the complicated plumbing demanded by the liquids, and their inert fuel cannot cause an explosion. A solid-fuel rocket, on the other hand, has a "grain" (propellant mixture) that burns all over its surface. If the grain is cracked, the sides of the crack may start burning too; pressure may increase until the rocket explodes. The solid propellant can be riddled with cracks or even stacked up like bricks without increasing the burning rate.

Beautiful Flame. With so many advantages, what can be wrong with hybrids? A great deal, say their critics. Worst of all is low-combustion efficiency; the fuel and oxidizer tend to escape through the exhaust nozzle before they have reacted. They burn as a long, beautiful flame, which wastes much of its energy on empty air. When the hybrid is throttled down by partially closing the oxidizer valve, its efficiency gets worse, sometimes falling as low as 20%.

But all such objections are out of date, insists U.T.C.'s Ordahl. He admits that early hybrids spat unburned propellants out their nozzles, but he claims that the habit has been cured by baffles that keep the propellants from escaping before they have mixed and burned. Baffles and other improvements, says Ordahl, have boosted combustion efficiency to 90% in some U.T.C. hybrids. Aerojet-General Corp. has a different kind of baffle that is said to get 95%. The Reaction Motors Division of Thiokol Chemical Corp. believes that good burning under variable conditions can best be had by injecting extra oxidizer near the rear of the combustion chamber or downstream from the baffles.

Looking into the future, the hybrid men see big hybrid space boosters using extremely cheap fuels: liquid oxygen and ordinary rubber. For extra performance in upper-stage rockets, they have high hopes for hybrids using fuel that is almost entirely powdered metal. If a little hydrogen is burned along with the metal and its oxidizer, the hybrid will become a "tribrid." Its specific impulse will rise into the range of the engines to be built nuclear rockets. But there will be nothing like the "nukes" for ease ties in cost and danger.

ELECTRONICS

Battles by Starlight

The sentry nervously stares at the ink-dark night. Among the rustling leaves and insects he hears a hostile sound. He raises his rifle presses an eye to a rubber cup at end of a tubular scope. Now blackness turns into an eerie green glow; sentry can see trees, bushes, rocks. enemy patrol is creeping toward he can spot the moving figures surprising ease.

So far, such scenes have been out only in practice, but the Army new night-seeing scope is proving practical that it soon will be made quantity for troops in the field. once on active duty, the new sight devices should prove to be a ma advance over the famed snooperscope that were so useful in World War The trouble with the snooperscopes that they needed their own light so —a searchlight that illuminated the with an infra-red beam. That was visible to the naked eye but could ily be seen by an enemy equipped relatively simple detection devices. snooperscope sniper often found himself a sitting duck, his own infra searchlight pinpointing his position

The Army's new night peeper has no such signature. It needs only faint light that comes from the moon stars or sky glow, which is never tirely absent. This light, bouncing targets, is focused on a semitransparent screen at the front end of an extremely sensitive electron tube. The screen photoemissive—it gives off electrons when struck by the faintest light. The photoelectrons are then speeded up high electrical charges so that when they hit a phosphor (luminescent screen in the tube, they make a much brighter image. The process is repeated three times, until it produces a picture thousands of times brighter than the starlit target viewed by an unaided eye.

The night-light scopes have $18 million of development behind them. They come in three sizes. The smallest which fits on a rifle or can be used as hand telescope, weighs only 5½ lbs. cluding its 6-volt batteries. Larger lb. scopes with a wider field of view meant for use with recoilless rifles other crew-handled weapons. The gest scopes weigh 40 lbs. and sit on tripods. Through their wide-angle lenses, a commander can keep track the stumbling confusion of a night tle. He can see his own forces along the enemy's, and hopefully send lightened orders that will result in starlit victory.

TODAY IN AUSTRALIA

What's new in this land of rapid growth and huge potential

Adds Up

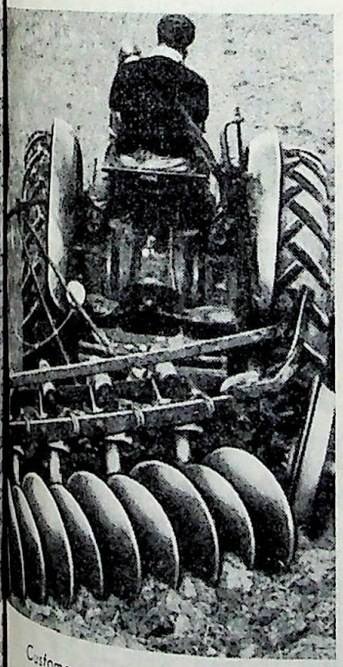
Australia is fast becoming one of the world's most "computerised" countries on a population basis. It is estimated that the Australian computer market is growing at the rate of about 35 per cent a year. When a new computer is operating in Sydney's Stock Exchange in January it will, says the Exchange Chairman, "put Sydney a full five years ahead of any other Stock Exchange in the world. Nowhere else is there a central system, equipped to do, to serve every data processing need of an entire broking community."

Sweet Story

Every last spoonful of sugar you used today may have come from Australia's large and fast expanding sugar industry—one of the country's biggest export earners. Last year Australian sugar production totalled about 1¾ million tons but after a planned £A50 million expansion programme is finished in 1965 this should be lifted well over 2 million tons of sugar annually, most of the export.

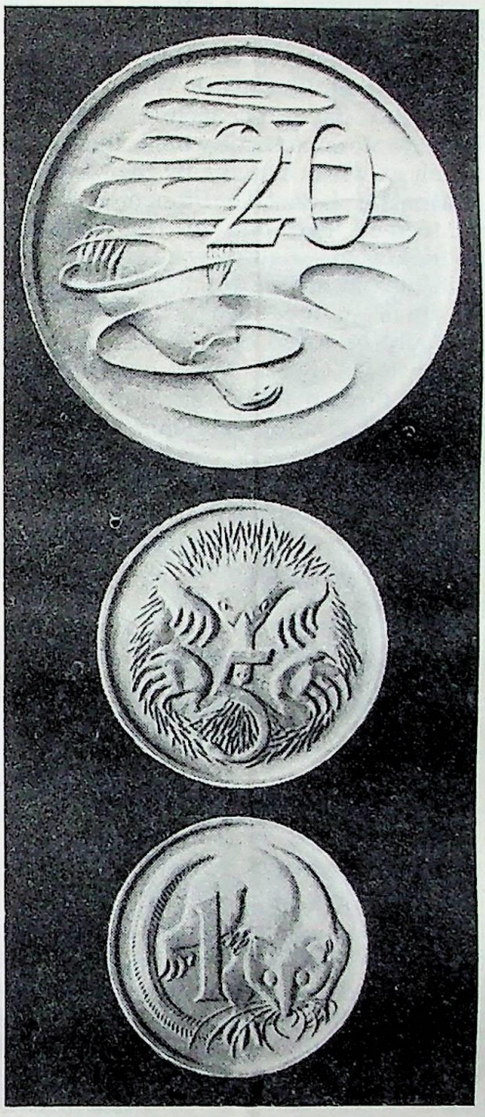
Ploughs

Some of the most peaceful nations don't want to beat down their guns to make ploughshares any more. Farmers around the world now prefer disc ploughs to the old mouldboard type—and an Australian company is one of the major suppliers of these discs to 30 countries. Farmers in Greece, Africa, South America,



Customers in 30 countries

Pakistan, Burma, the Philippines, New Zealand and many other South Asian and Pacific areas are customers of this Australian company (Sutton McKay Limited), one-third of whose output goes overseas.



To coin a new phrase

D-Day

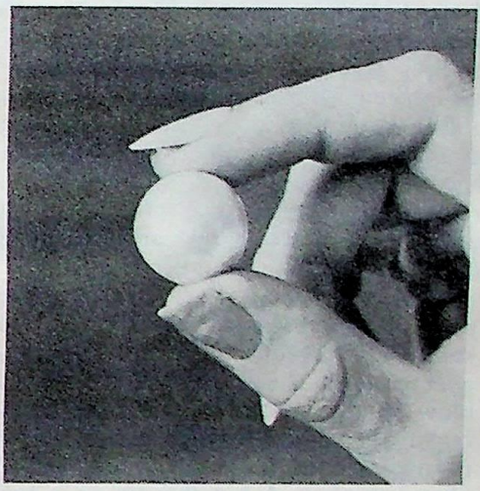
After a lifetime of pounds, shillings and pence, Australia will soon begin to count in dollars and cents. The old system of 12 pennies to a shilling and 20 shillings to a pound that came out from Britain will be replaced by a decimal system. Two dollars will equal one old pound and a whole range of attractive new coins featuring Australian animals has already been designed by an Australian artist. Cost of the business machine changeover will be around £A32 million. The Australian Government will recompense private enterprise for the cost of conversion.

Seats Please

When the horses gallop down the straight at Ipoh in Malaysia the cheering punters will soon be seated (or standing, depending on the closeness of the finish) in a £A1¼ million grandstand designed by a group of Australian architects. The design for the 750 ft. long grandstand holding 6,000 people won a world-wide competition held by the Perak Turf Club. Australia's well-known sports consciousness can be turned to profitable use

Pearly King

The first major crops of Australian cultured pearls have been exported from Sydney this year. They are the world's biggest cultured pearls, varying in size from 11 mm. up to 20 mm. The secret? Dinner-plate size Silverslip oysters which grow pearls 18 mm. in diameter in less than two years. The abundance in Australian waters of



. . . adding new lustre to exports

materials oysters eat contributes to the Silverslip's remarkable rate of growth. Experts predict that Australian pearl farming will be a multi-million-pound industry within a few years.

Matter of Hours

Come to Australia and judge the business opportunities for yourself. Qantas V-Jets—fastest Jets in round-world service—will fly you to Australia in a matter of hours from America, Europe, Asia and the Orient. Your Travel Agent or Qantas will show you how little extra it costs to include Australia in your next round-world itinerary. Ask Qantas all about Qantas air cargo offering fast, frequent service to all parts of the world, with renowned Qantas care.

Mistress to a Monument

LIFE WITH PICASSO *by Françoise Gilot and Carlton Lake.* 373 pages. *McGraw-Hill.* $6.95.

After nine years and two children, Françoise Gilot finally left Pablo Picasso, reportedly exclaiming: "I am not living with a man, but with a monument." Many women have tried to live with the monument who, as the greatest living artist, was bound to make it a monumental task. Françoise was his fourth long-term mistress, escaped becoming his second wife. Now, twelve years after the end of the affair, Françoise recollects in tranquillity—something she rarely had with Picasso—with the aid of the Paris art correspondent for the Christian Science Monitor.

In his courtship of Françoise, Picasso didn't show her his etchings—he showed her how to etch. Since she was a full 40 years younger than he, she had to pass acid-test encounters with Gertrude Stein, Braque, Matisse, Cocteau, and a dozen other greats before she could share his life. Yet, judging from her memoirs, crammed with incredible recall, she was a cool creature who passed the tests but, instead of sharing his life, only came to understand it.

Marriage Album. Everything had the power to stir Picasso's imagination. He kept owls, pigeons, even a smelly he-goat around the house. He loved to blow loudly on an old French army bugle. He was superstitious to a degree unsuspected in such an undisciplined liberal thinker. A hat thrown on a bed (meaning that someone in the house was going to die before the year was over) could throw him into a tantrum. Dancing was total depravity to Picasso, who was otherwise unbothered by convention.

Picasso was a collector of people as well as things. He constantly visited Françoise's predecessor, Dora Maar, who responded by conventionally snubbing Françoise when they met. It did not bother him a bit that his first wife, Olga, trailed Françoise around the streets. He even kept an entire apartment in Paris, where he had lived with Olga, intact. His suits were still there, moth-eaten to the seams; paintings were slathered with inches of dust. But Picasso regarded it as a kind of album of his first marriage. Taken to see it, Françoise began to think of Picasso as some sort of Bluebeard. Writes she: "I began to have the feeling that if I looked into a closet, I would find half a dozen ex-wives hanging by their necks."

Monster Love. To Françoise, Picasso seemed like one of his recurrent mythological figures—the minotaur. Painfully aware of his bandy legs and his small stature, Picasso believed that he could be loved only because he was a monster. "God is really only another artist," Picasso told Françoise. "He invented the giraffe, the elephant and the cat. He just keeps on trying other things. The same with this sculptor [himself]. First he works from nature; then he tries abstraction. Finally he winds up lying around caressing his models."

For a woman who spent so long with Picasso, Françoise writes as if love's labor's lost. But in the minotaur's caress, Françoise admits that she found herself. No woman could ask for more.

Misery in Eden

THE ARISTOS *by John Fowles.* 246 pages. *Little, Brown.* $5.

In British Author John Fowles's brilliant first novel, *The Collector*, one of the most cunning evil characters of modern fiction utterly vanquishes the good. As if to make amends, Fowles has now written a philosophical work whose theme is the *aristos*, Greek for the excellent in life. Good novels dom make good philosophers, versa; but Fowles is obviously in both fields.

JOHN FOWLES
Adrift in a boundless ocean.

Fowles's acknowledged mentor 6th century B.C. Greek thinker clitus, whose extant work consists of brief fragments declaring cry- that the universe is in flux, that ceaseless struggle of opposites: water, earth and spirit, love and Fowles shares Heraclitus' reverence life, his clear-eyed contemplation tragic, his love of paradox; and even more eloquent.

"I live in hazard and infinity," writes. "The cosmos stretches me, meadow on meadow of reach on reach of dark space, of stars, oceanic darkness and There is no god in it, no particular cern or particular mercy. Yet where I see a living balance, a tension, an enormous yet mys simplicity, an endless breathing And I comprehend that being is standing, that I must exist in haz that the whole is not in hazard and knowing this is being conscious cepting it is being human."

Designed to Want. Man is adrift raft in a boundless ocean, writes Fowles. "From his present dissatisfaction reasons that there was some cata ic wreck in the past, before which was happy; some golden age, Garden of Eden. He also reasons somewhere ahead lies a promised Meanwhile, he is miserably *en passe*. But if man were to find his writes Fowles, he would be much miserable. For man is made to and yearn: "We are designed to with nothing to want, we are like mills in a world without wind."

In fact, facing up to the finality death is a liberation; it makes life more precious: "The idea that death not absolute consoles the childish vidual, but prevents society from

he many another existentialist-type
. Fowles combines a cosmic pes-
sm with a reformer's drive to im-
the world. Less interesting and
owing on such topics as cybernet-
d birth control, he is nonetheless
ally sensible, and his strictures
against all dogmatic camps are
"A Christian says, 'If all were
ll would be happy.' A social-
ts, 'If all were happy, all would
d.' A mystic says, 'If all were
e, happiness and goodness would
matter.' A humanist says, 'Happi-
nd goodness need more analysis.'
xistentialist tries to commit him-
o what is best of the best philoso-
or the given situation."

e for a Truce. Fowles concludes
it is possible that some of life's
sies can be reconciled. Man is un-
sarily passionate on the one hand
quarrelsome on the other. The
emotion supports the other; and
violence of human history is the
consequence of this alternation.
es coolly urges a return to clas-
harmony, the "avoidance of wast-
ergy, of pointless battle, of unnec-
y suffering. There is no inescapa-
eed for man to be his own worst
y. Many other things are queuing
e that role."

hat Fowles means by "other things"
roblems of overpopulation, pover-
d ignorance. It is time, he writes,
an to come to terms with his ten-
and to get on with the practical
ss of making the world a better
o live in.

od Hatred

E FAMILY OF PASCUAL DUARTE *by*

's wife, Pascual kills him.

Pascual's cuckold horns become the
s of the sacrificial Spanish bull.
ng drawn blood, he charges on till
ores the very flesh that made him:
mother, whom he guiltily loves and

hates, who symbolizes Spain. "There is no deeper hatred than blood hatred, hatred for one's own blood," reflects Pascual. He hates his mother for her blasphemy, sluttishness, ignorance and indifference. She cannot even produce tears at the funeral of her younger son. Unconsciously, Pascual decides she will weep blood.

Knife in hand, he finds himself standing over the mother's bed, but he cannot kill her in her sleep. When she wakes, shrieking, he jumps on her and they fight, tearing one another's clothes until "her mouth found my nipple, my left nipple, and tore it away. That was the moment I sank the blade into her throat . . . Her blood spurted all over my face. It was warm as a soft belly and tasted like the blood of a lamb."

Though it has appeared in 13 Spanish editions and 16 translations (including one in England in 1946), this novel has waited 22 years for U.S. readership, in part because it is short in length, and certainly not sweet. Deep in the classic Spanish vein, it is a tragedy of blood, relentless as a *corrida*, cruel as an *auto-da-fé*.

JUAN DE JUAN

CAMILO CELA
Deep in the Spanish vein.

Tea & Tedium

CHILDREN OF VIOLENCE: MARTHA QUEST AND A PROPER MARRIAGE *by Doris Lessing.* 605 pages. *Simon & Schuster.* $7.50.

We are all prisoners of our mechanisms, of the harsh or easy tyrannies of our bodies and of society. Possession of intelligence does not change this galling truth; it merely makes us aware of it. The rebellious spirit is jerked short by the end of the chain.

This is the theme that slowly surfaces in these first two novels of what Doris Lessing plans as a five-novel-cycle. The heroine is a girl of middle-class English parents who was born and grows up in a British colony in Africa. Her name, Martha Quest, is recognized first as

T-6411

Just hold an Asahi Pentax

... AND YOU BEGIN TO UNDERSTAND WHY THIS CAMERA IS THE ULTIMATE CHOICE OF DISCERNING PHOTOGRAPHERS ALL OVER THE WORLD.

Asahi Pentax is a beautifully balanced instrument. It's smooth. Precise. Incredibly accurate. Very easy to handle. It *feels* right. Fast too. It's meticulously constructed for constant heavy handling. And the lenses are outstanding both in appearance and performance. Another real advantage of an Asahi Pentax is its *do-anything* versatility. The comprehensive range of high quality accessories enables you to build up a complete system which prepares you for any demand: from microphotography to extra long range telephotography, high speed action subjects to portraiture. *Just hold an Asahi Pentax at your dealer's soon!*

Asahi Optical Co., Ltd.

Digitized by Arya Samaj Foundation Chennai and eGangotri

lame symbolism and then as intentional irony. Martha is not questing for anything. Her father is an unsuccessful farmer and a passionate hypochondriac; her mother is a graceless worshipper of convention.

When the reader meets Martha in the mid-1930s, she is a 15-year-old rationalist who contemptuously understands everything about her parents except how they got that way. Yet by her early 20s, she herself is, by what seems at the time her own choice, the wife of a standard-model civil servant and the mother of a conventional child. Although she has "views"—she disbelieves vaguely in the color bar—she is accepted placidly by colonial suburbia. Then she discovers that she feels as if she were going mad. Older wives smile kindly and say, Yes, that's right, everyone feels that way.

In this situation, an American housewife would get a divorce or take a course in something. By the end of these 600 pages, Martha has indeed left her husband, and also joined a Communist Party cell. But Martha is moved to redecorate her mind by impulses that would prompt a less intelligent woman to change the slip covers in her living room. She serves the cause of world revolution because she is bored with serving tea cakes.

Doris Lessing has the rare skill to deal seriously with a female main character who falls into the large but artistically troublesome range between prostitute and nun. Perhaps because the novels are more autobiography than fiction, the author suffers curiously from her heroine's flaw of vision; she is unwilling to look with interest at anything outside Martha.

Blunted Needle

NOVA EXPRESS *by William S. Burroughs.* 187 pages. *Grove.* $5.

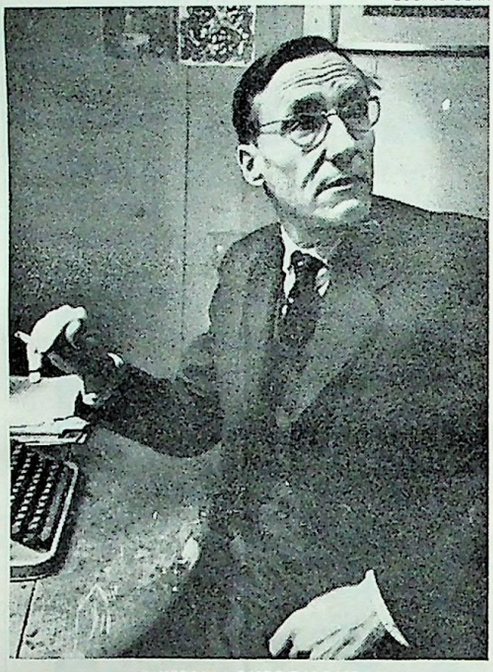
Nominally novels, William Burroughs' works are, more precisely, potluck: the cauldron, having flipped its lid, spills nightmare fantasies, sick jokes, narcotic dreams and polemics against pushers and in favor of the apomorphine cure. And, of course, concedes the author, "obscenity is coldly added as the total weapon."

With that sort of prospectus, the St. Louis-born Tangier expatriate was ordained as the high priest of the beats even before his first "novel," *Naked Lunch*, was off the Grove press. Now, in his second of what promises to be a Doomsday Quartet, Burroughs invokes a personal and "very inglorious Pantheon to give the modern world the needle in the same way Zeus and his gang broke up the ancient one." His Zenlike Zeus is the Persian Hassan-*i-Sabbah*, prophet of an 11th century cult of hashish takers.

Burroughs feels very close to Hassan; he says Hassan seems to dictate portions of his novels. Vying to usurp Hassan's dominion over earth are lesser but formidable rival gods, including 1) the lecherous ones of Venus, who are dosing man with the Orgasm Drug to draw him into fatal orgies; 2) the totalitarian of the Crab Galaxy, who have ready giant ovens to bake humans into insectlike critters in a hivelike commune; and 3) the plain old hophead gods of Uranus, who have become radioactive themselves and are plotting to frizzle Earthmen with their own radioactivity.

This unholy trinity constitutes the Nova Mob, a sort of celestial Cosa Nostra, and the book begins with "total disaster *now* on tracks" for earth, and "the whole planet absolutely flapping hysterical with panic." Any reader who hopes to learn in the end whether the

LOOMIS DEAN



WILLIAM BURROUGHS
Obscenity as a total weapon.

Nova Mob outwits the efforts of Hassan's Nova Police to save the world reveals a hidebound, un-hip fixation with the old plotted fiction.

Occasionally, Burroughs' hollow humor draws a hollow belly laugh, as when one Nova Mobster, The Subliminal Kid, eggs on the civilized world toward a mind-shattering collapse by playing over and over (on loudspeakers that cannot be turned off) unrelated sound tapes of jack hammers, jukeboxes and cocktail-hour persiflage. But mostly the novel is a stream of unpunctuated non sequiturs, in which coherence seems inadvertent and in which Burroughs' scatological and pornographic effects no longer seem to shock.

Also Current

LET IN THE SUN *by Woody Klein.* 297 pages. *Macmillan.* $5.95.

The house at 311 East 100th Street in Harlem enjoys a reputation for being the grubbiest slum building on the grubbiest slum street in the U.S. It has been the scene of countless fires, fights, arrests, knifings, suicides, and a few deaths that defy all explanation. Woody Klein, reporter for the New York World-Telegram and Sun, relates the depressing history of this house, all the more depressing because politicians, social workers, and no end of other do-gooders have been promising to clean it up for decades, and yet nothing has actually been done. The fault, Reporter Klein finds, lies largely with the lethargy of the city government and the profits to be had from slums. Avaricious landlords make a killing by collecting rents without making any repairs, then selling out quickly. Because they do not consider that owning a slum building is much of a crime, local judges usually hand down notoriously light sentences. On those rare occasions when slumlords are haled into court. But as the great housing reformer, Jacob Riis, once put it, "Murder is murder, whether it is done with an axe or with a house."

SHORT FRIDAY AND OTHER STORIES *by Isaac Bashevis Singer.* 243 pages. *Farrar, Straus & Giroux.* $4.95.

In every man there is a bit of devil that will not be exorcised. This is the informing spirit of the world of Isaac Singer, who was born in Poland 70 years ago and still writes in Yiddish though he has lived in the U.S. since 1935. In one characteristic fable, a deserted wife is consoled by an affair with a prankster posing as a demon; in another, a husband's daydream of adultery turns into nightmare when his genie procures for him a repugnant witch. Then once, in Singer's *The Last Demon*, to give an imp face unemployment, and it is then merely technological. Seeking final success, the imp tries to lure a villager into an affair with an official's wife. Grumbles the frustrated imp: 'I had my handkerchief ready if he should spit on me. So what does the man do? 'Why waste your breath?' he calls angrily. 'I'm willing. Start working on her.' " Who needs demons when man himself is a demon?

ARGEN THE GULL *by Frank Russell.* 238 pages. *Knopf.* $4.95.

Author Russell has zeroed in on one particular *Larus argentatus*, or herring gull, and produced an odd, passionate saga of its free life and very hard times. Russell scrutinizes "Argen's" birth from egg to watery grave 20 years later, an exceptionally long life span as calamity-prone gulls go. He shadows Argen in the flock and drifting solo, molting and mating, gorging and regurgitating, rising and falling in the pecking order. Without ever bringing man into his pages, Russell draws an obvious comparison between the life of the gull and man both caught in the grip of habit and driven by the search for home. So long as his big motivation remains unstated and merely implied, Author Russell flies straight and true, occasionally soaring in his prose to the seeming effortlessness of his subject. But when he succumbs to the temptation to personify, he is in trouble. In fact, he succumbs to gullibility.

First on the Pacific . . . First on the Atlantic . . . First in Latin America . . . First 'Round the World

That wonderful Pan Am feeling

It's reserved for Pan Am travelers.

Wherever they go—Asia, throughout the Pacific, the U.S.A., Europe, Africa, the Caribbean, Central or South America or 'Round the World—they feel *better* because they're flying Pan Am. No wonder. Pan Am is the world's most experienced airline.

Pan Am's Experience means more to them—and to you—than all that we or anyone else can offer you on a Jet trip.

It means more than the convenience of hundreds of Pan Am flights linking major cities throughout the world. More than cuisine by *Maxim's of Paris* and matchless cabin service.

It goes much deeper than the fact that Pan Am's flight and maintenance crews are trained to U.S. standards. And there are none higher.

It goes far beyond the fact that Pan Am can be your home away from home, where you can get travel help in 900 offices throughout the world.

It has everything to do with your frame of mind—the good feeling that's yours when you know that you've chosen to fly the very best there is: the World's Most Experienced Airline.

For reservations, see your Pan Am Travel Agent, or Pan Am.

THE NEW COMPETITION PERFORMANCE

Contessa 1300

Stile Torinese

■ Take a good look. The styling of Turin—Stile Torinese—is obvious. Designed by world-famous Italian auto stylist G. Michelotti, the beautifully executed Contessa 1300 possesses the classic look . . . with that unmistakable Italian flair.

But wait till you drive it. You'll marvel at its competition performance. Shift into low. Tramp on the accelerator. You'll rip out like an impatient thoroughbred. Roar into a turn . . . flat, fast cornering with dead-accurate steering. Speed down the highway . . . remarkable handling ease and *stability*, even on slick conditions. Stop! You'll do it on a dime with swerve-free, no-dive tendencies . . . *thanks* to exclusive Optimum Balance and extra-large brakes.

Every one of Contessa 1300's beautifully crafted components is functionally designed to combine *competition performance* with cushioned riding comfort and care-free maintenance. Extreme

STAINLESS STEEL BY PIERRE FORSSELL OF GENSE, ESKILSTUNA, SWEDEN

SCANDINAVIAN MODERN is Forssell stainless steel ...and the touch of precision in air travel

Some say precision is an obsession with Scandinavians. The Scandinavians say nothing else will do—in fashioning stainless steel, or running an airline. This handsome tableware also suggests another trait, the inimitable Scandinavian way with food. The two talents, meticulous care and open-hearted hospitality, are important reasons why SAS is so successful in making travel a pleasure. Enjoy them next time you fly. And ship your air cargo by SAS for extra care, too.

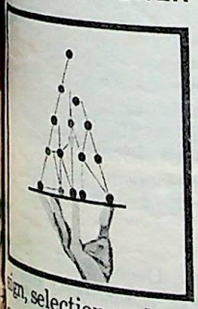
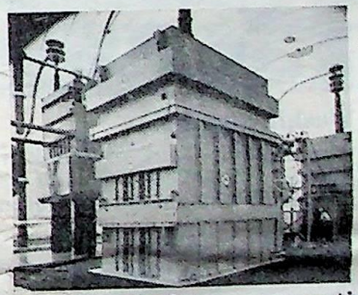
Unusual hydroelectric generating system for peak-demand periods: it needs no river

t the Taum Sauk pumped-storage project in Missouri, llis-Chalmers reversible pump-turbines send water 800 t uphill to a reservoir during low-demand periods — in single pumping stage. During peak demand periods, e water flows back through the turbines to generate ectricity.

OW TO GET HELP IN DEVELOPING YOUR OUNTRY'S POWER POTENTIAL:



If your country has latent power potential—oil, gas or other fuel reserves waiting to be utilized—you may well be interested in the help that Allis-Chalmers can offer. We are prepared to participate in handling all the details of constructing major generating facilities—initial design, selection and erection of equipment and structures, operator training and startup. A current project of Allis-Chalmers is the Pamba-Kakki hydroelectric development in Kerala, India. A-C not only designed the generating and power transmission facility, but provided and installed all the equipment for it — ranging from trash rakes to turbines to switchgear and transformers. Write for information on the full range of Allis-Chalmers project-management services for the power industry.



HOW TO CUT COST OF TRANSMISSION BY 50%:

Our specialists in high-voltage power transmission believe that it is more economical to generate power at the fuel source — and transmit it over long distances — rather than transport the fuel to a generating station near the point of use. They calculate savings of long-distance power transmission at 50%. Extra-high-voltage transmission makes these savings possible. For more than 40 years, A-C has been designing and building extra-high-voltage transformers. And during that time, not one of these transformers has suffered an insulation failure. Allis-Chalmers International, Milwaukee, Wis. 53201, U.S.A.

YOU CAN DEPEND ON ALLIS-CHALMERS.

Through our world-wide network of factories, representatives, distributors and licensees you will find a single source for planning, manufacture and installation of equipment in basic fields such as these: generation, distribution and control of electricity; construction; cement, mining; agriculture; pulp and paper; sugar; public works; oil refining; food and chemical processing; textile manufacturing; metalworking and general manufacturing.

These 3 tests prove First National City Travelers Checks are "Better Than Money"®

National City Travelers Checks are the best way to carry money. Actual tests, shown below, demonstrate three specific reasons: *ready availability ...immediate acceptability...on-the-spot refundability.* In case of loss, there are thousands of refund points throughout the world...leading hotels can direct you to the nearest one.

In the United States, no Travelers Check is more spendable, more readily available than these famous checks backed by First National City Bank. And, in case of loss, there are many thousands of U.S. refund points... easily located simply by calling Western Union Operator 25.

Test No. 1–Refundability–in Washington, D. C.
In this test, vacationing Mr. and Mrs. David Jalbert, of Brooklyn Hgts., N. Y., burned $220 of National City Travelers Checks; called Western Union Operator 25. Directed to Riggs National Bank, they received an immediate on-the-spot refund.

Test No. 2–Acceptability–in Waikiki
The S. Joseph Gores of Florissant, Mo., enjoy a ride in one of Hawaii's famous outriggers. They paid for this fun, as for all travel expenses, with National City Travelers Checks.

Test No. 3–Availability–in Mexico City
Dom Algieri, of Nutley, N.J., used additional cash to purchase more National City Travelers Checks. Banks everywhere carry them.

but fun for that reason. In this installment, Agent Solo (Robert Vaughn) is ordered to destroy some germ-loaded missiles that are being used to goad the U.S. and the Soviet Union into atomic war.

THEATER

On Broadway

POOR BITOS hinges on the visceral French political sport of right-baits-left. With more intellectual acuity than passion Jean Anouilh goes back to Robespierre to perform a masterly autopsy on the revolutionary mentality. As Bitos-Robespierre, Donald Pleasence is phenomenally good.

THE OWL AND THE PUSSYCAT, by Bill Manhoff, is as timeless as a Punch-and-Judy show and as timely as *Who's Afraid of Virginia Woolf?* Diana Sands as a sexy pussycat who claws and Alan Alda as a bookish owl who screeches, fill the evening with good, vulgar, neurotic laughter.

LUV, by Murray Schisgal, sends three very modern and morose souls through a slapstick, tongue-wagging, satirical inferno of cocktail-party griefs. Under Mike Nichols' brilliantly inventive direction, Actors Eli Wallach, Anne Jackson and Alan Arkin produce constant and rib-aching hilarity.

COMEDY IN MUSIC. That matchless mirthmaster of the keyboard, Victor Borge, riffles through gags and slides off the piano bench without altering his usual mask of disdainful dismay. Added notes, comic and musical, are provided by a straight man, noted Pianist Leonid Hambro.

OH WHAT A LOVELY WAR. Blending song and satire, *commedia dell' arte* garb and Brechtian notions, Joan Littlewood and her "thinking clowns" effectively depict the foolishness and ironies of the 1914-18 war.

FIDDLER ON THE ROOF is a nostalgic folk-musical version of Sholom Aleichem's tales of life in czarist Russia and Aleichem's gentle dairyman, Tevye, brought to life by Zero Mostel's larger-than-life interpretation.

Off Broadway

THE SECRET LIFE OF WALTER MITTY. This engaging musical is lightly based on the days and dreams of the James Thurber character. Scenes from his several worlds are played with bounce.

CAMBRIDGE CIRCUS. With a chuckle rather than a sneer, a band of young Englishmen keep their eyes on the oddball and carry a big slapstick in this hilarious revue.

RECORDS

Jazz

PHILLY JOE JONES & ELVIN JONES TOGETHER (Atlantic). Two top drummers (no kin) trade solos in triumphant tattoos and combine in layered rhythms to launch some short flights by Trumpeter Blue Mitchell, Pianist Wynton Kelly and other swingers. Philly Joe rattles the right stereo, Elvin the left.

COLLABORATION: THE MODERN JAZZ QUARTET WITH LAURINDO ALMEIDA (Atlantic). The M.J.Q. and the Brazilian guitarist seem meant for each other, like gin and vermouth. Not that they are intoxicating; their colors are muted, their moods refined, their rhythms subtle. They can swing, but seldom do. In Bach's *A Minor Fugue* they demonstrate delicate counterpoint, and in the *Adagio* from the *Concierto de Aranjuez* they conjure up a lavender twilight as the guitar gently punctures the lingering ring of the vibraharp.

OSCAR PETERSON TRIO PLUS ONE (Mercury). The guest plus is Trumpeter Clark Terry, who makes himself right at home, tearing along breakneck above Ray Brown's bouncing bass in *Squeaky's Blues*, weeping into his flugelhorn in *They Didn't Believe Me*, choking out a funny song of his own called *Incoherent Blues*.

THE INDIVIDUALISM OF GIL EVANS (Verve). Evans, revered arranger for Claude Thornhill and Miles Davis, gathered a platoon of excellent musicians to stir musical colors with him (in *The Barbara Song, El Toreador*). The orchestration is sensuously full of woodwinds and French horns, and the arrangements so complex that they invite close listening.

IT'S MONK'S TIME (Thelonious Monk Quartet; Columbia). Monk stubbornly hammered out his style when nobody much cared, still has plenty to say now that he is in a continuous spotlight. Using his own dies to cut the rhythms and shape the harmonies, he remakes each song (*Nice Work if You Can Get It, Memories of You*). *Lulu's Back in Town* is one of his better top-to-toe transformations.

CINEMA

THE PUMPKIN EATER. A marriage is sliced open by Director Jack Clayton, and the raw wounds throb in Anne Bancroft's performance as an oft-wed British matron who is bored, betrayed and thoroughly befuddled.

THE FINEST HOURS. This skillfully edited documentary sums up the career of Sir Winston Churchill, often in his own words, and warms history with intimate views of Churchill's country retreats.

SEND ME NO FLOWERS. Married at last, Doris Day and Rock Hudson fluff up their pillow talk in a spoof about an ex-urban hypochondriac who thinks his wife's widowhood is at hand. As chief mourner, Tony Randall gets most of the laughs.

SEANCE ON A WET AFTERNOON. Kim Stanley seems simultaneously sweet, bitchy, poignant and menacing in this taut British thriller about a psychotic psychic whose contact on the other side persuades her to carry out a kidnaping.

MY FAIR LADY. As the irascible phonetics expert who transforms a grimy flower girl into an English rose, Rex Harrison suavely repeats for the camera his Broadway triumph in the Lerner-Loewe classic based on Shaw. Audrey Hepburn, in her full-blooming rose period, is a delight.

A WOMAN IS A WOMAN. A lissome Parisian stripteaser (Anna Karina) takes off in this giddy, free-form improvisation by French Director Jean-Luc Godard, who seems to have liberated his mind from all but youth, love, and a fondness for old Hollywood musicals.

THE SOFT SKIN. The emotional trigonometry of a love triangle formed by an aging intellectual, his wife and a pretty airline stewardess is worked out with Gallic elegance by Director François Truffaut (*The 400 Blows*), whose talent conquers triteness.

WOMAN IN THE DUNES. Japanese Director Hiroshi Teshigahara studies the human condition in a stunningly achieved metaphor—a man and woman trying to survive in a desolate sandhole.

TOPKAPI. For Director Jules Dassin's jewel thieves, getting theirs is only half the fun in this merry account of an Istanbul caper pulled off by Melina Mercouri, Peter Ustinov and other dr[illegible] reputables.

THE LUCK OF GINGER COFFEY. Pla[illegible] perbly by Robert Shaw, Ginger [illegible] broguish, affable Irishman whose [illegible] just so much blarney.

BOOKS

Best Reading

THE HORSE KNOWS THE WAY, by J[illegible] O'Hara. This is O'Hara's fourth large c[illegible] lection of short stories in as many ye[illegible] he has now sworn off to concentrate [illegible] novels. Maybe he shouldn't. The [illegible] volume shows O'Hara's brevity and [illegible] as a social observer.

HENRY ADAMS: THE MAJOR PHASE, by Ernest Samuels. This scholarly biography describes Adams' life of rather [illegible] despair, traveling often and behavi[illegible] Oliver Wendell Holmes put it, like old cardinal."

LIFE WITH PICASSO, by Françoise G[illegible] An odd mixture of acid and adu[illegible] comes from a discarded mistress who fers illuminating accounts of the ar[illegible] views of Picasso and his friends. Be[illegible] all are inside glimpses of the mu[illegible] monumental ego.

ARISTOS, by John Fowles. The a[illegible] of *The Collector*, a brilliant demonstr[illegible] el, turns to philosophy. His mentor Greek Philosopher Heraclitus, who wrote of *aristos* (the excellent in Fowles shares Heraclitus' love of para[illegible] his clear-eyed contemplation and, par[illegible] larly, his eloquence.

MARKINGS, by Dag Hammarskjöld, if it were some kind of Security C[illegible] document, the late U.N. Secretary-G[illegible] al described this strange and moving nal as "a white paper concerning my n[illegible] tiations with God." The book pro[illegible] in aphorisms, essays, and even [illegible] Hammarskjöld's mystical efforts to re[illegible] agonizing religious doubts.

OF POETRY AND POWER, edited by E[illegible] Glikes and Paul Schwaber. An anth[illegible] of poems—some elegiac, some ang[illegible] lamenting the death of John F. Kenn[illegible]

THE BRIGADIER AND THE GOLF WO[illegible] by John Cheever. In these short st[illegible] the author writes again of exurbia proletariat of vice presidents, the [illegible] ing, irresponsible remnants of old fa[illegible] lies, and the winning eccentrics.

What's missing from this picture?

(Three of **39,000 different B. F. Goodrich products** on the job around the world!)

ve away the B.F.Goodrich products and much would move on this dockside. But ngs do move—here and almost every- ere—thanks to more than 39,000 ferent products from BFG. ve some examples: tires for everything from airplanes to wheelbarrows—about 250 different types in all. Hose for every job, every climate, every specification. All types of conveyor belts. Quality, service and satisfaction are built into every B.F.Goodrich product.

B.F.Goodrich

FIRST IN RUBBER

Don't these products belong in your picture?

DOCK LOADING HOSE is reinforced with nylon cord for extra strength, surprising lightness. Other advantages—highly resistant to surge and shock pressures, longer life, lower operating costs.

TIRES for power trucks and tractors soak up shocks and vibration in irregular floors; give fragile loads extra-gentle protection. Results? Better control, lower maintenance on equipment, less damage to loads.

32% EXTRA MILEAGE! This Extra Miler truck tire beat all other tires tested for mileage economy! Made with extra strong SUPER-SYN and a new 3-rib tread design for better traction, more even wear.

For complete information about any B.F.Goodrich product, write: International B.F.Goodrich, 500 South Main Street, Akron, Ohio, U.S.A.

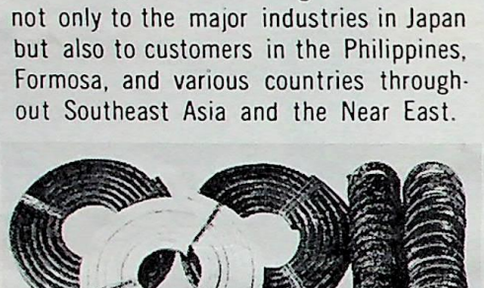
PROGRESS WITH EXPERIENCE

68 YEARS OF THE VERY BEST IN ASBESTOS PRODUCTS AND INDUSTRIAL THERMAL INSULATION

Nippon Asbestos Co., Ltd., a pioneer in the asbestos industry since 1896, is the largest and most experienced manufacturer of asbestos products in Asia. In addition to being a major supplier of materials for thermal insulation, it also contracts to do the installation itself, thereby assuring customers the maximum in efficiency and performance of the insulation.

The products and services of Nippon Asbestos Co., Ltd. have brought satisfaction not only to the major industries in Japan but also to customers in the Philippines, Formosa, and various countries throughout Southeast Asia and the Near East.



MAIN PRODUCTS:

■ Asbestos textiles (yarn, rope, cloth, etc.) ■ Asbestos paper, sheet, millboard ■ Asbestos joint sheet ■ Packings and gaskets of all description ■ Industrial Brake-lining & clutch facing ■ PTFE (Teflon) products (Tape, sheet, rod, pipe, molding) ■ Refractory materials ■ Thermal insulating materials ■ Incombustible bulkhead panel (Marine Board) ■ Incombustible paneling board (Asbestolux) ■ Sprayed asbestos (Tomlex) ■ Mechanical seals

lations issued by Alaska's Supreme Court. The state Supreme court had been requested by Alaska's senate to prepare these regulations, which conform closely to those of the Supreme Courts of Michigan and Wisconsin. The state trooper who served an order of sequestration upon the bank in Anchorage displayed his gun only because the bank's counsel falsely represented to him that the law required him to do so. The state trooper did this reluctantly and under protest. It is a sad commentary upon members of the Alaska bar that they would bamboozle a state trooper for no purpose other than to impugn the motives and methods of the state Supreme Court.

Pigskin Experts

Sir: This year Notre Dame [Nov. 20] has proved something that I'm sure has been in the mind of Father Hesburgh ever since he initiated his program of "excellence": that it is indeed possible to have a great football team without compromising the academic standards of a university.

ROBERT F. KRAUSE
University of Notre Dame
Notre Dame, Ind.

Sir: I am of Irish extraction, I'm a Roman Catholic, I'm a member of a religious order, I can't pronounce Parseghian, and I love to see Notre Dame lose for the same reason I love to see the New York Yankees lose. Am I still an American?

THOMAS SPRING, S.M.
Most Holy Trinity High School
Brooklyn

Sir: Re your remark, "the Fighting Irish were in a fighting mood," they certainly were! Not only was the Spartan football team beaten, but the Michigan State band was beaten up as well—with fists. Poor losers are one thing, but it is a sick age when we have college students who are such disgusting winners.

HUGH GARLOCK
Lansing, Mich.

Sir: Advancing an inflated pigskin toward a white line might not be beneath the dignity of man, but why must he also implicate his deities in such activity? Does the Mother of God really belong in a locker room?

STEPHEN B. SHUGRUE
New Brunswick, N.J.

Sir: We have thrilled and marveled at the *aggiornamento* of football at Notre Dame. Now TIME has divulged the reason. Hail Marys led by a French-Armenian Protestant—truly ecumenism on the playing fields of South Bend.

JOSEPH J. BURNS
Haddonfield, N.J.

Two Views of Union

Sir: Re your article "Ecumenism" [Nov. 20]: the interesting illustration given regarding the four churches that voted to combine into one United Church of Schellsburg augurs well for the solution of problems of church organization and effectiveness in communities of this size. May I commend you on the fine coverage of such an important event in the religious life of this community.

RALEIGH E. SAIN
Michigan Council of Churches
Detroit

Sir: I must disagree with TIME ... National Council of Churches on ... sertion that Schellsburg's United C... presents "an example that can be fo... with profit." You note that compro... was involved. Indeed so. A compro... of truths that Lutherans have been ... claiming for 447 years. The only valid ... sis for union is doctrinal agreement ... of faith. In view of the tremendous ... trinal differences among these four den... inations—Lutheran, Presbyterian, Met... ist, and United Church of Christ ... "merger" that took place in Schellsb... Pa., is ridiculous.

A letter from the PUBLISHER

Bernhard M. Auer

IN the prospectus written more than 40 years ago, the founders of TIME promised to deal with "all subjects of importance and general interest." That's quite a charter, and the breadth of its range both challenges and delights the editors who follow it four decades later. In this week's issue, two major stories provide sharp illustration of its all-encompassing nature.

One is the cover story, which probes the savagery of the massacre in the Congo. The story is the work of a group of staffers and stringers spread all the way from Stanleyville to Seattle. Front-line men were our Leopoldville stringer, Oxford Graduate Robin Mannock, and a Kenya Indian freelance photographer named Priya Ramrakha. Moving with Congolese loyalist troops, they reached Stanleyville shortly after the massacre in which Dr. Paul Carlson was killed. Mannock, who was hit by shell fragments along the way, says after three years in Africa that he stays there because "I am interested in abnormal psychology." Our key reporter in the area, operating from Leopoldville, was West African Bureau Chief Jonathan Randal, who was on an earlier casualty list. He is on crutches as the result of an injury suffered when a piece of a statue of Patrice Lumumba, blown up by loyalist troops, fell on his leg.

As the story spread across and out of Africa, it called for reporting from our correspondents and stringers in Nairobi, Kampala, Dar-es-Salaam, Algiers, Paris, Brussels, Bonn, the United Nations, Washington, Chicago, Minneapolis, Cincinnati, Los Angeles and Seattle. As all the pieces of the week's bloody events and their historical perspective were put together in Manhattan by Writer Robert Jones, the story could only be described as one of primitive horror.

AT the other pole of interest is a story that can best be described as velvet and faille seen through the bubbles of good champagne. This is MODERN LIVING's report on the growing U.S. tendency to dress up for fun, developed by the color projects staff, with a story by Writer Johanna Davis and eight pages of color pictures by Ormond Gigli. What Photographer Gigli had to dodge most to get his pictures were frequent dangers of too much hospitality. In most places he and his assistant went, the usual greeting was something like: "I don't know about you fellows, but I'm going to have some champagne. Will you join me?"

Graciousness at one pole of interest and savagery at the other only set the outside points of the range of stories in this week's TIME. With what lies between in all the other sections, the editors are aiming to live up to that charter to cover "all subjects of importance and general interest."

Coast to coast and throughout the U.S...

to the best of Europe and beyond...

TWA gives you one-airline convenience across half the world

If you're planning a business or pleasure trip to the U.S. or on across the Atlantic, consider the advantages of TWA. From San Francisco or Los Angeles, TWA offers daily service to Chicago, Detroit, Washington, Boston, New York and dozens more important cities in the U.S. Over the Atlantic, TWA flies to London, Paris, Rome, Frankfurt, Athens and all the way to Bombay. In all, 70 U.S. cities and 17 world centers in Europe, Africa and Asia are linked by TWA routes. It's a combination of commercial and vacation centers no other airline can offer. And only TWA shows wide-screen films* on transcontinental and transatlantic flights. For reservations, call TWA. Or see your travel agent and specify TWA.

Trans World Airlines Offices in: TOKYO . . . Imperial Hotel
HONG KONG . . . Room 104 Tak Shing House, 20 Des Voeux Road, C • MANILA . . . Hotel Filipinas
SYDNEY . . . Room 301 Shell House, 2 Carrington Street • BANGKOK . . . 37/3 Suriwongse Road

**Complimentary on all but transatlantic Economy. Then, optional at $1.*

TIME
THE WEEKLY NEWSMAGAZINE
December 4, 1964 Vol. 84, No. 23

THE U.S.

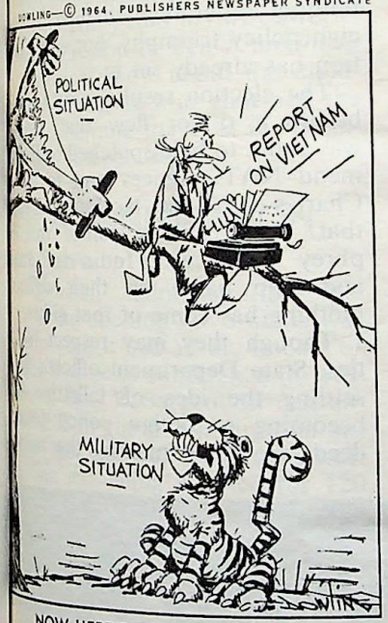
FOREIGN RELATIONS

"Just a Minute"

President Johnson recently recalled what the late Sam Rayburn once told him about making a decision. If the decision is big enough, Mr. Sam advised Lyndon, the thing to do is say, "Just a minute." Last week, in many foreign policy areas where Lyndon Johnson had actually said, "Just a minute," the clock was racing faster than ever.

Full Responsibility. In the Congo, where leftist-led rebels butchered at least 80 American and European men, women and children held hostage be-

BOWLING—© 1964, PUBLISHERS NEWSPAPER SYNDICATE



NOW HERE'S THE LOW-DOWN!

fore their lines, the U.S. provided a dozen C-130 Hercules transports to carry Belgian paratroopers to the rescue (*see cover story in* THE WORLD). President Johnson, who sat up until 4 a.m. at the LBJ Ranch to hear how the operation went, said he took "full responsibility" for U.S. involvement. There was little doubt that he would soon have to take responsibility for other decisions concerning the Congo.

In Europe, U.S. diplomats are still trying to promote a multilateral nuclear fleet (MLF) as an alternative to proliferating national forces. But France's Charles de Gaulle seems more adamant than ever against the idea, and Britain's Prime Minister Harold Wilson, under intense pressure from left-wingers in his own Labor Party, expressed serious reservations about the whole project. Next week Wilson will be in Washington to talk it over with Johnson.

At the United Nations, which begins its 19th session this week, long-anticipated trouble was brewing over Moscow's continuing refusal to pay up for peace-keeping operations in the Middle East and the Congo. Unless the Russians kick in this time, the U.S. will move to strip them of their General Assembly vote under Article 19 of the U.N. Charter, which ought to touch off the liveliest scene since Khrushchev took off his shoe. If and when that problem is settled, the long-nettlesome issue of Red China's admission to the U.N. is certain to follow.

"Dirty Feet." And then, of course, there is always South Viet Nam, where the latest U.S.-backed government is struggling to cope with student riots and where Communist guerrillas roam freely over more than half the country. Last week U.S. Ambassador Maxwell Taylor hurried back from Saigon, preceded by reports that he would urge that the war be expanded to North Viet Nam.

The Pentagon currently has at least five such plans under study, ranging from limited strikes at the spidery jungle trails that thread through border areas all the way to massive air and sea bombardment of Hanoi and other targets in North Viet Nam. President Johnson is not enthusiastic about any of them. Even after he sent U.S. planes over North Viet Nam during last summer's Tonkin Gulf crisis, he declared: "We still seek no wider war." Signs are that he is sticking to that position.

Taylor himself, when he took the job of ambassador last July, and for two years before that as Chairman of the Joint Chiefs of Staff, was an outspoken opponent of escalation as long as the government in Saigon remained unstable. But, says a ranking U.S. official, "Now that he has got his feet dirty, he may be changing his mind a little."

In an interview published by LIFE the week Taylor left Saigon, the ambassador suggested that bombing the infiltration routes, training camps and staging areas used by the Viet Cong might "contribute to a solution." Taylor carefully qualified the suggestion, noted that one of its drawbacks was the continued absence of a "viable society" in South Viet Nam. But one of the strongest points in favor of escalation, he said, was that "the government of North Viet Nam would be reminded that it cannot get off unscathed."

Nothing Horrendous. Taylor's remarks drew a reflex-action warning from Moscow against intensifying the war. It also alarmed some Administration officials, who took pains to discourage speculation that dramatic new measures would emerge from Taylor's meeting with the President this week. "The purpose of this meeting is not to make some horrendous decision," said a White House aide.

When Taylor arrived in Washington for a weekend round of preliminary

AP

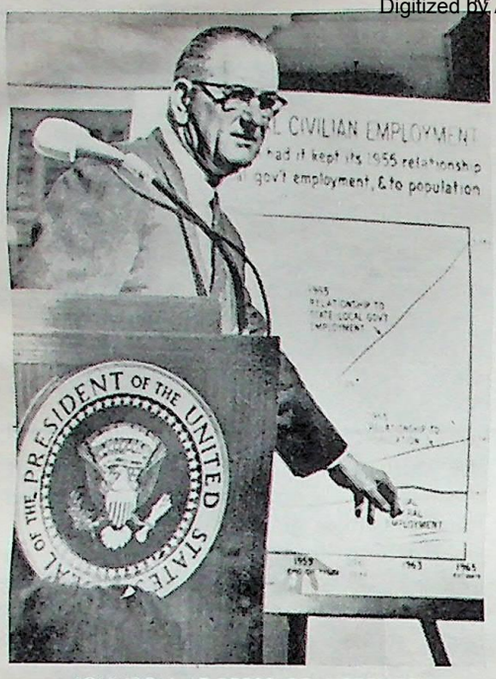
AMBASSADOR TAYLOR & MOTHER
And where were the fixed bayonets?

talks with Secretary of State Dean Rusk and Defense Secretary Robert McNamara, he was met by his 84-year-old mother and New York's Senator-elect Robert F. Kennedy, whose brother had brought Taylor out of military retirement and given him an active role in shaping Viet Nam policy. Questioned about his views on extending the war, Taylor sounded something like Barry Goldwater back-pedaling from a controversial comment. He had, he insisted, only mentioned extension of the war as a possibility. "I ran into stories which seemed to indicate that I was approaching Washington with fixed bayonets in order to put through my program," he said. "Such is not the case."

Whatever the outcome of his meet-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



JOHNSON AT PRESS CONFERENCE
Open season.

ing with President Johnson, Taylor says that he will not quit his post. "I have enlisted in this war for the duration," he said. Despite Taylor's denials that he will insist on extending the war, most military men believe that extension offers the only possible solution. They also feel that it cannot be merely a token extension, but will be costly in lives, money and material.

At week's end, Lyndon Johnson told newsmen that any talk about expanding the war was "somewhat premature." Said the President: "When you crawl out on a limb, you always have to find another one to crawl back on."

THE PRESIDENCY

On the Ranch

The President had been in Washington for only four days since the election, and nearly a month in the Texas sunshine had erased the marks of campaign fatigue. The relative isolation of the ranch protected him against Washington's nagging ceremonial duties, freed him to mull over foreign-policy issues and to chart the direction of the Great Society at home.

In a display of post-election charity, Johnson invited leading Democrats from Georgia, one of the few states he did not carry, to the ranch. Senator Herman Talmadge and Governor Carl Sanders each bagged an eight-point buck.

With the deer season open, so many hunters were prowling the area with rifles and telescopic sights that Ranch Road 1, which runs past the LBJ spread, was ordered closed whenever Johnson is there. According to some reports, Johnson actually was more concerned about photographers shooting from the road with long-range lenses and catching him in off moments, than about the danger from hunters.

Report Card. The President decreed total privacy for Thanksgiving Day, on which Daughters Lynda and Luci flew in from Washington to attend the Texas-Texas A. & M. football game in Austin and a traditional turkey, stuffin' and sweet-potato dinner at the ranch. After dark, Johnson hiked through the hills with the girls, discussed Lynda's studies at George Washington University and Luci's recent report card from the National Cathedral School.

At week's end he held his first give-and-take press conference in nearly two months, first spoke for 20 minutes, then answered questions for another 20.

He contended that the Atlantic Alliance is not in bad shape, argued that some "first principles" are neglected by press analysts. As Johnson sees those principles: "The ultimate essentials of the defense of the Atlantic community are the firmness and the mutual trust of the United States and Europe. The safety of the U.S. depends upon the freedom of Europe, and the freedom of Europe depends upon the strength and the will of the U.S." Johnson pledged that the U.S. will help its allies find "new and better ways by which all interested members of the alliance can increase their own sense of safety by sharing responsibility in the unified defense of the Alliance as a whole. We are not going to be adamant in our attitudes. We are going to try to be cooperative and helpful."

Chart Bearers. Johnson reported that Government agencies have submitted budget requests totaling more than $108 billion for next year, that there will be "a good many reductions," but that he "rather doubts" that he can hold the budget below $100 billion. Asked about the criticism of Civil Rights Leader Martin Luther King by FBI Director J. Edgar Hoover, Johnson took a conciliatory tack, said that he hoped "that this would not degenerate into a battle of personalities." He smiled widely as he spoke on the healthy state of the economy, while aides bustled on and off the porch bearing charts like Wagnerian spear carriers. The President r... a record retail business for the ... mas holidays, declared that ... and expect" steel prices will ... stable next year.

THE ADMINISTRATION

...gun Salvo

...e Johnson Administration last ...fired the opening salvo of its war ...verty—but it had all the impact of ...gun. In a news conference in Aus... ...Poverty Boss R. Sargent Shriver an... ...ced that of the $784.2 million ap... ...ated last October to fight the war, ...million was being ticketed for 120 ...jects in 32 states. Among them: $15 ...on to build or renovate 41 Job ...ps sites, and $12 million for com... ...ity-action programs ranging from ...sh lessons for Papago Indian chil... ...in Arizona to retirement commu... ...es in southwestern Louisiana.

...Shriver never did say just how he and ...181-man staff went about choos... ...recipients. But the standards cer... ...y must have been flexible. One ...ject, for example, was a $25,000 ...to a fruit-cake manufacturer in ...ayette, La.

ARMED FORCES

...w Big Gun

...On Nov. 6, 1937, Army Fullback ...e Ryan finally got into the Harvard ...e with the Crimson holding a 6-0 ...d. In quick succession, he 1) tackled ...Harvard runner so hard that the fellow ...fled and Ryan recovered, 2) bucked ...er a score on an Army fourth down, ...d 3) kicked the point after touchdown that won the game for Army, 7-6.

That glorious occasion is what is mostly remembered about John Dale Ryan, now 48 and a four-star Air Force general who still moves with the catlike grace of a 5-ft. 10-in., 175-pound fullback. Last week President Johnson named Ryan to succeed, effective this week, General Thomas Power as head of the world's most powerful military organization—the U.S. Strategic Air Command.

Ryan lacks the bulldozer force of SAC Predecessor Curtis LeMay, soon to retire as Air Force Chief of Staff, and he does not pretend to Power's burning brilliance. But he was a favorite of both LeMay and Power, and he knows SAC as perhaps no other man.

A World War II bomber pilot, Ryan flew 58 combat missions in Europe, on the final one lost his left index finger to flak; in SAC circles he is fondly, but not to his face, known as "Three-Finger Jack." In 1946 he helped plan U.S. atomic tests at Bikini atoll, then joined SAC, which was just being formed. With the exception of a year's tour as Air Force inspector general, he has been a SAC man ever since, most recently serving as Power's deputy commander. He knows all the tools of his trade, is an expert bombardier as well as pilot, knows his way around the inside of a jet engine and the innards of a missile.

Ryan takes command at a time of SAC transition, with 100 Atlas and 54 Titan I missiles being phased out, along with 400 B-47s, six airfields and 14 missile sites. But he will still have plenty left: 600 B-52s, 80 B-58s, 600 KC-135 jet tanker planes, 200 KC-97s, 54 Titan II missiles and 650 Minutemen (he will eventually have 1,000 Minutemen), all comprising 90% of the free world's explosive power.

LABOR

Staking the Claims

Meeting in Washington last week, the A.F.L.-C.I.O.'s executive council was clearly happy with the results of the 1964 elections. "The will of the people has never been more clearly evident," said the council in the preamble to its statement of 1965 legislative goals. "They gave their mandate to the program of progress President Johnson has called the 'Great Society.' "

Labor itself could—and did—claim a major share of the credit for helping the people evidence their will. During the campaign, the A.F.L.-C.I.O.'s Committee on Political Education staged a massive voter registration drive, distributed some 65 million pieces of propaganda, endorsed 354 congressional candidates, giving special attention to 89 marginal House seats, reported spending $894,000, although the actual figure for organized labor was probably closer to $20 million. In the aftermath, the investment looked good: the Administration is beholden to labor, and among the 91 new Congressmen to be sworn in on Jan. 4, more than 50 are considered more favorably inclined to organized labor than their predecessors.

In its legislative recommendations, the A.F.L.-C.I.O. gave top priority to the repeal of Section 14(b) of the Taft-Hartley law. The clause gives states the right to enact right-to-work laws, banning union shop contracts. Big Labor has been fighting it since 1947, when Taft-Hartley was enacted. The A.F.L.-C.I.O. figures that next year it will have at least 225 votes for the repeal of 14(b), provided of course that the Johnson Administration does not interfere. That seems unlikely, especially since Lyndon Johnson ordered a repeal

proposal included in the Democratic Party platform.

Other than that, labor asked, among many other things, increased unemployment compensation, a hike in the minimum wage from $1.25 to $2, double time for overtime, and a 35-hour week. While it will not get everything it seeks, the chances are that the next Congress will be more amenable to labor's claims than any since the early Roosevelt years.

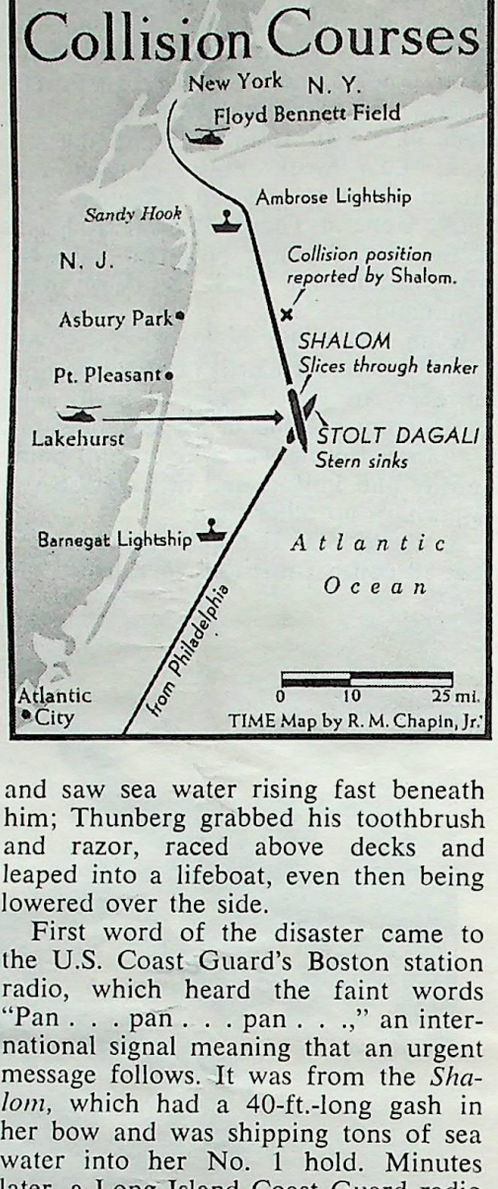
DISASTERS

Left to Be Answered

The expressive face, ordinarily lined with the reassuring smile marks of the luxury-liner captain, now was creased by weariness and worry. "I—I have had no sleep in such a long time," said Captain Avner Freudenberg, 53, a 31-year veteran of the sea, to reporters. "I cannot—you will understand—give any details now." In response to continued questioning, Freudenberg finally smiled painfully and said: "I will now shut up. I cannot give any details."

There were plenty of questions to be answered and plenty of details to be filled in by Freudenberg, skipper of the pride of the Israeli passenger fleet, the seven-month-old, $20 million *Shalom*, and by Captain Kristian Bendiksen, 54, of the 12,723-ton Norwegian tanker *Stolt Dagali*. The two ships collided early Thanksgiving morning in heavy fog 17 miles northeast of Barnegat Lightship, off the New Jersey coast.

The Unmistakable Sound. On the *Shalom* (Peace), just three hours out of New York on a Caribbean cruise, New York Pharmacist Stephen Tannenbaum and his wife Barbara were among the late-stayers at a Thanksgiving Eve party. Shortly after 2 a.m., they were dancing the cha cha cha in one of the ship's ballrooms when they were thrown to the floor and heard that horrifying dissonance—unmistakable to anyone—that means a collision at sea. On the *Stolt Dagali* (which means "Pride of Dagali," a Norwegian town), bound for Newark with a crew of 43 and a cargo of vegetable oil, Seaman Sverre Thunberg, 19, was jolted awake by that same sound, looked down from his bunk and saw sea water rising fast beneath him; Thunberg grabbed his toothbrush and razor, raced above decks and leaped into a lifeboat, even then being lowered over the side.



First word of the disaster came to the U.S. Coast Guard's Boston station radio, which heard the faint words "Pan . . . pan . . . pan . . .," an international signal meaning that an urgent message follows. It was from the *Shalom*, which had a 40-ft.-long gash in her bow and was shipping tons of sea water into her No. 1 hold. Minutes later, a Long Island Coast Guard radio monitored a distress call from the *Stolt Dagali*. The Coast Guard asked Washington's Federal Communications Commission for a radio fix on the vessels. Navy and Coast Guard helicopters and planes were dispatched from Brooklyn's Floyd Bennett Naval Air Station and the Lakehurst, N.J., Naval Air Station. Six Coast Guard cutters near the scene were given the emergency "go" signal, and two commercial vessels in the vicinity raced in to help.

On the *Shalom*, Captain Freudenberg ordered all watertight doors [illegible]. "We stopped immediately after the collision," he said. "There was no [illegible] not the crew and not the passe[illegible]. Then we heard the cries of men [illegible] water. We knew it was none of [illegible] people. We lowered lifeboats to [illegible] for them." The *Shalom*'s [illegible] picked up five of the tanker's crew.

As for the *Stolt Dagali*, it had [illegible] sheared in half by the *Shalom*'s [illegible]. The stern section sank almost [illegible] diately, taking 19 seamen with it [illegible] on the bow section were ten men, [illegible] cluding Captain Bendiksen.

Still Missing. The first rescue [illegible] copters hovered overhead, dro[illegible] flares to light the scene, descen[illegible] within 10 ft. of the 20-ft. swells, [illegible] up nine men and 13 bodies, the[illegible] Captain Bendiksen and the nine [illegible] from the bow section of the *Stolt D*[illegible].

By dawn, the rescue operation [illegible] over, and the *Shalom* was under[illegible] at slow speed back to New York. [illegible] missing were a lot of answers. [illegible] could the collision have occurred [illegible] tween two ships equipped with [illegible] that was reported to have been [illegible] on, functioning perfectly, and [illegible] watched? And after a journey [illegible] mere 50 miles how could the *S*[illegible] when it first radioed its position [illegible] the collision, give a reading 15 [illegible] away from where it really was?

CRIME

A Matter of Degree

An all-male jury last week de[illegible] ated for 19 hours, finally return[illegible] verdict of second-degree m[illegible] against Manhattan tin-can Ma[illegible] turer Mark Fein, 32, in the fatal [illegible] ing of his bookie (TIME, Nov. [illegible]. The crime is punishable by 20 ye[illegible] life. Second-degree murder is de[illegible] as killing in the heat of anger, w[illegible] premeditation. The definition do[illegible] necessarily fit the circumstances [illegible] Fein case, but the jury was not [illegible] to send a man to the chair on the [illegible] of the chief witness, Gloria Kend[illegible] scribed by a defense attorney as [illegible] procuress, this prostitute, this ma[illegible] this diabolically clever creature."

THE WARREN COMMISSION

The Witnesses

The Warren Commission last week received 26 volumes, totaling 17,741 pages, of the testimony and evidence on which it based its 888-page report on the assassination of President Kennedy. Included were more than 3,100 affidavits and statements from and interviews with some 550 persons, many of them technical experts, peripheral participants, and even people with some far-out ideas about how and why it happened.

But it was in the sometimes halting, often rambling, always chilling stories of those most immediately involved that the testimony had its impact.

Jackie

Chief Justice Warren, Commission counsel J. Lee Rankin and Bobby Kennedy spent 45 minutes with Jacqueline Kennedy in her Georgetown home when she told of the assassination. She sipped lemonade, replied softly to Rankin's gentle questioning. Excerpts:

A Quizzical Look. "In the motorcade, you know, I usually would be looking mostly to the left side and he was waving mostly to the right, which is one reason you are not looking at each other very much. It was terribly bright. Just blinding all of us.

"You know there is always noise in the motorcade, and there are always motorcycles beside us, a lot of them backfiring. So I was looking to the left. I guess there was a noise, but it didn't seem like any different noise really, because there is so much noise, motorcycles and things. But then suddenly Governor Connally was yelling 'Oh, no, no, no!'

"I heard these terrible noises. You know. And my husband never made any sound. So I turned to the right. And all I remember is seeing my husband, who had this sort of quizzical look on his face, and his hand was up, it must have been his left hand. And just as I turned and looked at him, I could see a piece of his skull, and I remember it was flesh-colored. I remember thinking he just looked as if he had a slight headache. And I just remember seeing that. No blood or anything.

"And then he sort of did this, put his hand to his forehead and fell in my lap. And then I just remember falling on him and saying, 'Oh, no, no, no,' I mean, 'Oh, my God, they have shot my husband.' And 'I love you, Jack,' I remember I was shouting.

"I used to think if I only had been looking to the right I would have seen the first shot hit him, then I could have pulled him down, and then the second shot would not have hit him."

Desperate Reach. Jackie said that she did not recall scrambling onto the back of the limousine in the instant after the President's head was shattered by the bullet. But Secret Service Agent Clint Hill, who sprinted up from behind and leaped onto the presidential car, later told the Commission what happened after he heard Oswald's first shot: "I had a hold of the handgrip [on the rear of the limousine] with my hand, when the car lurched forward. I lost my footing, and I had to run about three or four more steps before I could get back up in the car. The second noise that I heard had removed a portion of the President's head, and he slumped noticeably to his left. Mrs. Kennedy had jumped up from the seat and was, it appeared to me, reaching for something coming off the right rear bumper of the car, the right rear tail, when she noticed that I was trying to climb on the car."

Had Hill noticed anything that could have made Jackie reach out so desperately? "I thought I saw something come off the back, too, but I cannot say that there was. I do know that the next day we found the portion of the President's head. It was found in the street."

Hearing It Hit. When Connally himself was hit, his wife pulled him down into her lap. He was "conscious all the time, and with my eyes open, and then, of course, the third shot sounded, and I heard the shot very clearly. I heard it hit him. I heard the shot hit something, and I assumed again—it never entered my mind that it ever hit anybody but the President. I heard it hit. It was a very loud noise, just that audible, very clear.

"Immediately, I could see on my clothes, my clothing, I could see on the interior of the car which, as I recall, was a pale blue, brain tissue, which I immediately recognized, and I recall very well, on my trousers there was one chunk of brain tissue as big almost as my thumbnail, and again I did not see the President at any time either after the first, second, or third shots, but I assumed always that it was he who was hit and no one else."

AP

AGENT HILL SCRAMBLING ABOARD KENNEDY CAR
"The whole thing seemed unreal—unbelievable."

The Connallys

At one point during his testimony, Texas' Governor John Connally stripped off his shirt to show the scars on his chest. Repeatedly, his eyes filled with tears as he spoke.

Said Connally: "I heard this noise, which I immediately took to be a rifle shot. I instinctively turned to my right because the sound appeared to come from over my right shoulder, so I turned to look back over my right shoulder, and I saw nothing unusual except just people in the crowd, but I did not catch the President in the corner of my eye, and I was interested because, once I heard the shot in my own mind, I identified it as a rifle shot, and I immediately—the only thought that crossed my mind was that this is an assassination attempt."

When Connally's wife Nellie heard the first shot, she turned around to see Kennedy. "He made no utterance, no cry. I saw no blood, no anything. It was just sort of nothing, the expression on his face, and he just sort of slumped down. Then, very soon, there was the second shot that hit John. I never again looked in the back seat of the car after my husband was shot. I just pulled him over into my arms because it would have been impossible to get us really both down with me sitting and me holding him. So that I looked out, and all I could see were the people flashing by. I didn't look back any more."

Like Spent Buckshot. "The third shot that I heard I felt," said Nellie Connally. "It felt like spent buckshot falling all over us, and then, of course, I too could see that it was the matter, brain tissue, or whatever, just human matter all over the car and both of us. Mrs.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Kennedy said, the first thing I recall her saying was, after the first shot, and I heard her say, 'Jack, they have killed my husband,' and then there was the second shot, and then after the third shot, she said, 'They have killed my husband; I have his brains in my hand,' and she repeated that several times. And that was all the conversation."

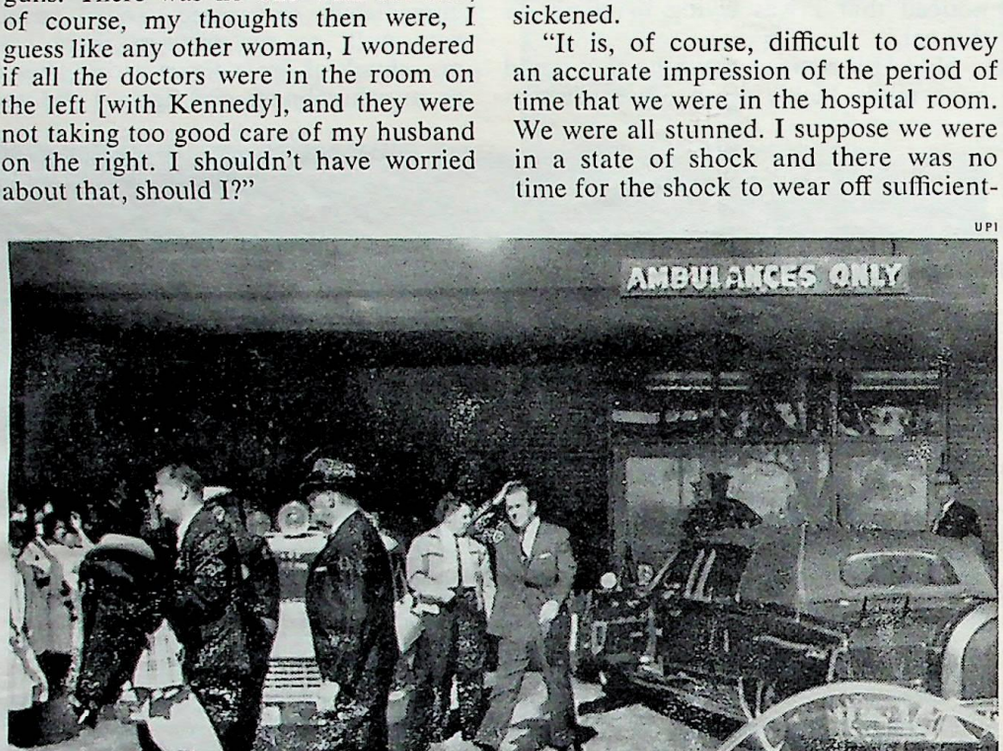
At the hospital, while her husband was in one emergency room and the President in another, Mrs. Connally recalled: "There were lots of what I assumed were Secret Service men rushing in with machine guns, I guess, or tommy guns. There was no one with me and, of course, my thoughts then were, I guess like any other woman, I wondered if all the doctors were in the room on the left [with Kennedy], and they were not taking too good care of my husband on the right. I shouldn't have worried about that, should I?"

"He's Gone." At the hospital, Johnson was escorted into a tiny room by Secret Service men and told to stay there—no matter what. There he learned of Kennedy's death.

"It was [White House Aide] Ken O'Donnell who, at about 1:20 p.m., told us that the President had died," said Johnson. "I think his precise words were, 'He's gone.' I found it hard to believe that this had happened. The whole thing seemed unreal—unbelievable. A few hours earlier, I had breakfast with John Kennedy; he was alive, strong, vigorous. I could not believe now that he was dead. I was shocked and sickened.

"It is, of course, difficult to convey an accurate impression of the period of time that we were in the hospital room. We were all stunned. I suppose we were in a state of shock and there was no time for the shock to wear off sufficiently so that the magnitude of our personal loss of this great man and good friend could express itself in words or in surface feelings. I suppose, actually, that the only outlet for the grief that shock had submerged was our sharp, painful and bitter concern and solicitude for Mrs. Kennedy."

UPI



PRESIDENTIAL CAR AT HOSPITAL (WITH ROOF BACK IN PLACE)

Amid chaos, time for compassion.

Lyndon Johnson

Vice President Johnson was riding two cars behind the Kennedys with Lady Bird, Texas Senator Ralph Yarborough and Secret Service Man Rufus Youngblood. "I was startled by the sharp report or explosion," Johnson wrote the Commission, "but I had no time to speculate as to its origin because Agent Youngblood turned in a flash, immediately after the first explosion, hitting me on the shoulder, and shouted to all of us in the back seat to get down. Almost in the same moment in which he hit or pushed me, he vaulted over the back seat and sat on me. I was bent over under the weight of Agent Youngblood's body. I remember attempting to turn my head to make sure that Mrs. Johnson had bent down. Both she and Senator Yarborough had crouched down at Agent Youngblood's command."

Later, aboard Air Force One, the air of unreality and disbelief persisted. Said Johnson: "We were ushered into the private quarters of the President's plane. It didn't seem right for John Kennedy not to be there. I told someone that we preferred for Mrs. Kennedy to use these quarters."

Bravery, Nobility, Dignity. From the plane, Johnson phoned Bobby Kennedy in Washington, and they decided that the presidential oath of office should be administered at Dallas' Love Field. Deputy Attorney General Nicholas Katzenbach dictated the oath to a secretary aboard the plane. Dallas Judge [illegible] Hughes, who was to administer the [illegible] arrived, and Lyndon recalled: "A [illegible] minutes later Mrs. Kennedy and [illegible] President's coffin arrived. Mrs. John[illegible] and I spoke to her. We tried to com[illegible] her, but our words seemed inadequ[illegible] About a half-hour later, I asked [illegible] one to find out if Mrs. Kennedy [illegible] stand with us during the administra[illegible] of the oath. Mrs. Johnson went [illegible] be with her. Mrs. Kennedy came [illegible] stood with us during the momen[illegible] the oath was being administered. I [illegible] never forget her bravery, nobility [illegible] dignity."

Lady Bird

About a week after the assassina[illegible] Lady Bird Johnson dictated her re[illegible] lections on a tiny tape recorder—[illegible] marily as a form of therapy to hel[illegible] over the shock and horror of the e[illegible] rience." A transcript was sent to [illegible] Warren Commission.

After the shots, the Johnsons [illegible] "accelerated terrifically fast—faster [illegible] faster. Then suddenly they put o[illegible] brakes so hard that I wondered if [illegible] were going to make it as we wh[illegible] left and went around the corner [illegible] pulled up to a building. I looked up [illegible] saw it said 'Hospital.' Only then [illegible] believe that this might be what it w[illegible]

"As we ground to a halt—we [illegible] still the third car—Secret Service [illegible] began to pull, lead, guide, and hus[illegible] out. I cast one last look over my s[illegible] der and saw, in the President's c[illegible] bundle of pink, just like a drift of [illegible] soms, lying on the back seat. I th[illegible] was Mrs. Kennedy lying over the P[illegible] dent's body."

"God Help Us All." Later, Lady [illegible] found Jackie waiting outside Emerg[illegible] Room One. "You always think of [illegible] or someone like her—as being insul[illegible] protected," said Mrs. Johnson. "She [illegible] quite alone. I don't think I ever [illegible] anyone so much alone in my life. I [illegible] up to her, put my arms around her [illegible] said something to her. I'm sure it [illegible] something like 'God help us all.' [illegible] cause my feelings for her were too [illegible] multuous to put into words."

Lady Bird spoke next with N[illegible] Connally. "Then I turned and went [illegible] to the small white room where Ly[illegible] was. Mr. Kilduff [Assistant Press S[illegible] retary] and Kenny O'Donnell [illegible] coming and going. I think it was [illegible] Kenny's face and Kenny's voice th[illegible] first heard the words, 'The President [illegible] dead.' Mr. Kilduff entered and said [illegible] Lyndon, 'Mr. President.'"

Lady Bird recalled the tense [illegible] from the hospital to the airport. "[illegible] don said to stop the sirens. We [illegible] along as fast as we could. I looked [illegible] at a building and there already was [illegible] flag at half-mast. I think that is w[illegible] the enormity of what had happened [illegible] struck me."

Of the wait in the cabin of Air F[illegible] One before the takeoff for Washi[illegible] Lady Bird recalled: "It's odd at a [illegible]

e that the little things that come to
ur mind, and a moment of deep
mpassion you have for people who
e really not at the center of the trag-
. I heard a Secret Service man say
the most desolate voice, and I hurt
him. 'We never lost a President in
Service,' and then Police Chief
ry of Dallas came on the plane
said to Mrs. Kennedy, 'Mrs. Ken-
believe me, we did everything we
bly could.' "

I Want Them to See." Later, Lady
talked briefly with Jackie again.
looked at her. Mrs. Kennedy's dress
stained with blood. Her right glove
caked—that immaculate woman—
as caked with blood, her husband's
d. She always wore gloves like she
used to them. I never could. Some-
that was one of the most poignant
gs—exquisitely dressed and caked
blood. I asked her if I couldn't get
eone in to help her change and she
d 'Oh, no. Perhaps later I'll ask
y Gallagher, but not right now.' "

efore Lady Bird gave the transcript
e Commission, she had done some
ing. On the original, at the point
re she discussed Jackie's refusal to
ge her blood-drenched clothes,
y Bird had added: "Then with some-
g—if you can say a person that gen-
that dignified, had an element of
eness—she said, 'I want them to
what they have done to Jack.' "

nny O'Donnell

One of Kennedy's most devoted
s, Kenny O'Donnell, who had ar-
ged the Dallas trip to straighten out
party problem in Texas," was riding
e car behind the President when he
d Oswald's shots. "I saw the third
hit. It was such a perfect shot—I
ember I blessed myself. I was rath-
convinced that it was a fatal blow."
utside the emergency room, O'Don-
talked with Jackie. "I tried to in
e way imply that she might leave
come with us, at least to get her
of that room. She was covered with
od. Her response to me was that she
ld not leave her husband's body. I
zed that she was going to stay with
husband, no matter what anybody
and there was no possible way of
ng her to leave." O'Donnell ordered
asket, then tried to take Jackie out
she would not see it. "But she knew
at was going on," said O'Donnell.
e came out and said, 'No, I want to
ch it all.' And she stood in the door-
. And then they took it in, and put
e body in the casket."

The Law Must Be Met." At that
nt came a harrowing incident. "The
sket was brought out about halfway,"
d O'Donnell, "and a gentleman ar-
ed who said that we would not be
owed to remove the body from the
spital until the necessary papers had
en signed." O'Donnell agreed, assum-
g it would be done on the instant, but
out ten minutes passed. "I was getting
re concerned about Mrs. Kennedy's
state all the time—although she appeared composed, as she had from the beginning. Then a gentleman did arrive who has later been identified for me as a judge. The gentleman was very calm and cool and collected. If my recollection is clear, he said something to the effect that as of now this was just a homicide case, and there were certain things that had to be carried out, one of which I interpreted as an autopsy.

"My recollection is it was indicated to us that the President is dead, the hospital has to perform certain functions, and the law must be met, no matter who it is, at this moment. In my own mind, when they said autopsy, I realized we were talking not about hours, but perhaps even days, which was an impossible situation for Mrs. Kennedy."

"You Can't Do That!" Angered O'Donnell decided to ignore the demands of the Dallas officials. "We went

FRED WARD—BLACK STAR

THE RETURN TO WASHINGTON
An outburst was omitted.

in and took the body out," said O'Donnell. "Mrs. Kennedy stood right behind it, I think totally unaware of the problems that were then existing. We pushed the casket out through the hall. This first gentleman that had come in, who, I presume, was from the coroner's office, shouted very loudly, 'You can't do that! You can't leave here now!' Nobody paid any attention to him. We pushed out through another set of swinging doors. I remember a Catholic priest was between this and the doorway, and was praying. It was most disconcerting because we were concerned at all times that some moment they would say stop, and I hated to think what might happen to Mrs. Kennedy if she had to go back and go through this all over again. So we brushed them all aside and came out the same way we had come in, through the same doors."

In the presidential plane, O'Donnell urged the crew to take off quickly because "all of us were under the assumption or apprehension that at some moment we either might not be granted clearance to take off, or that the hospital may have in some way gotten the police to intercept us—the difficulty of that to Mrs. Kennedy was incalculable. I was in a highly desperate strait to get that airplane in the air and back to Washington."

Marina Oswald

In her more than 25 hours before the Commission (longest appearance of any witness), Marina Oswald spoke mostly through a Russian interpreter, haltingly told what it was like to live with Lee Harvey Oswald. Excerpts:

"He said that after 20 years he would be prime minister. I think that he had a sick imagination—at least at that time I already considered him to be not quite normal—not always, but at times. He was very much interested, exceedingly so, in autobiographical works of outstanding statesmen of the United States and others. I think that he compared himself to these people whose autobiographies he read. That seems strange to me, because it is necessary to have an education in order to achieve success of that kind.

"He was irritated by trifles. Such a small thing as, for example, dinner being five minutes late, and I do mean five minutes—it is not that I am exaggerating—he would be very angry. Or if there were no butter on the table, because he hadn't brought it from the icebox, he would with great indignation ask, 'Why is there no butter?' And at the same time if I had put butter on the table he wouldn't have touched it. This is foolishness, of course. A normal person doesn't get irritated by things like that."

At one point, Marina was thinking of returning alone to Russia. "He was very sad and upset. He was sitting and writing something in his notebook. I asked him what he was writing and he said, 'It would be better if I go with you.' Then he went into the kitchen and he sat there in the dark, and when I came in I saw that he was crying. I didn't know why. But, of course, when a man is crying it is not a very pleasant thing, and I didn't start to question him about why.

"I remember that he talked about Kennedy's father, who made his fortune by a not very—in a not very good manner. He said he had speculated in wine. I don't know to what extent that is true."

The night after Kennedy died, Marina saw Oswald in the Dallas city jail. "He tried to console me that I should not worry, that everything would turn out well. But I could see by his eyes that he was guilty. Rather, he tried to appear to be brave. However, by his eyes I could tell that he was afraid. This was just a feeling. It is hard to describe. He said goodbye to me with his eyes."

DR. PAUL CARLSON'S BODY

A single life with a special, tragic meaning.

AFRICA

The Congo Massacre

(See Cover)

The Simbas came at 7 o'clock. Grim-faced in their manes of monkey fur and feathers, they banged on the doors of the Résidence Victoria with spears and gun butts, roughly hustled their white hostages out into the street. For an hour, the skies over Stanleyville had pulsed with airplane engines and apprehension. Watchers on the rooftops saw parachutes bloom and fall over the airfield to the west; gunfire ticked closer in the near distance. The Belgians had come, and help for the hostages was on its way—fast, but for many not fast enough.

The Simbas marched the 250 whites out into the broad, dawn-pale streets near the monument of the late Patrice Lumumba, the wild leftist demagogue who was the Congo's first Premier and remains its leading martyr. The marble steps below the rain-blanched image were discolored with the blood of more than 100 Congolese executed in recent months: even before the rebels turned on the whites, they had brutally exterminated black opponents of their arcane revolutionary cause. At the monument, in the name of socialism and the Congolese People's Republic, the former mayor of Stanleyville had been eviscerated, his liver and kidneys eaten raw by a laughing rebel officer while the mayor slowly died.

No Scruples. The hostage column was marched into nearby Avenue Sergeant Kitele, then ordered to sit down in the street. "We didn't believe they would harm us deliberately," recalls U.S. Consul Michael P. Hoyt, who walked with one of his aides at the head of the column. "But there was always the chance of an accident. The firing kept getting closer. Then I saw one of the Simbas fire into the crowd and I saw people running. Everybody began running. I was not running properly and I fell down twice. My legs wouldn't function right. A guy ahead of me went over a wire fence. I decided it was best to keep down. I didn't hear any screams during the firing. Funny. I always thought that people being shot at screamed."

There were plenty of screams elsewhere. As the U.S. planes kept coming and stick after stick of Belgian paratroopers popped silk over the city, Radio Stanleyville shrilled its last message: "*Ciyuga! Ciyuga!* Kill them all! Men, women and children. Kill them all! Have no scruples!" The Simbas (Swahili for "lions") of Rebel General Nicholas Olenga did their best to carry out the order. In the Avenue Sergeant Kitele, according to some survivors, the command to fire was given by "Major Bubu," a deaf-mute ex-boxer addicted to hemp who served as personal bodyguard to Rebel Defense Minister Gaston Soumialot. Bubu's order could not have been a scream, but in its strangled, inarticulate ferocity must have expressed precisely the blood lust of the Simbas.

Rifles and Sten guns rattling, they fired point-blank into the seated hostages. The gunners picked women and children as their first targets. Many whites flopped onto the pavement, pretending to be dead. Others did not have to pretend. One Belgian child was cut in half by a Sten-gun burst. Parents who flung themselves over their children were stitched by the wild bullets that sprayed the crowd. A woman sat openmouthed as gunfire chopped down the people on either side of her. She somehow came through unhurt.

Not so lucky was a quiet, self-effacing American medical missionary from Torrance, Calif., who for two months had been a pawn of the rebel regime in its negotiations with the U.S., Belgium and the legal Congolese government of Premier Moise Tshombe. Periodic sentenced to death as an "Ameri spy," periodically reprieved when th seemed to go well for the rebels, Paul Earle Carlson, 36, caught a s of bullets through head and back he tried to escape the slashing gunf "Carlson was not singled out," s Mike Hoyt, who saw the surgeon "He arrived late at the rear of the umn with two other Americans. T started running and went over a w Then he started over. He just di make it. It made me sick. He had h through so much, and to be killed the very end."

Last Rites. Moments after Carl died, the Belgian paratroopers arri and at their approach the Simbas t to their heels. The troops secured airport, quickly fought their way town. Surprise, speed and Simba c ardice kept the slaughter near Lumu ba Square from reaching major p portions. But across the Congo Ri in Stanleyville's Rive Gauche sec the Simbas found 28 other victims. hostages were hacked to pieces on street. Among them were four Span nuns and a number of Spanish Dutch priests. According to a witn the priests were beaten and then th throats were cut. After similar tre ment, the nuns were placed on top them. The usual mutilations were c ried out on the sexual organs, and fe was cut from the bodies to be ea One Belgian who escaped said: " bought our lives with beer and mo The fathers and nuns had nothing ransom their lives with."

Of some 1,300 whites in Stanleyv all but 60 were rescued. Of the d at least 29 were Belgian, one Canadi two American—Carlson and an missionary, Phyllis Rine, 25, of M Vernon, Ohio.

was no saint and no deliberate mar-
. He was a highly skilled physician
o, out of a strong Christian faith and
ense of common humanity, had gone
the Congo to treat the sick. His
ath did more than prove that Black
ican civilization—with its elaborate
ppings of half a hundred sovereign-
s, governments and U.N. delegations
—is largely a pretense. The rebels were after all, for the most part, only a rabble of dazed, ignorant savages, used and abused by semi-sophisticated leaders.

But virtually all other black African nations, including the more advanced and moderate ones, supported the rebels without even a hint of condemnation for their bestialities. Virtually all these nations echoed the cynical Communist line in denouncing the parachute rescue as "imperialist aggression." When this happened, the sane part of the world could only wonder whether Black Africa can be taken seriously at all, or whether, for the foreseeable future, it is beyond the reach of reason.

Naked Nuns. The U.S.-Belgian intervention was decided upon only as a last resort, when all negotiations had failed with the rebel regime of Christophe Gbenye—the bearded "President" of the Peking-backed Congo People's Republic, who packs a Colt revolver in his blue jeans and drives a Rolls-Royce. When the more or less Communist-backed rebels first launched their attack on the government, the U.S. helped Premier Tshombe only with relatively modest sums of money and supplies. He himself recruited white officers of various nationalities to stiffen the loyal Congolese army.

When the rebels captured Stanleyville last August, they treated the whites living there relatively well at first. But as the war began to turn against them, they grew increasingly venomous, until finally all whites were "Americans" and deserving of maltreatment or death. The rebel regime kept announcing that 10,000 Americans were fighting alongside Tshombe. Except for an occasional refugee's horror story, little was known on the outside about the fate of the whites during that period. But last week, the grim details were filled in.

Anyone with a radio set—either transmitter or receiver—was considered a spy, calling in "Yankee" help against the cause. Sister Anne-Maria Merkens, another superior of a mission hospital at Bondamba, 300 miles northwest of Stan, owned a tiny transistor radio. Simbas in leopardskins appeared in mid-September, accused the nuns of sending messages to the Americans, even though the radio was only capable of receiving signals. They returned a few weeks later, killed the mission's cows, stole its chickens and rice. On their next visit, they abducted schoolgirls aged 7 to 14, spent the night sniffing dope, dancing and raping. Finally, in November they "arrested" Sister Anne-Maria and another nun, forced them to strip, and locked them up in Basoko with 16 other nuns, 23 priests and three civilians.

"The next day, Nov. 11, the Simbas heard two light planes overhead," Sister Anne-Maria recalled last week: "In rushed a Simba, who with a sweep of his spear brushed the table clean. Shouting accusations that we had summoned the Americans, the Simbas attacked the priests. They hammered them mercilessly with sticks and rifle butts until nearly everyone was covered with blood and bruises. Then we were marched outside, told to strip off all our clothes, and ordered to sit down." Naked, the nuns were beaten fiercely, locked up without food and clothing for 24 hours in a small room. "Again and again they promised to kill us or eat us alive or throw us into the river in sacks."

Finally the priests and nuns were taken to Stanleyville to join the rebels' other hostages. By now the leaders were trying to barter the lives of their prisoners for a cease-fire.

To the Inner Station. Negotiations started in Nairobi, under the auspices of Kenya's Prime Minister Jomo Kenyatta, chairman of the Organization of African Unity's Congo Reconciliation Commission. Posturing in his orange sport shirt among the mangoes and moonflowers of Jomo's garden, the rebel "Foreign Minister," Thomas Kanza, presented his conditions: hostages would live if Tshombe's Congolese army im-

mediately halted its drive toward the rebel capital. That was tantamount to demanding a legitimate government's surrender to the rebels.

Moreover, it was becoming increasingly clear that Gbenye's control over his savage Simbas was fraying, and that unless something was done immediately, the hostages in rebel territory would be massacred out of hand. U.S. Consul Hoyt and his four aides were under threat of death for most of their three-month captivity, at one point were told to eat slices of an American flag ("We just made like we were chewing it," said Vice Consul David Grinwis. "It was a very durable flag"). Early last week, Gbenye himself fed the fires by telling a cheering crowd: "As fetishes we will wear the hearts of Belgians and Americans; we will dress in the skins of Americans and Belgians."

On instructions from Washington, U.S. Ambassador William Attwood broke off the talks. To save the lives of the hostages, the 600 men of Belgium's crack Régiment Para-Commando, led by a stocky, balding Africa hand, Colonel Charles Laurent, 51, would have to live up to their motto: *Nec Iactantia Nec Metu* (Neither Boasting nor Fearing). They did.

From Ascension Island, where they had been in readiness for a week, the para-commandos flew in 14 U.S.-piloted C-130s to Katanga's giant Kamina Military Base and thence toward their target. Below the gaping jump-hatches, the Congo wound broad and tawny through black-green bush; the tin and tile roofs of Stanleyville shone pink in the early light. "Stan," as it is known to both black and white, is the most African town of the Congo. The "Inner Station" of Conrad's *Heart of Darkness*, it stands at the very center of the continent.

As Conrad wrote of the journey upriver to Stanleyville: "It was like traveling back to the earliest beginnings of the world, when vegetation rioted on earth and the big trees were kings. The air was warm, thick, heavy, sluggish. You thought yourself bewitched and cut off forever from everything you had known once—somewhere—far away—in another existence perhaps." So it must have seemed to the soldiers who last week made the voyage to the Inner Station.

Gold Reserves. The Belgian paras sustained only seven casualties in rescuing the hostages. Four hours after their arrival, the Congolese 5th Mechanized Brigade rolled into Stan, spearheaded by the tough white fighters of Major Mike Hoare, 44, a starchy South African who served behind Japanese lines in Burma under Britain's mystical guerrilla warfare expert, Orde Wingate. No mystic himself, Hoare insisted that his 300 men stay neatly shaved, refrain from drinking beer before battle, but cared not a whit what they did otherwise. Mostly South Africans and Rhodesians, they gave no quarter to any black resembling a rebel.

Some of these white soldiers lived up to the name by which they are universally known—mercenaries. They were not above searching bodies for cash or blowing a few safes in the Stanleyville banks. But a great many of them are fighting for Tshombe's government out of conviction. Certainly, the "mercenaries" are no more mercenary—and far less brutal—than the African soldiers on either side of the Congolese civil war.

Gbenye and his rebel ministers had fled Stanleyville, and with them went more than 1,500 lbs. of gold (valued at nearly $800,000) from the Kilo-Moto Mines and more than $6,000,000 from the vaults of the Banque du Congo. But many Simbas had stayed behind sniping at anyone who moved, and the mopping up was bloody.

As troops entered the rebel headquarters near Lumumba Square, a black hand was spotted reaching from a closet to close the door. A Belgian opened up with his automatic rifle. In the headquarters alone, 25 rebels—mostly unarmed, minor political types—were sprayed with rifle fire as they hid under beds, beneath the kitchen table, and in wardrobes, which toppled like tipped coffins as their occupants died. Outside, Tshombe's tough Katangese gendarmes hunted down Simbas. Black residents of Stanleyville took to wearing white headbands to show their allegiance to the Leopoldville government, but that did not always work, and many a headband was soon stained red.

While a ghostly Stanleyville was gradually secured by the government troops, hundreds of white hostages still remained in rebel hands elsewhere. Two days after the Stanleyville drop, the Belgian paras jumped again, this time at Paulis, northeast of Stanleyville, where 270 whites were being kept prisoner.

Simba Scrimshaw. When they arrived, the paras found 20 hostages murdered with a deliberate savagery reminiscent of the Nazi death camps. A group of Simbas had burst into a Protestant mission where 71 Belgians and an American missionary, Joseph T[illman], 49, had been held for three weeks. The rebels, drunk and high on hemp, chose their victims for the night. Jean de Gotte, Belgian honorary consul in Paulis, watched in horror:

"The first dozen were bound, hands and feet tied together behind their backs—trussed like chickens. They were taken outside and dumped on the [road]. walk. Five white fathers were stripped of their cassocks and their beards were cut off. Mr. Tucker was first. They beat him across the face with a beer bottle and blinded him. Then they began to slowly, down the spine, with rifle butts and sticks. Every time he squirmed they hit him. It took him 45 minutes to die. Some of them died more quickly." The next night, seven more Belgians were killed. The priests' bodies were left on the mission steps; others were dumped into a crocodile-infested river.

In Paulis, the rebels were equally savage with their fellow Africans. A pro-Tshombe provincial president had been executed as an example to the town's 30,000 inhabitants. The Simbas first cut out his tongue, next lopped off his ears, feet and hands. Then they began a slow scrimshaw from the bottom up. It took him 15 minutes to die. One survivor estimated that 4,000 Congolese were killed in Paulis—mostly the town's "intellectuals" (clerks, teachers, civil servants). "They started by killing anyone who was well-dressed," said a 27-year-old railway employee who got out alive. "In this country, the well-dressed are well-educated."

As the paras tried to get the survivors out of Paulis, the Simbas followed them back to the rutted dirt airstrip where

The Road to Wasolo. Against the
kground of Stanleyville and Paulis,
quick machine-gun death of Paul
son appears merciful. But against
deeper background of his life, par-
arly his two years of service as a
geon in a high, hot corner of Africa,
re medicine was as rare as a morn-
frost, it appears cruel and incredibly
eful.

Wasolo, where "Doctor Paul" main-
ed his medical mission, is a sudden
ing on the turn of a jungle road
miles northeast of Leopoldville and
illion miles from nowhere. In Lin-
, the lingua franca of the region,
place is aptly called "The End of
World." The Africans have beaten
n the *sobi* grass around their huts
ear of snakes; beyond rises a wall of
enetrable rain forest. The hospital
mpound dominates a low hill. The
se itself is red brick, and in the rainy
son its roof pours drinking water
barrels standing beneath the eaves.
the dry season, Lois Carlson, 36, and
two children, Wayne, 9, and Lyn-
7, would take the truck to a stream
a mile away to fetch water. At the

was here that Carlson chose to
e his life. Born in Culver City,
if., the son of a Swedish-immigrant
chinist, he had been raised in an
osphere of religion: the Evangelical
venant Church of America, an off-
ot of Lutheranism. Two years of
vice as a seaman in the U.S. Navy
46-48) provided him with the G.I.
and eventually his medical degree.
North Park College in Chicago he
ed blonde, pert Lois Lindblom,
om he married in 1950. Then came
nford and a degree in anthropology,
owed by George Washington Uni-
sity med school. Lois worked as a
se during Carlson's medical studies,
ked forward to a cozy, housewifely
eer in California. But then Paul went
the Congo in 1961 for a six-month
r with the Protestant Relief Agency.
hat he saw there changed, and ulti-
ately ended, his life.

Back in California, Carlson could not
get the urgent medical needs of the
ongo. As he told one colleague over
each: "If you could only see, you
uldn't be able to swallow your sand-
ich." He remained in private practice
nonetheless; he owned a $12,000 home

STANLEYVILLE SURVIVOR & CHILD
Others did not have to play dead.

near Redondo Beach, was earning $12,000 a year. But it palled, and finally he told a radiologist friend: "I'm going back. I can't stand doing hernias and hemorrhoids any more."

Some Exotica. Signing on as medical missionaries for $3,230 a year, the Carlsons arrived at Wasolo in October 1963—and were promptly greeted by several cases of hernia and hemorrhoids. But somehow it was different in an 80-bed hospital serving 100,000 potential patients, particularly since the chief surgeon also had to patch broken tie rods on his truck-*cum*-ambulance with vines, build cookhouses, make house calls on a motor bike, and still handle at least one major operation a day.

As Carlson wrote to friends back home, there was some exotica as well: "The teen-age boy with hemoglobin of only 20% who looks as if he had been blown up with the helium gas used for balloons at the circus—only the skin of his legs is like old, dried, peeling leather"; the African whose homemade *poo-poo* gun had exploded and taken half his face with it; the difficult obstetrical cases, as for instance the pregnant patient who had to be operated on for a ruptured uterus. "The lady had come about 75 miles in trucks. When she got here, she had no blood pressure and a pulse of 180. We thank God that she is slowly on the way to recovery. And she paid the $1.75 that covered the surgery."

Permeating Carlson's letters, and scored in his thin voice on the tape-recorded messages he sent, were a delighted wonder at the oddness of the Congo and a conscious attempt to sound matter-of-fact. He found it strange to be awakened by "the night sentry in tattered pants with a long spear" and asked to aid a child with meningitis. It was oddly lyrical to be "trudging single file through the forest on the little path" to the leper colony, singing Christmas carols. There was something more immediate about his surgery when the sun set in the middle of an operation and the sutures had to be made by flashlight. Throughout his letters, the phrase persisted: "But so life goes."

For the family, the life was a far remove from Redondo Beach barbecues. The diet was bananas, papayas and pineapples; goats, chickens and an occasional antelope. Though missionaries from the Evangelical Covenant network occasionally visited back and forth, amusement was usually family style: games of Scrabble, hymn singing, reading. The kids raised cats and dogs; Wayne built a monkey cage. It was hardly the usual Schweitzer-at-Lambaréné scene. Even when the rebels showed up, it was far from dramatic.

A month after the rebels took Stan-

PRIYA RAMRAKHA

leyville, two scruffy Simbas in a purloined truck captured the area. The rebels were *underestimated* by the whites *who chose* to remain—missionaries, officials, technicians, businessmen, employees of the Belgian-owned Société Générale, which controls most of the Congo's business enterprises and is still making money.

Some Europeans played into rebel hands—for instance, the Belgian owner of a sugar mill who felt it was better to deal with the people in power than lose his sugar crop: from neighboring Burundi he continued to bring in supplies and gasoline, which the rebels regularly confiscated, thus gaining enough fuel to attack Albertville. The rebels reassured the owner by formally signing for everything—they delight in mixing barbarism with bureaucracy—but before long, they held all the sugar workers as hostages and were manufacturing cannon in the mill workshops.

Foreign embassies had ordered all missionaries out of the north. Carlson took his family and his white nurse across the Ubangi River to the safety of the Central African Republic. But he himself returned to the hospital last September. He felt he could not desert his patients, and up to that time the rebels had not bothered doctors.

Carlson was arrested two weeks later because he owned a radio, because he was an American, and because the hard-pressed rebel regime wanted hostages. Along with the other American prisoners, Carlson became a pawn in the rebels' game to buy victory that did not end until the joint U.S.-Belgium paratroop action.

Remember Pearl Harbor. That action was completely understood in the West as humanitarian and, if anything, more cautiously carried out than necessary. The NATO Council formally backed it. In the "nonaligned" and Communist worlds, though, a well-organized propaganda effort made it sound as if the Americans and Belgians, not the savage Simbas, had committed the atrocities of Stanleyville. Whatever Belgium's guilt in the past, whatever the U.S.'s mistakes, it was a dizzying and infuriating perversion of the reality.

Moscow, obviously eager to show that it is just as anti-colonialist as Peking, mouthed the usual phrases about "imperialist intervention" and permitted African students to riot at the U.S. embassy. But the Russian response was mild compared to the Khrushchevian blasts of 1960 (when Lumumba was deposed) and 1962 (when the U.N. went into Katanga). For all their relative softening toward the West, the satellites kept pace, with embassy riots in Prague and Sofia.

Kenya's Jomo Kenyatta, who has more than passing acquaintance with African savagery from his country's Mau Mau days, may have felt somewhat embarrassed at his failure to bring about a "peaceful" solution to the hostage problem; though he condemned foreign intervention, he also called for continued "efforts at reconciliation" between the rebels and the Tshombe government. Tanzania's Julius Nyerere, a moderate who himself called for white help earlier this year when his army mutinied, ludicrously deplored the paratroop drop as "reminiscent of Pearl Harbor"—but then, he has Communist problems of his own at home.

In Cairo, some 200 African and Egyptian students descended on the U.S. embassy and burned down the adjacent, $250,000 John F. Kennedy Memorial Library. Ahmed ben Bella, shaky ruler of a bankrupt Algeria, many of whose people survive only because of U.S. food gifts, pledged "arms and volunteers" to the Congo rebels. So did Red China.

No Can Do. Despite the fact that Rebel Boss Gbenye and his henchmen have been driven from their capital, the fight will go on for some time. In their rapid push to save white [illegible] the Congolese army left big rebel [illegible] ets behind. Many pessimists talk [illegible] "Hundred Years War." How can rebellion be crushed?

The remedy, as Tshombe sees it, a patient formula—denounced as [illegible] colonial by his enemies—in which [illegible] men will hold as many key jobs as [illegible] sible for as long as it takes to mold effective army and an efficient administration. His refusal to "Africanize" at cost is part of the reason why he [illegible] yond the pale of his peers in other [illegible] rican nations. And yet a sizable [illegible] of whites have stayed on in such [illegible] as Nigeria and Ghana, where they welcomed but not overly publicized.

Tshombe knows how to maintain popularity at home—and he does it a way no other African leader would dare. He talks about the dignity his people have lost through laziness and common response, "*Pas moyen*, [illegible] [No can do, boss]." He gives them In Stanleyville, just before the re took it, he told a crowd: "You tell you don't have enough to eat. But I you drinking beer at 9 o'clock in morning. First work, then drink beer."

Africans respect a winner, and Tshombe banked on his firm st against the rebels in Stanleyville. If succeeds, the Congo could become watershed in the history of emerg Africa. For five years, African po cians have indiscriminately whipla the Western world while glorifi themselves with such airy phrases "African personality" and "African cialism." Tshombe—that rarest of ricans who seems to have no compl about being black—recognizes the tal side of the African personality, the phony side of African socialism. is willing to accept people from the side—whether mercenaries, technici or missionaries—to give the Congo measure of stability. Canny and u scrupulous, candid and pragmatic, just might do it—although the odds overwhelmingly against him.

The blacks of Stanleyville and Pa are not likely soon to forget the hea tread of the mercenaries. And it w take the whites even longer to forget forgive the enormities committed by Simbas. A great many of the Belgia and other whites who lived and worke in the Congo now shudder at th thought of returning. And yet, others a surprisingly high number—have a ready said that after a while, they w go back, if asked. In all likelihood, th will not go in the spirit of a Paul Cl son, who once said, "In this centu more people have died for their witness for Christ than died in the early cen turies, which we think of as the days o martyrs." They will be in the Congo f more mundane reasons. But if there is ever to be a normal, sane relationship between Black Africa and the white world, they will have to be there, and they will have to be accepted. For so life goes.

GREAT BRITAIN

The $3 Billion Bail Bond

Harold Wilson came to power seven weeks ago promising that "Britain will have just as much influence in the world as we can earn and deserve"—and gave his Labor government 100 days to make its mark. The financial world passed judgment in less than half that time, and in a crushing vote of no-confidence last week mounted the heaviest attack on the pound that Britain had faced since the early postwar years. Thanks to a $3 billion, eleven-nation bailing-out operation backed by the U.S., both the pound and the Prime Minister managed to survive. But the lesson of Wilson's first major crisis may be felt for many times 100 days.

The Laborites—as even most Tories now admit—inherited an Augean mess. The Conservative government had closed its eyes too long to a mounting trade deficit that by year's end seemed certain to top $2 billion, almost equivalent to the gold reserves of the entire sterling bloc (*see charts*). Theoretically, few economists quarreled with Wilson's first, stringent measures to close the gap: a "temporary" 15% tax on virtually all imports reaching Britain, plus tax incentives for British industrialists who boost exports. Practically, however, Wilson could hardly have acted more ineptly.

Waiting for Noah. The surcharge on their exports was a jolting setback for the Commonwealth nations and Britain's trading partners in E.F.T.A., Europe's Outer Seven; yet the Prime Minister made no attempt to soften the blow by consulting them in advance. Too late, British officials scurried across the Continent to plead their government's case—resembling, in former Tory Party Leader Iain Macleod's withering phrase, "doves sent out from the ark to tell people that Noah's sorry it's raining."

Even so, hardheaded foreign bankers might have waited for Noah to reach dry land if there had been any real sign that the government was coming to grips with Britain's basic economic ills. On the contrary, Wilson clearly assigned priority to expanded welfare statism that Britain can patently ill afford. He also insisted on doctrinaire legislation such as renationalization of steel, hinted at new, incentive-stifling corporate and capital-gains taxes. Convinced that Britain's financial position could only worsen, international bankers scrambled to unload their sterling holdings.

Gnomes of Zurich. London's top merchant bankers came to Wilson two weeks ago to warn that he could only avert a full-blown crisis of confidence in the pound by raising the Bank of England's interest rate on borrowed money from 5% to 6%, in order to damp down domestic consumption and lure international investors back to the sterling bloc. The Prime Minister refused on the dogmatic grounds that he would not resort to the "stop-go" economic policies of the Tories—who nonetheless had never faced a balance-of-payments gap as formidable as that which confronted Wilson. While Labor backbenchers muttered against international financiers—the "gnomes of Zurich"—Wilson warned direly that world bankers would have to "pay the price for their lack of faith in Britain."

The price, in fact, was paid by the Bank of England, which was forced to pump in dwindling reserves to support sterling at the minimum official rate of $2.78‡ to the pound. Finally, after a weekend huddle with his ministers and consultations with the U.S., Wilson hiked Britain's bank rate to 7%, the "crisis" level. As a result, Washington was forced to raise the U.S. discount rate from 3.5% to 4% (*see* U. S. BUSINESS). But for the pound, it was already too late. By then the stampede from sterling was in full thunder, whipped on by worldwide speculation that Britain would be forced to devalue.

Telephone Offensive. Only four years ago, that might indeed have been the result. Since then, however, the U.S. has cemented cooperative agreements with Europe's powerful central banks to bail one another out whenever any nation's currency is under attack. As the world's No. 2 reserve currency, after the dollar, the pound plainly had to be defended. Within minutes of receiving a Save-Our-Sterling message from Whitehall, U.S. monetary officials and Bank of England experts in London's Threadneedle Street embarked on a night-long telephone offensive that by next day had raised the $3 billion bundle that Britain needed. Said Treasury Under Secretary Robert Roosa: "This was the biggest and quickest monetary rescue job ever seen."

The crisis was a rude shock for Labor, and a sobering reminder that the whole British economy must become drastically more efficient to survive. "Gone is the illusion," wrote the Financial Times, "that more benefits for all could be squeezed from static production. Gone is the illusion that growth can come from talk. Gone is the illusion that planning can ignore finance . . . Labor's ideas have been swept away with almost frightening speed."

The huge sum that rescued the pound must be repaid within six months, and Britain's creditors thus hold a *de facto* veto power over government policy. In effect they will insist that Britain must regain solvency and international confidence before anything else is undertaken, including further expensive welfare schemes.

Anniversary of an Antediluvian

A quarter-century ago this fall, Britain declared war on Hitler's Germany. Fifty years ago, its troops were digging in for the first, fearsome winter of World War I. Ninety years ago this week was born the only man who, in his own words, "passed through both the two supreme cataclysms of recorded history in high Cabinet office." It is a mark of the world's affection and deep respect for Sir Winston Churchill that his birthday is celebrated almost as a national anniversary throughout the free world.

In London, tributes to "the only ante-

CHURCHILL BEFORE "IRON CURTAIN" SPEECH, 1946

P.A. REUTER

DINING OUT, NOVEMBER 1964

Still, echoes of Elizabeth at Tilbury and Henry at Agincourt.

diluvian," as he styled himself in 1940, range from an hour-long BBC television show built around his favorite songs to a radio play about the second most illustrious of the Churchills, the Duke of Marlborough. At dozens of observances throughout the U.S., Americans contributed funds to the Winston Churchill Memorial* at Fulton, Mo., commemorating the historic 1946 "Sinews of Peace" speech at Westminster College, in which Churchill urged the Western world to close ranks again in the face of a threat to peace as formidable as any it had yet seen: "From Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the Continent."

Duty Done. One of the few statesmen to achieve undisputed immortality *in his lifetime*, Sir Winston is perhaps the only world leader who has ever written history as memorably as he made it. His chronicles of the First and Second World Wars, and the West's misspent years between, are without parallel either as history or, as he saw them, a distillation of "thirty years of action and advocacy that comprise and express my life-effort."

Thanks to a deep sense of the past and a lofty view of the future, Churchill has always been a poet of action, a brilliant interpreter of great events from the British army's last great cavalry charge at Omdurman in 1898 to the final defeat of the Axis powers in 1945. And for all his political pragmatism, Churchill never hesitated to point to the underlying moral of events or to affirm that, by and large, the Allied cause was that of civilization itself. As he said in the hour of victory: "We gave thanks to God for the noblest of all His blessings, the sense that we had done our duty."

The Voice. It seems a distant victory now, with yesterday's friends and foes dizzyingly reversed. His own finest hour remains the summer of 1940, with the clamor of fighters overhead, the army trucks clattering along country roads, the crunch of falling bombs, the civilians digging trenches against the invasion that could come at any hour. All this is not memory but only history to a new generation. But it is still sometimes brought to life—for instance, in a massive birthday edition by London Records (24 sides) of Churchill's speeches, readings and spoken recollections.

With not too much imagination it is possible to hear that gruff, grave, sibilant voice as the voice of Elizabeth at Tilbury, of Henry V at Agincourt, of Pitt, or Chatham, or the Lloyd George to whom Churchill paid tribute in his last speech before the House of Commons nine years ago. The words could apply to Churchill himself: "He imparted at once a new surge of strength, of impulse, far stronger than anything that had been known up to that time . . . As a man of action, resource and creative energy, he stood, when at his zenith, without a rival."

Old Feats. If Churchill's zenith is past, his words retain a remarkable pertinence. The Iron Curtain speech itself, his advice to seek pragmatic understandings with the Communists, the vision of a united Europe and a European army, above all the incomparable definition of Western values, remain strikingly contemporary. At fourscore years and ten, Churchill lives in quiet seclusion. Increasingly feeble and withdrawn within himself, he still enjoys his food and drink and the company of a few old friends who recall old feats of arms or totter out with him to feed the black swans at Chartwell, his country house in Kent. He no longer paints, but his eyes are dim—as his testimony will never be.

* *Consisting of a library of Churchilliana, housed inside the transplanted shell of Sir Christopher Wren's 17th century church of St. Mary Aldermanbury in London (it was destroyed during the blitz). The interior of the church will be rebuilt to Wren's original plans.*

WEST GERMANY

Socialists Gaining

After 30 years in the political wilder-ness, West German Socialists excited glimpsed the Promised Land—victory next year's national elections. The chances are still limited, but they are better than ever before.

To the party convention delegates gathered in Karlsruhe last week, all the indices looked good. Their leaders had transformed a blue-collar, militant workers' movement into a broad-based respectable middle-class party that hardly ever mentions Marx. Alone or in coalition, Socialists now rule five of West Germany's eleven states and 45% the nation's biggest cities. In September they scored impressive gains in local elections in the Saar and Rhineland whose formerly hostile Catholic populations know that the "new" Socialists have abandoned their attacks on the church. The latest national public opinion poll gives the Socialists a 7% lead over the ruling Christian Democrats.

The Socialists admit that in all this they have been helped by their political foes; the Christian Democratic Party these days seems bent on tearing itself apart.

Economic Dilemmas. Most of the tearing is being done by the party's "Gaullist" wing, headed by venerable ex-Chancellor Konrad Adenauer, 88, and beefy ex-Defense Minister Franz Josef Strauss, 49, who favor De Gaulle's vision of a Europe independent of the U.S. in nuclear and other matters. They are opposed by the dominant "Atlanticist" wing, led by Chancellor Ludwig Erhard and his Foreign Minister, Gerhard Schröder, who favor the U.S.-proposed multilateral force (MLF) and close association with Washington.

The fight is as much personal as political. Adenauer has always been disdainful of plump, amiable Erhard, and lately Erhard's leadership has indeed faltered. He has not been able to overcome his party's divisions, and he is troubled by several economic dilemmas. He will have to lower German grain prices to meet Common Market levels, a move which Germany's inefficient subsidized farmers dread. Proclaiming an attack on inflationary spending, Erhard chose to make his stand by refusing to grant increased benefits to war victims, and was later forced to back down. After appealing for moderation to the public, Erhard then infuriated everyone by raising telephone rates—and again backed down.

Unrocked Boat. Against this, the Socialists are trying to project an image of unity and reason. At Karlsruhe, the party formally came out for the multilateral force. As for the choice between France

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...and the U.S., the Socialists are already on record as depending upon the U.S. for the defense of Europe and the eventual reunification of Germany. In short, the Socialists are promising that, if elected, they will not rock the boat but merely run it more efficiently than the Christian Democrats.

For all his troubles, Erhard's personal popularity and deserved reputation as the father of German prosperity remain immense. Regardless of party standing, the polls still favor Erhard as Chancellor over Socialist Leader Willy Brandt. The vigorous mayor of West Berlin, Brandt simply lacks the stature of a national leader, a fact that the Karlsruhe convention recognized when, in drawing up its election program, it emphasized the party more than the man. The convention also appointed a "shadow Cabinet" of able technicians to show the electorate that the Socialists have more to offer than just Brandt.

ITALY

A Communist by Any Other Name

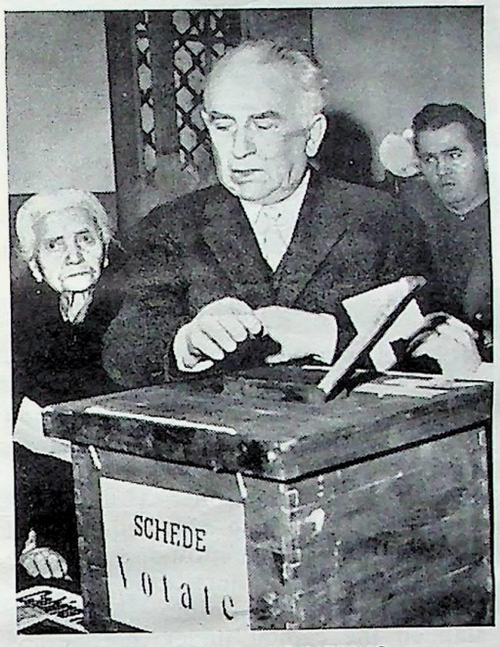
What with Western Europe's glowing prosperity and the corresponding disarray behind the Iron Curtain, the U.S. has come to count heavily on the idea that there is no future for Communist parties in the free world. But once again, Italy proved that higher wages and additional creature comforts do not necessarily ensure a Red rout. The country's municipal elections resulted in a small but significant increase of Communist strength and another decline in the fortunes of the ruling center-left coalition.

Complicated Failure. It was to avoid just such a result, and to "isolate" the Communists, that former Premier Amintore Fanfani created the *apertura a sinistra*, or opening to the left, in 1962. Fanfani reasoned that by forming a coalition government between his Christian Democrats and the left-wing Socialists of Pietro Nenni, he would 1) rob the Communists of their strongest allies, and 2) give himself room to press for domestic reforms without footdragging by conservative parties.

It was a complicated maneuver, and it failed. It was Nenni's Socialists who were isolated, not the Communists. At the first national elections after the *apertura*, in 1963, the Communists gained a formidable million votes. Then it was argued that the coalition experiment had not yet had time to prove itself. By now it has been given plenty of time—and has accomplished little or nothing. In the municipal elections, all the tides were supposed to be running against the Reds: Italy's longtime Red Boss Palmiro Togliatti was dead; Khrushchev was out; and for the first time since the death of Pope John, Italy's Roman Catholic bishops were actively anti-Communist.

The Reds serenely and successfully campaigned under the guise of middle-class reformers (TIME, Nov. 20), and as usual many Italians voted for them simply as a form of protest against various troubles, from high prices to bad schools. While not gaining nearly so much as in 1963, the Reds did increase their majority .04% over their total in last year's parliamentary elections. They gained in central Italy, tightened their hold on the "Red belt" of Tuscany, Umbria and Emilia-Romagna, became the biggest party in Florence. The Christian Democrats were off more than 1% from last year, 3% from 1960, and lost 59 provincial council seats throughout the country. The Nenni Socialists slipped badly. Of the minor parties, only the conservative Liberals continued to grow. The party position for the past few years:

ANSA



RED BOSS LONGO VOTING
Isolating the isolators.

	1960	1963	1964
Christian Democrats	40.4	38.3	37.4
Communists	24.3	25.6	26.0
Nenni Socialists	14.4	14.2	11.3
Liberals	4.0	7.0	7.9
Social Democrats	5.8	6.3	6.6
Neo-Fascists	5.9	5.0	5.0
Proletarian Unity Socialists	—	—	2.9
Republicans	1.3	1.3	1.2
Monarchists	2.9	1.7	0.9
Others	1.0	0.7	0.8

Balance of Power. The Christian Democratic leadership still clung to the *apertura* that had failed, while the Reds were elated. "Splendid success!" trumpeted the Communist newspaper L'Unità. And the Communists promptly offered to help the center-left coalition form ruling bodies in local and municipal councils. Italy's new Red boss, Luigi Longo, launched a campaign for an Italian Workers Movement open to members of all parties; he even offered to drop the name "Communist" from his party and to merge with the others. When one of the Red faithful demurred at dropping the party name, he was loftily told it would "open up a new highway to Socialism."

Longo's siren song may find its listeners. Even so staunch an anti-Communist as Social Democratic Foreign Minister Giuseppe Saragat has hinted that he could accept Communist cooperation on some issues. But then Saragat has his eye on the presidency, now occupied by long-ailing President Antonio Segni, who will probably announce his resignation next month, requiring presidential elections. Saragat's chief rivals will probably be Naples Jurist Giovanni Leone and former Premier Fanfani. In that contest, the Communists may well hold the balance of power.

UNITED NATIONS

Red, Green or Yellow

Throughout the summer and fall, the great blue-and-white General Assembly hall had been under the rule of the jackhammer. The semicircular rows of gleaming oaken desks had to be rearranged to make room for the U.N.'s population explosion: 115 members this year, *v.* 99 in 1960 and 51 at the founding. To pare down the time it takes for all of the delegations to vote, the desks were fitted out with buttons connected to a pair of large electronic boards beside the podium—green lights will flash on for aye, red for nay, yellow for abstention.

If the décor has changed, so has the mood. As the 19th General Assembly prepared to open this week, the euphoria flowing from last year's partial nuclear test-ban treaty was largely gone. Red China, for the first time supported by France and a majority of Africa, is making its strongest bid ever for U.N. membership—and although the betting is that there will still be enough red or yellow lights to stop Peking, it will be close. Of more immediate consequence is a new duel between the U.S. and Russia. The Big Two are on what appears to be a collision course over Moscow's unpaid U.N. bill of $52.6 million—and many delegates fear the U.N. itself may be the first of the crash victims.

Change of Mind. The money is Russia's assessed share of the cost of maintaining U.N. peace-keeping forces in Suez and the Congo. Russia supported the original U.N. action in both cases, but later changed its mind—to give Nasser a free hand in the Suez area, and to aid Red stooges in the Congo after Leftist Patrice Lumumba was assassinated. Moscow now claims the assessments are illegal, and despite the unanimous verdict of the International Court of Justice that they are binding, the Kremlin has refused to pay its share since early 1962. Washington threatens to open this week's session by demanding the invocation of Article 19 of the U.N. Charter—which declares that any nation two years behind in its payments "shall have no vote" in the General Assembly.

If the U.N. refuses to go along, Washington has threatened drastic reductions in its own contributions—currently 37% of the entire U.N. operating budget. Russia's counterthreat: any

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

punitive action would force Moscow to "face the necessity of reviewing its attitude toward the United Nations."

Voluntary Fund. Terrified of the prospect of a Russian walkout, the bulk of the U.N. membership has spent most of the year searching for a formula that might avert the crisis. A 21-nation working committee, followed by a four-nation "good offices committee," proposed a voluntary all-purpose peace-keeping fund so that Russia would not have to contribute directly to operations it considered illegal. The U.S. has offered a variety of minor concessions to Russian pride. So far, Russia's position has not changed. But Secretary-General U Thant was working hard to avoid a showdown, proposed delaying the issue. Most delegates still managed to persuade themselves that the clash would somehow be avoided. "There has to be a settlement," said Liberia's pro-U.S. Ambassador Nathan Barnes. "I just can't believe either the U.S. or Russia wants to destroy the U.N."

SOUTH VIET NAM

Reprise from the Pagodas

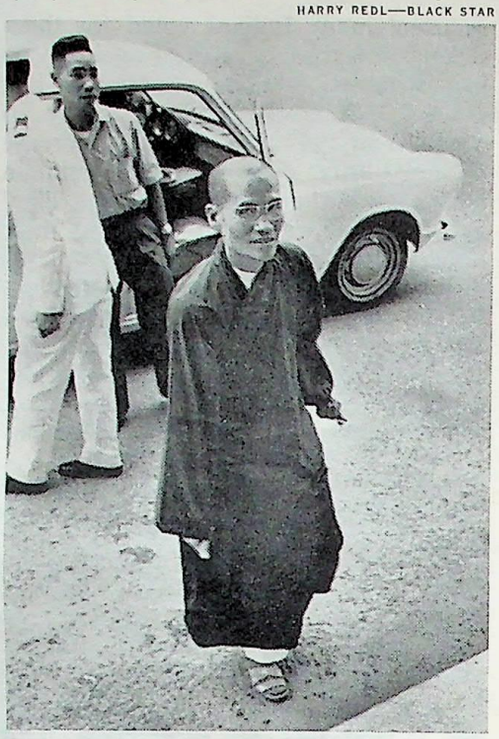
"It is better to have a political vacuum than have Huong in power," said one of South Viet Nam's most respected Buddhist leaders. "This government will have to go." At week's end Provisional Premier Tran Van Huong had not yet gone, but the bonzes were once again doing their beatific best to bring about a vacuum that sooner or later the Communists might fill.

Stage Set. During a week of chaos last August, the Buddhists had brought down General Nguyen Khanh, demanding a civilian regime. Only a month ago, Huong, 61, the bicycle-riding ex-mayor of Saigon, took over supposedly to fill that bill. Now Huong was the target. Why? Well, the Buddhists vaguely explained, Huong's government, which is made up mostly of nonpolitical civil servants, is "not revolutionary" and contains "vestiges of the Diem regime."

Saigon's draft-exempt students and microscopic "political parties," with the Buddhists' tacit approval, began holding meetings and demanded a government reshuffle. Huong refused, explaining: "They all want my job. If I had satisfied all their demands, my Cabinet would have numbered over a hundred." Then he appealed to the head of the Buddhists' political bureau, Thich Tam Chau, and reported, "It was like talking to a deaf man."

The Buddhists always like to organize riots when the U.S. ambassador is out of town, and with General Maxwell Taylor on his way to Washington, the show began. For four days demonstrators—including children—streaming out of the National Buddhist Center again turned Saigon into a battleground, hurling barrages of rocks and clubbing outnumbered policemen. After the rioters threw seven Viet Cong-type concussion grenades, a paratroop officer emptied his pistol into a mob, killing a 15-year-old boy. The Buddhists issued an ultimatum demanding that the army and police keep hands off the demonstrators, and that Huong be forced down.

HARRY REDL—BLACK STAR



BUDDHIST LEADER TAM CHAU
Just a little deaf.

Martial Law. Premier Huong was proving tougher than expected, at least for the moment. He pronounced some of the arrested rioters draft dodgers and inducted them into the army, slapped the capital under martial law and named burly General Pham Van Dong ("the Tiger of the Delta") military governor of Saigon. Dong threw two battalions of troops around the Buddhist Center. Taking to radio, Huong blamed the disorders on "irresponsible people who have either innocently or deliberately fallen in with the Communist plan."

From his two-telephone desk in the Buddhist temple, which has the bustling air of a campaign headquarters, [illegible] Tam Chau complained that the Bu[illegible] dhists had been slandered. He ad[illegible] that to fight the Reds, the country m[illegible] have "a government supported by t[illegible] people"—an argument that might c[illegible] ry more weight if the Buddhists e[illegible] adopted an active role against the V[illegible] Cong. He also announced a passiv[illegible] resistance campaign against the govern[illegible] ment. But a lot of Vietnamese were apparently tiring of Buddhist intrigue[illegible] and so far Tam Chau had not received anything like mass support. This week the Buddhists again defied the govern[illegible] ment by turning the funeral of their 1[illegible] year-old martyr into a riotous melee.

AP

CANDIDATE PANDIT
Just a room somewhere.

INDIA

A Nehru Back in Politics

"Do not be captivated by her beau[illegible] ty," warned Socialist Dr. Ram Lohi[illegible] "Inside she is pure venom!" He furth[illegible] claimed that Vijaya Lakshmi Pandi[illegible] 64, retained her youthful good look[illegible] only because she had undergone plas[illegible] surgery in Europe.

Details about face lifting made li[illegible] impression on the emaciated peasa[illegible] of Phulpur, a district in northern In[illegible] dia, 16 miles from Allahabad, whi[illegible] ever since 1952 had loyally returne[illegible] the late Prime Minister Jawaharlal Ne[illegible] ru to Parliament. In last week's b[illegible] election, the empty seat was being co[illegible] tested by Madame Pandit, Nehru[illegible] younger sister, who had the full backi[illegible] of the dominant Congress Party, a[illegible] Socialist Lohia was on hand as a lo[illegible] long enemy of the Nehru family. I[illegible] 1962, Lohia personally fought for h[illegible] seat against Nehru and was soundl[illegible] trounced. Last week he was backin[illegible] a local Socialist named Saligram Jai[illegible] wal, who kept harping on Madam[illegible] Pandit's means ("Poverty has entere[illegible] the field against wealth") and prom[illegible] ised lower food prices.

But, despite the district's poverty[illegible] many peasants do not want lower prices[illegible] for the crops they sell to the cities[illegible] Besides, Madame Pandit fought a bril[illegible] liant campaign. She curbed the arro[illegible] gant Nehru temper, of which she ha[illegible] her full share, and conducted herse[illegible] with a humility she had never displayed[illegible] as India's aggressively "neutralist" am[illegible] bassador to Washington and Moscow[illegible] On the hustings, she gestured toward[illegible] her blue-rinsed grey hair, described her[illegible] self as a daughter returning home [illegible] her old age, and asked plaintively: "[illegible] you fail to give me room, where can I[illegible] go?" While the Socialists bustled about[illegible] the countryside in a car preceded by a[illegible] motorcyclist bearing a red flag, Mad[illegible] ame Pandit toured the villages on foo[illegible] and spent the last 25 days of the camp[illegible] paign living in a tent in the midst of[illegible] the peasants.

Candidate Pandit won easily, 11[illegible] 548 to 52,528. It is expected she will[illegible] soon join her niece and Nehru's daugh[illegible] ter, Indira Gandhi, in the Cabinet of[illegible] Prime Minister Lal Bahadur Shastri.

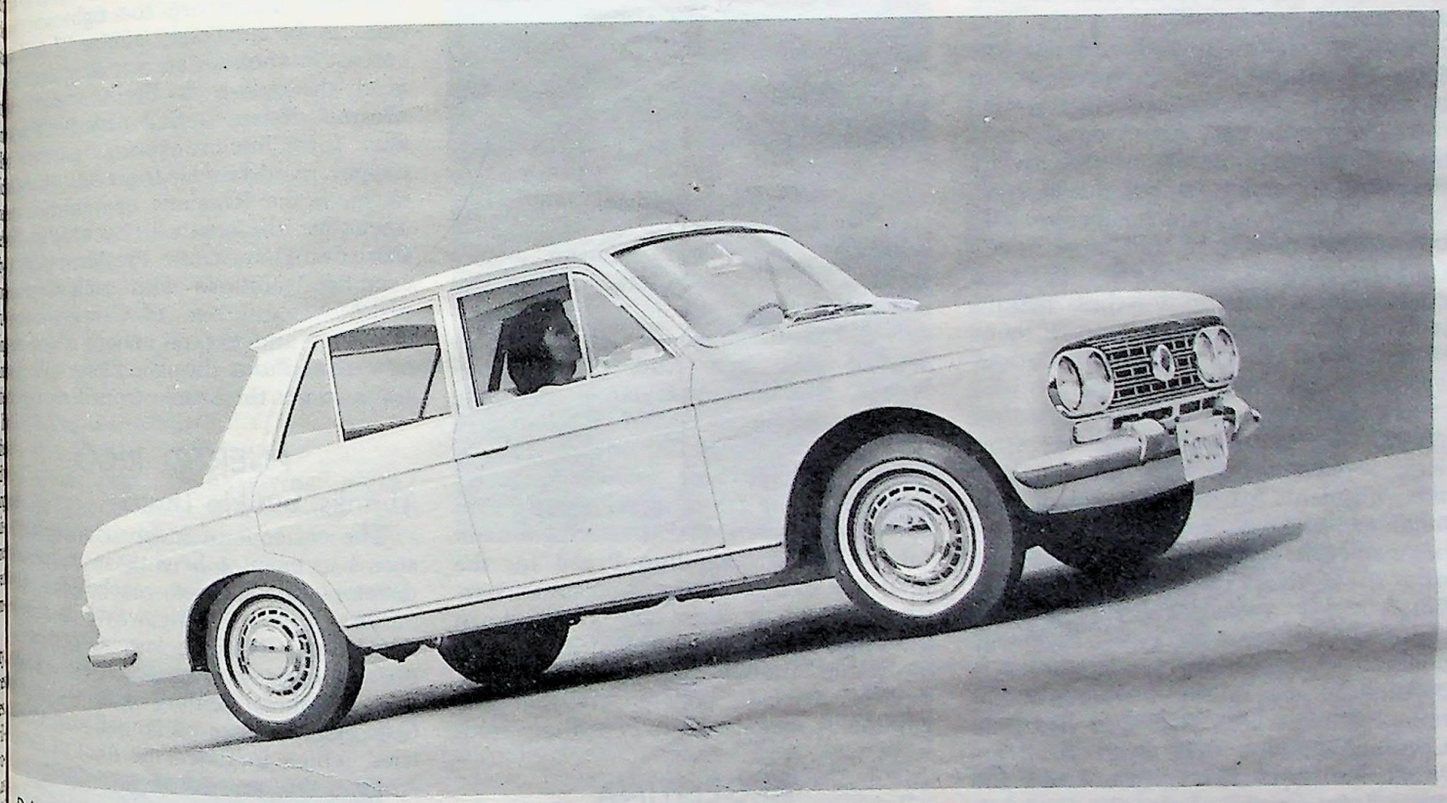
An invitation to enjoy Datsun Bluebird dependability



Drive the Datsun Bluebird once, and you'll see why drivers in 60 countries around the world choose it for all-around dependability.

Why? Construction, for one reason.

A unitized body makes it virtually rattle and squeak-proof.

Exceptional balance eliminates leaning on curves.

This passenger car represents the finest in Japanese automotive engineering and craftsmanship.

Riding comfort is another point.

A superior suspension system, soft-cushion seats and an abundance of head and leg room compare with passenger cars many times its size.

Third, Datsun Bluebird economy.

No other car in its class can compare with Bluebird's fuel economy.

Less maintenance and longer lasting parts add to the years of trouble-free driving pleasure of the Datsun Bluebird.

Like to know more about Datsun Bluebird dependability?

Your Datsun dealer will be happy to demonstrate.

BRAZIL

A Hard Line

A determined tug of war has been going on behind the scenes in Brazil's revolutionary government. On one side stands little (5 ft. 5 in.) President Humberto Castello Branco and those who prefer to deal with corruption and subversion by constitutional methods. On the other side range the *linha dura* (hard-line) military men who want to continue the star-chamber purges that Castello Branco ended after six months (TIME, Oct. 16). Last week Castello Branco gave in to the *linha dura* in order to get on with the important business of saving Brazil from economic ruin.

Talk of a Coup. The military move started last month in the northeast state of Ceará, when an army general arrested four deputies in the state legislature, accusing them of Communist subversion. Castello Branco ordered the deputies released, but the general was backed by powerful allies—chief among them War Minister Artur da Costa e Silva, a prime architect of the revolution. For three days neither side budged, while the officers talked openly of a coup. Then the Ceará legislature mercifully intervened, revoking the deputies' constitutional immunity—thus making it legal for the army to arrest them.

As news of the "Ceará solution" spread, other *linha dura* officers took it as a hunting license. They ousted the mayor of Niteroi, across the bay from Rio, leveled charges of graft against the presidents of Brazil's Senate and Chamber of Deputies and the governor of prosperous São Paulo state. The man who drew the most fire was Mauro Borges, 44, governor of the central farmland state of Goiás. He was charged with outright subversion. According to the military, Borges maintained a close link with top Brazilian Communists and has been receiving "bulky" sums of money from Cuba and other Iron Curtain countries. The soldiers demanded his ouster.

Outmanned & Outgunned. Last week, invoking a constitutional provision that permits intervention in a state when "national integrity" is threatened, Castello Branco let the military have its way. In the space of two days, 6,000 federal troops poured into the state capital of Goiânia. The troops took over the telephone and telegraph systems, power companies and a water-treatment plant, formed up around the palace. Outmanned and outgunned, Borges caved in and turned the government over to the military. The way the brass told it, they got Borges just in time. Three days later they announced the arrest of more than 200 leftists whom they accused of planning a wave of terrorism across Brazil.

Such harsh tactics have made enemies for the new government among those who fear that the revolution will descend into dictatorship. Yet thoughtful Brazilians also recognize Castello Branco as a man who, alone among recent Brazilian presidents, is doing what he set out to do. Of 147 bills sent to Congress since the March revolution, 102 have been approved, covering everything from agrarian reform to low-cost housing credit. Foreign capital is flowing back into Brazil for the first time in three years. And some cherished Brazilian ideas are going down the drain—that uncontrolled inflation is inevitable, that a man should be well paid for a job he does poorly, that corruption is illegal only when discovered.

MANCHETE

COSTA E SILVA & CASTELLO BRANCO
On with the nation-saving.

ARGENTINA

Neither Justice nor Oil

President Arturo Illia, 64, was barely in office last fall when he summarily annulled 13 contracts with the foreign oil companies—including nine U.S. firms—that had made Argentina virtually self-sufficient in oil. Illia claimed that the contracts, signed between 1958 and 1960 under deposed President Arturo Frondizi, hurt the Argentine national oil company, and were illegal to boot. "But no one need be alarmed," he said. "Justice will be done."

Last week, the private oilmen were still working for justice and a fair settlement. The country's state-run oil company, which took over the foreign holdings, has been unable to keep pace with demand, has gone back to importing wholesale quantities of crude oil for the first time in four years. For American oilmen, the cruelest cut of all has just been announced: a $9,300,000 deal with Moscow for 1,500,000 barrels of diesel fuel and 2,500,000 barrels of crude oil.

CHILE

To Russia with Trade

Chile has not had diplomatic relations with the Soviet Union since 1947, when Communist-led coal miners mounted a small-scale antigovernment insurrection. Last week Chile's newly inaugurated President Eduardo Frei, 53, decided to forgive, if not forget. In a brief ceremony at Santiago's La Moneda palace, he accepted the credentials of Ambassador Nikolai Alekseev, thus making Chile the sixth Latin American nation to have diplomatic relations with Moscow.*

The U.S. took it with a shrug. "Our ties with Chile are too tight and too deep to be adversely affected," said an embassy spokesman in Santiago. Behind the move is Frei's frankly expressed desire to find new trade markets for Chilean exports, particularly copper. And besides, he adds, "I prefer to have the Russians operating in the open as diplomats." Eventually, the Christian Democratic President plans to establish relations with such Communist-bloc countries as Czechoslovakia, Hungary and Poland. There is one specific exception, though. Cuba will continue to get the freeze from Frei.

PUERTO RICO

Thanks, but No Thanks

The concept of independence, which seems to burn so brightly in the world of developing countries, reaches the point of distortion in many ways. Last week the United Nations special committee on decolonization accepted by a 15-1 vote a report dealing with the recent Cairo Conference of Nonaligned Countries, which included the likes of Cuba. Among the report's recommendations: a U.N. discussion of independence for Puerto Rico.

The committee vote ignored a 1953 General Assembly ruling that Puerto Rico is a self-governing commonwealth "in free association" with the U.S. and thus not a proper subject for U.N. territorial studies. Stormed Governor Luis Muñoz Marín: "It is inconceivable that a responsible international body could place itself in the untenable position of advocating a political status for a people who have categorically rejected it in numerous elections." Muñoz pointed out that Puerto Rico's minuscule Independence Party mustered less than 5% (22,000 out of 800,000) of the vote in the Nov. 3 elections—not even enough to remain on the ballot.

* The others: Argentina, Brazil, Mexico, Uruguay, and of course Cuba.

The canvas lay in a box of junk in an Alexandria, Va., secondhand store. But when Christine du Tant, wife of a U.S. Senate aide, unrolled it, she recognized the handsome young man it portrayed and bought it for $3. A curator of the Smithsonian Institution agreed with her: the small (10 in. by 14 in.) oil by an unknown artist is indeed of the young Abraham Lincoln, painted around 1840, and thus the earliest-known likeness of the future President. He had just turned 30 at the time and was a frontier legislator and lawyer in the midst of his off-again, on-again romance with Mary Todd (he married her in 1842).

. . .

Trick-or-treat was what 50 Pennsylvania teen-agers had in mind when they dropped around to the empty Chadds Ford studio of Artist Andrew Wyeth, off, last Oct. 31. Not a treat but a treatment was what they needed, for they slashed Wyeth's 18th and 19th century costume collection, broke lamps and sculpture, smeared his walls with paint. Wyeth refused to prosecute. Instead, he invited the vandals around for a talk, forgiving the eight who showed up last week when they apologized and promised to do what they could to repay the $2,000 worth of damage. "I am left feeling saddest," said Wyeth, "about the failure of us who are responsible in some way for these youths. They said they had nothing to do, and I believe so deeply in the preciousness of time and in the creative use of it."

. . .

Just in case Thanksgiving wasn't enough excitement, there were two birthday parties in Jacqueline Kennedy's family last week. John-John turned four and invited a group of Manhattan preschoolers in to his Fifth Avenue home for ice cream, cake, and games. Then, with his mother and sister, he adjourned for the weekend to the family's house on Long Island, where he helped Caroline celebrate her seventh birthday with a number of her young North Shore neighbors.

AP

JOHN-JOHN
Two parties.

. . .

"I bought bear traps and honey, all of it wasted," said a wan and relatively subdued Cassius Clay, 22, as he left Boston's City Hospital after his hernia operation. But the suffering had clearly left the winningest Pooh-Bah an older and wiser man. "When I went under surgery," he noted, "the doctor told me to count to ten, and on nine I went out. I thought it would be Liston, but I went out on nine."

. . .

It takes a heap o' birthday cake to commemorate a man's 96th birthday. And so when 250 friends of John Nance Garner gathered at his Uvalde, Texas, home, they thoughtfully brought along a two-foot-high, German-style *Baumkuchen* (tree cake), and two smaller ones decorated with the six flags that have flown over Texas. Cactus Jack eyed them. He studied his neighbors, many of whom can't rightly remember the days when he was Franklin Roosevelt's Vice President, a job he liked to refer to as "a spare tire on the automobile of government." Finally someone wondered how it felt to be so old. Said Garner, with a wink: "I am the youngest man in town."

CACTUS JACK
Six flags.

. . .

"Ten has always been my special number," Brunette Maria Elena Torch once said, and so it has always seemed. She met Architect Edward Durell Stone on a flight to Paris on July 10, 1953, ten days later accepted his proposal. Thereafter Stone's genius shone with a special brilliance, and they called the wind that fanned the flame Maria. For her he built one of his famed grillework façades on a $250,000 Manhattan town house, "just as," she explained, "the Shah Jahan did the Taj Mahal in India for his wife." But the Taj Mahal, of course, is a tomb, and behind the Stone front ember day came as well. Suing in Manhattan for a separation allowance of $6,500 a month, Maria Stone, now 38, charged that the 62-year-old architect, who earns $2,000,000 a year, beat her up, flirted with other women, and deserted her ten years and ten days after they were wed.

N.Y. DAILY NEWS

MARIA STONE
Ten years.

. . .

Presiding over the opening of New York harbor's $325 million Verrazano-Narrows Bridge, in his capacity as chairman of the Triborough Bridge and Tunnel Authority, acerbic Robert Moses, 75, paused to chat with a newly appointed woman city employee. "Why, you're not nearly as much of an ogre as I'd been led to believe!" she exclaimed in happy surprise. "Please don't let the word get around," commanded Moses. "It will ruin my reputation."

. . .

He is a Harvard man, his wife's name is Jacqueline, and for $200,000 he will become the new owner of Wexford, the Virginia hideaway built by the late President on Rattlesnake Mountain. But there the similarity ends, for Canton-born Quing Non Wong, 31, is Class of 1955 (a history and literature major), father of three daughters, and a Manhattan investment banker. Both he and his French wife are fond of horses, and since the local hunt club, Piedmont Fox Hounds, regularly traipses across the 40-acre estate, the Wongs are hoping that they will soon join the chase.

. . .

Clearly, it was a tense moment in Ottawa. The "hot line" from the home of Canada's Prime Minister Lester B. ("Mike") Pearson, 67, was in use, and North American Air Defense Command headquarters in Colorado Springs listened incredulously to the high-pitched message coming over the wires. Fortunately, Pearson added, telling the story at a rally in Manitoba last week, he was able to grab the receiver from his four-year-old grandchild, Robin Hannah, who had found the phone in a closet. "I explained to the officer on the other end that war had not begun," said Mike.

CUSTOMS

The New Elegants

Once they were called the beautiful people and were presumed to have titles. Others knew them better as the idle rich. But today there are few titles among them, they are not that rich, nor are they idle. Less grand than the grandest of an older generation, but also less ostentatious, they might be called the New Elegants. And they are not a numbered set revolving around a few Manhattan town houses and Newport mansions but a relaxed con-

ALAN GROSSMAN

AT METROPOLITAN'S COSTUME INSTITUTE BALL*

Across the land, a relaxed confraternity.

fraternity that extends the length and breadth of the land.

They are dedicated wives (generally to high-powered men who dabble equally in politics and the arts, wear dinner jackets and parkas with identical ease) and devoted mothers (generally to no more than four picture-book children with fanciful names like Chloe and Sabrina, Jared and Clive). Somehow they find time for charity work, church functions, community projects and college alumnae drives. They are enthusiastic music lovers (with a predilection for baroque quartets, German lieder and early Dixieland, an antipathy for anything atonal) and zealous art collectors (with a penchant for abstract expressionists, pre-Columbian sculpture and 18th century French furniture, a marked aversion to teak and leatherette).

They prefer concerts and auctions to canasta and golf, are likely to spend the time their mothers relegated to ladies' luncheons to tracking down a Directoire commode for the foyer, just the right bronze for the living-room mantle. If not elaborately educated in the mechanics of cooking, the New Elegants are nonetheless possessed of a sophisticated palate favoring simple Continental cuisine—everything light in body and definite in flavor, including the wines.

Sit Down at Home. But it is as hostesses, often to as many as 40 guests at as many as three sittings a week, that they are most practiced and most properly celebrated. Skilled in every facet of party giving, from the arrangement of flowers to the decision (reluctant but mandatory) to hire an extra couple to take coats and pass drinks, they have the energy to perform a well-worn role as if it were the choice part in a first-run play, the ingenuity to plan a guest list with an eye toward a lively, varied pattern (putting banker next to deep-sea diver, Senator between pop artist and prima ballerina), and the social status sufficient to commandeer acceptances all around.

Lately, moreover, they have dismissed the short cuts—the vast cocktail party and the buffet supper—for the older, more elegant sit-down dinner. Gone today from the boards that count are the stacks of plates and flatware wrapped in napkins; vanished, like the overhead light, are the women in sensible, street-length silks. More and more, the discriminating tables across the land are set with ornate silver on cloths of heirloom lace. And, gleaming in the dim, expensive light of tall candles, sit some of the handsomest people in some of the handsomest dresses that the age provides. The New Elegants have rediscovered the pleasure of dressing up.

Art after Dinner. The trend can be documented in economic statistics. Sales of evening gowns have more than doubled in the past four years; the dinner-jacket market has zoomed in cities across the country. Some credit the U.S.'s widening affluence, others the infectious sense of style radiated by the Kennedys. The new elegance has also resulted in a change in locale. In Manhattan, for instance, big-time restaurants and nightclubs are no longer the vogue for any but the column-happy or expense-account crowds. Instead, private dances and sit-down dinners (the favorite guest list accommodates twelve, with luck includes at least one artistic "Success of the ... ment")* are ordinary, every-... weekday affairs for most fashionable

But most titled ...ladies are simple American girls who ...have earned romantic foreigners. Spain's ...Countess Quintanilla, for instance, was ...plain Mary Aline Griffith, daughter of a ...Pearl River, N.Y., insurance salesman.

Jax & Old Orange Mink. "The important thing," says Robin Butler, "is simplicity and ingenuity." To that end, she ...ticks an apron around her Dior and ...cooks her own meals. Felicia Sarnoff, ...second wife of the board chairman ...of NBC and mother of two small children, buys her clothes at Jax, Saks and ...Lord & Taylor, scorns "the group that ...thinks it's chic to whip over to Paris, ...stand around in hot, stuffy rooms and have ...fittings." She is pleased with the ...trend to more and more formal dinners, which she prefers to "those mad ...mob scenes at cocktail parties," but is ...some too happy about the resultant need ...for a closetful of evening dresses that ...have to be originals and can only be ...worn once or twice. "I think it would ...be great to be able to rent them," she ...says wistfully.

The impulse to elegance is not confined to Manhattan but has had a different impact in different areas. Boston, where patrician families have been ...dressing up for years, takes it in stride. "Here," sniffs one Brahmin observer, "clothes are not status symbols," a fact ...sustained by the regular appearance on well-bred shoulders of the old orange ...pink. Atlantans, on the other hand, ...greet the new elegance with antebellum ...ardor, consider it out of the question to ...appear anywhere but at a cocktail party ...in anything but formal, full-length dress. ...In St. Louis, dressing up is still considered a bit of a lark and centers on ...occasions like the Veiled Prophet Ball, ...where above-elbow white gloves are de rigueur for wives and the soberest businessmen get wildly trigged out as bearded warriors.

Chanel & Shower Curtains. Chicago society has been dressing up for years, but New and Old Guard alike have welcomed the new sanction with delight. Mrs. Edward Byron Smith, whose family is among Chicago's oldest, still shops in small, exclusive local stores, is so socially secure that she found it "quite amusing" to encounter another woman wearing the identical gown at a recent ball. Mrs. Michael Butler, 31, third wife to her second husband, a millionaire sportsman (Manhattan's Robin Butler was his second) keeps busy with two daughters (by No. 1) and a ten-month-old son.

Born in Oklahoma and only a two-year resident of suburban Oak Brook, Mrs. Butler claims to be delighted with Chicago ("It's like a pregnant woman, just beginning to be recognized"). She makes frequent trips to town, adores an evening at the opera or dinner at a favorite restaurant like Maxim's ("We love it," she says, "although the one in Paris is really a bit better"). A crack shot, capable equestrienne and "dear friend of Coco Chanel's," Mrs. Butler has a passion for Paris clothes, wears long hostess gowns or pants suits for quiet evenings at home. In fact, evening pants, designed and priced high by Pucci, Chanel and imitators, are almost intimidatingly chic in salons from San Francisco to New York, where no one sets them off with more distinction than Mrs. Denise Bouché, former Vogue editor and widow of Painter René Bouché.

The James Goffs belong neither to the Old Guard nor to the flashy new set but to a special stratum in between, a sort of *nouveau niche*. Mr. Goff is a lawyer, Mrs. Goff his first wife. Instead of an old-style town house or suburban estate, they have a wood-paneled-duplex city apartment. Like Mrs. Butler, Mrs. Goff, 33, is partial to Chanel, makes do at local shops and "the boutiques in New York, when it works out" between annual trips to Europe.

Currently concerned with furnishing her new apartment, Mrs. Goff keeps a wary eye out for French antique furniture, has even gone so far as to rent a sewing machine so that she can run up bathroom and shower curtains "to see whether I could do it." She finds time for almost daily tennis in the summer, almost nightly opera in the winter, and part-time volunteer hospital work when her schedule permits. She does her own cooking, arranges her own flowers, and does her own hair (though, until recently, she used to have to fly to an expert in New York to have it cut).

Norell & a French Château. In San Francisco, as elsewhere, elegance is the order of the day. Mrs. John Rosekrans Jr. welcomes it, even though her own life has never been much different ("Except," she admits, "for the war, when people were reluctant to display wealth, it being, after all, such a very sad time"). As with most of the Bay area's elite, Mrs. Rosekrans is devoted to the at-home dinner party, points with pride to the increased use of fish knives and finger bowls as table appointments. For clothes, she depends on Balenciaga and Simonetta & Fabiani for staples (gathered in the average three to six weeks every other year she spends on a European tour of salons), prefers Galanos and Norell among American designers. Mrs. José Cebrian, 32, is no less addicted to small, sit-down dinners held in her Nob Hill apartment, but she unbends once a year when she asks 200 guests (among them always a sprinkling of "creative people") to the Napa Valley family home for a casual afternoon of swimming and games, a formal dinner dance at night.

Like Mrs. Rosekrans, Mrs. Christian de Guigné III cites World War II as the only period in her life when things were any less elegant than today. Certain

ORMOND GIGLI

MRS. BOUCHÉ AT HOME

And next to the Senator, a pop artist.

facets, in fact, have not changed a whit: her servants have been with her for close to 25 years; her San Mateo home is the one she moved into as a bride; the French château the family visit every year has been theirs for a century. Mrs. de Guigné shops both here and abroad, finds European stores "more fun" but "has a ball" Christmas shopping in Macy's. Dior, Balenciaga and Saint Laurent are her best-loved designers, but her wardrobe is catholic enough to include frontier pants for gardening, simple hostess skirts for dinners with the family.

With a staff that includes a butler, an upstairs maid, a personal maid, a cook, two gardeners, a chauffeur and a part-time secretary, someone is almost always on duty. Thursday nights, however, Mrs. de Guigné does the cooking. "I love it," she says. "After all, I love my home, and why shouldn't I? I'm a housewife!"

So are they all. But increasingly across the U.S. they are getting harder and harder to tell from the celebrities.

COURTS

The Fascinating & Frenetic Fifth

Apart from the Supreme Court, the most fascinating bench in the U.S. is the Deep South's Fifth Circuit Court of Appeals—the trail-blazing intermediate court that handles most of the nation's civil rights cases by hearing appeals from district courts in Alabama, Florida, Georgia, Texas, Louisiana and Mississippi. "Without the Fifth Circuit," says a leading civil rights lawyer, "we would be on the verge of actual warfare in the South."

The Fifth's main home is the fourth floor of the cavernous Louisiana Civil Courts Building in New Orleans. But the nine judges seldom sit all together in New Orleans or elsewhere. To handle their vast circuit, they shuttle about in three-judge panels that sit in any of five other cities: Atlanta, Fort Worth, Houston, Jacksonville, Montgomery.

Litigation Explosion. So busy is the frenetic Fifth that last term it took on 40% more cases than any of the nation's ten other circuit courts. In four years the caseload has jumped nearly 100% to a projected 1,200 appeals this term. With almost 175 cases per judge, the Fifth is now well beyond the 80 a year said to be tops for efficient appellate judges. Yet only about 5% of the Fifth's cases stem from civil rights disputes. It is deluged with writs of habeas corpus arising from the Supreme Court's criminal law precedents. And the South's burgeoning industry and population have touched off a litigation explosion that confronts the court with complex disputes involving everything from oil and gas to taxes and labor.

Civil rights, though, remains the big problem. For ten years the Fifth has steadily overruled segregationist district judges while vigorously carrying out the Supreme Court's 1954 ban against segregated schools. In the process it has upheld the desegregation of everything else in sight—buses, parks, juries, ballots, libraries, sporting events, the universities of Alabama, Georgia and Mississippi. The court has made law, not just followed it. It has pioneered, for example, in the use of injunctions to force state and federal courts to act faster in carrying out constitutional rights. Chief Judge Elbert P. Tuttle has made strategic use of a special "interim" panel that hears emergency appeals with remarkable speed, thus foiling district court orders aimed at delaying school integration indefinitely.

Dishonored Grave. The Fifth's all-Southern judges have inevitably been denounced by Alabama's Governor George Wallace as "scallywagging, carpetbagging federal judges." They have been ostracized by former friends, constantly threatened by all-night phone callers. After his son's death in an auto accident, Judge Richard T. Rives was honored by his fellow Alabamians—they threw garbage on his son's grave.

Stoutly unswayed are the court's four hard-core moderates:

▶ Chief Judge Tuttle, 67, a native Californian, who has lived in Atlanta since graduating from Cornell Law School in 1923. A former G.O.P. state chairman of Georgia, Tax Lawyer Tuttle was the U.S. Treasury Department's general counsel when Eisenhower appointed him to the court in 1954. As the senior man under 70, Tuttle became chief judge in 1961 when the overworked Rives relinquished the job. Tough-minded Tuttle is regarded as one of the fairest, most efficient judges in the U.S.

▶ John Minor Wisdom, 59, a New Orleans aristocrat, topflight corporation lawyer and former G.O.P. national committeeman. Another Ike appointee (1957), Wisdom is probably the court's top constitutional scholar; he is equally at home in archaeology, Greek tragedy and Louisiana civil law. Wisdom is one of the best (and most painstaking) opinion writers on any U.S. [illegible]

▶ John R. Brown, 54, a native [illegible] braskan, who began practicing [illegible] ty law in Houston in 1932. Also an [illegible] appointee (1955), Brown proved to [illegible] a surprisingly adept constitutional [illegible] yer and such a firm believer in [illegible] things as jury duty that in 1960 he [illegible] fused exemption from duty in a [illegible] court. Houston lawyers wryly [illegible] him because "a federal judge's idea [illegible] the requirements for a search warrant [illegible] is a little different from ours."

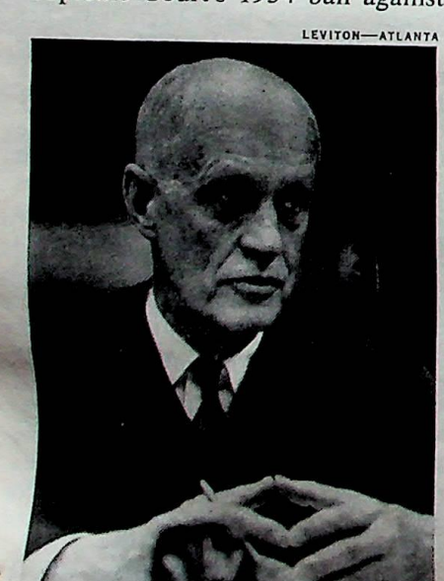
▶ Alabama's courtly Judge Rives, [illegible] who never went to law school, but "read law" in Montgomery and became [illegible] town's most popular advocate [illegible] Harry Truman appointed him to [illegible] court in 1951. Rives's strong decisions [illegible] for Negro rights have made him a [illegible] riah among white segregationists. [illegible] unwitting irony, his former friends [illegible] ter: "Dick could have gotten any [illegible] litical job he wanted."

4-4 Split. Until recently, the "activists" were hotly opposed by [illegible] other Ike appointee—the late J. Benjamin F. Cameron, a Mississippi Republican (and friend of Democratic Senator James O. Eastland), who seemed to believe that the 14th Amendment did not apply to the South. As Cameron saw it, the Supreme Court had turned Southern states into "conquered provinces"; he accused his colleagues of "applying force, blind and heartless, where only love can triumph."

Cameron's importance was clear [illegible] year in the crucial case of Mississippi Governor Ross Barnett, whom the court had cited for contempt of its order to desegregate Ole Miss. Cameron voted to try Barnett by jury—a precedent with the potential effect of nullifying all of the court's civil rights orders. Cameron had three supporters: Ike Appointee Warren L. Jones of Jacksonville and two new Kennedy appointees—Alabamian Walter P. Gewin and Georgian Griffin B. Bell. Since the aged John C. Hutcheson Jr. of Houston was incapacitated, the court split 4 to 4, a result that seemed to promise trouble.

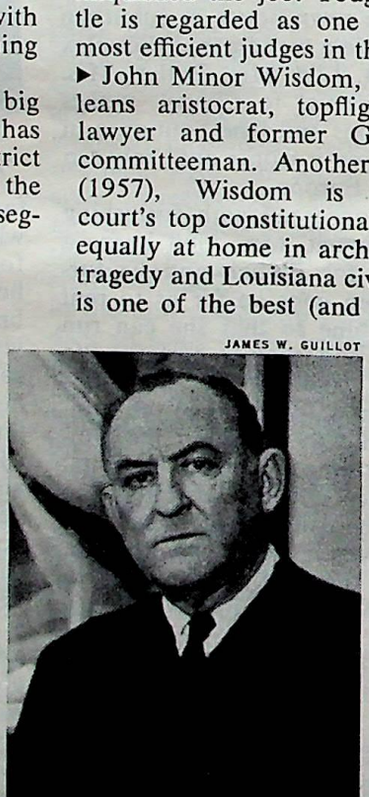
Cameron died last spring, just be[illegible]

LEVITON—ATLANTA

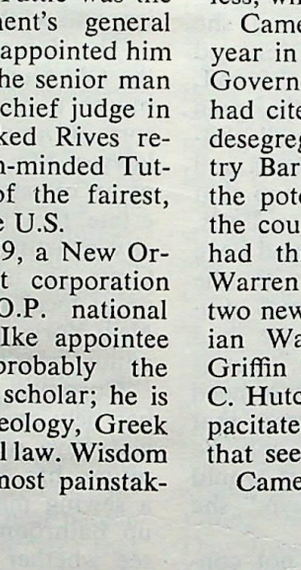


TUTTLE

JAMES W. GUILLOT



WISDOM



RIVES

BROWN

No magic in numbers.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Supreme Court itself denied Barr a jury trial. But his death raised another prickly problem: Mississippi's segregationist Eastland, chairman of the Judiciary Committee, will unduly insist that Cameron be replaced by another Mississippian of Eastland's persuasion. Judge Hutcheson, 85, meanwhile handed in his resignation time when the new Civil Rights Act poses more and more tough cases.

Expect Solution. Even if Southerner Lyndon Johnson solves the formidable problem of getting Democratic Southern senators to approve two Southern-type of the type the Fifth deserves, the trouble is that nine judges cannot handle the court's runaway caseload. There are two alternatives: add judges or cut the circuit. Because some experts insist that circuit courts should have no more than nine judges, Congress will shortly be asked to reduce the Fifth's jurisdiction by creating a new seven-judge circuit court to handle Texas, Louisiana and the Canal Zone.

But this plan, backed by Senator Eastland, includes provisions for all but dropping the Fifth of moderate judges. When the new circuit court is set up, it would get Texas' Brown and Louisiana Wisdom, leaving the Fifth with John Rives and Tuttle as moderates, and Tuttle would soon be succeeded as chief judge by the traditionalist Alabamian Gewin.

To the plan's critics, who include the Fifth's most enlightened judges, the best solution is to keep the Fifth intact, despite adding more and more good judges to handle the load. As they put it, "There is no magic in the number nine." The real magic lies in preserving a great court that balances local feelings against the needs of the region and the nation.

THE SUPREME COURT

Place for Seditious Libel

In the fall of 1962, Jim Garrison, the flickering district attorney of Orleans Parish, was determined to cut down vice in the French Quarter of New Orleans. But the parish's eight criminal judges refused to give their approval, which was necessary before the D.A.'s undercover agents could be paid. In a blast to the press, Garrison said the refusal raised "interesting questions about the character influences on our eight vacation-minded judges." Garrison's statement raised something else: the judges charged him with criminal defamation, a misdemeanor that, in Louisiana, receives no jury trial. Garrison was convicted, sentenced to a $1,000 fine and four months in jail. Louisiana's highest court upheld the conviction.

Last week the Supreme Court reversed that conviction, thereby extending to criminal libel the same rule it laid down for civil libel in last year's Alabama libel judgment against the New York Times: public officials cannot collect for public criticism unless a statement is "made with actual malice," meaning full

AP

D. A. GARRISON IN FRENCH QUARTER
Criticism is no crime.

knowledge that it was false. Though concurring, Justice Hugo Black argued, as he has before, that "There is absolutely no place in this country for the old, discredited English Star Chamber law of seditious libel."

No Hostility to God

I pledge allegiance to the flag of the United States of America and to the republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

When Congress added the words "under God" to the familiar pledge in 1954, New York State's Education Commissioner James E. Allen was legally bound to recommend that schools go along. There was scarcely a suggestion that to do so would raise a constitutional issue. After all, U.S. public life is filled with allusions to God—"This nation under God" (Gettysburg Address), "Great God, our king" (*America*), "So help me, God" (congressional oath of office). The Supreme Court itself opens with the cry: "God save the United States and this honorable court."

But the Supreme Court's subsequent bans on public school prayers in 1962 and 1963 led many Americans to think that the mere word "God" had suddenly become unconstitutional. And two agnostics were already suing New York's Commissioner Allen on the ground that the amended pledge imposed "compulsion on the young children of nonbelievers" and violated the First Amendment.

Not only did the New York Court of Appeals rule against the agnostics, but last week the Supreme Court left the ruling intact by refusing to review the case. The Court was being consistent: its 1963 decision merely held that the First Amendment forbids state-sponsored or government-supported religion. It has never endorsed hostility to God, only the separation of church and state.

THE THEATER

Strictly for the Gypsies

Bajour. If it strikes a playgoer that there is something terribly funny about bilking a lonely, gullible widow out of some insurance money, then this musical is his to enjoy. Otherwise, it is strictly for the gypsies.

A Manhattan clan, headed by a *Guys and Dolls*-type gypsy, Herschel Bernardi, needs to raise an $8,000 bridal fee to purchase a spitfiery *West Side Story*-type gypsy girl (Chita Rivera) for his son. The girl is so keen for the match that she stages a *bajour* (Romany for swindle) and cons the widow for the money. A subplot has the widow's daughter living in with the Bernardi bunch to research a Ph.D.

The rainbow-clad company whirls through its paces like a hurricane at a remnant counter. Chita Rivera is a one-woman atomic pile, and her dances are radioactive. The book is carefully thought out, and if the music is merely passable, the lyrics are intelligent.

It is all to little avail. *Bajour* wants to be offbeat and manages only to be off key. When a group of vagrants camp fifty to the square foot in a deplastered slum store and trumpet that they intend to steal New York blind, the $9.60 ticket buyer is bound to speculate wryly that he may be the next victim. And even if he is filled with escapist envy for the gypsy's irresponsible lot, his conscience, drummed by a thousand pleas, dampens his delight. In the climate of today's opinion, play-gypsies-play translates into the specter of migrant urban nonworkers, who are just about as amusing as migrant agricultural workers, and everyone knows how funny they are.

MUSIC

DAVID SIM—LONDON OBSERVER

GWYNETH JONES IN "IL TROVATORE"
Delight from a tidal wave.

OPERA

Presto Chango

There is nothing like a change of key to unlock a whole new career. At least such is the case of a tall Welsh lass named Gwyneth Jones. A year and a half ago she was a so-so mezzo, beset with a special problem: "My voice just kept going up and up." Why fight it, she thought. So presto chango, the mezzo became a soprano.

Almost immediately her stock as a singer also soared up and up. She was signed by London's Royal Opera and two months ago awarded her first major role in Covent Garden as Leonore in Beethoven's *Fidelio*. "Genius," declared one critic. "She has it in her to be one of the great lyrical-dramatic sopranos of our generation," raved the London *Times*.

Flying Colors. Last week Gwyneth Jones was put to her severest test yet, stepping in for the ailing Leontyne Price to sing the demanding role of Leonora in the opening of Covent Garden's new production of *Il Trovatore*. She passed with flying colors, though she was scored for occasionally giving too free a rein to her voice when spiraling into the upper registers. What thrilled the audiences was the raw power of her bright, heroic soprano, a tidal wave of a voice that all but drowned out Tenor Bruno Prevedi.

Just 28, Gwyneth lives in a middle-class London suburb with her Welsh husband Islwyn, a ladies' underwear salesman and an amateur rugby player. She was born in Pontnewynydd, Wales, worked as a secretary for four years in the local foundry before winning a scholarship in 1956 to London's Royal College of Music. She was hired by the Zurich Opera in 1962 as a mezzo, but soon found she couldn't restrain herself from "singing top Cs and trilling." Zurich Conductor Nello Santi listened and forthwith pronounced her a soprano.

Furry Animals. She responded to the transition like an uncaged bird. "It was terrific," she says, "so much more challenging and rewarding than mezzo parts. I could have kicked myself for not having done it before." Now she is intent on making up for lost time, has performed a new role each month for the past five months.

But so far she has acquired none of the signs of soprano temperament, is instead almost girlishly exuberant about her new career. Her dressing room is crowded with "furry little toy animals," and like a teen-ager after the senior prom, she brings home all her curtain-call flowers and heaps them in the bathtub until she can arrange them around the house. To get to Covent Garden she takes a half hour ride on the tube, studying her role en route. "I memorize beautifully when there is noise around," she says. There promises to be a lot of noise about Gwyneth Jones for some years to come.

INSTRUMENTS

Lily's Machine

Committing the sounds of music to paper is like trying to bottle a moonbeam. It is an elusive and often perplexing art. The mechanics of inscribing notations, for one thing, is such a tedious and time-consuming task that for centuries composers and musicians have been searching for an easier and faster way of writing music. Now Britain's Imperial Typewriter Co. Ltd. is offering just that—a typewriter that types music.

Scheduled for world distribution some time next fall at a price of about $700, the Musikriter consists of a standard typewriter keyboard of 46 keys plus eight "elevation keys" that allow vertical as well as horizontal typing. The machine can be mastered in [illegible] weeks by an experienced typist, who can then tap out a symphony or a fu[illegible] at the rate of about 60 notes a min[illegible] Imperial Typewriter, which already h[illegible] orders from 14 countries, hopefully s[illegible] the Musikriter as a great boon to co[illegible] posers, music publishers, orchestra[illegible] music libraries and schools.

The Musikriter is the brainchild of [illegible] short (4 ft. 9 in.), roly-poly, forty-[illegible] divorcee named Lily Pavey, who had only a year and a half of formal schooling. A former circus clown who could play 17 different musical instruments, she has spent the past 14 years developing her invention in a cluttered [illegible] in South London. She hit on the idea one day while working as an invoice clerk to support her family. To relieve the boredom of the job, she took to sing ing while she typed and was suddenly seized by the thought: "How much more interesting it would be to type music than invoices."

She bought a secondhand typewriter from a friend and began years of figuring how to reproduce 8,000 characters with 46 keys. Biggest breakthrough was the idea for vertical typing, in which the basket of type and not the paper is shifted up and down eight spaces, or an octave—an inspiration that struck her one day while riding up and down in a creaking elevator in her apartment building. She financed her experiments with winnings from soccer pools, small donations from friends, and a $4,200 grant from the Calouste Gulbenkian Foundation.

Lily has also perfected an electronic extra she calls a "multi-note rotating drum," a device which audibly sounds the notes as they are struck on the keyboard. "If Beethoven had had my machine," she enthuses, slightly missing the point, "he could have written a symphony in a week!"

SPACE

Mission to Mars

The planet Mars follows such an eccentric orbit around the sun that it is accessible to probing spacecraft from each only one month out of every 25—a period referred to by scientists as "the window." All through November the window was open, but the first U.S. attempt to peek inside failed when the Mariner C spacecraft, unable to jettison its 500-lb. fiber-glass protective shield, could not attain the necessary speed. Last week the U.S. tried again, barely 25 days before the window would have slammed shut until December 1966.

At Cape Kennedy a three-stage, 100-ft. Atlas-Agena rocket blasted downrange over the South Atlantic missile track in a perfect launch. Five minutes later, the protective shield, a redesigned shroud of magnesium thorium, was jettisoned right on schedule. Thirty-seven minutes after that, from a 115-mile-high parking orbit over the Indian Ocean, the rocket engine reignited, kicking the 575-lb. Mariner D payload toward Mars at the required speed—17,600 m.p.h. At week's end all was going well with Mariner D and its 138,-000 individual parts. But the spacecraft still has quite a way to travel—325 million miles along a route that is expected to carry it past Mars by mid-July.

Mariner's mission is manifold. During its journey away from the sun, it will radio back information on radiation, magnetic fields and micrometeorites. If all goes perfectly, it is supposed to transmit data on the density of the Martian atmosphere that could be invaluable to U.S. scientists who are hoping to land a capsule there by 1969. As a final dividend, it will also try to take 22 still pictures with a television camera during a 30-minute fly-by some 8,600 miles from the red planet. The pictures will be transmitted to earth from 150 million miles in space, but scientists think they should be as detailed as photos of the moon taken by the strongest telescopes on earth. If they are right, new light may at last be thrown on the mystery of the Martian canals.

OCEANOLOGY

To Catch a Tired Fish

Why do swift and agile fish get caught in slow-moving nets? They simply get tired. This sea-borne secret was documented recently when skindivers of the U.S. Bureau of Commercial Fisheries hung on the mouth of a big submerged trawl and took movies of fish as they were caught. The net moved through the water as slowly as 2 m.p.h., a pace that most fish can exceed with ease. But the skindivers learned that, fast as fish are, most of them are too lazy to take evasive measures. They swim lantly for a while to keep ahead of the net, but eventually they tire and drift back into its maw. After that, they are stuffed into its trailing "cod end," from which there is no escape.

Encouraged by these observations, the bureau's Seattle base designed a monster, bag-shaped trawl. The mouth, 117 ft. square, is kept open by floats and kitelike "otter boards"; it can be submerged at any depth. The great net is pulled through the water at less than 3 m.p.h. A few fish, including salmon, are smart enough to recognize danger and dart to safety, but most types do not take alarm until too late.

Armed with their slow, enormous net, the fisheries men have found an unexploited treasure in the North Pacific. The midwaters between the surface and the bottom, a region usually neglected by commercial fishermen, swarm with great schools of hake. Often the giant net has caught them at the rate of a ton a minute. Pacific hake bring a low price because they are used to make fish meal, but the net has also caught ocean perch and other food fish. The bureau is looking forward to a time when fleets of supernets will comb the neglected midwaters of the North Pacific, gulping shiploads of fish that are now almost untroubled by fishermen.

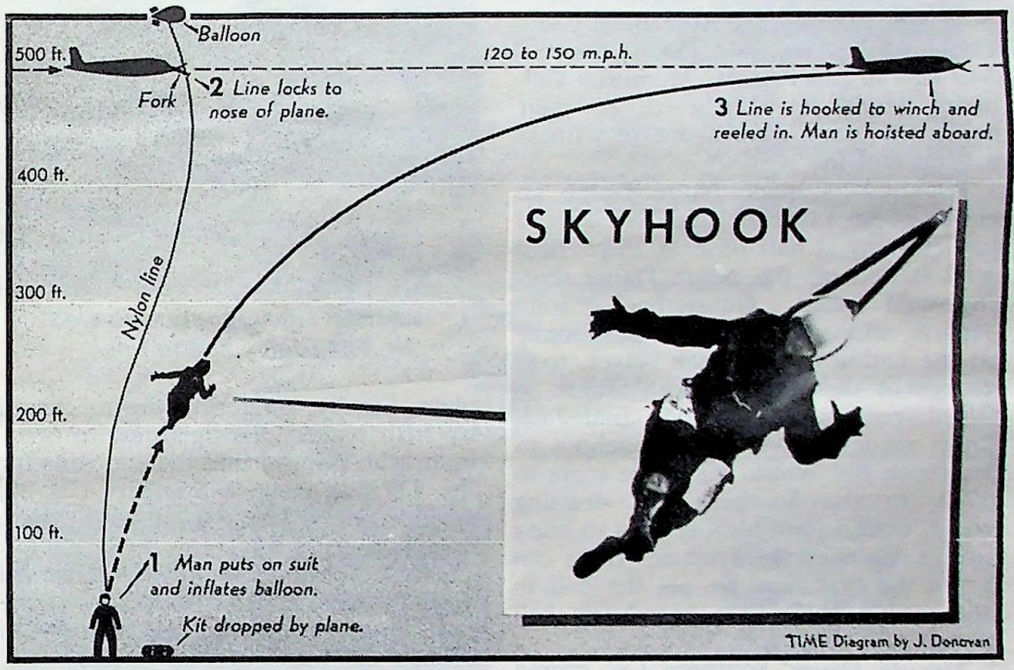
AERONAUTICS

Operation Skyhook

It has always been the proud boast of the U.S. armed forces that their pilots would go to extravagant lengths to rescue comrades in trouble. Helicopters flap into impossible places to save plane-crash survivors; skindivers drop to the aid of downed astronauts; search-and-rescue craft crisscross vast areas of ocean. And now the lifesaving arsenal has a new weapon: the military Skyhook developed by Connecticut Inventor Robert E. Fulton, Jr.

Once its target is located, a Skyhook rescue plane sends a 400-lb., do-it-yourself kit drifting downward by parachute. The bulky package, which is buoyant enough to float if it lands on water, contains a cylinder filled with helium and 500 ft. of woven nylon line with a special suit attached to one end, a balloon to the other. The man to be rescued must be in good enough physical shape to do a few simple things: put on the suit and inflate the balloon with helium. Once the big bag rises to the full length of the line, the rest of the operation begins.

The plane drops down to 450 ft., zeroing in on the nylon line. A V-shaped fork, attached to the plane's nose, guides the line into a locking device. Although the plane is moving at 150 m.p.h., the man being rescued is lifted with less of a jolt than the force of a 6-ft. jump. The man goes up almost vertically before he begins tracing a curved path into a position somewhat below and to the rear of the plane. The relative gentleness of the takeoff and the curved trajectory result from the interaction of several forces: the man's weight and air resistance, the speed and altitude of the plane, and the stretchability of the woven nylon line, which absorbs shock as it lengthens. Within five minutes of lift-off, the man is hoisted aboard the plane.



The Navy, which got into the act first, has been perfecting Skyhook rescues for seven years. Earlier this year, the Army used the technique to lift 35 men, including two Special Forces generals, during exercises at Fort Bragg, N.C. Now the Air Force is also trying the method, and 48 Lockheed C-130 transports have been modified with the forks and winches needed for Skyhook lifts. "I've never experienced anything like it in my military career," says Special Forces veteran Sergeant First Class Johnny Dolin. "First there is a slight tug at the shoulders, then you're soaring through the air like a bird."

COLLEGE FOOTBALL

The Trojan Horse

All season long, while Notre Dame's Fighting Irish piled up victory after victory, Coach Ara Parseghian played the persistent pessimist. "It is impossible to go through a season undefeated," he insisted. "Teams are too evenly matched these days."

Now the only thing that stood between Notre Dame and its first perfect season in 15 years was a so-so Southern California squad that had lost three out of nine games. True, U.S.C. had something worth fighting for—a possible Rose Bowl bid—but the Irish had something worth more: the national championship. "This is our Rose Bowl," said Coach Parseghian, and few of the 83,840 fans in Los Angeles Memorial Coliseum could have believed in their hearts that they were about to witness the upset of the year.

Bookmakers made Notre Dame an eleven-point favorite, and the spread looked puny at half time. A 25-yd. field goal started off the Notre Dame scoring—and then Quarterback John Huarte, winner of the Heisman Trophy as the nation's top college player, took charge of the relentless Irish attack. A 21-yd. pass to All-America End Jack Snow made it 10-0, and a pitchout to Halfback Bill Wolski hiked the score to 17-0. In the Southern Cal dressing room, Coach John McKay tried to buoy up his downhearted Trojans: "If we can score the first time we get the ball in the second half, it's a brand-new ball game."

Upside Down. Southern Cal scored all right, striking 68 yds. in nine plays to cut the gap to 17-7. But it still seemed like the same old ball game. Time after time, Irish receivers broke into the clear to haul in Huarte's whistling passes. Notre Dame marched to the Southern Cal 9—only to lose the ball on a fumble. Back came the Irish again, and this time Fullback Joe Kantor got the touchdown—only to have it nullified by a holding penalty. By now it was the fourth quarter, and bored sportswriters amused themselves by making bets on what the Notre Dame margin would be.

Then everything turned upside down. Trojan Quarterback Craig Fertig passed, Fred Hill and Rod Sherman made clawing catches, Halfback Mike Garrett slipped away from Notre Dame tacklers as if he were coated with grease. From his own 8, Fertig marched the Trojans to the Notre Dame 23. Then he rolled out, lofted a pass to Hill in the end zone, and the Irish lead was 17-13.

"Rose Bowl!" With only 4½ min. left, Parseghian decided to eat up the clock. But now the aroused Trojans held for downs, got the ball back on the Notre Dame 40, and went to desperate work. A run failed, two passes fell incomplete. Finally, on fourth down, chased by Irish blitzers, Fertig threw to Sherman, who skipped into the end zone for the TD that made it Southern Cal 20, Notre Dame 17. The clock read 1 min. 35 sec.

"Rose Bowl! Rose Bowl!" screamed Southern Cal rooters. But Notre Dame has never been a quitter. Parseghian draped his arm around Quarterback Huarte's shoulders, whispered briefly in his ear. No deception now; everybody knew what Huarte was going to do—throw, throw, throw. A 15-yarder to Halfback Nick Eddy put the ball on the Notre Dame 38—and U.S.C. fenders began to get jittery. Two alties moved Notre Dame to the jan 43. But Huarte's next pass was tercepted on the Cal 20. Trojan heaved a sigh of relief. Now there less than one minute left. It was all

Not quite. The stubborn Irish the Trojans cold, forced them to with 35 sec. remaining. Huarte to throw again. Two passes to and the Irish were back at Six seconds—time for one last Huarte dropped back, danced looked downfield for Snow, and corked a long, looping pass to the Trojan end zone. Snow leaped so did four Southern Cal defenders. the ball fell to the ground. Bang gun sounded.

In the Southern Cal locker room, victorious Trojans heaved Coach Kay into the shower and waited iously for word that they had been vited to the Rose Bowl. It never The Pacific Athletic Conference Oregon State instead.

RHOME CHOWING DOWN
The price keeps going up.

Playing Catch

When the pros got around to d ing up the college catch at last annual draft in Manhattan, one fish was missing: Quarterback Rhome, 22, of the University of T Missing, but not forgotten. T teams, the New York Jets, the D Cowboys, Canada's Calgary Stam ers, drafted Rhome last year, whe was a junior, and the only question is how much he is going to cost lucky bidder. Last week Rhome the starting price another notch flinging 29 passes and completing for 234 yds. and two touchdowns, ing Tulsa to a 21-7 victory over W ta and a berth in the Bluebonnet B

By Rhome's standards, that wa horrible day. Oklahoma State bo the nation's second-best pass defe before it ran into Tulsa in Octob Rhome hit on 35 of 43 for 488 and moved an awestruck pro scou exclaim: "We couldn't complete many if we were only playing Against the University of Louisi Rhome threw seven touchdown pass against Houston, he threw one that eled a fantastic 60 yds. in the air. Tulsa's ten games (eight wins, two es) this season, Rhome has compl 224 out of 326 passes (a percentage .687) for 2,870 yds. and 32 TD major college records all. His 3,128 of total offense is an alltime re as well, and he has broken an dozen or so minor marks during three varsity years.

The pro bidding for Rhome probably start somewhere around 000 for a bonus—which is more the Jets apparently want to spend week they gave Houston their rights Rhome in return for a draft choice Jets Coach Weeb Ewbank did his to explain the decision: "I'd have

JON BRENNEIS

SAN FRANCISCO'S GHIBERTI DOORS
Brighter than the original.

SCULPTURE

Paradise Regained

Michelangelo said that the doors might "fittingly stand at the gates of Paradise." All Florentines of the 1450s agreed that their Baptistery's portal, sculpted by Lorenzo Ghiberti, was worthy of immortality. The double doors, 16 ft. by 9 ft., cast of bronze and overlaid with gold, held ten panels that told Old Testament tales in such graceful relief that the metal seemed brushed on like oils.

Immortality has no guarantees on earth. Only the beauty of Ghiberti's doors saved them from centuries of soldiers smelting Renaissance masterworks into cannon. When World War II broke out, the Italian government ordered the doors taken down for safety. As double insurance, Master Foundryman Bruno Bearzi was commissioned to make plaster impressions and cast bronze replicas. Since Bearzi used the waste-mold process, in which the plaster is broken off, only one set of duplicates was made. In 1948 the scrubbed originals were rehinged at the famed San Giovanni Baptistery. Five years ago, San Francisco's Protestant Episcopal Grace Cathedral, under construction in traditional Gothic style, commissioned the completion of the duplicate doors. Now the replicated Ghibertis have a godly home too.

A third of the way around the world from Florence, Bearzi's two-ton doubles opened last week on their first services in the newly consecrated cathedral. In some ways, the doors are closer to mint condition than the originals in Florence. After centuries, much of Ghiberti's detail was too weathered and worn to emerge clearly. So, after gilding the bronze, Bearzi's foundry chased the Renaissance precision touch back on. One craftsman spent six weeks detailing a postcard-size section, bringing out each and every feather on a bird no bigger than one-sixth of a postage stamp. What took Ghiberti 27 years to conceive and execute took eight man-years of labor just to imitate.

Perhaps only in the U.S. would someone have conceived of repeating the gates to heaven. Yet, shining in their new cathedral portals, the doors also double Ghiberti's chance to survive, astonish and delight his viewers as freshly as he did in Florence five centuries ago.

PAINTING

Catcher of the Eye

As shock is wearing off and familiarity is setting in, two facts are emerging about the proliferating art movement called pop. First, it has proved to be the most copied U.S. art movement abroad since abstract expressionism, now turns up in galleries from Rome to Tokyo. Second, among its welter of practitioners, two painters have emerged as the undisputed eye-catchers: Robert Rauschenberg, 38, (TIME, Sept. 18), who made off with first honors last summer at the Venice Biennale, and Jasper Johns, 34, pop's most painterly painter (*opposite*).

The two are close friends, but miles apart in temperament. Extravert Rauschenberg is now touring Japan with the Merce Cunningham ballet, for which he whips up a spontaneous stage set a night out of the jetsam of commercial products. More reticent, Jasper Johns plays the position of a mandarin: his aim is to make art about art. In his beach house on Edisto Island, S.C., and his Riverside Drive penthouse in Manhattan, Johns surrounds himself with art works of his friends, from Marcel Duchamp's Dada gimcracks to Andy Warhol's soup boxes, which he uses in lieu of extra furniture. He is a chess player and keeps a library substantial in such stiff favorite reading as Ludwig Wittgenstein's *Tractatus-Logicos Philosophicus*. Johns also keeps on hand an inexhaustible supply of beer, which, in a way, has crept into his work.

Totem from Taboo. Johns's most known work is his 1960 *Painted Bronze*, apparently just two Ballantine ale cans on a pedestal. But look again, since, through the looking glass of pop, nothing is quite what it seems. They are, in fact, cast-bronze facsimiles of ale cans, one slightly smaller than the other. One is punched open and empty; the other is closed and solid bronze. Their labels are hand-painted, and when lifted off their base, they provide a hefty gravitational surprise. They delight Johns precisely because they are false twins, a unequal equation, in short, a parad Johns's followers even go so far as see in them the transubstantiation of familiar, a totem made from art taboo.

Johns's choice of Ballantine ale came from an offhand remark by Abstract Expressionist Willem de Kooning to Johns's dealer, Leo Castelli: "Get that s.o.b. two beer cans and he can sell them." Johns proved he could (for $1,000). Johns has also made art out of neon lettering, chairs, paint brushes and cast light bulbs in bronze.

Johns chose subject matter that was purposely flat and familiar—U.S. flags, targets, maps, and the digits one to ten (*see overleaf*). But to him, they are no more commonplace than the lemons in the still lifes of yesteryear. Transforming everyday objects into images of common beauty is unquestionably the artist's task, and for Johns the act of metamorphosis is full of magic. He says, "I am concerned with a thing not being what it was, with its becoming something else, with any moment in which one identifies a thing precisely, dealing with the slipping away of that moment."

Saucy Delight. At first even a look at art seemed unlikely for Johns. He grew up in Allendale, S.C., and spent a short year and a half at the state university, where the lanky, laugh-prone Southerner got a smattering of art studies. But as an artist, Johns was largely self-taught. Not until he was 27 did he get his first show. It was a virtual sellout, and Manhattan's Museum of Modern Art bought three works. Three years later, in 1961, he won an award

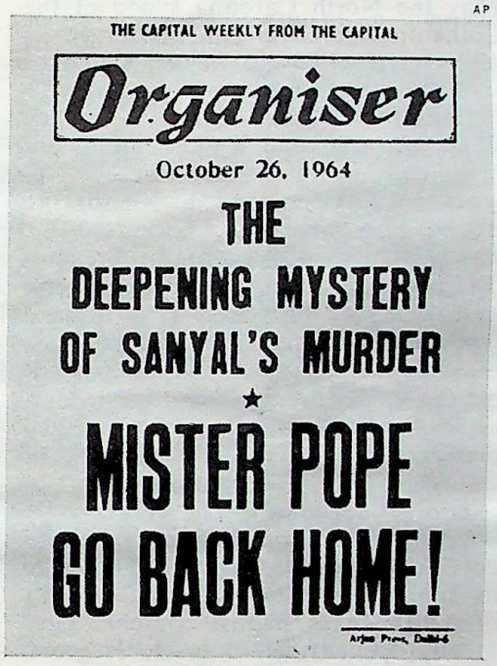
ROMAN CATHOLICS

Bombay's Spiritual Spectacular

This week Paul VI will add 8,000 miles to his record as the most travel-minded Pope of history by flying from Rome to Bombay for Roman Catholicism's 38th Eucharistic Congress. The Pope's four-day visit to India is intended to symbolize his concern for the mission church, and for Catholicism's witness to the non-Christian world.

Eucharistic Congresses have been held periodically since 1881 all over the world to demonstrate the unity of

AP



POSTER IN NEW DELHI
Six bishops for consecration.

Catholicism and to worship the "Real Presence" of Christ in the Eucharist, the bread and wine of Communion. More than 100,000 Catholics, including 14 cardinals and 300 bishops, are expected to attend this spiritual spectacular. On the program are Masses in various rites, consecration by the Pope of six new bishops from five continents, and an Indian ballet on "The Eucharist and the New Man," with 1,500 dancers and musicians. The congress will also discuss how the church can ease world problems, particularly poverty, hunger and overpopulation. The nine-day congress will cost upwards of $1,000,000.

Portuguese Anger. Not everyone is as pleased by the congress as are India's 6,200,000 Roman Catholics. Although President Sarvepalli Radhakrishnan and Prime Minister Lal Bahadur Shastri will greet the Pope in Bombay, many Indian officials are miffed that Paul refused to visit New Delhi. The papal trip also cuts no ice with Portugal, which has never forgiven India for seizing its old colony of Goa in 1961. In honor of the Bombay congress, Goa is exposing for 44 days of veneration its most famous relic, the mummified body of the 16th century Jesuit Missionary St. Francis Xavier—minus one toe that was bitten off by an overzealous worshiper in 1859 and part of one arm, which was shipped to Rome for veneration in 1615. So outraged was the government of Portugal by news of the papal visit that it forbade the country's newspapers and magazines to mention it.

Portuguese anger is mild compared to that of some right-wing Hindu groups, which look upon the congress as a colonialist plot to destroy the culture of India. There are blunt posters on the streets of Bombay warning that "Christianity is a danger to Hinduism." Indian officials minimized the threat to the Pope, but put a number of Hindu fanatics in protective custody and strengthened the 16,000-man Bombay police force with 3,000 troops from the Maharashtra state police.

Tickets & Traffic Jams. Construction work for the congress has run behind schedule, partly because of the planners' general lack of organization, partly because of last-minute changes inspired by the Pope's decision in late September to attend. In anticipation of the flood of visitors, food prices have risen 10% within the past month.

Racketeers have done an impressive business selling counterfeit tickets. With more than 20,000 extra cars in town—including the Pope's white Lincoln Continental, given him by an alumnus of Notre Dame—Bombay police are resigned to the prospect of monstrous traffic jams. As it happens, almost every major highway in the city is clogged with construction projects. There is perhaps some unintended irony in the pronouncement by Bombay's Valerian Cardinal Gracias that the Pope's visit is "a spiritual pilgrimage in keeping with the best spiritual traditions of India."

PROTESTANTS

The Sinner of Elburg

"I solemnly declare before God and my parish that I have committed adultery," announced Pastor Bastianus Gerardus Andries van der Wiel from the pulpit of the Reformed Church of Elburg in The Netherlands. The congregation listened in thrilled silence; then the chief elder rose to deliver a thunderous, hour-long sermon on guilt, as Van der Wiel sat beside his wife with head bowed. Many in the congregation cried, and they sang six psalms for a sinner restored to grace.

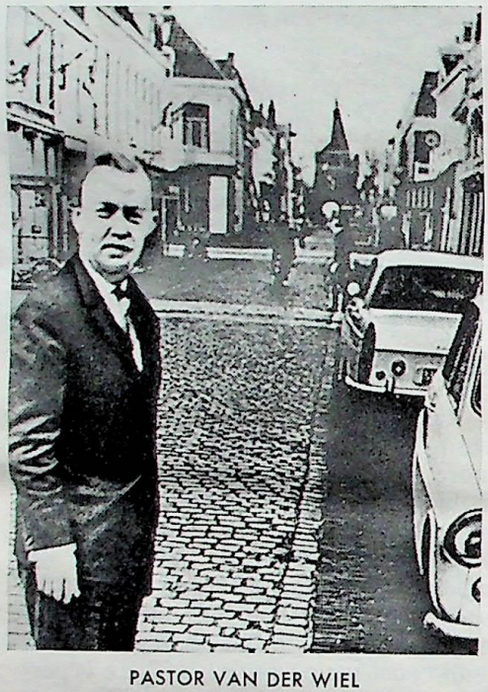
Elburg is a gossipy little farming and fishing community of 4,000 that eyes with suspicion all strangers who enter its grim, grey, 17th century walls, takes religion seriously, and demands repentation for sins against divine law. Without a doubt, Pastor Van der Wiel, 54, had offended Elburg's sense of the proprieties. As pastor of the Reformed Church for ten years, he had earned the clannish townsfolk's respect for his learned

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sermons, theological orthodoxy and stern denunciations of engaged couples who did not wait until their wedding night. The town was horrified seven weeks ago when four local youths reported that they had seen pretty, blonde Matje Leusink, 26, kissing the pastor.

Van der Wiel protested that he had simply been driving Matje home from a confirmation class. Matje insisted that she had simply given the pastor a daughterly peck on the cheek. But the church elders measured the offense against Jesus' words that "one who looks at a woman lustfully has already committed adultery with her in his heart." Unless Van der Wiel publicly confessed his sin, they warned, "we will chase you out of



PASTOR VAN DER WIEL
Six psalms of penitence.

town." To keep his job, Van der Wiel agreed to accept the punishment.

As far as the rigid, righteous Christians of Elburg were concerned, justice had been done, and the case was closed. "Ministers are sinners, like you and me," said one elderly fisherman, contentedly. "We are all sinners, day and night." Another Elburger, who last week heard Van der Wiel deliver his first post-confession sermon, commented: "It was wonderful preaching today. I felt fine, as we all did, and we sang with joy." But Van der Wiel was emotionally shattered by his ordeal. The provincial synod, when it heard about the pastor's punishment, was so shocked that it ordered an investigation of the congregation's "unchristian" behavior.

CHURCHES

Southern Desegregation

The unedifying bitterness that keeps Christian whites from wanting to pray in church next to Christian Negroes does not end spontaneously. Instead, it usually gives way before glacierlike pressures from above—from bishops, synods and church conferences, followed by pastors and priests. This process, advanced in the North, is slowly reaching the pulpits and even the congregations of Southern Protestants.

Presbyterian Precept. Responding to the marching orders of this year's General Conference, white-only Methodist jurisdictions in the South have begun to explore merging with smaller Negro conferences. At its General Assembly in April, the Southern Presbyterian Church ordered the integration of its separate white and Negro presbyteries; since then many Southern Presbyterian synods have also approved an amendment to the church's constitution that states: "No one shall be excluded from participation in public worship on grounds of race, color or class." Last May the North Carolina synod of the Lutheran Church in America urged its 198 congregations to welcome all persons to worship regardless of race.

Reflecting these high-level policy shifts, the all-white Enoree presbytery in South Carolina voted to accept Negroes to services, and a Negro, the Rev. E. E. Newberry of Charlotte, N.C., was elected moderator of the predominantly white Mecklenberg presbytery. Negro clergy this year were for the first time admitted to membership in the Ministers' Association of Columbia, S.C. Last week a Negro, Dr. Harry Richardson of Atlanta, was elected president of the Georgia Council of Churches.

Baptist Backdown. The conservative Southern Baptist Convention voted down a strong civil rights resolution at its annual convention in May, but 981 of 3,901 Texas Baptist churches have quietly opened their doors to Negroes. The Rev. C. E. Autrey of Dallas, one of the most respected of Southern Baptist evangelists, preaches that "racism is immoral" and that Baptist foot dragging on civil rights is impeding its mission work. Atlanta's First Baptist Church, which made headlines when its ushers threw Negroes bodily from the steps last year, has long since voted to allow them to sit in the sanctuary with whites.

So far, the effect of the changing attitudes toward race remains on the level of tokenism and gingerly pronouncements, but there are a few signs that pronouncement may be the prologue to commitment and action. Last month the District of Columbia Baptist Convention, which is composed of both American and Southern Baptists, passed a resolution that urged charitable institutions affiliated with it to abandon racist admission policies; behind these soft words was the unmistakable threat to cut off financial support if the institutions did not comply. And in Mississippi, a Roman Catholic bishop has joined with Protestants to form a "Committee of Concern" under the leadership of Baptist Preacher William P. Davis of Jackson. The purpose is to raise money to rebuild Negro churches destroyed or damaged in the state by racist bomb throwers.

MILESTONES

Married. Melissa Murphy, 21, daughter of California's new Republican U.S. Senator; and Robert Ellis, 23, fellow student at the University of Colorado, in Aspen, Colo.

Died. Colonel William Draper, 44, Eisenhower's pilot during eight presidential years, who almost always brought Ike winging in on time despite snowstorms, tardy politicians and small-town airstrips, logging over 200,000 miles in the *Columbine* and 707; by his own hand (hanging), probably as result of despondency since a heart attack grounded him last year; in Camp Springs, Md.

Died. The Most Rev. Edward Daly, 70, Roman Catholic bishop of Des Moines since 1948, one of 22 American churchmen serving on Ecumenical Council commissions; of injuries sustained when the TWA Boeing 707 he was taking to Athens veered off the runway, slammed into a steamroller and exploded during an aborted takeoff at Rome's Leonardo da Vinci Airport, killing 48 of 73 passengers and crew.

Died. William O'Dwyer, 74, New York City's bluff, ebullient Democratic mayor from 1946 to 1950; of a heart attack; in Manhattan. The luck of the Irish "Billo" had, at least in the beginning—immigrant from County Mayo at 20, bartender, hod carrier, New York City policeman, night-school lawyer and overnight hero in 1940 when as Brooklyn D.A., he uncovered the infamous Murder, Inc. and sent seven of its killers to the chair. That made him mayor of New York, and a good job he seemed to be doing too—until he suddenly quit "because of health" to take a less taxing job as Ambassador to Mexico, and people soon after discovered that his aides had been shaking down bookies and oil-burner dealers for $1,500,000. There was no evidence that O'Dwyer was in on the graft, but he could not bring himself to return to Manhattan until ten years later.

Died. Arthur Winarick, 75, who converted a 20-room Catskills boarding house into what is now the 1,500-room Concord Hotel, the Borsch Belt's biggest beat, offering pink, yellow or blue snow on the winter ski slopes, 45 golf holes in the summer, and romantic matchmaking all year round; of a heart attack; in Kiamesha Lake, N.Y.

Died. Bessie Love Merryman, 100, the Duchess of Windsor's dowager aunt and her constant chaperone throughout the royal courtship, a hard-boiled Yankee who advised Edward in the midst of his dilemma between Cupid and crown, "You can always marry someone else; you can never again be King"; in Washington.

MONEY

A Heroic Defense

While their names are seldom in the headlines and the real extent of their power is appreciated by only a few insiders, there is in the non-Communist world a band of global money managers who have done almost as much as politicians or generals to head off crisis and knit nations together. Using their special skills, they have built a delicately balanced monetary structure that for 20 years has helped to expand trade, travel and economic growth around the world. Last week they faced—and overcame—the greatest challenge since their financial fortress was created at Bretton Woods, N.H., in 1944. It was a British crisis, but the U.S. reactions to it held potentially important consequences for the U.S. economy.

By raising the U.S. discount rate from 3½% to 4% in response to a hike in the British discount rate—the interest that central banks charge their members—the Federal Reserve Board showed how closely interwoven have become economies that are oceans apart. By helping to rescue the faltering British pound (*see* THE WORLD), the U.S.'s money managers demonstrated how tightly bound together are the fates of the Western world's two major currencies. "It was an orderly operation all the way," said William McChesney Martin Jr., chairman of the Federal Reserve, and showed that the bankers' international contacts are pretty good." Despite that typical banker's understatement, the operations had many of the elements of secrecy, mystery and intrigue that would do justice to James Bond—or to Goldfinger, his gold-hungry foe.

With Resignation. The U.S. had little choice but to do what it did, and it moved with skill and speed. The British raised their discount rate from 5% to 7% to strengthen the pound against banks and corporations that were dumping it in fear of possible devaluation, and against speculators who sold short in the hope that the pound would be devalued and they could later buy it back at depressed prices. The rise meant that the British rate would be twice as high as the 3½% U.S. rate, and, as one Swiss banker put it, "7% would drag money from the moon." The Federal Reserve and the Treasury were concerned that it might pull too many U.S. dollars to Britain, causing further difficulties for the U.S. balance of payments, which had been doing somewhat better this year.

But beyond that, said Federal Reserve Chairman Martin in an unprecedented press conference, the hike was "an insurance measure" designed to prove "that we are ready to defend and preserve the dollar." The U.S. money managers feared that European speculators, many of whom received dollars for the pounds they were unloading, might be tempted to convert those dollars into other currencies unless the U.S. demonstrated that it intended to keep the dollar stable. The U.S. did just this by raising the discount rate, thus averted possible speculative pressure on the dollar. In so acting, Martin and his governors placed the nation's international monetary policy at least on a par with the needs of the domestic economy.

Those needs have been best served up to now by a money policy of relative ease. A prime reason that the current expansion has been so prolonged is the abundance of easy credit for installment buying and capital spending—and Lyndon Johnson, for one, has been telling everyone within earshot of his desire to keep money cheap and easy. Immediately before the Federal Reserve governors acted, Secretary of the Treasury Douglas Dillon called Lyndon Johnson at his Texas ranch to tell him their decision. Johnson accepted the news with resignation.

"For Shame, for Shame." Others were not so resigned. "For shame, for shame!" cried Congressman Wright Patman, chairman of the House Banking Committee, who went on to predict "a marked slowdown in our economic growth" as a result of the hike. The A.F.L.-C.I.O. executive council complained that the move would discourage borrowing by consumers and business alike. Coming at a time when many businessmen were beginning to wonder aloud whether the U.S.'s 45-month economic upswing could continue much beyond mid-1965, the discount-rate hike also raised fears among many businessmen of a recurrence of 1960, when an economic expansion was pinched off and a recession brought on by a tightening of money.

WALTER BENNETT

THE FRB: JAMES ROBERTSON, C. CANBY BALDERSTON, MARTIN, A. L. MILLS JR., CHARLES SHEPARDSON, GEORGE MITCHELL, J. DEWEY DAANE

Considering self-interest and the tight bonds of fate.

To such fears Chairman Martin had a ready answer: the Federal Reserve, he said, will continue its present policy of "cautious ease," *preventing the rate hike from hurting the economy* by buying Government securities in the open market and thus pumping money into the banking system. In Martin's view, the hike would not raise loan or mortgage rates, or affect the economy: "I think that it would have a negligible effect on the money supply." To attract more savings and further increase the supply of money, the Federal Reserve simultaneously allowed banks to increase their maximum interest on savings deposits from 3½% to 4%. The board thus hopes, in a deft balancing act, to hold long-term interest rates low at the same time that it raises short-term rates. Not all bankers will play along, of course; at week's end, Atlanta's Citizens & Southern became the first major bank to raise its prime rate for long-term loans to blue-chip borrowers, from 4½% to 4¾%.

The Most Daring. *If the U.S. had to pay a price for the protection of the dollar—and only time would tell just what that cost to the economy would*

NO OATS WANTED!!!

Not for these two sturdy work horses. They live on small quantities of diesel fuel and loads of work.

Nevertheless, they're real Mitsubishi thoroughbreds. Just look at their markings...⛰! Light, all-purpose trucks, the Canter and Jupiter Junior were engineered with several distinct purposes in mind... to carry bigger loads more frequently, *more* economically, and for a longer *lifetime* of service than all other trucks in the same weight class.

Take the Canter, for instance. Its cab-over styling combines maximum cargo space within the shortest possible wheel base. It means that the Canter can get onto those small, narrow streets where other 2-ton trucks are just too big. And for easy maintenance, the seat next to the driver can be folded up.

Or the Jupiter Junior. No other truck in it's class, 2-ton, can boast of as much cargo space. Or a shorter turning rad... Or a cargo bed that's closer to the grou... for lifting convenience.

The engineer thought about the driver a... his comfort and safety too. Both trucks ha... tastefully decorated, spacious cabs (se... three) and handle easy in traffic. Bo... have synchromesh transmission, ma... double-clutching a thing of the past.

They're rugged. Gentle.

They're Mitsubishi work horses!

—it was also moved by self-interest coming massively to the aid of the pound, which continued to weaken despite Britain's rate hike. Had Britain been forced to devalue the pound, the resulting chaos might not only have wrecked world trade and weakened the West, but would almost certainly have undermined the dollar as well. It was clear to the Americans that they had to act just as resolutely in defense of the pound as they had to follow Britain's rate rise. Said Treasury Under Secretary Robert Roosa: "It's like a run on a bank: if you roll the money back in the door, the depositors who planned to withdraw will go away." The rescue that followed was the most daring ever tried.

Just as there is a certain element of conspiracy in the attempts of international speculators to bring down a stable nation's monetary structure, so strong elements of secrecy and suspense went into the efforts to foil them. By sheer teamwork, the U.S. and British bankers put the size of the rescue needed by Britain at a record $3 billion, not counting the $1 billion already available through the International Monetary Fund. The U.S. agreed to put up $1 billion of the amount—and to ask ten nations to put up the other $2 billion. Working with Bank of England Governor Lord Cromer and his British colleagues, the Americans got onto telephone lines stretching around the world. At the New York Federal Reserve Bank, Vice President Charles Coombs and his aides worked through the night, some of them taking off a few hours to nap on "hot beds" kept at the office for such emergencies; coordinating their efforts, Bank President Alfred Hayes was on the job before dawn, when European offices began to open. In Washington, Martin and Roosa each made pitches to half a dozen bankers overseas. It was, in fact, Roosa's swan song in Government after a distinguished four-year career; at week's end, in accordance with a previous plan, he submitted his resignation to enter private banking.

Tuxedos & Secrecy. The bankers twisted a few arms, carefully kept excitement out of their voices to ensure that foreign bankers got no chance impression of panic, and made occasional use of what is known in Washington as the "crossruff": the practice of getting someone to join a party by telling him someone else is coming in. The need for secrecy was so important that in the midst of negotiations, Roosa even donned a tuxedo in the office and went off to a scheduled piano recital at the Polish embassy lest anyone suspect by his absence what was afoot. He kept a car waiting outside with its motor running, just in case.

Just before midday, when France's Giscard d'Estaing signaled approval from his government, the deal was finally closed. Almost overnight, a handful of men had managed to raise $3 billion, relying completely on gentlemanly agreements and a structure of confidence built up over many years. The bundle that they produced will enable Britain's central bankers to buy, buy, buy sterling—until the speculators finally get tired of selling. It was a remarkable show of ability and confidence, and it dramatically demonstrated that the world's cool money managers can perform truly heroic feats in defense of the wealth of nations.

MERCHANDISING

The Business of Giving

While his wife got started on the family Christmas shopping last week, many an executive scanned a lengthy gift list of his own. Corporate gift giving to contacts and customers, out of favor in recent years after "payola" worked its way into the business lexicon, has been revived by prosperity, the passage of time, and a 1963 Internal Revenue ruling that allows business deductions for gifts of no more than $25 in value. This year, company Christmas purchases are expected to rise 9% and account for the largest part of the $325 million yearly business in corporate gifts.

A few large corporations—General Electric, General Motors, Chase Manhattan Bank—enforce written rules against receiving gifts. Other companies suggest that presents be passed on to the Salvation Army or a similar charity, and some just send them back unopened. But throughout U.S. business, executive Santas—and happy recipients—are still more common than not. The main concession to the gift-giving uproar of a few years back is that many more gifts are quietly routed to homes instead of to offices.

Wines & Artichokes. Brown & Bigelow, whose salesmen start Christmas rounds in March, this year will write $5,000,000 worth of orders for Christmas presents. Honeywell has set up a special division that offers twelve kinds of gifts for executives seeking something different. A Food Fair Stores subsidiary called Choice Gifts Inc. has 500 corporate clients in whose name it distributes seven catalogues, from which a recipient selects a gift without ever seeing a price tag. Manhattan's Mark Cross and Dunhill have both set up corporate gift departments; so has Tiffany, which does $1,000,000 worth of business annually in executive gifts.

Alcoholic beverages are given more than any other gift, but tastes are becoming sophisticated. Where once the gift was a predictably expensive bottle of Scotch or bourbon, this year it is more likely to be a bottle or case of Chateau Haut-Brion or Chateau Lafite-Rothschild. Wines have increased in a decade from 10% of Christmas orders to 35%, according to Samuel Aaron, president of Manhattan's Sherry Wine & Spirits Co., Inc.

For companies who discreetly proscribe bottled cheer but want to reach the recipient through taste buds, there are Southern hams, Texas pecans, or fruits packed by more than a dozen Florida and California growers. Santa Clara's Day & Young, Inc. offers a "Royal Feast" that costs $21.95 and includes two smoked pheasants, two cheeses and four jars of marinated artichoke hearts. Busiest fruit packer of all is 64-year-old "Harry & David" of Medford, Ore., whose business annually exceeds $10 million and whose corporate orders often total $25,000 at a clip.

"Fondling Pieces." Naturally, a plethora of stereotyped gifts is available: pen sets, leather-tooled engagement calendars, letter openers, diaries, rulers, cigarette lighters and ashtrays. San Francisco's Gump's is doing a big corporate business in "fondling pieces," otherwise useless hunks of jade that come in a suede pouch (price: $8.2[illegible]). This year executives can also give and get desk-scale Rolls-Royce radiators, fused into everything from paperweights to cigar lighters to book ends.

That is only the beginning of the snob-appeal gifts. Tiffany's fastest indi-

And for the man who has everything, and ran hard to get it, there is an executive foot massager, available at Manhattan's B. Altman & Co. for $9.95.

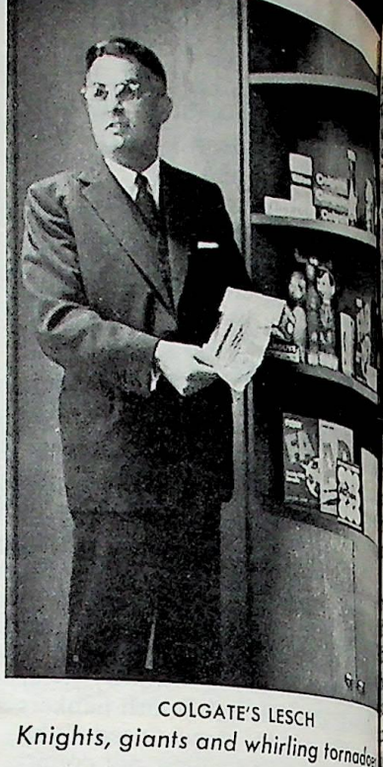
MANAGEMENT

An Executive Peace Corps

When the International Executive Service Corps was organized last June as a sort of executives' Peace Corps, wits immediately dubbed it the "Paunch Corps." Last week the paunch began to show some punch. Elected formally to the $50,000-a-year full-time President's post that he has filled unofficially for five months: Frank Pace Jr., 52, former Army Secretary and General Dynamics chief. Pace, who offered to accept a salary of only $36,000, flew off to the Far East to see what corps services are most urgently needed. Behind him, in new Manhattan offices, a 14-man Service Corps staff got busy at the job of finding U.S. executives to send overseas.

Just as many emerging nations welcome expertise from the U.S. Government, emerging businessmen want it from the private sector. Businessmen from 26 African, Asian and Latin American nations have indicated that they would like help with such jobs as auditing, cost control, administration, plant engineering, product design and marketing. To provide it, according to preliminary plan, U.S. businessmen joining the Service Corps would spend up to two years abroad on a consultant basis; unlike the situation in the Peace Corps, they would be paid a nominal fee collected by the corps from the companies they advise.

The Service Corps' costs at the start are being underwritten by the Agency for International Development; after that, they will be subsidized by U.S. companies. As a catalyzer, 52 executives have been named to the corps' board, and Chase Manhattan's David Rockefeller—one of the original proponents of the idea—has been elected chairman to succeed the late C. D. Jackson of Time Inc. Along with money, U.S. corporations hopefully will also offer talent. The Service Corps has already received 3,000 inquiries about its program, sifted out 700 as particularly promising. It is now trying to recruit the kind of young middle-managers who are most needed—but who can be pried away from most corporations for two years only with great difficulty.



COLGATE'S LESCH

Knights, giants and whirling tornadoes

CORPORATIONS

Mr. Hard Sell

When it comes to creating the wor of fantasy in which U.S. compa sell their products on TV, the Colg Palmolive Co. seems to hold the c rent lead. Hundreds of times a wee "White Tornado" whirls like a der across the nation's TV screens, and "White Knight" charges about ban ing dirt miraculously with a touch his trusty lance. Colgate also has Action "Giant" who reaches a muscu arm right out of the washing machi before awestruck housewives, most whom are blissfully unaware of Freudian predilections of Madis Avenue.

This bizarre collection of hard-sell creatures all work for—and owe the existence to—a rather harmless-looki fellow named George Lesch, Colga president. While not exactly a wh knight, Lesch, 55, has certainly prov to be something of a whirling torna at the U.S.'s second largest soap co pany (first: Procter & Gamble).

Search for Food. Since Lesch be came president in 1960, Colgate h introduced such successful new pro ucts as Baggies plastic bags, Halo h spray, Ajax detergent powder, and a dozen others that now account f 15% of its annual sales of $800 m lion. Colgate is testing freeze-dry foo with a view to jumping into the fo field, is searching to acquire a foo company. This week, battling to re the top of the U.S. toothpaste ma ket that it lost to Procter & Gamb Crest, it began national marketing of white-colored, mint-tasting, fluoride toothpaste called Cue; like Crest, it new paste has won the valuable seal "recognition" from the American Den tal Association.

many whose U.S. sales had been stagnant for years until Lesch took over, is what might be expected of Mr. Hard Sell. An accountant who rose through the international division, which rings up 53% of the company's sales, Lesch has personally rung doorbells to interview housewives from Bangkok to San Diego, has sold Colgate's Fab to Mexican villagers by rolling up his sleeves to show them that they could even use it to wash clothes in streams. His first act as Colgate president was to drop out of sight for three months while he toured the U.S. asking store managers and housewives for suggestions. That tour convinced him that Colgate had to bring out many more new products—even at the cost of some profits.

Executives Out. Lesch set up a number of "invention groups," increased the annual product-development budget from $8,000,000 to $28 million—and hoped to pay the bill by cutting the salaried force by 10% to 15%. Some critical ex-executives complain that under Lesch, Colgate's middle managers are overworked and insecure, and that the company's profits have yet to top the 1959 record of $25 million. At the same time, Lesch gets credit from the trade for having brought out so many new products with catchy names and clever promotions—two of the essentials for success in the soap business. In any case, Lesch's decision to put proposition ahead of profits for his early years seems to be paying off. In 1964's first nine months, Colgate's earnings rose 8%—to $19 million.

Wrong Numbers for A.T. & T.

American Telephone & Telegraph Co. has been trying to reach an 8% return on its invested capital for years, but it keeps getting cut off by a Washington operator: the Federal Communications Commission. Last week the FCC announced an annual $100 million reduction in long-distance telephone rates that will decrease A.T. & T.'s rate of return on interstate telephone operations from its present 7.9% to only 7%. A.T. & T. is obviously displeased. Chairman Frederick Kappel termed the reductions "out of step with the Government's efforts to encourage economic growth." But there is little doubt that subscribers will be happy to heed the call. Beginning Feb. 1, the current after-5 p.m. $1 maximum rate for a three-minute, station-to-station call anywhere in the continental U.S. will go into effect after 8 p.m. and all day Sunday. Weekday station rates between 6 p.m. and 8 p.m. will be reduced and will also be applied all day Saturday. A three-minute station call between San Francisco and New York will drop from $1.25 to $1.50 on Saturdays, from $1.75 to only $1 on Sundays. Despite the revenue it will lose, A.T. & T. has no plans to reduce the record $3.5 billion it has allocated for capital expenditures in 1965. hopes to make up part of its loss by increasing long-distance usage.

NORTH AFRICA

Desert Oil & Political Quicksands

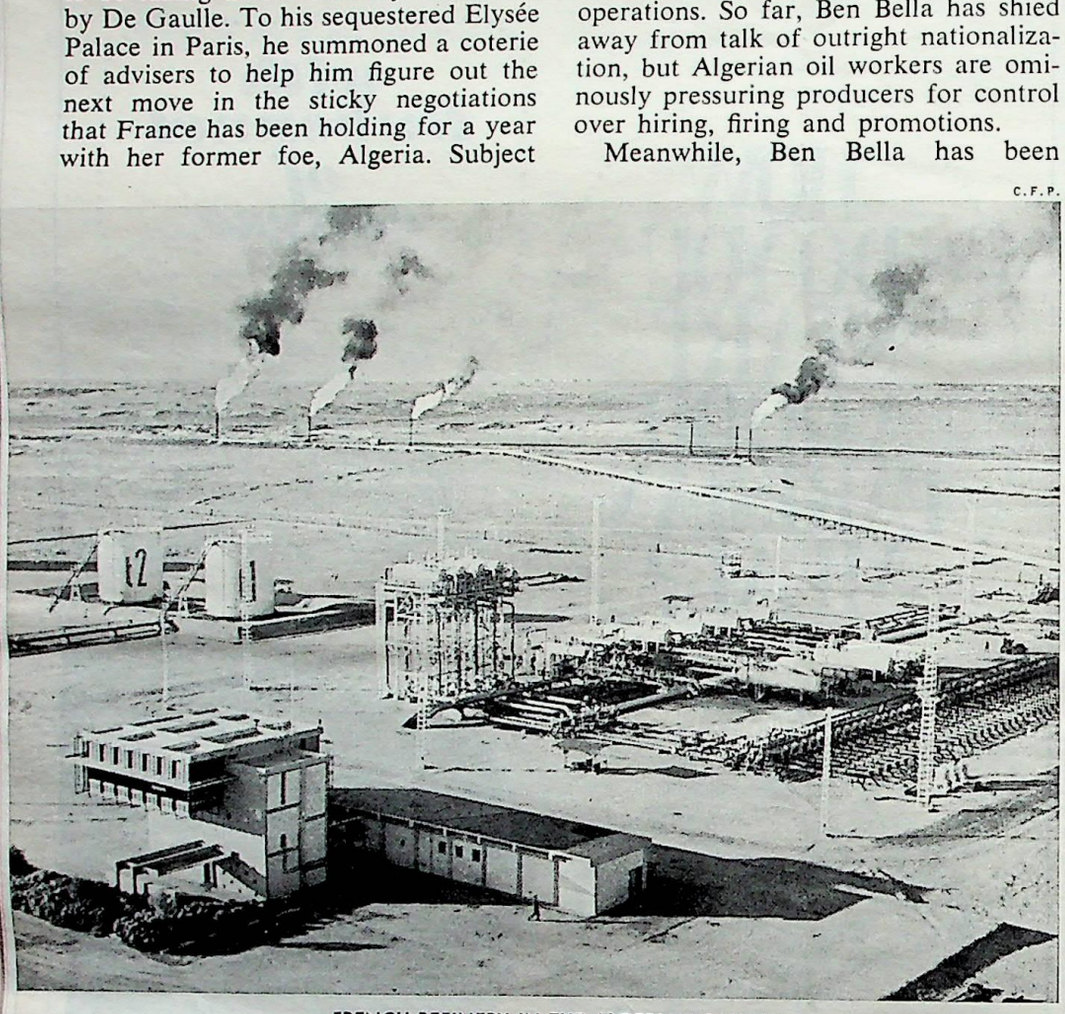
Four years ago, after French consortiums began pumping a treasure of oil from under the desert sands, Charles de Gaulle proudly prophesied: "France may have found a new destiny in the Sahara." Last week that destiny seemed to be taking a turn scarcely envisioned by De Gaulle. To his sequestered Elysée Palace in Paris, he summoned a coterie of advisers to help him figure out the next move in the sticky negotiations that France has been holding for a year with her former foe, Algeria. Subject of the negotiations: the perilous future of French oil concessions in the Sahara.

The best-known image of desert oil is that of such places as Saudi Arabia and Kuwait; the Middle East does, in fact, account for a quarter of the world's petroleum output. But as the sheiks grab bigger and bigger slices of oil revenues, producers have been busy developing alternative resources closer to the oil-hungry European market. The biggest of these now lie in the Algerian and Libyan Sahara, where drilling rigs, tank farms and smoke-plumed refineries give a modern industrial look to the ancient face of the desert.

Courting Both Sides. French companies, mostly government-owned, have invested $1.8 billion in Algerian oil, and France takes two-thirds of Algeria's 184-million-barrel-a-year output. Last year this not only met 37% of France's oil needs in dollar-saving francs but poured $60 million into the treasury of Algerian President Ahmed ben Bella. Not content with that (plus some $221 million of outright French aid), Ben Bella is demanding half ownership of the oil industry, which now gives him 50% of the profits, so that he can industrialize poverty-stricken Algeria. French negotiators seem willing to give in to demands for joint management of new oil ventures, but want to hold out for the profitable status quo on existing operations. So far, Ben Bella has shied away from talk of outright nationalization, but Algerian oil workers are ominously pressuring producers for control over hiring, firing and promotions.

Meanwhile, Ben Bella has been courting both Western and Communist oilmen to reduce his dependence on France. Soviet experts are training 650 Algerians as oil technicians at a school near Algiers, and a U.S.-British-French combine has just opened a $64 million plant at coastal Arzew to freeze natural gas and ship it to fuel-shy Britain in insulated tankers. Italy's giant ENI plans to build a refinery at Arzew on a fifty-fifty basis with Ben Bella.

C.F.P.



FRENCH REFINERY IN THE ALGERIAN SAHARA
And please watch out for the mine fields.

Plenty for King Idris. No such political quicksand threatens oilmen in Libya, where relations with the government have been stable and happy (with fifty-fifty profit-sharing) ever since Standard of New Jersey brought in the first big field in 1959. Since then, output has shot up so fast that Libya now ranks eighth among the world's oil-producing nations, and this year's $250 million oil income will account for 80% of King Idris' revenues. Of 20 companies active in Libya, 13 are American.

Oilmen have invested $1.3 billion in Libya. A consortium headed by Soc... Mobil, which recently snaked a th... pipeline across a desert still infes... with World War II mines, this w... will begin pumping oil to a terminal ... the Gulf of Sirte. From there, tanke... can haul it to European markets ... 40¢ a barrel cheaper than oil from ... Persian Gulf. If oilmen are resigned ... Ben Bella's muscling into their b... in Algeria, the danger of similar ... in Libya seems remote. And Libya, ... men predict, will soon produce ... times as much oil as Algeria.

"Sorry . . . we're out. We can order it for you."

Sound familiar? It should. These words cost retail stores millions of dollars in lost sales – and lost customers. That's why NCR developed a way to make it easy to collect vital merchandising details – right at the point of sale. This new NCR Sales and Inventory Register enforces the collection of inventory data in order to record the sale. All you do is record the unit data along with the price of the item. It's fast. It's easy. It's economical (you save a lot of back-office expense, too)! Simply take the cash register tape to a computer (yours or ours) and you get your up-dated merchandise reports. Not next week or next month – but **now.** "To buy or not to buy" is no longer the question, because you know–item by item–the exact condition of your stock right now. To learn how a Total Retail System eliminates those "Sorry, just outs," contact your nearby NCR office. Or write NCR, Dayton, Ohio, U.S.A.

to simple bureaucracy. The Belgian license plate is too large for the plate holder of the small Italian Fiat 600, and Belgian importers must jerry-build other arrangements. Belgium's single-faced grocery scales, on the other hand, are so far illegal in Germany, where the law requires two-faced scales for merchant and customer. German automobiles must be fitted with yellow headlights when they are exported to France, but the French must put white headlights on their own cars before exporting them. One of the most complicated problems is that of standardizing electrical equipment, a task that some experts say will take 20 years.

Blanket Solution. For all that, no product has so far provoked as many uneasy stirrings in the Common Market as the ordinary blanket. When they sleep, the French like to tuck in their blankets, and they thus require a wider blanket than the citizens of other nations. The Germans, on the other hand, sleep with covers untucked, and the much larger blankets liked by the French irritate them by dragging on the floor. The blanket business is by no means Europe's biggest, but it clearly will have to come up with a physiological solution agreeable to all—perhaps a stretch blanket—before it can expect to profit by the lowering of trade barriers.

PAKISTAN

The Jute King

Pakistan's entire economy is tightly interwoven with jute, which is second only to cotton as the world's most widely used natural plant fiber. Last week Pakistan's vital jute industry was snarled in a strike of nearly 60,000 workers who are demanding higher wages. Some mills were the scenes of clashes, and others resolutely evicted all workers. The mood was different at the mills of one jute maker, who has retained the good will of his striking workers by continuing to provide them with their regular fringe benefits of inexpensive company housing and rice at below-market prices.

GHULAM MALIK

ADAMJEE & JUTE STALKS
Just a poor millionaire.

Such shrewdness irked other millowners, but it came as little surprise. Gul Mohamed Adamjee, 44, has not only made his mills a South Asia showcase of enlightened management (Queen Elizabeth and Prince Philip have visited them) but has propelled himself into the industry's top position as Pakistan's "Jute King." His Adamjee Jute Mills Ltd. produce a third of Pakistan's jute goods and consume more raw jute than all of the mills in Britain, which ranks second to Pakistan in the manufacture of jute products.

Bags & Tea. In an industrial complex near Dacca, East Pakistan, some 20,000 Adamjee workers annually produce 70 million burlap bags and 90 million square yards of cloth to be used in products as diverse as automobile seats and jute suits. Nearby, Adamjee has just opened a new factory that will ensure even greater use of Pakistan's jute crop by producing particle board out of jute stems, providing a low-cost wood substitute for lumber-poor Pakistan. He is also almost single-handedly diversifying Pakistan's industry, using jute profits to build a $2.1 million cotton mill, a $6.3 million sugar refinery, a tea company and a vegetable-oil plant in other locations.

Until the Moslem-Hindu partition that created Pakistan in 1947, the Adamjee family owned a jute mill near Calcutta and ran a thriving export business. Then partition left Pakistan with 42% of the world's jute crop and no jute mills. To Adamjee, a Moslem, his duty was clear. He liquidated his substantial holdings in India, moved his entire family to Pakistan, where the grateful government helped him finance the new nation's first jute mill. Today, the family's assets are $75 million. In West Pakistan, Adamjee's two brothers have constructed a $6.3 million cotton mill, a $5.2 million paperboard mill and a chemical factory. A family holding company, Adamjee Sons, Ltd., established and owns Pakistan's second-largest insurance company and a major bank with 120 branch offices.

Mohamed's Mosque. "I suppose I am a millionaire," says Adamjee, "a poor Pakistani millionaire." He has attempted to repay Pakistan's hospitality by establishing a $420,000 science college and contributing $100,000 a year to charity. As for his workers, whom he expects to see back on the job soon, Adamjee pays them double time for overtime, also provides a pension plan, free medical care and schooling. On the company grounds at the Dacca complex, the benevolent boss has built a house of worship that his workers have respectfully nicknamed the "Adamjee Mosque."

THE NETHERLANDS

Feathers from a Frog

Trade, as well as politics, makes strange bedfellows: Spain and Castro's Cuba, Britain and Red China, Israel and West Germany. One of the strangest tie-ups these days is between The Netherlands and its former colony, Indonesia, which severed diplomatic relations in 1960 and seemed headed for a full-scale war. The once bitter enemies have recently begun exchanging public compliments and friendly trade delegations, will even exchange ambassadors in January in a full resumption of diplomatic relations.

At a time when the U.S. and other Western nations are washing their hands of Indonesia's erratic strongman, Sukarno, the alliance is clearly a case of economic necessity rather than natural affinity. Both countries have been hurt by the disruption of their once strong economic ties, and both have had to swallow national pride in an attempt to mend them.

Traditional Role. To stimulate Indonesia's economy, nearly wrecked by Sukarno's mismanagement and the withdrawal of Dutch trade, The Netherlands recently granted Indonesia $27.4 million in credits for 1965, will probably extend at least as much again in 1966. The Dutch treat will be used to rebuild Indonesia's Dutch-equipped railway system and sugar and tin industries—crippled when the flow of replacement parts from The Netherlands was halted—and to expand and improve inadequate port and airport facilities.

Indonesia has responded with a $10.5 million order for trucks and buses from DAF, the Dutch automaker, and a $22 million contract for Verolme United Shipyards to construct Indonesian port facilities. Meantime, The Netherlands is again assuming its traditional role as Indonesia's marketplace. In the first nine months of 1964, Indonesia exported $56 million worth of tin, oil, rubber and other resources to The Netherlands, compared with only $15 million worth during all of 1963.

No Hard Feelings. Many obstacles remain to the full resumption of Dutch-Indonesian trade because, as one Dutch businessman puts it, "You cannot pluck feathers from a frog." Yet the Dutch recognize Indonesia's great trade potential and seem determined to play as large a role in restoring trade as Sukarno will allow. KLM has resumed twice-weekly flights to Djakarta. Djakarta's once large Dutch community, depleted when 200,000 Dutch left Indonesia in 1958, is growing again. Dutch newspapers and candies have reappeared in major Indonesian cities, and Djakarta radio recently played the Dutch national anthem to emphasize that no hard feelings remained. The music will have to get awfully loud, however, before Dutch businessmen forget Sukarno's expropriation of Dutch property—to the tune of $1 billion.

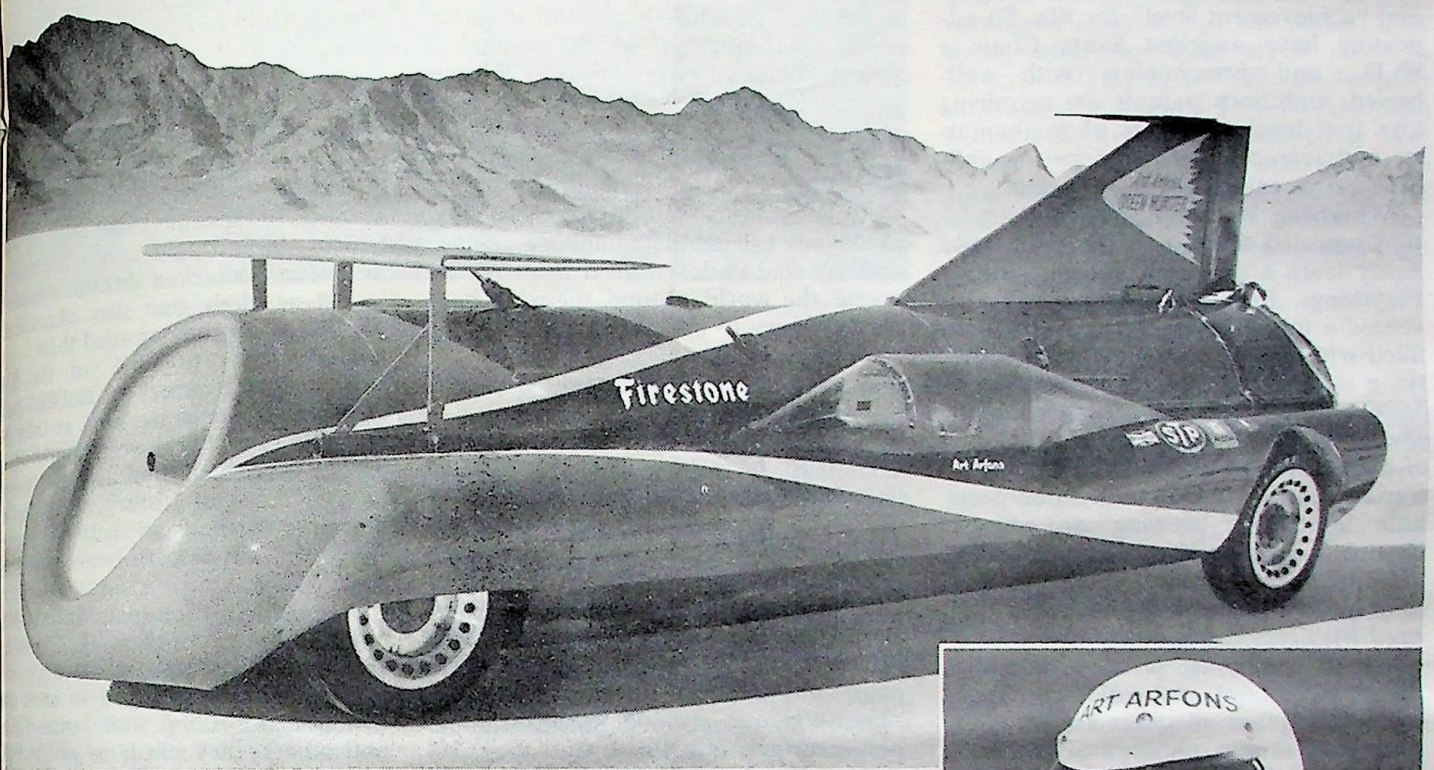
FIRESTONE TIRES SET NEW LAND SPEED RECORD
536.71 M.P.H. (863.57 K.P.H.)
AT BONNEVILLE SALT FLATS IN UTAH



FASTEST MAN HAS EVER TRAVELED ON TIRES

UNITED STATES AUTO CLUB

Subject to FIA Approval

Superiority of **Firestone** tires proved once again

Riding on Firestone tires, Art Arfons broke the world's land speed record for the second time in a month with an average speed of 536.71 miles an hour (863.57 K.P.H.) over the famed salt flats at Lake Bonneville, Utah, U.S.A.

Again, the superiority of Firestone tires was proved in this torturing test of tire safety and endurance just as it was in this year's Indianapolis 500-Mile Sweepstakes, when Firestone tires won at the record-breaking speed of 147.35 M.P.H.

You need this same kind of safety, endurance and mileage in the tires you buy for your car. But remember, only Firestone tires give you these advantages.

LEARNING

New Breed of Toys

Advanced placement begins in the nursery, say some perhaps overly worried child development experts: by the time a kid is ready for school, he has already reached more than half his general "achievement level" for life. So educators have awarded Santa Claus a Ph.D., and preschoolers with well-heeled, ambitious parents are acquiring toys that teach concepts of mathematics and science almost before the children can speak in whole sentences.

When the National Science Foundation reported that young children could easily learn a lot about optics, Creative Playthings, Inc. of Cranbury, N.J., invented a tough, clear plastic bag which, filled with water, makes a big and satisfying magnifying glass. The same company also devised a three-legged stool whose height is equal to the focal length of a giant lens in the middle of the seat, a triangular wood box with three peephole lenses for viewing an object's change in size, and a merry-go-round of mirrors that reflect other mirrors and spy around corners. A set of colored Plexiglas paddles demonstrates the effect of combining primary colors. A different sort of distinction is taught with perception plaques: twelve pairs of highly similar pictures of the same object that inspire the child to match the identical drawings.

Among math toys is a two-piece jigsaw puzzle with a written number on one piece and a like number of horses or flowers painted on the other. Various counting boards and bars derive from the theory of sets used in computers. A small seesaw devised by Child Guidance Toys Inc. of New York City teaches addition and subtraction by using weighted numerals that hang from each end of the bar; only the combined weight of a two and a seven, for example, will balance a nine. Playskool Manufacturing Co. of Chicago, which got many of its long-popular peg-and-hole toys from standard IQ tests, now makes a 100-bead counting board similar to the teaching materials of Montessori schools.

Many so-called educational toys are mediocre gadgets whose makers hope to cash in on the wave of interest in early childhood education. Others—typically scale models—are too detailed, or "structured," in the lingo of child psychologists, which cramps a young child's imagination. "Parents who succumb to the charms of these toys are fulfilling their own frustrated needs," says Chicago Psychoanalyst Ner Littner. Another kind of toy is truly educational but hardly new. Psychologists call them "miniature people" and say that children need them "to recreate the world around them." That's the hard way to invent a doll.

PUBLIC SCHOOLS

The Trouble Is Teachers

A U.S. history teacher in Indiana says that she hates to teach the Grover Cleveland period—the time of civil-service reform, the Interstate Commerce Act, the Populist revolt, the panic of 1893, and the first attempt at a federal income tax—"because nothing happened." Another teacher, asked to explain the Monroe Doctrine, replied: "That was our attitude toward Europe plus Europe's attitude toward us."

American history is taught badly, and teachers, rather than books or equipment, are mostly to blame. So say three Indiana University history professors who witnessed classroom performance in junior and senior high schools throughout that state and found their investigation to be "a traumatic experience." More than half of the teachers admitted that they had not read even one book about U.S. history during the preceding year.

Invented Authors. But that was not as shocking as the reading they lied and bragged about. In a trick question, teachers were asked to check what t... tories they had read from a list that ... fictitious works by nonexistent auth... scrambled with actual books: *The Co... ing of the New Deal* by Arthur ... Schlesinger Jr., *America and the Fi... World War* by Edwin N. Kaufman, ... *Biography of Old Hickory* by Robe... M. Shaw, *Ordeal of the Union* by A... lan Nevins, *The American Immigra...* by Gerhard Engelmeier, *Pearl Harbo...* *Warning and Decision* by Roberta Wohl... setter, *Columbus* by Leslie H. Hawkins, *Slavery and the Civil War* by Hawkins, Stevenson Robards, *The Good Years* by Walter Lord, and *Only Yesterday* by Frederick Lewis Allen. More than a third said that they had read one or more of the invented authors.* The professors despairingly concluded that individuals checked fictitious books is just as likely that they checked real books without having read them."

Only 15% to 20% of the 1,... U.S. history teachers in Indiana pu... schools are really working at their p... fession, says the investigators' re... They "read books, understand the ... ture and use of history, range far ... yond the textbook in their classroom... But "students deserve better odds" t... that.

Armed with Popguns. Authors M... rice G. Baxter, Robert H. Ferrell ... John E. Wiltz argue that the mess ... Indiana can be matched in most ... of the U.S. Along with James Co... and others, they pin most of the bl... on teacher preparation, which co... mainly of a few undergraduate ... vey courses in history. STUDENTS WATCHING TEACHER LOMMEN ON TV
Reception sharpens perception.

lls 2,300 miles southwest of Hawaii
is trading old romance for new bus-
. It has a jet airport and zip code
mbers for outlying villages; a Pan
n subsidiary has leased a 100-room
rist inn to compete with the old
inmaker Hotel. Most striking of all,
e whole Samoan school system has
n turned over to television.

Antennas & Thatch. Last week, while
ives sang and guests drank a toast in
va (a paralyzing concoction of pow-
ed pepper root and water), Idaho-
m Governor H. Rex Lee dedicated
educational TV network that in two
nths of operation has transformed
islands. The net centers on a big
,000 . watts) transmitter, lifted to
top of 1,600-ft. Mt. Alava by a
. mile-long cable tramway that
ays giddily over Pago Pago Harbor.
signals go to islands as far as 60
es away, to be caught by antennas
r thatched-roof one-room schools or
consolidated schools of three to
rooms.

Lee, a farm specialist, arrived in
go Pago in 1961 to find the terri-
's schooling in a mess. Most of the
teachers had educations equivalent
to a Stateside fifth grade. Teaching
the 5,500 pupils was supposed to be
English, "but the teacher's own Eng-
h was unintelligible. It was merely a
e of the blind leading the blind."
th an assist from Ohio's Democratic
presentative Michael J. Kirwan
ose son John is assistant director of
U.S. Department of Interior office
sponsible for overseeing American
moa), Lee wangled $1,600,000 from
ngress.

Clarifying Confusion. School in
merican Samoa used to begin any
me: if a teacher had some *faalavelave*
rsonal business), he might close
hool all day. Now station KVZK
oadcasts from the two-story Michael
Kirwan Studios at Utulei, just out-
de Pago Pago, from 8:05 a.m. until
:05 p.m., and attendance at the tuned-
schools is close to perfect. Teachers
from the U.S. mainland carry the bur-
den of the TV instruction, live or on
tape. Every classroom has a receiver
with a 23-in. screen, and Samoan teach-
ers with lesson guides follow up when
the TV instructor is done. A U.S. prin-
cipal lives in the village, helps teachers
follow the curriculum.

Basically, the courses are the three
Rs geared to Samoan culture, though
math, history and science are taught on
a secondary level. Much time is spent
on introducing the concept of change.
"It may seem simple," says Vernon
Bronson, research and development di-
rector of the National Association of
Educational Broadcasters, which helped
to set up the new system, "but to the
tropical Samoan, such concepts as
change in season in temperate climates
are enormously confusing." Also diffi-
cult is teaching world history to isolat-
ed students who may not even see a
stranger all year.

Adult Education. "Our aim," says
Lee, "is an education system that will
allow a Samoan student to compete on
equal terms in mainland colleges." As a
dividend, the new schools, designed in
Samoa's traditional open-sided *fale* style,
are becoming nighttime community
centers with television programs to
combat adult illiteracy and improve
public health, farming and self-govern-
ment. And with 275 million children in
the world getting no formal instruction,
the ETV project in American Samoa
has drawn the attention of education
officials from half a dozen nations in
Asia and Africa.

Just as on the mainland, TV makes
celebrities. The elastic, expressive face
of English Teacher David Lommen,
who comes from Minot, N. Dak., made
him famous within a week. Lommen
had been told that Polynesian children
could not learn to distinguish the *th* and
z sounds of English. He accepted the
challenge. Now when he takes a walk,
he is sometimes followed by kids danc-
ing after him and hissing, "Th . . . zzz
. . . th . . . zzz!"

THE PRESS

FOREIGN CORRESPONDENTS

The News from Moscow

For Western correspondents in Mos-
cow, getting the news has always in-
volved threading a labyrinth of unco-
operative and inaccessible officialdom.
Did the recent change in the Soviet high
command make things any better? Last
week, after spending seven days in
Moscow talking to 18 "officials and edi-
tors," the New York Times's Associate
Editor "Scotty" Reston cabled a two-
column "news analysis" with the preg-
nant, telltale observation: "The people
who have power are not available for
discussion, and the people who are
available have no power."

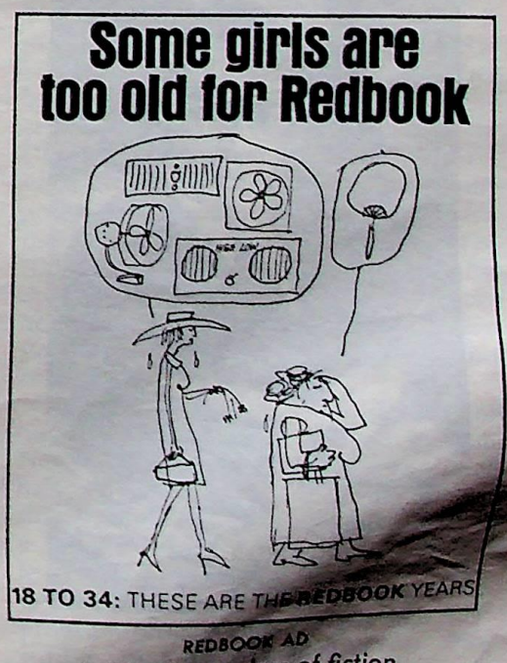
MAGAZINES

Stein Song

Women's magazine editors are usual-
ly pleased when their product appeals to
large audiences. Their advertising direc-
tors, on the other hand, like to argue
that the space they sell is surrounded by
editorial copy that appeals to a very
select crew. In competing with TV's
undiscriminating mass appeal, they lean
hard on their publication's selectivity.

When the ad department of *Redbook*
Magazine began a campaign in trade
publications and the financial sections of
newspapers, it boldly set stringent limits
on the editorial product that bills itself
"for young adults." Said each of the
ads: "Some girls are too old for *Red-
book*. 18 to 34: These are the *Redbook*
Years." In the accompanying cartoons,
Under 34 dreamed of shopping sprees.
Over 34 was a tight-pursed dowager just
this side of her next face-lift.

The message was aimed at Madison
Avenue. But it also managed to reach
many of those old ladies of 34 and up
whom *Redbook* says it does not want—
even though they comprise about 55%



REDBOOK AD
With a heavy dose of fiction.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the magazine's approximately 4,000,000 women readers. The reaction was scornful. "Since I'm rapidly approaching the ripe old age of 46," wrote one subscriber, "I guess you don't want me. So you may be assured I have subscribed for the last time." From the mature perspective of 38 years, another reader informed the magazine: "I don't think I'll bother tottering up to the newsstand for any more copies."

Delighted by the publicity but somewhat astonished by the protest, *Redbook* nevertheless stuck to its position. "We are edited solely for the women in the 18-to-34 age group," insisted Advertising Director Arthur Stein, himself a superannuated 52. "If we had some way to tell them to go away and stop reading the magazine after that, we would do it." With these blunt words, *Redbook* Editor Robert Stein, 40, and no kin to Arthur, expressed full agreement. While Adman Stein is straightforwardly encouraging older readers to take it on the lam, Editor Stein says he is taking a subtler tack: he is running large amounts of fiction on the theory that elderly females can't stomach the stuff. Says he with ill-concealed admiration: "The ads are a quicker method."

NEWSPAPERS

A Lesson in Economics

Last summer, when Detroit's pressmen walked off the city's two papers, the Free Press and the News, one of the more interested observers was a 23-year-old graduate student in economics at Detroit's Wayne State University. Michael Gordon Dworkin's journalistic experience was meager; in years past he had logged a little time on Wayne State's student paper, the Daily Collegian. But he did not lack for nerve. If the shutdown lasted long enough, he decided, an interim daily might make its publisher some real money. On the strength of his decision, Student Dworkin went into the newspaper business.

J. EDWARD BAILEY

STUDENT DWORKIN
With help from Irving.

Paying Off. Instead of looking for experienced partners, who might have dissuaded him, Detroit's journalistic entrepreneur talked three buddies into joining him. Instead of appealing for funds to bankers, who would probably have turned him down, he appealed to Irving Hershman, a softhearted cousin with means. Jimmy Hoffa's perennially hungry teamsters helped out by agreeing to deliver Dworkin's nonexistent daily on a cash-and-carry basis. Detroit's job printers, who first sneered at Dworkin's proffered business, soon accepted it gratefully. From abruptly laid-off newspaper salesmen, the neophyte publisher put together a willing business staff. And finally, when all else was in place, he got the professional talent he desperately needed: unemployed editorial staffers from the Free Press.

Just ten days after the Free Press and News were struck, the Detroit Daily Press hit the streets. It was at the time scarcely worth its price of 10¢; it was a tangle of printer's errors, garbled copy, unscannable headlines and whole pages run upside down. Unable to subscribe to a domestic wire service, the Daily Press limped along with a British import, Reuters Ltd., and the Dow-Jones ticker. It cribbed unabashedly from radio newscasts, engraved photos snapped directly from the TV tube.

But within three days of its birth, the Daily Press had retired Cousin Irving's loan. And as Detroit's longest newspaper shutdown wore on, the paper developed professional competence. In time, the editorial payroll included more than 100 hands, most of them borrowed from the silenced Free Press.

Correspondents all over the country sent in copy, at space rates. A moonlighting Washington newsman supplied a Capital column, whimsically bylined G. Schenk Gott ("God's gift" in idiomatic German). The Daily Press sent a man to follow Republican Presidential Candidate Goldwater about the country, another staffer to cover the Ecumenical Conference in the Vatican. When the Warren Commission report became available, Dworkin flew a reporter to Washington for a copy, published 13,000 words of summary text.

Scolding Its Readers. Editorially, Dworkin's Daily Press lined up with the majority and backed the Democrats. It also opposed pay raises for Wayne County (Detroit) elective officials, and it fought a referendum issue granting Detroit homeowners the right not to sell their property to anyone they considered undesirable. When the referendum passed anyway, the Daily Press scolded voters roundly.

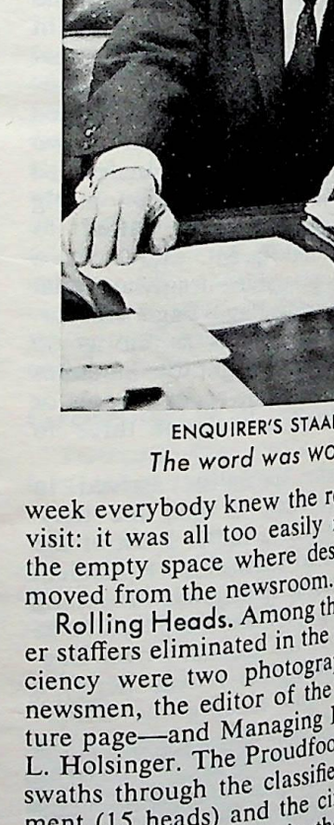
Before the city's newspaper shutdown finally ended after a record 134 days, Publisher Dworkin had boosted his reporters' bony salaries to Guild scale, and had himself grown surprisingly prosperous. Last week Dworkin and his four partners had a $500,000 profit to show for their experience. The short-term publisher put the Daily Press's final issue to bed without regrets.

But as an afterthought, he filed suit for $7,500,000 in damages against UPI, the Free Press and the News, charging that all three had conspired to keep him from buying the UPI service. With that, Mike Dworkin, having learned a lesson or two in journalism as well as economics, went back to school.

Efficiency in Cincinnati

For six months, the dark-suited strangers circulated politely through the newsroom of the Cincinnati Enquirer. Six times an hour they approached each staffer with the same question—"What are you doing?" Everybody knew who they were: efficiency experts from Chicago's Alexander Proudfoot Co. Ltd.

JACK KELLY



ENQUIRER'S STAAB
The word was WOW.

By week everybody knew the result of the visit: it was all too easily measured in the empty space where desks had been moved from the newsroom.

Rolling Heads. Among the 24 Enquirer staffers eliminated in the name of efficiency were two photographers, seven newsmen, the editor of the Sunday feature page—and Managing Editor Ralph L. Holsinger. The Proudfoot ax also cut swaths through the classified-ad department (15 heads) and the circulation department (five). Only in the composing room did the efficiency experts fall short on the job—only because the shop foremen flatly refused to let them in.

The Cincinnati overhaul began last spring when Proudfoot, which had never before studied a newspaper operation, approached the Enquirer with a confident proposal to find and trim several hundred thousand dollars worth of waste effort. The prospect was warmly welcomed by Charles Staab, 60, the Enquirer's executive vice president and

TELEVISION

The Fang & Fin Hour

The baby moose was stuck in the mud at the edge of Watts Lake in Alberta; Marlin Perkins was nosing his shiny red canoe through the cattails and saw the problem. *Thwuck, thwuck, thwuck*—Perkins, in hip-high rubber waders slogged through the sludge, grabbed the mooselet around the rump and pulled it free. Next problem: How now to get Perkins out of the mud?

Tooth-&-Claw. One rubber wading boot may still be mired on the shore of Watts Lake, testimony to the way that Marlin Perkins, 59, director of the St. Louis Zoo, gets into the act in each weekly episode of NBC's *Wild Kingdom*. Last Sunday's "Cattail Country" also had Perkins skimming around the lake in an airboat helping Government conservationists on a duck-banding roundup; on the same show Assistant Jim Fowler was in the Grand Tetons watching a beaver repair a broken dam and following a wet mink on a musk-rat hunt.

There was nothing Disneyish about the goings-on—no frogs dancing the frug, no kissing coots. When a leopard set out to stalk a wildebeest in a recent episode, the victim all too surely was brought to earth. "If you are going to show the truth," said *Kingdom's* Producer Don Meier, "you cannot avoid the proposition that tooth-and-claw battles take place every day in the wild kingdom. We would be doing a disservice to our viewers if we glossed that over."

Realism has paid off. *Wild Kingdom*, carried on 185 NBC stations, stands a few points ahead of its nearest competition, the American Football League game of the week. But filming wildlife in the veld is dicey business at best. Expeditions have fanned out to Africa, India, South America, Australia, Alaska and Canada for this season's footage, and 12,000 ft. of film are required for every 1,000-ft. program: "An animal does not usually do the same thing twice," explains Meier. "You can't say to your actor, 'O.K., today you walk up and lick the stump.' "

Seismic Rumble. A tireless field man himself, Perkins accompanied Sir Edmund Hillary on an expedition to hunt down the Abominable Snowman in the Himalayas, returned with the disappointing news that the big tracks had been made by foxes and other small animals, whose imprints subsequently melted into scary giant forms. Jim Fowler, 34, the apotheosis of Jungle Jim, spent a month in Africa putting together a documentary on elephants. A television first for an upcoming *Kingdom* show: Fowler's recordings of elephant stomach rumblings, which are seismic.

By sticking to zoological fact and staying clear of zoos, *Wild Kingdom* has made *aficionados* of those who know best, the zoo keepers themselves. "I catch it as often as I can," says Zoo Designer Robert Everly. "It touches bases all around the world. It is very earthy. And it is good."

ALAN GROSSMAN

LEOPARD DOWNING WILDEBEEST
A loyal audience of zoo keepers.

ACTRESSES

The Electronic Tomato

She is, more or less, the empire sex building. She is 6 ft. tall. She is over a yard in circumference at the chest. Her thews are soft, her sinews are taut; her thighs, her eyes—her total form is a monument to the aspirations of man. She could not have been made anywhere but in a laboratory.

That, actually, is the story line. This creature's name is Air Force Project 709. Her nickname is "Rhoda." She is made of transistors, computers, polyethylene and a generator. Within her breasts are solar batteries. She is the central figure and continuous joke in CBS's new situation comedy, *My Living Doll*. Created for experimental purposes by aerospace scientists, she is for the moment on loan to a psychiatrist (Bob Cummings), who keeps her in his apartment. She will do anything he tells her to do, and when she doesn't understand him, she says, "That does not compute."

Curiously enough, this remarkably human robot is being played by Julie Newmar, and typecasting has rarely had a brighter hour. A strong-min[illegible] single-minded, career-minded [illegible] a unique sense of humor, [illegible] in terse, direct and [illegible] ing sentences that seem to have been programmed on punch cards that say PLEASE DO NOT FOLD OR BEND. No method actress has ever found a more

business manager, and something of a fat trimmer himself: eight years of Staab-inspired WOW (for "Wipe Out Waste") campaigns have, among other things, reduced the mail-room staff by introducing automation.

"Excellent Thing." Although the Enquirer had just chalked up its most prosperous year (with net earnings of $1,430,324), and is headed for an even better one, Staab decided to go ahead, acting: "You do not take corrective action after the fact." He expressed delight at Proudfoot's results. "Our studies showed a pool of people not all of whom were busy all the time."

Survivors will certainly be busier than before—if only in filling out the new work forms on which staffers must make a daily account for every minute of their time. Down in classified ads, an abbreviated force could not stay abreast of the phone calls—a crisis that the paper met, somewhat inefficiently, by hiring an emergency weekend crew.

Among Enquirer news hands, there were serious doubts that the efficiency of a newspaper, which runs by fits and starts in concert with the uneven flow of the news, could ever be measured by time-and-motion studies.

WIRE SERVICES

The A.P.'s Cliché Hunt

Haste is the standing excuse of the newsman whose deadline bouts with the typewriter let a cliché or two slip past his careless eye. In an effort to reduce the cliché content of its own copy, the Associated Press, which must cope with haste to a greater degree than most news-gathering agencies, decided to enlist the aid of a computer. From editors and staff writers all over the U.S. the A.P. assembled a list of 469 clichéd words and phrases. These were fed into a Univac 1105, along with 375,000 words of wire copy to be used for those same clichés.

Topping the list of shopworn journalese was the verb "hail," a pet of headline writers (MAYOR HAILS HOMETOWN HERO) as well as reporters ("New workers hailed their first rain in six weeks"). Univac awarded second place to the phrase "violence flared," third place to "flatly denied." The rest of the runners-up: "racially troubled," "voters marched to the polls," "jampacked," "usually reliable sources," "backlash," "kickoff" (as applied to anything but a football game), "limped into port," "gutted by fire," "death and destruction," "riot-torn," "strife-torn," "tinder-dry woodlands," "in the wake of," "no immediate comment," "guarded optimism," "-wise" (as in percentage-wise). In the wake of Univac's report, the A.P. had no immediate comment. But a usually reliable source hailed with guarded optimism the fact that, percentage-wise, the A.P. copy came out relatively cliché-clean. Even the first-place winner, "hail," was found only nine times among the 375,000 words.

JULIE NEWMAR
An occasional kiss for the mirror.

empathetical wave length with the character she is playing. "Rhoda is the ultimate consciousness," says Julie, "the ultimate reality, the ultimate freedom. She is the quintessence of humanness. As I play her, the robot is coming closer to the ideal in humanity, and the humans around it are becoming more and more like robots."

Fresh Ears. Unmarried and 29, Julie used to sleep in her dressing room until Desilu studios told her they were not insured; now she has a flat across the street from the studio gate. She is on the set at 6:30 every morning, a half-hour before her call. On weekends, she goes home to her parents. Her father was once a professional football player and is now a teacher at Los Angeles City College. Her mother was a Ziegfeld girl.

As a pretty little computer in frocks and saddle shoes, Julie was shy and withdrawn. "That is the reason," she analyzes, "why most girls become actresses. The thing that turns them into a star is the need to be loved and accepted. Approbation to me means more than anything." By the time she was 16, she was getting approbation all over the place, even on a trip to Spain, where a matador spotted her in the stands and gave her both ears of his most recently vanquished bull. Outside the *plaza de toros*, her mother threw the ears in the gutter.

When she was 20, she was a featured dancer in Broadway's *Silk Stockings*. In *Li'l Abner*—on Broadway and in the film—she was a monadnock of sex as "Stupefyin' Jones." In *The Marriage-Go-Round*, she won a Tony award for standing on the stage dressed only in a towel and begging Charles Boyer, as a brilliant professor, to unite his mighty *mens sana* with her massive *corpore sano*. She brings the same sort of ingenuous sexuality to her role as a TV robot, managing the difficult trick of being comical and at the same time alluring enough to start the Colossus of Rhodes off his blocks.

Perfect Intuition. With all this, she gained confidence. "Most beautiful women are not beautiful enough to suit themselves," she says. "I have never believed I was beautiful. Once in a while, I will sidle up to a mirror and plant a kiss on it and squeal something about how beautiful I am, but I am just kidding. I would rather you tell me I am beautiful than intelligent, because I am sure of my intelligence. I have not accepted the physical part of me yet."

Even though it has a star of the quality of Bob Cummings, *Living Doll*, which is somewhere in the middle of the ratings curve, would be nothing without her—since the physical part of her is feverishly acceptable. Julie says she used to date only bankers and lawyers. Now that she is more secure in show business, she thinks she would like to have a director or writer as a husband. It is possible, however, that she would stand a better chance of getting the one she wants if she were to ask the Massachusetts Institute of Technology to construct one for her. "I don't need security," she says. "I don't need a house, social acceptance, or a chance to get away from my family. So marriage will have to be a direct hit. All I need is happiness. I have everything else."

PLAYWRIGHTS

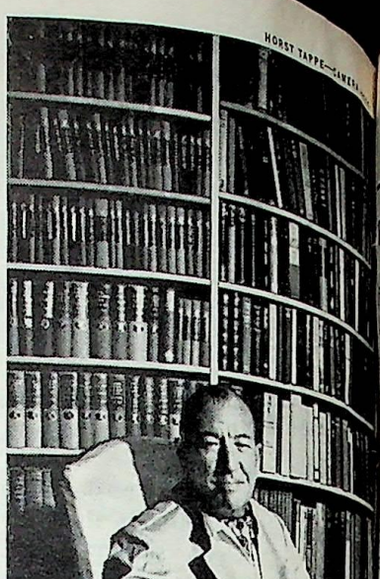
Outpatient of the Year

The master speaks. "There are only two great playwrights in Britain today—Terence Rattigan and myself. Perhaps Peter Shaffer is a third, but he doesn't really write enough. There has to be output, not just one or two plays. I have been in fashion, and people have said I have gone out of fashion. Beware of fashion. Staying power is what counts."

Staying power Noel Coward surely has. He will be 65 this month. Less than a year ago, his doctor told him to take a thoroughgoing sabbatical, since he had been suffering from savage gastritis. So Coward slowed down to a run, and this fall he has been busy with a spread of enterprises that obviously make him the outpatient of the year.

Britannican Lyrics. To demonstrate his fitness, Coward took over this week as master of ceremonies on a 90-minute BBC television tribute to Sir Winston Churchill on the eve of his 90th birthday. Noting all this, the Times of London felt moved to write a tribute to Coward too. "Here, through and through, is a craftsman," explained the Times, "who has remained at the top of his profession for longer perhaps than any other living English playwright, simply because he has dedicated his life not to attitudes or to transient theatrical movements but to getting on with his work to the best of his ability."

Coward has just finished supervising the London production of his *High*



NOEL COWARD
Trivial, like Beethoven.

Spirits, which is a long-running hit Broadway. BBC television has done Coward plays, full length, in succes weeks. And a fresh revival of his *Fever*, produced by the National Th ter and directed by Coward himself, sellout. Of this new production, one c ic commented: " 'Thin' and 'trivial' what the critics said of this play when first appeared. So it is. And so is Be thoven's *Eighth Symphony*."

Coward takes all this without the p tense of surprise or the arrogance conceit. He describes his modern po larity as "Dad's Renaissance." He ha collection of short stories that is se briskly, and another half-written. "A they're doing a collected volume of lyrics," he says with sculpted indif ence. "I'm embarrassed to report that looks like being the size of the *cyclopaedia Britannica*. We shall ha to do something about it. I fear I written far, far too many lyrics."

A Bit Far. Still he goes on writ them like a mad dog in the midd sun. He has a coop above Lake Gene in Switzerland and another pad in Ja maica. The Jamaica setting is apparen perfect for glib, swift masters. The la Ian Fleming, after lolling in Cowar guesthouse for a time, bought his own place near by. "God, I miss him," s Coward. "He was so fabulously intel gent. Nobody quite appreciates ho very, very good his descriptive passag were. His plots went a bit far, of cours I mean Goldfinger. Really. But he co extract the sense of a place so terrif well. He asked me to play Dr. No. M Bond—Dr. No. How wonderful. I w I could have."

Pipsqueak Plautus

To Love. They meet at her husband's funeral, and it's lust at first sight. She (Harriet Andersson) is a young Swedish widow whose husband left much to be desired. He (Zbigniew Cybulski) is a young Stockholm travel agent who thinks like what she needs. "I might want to go south," she sighs receptively. "I might give you a ring," he mutters as he kisses her over. When the mourners go home, she skips off to her bedroom, rips off her clothes, flips on a station that plays jazz jazz jazz. Her mother protests: "Hardly decent, is it?"

Hardly. Many moviegoers, in fact, will find this picture downright scandalous. But Director Jörn Donner is not prurient; he is Priapic. He does not play the facts of life for sniggers; he displays them, like some pipsqueak Plautus, for grand though gross guffaws.

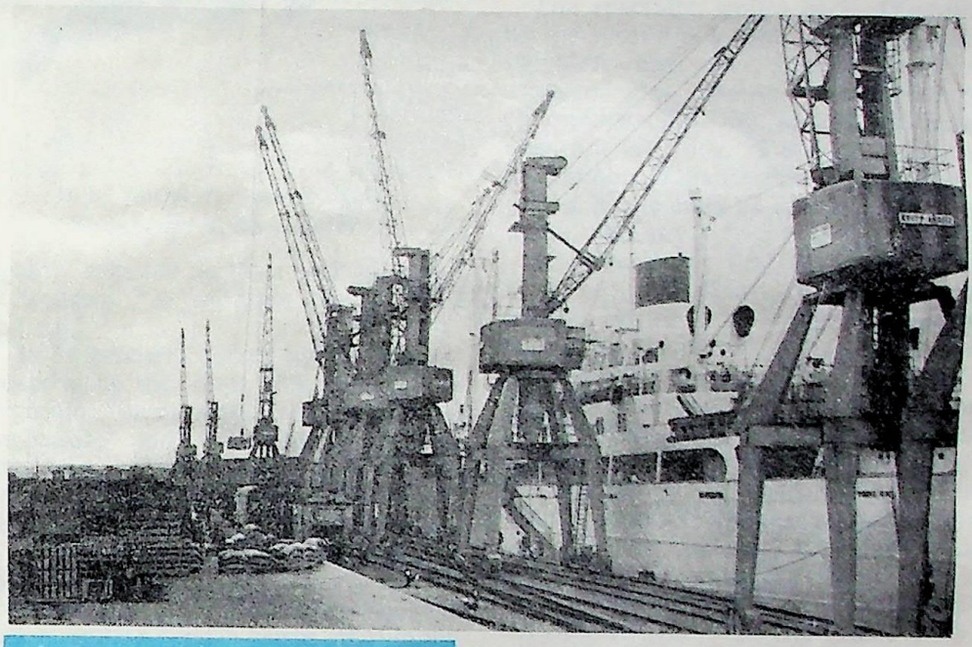
The travel agent reappears with irreverent celerity. He draws the widow's hand toward him across the kitchen table, suddenly bends to kiss it, just as suddenly discovers the hand withdrawn and his lips pressed tenderly to a table mat. The next frame, however, finds them bouncing around on her bed, and for the next 80 minutes they hardly ever leave it—except to hurry over and bounce around on his bed. Sometimes they bounce all over the floor. Sometimes they bounce blindfolded. Once they land somehow in a large wooden chest . . . and discreetly lower the lid.

"Dear," she asks at one point in a worried little voice, "do you think we're abnormal?"

Whatever anybody else may say, Director Donner most emphatically thinks his lovers are normal, magnificently normal. Sex breaks open the ground of their lives and in it plants the seed of love. The final scenes are subtly realized

ANDERSSON & CYBULSKI IN "LOVE"
"Do you think we're abnormal?"

KRUPP



Full-portal level-luffing cranes in a European port. The cranes have a capacity of 3 tons at 25 m radius.

LET KRUPP HELP YOU FIND THE BEST SOLUTION

More than 150 years of experience and more than 100,000 employees in modern research centers, engineering and production departments are your guarantee for the highest return on your investment.

KRUPP design and build complete industrial plants, locomotives, heavy trucks, ships, excavators, bulk-handling equipment, cranes, can-making machinery, tools, chemical process equipment, civil engineering structures, etc.

The complete catalog of products and services comprises some 3,000 items. 355 agents represent KRUPP in 116 countries, and KRUPP sales engineers are stationed in many parts of the world.

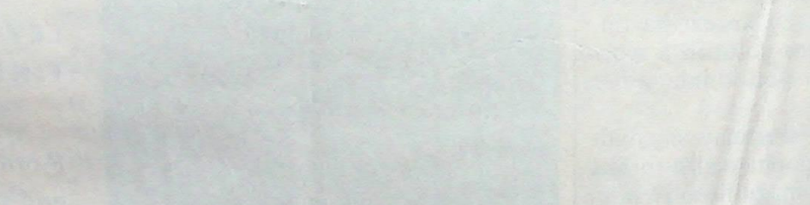
How many trips did TIME International readers make outside their countries last year?



2,440,750.

TIME's international readers cover a record number of miles every year in every mode of transportation. Because of their high positions, they are required to travel extensively about the world. Because of their high incomes, they are able to vacation to all parts of the world. In business or pleasure, they wield influence and buying power vastly out of proportion to their numbers. To them, TIME Magazine's weekly reports of world business and world affairs are a necessity. To you, TIME is equally necessary in *any* selective marketing plan in *any* world market. *Talk to the right people in the right place... in TIME.*

ndering a pig. "Will they do it

SY FRIEDMAN

NUDE SKIERS IN "MALAMONDO"
"They want to be different."

again?" asks the narrator with elaborate seriousness. "If so, then the pig died in vain."

In Switzerland, mixed nude skiing appears to be the latest kick. France has orgiastic "happenings," a homosexual nightclub, and parachutists with a marked proclivity for drunkenness and rape. German and Dutch students prefer sadism. England's youth, except for a bully gang of Glasgow girls picketing against free love, apparently derives thrills from its Mods and Rockers, heavy petting, and a corps of pimply-faced boys at the Royal Ballet School. "These dancers don't cultivate violence," the narrator leers. In Sweden, *Malamondo* attends an interracial wedding to spew racist innuendoes about "the appeal of the African lover," then jobs off to visit a Scandinavian miss who clearly wants photographers at hand while she contemplates suicide.

Most of *Malamondo* is so patently contrived and tasteless that even thrill seekers will find it boring. Its net effect is to make an audience stop wondering about today's youth and start wondering about the grown men who make such movies. Perhaps this entry will be the last. If not, the pig died in vain.

A Devil in Diapers

Il Bidone. Round and solemn as a barrel of holy water, a fat old bishop (Broderick Crawford) rolls ponderously out of a big black automobile and stands staring at a huddle of Italian peasants. "My children," he informs them in a sanctimonious monotone, "I bring you tidings of great sorrow and good fortune. During the last war, a man was murdered and a treasure hidden on the land you own." The peasants, quivering with avarice, scuttle off to the appointed spot and dig up the treasure: an iron casket crammed with smoldering brilliants. "Worth at least six million lire," the bishop announces appreciatively. "But the church has no interest in them. By the terms of the murderer's will, they belong to you—on one condition: you *must faithfully* offer up 500 masses for the salvation of his miserable soul."

The peasants turn pale. At 1,000 lire apiece, 500 masses would cost 500,000 lire! His Grace gravely agrees; the peasants ruefully remit. "*Pax vobiscum*," the bishop murmurs as his big black automobile rumbles off to Rome. On the way, however, the car stops. The bishop, round and lively as a barrel of Valpolicella, rolls vigorously out and removes his vestments. Beneath them he is wearing a business suit—and on his face he is wearing a sly little smile.

The spectator smiles back. Obviously, the bishop is a *bidone*, a small-time swindler, and the camera has just watched him chouse some country chumpkins. But the spectator's smile does not last long. *Il Bidone* begins as a common Italian comedy of criminal errors but it ends as the tragedy of an aging wise guy.

If it were only that, *Il Bidone* would seem no more than a fairly interesting failure. Fortunately, it possesses an extrinsic significance: it is the missing volume of Federico Fellini's famous "trilogy of solitude," the shambling and disreputable pseudo-masterpiece that started with *La Strada* (1954) and culminated in *Le Notti di Cabiria* (1957). What's more, *Il Bidone* is clearly the first fumbling version of Fellini's masterpiece—*8½*. As in *8½*, the hero is a man divided against himself: a brilliant but soulless showman inhabited/inhibited by an amiable but infantile idealist. Both elements are inferentially Fellini, and Fellini labors hugely to reconcile the contradiction. In *Il Bidone* he fails: the showman dissolves into the infant, the infant becomes a sort of devil in diapers. But the failure is not final. In *8½* the opposites attain a higher synthesis: in the infant the showman finds spiritual rebirth, in the showman the infant finds creative release.

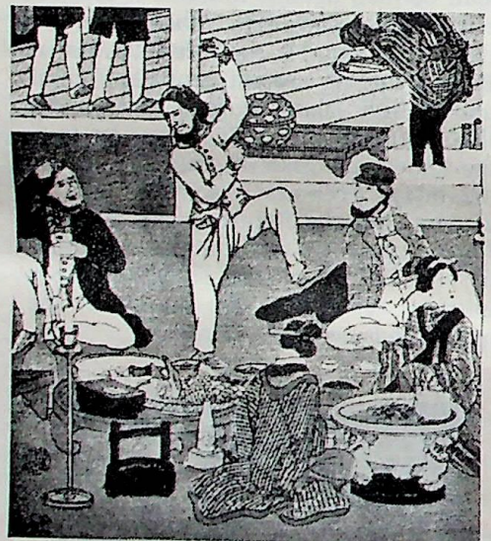
GOYA: BLACK PAINTING DETAIL

MYCENAEAN LYRE PLAYER (2000 B.C.)



JAPAN: DANCING IN GEISHA HOUSE (1861)

PRE-AZTEC FIGURINE

Twelve Drummers Drumming, Eleven Pipers Piping

The big expensive picture book is probably a fixed Christmas institution for the foreseeable future. As publishers recognize, its very size and expensiveness make it sell. Both price tag and poundage are an unarguably solid demonstration of the giver's regard. The presumed esthetic content is an implied compliment to the recipient's cultivation. Yet it can appear to be absorbed just by leafing through it; and duty done, the thing lends its own cachet as it lies there on the coffee table. Of course, for those with the courage to seek them out and match them with the taste of the recipient, there are even real pictureless books for real reading. This year, however, the surprise is that some of the picture books are actually readable too. Among the dog books and bird books, joke books and gardening books, gun books, horse books, bridge books and seemingly endless art books, the following stand out:

GOYA *by Francisco Javier Sánchez Cantón.* 95 pages followed by 56 plates. *Reynal.* $100. Some of the double gatefold plates open out to more than 4 ft. in length. The typography is superb, the paper heavy. Each of the 193 reproductions was printed separately and with fanatic attention to accuracy of color, then pasted in. *Goya* is also a work of immense scholarship: the extensive text is by the director of Madrid's Prado Museum, who is the acknowledged Goya authority. Yet the book may prove curiously disappointing to those who are not specialists. Goya in his long lifetime produced many hundreds of works, from accomplished courtly portraits of Spanish nobility to the increasingly tormented later etchings and paintings of war and cruelty. All of Goya's phases are represented, but the book's emphasis (including all 56 large plates) is devoted to just 14 works, the "black paintings" with which he decorated the walls of his country villa toward the end of his life. The black paintings are massive, powerful, hell-ridden. But they are also sadly deteriorated with time, having been originally executed on plaster in oil paint that was transferred bodily to canvas many years later. Their power finally eludes even the great care and scale of these reproductions.

THE BIRTH OF GREEK ART *by Pierre Demargne.* 446 pages. *Golden Press.* $25. The incomparable flowering of Hellenic culture in the 5th century B.C., the era of the building of the Parthenon and the repulse of the Persians, was in fact preceded by at least 2,500 years of art and civilization in the islands and mainland of the Greek world. New Asahi Bldg., 2-22, Nakanoshima, Kita-ku, Osaka, Japan

largest collection of the artist's work ever reproduced between two covers. To that it adds photos of Lautrec himself, of his studios, and of many of his models and subjects. Philippe Huisman's text is thorough but simperingly eager to simonize Lautrec's reputation as the depraved genius of *fin-de-siècle* Montmartre.

The strength of the Rousseau volume is the other way around: the pictures are good but are dominated by Dora Vallier's text, which is a critical biography of satisfying dexterity and power. In the 50 years since his death, the life story of this Paris toll collector who quit his work to become a painter at the age of 40 has become fogged with hearsay and growing legend. Author Vallier penetrates to the basic facts of his life and establishes a firm chronology of his work. She is thus able to be explicit and detailed about the development, both in content and technique, of his entirely self-taught and strangely powerful art.

AMERICAN WILDFLOWERS. *Photographs by Farrell Grehan, text by H. W. Rickett.* 252 pages. *Odyssey.* $12.95. Those zealous amateurs who start hunting wildflowers in waterproof boots with snow still on the ground may sniff at this book because it is not a field guide to slip into the coat pocket. All others should rejoice, for Farrell Grehan has taken a remarkable series of color photographs that are almost uniformly successful in capturing the beauty of more than 300 different kinds of wildflowers across the country. The photos are delicate, somewhat sweet, and unabashedly romantic. The text, keyed to the photos, is by a senior botanist at The New York Botanical Garden; it is informative, adequately technical and a model of clarity. One quibble: many of the pictures would be helped by some discreet indication of scale.

A CONCISE HISTORY OF MODERN SCULPTURE *by Herbert Read.* 310 pages. *Praeger.* $7.50. Beginning with Rodin and the influence of Cézanne at the turn of the century, modern sculpture has erupted into a bewildering jungle of movements, styles and highly individual artists. Sir Herbert Read, despite an occasionally oracular tone, is one of the better available guides through this wilderness, with strongly phrased opinions and provocative prejudices. He comes remarkably close to getting it all into this small-format book—and making it all intelligible, even to the sculpturally illiterate.

THE STORY OF ART FOR YOUNG PEOPLE *by Ariane Ruskin.* 157 pages. *Pantheon.* $6.95. The reproductions are pretty, the art works selected are all essential classics, the coverage is comprehensive, the text is pleasant—in fact the only thing that seriously mars this children's introduction to art is its total lack of courage. Modern art is given too little space, even in a book that ... essarily covers ground quickly. ... is no gore: paintings of battles, ... sters or martyrs are avoided—and ... credible in a history of art, there ... a single Christ on the Cross, while ... only *Pietà* is Michelangelo's great ... bloodless sculpture. But the most ... gious lapse is the avoidance of ... even the Venus de Milo, certainly ... essential classic, is omitted.

THE PRESENCE OF SPAIN ... *Morris with photographs by Evelyn ...* 119 pages. *Harcourt, Brace & World.* ... The author's concept of the country ... Ortega y Gasset's classic summary: ... "A cloud of dust, left in the air when ... great people went galloping down ...

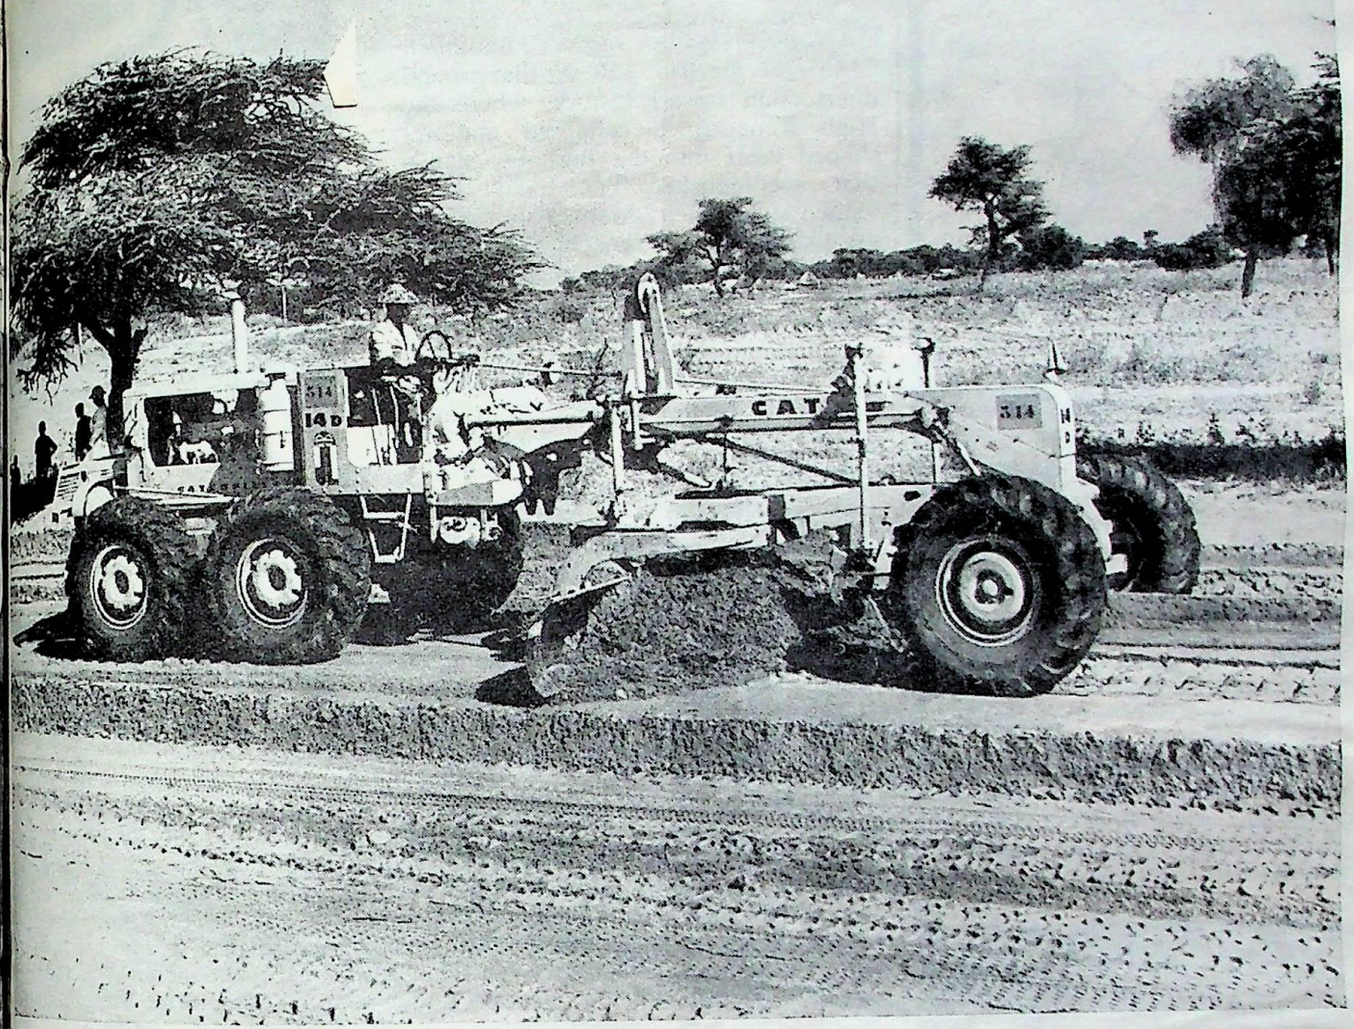
When you buy a Motor Grader...



Invest in the quality that cuts your long term costs

More and more public buying authorities are looking beyond the purchase price of apparently similar machines. They know there are other measurements of cost more vital in assessing the *ultimate* investment in capital equipment like motor graders. So they look for long term machine dependability to cut operating costs and reduce expensive downtime. They look for high productive capacity. And, more and more, they choose Caterpillar as the best investment. Report after report from Governmental and other public agencies describe the low operating and maintenance costs of Caterpillar Motor Graders, over tens of thousands of work-hours in years of trouble free service. Typical is the report on a Cat No. 12 Motor Grader that averaged 75% less in repair cost over 15,000 work-hours than a comparable specification machine.

Ask your nearest Caterpillar Dealer about the Motor Grader best suited to your needs from the Caterpillar 85 to 225 (flywheel) HP range. He will explain what makes it the finest investment in its power class.

CATERPILLAR

Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co.

Grand Canyon is, not only in its sweeping vistas but in the close-up details of rock, water, and unique life forms that would be drowned by the dams. The narrative starts with the story of a hazardous 17-day boat trip the author took through the Grand Canyon, and rises to a reasoned, passionate plea for preserving the place unblocked by the curved concrete of progress.

MANNERISM *by Jacques Bousquet.* 347 pages. *Braziller.* $20. At that crucial intersection of art history, where the High Renaissance collapsed and reshaped itself into the Baroque, stands that accomplished but today little-valued style called "Mannerism." Painters like Mabuse, Cranach, Caravaggio, da Pontormo, and a hundred others across Europe were luxuriating in the mastery of technique. Their work was energetic, inventive, sensual, and edged with a fascination for the grotesque. The new painting's exploration of emotionally exotic themes was paralleled in poetry and theater. To demonstrate that the flamboyant creativity of the Mannerist era is more important and more visual fun than it has usually been given credit for, Author Bousquet has brought together a wide range of art and literature. The examples are felicitous, the commentary urbane, and the format itself is wittily evocative of the Mannerist manner.

ARMS AND ARMOUR OF THE WESTERN WORLD *by Bruno Thomas and others.* 243 pages. *McGraw-Hill.* $27.50. ARMS AND ARMOR *by Vesey Norman.* 128 pages. *Putnam.* $4.95. Who has not, at least in childhood, been fascinated by the medieval knight, his squire and yeoman, and the strange tools they used in war? Cuirass and helmet, shield and sword. Chain mail, longbow, harquebus, pike—and the thin-bladed misericord that could slip between the plates to pluck a man's life from his ribs. The battle-dented, brutally functional field armor of the 14th century; the intricately inlaid and painted parade armor of the 16th. Both of these accounts of arms and armor cover the ground well. The big one is naturally longer, more complete, with more large and lush color pictures. It also treats of the muskets and hand guns that signaled the beginning of armor's end. But the smaller volume is nonetheless unexpectedly meaty, and certainly represents value for money.

MICHELANGELO'S LOST ST. JOHN *by Fernanda de' Maffei.* 150 pages. *Reynal.* $15. A first-rate intellectual detective story and a fascinating photographic lecture in connoisseurship. In 1942 New York Art Dealer Piero Tozzi acquired a dirt-encrusted Renaissance statue of a boy seated on a rock. A sheepskin over one shoulder and a shell in one hand identify the youth as St. John the Baptist, and while Tozzi patiently cleaned the fragile ancient marble inch by inch,

THE YOUNG ST. JOHN
Whodunit? Michelangelo?

using only castile soap and a t brush, he began to think it might lost statue that Michelangelo is k to have carved in 1496. The possi has aroused the cautious enthusias a number of scholars, including I Dr. Fernanda de' Maffei, who now sents the full case for attributing statue to the sculptor. The argu draws its greatest strength from photos, which compare the statue dozens of known Michelangelo p ings, drawings and sculptures, and with classical statues and gem carv that would have influenced the yo artist. The St. John statue itself, vi in photo after photo from all an and in every possible detail, is a tivatingly beautiful. The probing, q tioning visual presentation is uni exciting.

OTHER TASTES, OTHER BOOKS: F modern architecture buffs, *The Bes 20th Century Architecture* (*Reynal;* $ is an effective if somewhat slick pres tation of a worldwide range of build and their creators. For players, k ers, or even for collectors who ha know QR3 from KB7, *Chess* by H and Siegfried Wichmann (*Crown;* $ is a comprehensive, pleasantly illus ed history of chess pieces. For th who like social history, *Mirror of Fa ion* by Margarete Braun-Ronsdorf (*M Graw-Hill;* $26.50) is a copious sur of European costume from the Fre Revolution to 1929, while *Le Armchairs* by Charles Graves (*Cow McCann;* $7.95) is an anecdote-lad fascinating-in-spite-of-itself account all the major London clubs. What well prove to be both the best-illustra and best-written of the Kennedy me morial books is *The Kennedy Y* (*Viking;* $16.50), a massively comp compilation of photographs with ex ly compendious text by the New Yo Times.

Every fifth PIA passenger a new one

While growth in passenger traffic for all airlines averaged 11% over the past five years, PIA's passenger traffic has gone up 25%. These results reflect not only PIA's dramatic expansion, but also PIA's own high standards of operation—again, well above the industry average. It is this sort of vigorous growth and imaginative enterprise which last year brought to this consistently profitable airline over 14% more passengers, and explains why travellers say PIA are great people to fly with.

Why are so many active people turning to BELLETT?

Because Bellett offers performance... *livelier, sportier* performance than you ever thought possible in a four-door compact!

Bellett gives you more power-per-pound because it's got one of the largest engines for a car of its size—a responsive 1500cc powerplant that delivers a full 71 horsepower. Rev it up, then marry it to the four-speed close-ratio gearbox—and you're out in front in a hurry! Tricky stretch of road ahead? Just watch how Bellett's rack-and-pinion steering and independent four-wheel suspension take the curves and bumps out of it.

Yes, one drive will convince you that here's a lot more than "just another compact." That's why we call it a **family sports sedan.** Bellett gives you both—family car practicality *and* sports car excitement. Why not see it soon, at your local Isuzu dealer. But don't just look at it. Drive it . . . be a sport!

TIME LISTINGS

TELEVISION

Wednesday, December 9

CBS REPORTS (CBS, 7:30-8:30 p.m.).* "Segregation: Northern-Style," a report, shot with hidden cameras, on the trials of a Negro family trying to buy a home in a white suburban neighborhood.

BURKE'S LAW (ABC, 9:30-10:30 p.m.). Burke's usual bag of interesting cameo players: Hans Conried, Broderick Crawford, Dan Duryea, Rhonda Fleming, Burgess Meredith and Mamie Van Doren.

THE DANNY KAYE SHOW (CBS, 10-11 p.m.). Kaye and Guest Imogene Coca will perform *Swan Lake* with, one presumes, new variations.

Friday, December 11

THE ENTERTAINERS (CBS, 8:30-9:30 p.m.). Thelma Ritter joins Regulars Bob Newhart, Caterina Valente and Don DeLuise.

Saturday, December 12

THE NOBEL PRIZE AWARDS 1964 (ABC, 7:30-8:30 p.m.). A documentary special, hosted by Alistair Cooke, with behind-the-scenes deliberations and discussions by the judges, which were recorded on camera for the first time, and the presentations of the 1964 prizes.

Sunday, December 13

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). "Who Killed Anne Frank?" is a report on the hunt for the remaining Nazi war criminals.

PROFILES IN COURAGE (NBC, 6:30-7:30 p.m.). Sam Houston, and his courage in opposing the secession of Texas from the Union on the eve of the Civil War.

Monday, December 14

BEN CASEY (ABC, 10-11 p.m.). Joan Hackett as a polio victim bent on suicide.

Tuesday, December 15

THE MAN FROM U.N.C.L.E. (NBC, 8:30-9:30 p.m.). Super-Agent Napoleon Solo needs Super-Schoolmarm June Lockhart to help him out of the clutches of Super-Enemy Ricardo Montalban.

THE BATTLE OF THE BULGE (NBC, 10-11 p.m.). A special on Hitler's last big effort to pluck victory from defeat 20 years ago.

THEATER

On Broadway

THE OWL AND THE PUSSYCAT, by Bill Manhoff, is as timeless as a Punch-and-Judy show and as timely as *Who's Afraid of Virginia Woolf?* Diana Sands, as a sexy pussycat who claws, and Alan Alda, as a bookish owl who screeches, fill the evening with good, vulgar, neurotic laughter.

LUV. Eli Wallach, Anne Jackson and Alan Arkin take a slapstick and tongue-wagging jaunt on a suspension bridge in Murray Schisgal's absurd spoof of the theater of the absurd. The hand of Mike Nichols mixes gags and sight gags with unerring skill.

OH WHAT A LOVELY WAR. For this music-hall documentary, Joan Littlewood hits where it hurts with laughter by blending sentimentality, song and satire. A marvelously adroit cast, led by Victor Spinetti, plays the men and women who [illegible] joked and suffered through World W[illegible]

COMEDY IN MUSIC. Victor Borge [illegible] himself a Great Dane as he toys with [illegible] ivories and tickles his audience in a [illegible] man romp with Co-Pianist and [illegible] Leonid Hambro.

FIDDLER ON THE ROOF. One of the [illegible] remarkably versatile talents of the [illegible] temporary stage, Zero Mostel breathe[illegible] nostalgic life into this pleasant, pegram[illegible] musical comedy derived from [illegible] Aleichem's tales of Tevye and his [illegible] daughters.

Off Broadway

THE SECRET LIFE OF WALTER MITTY. [illegible] might have difficulty recognizing [illegible] in this musical exercise thinly base[illegible] the Thurber character, but a clever [illegible] and fresh songs and dances provide [illegible] zesty evening.

CAMBRIDGE CIRCUS. A group of [illegible] have brought the British revue back [illegible] beyond-the-fringe lunacy in a parade [illegible] consistently hilarious vignettes.

RECORDS

For Children

MARY POPPINS (Vista). The [illegible] the real Mary Poppins has vanished, [illegible] the movie's sugar-coated Mary still [illegible] magic about her, thanks to Julie Andrews [illegible] who sings about half the Sherman broth[illegible] ers' songs on the sound track, including *Super-cali-fragil-istic-expi-ali-docious*.

NOAH'S ARK (RCA Victor). One of [illegible] little "Dance-a-Story" albums with [illegible] tions suggesting how to dance to the [illegible] sic. In this one, children imitate [illegible] bears, monkeys, birds, rabbits, snakes [illegible] turtles after they have sawed and ham[illegible] mered to build the Ark.

DR. SEUSS PRESENTS HORTON HATCHES THE *EGG, THE SNEETCHES,* AND OTHER STORIES (RCA Camden). Few parents can read aloud Dr. Seuss's funny, freewheeling fantasies with as quick and droll a tongue. Actor Marvin Miller. He has already recorded *Bartholomew and the Oobleck* and *Yertle the Turtle.*

"I DON'T WANT TO GO TO BED" (Harmony). Children even up to age eight will be vastly amused to hear Robbie, on one side of the record, and Kathy, on the other, act out all the dodges they themselves use to fight sleep ("I want a glass of water," "There is a tiger in my room").

WINNIE THE POOH NO. 2 (Two 45s; [illegible] Victor). Two well-dramatized A. A. Milne stories, about Pooh and Eeyore and Kanga and Baby Roo. A special hum of Pooh signals when to turn the pages of the accompanying child-scaled booklet with colored pictures and text.

HI NEIGHBOR #2 (U.S. Committee for UNICEF). From each of five countries — Brazil, Ghana, Israel, Japan and Turkey — come a favorite song or two and typical dances, with clear directions for attempting them.

SNOOPYCAT (Folkways). The wit and beauty of Marian Anderson's voice brings to life a gentle series of stories and songs about her cat. For very young children.

HANS CHRISTIAN ANDERSEN FAIRY TALES (Spoken Arts). Flooded with water, down stories, parents and children can understand English English should

Every big steelmaker in Japan wanted this mark Sumitomo got it first

Why? (One of the ways we work with steel)

The API mark on a steel pipe means, "this pipe meets the standards of the American Petroleum Institute". These are the toughest pipe standards in the world.

Sumitomo was the first steelmaker in Asia to get this mark of approval. Today, every length of Sumitomo steel pipe carries the API mark. And today, over 50% of Japan's line pipe exports bear the name Sumitomo.

Every Sumitomo steel product must pass rigid tests of excellence. Steel tubes, pipe, sheets, plate, wire rods, castings, forgings and rolling stock parts: If it bears the name Sumitomo, you know quality is there.

But in the competitive world of steel, quality is not enough. Price is important, too. This is where production efficiency counts. Our Wakayama Works is the most modern in the world, and our price lists reflect the extraordinary efficiency of our plants.

So, for superior steel, competitively priced — you're right with Sumitomo.

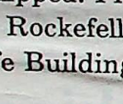
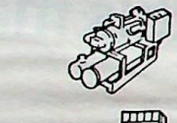
YORK city

Where York Cooling Equipment Controls Temperatures!

"York City" in midtown Manhattan, New York, U.S.A., includes five of the largest buildings erected in New York in recent years. All of these huge skyscrapers are York* equipped. From left: Tishman Building; New York Hilton at Rockefeller Center; Sperry-Rand Building; Equitable Life Building; Americana Hotel.



YORK Centrifugal Water Cooling Systems with individually controlled induction or fan coil units serve the varying comfort requirements of the daily population in YORK City.



Also, many of the older buildings and restaurants in YORK City have been modernized through the addition of YORK packaged units . . . self-contained or split systems, reciprocating package chillers, central air-handling units, automatic ice makers and condensing units.

For air conditioning or refrigeration projects have your architect or consulting engineer check YORK — a single source of supply through associate companies, licensees, distributors around the world.

York air conditioning and refrigeration

BORG WARNER™

grateful for these articulate readings. British Actress Eve Watkinson and Vic Alumnus Christopher Casson. The latest LP, Volume VII, contains only *Little Mermaid*. Boys might best start with the tricky, funny tale of *Great Claus* and *Little Claus* on Volume III.

CINEMA

TO LOVE. Lust at first sight is good for grand though gross guffaws in Swedish Director Jörn Donner's tale of a repressed young widow (Harriet Andersson) who meets a fast-moving travel agent at her husband's funeral and gives nary a thought to the mourning after.

IL BIDONE. Though it sometimes seems a fumbling first version of *8½*, this bittersweet tragicomedy about a smalltime swindler (Broderick Crawford) in bishop's clothes stirs interest as the missing volume of Director Federico Fellini's "trilogy of solitude" begun with *La Strada* and ending with *Le Notti di Cabiria*.

THE PUMPKIN EATER. A marriage is sliced open by Director Jack Clayton, and the raw wounds throb in Anne Bancroft's performance as an oft-wed British matron who is bored, betrayed and befuddled.

THE FINEST HOURS. This skillful documentary sums up the career of Sir Winston Churchill, often in his own eloquent words, and warms history with intimate views of Churchill's country retreats.

SEND ME NO FLOWERS. As a supposed hypochondriac who feels the end is near, Rock Hudson prepares Wife Doris Day for widowhood while Tony Randall keeps the fun alive as a macabre neighbor.

SÉANCE ON A WET AFTERNOON. Kim Stanley seems simultaneously sweet, brittle, poignant and menacing in this taut British thriller about a psychotic psychic whose contact on the other side persuades her to carry out a kidnaping.

A WOMAN IS A WOMAN. A lissome Parisian stripteaser (Anna Karina) sheds her inhibitions in this giddy, free-form improvisation by French Director Jean-Luc Godard, who seems to have liberated the mind from all but youth, love, and a fondness for old Hollywood musicals.

MY FAIR LADY. As the irascible phonetics expert who transforms a grimy flower girl into an English rose, Rex Harrison suavely repeats for the camera his Broadway triumph in the Lerner-Loewe classic based on Shaw. Audrey Hepburn, in her full-blooming rose period, is a delight.

THE SOFT SKIN. Air travel spells doom for an aging intellectual who develops an *amour fixe* about a stewardess in this triangular Gallic drama, exquisitely wrought by Director François Truffaut (*The 400 Blows*).

WOMAN IN THE DUNES. Japanese Director Hiroshi Teshigahara studies the human condition in a stunningly achieved metaphor—a man and woman trying to survive in a desolate sand hole.

TOPKAPI. For Director Jules Dassin, jewel thieves, getting theirs is only half the fun in this merry account of an Istanbul caper pulled off by Melina Mercouri, Peter Ustinov and other scalawags.

BOOKS

Best Reading

THE HORSE KNOWS THE WAY, by John O'Hara. This is O'Hara's fourth large collection of short stories in as many years; he has now sworn off to concentrate on novels. Maybe he shouldn't. The latest volume enhances his reputation for brevity

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and wit as a social observer in the short story form.

HENRY ADAMS: THE MAJOR PHASE, by Ernest Samuels. This biography describes Adams' life of luxurious despair, traveling often and behaving, as Oliver Wendell Holmes put it, like "an old cardinal."

A LITTLE LEARNING, by Evelyn Waugh. The first part of the British satirist's autobiography comprises a warm, impressionistic recollection of childhood, a spirited account of high living at Oxford and a miserable tour as a master in a bleak prep school in Wales—in fact almost all the ingredients of Waugh's brilliant first novel, *Decline and Fall*.

HERZOG, by Saul Bellow. The misery of an unwanted divorce and a custody case and the psychological desolation they inflict on a man of good will are remorselessly pursued by Bellow. The gloom is lightened by swatches of letters written by the hero to famous men, giving them, instead of his wife, a piece of his mind.

LIFE WITH PICASSO, by Françoise Gilot. In a rich year for autobiographies and memoirs, this account of the great artist by his ex-mistress of nine years holds a unique and surprisingly high place. Mlle. Gilot is unfailingly frank about her own emotions as well as Picasso's, making her revelation of living with genius meaningful as well as authentic.

MARKINGS, by Dag Hammarskjöld. This disturbing book is in out-of-stock demand in most of the U.S. It is a record of the religious doubts and mystical exaltations that possessed the late U.N. Secretary-General during times of crisis as well as seldom in the huge glass box on Manhattan's East River.

OF POETRY AND POWER, edited by Erwin Likes and Paul Schwaber. One of the few books of enduring significance among the 60-odd about President Kennedy published since the assassination. It is a collection of poems, written in grief and occasionally in anger by many of America's most talented poets.

THE BRIGADIER AND THE GOLF WIDOW, by John Cheever. In these short stories, the author writes again of exurbia: the proletariat of vice presidents, the charming irresponsible remnants of old families, and the winning eccentrics.

Behind the success...
7 years of development...
to set new standards of dependability and production economy

In 1952 a group of Caterpillar research and development engineers began work on a new machine : a wheel loader. Their goal ? To design a wheel loader to surpass all existing machines and any loader likely to be marketed in the near future. Spring 1960 saw the result : a line of three fully-proven machines were in full production. An over-long interval between concept and finished product ? Not in Caterpillar's view. Every day of that 7-year programme had been used. From the first prototype, built late in 1952, thousands of test hours went into refining every component and improving every aspect of dependable, productive performance. In laboratories, on proving grounds and customer jobs, pilot models worked endless hours, and always Caterpillar engineers were watching, recording and planning further improvements. Now, with four job-matched Caterpillar wheel loaders available—another model was put into production early in 1963—owners throughout the world can measure the full value of this painstaking research.

But the work started in 1952 was only the beginning of a continuous wheel loader development programme in the search for the uncommon quality of product which gives owners product dependability, low operating cost and superior performance.

the thinnest automatic cal
watch with centre second.
trated watch: Ref. 746 TB (
1466)

A capsule history of a significant watch achievement

1949: Eterna·Matic, with its revolutionary ballbearing-mounted selfwinding system, created a technical sensation.

1956: The "Centenaire" series brought still another great success: the first really thin automatic watch.

Today: The progress attained by pioneers of research and technology has made it possible, for the first time, to produce a startling new design: the Eterna·Matic 3000 "Dato": a model of precision and endurance, yet by far the thinnest automatic calendar watch with centre second.

LETTERS

ongo Atrocities

As a surgeon in training who has experience with medical missions, I ld not help wincing as I read the gruegory details of the Congo massacre ec. 4]. Dr. Paul Carlson's death is imsurably tragic. But we know this 't discourage others in our profession making humanitarian missions to ple who need our help very badly, like Africans whom we should pity more loathe for that barbaric deed.

T. D. BONZON, M.D.

shing, N.Y.

According to you, when a white murders innocent Africans, he is only ng up to his name as a mercenary and aying savage Simbas, but when an Afan kills an intruding Caucasian, his demnable action only shows that all ricans are atrocious cannibals warring inst the civilized Christian and huanitarian white race! As a Nigerian, y I ask if you have forgotten the three il rights martyrs of white Mississippi the heart of "civilization"? No wonder Chinese Communists have a case!

ADEOLA ADE MAFO

Angeles

It seems almost unbelievable that yone, regardless of his nationality or itical convictions, could vilify the ericans, British and Belgians for their manitarian act in trying to rescue as ny as possible of the white hostages in Congo. Yet the Communists and their llow travelers have the unmitigated gall call this action "aggression, a warlike t" etc. Thank God America is still able do all it can to protect its citizens.

JEAN SCHOEN

Paso

Your attempt to depict the actions a small and fanatic group as expresn of Africa and Africans generally uld, I suspect, have distressed Dr. Carl- himself. Similar tragedies have been acted among many peoples and in many ods of history, and surely the point Conrad's story is that the "heart of kness" lurks in us all.

JOHN DEMOS

erville, Mass.

Ever since the first reports began sking in of the butchery in the Congo, ve been running around to my fellow es calling on them to rejoice. "By y," I cry, "those goddam nuns, misnaries and doctors are really getting what they deserve. What are they but a bunch of lousy outside agitators, not even of the same race, going in there trying to change the Congolese way of life? Don't they have enough sin and disease back where they came from? Why don't they clean up the mess at home before bothering other people?"

It was funny in a way, particularly since the white Mississippian will nod his head zealously through about two-thirds of the spiel, until he gets the point. Slack-jawed indignation ensues. I am afraid, though, that you have ruined my sardonic joke. I got half way through your cover story before nausea overtook me, and it occurred to me that blind barbarism—in the Congo, in Mississippi—is the one citadel that will not tumble before mockery.

RICHARD W. BOETH

Rosedale, Miss.

Ecumenical Disputes

Sir: How pitiful that the Roman Catholic Church, in its frenzied effort to curry Protestant favor by emulation, has stripped the Mass of its unique significance, taken away the non-Catholic's prime source of attraction, and given its members another reason to re-examine a church that now resembles every other except for one thing—birth control.

(MRS.) JOAN D. LADD

Niagara Falls, N.Y.

Sir: What TIME overlooks in its appraisal of the Ecumenical Council is that if there is a need for a mystical body such as the Roman Catholic Church, then it cannot be democratic. In the ideal democracy every man celebrates the mystery of himself at the altar of his own divinity. In a world oriented to incentives, gain, self-aggrandizement and greed, there is an urgent need for a mystical, symbolic figure, which the role of Pope fulfills.

JOHN MCCLOSKEY

New York City

Sir: As a former dyed-in-the-wool conservative, I now wildly applaud the new changes in the Mass. Expecting the worst, I instead found myself involved in the most fascinating experience.

ALICE R. O'HARA

Hartford, Conn.

Sir: Perhaps the third session of the Ecumenical Council now completed should be known as the "Grand Illusion." The unyielding attitude of a powerful few on the religious-liberty issue, in the face of overwhelming approval, presages failure for "letting in a little fresh air," as envisioned by Pope John.

C. L. KUCERA

Balloon Across the Border

Sir: Who is John C. Kimball? A week or so before the U.S. elections, we found a big balloon inscribed "John C. Kimball for Congress." As we live in a rural area on the south shore of Nova Scotia, we are curious to know how far the balloon had traveled before bouncing down our narrow gravel road.

(MRS.) HATTIE F. BOWER

Shelburne, Nova Scotia

▶ *Democrat John C. Kimball of Deerfield, Ill., sold nearly 8,000 helium-filled balloons to publicize his unsuccessful campaign for U.S. Representative from Illinois' staunchly Republican 12th District (near Chicago). Reader Bower's balloon, which traveled 1,100 miles, "went a helluva lot farther than my candidacy did," says Kimball.*

Moneyed Prince Charlie

Sir: My attention has been drawn to your report [Nov. 27] entitled "The Princely Pauper." There is no truth whatever in the story that Prince Charles has sold his autograph at any time. There is also no truth whatever in the story that he sold his composition book to a classmate. In the first place, he is intelligent and old enough to realize how embarrassing this would turn out to be, and second, he is only too conscious of the interest of the press in anything to do with himself and his family. The suggestion that his parents keep him so short of money that he has to find other means to raise it is also a complete invention. Finally, the police would not have attempted to regain the composition book unless they were quite satisfied that it had been obtained illegally.

As to the essays in the book, you may be interested to know that the one about corruption in government, which you quote, was in fact a précis from Lecky's *History of England*.

RICHARD COLVILLE

Buckingham Palace
London

▶ *The royal family's press officer mounts a princely defense in his belated offer to clarify the case.*

Defending Alabamians

Sir: Though not so intended, an expression in your article on the Fifth Circuit Court [Dec. 4] does a serious injustice to my fellow Alabamians, viz.: "After his

CAMERA PRESS—PIX

ANOTHER SIDE OF THE RECLINING BUDDHA

A letter from the PUBLISHER

Bernhard M. Auer

A TIME cover story is expected to surround, probe and analyze the subject, showing all sides as well as depth. Few issues have so many sides, and few need so much to be explored and explained as this week's cover subject—the ancient religion of Buddhism, now emerging as a new political force in Asia.

To suggest the many-faceted nature of the story, Artist Bernard Safran painted representations of Buddha based on actual figures from four different countries, placing them on a background of the traditional Buddhist robe. At the top is the reclining Buddha in the Shwe Dagon pagoda in Rangoon, Burma, a 28-ft.-long, 19th century figure representing the attainment of nirvana. (For a look at the other side of this Buddha, see the photograph above.) The dominating figure in the center of the cover is copied from the Great Buddha of Kamakura, which is perhaps the best-known representation of a Buddha in the world. The 42-ft.-high bronze figure has 656 curls, 6-ft.-long ears and a yard-wide mouth on its 7-ft.-high face. Seated, with hands in lap, palms up and thumbs together in the traditional Buddhist attitude of contemplation, it was completed more than 700 years ago on the seaside near Tokyo, and has withstood *tidal waves (1495) and earth*quakes (1923). The figure on the left in the cover design, from Thailand, and the one on the right, from Nepal, are familiar examples of the thousands of images of Buddha around the world.

To report on the many complexities of the force that is Buddhism in the world of 1964, we called on twelve correspondents and stringers spread throughout the lands where Buddha is a pervasive figure. The key correspondent was Tokyo Bureau Chief Jerrold Schecter, who ranged over most of the Buddhist-influenced territory and who, not so incidentally, is finishing a book on Buddhism and politics in Southeast Asia. Absorbing all the reporting along with the rich store of existing Buddhist literature caused Writer Jason McManus to spend, appropriately enough, even more time than most cover stories require in sheer contemplation of all that the subject means. The result is a story that reveals Buddhism, the ancient religion assuming new political power, as a force with which thinking people around the world must be prepared to reckon.

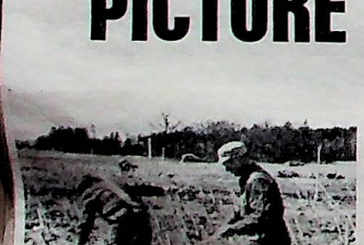
PICTURE OF A RIVER CHANGING ITS COURSE



Ready for the biggest blast on the 200 ft. wide canal – some 5,000 plastic tubes charged with 56 tons of dynamite stretch through water-logged overburden into the bedrock.

This is no ordinary blast. It was the début of a new method that cut a 4-mile seaway overland to double the shipping tonnage of Sweden's port of Norrköping. Four miles of problems to short-circuit the long, winding estuary to the Baltic that no large modern vessels could clear.

Some thirty feet of clay covered the rock bed to be blasted. Too costly for conventional excavation. A new method was evolved – Overburden Drilling. The bedrock was drilled and charged *without removing the overlying clay*. Rock and overburden were blasted as one and removed by dredging.

Sounds simple. It wasn't. It took advanced compressed air technology, new Atlas Copco air-powered equipment, plus special Coromant Extension steels. Most of all it took experience. Experience in putting air to work. The same method has been used for deepening Genoa's new harbour, for prospecting in Africa, and for strengthening dam foundations in Canada.

This is the kind of experience Atlas Copco brings you from construction sites, mines and industry the world over, and which is reflected in the smallest tool and the largest compressor.

Atlas Copco

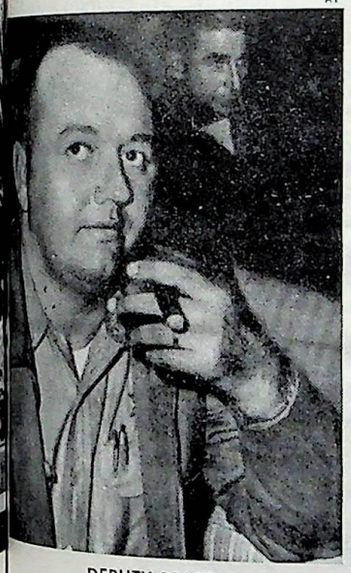
Crime Called Conspiracy

Holstered pistols and blackjacks ped against their hips and red mud to their boots as Neshoba County riff Lawrence Rainey and Deputy l Price got out of their squad car walked into the Philadelphia, Miss., rthouse one chill morning last week. back from a dawn search for a nshine still in backwoods country, er seemed to notice four men in h coats waiting in cars parked near courthouse.

Moments after the lawmen entered

AP



DEPUTY PRICE
After the moonshine search . . .

r office, the four FBI agents left r cars, went into the courthouse, tly told Rainey and Price they were er arrest. Unsurprised, the sheriff re- ed his pistol and badge, handed his to his secretary. Then Rainey and e walked out with the agents, down ough a cursing gauntlet of local red- ks who had gathered as soon as they ted the FBI men, now as familiar as ghbors after months of work in the a. The crowd knew perfectly well at last the long-awaited event had urred: Neshoba County's two top officers had been charged with com- city in the murder of three civil hts workers—Michael Schwerner, 24, nes Chaney, 21, and Andrew Good- an, 20.

On that same grey morning, some 60 other FBI men had fanned out through the area. In quick, efficient visits to piney woods, farms, back-road gas stations and roadside house trailers, they collected a motley crew of 19 more men —including a Freewill Baptist preacher, a tavern bouncer, a 71-year-old Philadelphia cop, and a 17-year-old high school dropout. The 19 were charged, too, in connection with the killings. Whatever the outcome, the trial will certainly become one of the most celebrated in years—if only because the murder of the three young civil rights workers had been so shameless, shocking and senseless a crime.

Marked for Death. On June 21, a scorching, oppressive day, Schwerner, Chaney and Goodman had driven a blue station wagon through Neshoba County to investigate a burned-out Negro church near Philadelphia. All worked with the Council of Federated Organizations in Meridian, Miss., setting up voter-registration projects. Chaney, a Negro, was a native of Meridian. Goodman, a New Yorker, had begun work only that day. Schwerner, a bearded youth from New York, had been a COFO worker in Philadelphia for six months. Because of his civil rights aggressiveness and because he was Jewish, he had been marked for death as early as May by an occult, segregationist organization called the White Knights of the Ku Klux Klan. Founded just last March, the Knights dedicated themselves to carrying out terrorist tactics against civil rights workers coming in from the North.

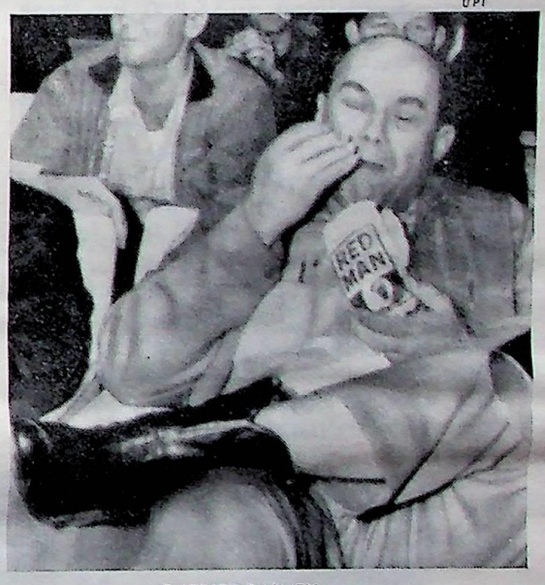
After visiting the church, the three workers were stopped by Cecil Price, who claimed that they were speeding near Philadelphia. He jailed them until long after dark, then released them. They disappeared. Price insisted that he followed them to the edge of town, saw them drive away.

Two days later, their burned-out station wagon was found. On Aug. 4, FBI men, acting on a tip, dug a single hole in a new earthen dam on Old Jolly Farm six miles from Philadelphia and uncovered the three bodies. Each man had been shot to death with a .38-caliber weapon; Chaney had been beaten so horribly that a pathologist who performed an autopsy said he had never seen such injuries except in a high-speed auto accident or a plane crash.

"The Plan & the Purpose." The FBI beefed up its Mississippi forces to 153 men—ten times the normal complement. The contingent was headed by able Roy K. Moore, 50, a native of Oregon and a 26-year FBI veteran. Around Philadelphia agents met almost as much hostility as the civil rights workers had—one found several snakes in his car one morning. But the FBI built its case persistently. Agents infiltrated the White Knights of the Klan, paid out several thousand dollars for information.

When the FBI finally made its arrests, it outlined the charges in chilling tones.

UPI



SHERIFF RAINEY
. . . the subject was death.

Said the FBI report last week: "It was part of the plan and purpose of the conspiracy that Cecil Ray Price, acting under the color of his office," would arrest Schwerner, Chaney and Goodman "without lawful cause, and detain them in the Neshoba County jail." Then, said the FBI, Price arranged it so that when they left the jail he and nine other men—members or warm admirers of the White Knights of the Klan—could intercept them outside town. The killers forced them into other cars, drove down an isolated road, "and did threaten, assault, shoot and kill them." The lynchers hauled the bodies to the Old Jolly Farm, dumped them in a shallow grave. A few days later, tons of dirt for the dam were piled atop the grave. Rainey himself was not involved in the kill-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ings, said the FBI, but was well aware of the conspiracy.

Despite the agents' certainty that they had nailed the men who had plotted the murders, they still could not directly charge them with the slayings. Murder is a state offense, except on federal property, and the Mississippians were therefore beyond the jurisdictional reach of the Federal Government so far as murder was concerned. So 19 of the 21 arrested—including Rainey and Price—were charged under a section of an 1870 law that was passed, ironically, to control Klan terrorism nearly a century ago. Titled "Conspiracy Against Rights of Citizens," it reads: "If two or more persons conspire to injure, oppress, threaten or intimidate any citizen in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having so exercised the same . . . they shall be fined not more than $5,000 or imprisoned not more than ten years, or both." The other two were charged with failing to give information about a felony—which carries a maximum $500 fine and three-year prison term.

Back at Work. Within hours after the arrests, U.S. Commissioner Esther Carter fixed bond at $5,000 for those charged with the rights violation, and at $3,500 for the other two. All of them quickly posted it. Price and Rainey were back at work in the Neshoba County sheriff's office that afternoon.

At week's end Mississippi officials refused to charge anyone with murder. FBI charges will be heard in a federal court in Meridian. There can be no change of venue unless the defense asks for it—which will not happen. Thus the 21 will be judged by a jury of their Mississippi peers, and Mississippi juries are not noted for convicting people accused of civil rights crimes.

Cooling the Controversy

In view of the Mississippi arrests, criticism directed against FBI Director J. Edgar Hoover by civil rights groups could be expected to subside. Although Hoover had drawn such fire by an intemperate attack upon the Rev. Martin Luther King, he last week agreed to King's suggestion that the two talk over their differences. The 70-minute meeting in Hoover's Washington office seemed to cool the controversy and, reported King, led to "a much clearer understanding on both sides."

Neither man really retreated. King told Hoover that he still thought that, while "the FBI can arrest on the spot in other cases, it seems slower to act in civil rights cases." After the meeting King told newsmen that he still feels that "justice delayed is justice denied—but I'm not going to criticize the past."

For his part, Hoover contended that the FBI is an investigative agency, which often cannot act without Justice Department instructions. He later expanded on that theme in an interview with former Associated Press Correspondent Don Whitehead, author of *The FBI Story*. "I don't enjoy a controversy, and I don't go looking for one," said Hoover. "But I cannot let attacks on the FBI go unchallenged when they are unjustified." He complained that civil rights groups "want us to be bodyguards and to give personal protection, but that is impossible. Our agents cannot be used as instruments for social reform. They are law-enforcement agents. After all that has been written, so few people know what we legally can do and can't do."

The FBI's job, said Hoover, "is to gather facts when there is an indication that a federal law has been violated. These facts are presented to the Department of Justice and the department decides whether there will be or will be a prosecution. An FBI agent is authorized to pass judgment on the or innocence of a person. He can gather the facts and let the facts sp for themselves. If he were allowed become an investigator, judge and all in one, then we would have no c stitutional law enforcement. We wo have a police state."

Hoover said he had no plans for i minent retirement, chuckled at speculation that his fuss with King might hasten his leave-taking. Said he: "I intend remain active because I just don't like the rocking-chair life."

KING AT FBI HEADQUARTERS
From criticism to better understanding.

FOREIGN RELATIONS

The Situation

The momentous meeting was o and White House newsmen were fi admitted to the Cabinet Room. Ch Mohr of the New York Times wa the vanguard, and he reported the day that he had heard Defense S tary Robert McNamara say, with siderable vehemence, to the Pres of the U.S.: "It would be impossible Max to talk to these people wi leaving the impression that the situ is going to hell."

The "situation," of course, was S Viet Nam, which is certainly goin hell. The "Max" was U.S. Ambass to South Viet Nam Maxwell Ta who had just finished a 2½-hour re to the President and top U.S. Department and military leaders. President took McNamara's ad and Taylor did not hold a press co ence that might have been provoca

Try Harder, Do Better. The of communiqué was properly bland, ing in effect that President Johnson instructed Taylor to go back to Nam and urge the South Vietnam government to try harder and do be But there was one tough-sounding s tence about how North Vietnam help for the Communist guerrillas building up; implied was the possi ty that the U.S. might, as Taylor urged, extend the war.

Aware that the White House mee was about to take place, and proba anticipating Taylor's recommendati the North Vietnamese and the Chin Communists had already started ha ing charges that U.S. planes were bo ing Communist installations in the called neutralist buffer zone betwe North and South Viet Nam. And ha ly was the White House meeting than the Soviet Union started squa ing about how the U.S. was "play with fire" in even considering a step in the Vietnamese war effort.

Fact is, the Communists probab didn't have too much to worry abo although he is playing his cards close his chest (as he should), and acting though he will take drastic action the Communists do not start behavi themselves in Southeast Asia (w they probably won't), the likelihood

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

at the President has no intention now extending the Vietnamese war in any meaningful way.

Back to the Wolves. Max Taylor, od soldier that he is, tried to make best of it all. After the White House sion, Taylor conferred again with ous State Department and Defense cials, returned at week's end for an- er conference with Johnson.

This time, the President did let Tay- talk to reporters, and Max had ob- ly got the word about the situation. u're throwing me to the wolves n, Mr. President," he said amiably. went on to say that he and President sson had "talked about all aspects he situation—everything you can k of." He concluded by saying that paramount duty on returning this k to Saigon would be to confer with th Vietnamese officials about sub- s ranging "across the board."

ARMED FORCES

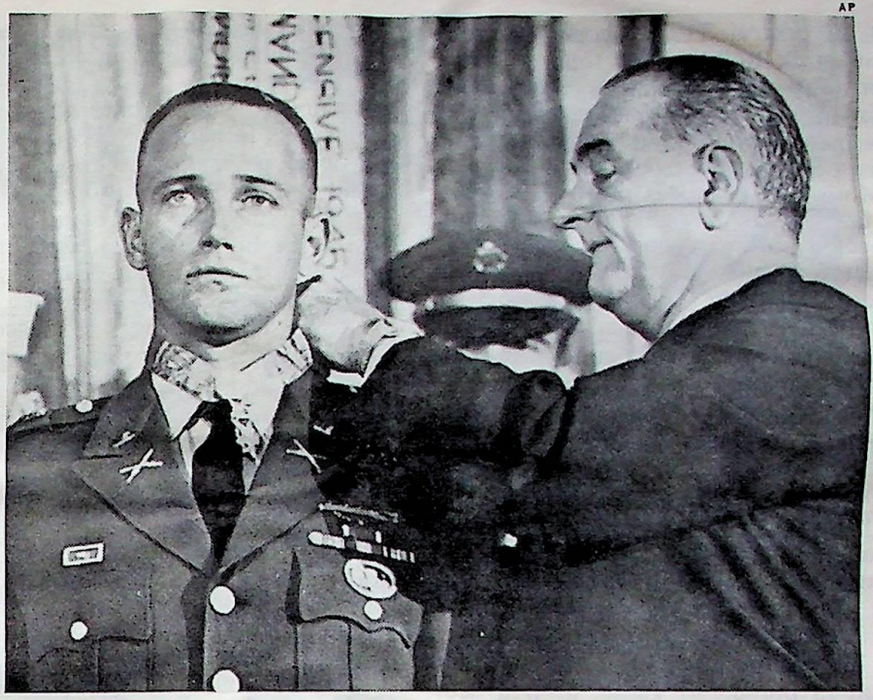
ne Who Was Belligerent

So far, 225 U.S. servicemen have n killed in that Vietnamese war in ch their country still does not admit being an official combatant. Last k, the White House announced that Medal of Honor had been awarded Army Special Forces Captain Roger h C. Donlon for "conspicuous gal- ry and intrepidity" in action against Viet Cong.

Said the White House announce- nt: "This is the first Medal of Honor rded to an individual who distin- shed himself while serving with a ndly force engaged in an armed flict in which the United States is a belligerent party."

The mild idiocy of that statement uld take nothing away from Don- now 30. A tall, sandy-haired man, enlisted in the Air Force in 1953, s appointed to West Point in 1955. er two years, he decided that the tary life was not for him, left to take b as a data processor with Interna- al Business Machines Corp. in Man- tan. A mere ten months of button- n hustle and bustle made Donlon ide that he really wanted to be a dier. He enlisted in the Army, gradu- d in 1959 from Officer Candidate ool at Fort Benning, Ga.

In Viet Nam last summer, Donlon s commanding a detachment as- ned to defend Camp Nam Dong, 0 miles north of Saigon. At 2:25 n. on July 6, a Viet Cong battalion nched a full-scale surprise attack. In e course of the five-hour battle, Don- n seemed to be everywhere, firing d hurling hand grenades under a hail enemy bullets and mortar shells. He ot down a three-man Viet Cong dem- tion team threatening the main gate the defense compound. He dragged gently needed ammunition across pen areas to gun positions. When he scovered a wounded gun crew, he ayed behind to cover their withdraw- al. Donlon himself was wounded four times, the first a stomach wound into which he stuffed a handkerchief to stem the flow of blood. Yet he refused aid for himself until after daylight, when all of his men had been tended to.



AP

CAPTAIN DONLON & THE PRESIDENT
From button-down hustle to heroism.

THE PRESIDENCY

On His Mind

Introducing Interior Secretary Stewart Udall to 108 U.S. Olympic medal winners at a White House luncheon, President Johnson described him as a onetime "star guard on the baseball team" at the University of Arizona. An aide later issued a correction, said the President had really meant football. Actually, Udall was a basketball guard, and a good one.

If the President seemed preoccupied, it was because he had weightier matters on his mind, as he demonstrated in a pair of major speeches last week.

At Georgetown University's 175th memorial convocation, Johnson dealt with the problems of NATO. "The Atlantic Alliance," he said, "is not in the midst of crisis, as some alarm-mongers would have you believe. But it is in the midst of change . . . To change patterns of thought or the shape of institutions is never very easy. Today's discussion and debate, the flow of ideas and proposals, is proof of coming change and a spur to continuing action.

"We have a common interest in the defense of the West. For 20 years the atomic might of the United States has been the decisive guard of freedom. Ours remains the largest strength, and ours a most awesome obligation. But we realize the reasonable interest and concerns of other allies—those who have nuclear weapons of their own and those who do not. We seek ways to bind the Alliance even more strongly together by sharing the tasks of defense through collective action and meeting the honorable concerns of all."

In his second speech, to the Business Council, the President warned commercial bankers against raising their lending rates as a result of the Federal Reserve Board's recent increase in the discount rate.

Many a banker around the U.S. found cause for consternation in the President's outlook. They had been convinced throughout the campaign that Lyndon Johnson was a man who harbored a real sympathy for men of business and motives of profit. But what Johnson said took almost instant effect as one of the banks he had most immediately in mind reversed a lending rate hike (*see* U.S. BUSINESS).

Last week the President also:

▶ Had two small, wartlike growths removed from his right hand with an electric needle by a pair of Washington dermatologists in his White House bedroom. Press Secretary George Reedy said later that the growths were merely thickenings of the skin caused by overexposure to the sun and that there was "no suspicion of malignancy."

▶ Dug up a shovel of earth at groundbreaking ceremonies for Washington's $46 million John F. Kennedy Center for the Performing Arts. Construction will get under way next summer.

▶ Spoke by White House telephone for commissioning ceremonies at Newport News, Va., for the Nuclear Submarine *Sam Rayburn*.

A Texan's Texan

It is hardly a secret that President Johnson likes Texans—and has imported a fair number of them to [illegible] Washington. Yet the Texan [illegible]don probably likes best of them all is one he has left behind. He is A. W. (for Albert Wadel) Moursund, 45, who lives in a modest ranch house in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hills of central Texas, works out of a small brick building off Johnson City's courthouse square, has a passion for anonymity, and insists to inquiring newsmen that "I don't give interviews. I just practice law, that's about all."

Moursund practices more than a little law: he is recognized as a highly respected authority on the law of real property in a state where such expertise counts heavily. He is also the principal trustee of all the Johnsons' land, cattle, municipal bonds, radio and television holdings. Elected Blanco County judge, a largely administrative post, in the mid-'50s, he quit politics after five years, but still is known as "the Judge" around Johnson City.

Through Prickly Pear. Moursund is an all-round man in the best Texas tradition. He controls a local bank. He can survey land, brand cattle, ride a horse through prickly pear cactus, steer his Lincoln Continental through cedar brush in pursuit of game, drop a deer with unerring aim, then gut and skin the animal. To the Judge ranching is more of a pleasure than a source of income. Explains an associate: "He gets a real kick out of manipulating cattle from one pasture to another." He also enjoys food in quantity. When he speaks of a "couple of hamburgers" for lunch, it turns out to be thick chunks of roast round steak, rolls, iced tea, jalapeños, peas, fried potatoes, fruit cake, and cottage cheese salad.

Johnson's admiration of Moursund knows no bounds. Shortly after he became President, he boasted to newsmen that Moursund, who stands 6 ft. 3 in., and weighs 230 lbs. with no fat, could "whup Sonny Liston tonight, right now." According to Lyndon, Moursund keeps a six-shooter in the glove compartment of his Lincoln and is fast on the draw. A few months after Jack Kennedy's death, Johnson declared: "If anybody tried to do anything to me, the Judge would get him before anybody." Moursund also keeps a .30-caliber rifle with a nickel-plated barrel clipped under the front seat of his car. Explains he: "When you have to shoot a rattlesnake, pistols aren't worth a damn."

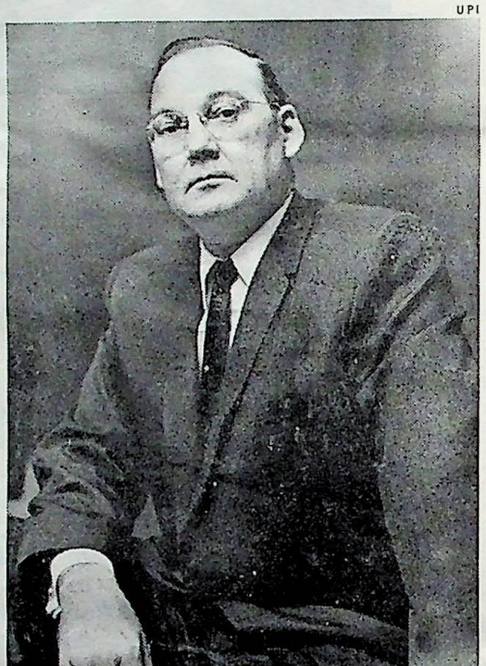
The Judge is also at home on water. Once Lyndon developed a craving for a cruise up the narrow, treacherous Llano River on a winter night so pitch-dark that Moursund stepped right off the end of the pier into hip-deep water. Yet A. W. took the wheel of the cruiser, while Lyndon unconcernedly ate shrimp in the cabin below. Said Johnson: "He'll get us there. I wouldn't trust anybody else."

An Extra Million. Moursund's business acumen is held in awe, particularly by those who recall such feats as his 1958 sale of 631,000 acres on three ranches owned by the West-Pyle Cattle Co. for almost $3,000,000—a cool $1,000,000 more than the owners had expected. He did it by rounding up the biggest cattle buyers in the Southwest, carefully sorting the cattle by breed, size and quality, insisting on sealed bids for each pen.

Moursund comes naturally by such talents. His father, A. W. Moursund Jr., had developed ranch holdings in Blanco County, founded Johnson City State Bank (it survived the Depression but closed in the late '30s), and married Mary Frances Stribling. The Striblings, largely through Mary's mother, Lurania, who had a knack for acquiring land and stocking it profitably with cattle, sheep and goats, owned some 100,000 acres near the Pedernales River. Lurania was once asked how much land she thought was "enough." "Just what's mine," she said, "and that which joins mine."

The Judge worked as a boy on his grandmother's ranch, earned a law degree from the University of Texas and learned practical law from his uncle, Anton N. Moursund, who at 88 is still a respected circuit judge in San Antonio. After 42 months' duty as an Air Force staff sergeant in World War II, A. W. set up practice in Johnson City. He also gradually expanded his inherited lands into a millionaire's fortune of his own.

UPI



A. W. MOURSUND
A little more than law.

"More Little Places." It was a land deal that brought Johnson and Moursund, who had been neighbors and friends for years, closer together. In the early '50s Johnson sought the lawyer's help in putting the LBJ Ranch together from land held by Lyndon's grandfather, Samuel Ealy Johnson. Moursund handled the legal work efficiently, also proved a sharp adviser on new grasses, breeding and pasture planning. As Lyndon rose in Washington politics, he came to rely more and more on A. W. to tend to business matters at home.

Two ranches, now part of the Johnson trust, are jointly owned by Johnson and Moursund. Acquired in 1961 and 1962, they are the 2,186-acre [illegible] Springs Ranch along the Pedernales in Blanco County and the 4,500-acre [illegible] wood Ranch in the lake region of [illegible] by Llano County. They consist [illegible] of pastureland on which cattle, [illegible] and Angora goats thrive. Moursund explains his interest in such land acquisition with typical understatement: [illegible] he: "The more little places you have the better off you are."

Nowadays, when Lyndon is at the LBJ Ranch or even taking one of his patented auto tours of his property, Moursund can reach him by radio-telephone either from the Moursund home, his car, or from the Moursund office. And when Lyndon is in Washington, Moursund has to do is pick up a white telephone on a counter in his [illegible]. A small blue White House symbol on its face indicates that it is a special direct line to the President.

INVESTIGATIONS

Parties & Payments

Anyone who has followed the [illegible] by Baker case even vaguely knows charges of a political payoff to finance the 1960 presidential campaign and of reports that Baker used share party girls to help smooth the way for his shady deals. Last week the fact that there was indeed a lot of loose cash floating around—$35,000, to be exact —was confirmed beyond a doubt. For whatever purpose it may have been used. And the Senate Rules Committee, reopening its hearings into the Baker affair, also began pinning down some of that party-girl talk.

To Stump the Snoopers. Star witness was Insurance Man Don Reynolds, [illegible] an old business buddy of Baker's. He testified that in 1959 Baker arranged an insurance kickback from Philadelphia Contractor Matthew McCloskey. 71, former Democratic National Committee treasurer and Ambassador to Ireland under John F. Kennedy, [illegible] was then angling for the contract to build Washington's $20 million municipal stadium. McCloskey, said Reynolds, made the payoff by handing [illegible] $35,000 more than he had to on the premium on a performance bond for stadium construction.

"I," said Reynolds, "was the bagman in this thing from beginning to end. A bagman is the man pushed around, having been the medium . . . Of course, low man on the totem pole." Of the $35,000, Reynolds said, he kept $15,000 for himself, and "Bobby told me that $15,000 was to go for the primary dential campaign and the other $10,000 was to go for political purposes as [illegible] and Mr. McCloskey saw fit—mostly Bobby." Reynolds said that Baker further told him to "stick the money in a bank you don't ordinarily use, so that people snooping around will have a hell of a time locating it."

Despite the fact that Reynolds' own testimony is a pretty shaky [illegible]

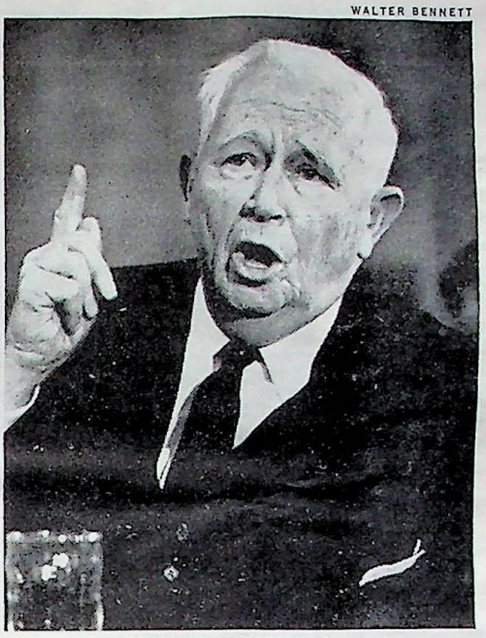
AP

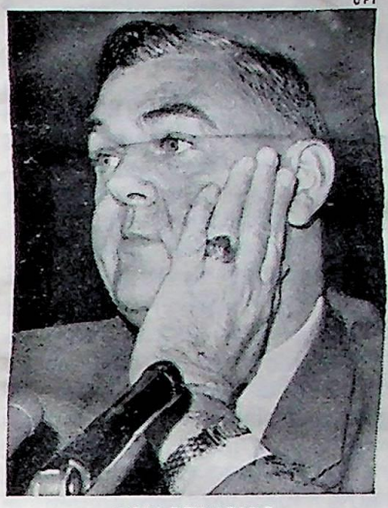
BOBBY BAKER

WALTER BENNETT



MATT McCLOSKEY

UPI



DON REYNOLDS

A bagman, or $35,000 gone astray?

acter, he produced some impressive documents to support his story: 1) an invoice in the amount of $109,000 sent to McCloskey by Reynolds, 2) a check for $109,000 sent to Reynolds by the McCloskey company, and 3) a bill for only $64,000, the performance-bond premium minus Reynolds' regular $10,000 commission, sent to Reynolds by the insurance company for which he was agent.

Somebody Goofed. McCloskey, who testified later, agreed that the $35,000 had gone somewhere, and that Reynolds had indeed been overpaid. But, he said, it was only because "somebody in our organization goofed." Company officials, he insisted, believed that Reynolds' bill was for both a performance bond and general liability insurance, erroneously sent him a check large enough to cover both. "We make goofs like that every once in a while," he said. As for the $35,000, said McCloskey, "we have plans to recoup it. That's for sure."

That left it all pretty much a case of Reynolds' word against McCloskey's. And as far as Bobby Baker was concerned, that was how it would stay. Appearing under subpoena before the committee last week, Baker invoked not only the Fifth Amendment, but the First, Fourth and Sixth, refusing to answer more than 40 Rules Committee questions.

But Delaware's G.O.P. Senator John Williams, who first blew the whistle on Baker and who was sitting in on the hearings although not a member of the committee, was unwilling to let it go at that. His reluctance set off a shouting match. Williams said he had offered Committee Counsel Lennox McLendon, a back-home crony of Committee Chairman Everett Jordan's, Democrat of North Carolina, a "rather complete file" on various McCloskey contracts. McLendon, he said, had brushed the offer aside, saying he wasn't interested. Roared McLendon: "Senator, you're absolutely and unalterably untrue in your statement . . . You ought to at least tell the truth." Later Williams, still burning, cried to the committee: "I've had my integrity challenged twice this week. No man gets a third chance to call me a liar." With that he stalked from the room. By so doing he missed the spiciest testimony of the week.

Good as His Word. Next day came the bit about the broads. Committee Investigator Samuel Scott told of a riproaring time Baker and a Puerto Rican business crony named Paul Aguirre had in New Orleans with a pair of lovelies last year. Baker and Aguirre, said Scott, went to the city to look over a housing development that offered investment possibilities, took with them Baker's secretary, Carole Tyler, and German-born Vamp Ellen Rometsch, who has since been deported. They wound up, said Scott, spending "several days partying."

Scott said that he had talked with Aguirre about the fling. But Aguirre had vowed that if called to testify, "I'll deny it, even if the committee has photographs . . . My wife is expecting a denial and she'll get it. I'll take the First through the 28th.*" Before the committee last week Aguirre was as good as his word, refused to answer 66 questions put to him.

THE ADMINISTRATION

Hope for Hucklebuck

Charles ("Hucklebuck") Logan, a 17-year-old Baltimore Negro, dropped out of school last year because he had flunked the same class twice. His parents are separated. He lives in roach-infested rooms with his grandmother, makes a little walking-around money by washing cars at $1 apiece. His social life is pretty rugged: at a party last year one of his friends was shot dead at Hucklebuck's feet; shortly after that Hucklebuck himself was knifed at another party. He is on probation for receiving stolen goods.

One day last week Hucklebuck Logan arose at 5 a.m., bussed to Baltimore's grimy city hall. When the offices opened at 8:30 he signed up as the U.S.'s first volunteer for Poverty Czar Sargent Shriver's brand-new Job Corps. Behind Hucklebuck, to the delight of Job Corps officials who had feared that the corps' first recruiting campaign would draw an embarrassingly puny turnout, came well over 400 more kids from Baltimore. Almost all were school dropouts, few had steady jobs, and about one-third had had trouble with the police.

Idea & Idealism. There was no guarantee that Hucklebuck or any of the other volunteers would actually be accepted; the Job Corps says it will not, for example, sign up serious criminal offenders or narcotics addicts. Endowed with $150 million of the $784,200,000 first-year appropriation for President Johnson's war on poverty, the corps is essentially geared for boys and girls aged 16 to 21 who have not finished high school, have no decent job, and whose academic skills are hopelessly stuck at fourth- to seventh-grade levels. Shriver hopes to get 40,000 such youngsters enlisted this year, another 100,000 next year.

The idea—and the idealism—behind the Job Corps stems from the old CCC camps of the '30s. The kids will sign on for one- or two-year stints, move into rural "camps" (to be built in U.S.-owned parks or forests) or urban "centers" (mostly abandoned military barracks near cities). Forty-one sites in 21 states have been picked, about 130 are projected for completion by next June. Governors can veto Job Corps installations in their states if they wish, but so far none have. Still, Shriver has had his problems with local folks. In Yorktown, Va., last September, residents set up a howl about plans for a

* Aguirre was talking about constitutional amendments, even though there are only 24.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

corps camp near by because they feared an influx of "Negro hoodlums from Harlem." Shriver postponed plans for the Yorktown camp.

"No More Trouble." Once enrolled, Job Corpsmen will be paid $50 a month, to be banked until they leave the corps, plus $30 a month pocket money, along with room, board, clothing and medical care. They will attend classes in subjects ranging from bulldozer driving to personal grooming—all aimed at making them potentially useful citizens. Says Shriver: "The head of one of the biggest oil companies in the U.S. told me that in the state of New Jersey alone they could employ 8,000 gasoline station attendants tomorrow morning if they could get them. And in Chicago, the Yellow Cab Co. had a 60% turnover per annum in cab drivers. Now there are thousands, literally thousands of those jobs now open if people would take them and keep them. Those are the kinds of jobs that we are going to begin to try to prepare these boys and girls for."

For people like Hucklebuck Logan, the Job Corps thus offers at least a hope for the future and an escape from the present. When he was asked why he wanted to join, Hucklebuck said: "I just don't want no more trouble."

ELECTIONS

What's in a Name?

Because the Illinois house of representatives failed to work out an acceptable reapportionment before the deadline set by the state constitution, all 177 house seats were up for grabs on an at-large basis in the Nov. 3 election. But in a peculiar arrangement, Illinois Democrats and Republicans agreed beforehand that neither party would field more than 118 candidates—a two-thirds majority—for the new house.

The huge paper ballot discouraged ticket splitting, and last week vote canvassers, finally finishing the count, announced that all 118 Democratic candidates had won in their party's landslide. Leading the Democratic ticket with 2,361,623 votes was Adlai Stevenson III, 34, Chicago lawyer and son of U.N. Ambassador Adlai Stevenson. Biggest vote getter, with 2,191,065, among the 59 elected Republicans: Earl Eisenhower, 66, one of Ike's brothers and a retired La Grange Park newspaper executive.

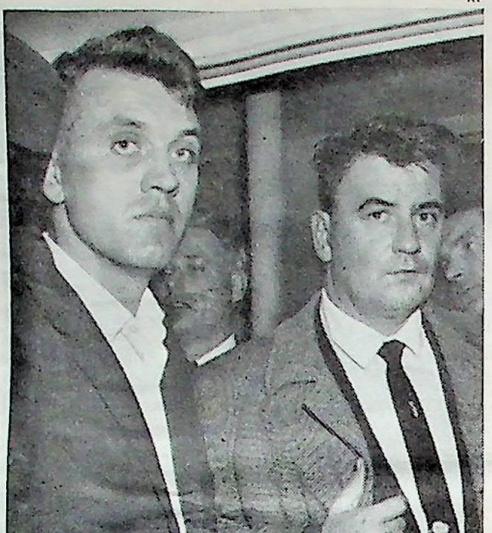
ESPIONAGE

"Include the Women"

Spies, like hats, come in different sizes and shapes. Two current cases concerning Soviet spies illustrate the two main models now in fashion: sneak-thief traitor and suave professional.

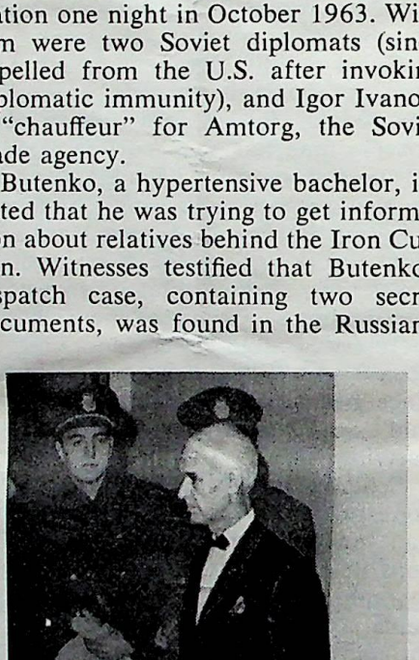
Dispatch Case. The traitor is John W. Butenko, 39, American-born son of Russian immigrants, honors graduate in engineering, trusted employee in New Jersey of the International Telephone and Telegraph Corp., and holder of top security clearance as a key electronics technician dealing with counter-strike operations of the Strategic Air Command. Trailed for six months by FBI agents, Butenko was picked up in his automobile at a deserted railroad station one night in October 1963. With him were two Soviet diplomats (since expelled from the U.S. after invoking diplomatic immunity), and Igor Ivanov, a "chauffeur" for Amtorg, the Soviet trade agency.

AP



SPIES IVANOV & BUTENKO
The sneak-thief amateur.

Butenko, a hypertensive bachelor, insisted that he was trying to get information about relatives behind the Iron Curtain. Witnesses testified that Butenko's dispatch case, containing two secret documents, was found in the Russians' car near by, along with a copying machine, a radio and a cigarette case, concealing a camera, and an electronic signaling device. In Newark last week, a Federal Court jury found Butenko and Ivanov guilty of conspiracy to commit espionage, and Butenko alone of failing to register as an agent for a foreign government. Sentence has not yet been passed, but both men could get the death penalty.



SPY WENNERSTRÖM
The suave professional.

Piece of Cake. The professional is Colonel Stig Erik Constans Wennerström, 58, tall, handsome, debonair Swedish diplomat, air attaché for the embassy in Washington from 1952 to 1957. He was arrested by Swedish agents in Stockholm last year, and admitted that he had been a Soviet spy since 1948. In testimony provided by the Swedes to the U.S. Government and released last week, Wennerström casually disclosed that spying in the U.S. was a piece of cake. He perfected the art of name-dropping in the presence of impressionable people, and cultivated military and diplomatic officers and their wives at country clubs and cocktail parties.

"If it is desired to have closer contacts in the U.S.," he explained, "it is necessary, in most cases, to include the women." The wives, he said, "like to speak to me and my wife. This, in turn, impressed their husbands' assistants whom I had not met yet. When I had made their acquaintance, I concentrated on those who had contact with their highest chiefs."

Wennerström's chief function was to supply Moscow with information on technological advances in a variety of fields. He traveled freely to industrial plants to inspect production and facilities and, because he represented a neutral nation and frequently had been introduced "from the top by the highest chief," was almost never asked for verification of his security clearance. He passed most of his information on to his contact by means of microfilm which he transferred with a hearty handshake wherever the two had agreed to meet. He and his Soviet contact even practiced the handshake ("He had very large hands, which greatly facilitated the procedure"), often met at parties or at clandestine rendezvous. Once he delivered microfilm by handshake at the Pentagon itself.

Out of Pocket. Another method for transfer was used when Wennerström attended diplomatic receptions at the Soviet embassy: "One arrives wearing an overcoat. The coat is hung on a numbered hanger far in the rear. Remembering the number, you enter the reception room, acting normally. When you meet your contact, you must greet him as usual and occasion to tell him the number. You separate, and the contact goes to the coat hangers and gets the material in the pockets." Wennerström liked to use hangers No. 24 and 25.

He is now serving a life sentence in a Swedish prison.

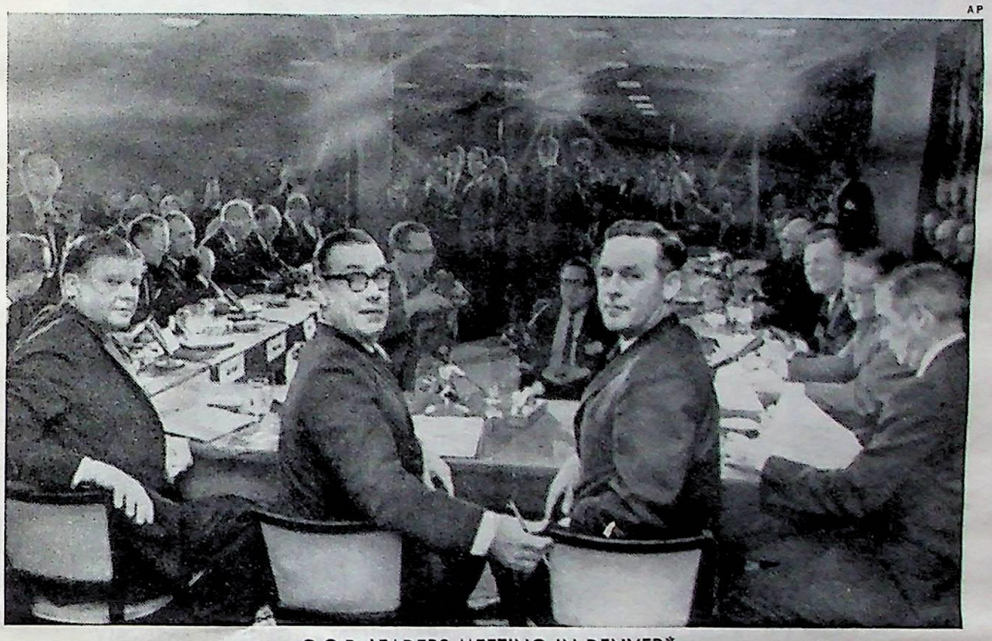
REPUBLICANS

Toward a Broad View

Toward a broad view of Republicanism and practices a policy of inclusion rather than exclusion." They said the party should "vigorously oppose all forms of narrow political radicalism, whether right or left." Some Governors felt this skirted the dump-Burch issue. But three of the most influential men there—Pennsylvania's Scranton, New York's Rockefeller and Michigan's Romney—insisted that the resolution was really a clear-cut demand for Dean Burch's scalp, although nothing can be done officially until the National Committee meets on Jan. 2.

Beyond that, the Governors' final report produced a redefinition of some moderate G.O.P. principles that had been noticeably missing from Goldwater's convention platform. They heartily endorsed the 1964 civil rights bill and said flatly that government must be "necessarily active in many areas of human need" such as "old-age security, hospital and medical care, decent living standards, public education, mental health and the needs of youth."



AP

G.O.P. LEADERS MEETING IN DENVER*

The division would be too dramatic.

OPINION

The Real Poop

In a twelve-page editorial, titled "If You Want It Straight," in his own *American Opinion* magazine, the John Birch Society's founder and presiding genius, Robert Welch, last week managed to blame everyone but himself and his organization for Barry Goldwater's overwhelming electoral defeat.

In Welch's view, the 42-million-plus who cast ballots for Lyndon Johnson "actually voted, of course, for repeal of the Declaration of Independence," for "scrapping the U.S. Constitution entirely as an absurd and useless antique," for "completely disarming the U.S., for doing away with our Army, Navy and Air Force," for continuing programs that will "wipe out the value of all their savings, their life insurance policies, their bonds and mortgages, and will redistribute wealth from the industrious and frugal into the hands of the shiftless," and for "more riots to be instigated by racial agitators, for more racial bitterness, and for greater use of all these fomented troubles to forward Communist purposes."

How could so many people possibly have been so deluded? "*Nobody* on the Republican side told them otherwise," said Welch. "There were very few campaigners, even among the Conservatives, who took the trouble and had the courage to tell the people even a fraction of the truth."

Welch was willing to credit Goldwater with "plenty of lion-like courage," and to observe that "much of the criticism of the Senator overlooks or the critics fail to understand, the incredible array of hidden forces that were organized against him." Goldwater's disaster came, in part, because of his "committee-like" campaign operation, "which may even have included some enemies posing as friends," said Welch, and because he ran "an old-fashioned political campaign which was as unrealistic in our present circumstances as using horse-drawn watercarts to put out a forest fire." If Goldwater had campaigned along lines adhering more closely to the John Birch Society's tenets, said Welch, he might have lost anyhow, but at least he would have contributed a little something to the "continuous, massive educational program that simply has to be carried out as the only chance of saving our own country from the great danger of Communist enslavement."

* From left foreground: Kentucky's Senator Morton, Idaho's Governor Robert Smylie, Colorado's Governor John Love, Governors at right, from foreground: Pennsylvania's Scranton, Michigan's Romney, New York's Rockefeller.

"We are a defeated party with a defeated leadership," cried Idaho's Republican Governor Robert Smylie. "In that state of affairs no one should try to shackle the future with a harness that has already proved unworkable."

This was Smylie's way of demanding the ouster of Goldwater Aide Dean Burch as chairman of the Republican National Committee. In his sentiments, Smylie has plenty of Republican company. Thus Illinois' defeated gubernatorial candidate, Charles Percy, in a speech prepared for the National Association of Manufacturers' Public Relations Conference in Manhattan (Percy did not actually deliver it because N.A.M. officials protested that partisan political speeches were taboo at that session), said: "I think it is clear, first of all, that we must have a change in command at the national level." And Manhattan's Representative John Lindsay, one of the more impressive Republican winners this year, last week said scathingly: "The people who engineered the campaigns of Goldwater and whatsisname still don't believe or understand they didn't do the best thing."

"Enough Negativism." Smylie's own statement came in a speech last week opening a Denver meeting of the Republican Governors' Association. Of the Governors and Governors-elect who attended, virtually all had opposed Goldwater's nomination, and virtually all would like to see Dean Burch resign. As the Governors convened, there were reports that they would adopt a formal anti-Burch resolution.

Many Governors feared that such a resolution would only serve to dramatize the divisions within the G.O.P. "There's already enough negativism in the party," said Oregon's Mark Hatfield. "I don't think it's a problem of hate," said Massachusetts' Governor-elect John Volpe. Washington's promising young Governor-elect Daniel Evans warned against Republicans who "insist on tagging labels such as 'liberal,' 'moderate,' 'conservative,' and 'kook' on each party member," and who want to "purge" those within the party who disagree."

Kentucky's Senator Thruston Morton, a former National Committee chairman and now Republican Senatorial Campaign Committee chairman, was on hand to give the Governors an analysis of the election. He came out flatly against any move to oust Burch. "In my opinion," said he, "this is no time for bloodletting. Our blood is too thin, and there is too little of it. I am not a member of the Republican National Committee, but many of my best friends are, and I will use what influence I have to keep Dean Burch in as national chairman."

Missing Principles. When they finally came to the point of drafting a statement, the Governors decided not to demand Burch's resignation outright. Instead, they recommended that the G.O.P. "adopt leadership which clearly represents a broad view of Republican-

UNITED NATIONS

In Limbo

For a while it had looked as if the 19th General Assembly might meet only to break up. When it finally got under way—two months late so as to dodge the U.S. elections and an additional 35 minutes late because a tortured truce was being patched together—it was at least functioning. But just barely.

Secretary-General U Thant announced the truce terms: "Issues other than those that can be disposed of without objection will not be raised." In short, the Assembly agreed for the present not to handle anything of importance and to avoid taking any votes, while the U.S. postponed a formal demand to deprive Russia of its Assembly vote (under Article 19 of the Charter) for nonpayment of dues on the U. N. peacekeeping operations in the Congo and Suez. While the Assembly is in its limbo of talking without voting, the U.S. and Russia are having another go at working out a compromise.

Rescue Fund. Over lunch, Secretary of State Dean Rusk and Russian Foreign Minister Andrei Gromyko agreed to let a U.N. committee suggest how future peacekeeping missions should be authorized and financed—presumably through the Security Council, where both nations have the veto. Although it was precisely to avoid the veto's paralysis that the West first moved some peacekeeping decisions to the Assembly, Western influence in the U.N. is gradually fading with the growth of the Afro-Asian bloc—which now comprises 60 of the organization's 115 member nations. Under the circumstances, some Washington officials are convinced that the day is not far off when the U.S. might want to be in a position to use its Security Council veto.

Russia accepted, in principle, the oft-proposed idea of a voluntary U.N. "rescue fund," to which it could contribute without directly supporting the operations it objects to. But the U.S. still insists that the Russians cannot have a voice in the Assembly before they make at least a token payment.

Positive Neutrality. Meanwhile, the Assembly conducted business by acclamation in order to avoid voting. It admitted three new nations—Malta, Malawi and Zambia—and elected its first black African president. Ghana's Ambassador Alex Quaison-Sackey, 40, festively garbed in orange and yellow tribal robes, took the chair alongside U Thant and Indian Under Secretary C. V. Narasimhan, symbolizing the U.N.'s ever-increasing Afro-Asian cast.

BOB HENRIQUES

AFRO-ASIA'S U THANT, QUAISON-SACKEY & NARASIMHAN AT GENERAL ASSEMBLY

The mediator took to bed.

Like his boss, Kwame Nkrumah, the "Redeemer" of Ghana, Quaison-Sackey espouses "positive neutrality," but he has a far less abrasive personality, and has spoken out against "Communist colonialism" as well as the Western variety. He winces at the abusive anti-Western jargon tossed around by hard-core African leftists, is affable and accessible (he once served as chairman and honorary drummer of an international jazz festival in Central Park).

Quaison-Sackey went through Ghana's Achimota College, then was sent on to study political science and economics at Oxford. There, he recalls, he learned what it was to be an African: "Imagine yourself, if you please, walking in the streets of Oxford after an absorbing tutorial and being confronted by an English lady who asks you, 'Which of our possessions do you come from?' I clearly remember that I did not answer that question, but it continued to haunt me." He must have felt less haunted as he presided over the General Assembly, thanking his fellow delegates for his election as "an honor which goes far beyond my humble person, for it is a tribute to Africa."

While Alex Quaison-Sackey spoke, U Thant had his troubles. The major powers appointed him informal mediator, hoping that his patience could somehow resolve the payment issue. But at week's end, the mediator was taken to a New York hospital suffering from a suspected peptic ulcer.

EUROPE

The Razor's Edge

It is doubtful that Charles de Gaulle would cut off that magnificent nose to spite his face, but last week the razor was stropped and poised. After two days of debate, the French National Assembly rubber-stamped its approval of De Gaulle's military program for the next six years, including the somewhat farcical *force de frappe*. By a vote of 278 to 178, the Assembly gave De Gaulle a green light to pursue his intransigent course. He will have an opportunity to try the razor's edge next week, when the NATO foreign ministers assemble in Paris to debate the future shape of the alliance.

"We cannot content ourselves with a role within the alliance of auxiliaries in a Roman legion," said one Gaullist Deputy, advancing the reasonable enough argument that a truly independent Europe cannot permanently depend on the U.S. nuclear deterrent for its defense. There are only two things wrong with this reasoning: 1) De Gaulle expects the rest of Europe, including Germany, to be dependent on France in precisely the way he refuses to be dependent on the U.S.; 2) the French deterrent as outlined last week is not worth much now and will not be for a long time.

Fading Mirages. For a price tag of $30 billion, or roughly 5% of the French gross national product over the next six years, Frenchmen will be buying a beefed-up conventional force and a total of 62 needle-nosed Mirage IV bombers to tote the Gaullist *bombe*. At a relatively slow 1,200 m.p.h. over a range of 1,000 miles. When the Mirages fade into obsolescence around 1968-70, they will be supplanted by SSBS missiles (the sibilant stands for *sol-balistique-stratégique*, or ground-to-ground-ballistic-strategic), to be lodged in hard-base silos in France. With a range of 1,800 miles, the two-stage SSBS missile will pack a warhead in the megaton range, making it roughly the equivalent of the already operational Polaris missile, smallest of the U.S. strategic rockets.

As an alternative to all this, the U.S. continued its almost fanatical backing —with West Germany giving more re-

CC-0. Panini Kanya Maha Vidyalaya Collection. Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trained support—of the proposed multilateral force of 25 surface ships armed with Polaris missiles and manned by mixed crews from NATO nations. Where the French nuclear force currently swings a total punch of three megatons, the MLF would carry 200. Though the U.S. would retain ultimate control of the MLF's nuclear trigger, participating nations would have more say on it than under the French scheme. The French last week reiterated one of their many objections to MLF: it would lure the Germans toward being a nuclear power. But how in the long run can Germany be kept from wanting the same nuclear status De Gaulle wants for France? The French have no answer.

Qualified Endorsement. The British think they have a partial answer. Prime Minister Harold Wilson proposes to broaden the scope of MLF to include land-based missiles, three of five British Polaris subs, and various aircraft. This sprawling scheme would greatly dilute the German contribution.

Meeting in Paris, the Western European Union (composed of legislators from the six Common Market nations plus Britain) approved the Wilson plan by a vote of 37 to 9, with 15 abstentions. This qualified endorsement will give Wilson a somewhat stronger hand to play in his talks this week with President Johnson. But having just helped pull the British out of their financial crisis, Washington is not rushing to buy the Wilson plan—or to force the Germans to buy it. Speaking at Georgetown University last week, Johnson allowed how "we shall never insist on unanimity" within the alliance, meaning that the U.S. and West Germany would probably go ahead with MLF even if Britain and France stay out.

GREAT BRITAIN

The Crisis Continues

Having barely survived a massive hemorrhage, the patient was still dangerously ill. But Prime Minister Harold Wilson left the bedside of the British economy to fly to Washington for his meeting with President Johnson. In the first week after emergency treatment was applied, through $3 billion in standby financing from eleven nations to halt a panicky run on the pound, Britain's currency rallied on New York exchanges to a high of $2.7929. But that was still below its par strength of $2.80, and for the basic cause of the sickness in Britain's longtime negative trade balance—no cure was in sight.

In London, the Treasury announced that during November reserves dropped another $109.2 million, shrinking Britain's international bank balance to $2,343,600,000, lowest in seven years. There were whispers that even these figures hid the true dimensions of the action. Last week Britain drew another $1 billion in financing, this time from the International Monetary Fund, to pay off short-term loans that had been contracted earlier to support the pound.

London's financial community (*see* WORLD BUSINESS) was willing to concede that Wilson had inherited many of his troubles from the Tories. But there was also near-unanimous agreement that he had disastrously mishandled the situation.

Shared Skepticism. From its closest neighbors, the patient continued to get little sympathy. At its annual meeting the Organization for Economic Cooperation and Development, a club of 20 Western industrial nations and Japan, listened to Labor's Chancellor of the Exchequer James Callaghan defend Britain's recovery measures as "adequate for the time being." Callaghan was loyally supported by U.S. Under Secretary of State George Ball, but most European countries bitterly attacked Britain's 15% surcharge on most imports.

Strongest blast came from Belgian Minister for External Trade Maurice Brasseur, who declared: "We are not convinced that the British have attacked the real problem, which is the imbalance of their foreign trade. Others share our skepticism." What Britain's trading partners want, among other things, is more deflation to curb domestic spending. They feel that, in effect, the British have been living high on other people's money—the world's sterling deposits with Britain. As one economist put it, the British must "tighten their own belts instead of somebody else's"—even if it means "a little unemployment."

Question of Confidence. International confidence is not helped by some of the figures around Wilson, notably "the Three Cs"—Minister of Technology Frank Cousins, Minister of Housing Richard Crossman and Minister of Overseas Development Barbara Castle—all far left-wingers. Nor is confidence helped by Labor's disturbing tendency to mix its uncertain economic measures and its contradictory morals. Wilson's government, for example, halted sales of arms and aircraft to South Africa, worth millions in hard cash, to protest against *apartheid*—a policy also invoked by the U.S., which perhaps can better afford it. But Labor has not curbed exports to Australia, whose restrictive immigration laws are based on color, to say nothing of trade with the inhuman rulers of Communist China.

Oddly enough, though Wilson had just nearly wrecked the British economy, in the eyes of many Britons he emerged as something of a hero. Few realized that it was not Wilson but Lord Cromer, Governor of the Bank of England, who had really saved the situation by speedily arranging for the standby funds. A Daily Mirror cartoon depicted one widespread, nonsensical view of the matter: it showed Wilson having bravely knocked out international "speculators." As for his insistence on social welfare programs de-

LONDON SUN

PRIME MINISTER WILSON SHAVING WHILE READING
The physician left the bedside.

spite international economic opinion that Britain cannot afford them—a lot of Britons were telling themselves smugly that Harold was just ruffling the feathers of a bunch of foreigners.

Stiffer Measures. Wilson did persuade his party to accept a six-month postponement of Labor's promised hike of old-age pensions. But if Labor fails to achieve increased productivity and more-competitive exports soon, he will probably have to decree stiffer measures, such as higher sales taxes. Already, consumers were beginning to feel the effects of the government's hike in Britain's basic interest rate. Announced last week was a ½% increase in interest on new-car loans.

The ultimate disaster would be devaluation of the pound, which might mean the end of the pound as the world's second reserve currency—not to mention the end of the Labor government—and would produce international monetary chaos including grave damage to the dollar. Economists at present don't think it will happen—but it may, unless Britain faces reality.

Buddha on the Barricades

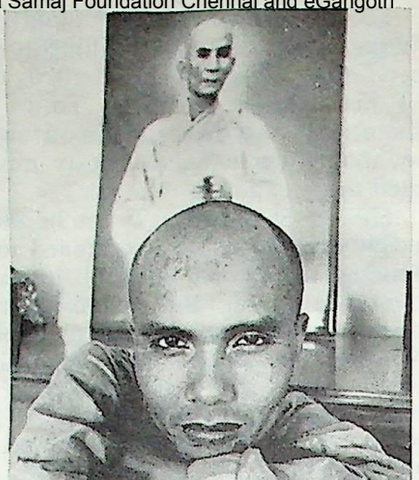
(See Cover)

As in the ocean's midmost depth no wave is born,
But all is still, so let the monk be still, be
Motionless, and nowhere should he swell.

—The Sayings of Buddha

At an hour when a man can first discern the shadows of the veins on the back of his hand, the monks arise. The great temple drum, hanging from its roughhewn log rack, summons the faithful to alms. Twisting a single saffron shift round their bodies, the monks move out into the quiet streets in single file, eyes to the ground, fingers clasped beneath their silver begging bowls. In Laos, the bonzes form a silent silhouette against the ornate temple roofs of the royal capital of Luangprabang. In Burma, they enter Rangoon framed against the great Shwe Dagon pagoda, its massive gilded spire shimmering in the early dawn. Though the robes may be grey in Formosa or black in Japan, in much of Asia the day begins with this same silent march of the mendicants. Passing laymen place gifts of food in the bowls, humbly thanking the monks for thus permitting the givers to acquire merit.

So has it been for most of the 2,508 years since Buddha, the Enlightened, took leave of his disciples. Yet throughout Asia today, in one of the little-remarked but momentous sea changes of modern times, the sandaled monks with shaved heads have abandoned Buddha's command to be still and motionless and have plunged deep into politics. While most continue their usual duties of meditating, reading the scriptures, teaching and begging, more and more of them are busy issuing political manifestoes, organizing riots, and working for the downfall of governments. From the Indian Ocean to the Sea of Japan, from the Irrawaddy to Tonkin Bay, bonzes are causing political waves whose final effect even they themselves cannot foresee but which are vitally affecting the Western—and the Communist—role in the fate of Asia.



VIET NAM'S THICH TRI QUANG*
Instead of peace, power.

New Threat. In Ceylon, the tenuous, left-wing coalition government has for weeks been at the capricious mercy of the Buddhist clergy; last week the Prime Minister, Mrs. Sirimavo Bandaranaike, lost a vote of confidence and dissolved Parliament, requiring new elections that are sure to be tumultuous. In Japan, Soka Gakkai, a new Buddhist sect claiming converts at the rate of [illegible] families a month, has launched [illegible] political party, which, says its chief, "naturally aims at ruling the nation." In Burma, an attempt to set up a Buddhist theocracy has led to chaos and [illegible] wing military dictatorship.

Above all, it is in South Viet Nam that political Buddhism is making its most vigorous, most open attempt to seize temporal power. Buddhism [illegible] may be as great a threat to the embattled country as the Viet Cong—if not greater. Saigon has just passed through a week of riots in which the [illegible] in the reverence for life tossed [illegible] grenades from the sanctuary of [illegible] dhist headquarters, teen-agers [illegible] edly raised in "the Middle Way" [illegible] up on policemen, and disciples of the gentle Buddha pushed old people and children as human shields ahead of demonstrators.

Though it asserts the insignificance and futility of the world, Buddhism has been powerfully active in the world before. It has known warriors and politicians, god-kings and bonzes who [illegible] pered the advice of the pagoda in the obedient ears of the palace. Its [illegible] is attested by the countless images of Buddha—smiling or somber, [illegible] vigorous, regally enthroned or [illegible] reclining. Yet nowhere, so far, has there been enshrined an image of Buddha at the barricades, of the Enlightened with a hand grenade.

Visual Aids. Buddhism's striking inner contradictions were on display last week in a great red, orange and gold tent pitched in the Deer Park of Sarnath, India, where Buddha preached his first sermon 500 years before Christ. There some 150 Buddhist leaders from 25 nations gathered for the Second World Fellowship of Buddhists, [illegible] in 1950 as a kind of informal, [illegible]

the Buddhists succeed, it will be third South Viet Nam regime the dhists have been instrumental in ng in just over a year with their ar "avoidance" of politics.

OR to Bed. It was only 18 months that a 73-year-old Buddhist monk d Thich Quang Duc sat down in middle of a Saigon street and, ched in five gallons of gasoline, ly set himself afire with a cigarette r to dramatize Buddhist opposition the regime of President Ngo Dinh Diem. It was this calculated grisly act of propaganda—and Diem's harsh countermeasures—that eventually led the U.S. to withdraw support from Diem, permitting his overthrow and murder. At the time, the West had great sympathy for South Viet Nam's Buddhists. Now the atmosphere is different. There is no longer even the shadow of a religious issue. Around the charred object that is still exhibited and venerated as Quang Duc's heart has grown up a militant, devious, determined movement whose aim is power.

Any suggestions that they are trying to help the Communists are indignantly rejected by the Buddhist leaders. On the contrary, they insist that they represent "the people," while the government does not, hence that they are the only power in South Viet Nam that can truly oppose the Communists. Thich Tri Quang, who is emerging as South Viet Nam's top Buddhist leader—Americans remember him as the monk who took refuge in the U.S. embassy during the weeks preceding Diem's overthrow—sounds as anti-Communist as any American could wish. Says he: "Like all educated Buddhists, I don't like Communism because it is atheistic. I strongly believe that Communism can never win." In the next breath he adds: "But I fear it is coming to South Viet Nam because this government is unpopular and always seems to do the wrong thing." He even asserts that the government and the U.S. are favoring negotiations with the Communists—the very thing he himself has been accused of.

What Tri Quang wants, he says frankly, is any "government that agrees with our policy." But he offers no specifics. Spreading his thin fingers, he blandly asserts that "we never want anything, and to say that Buddhism wants this or that is wrong. We never sponsor anybody."

And with that, he goes off to bed till midnight, when he rises again for meditations on his mistakes of the day. Some exasperated Americans refer to Tri Quang as "the Makarios of Viet Nam."

Princely Ascetic. Are Tri Quang and the other Buddhist leaders naive or villainous, or both? Are they merely inconsistent in the grand Vietnamese fashion? Are they nationalists or Communist dupes? Whatever the answer, much of it lies embedded in the myriad traditions of a great faith—noble, puzzling to the West, durable yet widely decayed, and sharply challenged by the modern world.

The diffuse spiritual legacy of Buddha, having survived the march and countermarch of conquerors in Asia, today commands perhaps 300 million faithful—it is typically Buddhist that estimates range from 100 million to 500 million. Precisely what they are faithful to is as diverse as the cultures of Asia, for everywhere Buddhism has benignly bent and become a part of all that it has met. The ties that bind Buddhist monks and laymen are vague, for Buddhism has neither dogma nor pope, offers no hope of individual immortality, neither premises divine authority nor promises forgiveness of sin. Its diversity of practice embraces everything from the cool conundrums of Zen in Japan to Cambodian water rites and the exorcism of devils in Ceylon through a dance-to-exhaustion. Yet at the heart of it all is the escape from the burdens of existence as exemplified in the life of that princely ascetic and saintly agnostic Siddhartha Gautama.

The Heaven of Delight. The son of a Himalayan chieftain, the future Buddha, "The Enlightened," was raised as a Hindu and enjoyed such palace amusements, so legend has it, as the performance of 40,000 dancing girls. When Gautama came of age, 500 virgins were

VISION OF THE BURNING BUDDHA
Freudianism in reverse.

presented to him: he chose the most beautiful as his bride, and soon she presented him with a son. With every luxury and favor, the young Crown Prince Gautama had only to inherit his kingdom to live happily ever after. But Gautama, like the carpenter of Nazareth who was to appear 500 years later and whose life offers many parallels to the Buddha legend, was not what he seemed.

According to the rich Buddhist mythology, Buddha rested in the Heaven of Delight from his innumerable previous reincarnations, both as men and as animals such as rabbits and pigeons, in which he had perfected his character; presently he was approached by the deities of the 10,000 world-systems of the universe. "Now has the moment come, O Blessed One, for Thy Buddhahood," they advised him. Buddha assented, picked out his mother, and approaching her bed in the guise of a white elephant, smote her with his trunk and entered her womb.

She carried the fetus clearly outlined in her womb "like oil in a bowl." The infant emerged into life from her side as Queen Maya stood holding to a *sala* tree, and at his birth a great light appeared in the sky, the deaf heard and the dumb spoke, and kings came from afar to welcome him. At the age of 29, "having seen the wretchedness" of the human condition, Gautama cut his ties and set out to seek "the unborn and supreme peace of nirvana."

The Tempter. For six years of severe asceticism, Gautama fed on seeds, grass, even dung. He wore a hair shirt, lay on thorns, slept among rotting corpses. Finally it dawned on him that, far from escaping from his body by torturing it in yogi fashion, he was in fact giving it more than its due. Taking a seat beneath the Bodhi Tree (which still grows, protected as a shrine, in Buddh Gaya), he resolved not to move until he had attained Supreme Enlightenment and had found the key to liberate man from himself.

The demon of evil, Mara, came to tempt him with visions of all the riches and prestige of the world. But Gautama only sank deeper and deeper into meditation. Finally, in a great mystic rapture that lasted 49 days, Enlightenment was captured, Gautama became the Buddha, and Buddhism was born.

He spent the rest of his life, some 45 years, walking from town to town in India imparting his vision. One of Buddha's sermons dealt with a starving man who had long had a pet rabbit. The rabbit jumped into a fire in order to provide food for his master, and, as the flames flared up, was transformed into a vision of the Buddha—a vision the Vietnamese monks were to borrow for their own purposes. Accompanied by his favorite monks and nuns, Buddha was content to be fed by local admirers and once scandalized his band by eating in the home of a courtesan. His last incarnation completed, at 80 Buddha lay down in a *sala* grove to die, passing out of the endless cycle of life into the great nirvana.

The Five Rules. Buddha was the rare mystic able to chalk out clearly to others the signposts leading out of reality, in the form of easily remembered shorthand formulas. The essence of his ethic came down in "Four Noble Truths": 1) Existence is suffering; 2) suffering springs from desire or craving; 3) the cure for suffering is extinction of desire; 4) to achieve the desired absence of desire there is an Eightfold Path of conduct to follow: right views, right effort, right mindfulness, right intentions, right speech, right conduct, right livelihood and right concentration. As a definition of rightness, Buddha merely offered "Five Moral Rules" of conduct: 1) Let not one kill any living being; 2) let not one take what is not given to him; 3) let not one speak falsely; 4) let not one drink intoxicating drinks; 5) let not one be unchaste.

Basic Buddhism is thus less a religion than a body of ethics. Buddhism recognizes nothing even remotely resembling a personal god or even a supreme being; there are no supernatural powers that concern themselves with the individual, and in strict Buddhism one prays not to anyone in particular but merely as an exercise to purify the mind. In this sense, Buddhism is atheistic.

Buddha dismissed the ultimate philosophical questions, such as the finiteness or infinity of the world, as profit... speculation. He's probably the most responsible goose in the world. He's the leader of a gaggle of white geese—70 in all—whose primary job in life is to help guard the thousands of casks of Scotch whisky destined to mature into Ballantine's.

At Dumbarton, the 42 whiskies, mostly from the Highlands, that will eventually blend into Ballantine's lie racked in the vast warehouses. You can see them there, on invitation. But don't wander there alone or you'll be met with a series of loud, terrifyingly shrill cackles guaranteed to turn your heels in the opposite direction.

Why do Ballantine's take such trouble to protect their whisky? If you drink Ballantine's you'll know why. If you don't, and still want the answer, try it!

lize the Middle Way. Their Buddha came less the example who must be mulated, more the savior who had ystically improved the lot of all man- ind. By giving nearly equal weight to ncern for others and to withdrawal m the self, Mahayana provided a plat- m for political engagement as heravada could not.

The Twofold Path. When the modern rld broke into Asia during the 19th ntury, Buddhism resisted. In the Box- Rebellion, Buddhist deities were re- on for help against the Christian ets. In Indo-China, Burma and else- re, Buddhism became identified h the nationalist struggle against onial rule.

When the great recessional of the estern colonial powers finally began, e Buddhists awoke to find themselves new positions of leverage. Their pow- stemmed from one source more than y other: the village pagoda, which day remains what it has been for nturies—the center of rural life, a ace where laymen can go to sleep off hangover, hide out from the police, spend an undisturbed hour with their rl friends. The bonzes are school- sters and doctors, as well as priests. This grass-roots power has taken a ofold—if not an eightfold—path. In e more agitated countries, the monks ve used it as a way into politics; in e quieter lands, all of the lesser- hariot persuasion, they have used it stay out of politics, merely adding conservative prop to support existing situtions.

• LAOS. A Laotian bonze is likely to mind questioners that for a priest to k politics violates one of the 227 heravadan rules of conduct. The con- tution stipulates that the King must a "fervent Buddhist," but fervor in ppy-go-lucky Laos covers a multi- de of careless religious enthusiasms. ecennial civil war has left Buddhist ractice virtually uninvolved, though ear the Luang temple, skilled, ciga- ette-puffing monks cheerfully cast eir Buddhas in brass melted down om 37-mm. and 105-mm. artillery artridges.

Laotian soldiers wear Buddhist neck- aces into battle and often piously shoot s miss, but it is considered highly bad rm to wear the amulet into a bor- ello. And though Vientiane's whisky- ppling set often honors Buddha's ourth rule more in spirits than in spirit, t least their chauffeurs use only the ffiest tail feathers of a rooster to dust e Mercedes—so as to avoid crushing e least ant, who could well be some- ody's mother.

• CAMBODIA. One of the greatest kings f early Buddhism was Cambodia's ayavarman VII, the builder of Angkor at. Today leftist Prince Sihanouk, as Cambodia's Chief of State and High Protector of the Buddhist religion, as- iduously cultivates the god-king role. Following the Buddhist road of the middle, intones Sihanouk, he means o be halfway between capitalism and Marxism at home and neutralist abroad.

"Our equality principle isn't from the French Revolution or Karl Marx," he says, "but from the Buddha." Though this is largely rhetoric, Sihanouk has so cultivated his clergy that Cambodian monks have voluntarily pitched into his public-works projects, and help build country roads, bridges, dig wells.

• THAILAND. Probably nowhere in Asia is Buddhism a gentler, more pervasive force than in pro-Western Thailand. Though now a constitutional monarch, King Bhumibol is still widely revered as a Buddhist god-king. Everywhere monks are valued not only as spiritual leaders but as astrologers and diviners. Some have even become management consultants, called on by businessmen before major investment decisions.

The Thais tithe their annual income in contributions to temple building and Buddhist ceremonies—good Buddhism but a serious drawback to the government's efforts at capital formation. Not long ago, Bangkok carried out a little-publicized roundup of leftist-oriented monks to prevent any Communist infiltration of the clergy. But by and large, in peaceful, prosperous Thailand, the golden mean rules. Bangkok is still rocking from the Sarit scandal—the tough, able late Prime Minister is charged with misappropriating vast government funds—and King Bhumibol has been urged to strip Sarit posthumously of his title of field marshal. Replies the King: "We are all Buddhist, and it is un-Buddhist to be vengeful because of a personal grudge."

• JAPAN. Amid the dizzying changes of industrialization, Buddhist laymen have seized on the widespread yearning for new values to form Soka Gakkai (Value-Creation Society). Staging great circuses with acrobats, brass bands and dancing girls, Soka Gakkai has recruited over 13 million adherents, largely from Japan's lower middle class and urban-poor discontents. Tightly regimented, from family squads on up, they must vote for the sect's political candidate as a religious duty.

Leftist and reforming in political attitudes, intolerant in its religious fanaticism (it considers itself "True Buddhism" and everything else heresy), Soka Gakkai envisions first turning Japan into a welfare state, then achieving eternal peace through spreading its gospel of *chikyu minzoku shugi*, or one-nation-on-earth. Since the Japanese constitution prohibits the exercise of political authority by any religion, Soka Gakkai insists—unconvincingly—that the Clean Government Party started last month under the chairmanship of Soka Gakkai's Koji Harashima is a completely independent entity. C.G.P. is putting up 32 candidates for the 467-seat lower house and ten in the upper house next spring—all likely to be elected.

• CEYLON. As an exception to the less political little-chariot tradition, Cey-

SOKA GAKKAI'S HARASHIMA LEADING SONGFEST
Through circuses and dancing girls, the only truth.

lon's clergy are hip-deep in politicking; in the unstable tight little island, the Buddhists are the only steady, if not steadying, power. What began as a long Buddhist temperance campaign in the 1940s turned into a drive to oust the British. In 1956 the monks formed a political organization, helped sweep Solomon Bandaranaike, a devout Buddhist and political middle-roader, into power as Prime Minister. Ironically, three years later he was assassinated by an extremist Buddhist monk, and his plump, matronly widow replaced him.

Mrs. Bandaranaike created a shaky, far-left coalition government whose every step had to have the approval of the Buddhists to survive. When the lady Prime Minister tried to balance the budget by a "tree tax" on the tapping of coconut trees for toddy, the potent and popular liquor of the masses, the temperance-minded Buddhists took this as a legalization of the drink and organized protest demonstrations and prayer meetings. Hundreds of saffron-robed *bhikkus* (monks) marched through Colombo, threatened to bar Mrs. Bandaranaike and her ministers from Ceylon's temples unless they resigned. Mrs. Bandaranaike backed down, withdrew the toddy-tapping plan, even though it had already been approved by both houses of Parliament.

The next clash came over the Prime Minister's scheme to nationalize the country's largest newspaper group. Oddly enough, the Buddhists gave her the idea in their complaints that the papers gave favored treatment to Catholic news and neglected Buddhist news. But when she tried to follow through, the Buddhists, fearing control of the press would work to the advantage of the nation's leftists rather than their own, dug in their sandaled heels, finally forced a no-confidence vote in Parliament, which the Prime Minister lost.

• BURMA. The most glaring failure of Buddhism in Asian politics began when, as in Ceylon, the Buddhist clergy sparked resistance to British rule. With independence won, Premier U Nu attempted a socialist forced-march into the modern world. Instead he ended up at the brink of national chaos, and General Ne Win and the army took over. The army restored order but wore the carefree Burmese raw with its zeal, and in the 1960 elections, U Nu hit the comeback trail. He promised to make Buddhism the state religion, used saffron color for his party's ballots. He won easily and plunged Burma into a great Buddhist revival, but neglected the nation's affairs.

In 1962 General Ne Win and the army took over for the second time, and U Nu remains under house arrest. The wildly socialist military regime has been running the country into the ground, but there is no evidence that Buddhists could do better. Still, the Buddhists remain the government's only effective opposition. Recently, orange- and yellow-robed monks stormed and wrecked the printing plant of a pro-government newspaper. Ne Win and the Buddhist leaders have set a Dec. 15 meeting to air their differences.

The Provincials. Who are the faceless but no longer self-effacing monks behind Buddhism's political offensive?

In many ways South Viet Nam's Thich Tri Quang personifies the saffron politicians. He entered the Buddhist Institute in Hué when he was 13, has traveled little, speaks neither French nor English. Though not without personal charm and even a certain detached charisma, he has the provincial's distrust of all things Western, refuses to meet with U.S. Ambassador Maxwell Taylor on the ground that he is more comfortable dealing with lesser officials. The son of a farmer in what is now North Viet Nam, he went to Hanoi in his 20s, taught and edited a Buddhist magazine, helped found the Vietnamese Boy Scouts. In 1948, the French arrested Tri on charges of being a Communist, but released him within ten days. The Diem government also suspected him of working for the Viet Cong, but could never prove it.

trolled government would press the
r against the Viet Cong. There is a
eat deal of evidence that instead it
ould try to negotiate with the Reds
bring about the "neutralization" of
uth Viet Nam. U.S. officials tend to
ert Tri Quang's assertions that he is
Communist or working with them.
there can be little doubt that the
munists have infiltrated the Bud-
ss to some extent. Besides, illusions
well be more dangerous than in-
ion. Tri Quang is guilty of the
ic, fatal error: he seems to believe
he and his fellow Buddhists could
ttle" the Communists.

The Heartland. Yet the lesson of
dhism's fate under Communism is
to see. In North Korea, the monks
simply put to work in factories or
farms. In North Viet Nam, where,
ly enough, Buddhism officially re-
s the state religion, the Commu-
s have killed Buddhism with "kind-
" by installing puppet monks to
k the government. But with 6,000
godas, North Viet Nam now has only
00 monks. Says one recent resident:
ey don't even bother to light incense
the temples any more."

Peking's brutality in suppressing the
ddhist revolt in Tibet in 1959 out-
ed the world. Monks were shot,
ced to sole their worn boots with
ted Buddhist texts, induced to take
ites. Members of a strict male celi-
e order were locked up with prosti-
s imported for the occasion. Some
the younger monks gave way and
n committed suicide in shame.

In the heartland of China itself,
ddhism fares not too badly—on the
face. Ancient shrines have been re-
ished. A few sample monasteries
d nunneries, while shorn of their
ds, are meticulously maintained to
press and soothe foreign Buddhists.
Peking has killed the living faith: of
a million monks in China in 1949,
is estimated that barely a few thou-
d survive.

Put Out More Flags. Despite the an-
s of the Buddhists in South Viet Nam
d elsewhere, it would be a grave er-
for the U.S. and the West to con-
ude that a great and ancient faith is
essarily prey to Communism. When
comes to an ultimate choice, the ma-
ity of Buddhist leaders still know that
ddhism is incompatible with the
arxist gospel.

Thailand's pro-Western, devoutly
ddhist Foreign Minister Thanat Kho-
an says: "Buddhism offers man the
portunity to think beyond material-
—beyond fish and rice—and Com-
nism does not." Even at the pink end
the spectrum, Cambodia's Prince Si-
nouk, drifting ever closer toward Red
ina, has admitted that Communism
uld be the end of Buddhism in his
ntion.

The U.S. would like nothing better
turn to back a strong and independ-
nt Buddhist movement. But helping the
Buddhists overthrow Diem certainly has
not earned Washington any gratitude from the pagodas. Elsewhere, the U.S. has made modest, tentative attempts to stiffen Asia's weak national identities by backing Buddhism. In Laos, for example, USIS has distributed Buddhist flags.

It will take more than flags to make the Buddhists a force for stability in Asia. Their faith, their training, their sense that history is irrelevant offer little guidance for them in the world into which the monks have blinkingly emerged. They find themselves in battles for which they would never have volunteered, which in many cases they have little interest in resolving.

Modern industrial society is based not only on materialism but, more important, on individualism; both concepts cut against the very grain of Buddhist philosophy. Modern Buddhist thinkers have tried to show that Buddhism is like science in its objective detachment; but it lacks the empirical spirit. To most Buddhists, Communism and capitalism alike seem peculiarly Western fixations on accumulating things. The best of the monks realize there is a more important distinction to be made: between freedom and its absence. But preoccupied with defending their own little sectarian and provincial barricades, it is a choice that they have tended to evade. Though few of the monks will admit it, there is no doubt that many of them secretly believe it is an unnecessary choice, that the Buddhists can tame Communism, can provide the spiritual complement for Marxist materialism. The view shows, as nothing else, that the monks in many ways are still living dangerously in the cloister. And as an ancient Mahayana text puts it:

When you are inside your room, enclosed by walls,
You do not know what takes place outside.

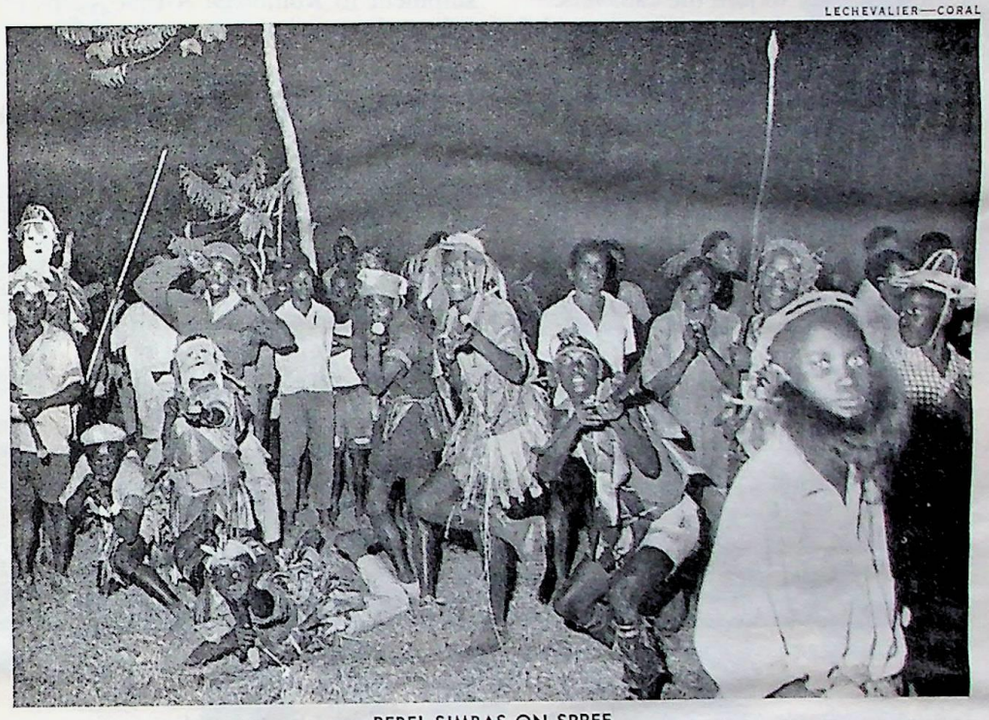
THE CONGO

La Nuit Infernale

The Belgian paratroopers had gone back home to a triumphant welcome, but they had probably left too soon. Behind them, the Congo kept sliding back into Stone Age savagery.

A pair of rescue columns of the Congolese government army led by white officers pushed deep into rebel territory. Their aim: to save as many as possible of the 1,100 white hostages still held by the savage rebel fighters known as Simbas (lions). By week's end they had rescued 600 whites—Belgian nuns and priests, Greek shopkeepers and restaurateurs, British and American missionaries. From nearly every man, woman and child saved came another numbing tale of terror, torture or death. Each could recall his own particular *nuit infernale*, but the most hellish of nights was that recounted by the 76 whites held captive by the rebels in the eastern Congo tin-mining town of Bunia.

LECHEVALIER—CORAL



REBEL SIMBAS ON SPREE
The dogs began feeding on corpses.

Furious on Hemp. Imprisoned for five weeks in the local hotel, the hostages included 21 Catholic priests and brothers, 17 nuns, and a British accountant who was considered an American spy because he owned a pair of binoculars. On the night of Nov. 16, more than a week before the joint U.S.-Belgian rescue mission began, the Simbas puffed themselves into a fury on bamboo pipeloads of Indian hemp. Then they dragged the nuns out of the hotel, forced them to strip, and made them "dance" by shooting at their feet. Then the Simbas took their pleasure.

Some nuns were merely beaten up with bottles or gun butts, and one was slugged with a telephone, which the Simbas apparently considered bad *dawa* (magic). Three were raped. One nun, Sister Maria Therese, 36, resisted, and a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Simba shattered both her kneecaps with a precisely aimed rifle shot. "It was night," recalled a surviving nun. "She was losing much blood, and the Simbas wouldn't let us near her. She died early in the morning after lying alone on the street for many hours." The Simbas then locked their prisoners back in the hotel, where most were ultimately rescued.

Back to the Cadavers. Before they fled, the Simbas took revenge on four priests who had tried to protect the nuns and incurred further rebel wrath by continuing to celebrate Mass and singing hymns—more bad *dawa* as far as the Simbas were concerned. When the priests tried to escape from a rebel truck, three were killed on the spot. The fourth survived by playing dead, but was driven mad by the experience. Carried into Leopoldville last week in a planeload of survivors, he kept muttering: "I must go back to join the cadavers."

And indeed there were plenty left behind. In Stanleyville, where the Congolese government army was barely holding on in the face of rebel snipers and raiding parties, only the road to the airport had been cleared of corpses. In the city, dogs were seen feeding on rotting bodies. A typhoid epidemic erupted among the city's 220,000 Congolese, with only one doctor left. Snipers kept up sporadic fire against all planes landing or taking off from Stanleyville's jungle-encircled jet strip, and after a Belgian International Air Service DC-4 crashed on takeoff, killing seven, civilian aircraft were banned from landing. At the same time, help for the rebels, according to some reports, was filtering in from the Sudan, where "President" Christophe Gbenye and his wild-eyed defense minister, Gaston Soumialot, were holed up in Khartoum.

With Stanleyville in tenuous government control and 500 hostages still scattered throughout a rebel-held reach of bush almost as large as France, Premier Moise Tshombe clearly needed more help. Major Mike Hoare, commander of the mercenaries fighting for the Congo government, sent his adjutant winging to Johannesburg to hire 150 more white soldiers. Tshombe himself flew off to Paris, where he pleaded unsuccessfully for assistance from Charles de Gaulle. Said Tshombe: "We are lost children struggling through the dark."

GREECE

The Meaning of an Explosion

Under one name or another, Greek rightists and leftists have long fought each other. But in 1942 two mutually suspicious Greek guerrilla detachments —one made up of E.D.E.S. nationalists and the other of E.L.A.S. Communists —joined forces long enough to give protective cover to a British demolition team that blew up a railway bridge at Gorgopotamos, 130 miles from Athens, thus halting supplies intended for transshipment to Rommel's Afrika Korps in Libya. In reprisal, 14 Greek hostages were executed by the Italian occupation forces. Ever since, Communists and rightists have argued about whose guerrillas deserved the greater glory at the bridge and in the war generally.

CROWD GATHERING BELOW GORGOPOTAMOS BRIDGE BEFORE BLAST
The middle was a minefield too.

The Gorgopotamos bridge was rebuilt with Marshall Plan funds, and last week busses and trains brought 10,000 leftists to the site to commemorate the 22nd anniversary of the explosion. Also on hand was a rightist delegation from E.D.E.S., as well as government officials and army officers. After a *Te Deum* Mass, much of the crowd began to sing Communist guerrilla songs and shout Communist slogans. Suddenly there was a violent explosion near the bridge. Screaming "Fascists!" and "Killers!" the crowd scattered, leaving behind 13 dead and 51 wounded.

The explosion reverberated inside Parliament, where Premier George Papandreou admitted that the memorial site had been a minefield during the 1947-49 civil war with the Greek Communists. The field had been cleared by the Greek army 15 years ago, but obviously at least one mine, a U.S. Army model M2A3, had been overlooked.

Leftist Deputies charged that [illegible] mine had been freshly placed by [illegible] terrorists. The rightists replied by [illegible] suring Papandreou for 1) permitt[illegible] mass meeting on a former mine[illegible] and 2) failing to curb Red organiz[illegible] and activity. Right-wing and left-[illegible] Deputies came to blows while Pa[illegible] dreou lit a cigarette and sat back, see[illegible] ingly safe in the middle. But the at[illegible] math of the explosion implied a d[illegible] ent meaning: under Papandreou's ce[illegible] ter government, the Communists ha[illegible] enjoyed an ominous revival in Greece.

COMMUNISTS

Independent Dummy

Before the Sino-Soviet split becam[illegible] public, Peking used little Albania as [illegible] sort of ventriloquist's dummy. Albani[illegible] fiercely anti-Khrushchev rulers said [illegible] the nasty things about Moscow that [illegible] Chinese obviously wanted to say th[illegible] selves. Since Nikita Khrushchev's o[illegible] amid signs of a Russian-Chinese t[illegible] the Communist world—and its obs[illegible] ers in the West—have wondered wh[illegible] er the Albanian line might soften. L[illegible] week came the answer: not a bit.

Pravda and Izvestia printed frie[illegible] articles about Albania, and the So[illegible] Union dispatched fraternal greetings [illegible] the occasion of the 20th anniversar[illegible] the "liberation" of Albania from A[illegible] occupation. It was wasted effort. [illegible] bania flexed its puny muscles with [illegible] 85-minute parade through Tirana's n[illegible] mally trafficless streets, and the mili[illegible] display included a few rockets, pr[illegible] ably donated by Red China. Albani[illegible] Party Boss Enver Hoxha ranted his w[illegible] through a three-hour speech hailing [illegible] removal of Khrushchev but blasting [illegible] new Soviet leadership for its failure [illegible] rehabilitate Stalin, who, said Hoxha, w[illegible] a great Marxist-Leninist even thou[illegible] "he may have committed some sm[illegible] errors." Hoxha sneered that the n[illegible] Soviet leaders "would like to have [illegible] Albanians go to Moscow and bow b[illegible] fore them because we are a small coun[illegible] try while they represent a big country[illegible] They are much mistaken."

On hand were delegates from pr[illegible] Chinese splinter parties in Western Eu[illegible] rope and Peking-controlled Communi[illegible] parties in North Viet Nam, North Ko[illegible] rea, Indonesia, Japan and, of all places, [illegible] New Zealand. Rumania and Cuba also [illegible] sent delegates, indicating an interest[illegible] ing degree of independence from Mos[illegible] cow. None of the other, normally pro-[illegible] Moscow parties attended. Peking meanw[illegible] while rejected another Moscow invita[illegible] tion for a meeting of the worldwide [illegible] Communist movement.

But even the somber Chinese seemed [illegible] to be displaying a sense of humor in [illegible] the matter of Albania. Peking's People's [illegible] Daily declared that the "comradeship in [illegible] arms" between China and Albania "is as [illegible] deep as the Adriatic and as sublime as [illegible] the Himalayas." The Himalayas are sub[illegible] lime, all right, but the Adriatic Sea, [illegible] which washes the shores of Albania, is [illegible] notorious for its shallowness.

ARGENTINA

The Return That Wasn't

To the bored cluster of newsmen posted outside his lavish villa in suburban Madrid, it looked like any other day in the life of Juan Domingo Perón. There had been the usual trickle of callers in the afternoon and evening. At 8 p.m. the exiled dictator went to dinner with Isabelita, his pretty young wife, a Spanish police officer assigned to guard him, and a few Peronista visitors from

PERÓN (WITH SUITCASE) IN RIO
The Untouchables played on.

Argentina. Later, as always, Perón went upstairs to watch television, which invariably occupies him until Spain's only channel goes off the air at 12:30 a.m. Instead, with *The Untouchables* turned up full blast inside, Perón suddenly embarked on a hugger-mugger exploit of his own that was to make world headlines, involve half a dozen governments, and end in a greater deflation for Perón than any event since his ouster from Argentina nine years ago.

Another Eva. Perón's great misadventure began shortly before midnight when a Mercedes sedan pulled out of his underground garage. Inside were Jorge Antonio, Perón's financial adviser, and Delia Parodi, a Peronista spitfire from Buenos Aires; the guard waved them briskly through the gate. Then, out of sight a few miles up the road, Jorge Antonio stopped the car and bustled around to the trunk. And who popped out? Of course. Even with a hat tugged over his eyebrows and a vicuña scarf pulled up tightly around his chin, the sportily dressed figure who took his place in the back seat was unmistakably Juan Perón, now 69. Secrecy and surprise were his watchwords—and his only hopes of success. When the Mercedes roared into Madrid Airport, Iberian Flight 991 to Rio was warming up on the takeoff strip. Shielded by a waiting cordon of police, Perón, Jorge Antonio and Delia Parodi scrambled aboard the DC-8, where six other Peronistas were waiting for them.

So, at last, began *El Retorno,* fulfilling the dictator's endlessly repeated vow to come back some day to the troubled country where the name of Perón still commands the almost religious adulation of 3,000,000 followers. His pledge to return was originally proposed by Peronista leaders as an expedient to help reunite their slowly splintering movement. At first, *El Líder* was lukewarm to the idea, but gradually, as Perón talked more and more about it, the vision of a triumphal recovery of power became an obsession. Isabelita, too, became infected, soon dreamed of replacing her old rival Eva. By last week, when several key Perón aides advised him against *El Retorno,* the mirage had gripped Perón's brain like a drug.

Rare Solidarity. What followed—and what Perón could not have anticipated—was a rare example of Latin American cooperation and solidarity. At first, Argentine President Arturo Illia had himself backed away from any countermove that might offend the Peronistas, whose votes provided Illia's winning margin in last year's elections. "Perón's return is up to Perón," Illia repeated cryptically. But Interior Minister Juan Palermo figured that the ex-dictator would not return directly to his homeland but would mastermind the revolution in Argentina from one of the neighboring countries. Chile, Peru and Brazil all agreed to send Perón packing if he tried. Brazilian officials were particularly sympathetic, since their own deposed President João Goulart is threatening to mount a Brazilian revolution from exile in Montevideo. Only Paraguay, ruled by Perón's longtime friend, General Alfredo Stroessner, seemed ready to welcome Perón.

At 7:35 a.m. the red and white plane bearing Perón whistled down through the overcast into Rio's Galeão Airport. Immediately 30 white-helmeted, machine-gun-toting police surrounded the plane, and all passengers were ordered off. From the tourist section tumbled 43 grumbling travelers, but the nine up front held fast. Finally, the Foreign Ministry's chief of protocol bustled aboard. "*Senhor* Perón," he said, "your trip has come to an end. You have been declared *persona non grata.*" "I know international law well," snapped P... "I am aboard a plane with the Spa... flag and thus under the protection of ... Spanish government, and you cannot ... terrupt my trip."

Brazil could, and did. Preceded ... two Brazilian officials, Perón—who ... dyed his sleek hair its pristine black—... led his company down the steps. The... were hustled to waiting cars ... whisked across the field to Galeão A... Force Base as "guests of the airforce." Behind them in the plane they left ... automatic pistols, a submachine gun, ... entirely of its own making. Its main problem is that world prices for coffee, the country's only real source of foreign exchange, have been in a slump ever since 1957. It was partly in hope of getting the economy moving that the Conservative and Liberal parties buried their bitter, historic feud* and formed the National Front in 1958. The coalition has turned out to be a halfway house that neither party can really call home.

Attacks from Within. Liberal Alberto Lleras Camargo, who became Colombia's first coalition President in 1958, was an able administrator who held the *frente* together by sheer statesmanship. Conservative Valencia, 55, a portly, scholarly lawyer, lacks his predecessor's *élan* and political acumen. When his budget came before Congress last October, his own party attacked it as inflationary. But Valencia, the son of Colombia's most revered poet and a lover of poetry himself, has little patience for anything so prosaic as economics. Famed for his gallantry to the ladies and a romantic passion for hunting, he professes to feel "pity for the man who goes to bed every night at the same time."

Last week Valencia ordered a 90-day embargo on nearly all imports, hoping to protect the country's depleted dollar reserves. But the ban is more likely to retard industrial expansion and cobble the country's social and economic development. "I am doing all I can," shrugs Valencia. "I am a poor bullfighter with a bad troupe and a very demanding audience."

"El Prematuro." Some bullfight. The *frente* has split into several factions. The Conservative band consistently criticizes Valencia's policies, and a left-wing offshoot of the Liberal Party has even thrown its support to ex-Dictator Gustavo Rojas Pinilla, whose National Popular Alliance Party went from six to 28 seats after the March congressional elections. "We shall take the government by fair means or foul," vows Rojas, whose followers have taken to wearing a Nazi-like party uniform.

About all that the Conservatives still have in common is their revulsion for Liberal Party Leader Carlos Lleras Restrepo, 56, the Liberal choice for coalition candidate in the 1966 elections. A cousin of Lleras Camargo and one of Valencia's most sulphurous critics, Attorney Lleras is nicknamed *"el Prematuro"* by his foes because of his visible eagerness for the presidency.

The Watchful Military. The only real power base in Colombia today is the military, and it still seems solidly behind the President. Valencia's war minister, able, astute Major General Alberto Ruiz Novoa, 47, who commanded the Colombian contingent during the Korean War, insists that the armed forces will adhere to their traditional role as "defenders of civilian rule."

Nonetheless, as Colombia's politicians keep up their feuding, Ruiz is quietly but unmistakably building his own stock. He distributes pamphlets of his speeches, joins in congressional debates, receives hundreds of admiring letters each week. His followers, who call Ruiz "Minister of Hope and Social Justice," believe that he represents the nation's best hope of preserving constitutional rule. For the time being, the military is simply watching developments. But, as Ruiz himself has said, "in times of crisis the armed forces cannot be indifferent to national events."

* The Conservatives have traditionally championed strong centralized government to perpetuate the privileges of an entrenched aristocratic and clerical elite. The Liberals preach social democracy, universal suffrage, and greater local autonomy.

MEXICO

A Glowing Start

As Mexico's 60th President stepped out onto the balcony of the austere National Palace, the sun burst through the overcast, warming the sea of upturned faces below. But the most radiant face of all belonged to Gustavo Díaz Ordaz, the brainy backlands lawyer on whose slim frame outgoing President Adolfo López Mateos draped the green, white and red sash of office. With arms outstretched in triumph and a huge, toothy grin creasing his dark, homely countenance, President Díaz Ordaz looked as if he would like nothing better than to hug the officials clustered around him.

The Fundamental Task. The fiesta mood was well founded. Of twelve Presidents who have taken office since Mexico's 1910 revolution, Díaz Ordaz, 53, is the first to inherit a prosperous and united nation that faces no immediate major problems. True to the Mexican pattern of orderly alternation between regimes that are to the left or right of center, Díaz Ordaz, who was Minister of the Interior under López Mateos, is slightly more conservative than his predecessor, who nonetheless hand-picked him for the job. As the new President made clear in his inaugural address, his administration, like López Mateos' regime, will put economic growth above doctrinaire politics. Emphasizing that "there is a vast field in Mexico for both public and private investment," Díaz Ordaz warned with characteristic caution: "The political and economic stability that we enjoy are not gifts. They are the result of a dynamic society that establishes economic development as a fundamental task."

Díaz Ordaz' Cabinet appointments suggested that the tough, down-to-earth President intends to handle that task with skill and imagination. His line-up boasts ten lawyers, four engineers, two doctors, two generals, a colonel, an accountant and a professor. In two key nominations, the new President reappointed Finance Minister Antonio Ortiz Mena, who is responsible for sustaining record economic growth along with a stable peso (12½ to the dollar), and for Foreign Minister picked Antonio Carrillo Flores, who as Ambassador to Washington since 1959 had earned the respect of the State Department and the enmity of Mexico's Communist Party.

FELIPE CHANO

DÍAZ ORDAZ ON BALCONY
A well-founded fiesta.

Solidarity First. The choice of Carrillo Flores, plus reports that Díaz Ordaz detests Fidel Castro, was taken by observers as an indication that Mexico may in time sever relations with Cuba, which, alone among Latin American nations, it persists in recognizing. Díaz Ordaz is unlikely to break with Cuba in the near future, however, lest he be accused of repudiating López Mateos.

Nonetheless, Mexico's new President took pains to dispel any illusion that he will promote a Latino form of Gaullism that would seek to build nationalist prestige at the expense of hemispheric solidarity. Said Díaz Ordaz. "It is unfair to Mexico to be pointed at as wishful of becoming the leader of Latin America. It aspires to be just another member in the group that joins its efforts for common improvement."

BRAZIL

Memorializing the Centavo

The Brazilian centavo is the monetary equivalent of a gnat's noggin. Officially the world's most minuscule denomination, it was—until last week—worth $.0000065, sixty-five one-hundred thousandths of a U.S. cent. Valued at one twentieth of a cent ($.0005) when it was first issued in 1944, the centavo became a victim of Brazil's roaring inflation, and last week the government finally declared it extinct. So is the one-cruzeiro note (worth 100 centavos), which cost four cruzeiros to print. From now on, cruzeiros up to the 500 denomination (value: 33¢) will be issued as coins. As for the centavo, it immediately became worth more dead than alive. Last week an early tencentavo piece was fetching 500 cruzeiros from coin collectors.

"Many years ago," observed Maine's Senator **Margaret Chase Smith**, 66, at a dinner in Manhattan, "the word square was one of the most honored words in our vocabulary. The square deal was an honest deal. A square meal was a full and good meal. It was the square shooter rather than the sharpshooter who was admired. What is a square today? He's the fellow who never learned to get away with it, who gets choked up when the flag unfurls. There has been too much glorification of the angle players, the corner cutters, and the goof-offs. One of America's greatest needs is for more people who are square."

. . .

Pittsburgh Financier Andrew Mellon built Washington's $15 million National Gallery of Art in 1937 to house the $50 million art collection he assembled with the aid of Dealer Joseph Duveen. His son, **Paul Mellon**, 57, a perceptive critic in his own right, has assembled a second superb collection of 18th and 19th century British painting. Now it looks as though the younger Mellon will build another public gallery in Washington for his 500-odd works of art, which are now hung in Mellon's various homes except when the paintings go on tour. Last week he appointed Dennis Farr, 35, a curator of London's Tate Gallery, to plan the project.

. . .

Manhattan's Doctors Hospital, a fashionable stork pad for East Side society, was dismayed. But *West Side Story* Star **Carol Lawrence**, 30, was determined. After taking a $40 stamina-building course in what its fans these days call "educated childbirth," she wanted that "do-it-yourself feeling." So she did it and felt it, and two weeks after 7-lb. 9-oz. Christopher was delivered, she held a press conference to tell about it. "It beats any show I've been to," trilled Carol, who had stayed awake all through her own production and was later told by her doctor, "You did that with great flair." The hospital wouldn't let her husband, Singer **Robert Goulet**, 31, in on the act, but that was just as well, since he had refused to take the educated-fatherhood course.

BEN MARTIN

LAWRENCE & CHRISTOPHER
Look, no help.

. . .

He's accustomed to being called a philanderer, but when he was labeled a philanthropist, **Richard Burton** reacted as if it were a dirty word. The ruckus started when Bertrand Russell's "Peace Foundation" announced that Burton was giving it all his British earnings. Not so, cried Richard. He had merely donated a few pounds and did not agree with Lord Bertie's anti-American jeremiads. In fact, deadpanned the actor, he gives most of his loose pence to the Invalid Tricycle Foundation of Wales (for crippled miners). Wife Liz had a different challenge. For a Lido opening in Paris, the invitations specified evening pajamas, and half the *haut monde* came in lace or sequined trousers. Not Liz. "I wear slacks to work," she sniffed, threw on her gold lamé sari by Balenciaga, and discovered that in spite of being so old-gown, she rated Table *Numéro Un* between two boulevardiers who could afford to clothe her in pure gold: Aristotle Onassis and Baron Guy de Rothschild.

SHAHROKH HATAMI

BURTON & ROTHSCHILD
Sari, no slacks.

. . .

Gagging for a gaggle of admirers, Drumbeatle **Ringo Starr**, 24, gave one last panorama of his aching tonsils before checking in at London's University College Hospital to have them clipped. "I feel fine," he croaked, which by a furry coincidence is the title of the longhairs' latest disk—and thanks to Ringo's sick publicity, it is at the top of London lists. After doctors executed the mop-top's op, a BBC announcer flubbed: "Ringo Starr's toenails were successfully removed." He should have been condemned to switchboard for the hard day's nig that followed.

RINGO & TONSILS
What, no toenails?

. . .

At the ripe old age of seven, Kels planning to retire. But the richest h in history (total winnings: $1,900,0 aims to keep busy, says his owner, M **Richard C. du Pont**, 50, of the De ware clan. Accepting a couple of t phies for him at a Thoroughbred R ing Association meeting in Manhatt she said: "Kelso would like to h guarantee the welfare of future gen ations of horses." Since he is a geld he will do that by making fund-raisi appearances for veterinary research.

. . .

Wearing shoes, stockings, a bra brace and pajamas, **Teddy Kenned** 32, inched off his orthopedic bed Boston's New England Baptist Hospit then took his first steps since he brok his back in a plane crash last June. H walked ten feet, but the effort was great that he could only grin and no thanks to his doctors. Nonetheless, th junior Senator from Massachuse swore afterward that he will walk ou of the hospital in time to spend Chris mas with his family in Palm Beach.

. . .

As the barracks-room balladeer wh found oompah in Empah, he was famed at 25 from Mafeking to Mandalay. Bu in the eyes of his parents, young Rud **yard Kipling** was a light that seemed likely to fail. To his mother Alice, he had "a great deal that is feminine in his nature." His father, John Lockwood Kipling, a museum director in India, summoned Ruddy from school in Eng land at 17 in hopes that working as a reporter on a Lahore newspaper might stiffen his spine. In a series of 14 let ters to the boy's headmaster in Devon shire, Papa Kipling grumped: "I don't think he is of the stuff to resist tempta tion. Journalism seems invented for such desultory souls." Far from desul tory was the bidding in London last week, where the Ruddy correspondence sold for a red-blooded $12,600.

Goodbye, Cruel World

Slow Dance on the Killing Ground, by William Hanley, encourages three characters, two men and a woman, to tell the audience all about their operations. They discuss not physical but psychic scars—traumatic surgery performed by that mad cruel doctor, life. A young Negro of high IQ and frayed nerves has stabbed his prostitute mother to death. A German ex-Communist has deserted his Jewish wife and child, condoning them to torture and death in a Nazi concentration camp. An unmarried but pregnant N.Y.U. coed has set her way to a Brooklyn abortionist and stumbled into the German's desolate stationery shop to sit on one of the counter stools where each character relates his or her autocryography. The theatergoer is thus once again in the creepy, hysterical presence of collectors of guilt, dispensers of self-pity, proclaimers of futility.

The play is evenly divided between what Playwright Hanley does badly and what he cannot do at all. He cannot initiate action, only total recall. His play has already happened before it goes onstage. His characters are not people but composites researched out of faded newspapers; they are set forth, not in the music of evocative monologues, but to the unrelenting din of talk, talk, talk. The worst thing that has happened to Hanley is something that he could not have foreseen—the opening of Murray Schisgal's therapeutically hilarious *Luv*. Sorry-I-was-ever-born plays now sound like hollow parodies rather than dour profundities; since *Luv* raised its satirical whoop, playgoers are bound to lessen their self-commiserating indulgence of misery. More than ever a playwright who intends to woo his audience with some tale of woe will have to do it out of an intensely felt, intensively rendered personal experience.

The Widower Takes a Wife

Poor Richard. Success defines the limits of a playwright; failure may suggest his aspirations. Jean Kerr's *Poor Richard* is that kind of failure. She comes to the new play still wearing the life-of-the-party grin from *Mary, Mary*, but something in her mind is now saying that life is not that kind of party at all, and the result is a probing but irresolute comedy. *Mary, Mary* was a joke-filled shopping bag that existed to be torn so that the laughs would tumble out. *Poor Richard* is a net hopefully cast to trap character and at least two themes of some gravity—the capacity to love and the squandering of talent.

Richard Ford (Alan Bates) is a best-selling poet who was once indentured to his creative task but now plays host to his legend. If a lovely flame has died, no smoke gets in poor Richard's eyes, only more liquor to his lips. He has the kind of flypaper charm that women love to get stuck with. Inevitably, a Columbia journalism student (Joanna Pettet), who has worshiped him between hard covers, proposes marriage.

But the widower-poet is haunted by the conviction that his late wife never thought he loved her and that he probably didn't. One of her journal entries unearthed by Richard's editor strikingly reveals the contrary, and with this security clearance as a love risk, the poet feels free to wed his blonde disciple.

The journal entry is the fulcrum of the play, and it intervenes like a *deus-ex*-Olivetti, imposing an arbitrary happy ending without being psychologically convincing. Like most writers, poor Richard may have been an edgy, self-absorbed husband, but two people who live together for any length of time read each other, without needing the assurance of posthumous journals. Jean Kerr knows this and says as much when she has a character remark that the present generation thinks love "isn't real unless we have a fever of 103."

PLAYWRIGHT KERR & FRIEND*
Too busy to stop and sink.

Mrs. Kerr's concern with the abuse of talent is more than a housewifely horror of waste. Richard Ford is the man who has everything but has lost possession of himself. He is possessed by the world and lived by others. The treachery of money and fame is that they debunk money and fame, and Mrs. Kerr hints at this but refuses to put bite in the insight.

Regrettably, substance is frequently sacrificed to surface. Like Eliza crossing the ice floes, the compulsive wittiest in Mrs. Kerr reflects a mind too busy to stop and sink. But unlike lesser jokesmiths, Jean Kerr can always be trusted to produce the wit that is instant wisdom, as in "The affair you don't get over is the one you never had."

Poor Richard is not well served in direction and cast. Director Peter Wood has the *Kon Tiki* touch: he sets the play adrift for the night and apparently prays that it will reach its destination. As *The Caretaker* showed, Alan Bates is fearfully good at transmitting menace, but as a charmer his signals are garbled. As Bates's second mate-to-be, Joanna Pettet is an indelibly enticing ingenue, but speech is her impediment. She says all the words correctly, but her avidly sincere delivery turns comic gold into lead. *Poor Richard* is not rich enough to afford a cast and director who do more to put the play under than over.

Guilt Unlimited

Incident at Vichy aims for the playgoer's conscience, but only grabs his lapels. Arthur Miller has written not a drama but a moral lecture on guilt and responsibility as it concerns the mass murder of European Jewry.

The time is September 1942. The place is a detention room in Vichy, France, where Jews are being rounded up for identity checks and circumcision examinations. As they learn but can scarcely credit, they are destined for the crematory furnaces. Miller assembles a doctor, an actor, a painter, an electrician and others, all representative enough to express the playwright's viewpoints, and none real enough to leave the impress of their own specific personalities.

They indulge in rationales of why the inevitable will not occur. It is unthinkable, they tell each other, inefficient, illegal. One by one, they disappear, until only two are left, the doctor and an Austrian prince who has been brought in by mistake. The doctor convicts the aristocratic Gentile of unintended complicity with the whole monstrous crime. "It's not your guilt I want—it's your responsibility," the doctor thunders. Moments later, the prince hands the doctor his own white paper pass to freedom, and stands, erect and alone, facing the irate Nazi sadists.

This ending is untrue to death. It would have been more moving, as well as more accurate, to have the aristocrat leave and the doctor face his fate. Furthermore, the episode subverts the play's moral stance. It is morally impermissible for the doctor to accept his life at the cost of the prince's. Even so, the stagecraft is considerably less faulty than the logic. Miller has written an equation with a missing term—power. Power precedes responsibility. One is not accountable for events that one is powerless to avert or affect.

Everyone would like to erase, or explain, the tragedies of history, but tragedy is by nature inexplicable, unavoidable and irreversible. Arthur Miller proposes that the living atone for the dead. But universal guilt, like universal love, is an abstraction. "What can ever save us?" the prince asks in a moment of anguish. A touch of genuine humility might help. Only God can be responsible for all to all.

DUKE DOWNEY—SAN FRANCISCO CHRONICLE

FOLK SINGER BAEZ AT RALLY
Students went limp, and to jail.

STUDENTS

To Prison with Love

"Have love as you do this thing," cooed Folk Singer Joan Baez, "and it will succeed." It was a battle cry, not a ballad. Marching behind their Joan of Arc, who was wearing a jeweled crucifix, a thousand undergraduates of the University of California at Berkeley stormed four-story Sproul Hall, the school's administration building. For 15 hours they camped in the corridors, whanged guitars, played jacks, watched Charlie Chaplin movies. Stairwells became "freedom" classrooms. An alcove was a kitchen where coeds made thousands of sandwiches for the all-night siege. The school had locked the bathrooms, but students with screwdrivers lifted the pins from hinges. For communication with the outside world, they used walkie-talkies.

Then, on orders from Governor Pat Brown, 400 policemen swept into the building. The students sprawling over the littered floors offered no defiance. They went limp, and for the next 13 hours police dragged them along hallways, pushed them into elevators or bumped them down stairs, and shoved them into buses backed up at the rear entrance. "This is wonderful, wonderful!" shouted Protest Leader Mario Savio, 21, a red-haired philosophy student, just before police took him away. Girls were carted off to the city jails; boys were hauled to the Santa Rita prison farm, where tough criminals in blue denims watched dumfounded as guitar-laden, bearded students were herded in.

A Battered Police Car. In the end, 814 were arrested, and it all grew out of a plot of campus property 26 ft. wide and 60 ft. long outside the Sather Gate entrance to the campus. That was the traditional spot where students recruited funds and followers for off-campus activities such as civil rights demonstrations and political campaigns. When school opened Sept. 21, the university barred any more solicitations, in part because of complaints from politicians that university property was being used by partisan groups in the presidential campaign. Thousands of students responded by staging a protest that trapped a police car summoned to arrest a defiant recruiter. While police and their prisoner huddled for 32 hours inside the patrol car, students and off-campus agitators battered it, rocked it, used the roof as a speaker's rostrum. Stunned, the university vacillated over its next move, then suspended eight ringleaders of the demonstration.

The move backfired. A faculty committee set up by Berkeley Chancellor Edward M. Strong deplored punishing eight students among thousands, censured the administration for acting without customary hearings and due process, and criticized the vagueness of university rules governing political activity. Meeting last month, the university regents adopted recommendations made by President Clark Kerr. They rescinded the rules barring political recruiting on campus but insisted on the right of the university to discipline or expel any students who might be arrested in consequence of political activity.

Castro Tactics. The regents' concession was probably sweeping enough to have ended student protests, although undergraduates protested that as individuals they should be free to organize politically and risk arrest without the added jeopardy of university punishment. But the university promptly reopened the dispute by threatening to discipline four student leaders, including Savio, who had organized the demonstration around the police car. Shouted Savio: "This factory does unjust things, and we'll have to cause the wheels to grind to a halt." Then he led the investment of Sproul Hall.

The arrested students were freed on a mass bail bond of $85,000, which a faculty group helped to guarantee. Within hours, the intransigent undergraduates, since October organized in a self-styled Free Speech Movement dominated by civil rights militants, Trotskyite groups, and members of a Communist front, called a strike on the 27,000-student campus at Berkeley. "We have promised that this university shall not run," said Savio, "and we shall keep that promise." One-third of the Berkeley faculty signed a telegram to Kerr and Strong urging amnesty for the four students who face punishment, and 5,000 students staged a rally outside Sproul Hall to hear speeches, strike appeals, and a final folk song in Portuguese by Joan Baez.

Kerr, who conceded that the F.S.M. at first reflected an "understandable concern" over student political rights, assailed the dissidents as "an instrument of anarchy and political aggrandizement." Even before the sit-in, he had concluded that a handful of activists in the demonstrations "have been impressed with the tactics of Fidel Castro and Mao Tse-tung."

Individuality at Iowa

Barring a so-so football record, the University of Iowa is a contented campus this fall. It has regents who value academic freedom, faculty and students hospitable to fresh ideas, ever-more-liberal financial support from the legislature. More important, the university has a tradition of wise, long-reigning presidents. Last week Iowa installed a new one, the first in 24 years.

From the start, the man seemed to match the office. Said Howard R. Bowen, 56, in his inaugural address: "The University of Iowa, located almost literally on the edge of a cornfield," must

ARTHUR SIEGEL

BOWEN & STUDENTS
The man matched the office.

"a place that is hospitable to the individual human being, that raises his aspirations. I hope we shall also seek individuality for the university itself."

Natural Habitat. Bowen's durable predecessor, Rhodes Scholar Virgil M. Hancher, has kept Iowa in the front rank of state universities. The Iowa City campus is home for some of the most adventuresome minds in science and the arts. Physicist James Van Allen, Psychologist Wendell Johnson, Printmaker Mauricio Lasansky, Paul Engle's famed Writers' Workshop. The library, medical and law schools are among the best in the U.S. But Hancher is a corporation lawyer by training and cautious by instinct. "He tended to protect what we already had," says one dean, "but I am more concerned about the future than today's needs." With Hancher approaching mandatory retirement at 68, the regents last year also began to think about the future. Screening more than 130 candidates, they finally chose Bowen, a specialist in economic theory, whom they found only 56 miles away, where he was president of Grinnell College.

For Bowen it was a homecoming. He took his doctorate from Iowa, taught there for seven years before becoming an expert in fiscal policy and the problems of small business for the New Deal. Then he worked as an economist for the Irving Trust Co. Over the next 20 years he moved from the University of Illinois to Williams College as professor of economics and then to Grinnell in 1955. When Bowen arrived, the school was scratching for students; by the time he left they were fighting to get in. Grinnell won one of the first Ford Foundation matching grants and, under Bowen, spent $6,000,000 on construction, curriculum revision, faculty wage increases.

Another Oxford? Bowen has brought the same vitality to Iowa since his appointment last spring. Already in progress is $60 million worth of new construction, including a fine arts center designed by Harrison & Abramovitz. Planning for a big state university was surprisingly similar to the needs of Grinnell, Bowen discovered. "I just had to add another digit or two."

One key set of digits is the student body of 15,000, due to double in a decade. But Iowa's new president is determined that the school preserve quality amidst growth, even if it means reorganizing the university along the lines of Oxford's residential colleges. "While other institutions may take on a somewhat wider range of programs," he said last week, "I believe our future lies in a carefully restricted scope. Let us emphasize thoroughness and depth rather than versatility and range."

PROFESSORS

"The Crassest Opportunism"

One cause of the growing shortage of college teachers is a "crisis in values" that has infected a generation of young scholars with "the crassest opportunism in grantsmanship, job hopping and wheeling-dealing." So writes John W. Gardner, president of the Carnegie Foundation for the Advancement of Teaching, in his annual report.

Many professors, says Gardner, think that "students are just impediments in the headlong search for more and better grants, fatter fees, higher salaries, higher rank." Catering to these professors, universities often relieve them of almost all teaching. "Needless to say, such faculty members do not provide the healthiest models for graduates thinking of teaching as a career." Gardner insists that professors and college officials must "behave as though undergraduate teaching is important." Typically. they might emulate the salary incentives and status benefits that a few worried universities, such as U.C.L.A., are offering to faculty members who are notably engrossed with teaching undergraduates.

Cold Shoulder

Two years ago, Soviet Poet Robert Rozhdestvensky, 32, was the idol of rebellious Communist youth. Sharing a platform with Evgeny Evtushenko and other young poets, Rozhdestvensky declaimed against the cult of Stalinism.

How could we
An atheist people
Be servants of a cult?

he cried, and the people cheered.

But Khrushchev said tut-tut to all that, and Rozhdestvensky rather readily switched his blank-verse sermonizing from anti-Stalinism to anti-Americanism. Imagining himself a U.S. Indian in wild West days, he asked:

What if . . . we should once more
hear the warpath's call?
How the tomahawk would glint in the
dew.
What scalps would steam in our
hands.

Even steamier was a poem denouncing Russian-born U.S. specialists on the Soviet Union. Rozhdestvensky said that during World War II they joined the Nazi armies and burned villages, raped women, massacred the wounded, and

smashed the gun butts
down on the babies' cribs.

Last week, in the course of the bland functioning of machinery that exchanges Soviet and U.S. scholars, Rozhdestvensky and four other Soviet writers came to Yale University, towed by Harold Taylor, former president of Sarah Lawrence College. Just as international fellowship was beginning to ripen, a chap burst in to charge the Soviet poet with "almost pathological anti-Americanism," which he documented by quoting the poems. The rude fellow was Charles Moser, 29, assistant professor of Slavic languages at Yale, and a graduate exchange student at the University of Leningrad five years ago. He argued that "to give the Russians anything more than the most reserved of receptions is to encourage those dedicated to the repression of any sort of liberalization in Soviet life."

Moser's call for a cold shoulder was cold-shouldered by most of his Yale colleagues. Robert Jackson, a specialist in Russian literature, called Moser's statement "irresponsible," and said that the university should be hospitable to obnoxious opinions. Even Frederick Barghoorn, who spent 16 days in a Moscow jail last year as an alleged U.S. spy, gulped and endorsed Rozhdestvensky's visit as a useful dialogue that explores rival opinions.

At first Moser seemed somewhat bewildered by the uproar. But he quickly recovered his poise, renewed the argument in a face-to-face showdown with the Russians. Soviet Editor Aleksandr Chakovsky, one of the party, protested —but Moser had already ticketed Chakovsky as an ex-agent of the Russian secret police. "I decided the attitude should be on the tough side of neutral," Moser summed up.

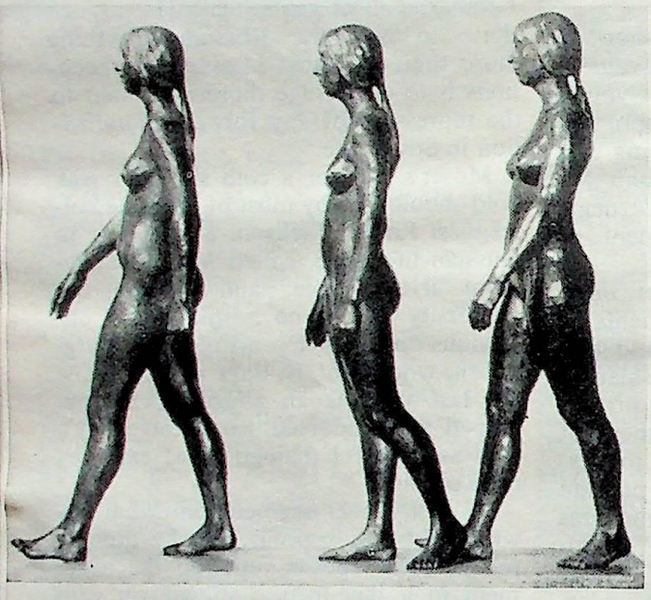
SCULPTURE

Era of the Object

Put a bronze man upon a bronze horse, and who salutes? Put a plaster Eisenhower in a real Jeep, and the art world cheers. For in today's sculpture, both traditional subject matter and traditional techniques have gone by the board. Where once marble and bronze held sway, sculpture is now made of plastics, automobile fenders, even fur, carpeting and burlap. In place of the commemorative bust, the symbolic nude or heroic grouping, there are now polyester broads, overstuffed light switches, 3-D inside-out doughnuts, stuffed-leather totems, and well-welded rem-



MILLER'S "MARY: WALKING SEQUENCE"
Among polyester broads, a triple image.

nants of the new Iron Age. The definition of sculpture has broadened until it has become an Everyman art, and the results exist more as a fascinating collection of objects than ideal worlds of form.

Best show of the year to assemble the artifacts of the new sculpture revolution is Manhattan's Whitney Museum sculpture biennial, which opened this week with works by 123 sculptors, 50 of them newcomers. Variety is the show's sole common denominator, but the overall impression leaves one fact inescapably clear: the past decade has changed sculpture more than it changed in all the time between Michelangelo and Rodin. Sculpture is no longer a quintessence of form, something to be isolated, set apart and contemplated. Instead, sculpture may plug in and light up, move by machinery or breezes, invite the viewer to play with it. Says Whitney Associate Curator Edward Bryant: "Sculpture wants to come down off the pedestal and create its own environment."

Plastic Patina. Some contemporary sculpture now jostling for *Liebensraum* in the living room cries less for the patina of age than for the quick eye jab of bright plastic paint. The result is a spate of new polychromists (*see opposite page*). Among them:

• ROBERT HOWARD, 42, who has taught art at the University of North Carolina for the past 14 years. His abstract *Landscape XVII* is welded steel painted with two subtly clashing shades of red that seem to warp the solidity of the sculpture. "To do something like it in bronze would cost me $3,000," he says, "but I go out to the junkpile and pick up steel for 6¢ a pound."

• JEREMY ANDERSON, 43, is a San Francisco sculptor who prefers working in natural-finished wood. He painted the upper reaches of his attenuated *Composite Mythology* green to harmonize its grain. Hardly shocking when compared with Brancusi, the slender shape looks at once like ephemeral femurs knocking on a knee joint and a pinch-waisted dancer on toe point.

• H. (for HORACE) C. (for CLIFFORD) WESTERMANN, 42, is a Los Angeles-born rambler who usually turns out carpenter's daydreams consisting of mirrors and precision mitering. His work at the Whitney is a drum-shaped totem of wall-to-wall carpeting. Says he: "I don't know why I named it *The Plush*. If I liked analysis, I'd be a writer."

• ROBERT HUDSON, 26, working out of San Francisco, creates polychrome assemblages straight out of Spike Jones and his City Slickers. The iridescent blue hand was his starting point in *Charm;* he then kept adding things until, says he, "it has a whole world in it." Why paint it a profusion of colors? "I dig painting too," says Hudson. "What the sculpture can't say, the paint can."

• ELIAS FRIEDENSOHN, 40, like many other artists today, shifts easily between painting and sculpture. His delicate pencil drawings and scruffy oils, which emphasize "the masks people wear which stand in the way of communication," have won him Fulbright and Guggenheim fellowships. His *Pyramus & Thisbe* is a dial-version of Shakespeare's *Midsummer Night's Dream* lovers, who can communicate only through a hole in a wall. In the painted epoxy sculpture, Thisbe appears only as an ear modeled inside the back door of the pay phone.

Victorian Finishes. No matter how questionable its content, much of the new sculpture is painstakingly crafted. The practitioners of junkyard assemblages have dwindled. Brutalism for its shock effect is on the wane. A new trend is the number of works that are neatly packaged in boxes, which Sir Herbert Read recently thought should be labeled "furniture" rather than "sculpture." Random objects glitter
hind glass in the work of Joseph C
nell and Mary Bauermeister; even L
ise Nevelson's newest darkling ora
woodwork are kept as purely as bla
fish in glass bowls.

Neatness of execution, however, w
not always a virtue even to Rodin. A
though aptness of thought was. Th
vogue for primitive art has led some
sculptors to making fetishes. Edward
Kienholz, 37, assembles objects from
Grandmother's Victorian parlor and
makes them into a wild and woolly re
vulsion called *The Four Bears*, which
composed, or decomposed, of a
jacket, a night table, and the extre
ties of a stuffed bear (whose sawed-o
head nuzzles into a broken go
bowl). The human figure, when it a
pears, seems almost a wry joke. W
liam King, 39, for instance, makes 7
figures out of burlap and metal that

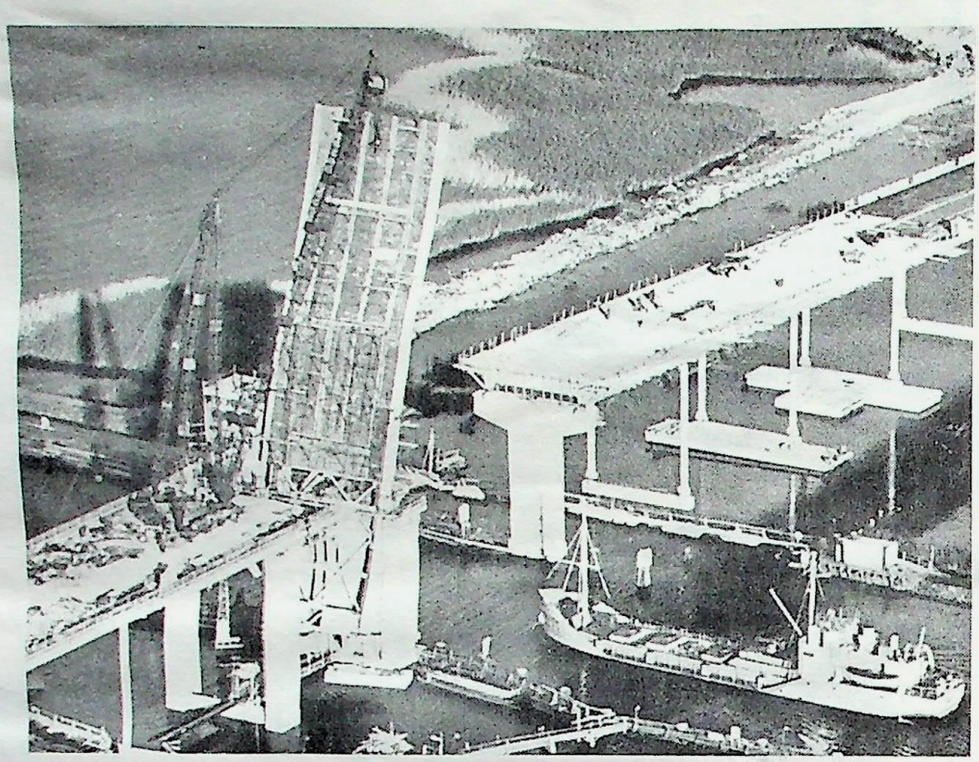
PROBLEMS we encounter



Navigable waterways are liable to be a major problem to road transport especially around big sea ports. Rarely can a fixed bridge be built with the spans high enough to clear the ships' masts and superstructures. A bascule, swing or vertical-lift type bridge is then the solution. Which to adopt depends on the subsoil conditions, the type of traffic on the bridge and the waterway, the nature of the banks, the traffic pattern and other specific factors.

To take a 17.3 m. wide road across the Göta älv near Vänersborg in Sweden our Gustavsburg bridge specialists decided on a rolling-lift type bascule bridge which spans the 50 m. channel with one leaf. The bridge which is seen in the course of erection in our picture has its tail end in the shape of a segment on which it rolls backwards to give full lateral and unlimited vertical clearance.

PRO FOOTBALL

Battle of the Bucks

A favorite yarn at the National Football League's plush Manhattan headquarters concerns a plaintive telegram that Commissioner Pete Rozelle received from a coach in the rival American Football League. POPE JOHN WAS A GREAT MAN, read the wire, HE RECOGNIZED THE OTHER LEAGUE. Rozelle's reply: TRUE, BUT IT TOOK 2,000 YEARS.

Last week, for a change, the five-year-old A.F.L. was getting plenty of recognition and precious few snickers. Maybe its teams were still no match for the titans of the N.F.L.—although those were fightin' words in Buffalo and San Diego. But there was one contest in which the A.F.L. was every bit the equal of its older rival: spending money. Armed with a $1,250,000 advance against its new five-year TV contract with NBC—and with orders to "get competitive" at any cost—the fledgling league plunged gleefully into a dollar-for-dollar battle with the N.F.L. to sign this year's bumper crop of graduating college stars.

Cash on the Bed. Eric Ambler might have written the script. The A.F.L. held an illegal secret draft—well before its officially scheduled draft meeting. And the N.F.L. hired "baby sitters" to hover over prize prospects and keep them out of the clutches of A.F.L. recruiters. An N.F.L. scout named Dick Pollard tagged along incognito when Indiana Fullback Tom Nowatzke flew to New York and talked contract with the A.F.L.'s New York Jets. The unwitting Jets gave Pollard a chatty tour of Shea Stadium ("Nice," said the spy) and allowed him to sit in on salary negotiations, thinking he was the boy's financial adviser—only to learn the bitter truth after Nowatzke signed with the Detroit Lions instead.

Money flowed like ballpark beer. One promising collegian reportedly returned to his dormitory room to find $25,000 in cash laid out neatly on his bed. When the Green Bay Packers lost out to the A.F.L.'s Houston Oilers in the bidding for Baylor End Larry Elkins, Packer Coach Vince Lombardi cracked: "We missed by a couple of hundred thousand." The New York Giants went all the way to $100,000 to land Auburn's rugged (6 ft. 2 in., 221 lbs.) Tucker Frederickson, the "big back" that Allie Sherman wanted in order to beef up the Giants' sputtering ground attack. Notre Dame Quarterback John Huarte, who was being fought over by the A.F.L.'s New York Jets and the N.F.L.'s Philadelphia Eagles, was asked: "How does it feel to know you'll be able to lay your hands on $125,000 or $150,000 in a few days?" Shrugged Huarte: "It's just money."

Standoff. Even George Halas was bitten by the spending bug. Owner-coach of the Chicago Bears, Halas has a reputation for penny pinching that goes back 45 years; in the old days, he used to plead bankruptcy every year when contract time rolled around. He also has a team that captured the N.F.L. championship in 1963—but won only five games this year. Yanking the [illegible] ber band off his bankroll, Halas shelled out $50,000 for Kansas Halfback [illegible] Sayers, then sent George Jr. around with a $100,000 bundle for Illinois' All-Everything linebacker, "Animal of the Year" Dick Butkus.

By week's end, the duel of the dollars was still pretty much a standoff. The American Football League had signed four of its eight top draft choices; the National Football League had signed nine out of 14. The big battle was yet to be fought—over Alabama Quarterback Joe Namath, who has a date with the Orange Bowl and cannot be bought until New Year's Day. A fine drop-back passer, in the mold of Baltimore's Johnny Unitas, Namath is a special case: he is a No. 1 draft choice in both the A.F.L. (New York Jets) and the N.F.L. (St. Louis Cardinals). With a smart lawyer and a little patience, he could well wind up the highest-paid player in history—before he even suits up for his first pro game.

SCOREBOARD

Who Won

▶ Mississippi State: a 20-17 victory over Mississippi, favored (by 10 points) and Bluebonnet Bowl-bound; at Oxford, Miss. Trailing 6-3 at half time (on a 48-yd. field goal by State's Justin [illegible] nale), Ole Miss rallied for 14 points in the second half, still lost to its cross-state rival for the first time in 18 years —ever since Johnny Vaught, the nation's winningest major college coach, took over as boss of the Rebels.

▶ Australia's Ron Clarke, 27: a wiry, whipped, three-mile race at Melbourne's Olympic Park, in the world-record time of 13 min. 7.6 sec.—clipping 2.4 sec. off the old mark held by New Zealander Murray Halberg, who trailed Clarke through the tape by 150 yds. Peter Snell failed in his attempt to break his own world record for the mile (3 min. 54.1 sec.), still clocked 3 min. 57.6 sec. —the eleventh time the muscular New Zealander has cracked 4 min.

▶ Miami's Willie Pastrano, 29: [illegible] 11th-round TKO victory over Britain's surprisingly tough Terry Downes, to keep light-heavyweight championship bout in Manchester, England. Bewildered by the determined, bull-like charges of the challenger (who works as a bookmaker when he is not fighting), outfought for ten rounds, Champion Pastrano [illegible] out swinging in the 11th, decking Downes twice before Referee Arthur Smyth stopped the bout.

▶ Pennsylvania's Roger Penske, 27: sweep of the first two major races at the Bahamas Speed Weeks, at Nassau's twisting, 4.5-mi. Oakes Field road course. Driving a Corvette Grand Sport, Penske averaged 95.5 m.p.h. to win the Tourist Trophy race for sports cars, switched to a Chevrolet-powered Lotus parral to beat A. J. Foyt for the Governor's Cup, averaging a record [illegible] m.p.h. for the 112.5-mi. race.

SHELL-TREATED COTTONS STAY WHITE FOR LIFE
[and are truly drip-dry]

Until Shell, drip-dry cottons that kept their whiteness as fresh and crisp as ordinary cottons, were only a housewife's dream. The available drip-dry cottons were inclined to yellow, sometimes uncomfortable to wear and tended to lose their 'non-iron' property after only a few washes.

Shell are about to change all that. Cottons treated with Shell's new textile chemical have all the crisp, cotton whiteness and cool comfort that you remember before the days of drip-dry — and they keep it for life. What's more your wife need hardly ever iron them.

The range of Shell chemical products is wide and diversified. In agriculture and industry, in almost every country in the world, they are contributing to greater efficiency and lower costs. Shell are eager to give you all the help they can. If chemicals can solve your problem contact the Shell company in your country.

PHILIPS' CONTRIBUTION TO THE NEW FACE OF THE NETHERLANDS

Holland. Colourful history, picturesque present. Windmills and ancient stepped gables, traditional costumes and gay tulip fields. But also: industrialization in a breathtaking rhythm. Research and technology apparent in giant projects, quality products. The contrasts of the old and the new, of the pretty and the rational, also abound within Philips, the world-wide industry, founded here in 1891. Philips products ranging from simple lamps to complex scientific equipment, contribute to comfort at home, to entertainment, to health. But also to education and to progress in industry: in fact to the new face of the Netherlands. That is why Philips signs all over the country proclaim: TRIOMF DER TECHNIEK. Philips in Holland (*80,000 employees in 90 factories in 70 towns and villages*) symbolize the peaceful triumph of technology.

trust in PHILIPS is world-wide

This advertisement was made by the Advertising Agency DelaMar, Amsterdam, for PHILIPS NEDERLAND N.V., one of 60 national organizations united in the Philips federation of industries. Philips products include: light, sound, cinema, radio, TV, gramophones & records, domestic appliances, electric shavers, telecommunications, chemical and pharmaceutical products, medical, industrial and scientific apparatus and components.

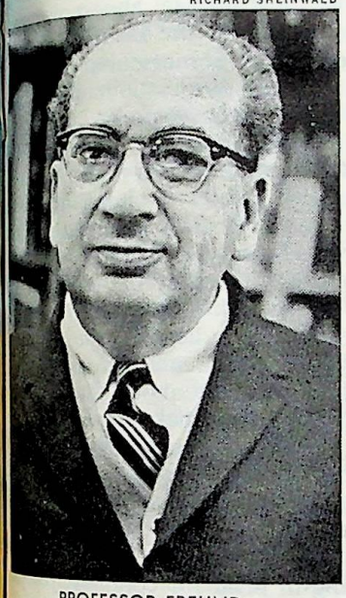
OBITER DICTA

ligion in the Schools

For all those people who have been severely disturbed by Supreme Court ions forbidding the recitation state-prescribed prayers in public ols, Harvard's famed constitutional professor, Paul Freund, had some during words last week. Not that ld disagreed with the court. It is to see how it could have ruled any way, he said in a lecture at Har- s School of Education. But the de- ons, he insisted, "are more important the doors they leave open than for e they shut."

Religion, Freund reminded his audi- e, "is unquestionably a part of our ural tradition. A number of the holi- s we observe, the coins we take and nd, the public addresses we hear, the

RICHARD SHEINWALD



PROFESSOR FREUND
If the audience isn't captive.

scriptions on public buildings that we r, all bear witness to the infusion persistence of this tradition." It is to see how such things can be chal- ged in law, he said, "so long as they not addressed to a captive audience do not call for a profession of com- ent or rejection on the part of e who witness them."

Schools are still free, Freund said, to ch about religion, even if they may teach religion itself. The distinction, admitted, is easier to point out than practice. As for the moral education called for, that presents "even great- subtleties." But the need is also great. e religious aspect of education, und concluded, "is too important be left to the professional educators ." What is needed is a collabora- n "among others, of philosophers clarify objectives, psychologists to ise on techniques of learning, and wyers to furnish materials from the tories of moral decisions known as e law reports." Asked why no min- isters were included among his collaborators, Freund explained: "I don't think there would be any constitutional difficulty about bringing in ministers as consultants. I just thought it would be more prudent, if a board or a city were interested in revising its curriculum, to do it with secular experts."

CRIMINAL PROCEDURES

Signs of a Soviet Switch

To Western law experts, the most dangerous defect in Soviet legal thinking is the tacit assumption by Russian courts that a defendant has been brought to trial because he is guilty, and that courtroom testimony at best can serve only to mitigate a sentence. The Soviet attitude stems largely from the fact that the kingpin of the system is not an impartial judge but a procurator, a sort of super district attorney and Big Brother rolled into one. As the state's No. 1 law enforcer he conducts investigations, orders arrests, serves as prosecuting attorney, keeps an eye on courts for irregularities and carries out sentences. In effect, about all that is left to the court is to decide on the severity of the sentence.

Lately, some Soviet judges and lawyers, disturbed by this one-sided setup, have stirred up a strenuous debate on the procurator's prerogatives. Writing in Izvestia last week, the Soviet Union's highest judge declared that a defendant should not be presumed guilty simply because the procurator says so. "Only the court can decide in the name of the state whether a person is guilty," wrote Soviet Supreme Court President Alexander Gorkin. At least that's what it said in Izvestia.

TRIALS

Cigarettes v. *Lollipops*

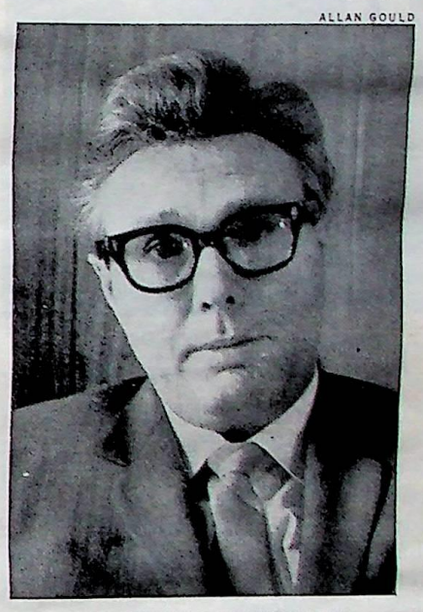
As both a licensed physician and a lawyer, Florida's Lawrence V. Hastings was uniquely qualified to participate in the growing controversy over whether cigarettes cause cancer, and if so, whether the companies that make them are liable for the damage they cause. Dr. Hastings has not failed his calling.

Unexpected Evidence. Ever since 1957, after Miami Contractor Edwin M. Green learned that he had lung cancer, Dr. Hastings has been in court suing the American Tobacco Co. for $1,500,000 in damages, charging that its Lucky Strike cigarettes, which Green smoked at the rate of as many as three packs a day for 32 years, caused the contractor's illness. While the first trial was in progress, Green provided some unexpected evidence by dying of the disease.

Hastings won a verdict that cigarettes did indeed cause Green's death, but the jury refused to award any damages to Green's wife and son. Since the knowledge of tobacco's dangers was not established until the mid-1950s, the jury agreed that the American Tobacco Co. could not have known during most of Green's smoking years that cigarettes can cause cancer. Later, after the Florida Supreme Court ruled that Florida law subjects any product sold for public consumption to an "implied warranty" that it is not harmful, the Federal Court of Appeals ordered a retrial of the Green case.

Question of Numbers. When the retrial opened in Miami Federal District Court last month, Dr. Hastings had hopes of winning the first damage verdict in the history of the tobacco-cancer controversy. His hopes began to fade when Judge Emett C. Choate started his charge to the jury. Implied warranty, explained the judge, only meant that the product must be "reasonably fit and safe for the ordinary purpose for which it was sold." The issue, he continued, was not whether Green died of cigarette-induced cancer; another jury had

ALLAN GOULD



DOCTOR-LAWYER HASTINGS
If Luckies are reasonably fit.

decided that. This jury was simply to determine whether "a large segment, a responsible segment, a significant number" of smokers were endangered.

Under that definition, the tobacco company was found not guilty of breaching its implied warranty. Complained Dr. Hastings: "If a candy company sold one poisoned lollipop that caused one death, it would not be necessary to show that its lollipops had killed off a sizable segment of the population."

Last week the doctor-lawyer asked for a new trial on the grounds that "the verdict was contrary to the evidence." As lawyer, he faced the problem that the jury was assessing the danger not of one unusual lollipop, but the possible danger of countless ordinary cigarettes to a "significant number" of people: as doctor, he must have realized that for all the convincing statistics pointing to a relationship between smoking and lung cancer, the tobacco companies can still point to millions of people who smoke and do not contract the disease.

THE PRESS

LIBEL

What's in a Name?

During the years that Drew Pearson's syndicated column "Washington Merry-Go-Round" ran in the Fairbanks, Alaska, News-Miner, Pearson's most constant detractor was C. W. (for Charles Willis) Snedden—who happens to be the News-Miner's publisher. It seemed to Snedden that the columnist never got

FAIRBANKS DAILY NEWS-MINER

PEARSON & SENATOR MORSE
Hitting smack in the reputation.

anything right about Alaska, not even the cost of a gallon of gas in Fairbanks, which Pearson quoted at $1 (actual price at the time: 51¢ to 54¢). Finally, Snedden could stand no more. "The garbage man of the fourth estate," his paper sneered in an editorial as it dropped the column.

This description joined the list of unflattering epithets—among them "chronic liar," "journalistic polecat" and "s.o.b."—that have already been hurled at Pearson without puncturing his hide. But the News-Miner's phrase hit him smack in the reputation—or so the columnist claimed in a $176,000 libel suit. In his own defense, Pearson produced almost half a dozen character witnesses, among them the gentleman farmer whose 499 acres are near the Pearson property in Maryland: U.S. Senator Wayne Morse.

Last week in Fairbanks, Superior Court Judge Everett Hepp decreed that Columnist Pearson had not been damaged. The recent U.S. Supreme Court ruling that public officials cannot collect for public criticism unless malice is proved (TIME, March 20), said Judge Hepp, should apply equally to public criticizers. As for the aptness of the News-Miner's description, Judge Hepp made no direct comment. But he was moved to include in his decision a question raised by the defense counsel: "How many garbage pails must a person empty to be called a garbage man?"

MAGAZINES

Forum Renascent

When Time Inc. reluctantly published the final issue of *Architectural Forum* in September,* there were many who mourned the magazine's passing. Chief among them were the 64,000 subscribers, who gave *Forum* top ranking in its field. This week, *Forum* got a new lease on life. Beginning next April, announced the American Planning and Civic Association, it will resume publication of architecture's most influential U.S. journal.

A nonprofit organization devoted since 1904 to "improving the character, appearance and functioning of American cities," the association early recognized *Forum* as an important ally in its cause. Its ambition to revive the magazine was cordially approved by Time Inc., which bestowed the publishing rights as a gift. *Forum's* future will be in experienced hands: ten members of the old staff, headed by General Manager Lawrence W. Mester and Managing Editor Peter Blake.

COLUMNISTS

Practicing Medicine in Print

Dr. William Brady, a spry, 84-year-old resident of Beverly Hills, takes great pride in his health. Brady is deaf in one ear, and a few months ago he had to give up daily somersaulting after cracking a vertebra in a dizzy spell following a spin. But his eyes are bright, 16 of his teeth are his own, and his arteries "are no harder than those of a man of 45." All told, Brady makes a lively exhibit for the efficacy of his own advice, which he has dispensed daily, through his syndicated column, "Personal Health Service," for the past 50 years.

Brady's 5,000,000 outpatients—a figure reflecting the combined circulation of his 80 papers—get a solid dose of old-fangled, no-nonsense medical advice. He is against TV patent-medicine commercials, toothpaste (he uses soap and a birch toothpick), cigarettes, alcohol and hypochondria. "What is my blood pressure advice?" he once asked his readers, and capitalized his answer: "NEVER MIND YOUR BLOOD PRESSURE." In a column on the benefits of exercise, he scolded sloths: "Don't just sit on your ischial tuberosities, watching hired professionals play."

Down to the Tegument. "Temperance, correct breathing, nudity and conservation of the teeth" stand high on his list of good health habits. Brady himself often peels down to the tegument—in some sequestered corner, to be sure. "A certain amount of nakedness is good for the body," he says, "for it gives all the cells a chance to breathe freely."

If his homespun counsel smack[s] medicine's horse-and-buggy days, [it] is only because Brady himself is a p[ro]duct of that departed time. After gra[d]uating from the University of Buf[fa]lo medical school in 1901, he set up pra[c]tice, and in 1914 began writing a co[l]umn for the Elmira, N.Y. Star-Gazett[e]. So far as Brady knows, he was then the only M.D. in newspaper practice.

Today, some 30 physicians syndicate medical columns, touching on just about every medical specialty but do-it-yourself surgery. Hundreds more, such as the New York Times's Dr. Howard A. Rusk, a practicing authority on rehabilitation of the handicapped, confine their practice to the home-town paper. Reader response can be impressive. Dr. Joseph G. Molner, who writes for 383 U.S. and Canadian papers, gets up to 100,000 letters a month. Montreal's French-language La Presse, which carries Dr. Brady in translation, dropped him for a week, the manager-editor "heard from almost every old age pensioner in the Dominion."

No End of Somersaults. The American Medical Association takes a stiff ant position on newspaper medical practice, perhaps because Morris Fishbein, longtime editor of the A.M.A. Journal (1924-49), wrote a column himself for 27 years. Fishbein's column, as a matter of fact, survived his newspaper career; after he left it, the syndicate kept it going with three other physicians.

Brady's syndicate, the National Newspaper Syndicate of Chicago, is not at all concerned about finding a successor for him. Tucked away in N.N.S. files is half a century's worth of Brady columns that, because of their basic approach to medicine, are not likely to go out of style. By tapping this reservoir, N.N.S. can keep Dr. Brady somersaulting in print for countless years after his death—and intends doing so.

DR. BRADY
Getting off the ischial tuberosities.

SCIENCE

SPACE

On to the Red Planet

For a few days last week, it seemed as if the U.S. and Soviet Russia were racing each other to Mars. No sooner had the U.S. launched Mariner IV from Cape Kennedy than the Russians put up Zond (for Probe) II. Scientists speculated that the Soviets' more powerful rockets might have given the Red spacecraft enough extra push to carry it past Mariner on the 228-day, 325 million-mile voyage to the red planet. But the race was not so much a contest between nations as it was a confrontation with the inexorable geometry of planetary orbits. Both Russia and the U.S. had dashed their spacecraft aloft to get them through the one-month "window" during which Mars is most favorably positioned for an earth-launched rocket. Whether Zond had enough zip to overtake Mariner was not clear. But the question seemed academic. Even if Zond gets there first, it may not be able to manage its mission; its power supply seems to be failing.

A Little Sticky. Mariner had different difficulties. Just as planned, one of its bright-eyed optical sensors locked on the sun, the craft's prime navigational reference and power source for its solar cells. But when another sensor began searching the heavens for a second reference point—the giant, blue-white star Canopus—Mariner got confused and began looking around in all directions. First, the star-sighter locked on Alphekka. Then it fixed its gaze on Regulus. Another roll on its axis, and Mariner picked out Naos, then a multi-star cluster near Naos. Finally, when Mariner was 360,000 miles from earth, its electronic eye found a star bright enough to send the proper radio report: Mariner had locked on Canopus.

The fix came none too soon. Besides using a guide on the way to Mars, Canopus also served to aim Mariner's directional radio antenna back toward earth, enabling Jet Propulsion Laboratory scientists to calculate the craft's flight path. Knowing that path, the rocketeers were able to plan a correction for Mariner's original course, which would have taken it past the red planet at a distance of 151,000 miles—too far for it to shoot any meaningful television pictures. But shortly before that correction could be made last week, Mariner went into an unexpected roll. JPL had to wait until the craft righted itself before carrying out the "mid-course" maneuver designed to turn Mariner ever so slightly toward Mars. The maneuver was accomplished, and again Mariner found Canopus. How accurate the course correction was, scientists will not know for days.

Many Hazards. But even a successful mid-course correction will not guarantee a successful mission. There are still some 323 million miles to go. The 138,000 parts on board are subject to radiation damage, and to unexplained failure caused by undetected flaws. Only if Mariner survives all such hazards, can the U.S. count on its purple-winged spacecraft taking the first detailed photos of mysterious Mars.

AERONAUTICS

Boom & Bust

It sounded like artillery fire rolling in over the rocky desert floor, but the sonic booms generated by the F-104 Starfighters did nothing more than rattle the windows of the 18 buildings spread out over five acres at White Sands Missile Range, N. Mex. The first pass by a Starfighter produced a shock of 4 lbs. per square foot of overpressure.* Another boom was boosted to 6 lbs. per square foot, and subsequent booms raised the overpressure to as high as 10 lbs. per square foot. But nothing broke. Officials of the Federal Aviation Agency began to break out in smiles. Maybe the booms sure to be caused by high-flying supersonic transports would not be so bad after all.

It was obvious that plaster and glass were standing up well. And they were getting hit with five times the average jolt that supersonic planes gave the 750,000 residents of Oklahoma City up to eight times a day in tests earlier this year. During those tests, the FAA answered 12,558 telephone calls and letters of complaint from irate Oklahoma City residents, paid out $8,608 to settle 163 small damage claims.

A lot of hopes were riding on the White Sands tests. If all went well, the agency would have a firm and convincing argument against the ever-increasing complaints of private citizens. Such an argument will surely be needed as U.S. plans to develop, test and produce supersonic commercial airliners get off the drawing boards and into the nuts, bolts and hardware phase.

In all, the FAA put their manufactured desert town through 15 sonic booms over a three-hour stretch. So well did the buildings bear the booms that a disappointed CBS camera crew left before the show was over. Then, for that inevitable one last picture, a Starfighter was ordered to make a low-level pass at subsonic speeds. But the pilot miscalculated, the speed indicator climbed, and the results were spectacularly embarrassing. Just as FAA Deputy Administrator Gordon Bain was answering a reporter's question about the psychological reaction to sonic booms, a walloping blast shook the walls. Bain and the newsmen.

A heavy ruby-glass ashtray flew off a desk and sprayed shards over the floor. Outside, both panes of a mock-up storefront were smashed, a glass window in a trailer caved in, and 16 out of 90 panes in a small greenhouse were shattered. The plane had come in at about 650 m.p.h., just over the speed of sound. Distressed FAA officials estimated the overpressure at 25 lbs. to 40 lbs. per square foot, but there was no way

* Pounds of pressure above the normal atmospheric pressure, which is 2,111 lbs. per square foot at sea level.

to be sure; they had already turned off their test equipment. What was scientifically certain was that a big enough boom at a low enough altitude can cause real damage.

GENETICS

Always a Good Show

"I've been very much a dabbler, and I'm not ashamed of it. Sometimes I wonder idly what I might be remembered for a hundred years from now—but I don't really very much care what people think about me, especially a hundred years hence." Perhaps John Burdon Sanderson Haldane did not really care, but last week, when it came time for BBC-TV to present a prefilmed obituary of the versatile British scientist in which he appeared, it was clear that he would be remembered for a multitude of contributions to man's knowledge of his world and of himself.

Infected with Experiment. Geneticist Haldane would have been the first to deny that his intellectual gifts and interests could have been genetically determined, but there was no doubt that they were early and firmly imprinted on him by his father, John Scott Haldane (1860-1936). Longtime professor of physiology at Oxford, the elder Haldane risked his own life by deliberately inhaling carbon monoxide for more than an hour and by sitting in ovens heated as high as 300° F. Young John was only four years old when his father took him down into coal mines and sewers to let him experience the befuddling effect of methane gas. Having figured out why divers get "the bends" and devised the decompression tables on which all diving practice has been based ever since, his father put young J.B.S. into a diving suit and dropped him into 40 feet of water. It was a quick but effective lesson for the boy; it taught him how to keep his Eustachian tubes open.

Thus the boy was thoroughly infected with the bug of self-experimentation. Gassed in World War I, he plunged into experiments to compare the effectiveness of different types of gas masks. Sent to India, he tested the value of his typhoid inoculation by deliberately drinking unboiled water and chewing betel nuts bought at filthy roadside stands. Haldane did not get typhoid—but he caught a sand-fly fever, which was about as bad.

Sex Viri. Demobbed, Haldane took a post as a lecturer in biochemistry at Cambridge University. He also took another man's wife, Writer Charlotte Franken. When he had to pay £1,000 damages as corespondent, the university asked Haldane to resign. He refused. He was called before the *Sex Viri** and fired. Haldane appealed, and a special university court upheld Haldane in his contention that a professor's private life is none of the university's business. Then Haldane and Charlotte Franken got married.

In 1933, Haldane switched from Cambridge to the University of London. Wherever he went, he persisted in self-experimentation. He had the blood supply to his arm shut off with a tourniquet until the arm was paralyzed, then watched another man move it with an electric current. To upset his body's acid-alkali balance, he drank ammonium chloride and panted for days afterward. To prove that "sunstroke" (properly, heat stroke) is not caused directly by the sun's rays, but by the overheating of the brain and spinal cord, he sat in Egypt's broiling sun for two hours, periodically dousing his head and spine with water. He got no heat stroke, but he suffered a severe sunburn across his broad shoulders.

Haldane breathed air containing as much as 11% carbon dioxide—generally accepted as more than any other man has survived—and recorded his ... ences as he went under. This was ... after the Royal Navy's submarine ... sank with the loss of all but four ... crew, and Haldane was explaining ... heavy death toll. While breathing ... oxygen, he took a "dive" in a com... sion chamber to seven atmospheres, ... it nearly killed him.

But his most extravagant dream ... medical martyrdom was not to be fu... filled. In 1949 he wrote: "If Ki... Charles I's or King Louis XVI's ha... [after their executions] had been sta... within a minute or so on a pump w... supplied oxygenated blood to ... would almost certainly have ... around, after half an hour or so, en... to open its eyes and move its lips. ... would probably have recovered ... sciousness. I hope that if I have ... inoperable cancer this experiment ... be tried on me."

Party Before Wife. Haldane's ... proclaimed political sympathies ... with the Loyalists in the Spanish ... War. Wife Charlotte had led him ... the Communist Party, and in ... he took over as editorial chairm... London's Daily Worker. Charlot... turned disillusioned from Russia ... tried to lead Haldane out of the ... But he stuck to it, not to her, and ... were divorced. That same year ... married an assistant, Helen Spurw...

Despite his die-hard Marxism, ... dane was too good a scientist to be ... en in by all Russian dogma. When ... party line sanctified Geneticist Tr... Lysenko, whose theories echoed ... "Lamarckian Heresy" holding that ... vironmentally induced characters ... can be inherited, Haldane quit the p...

The London Times called him ... great shambling bear of a man w... big bald head and a loud booming ... which could rise to an indignant ... His antiwar passions led him to ... tion with Britain because of the S... incident and in 1957 he went to ... dia. There he eventually settled d... as head of the Orissa state governm... Genetics and Biometry Laboratory.

A year ago, Haldane was stric... with cancer of the rectum. Still irrepr... ible, he wrote a piece of doggerel ... London's New Statesman and Na... entitled "Cancer's a Funny Thing":

I wish I had the voice of Homer
To sing of rectal carcinoma . . .
I know that cancer often kills,
But so do cars and sleeping pills;
And it can hurt one till one sweats,
So can bad teeth and unpaid debts.
A spot of laughter, I am sure,
Often accelerates one's cure.

Laughter was not enough. Last ... recurrence of his cancer ended ... stormy, 72-year life of John Halda... At his bidding, his widow sent his b... to a medical college to be used for ... search. Haldane had amply fulfilled ... lifelong desire: "I hope that I shall ... time to think as I die, 'I am glad th... lived when and where I did. It w... good show.' "

THE A.M.A.

The Making of a President

When the American Medical Association held its semiannual meeting in Miami Beach last week, high on the agenda was the election of a president to take office next June. Not surprisingly, the delegates chose a small-town general practitioner, a man who profiles just the sort of image that the A.M.A. prefers: Dr. James Ziegler Appel, 57, of Lancaster, Pa. (pop. 60,000). Dr. Appel's ancestors immigrated from the Palatinate in 1732. He is the son of a doctor who delivered his own baby in the family quarters above his office. Today, Dr. Appel (pronounced "apple") still practices in the house where he was born. He wears a hearing aid that is enough of a gadgeteer to have inspired it to serve as a stethoscope. It is a lot handier than a regular stethoscope," he says, "for getting inside a patient's shirt."

Up the Ladder. Though he is qualified as a surgeon, Dr. Appel insists that he is still a G.P. "A general practitioner," he says, "can be a very contented person because he becomes infused with a feeling of devotion and humanism; he and his patients get to know one another as persons; the rewards are very satisfying. I'm doing general practice and I love it." The house of delegates loved him for it too. They chose him 131 to 94, over Dr. Donald E. Ellis, an Indianapolis specialist in internal medicine.

Though small-town doctors are in a majority in the A.M.A., they get the association presidency disproportionately often. This is not so much the result of rural overrepresentation as of the facts of medico-political life. The small-town doctor has fewer professional societies to occupy him than his city colleagues have; he devotes relatively more time to his county medical society. Dr. Appel, during most of his professional life, has been methodically working his way up the ladder of medical-society office holding, first at the county level, then the state, and for 19 years as a member (and in many cases, chairman) of innumerable A.M.A. councils and committees.

Needs of the Elderly. With its current president, Iowa's Dr. Donovan F. Ward, and President-elect Appel as its chief spokesmen, the A.M.A. will continue to oppose, with one voice, President Johnson's plan to finance medical care for the aged under social security. Knowing that the medicare fight will come to a climax in the next Congress, the A.M.A. decided to hold a 50-state war council next week in Chicago and to appropriate a multimillion dollar campaign fund.

Dr. Appel stated the A.M.A.'s position succinctly: "There is no reason for a tax-supported program. We have a much better program in Kerr-Mills. If the states would enact good Kerr-Mills laws the medical needs of the elderly would be met better and at less expense than through medicare. But if it passes, the A.M.A. will obey the Constitution and the laws."

. . .

On another issue the A.M.A. did an extraordinary turnabout last week. Having taken a studiously neutral position on birth control for more than 25 years, it decided that "the prescription of child-spacing measures should be made available to all who require them, consistent with their creed and mores." Having jealously opposed any intrusion into the doctor's domain or infringement of his right to collect fees in the Depression 1930s, the A.M.A. now decided that birth-control guidance should be equally available to private and clinic patients, regardless of whether they "obtain their medical care through private physicians or community-supported health services."

NUTRITION

Too Much of a Good Thing

Aware that she is "eating for two," a pregnant woman is likely to make sure she gets sufficient bread, cereals and milk—all of which, because of the long campaign to wipe out rickets, are usually fortified with vitamin D. Her obstetrician may well prescribe a daily capsule of supplemental calcium and vitamin D. And while the mother-to-be is taking it easy, she may do a little sunbathing, which stimulates her system to make still more vitamin D. It all adds up not only to a hefty dose of the vital vitamin but to some risk that her baby will have heart defects and be mentally retarded as well.

Thick & Narrow. Dr. Robert E. Cooke, pediatrician in chief at Johns Hopkins' exciting new Children's Medical and Surgical Center (TIME, Nov. 22) based his warning on [illegible] originated in Britain, after the National Health Service offered free vitamin D to [illegible] lore and several cases of vitamin D poisoning were recorded. Similar reports were observed in Germany. And now, says Dr. Cooke, he is convinced that excessive vitamin D was responsible for the mental retardation and other abnormalities of 13 babies seen in 18 months in his hospital. This indicates that there are several hundred cases a year in the U.S. alone.

Dr. Cooke was careful to point out that for the vast majority of women and their babies, the prevailing intake of vitamin D does no harm. But in unpredictable cases, any excess over normal requirements causes unnatural calcium deposition in the fetus: its bones, especially the base of the skull, grow unusually dense, and chalky deposits narrow the aorta. Sometimes the aorta is narrowed around the origin of the renal arteries so that the kidneys are starved of blood and the affected baby suffers from extremely high blood pressure.

NEW ENGLAND JOURNAL OF MEDICINE

VITAMIN D VICTIM
Depositing excessive calcium.

Incurable & Preventable. The trouble with vitamin D, said Dr. Cooke, is that the body has no effective mechanism for getting rid of an excess. It accumulates until it triggers the deposition of calcium. And it is easy for the susceptible unborn child to get too much of it: one pregnant woman in Baltimore, who was eating well, drinking a great deal of milk, and taking her prescribed multivitamin capsules, was getting 2,000 to 3,000 units of vitamin D daily along with her sunshine supplement, as against a recommended daily intake of only 400 units, even for a fast-growing child. Dr. Cooke suggested that women check with their doctors on their total vitamin D intake. The striking thing about this form of mental retardation, he noted, is that while it is severe and incurable, it is so easily preventable.

FASHION

Net Gain

Through a glass, darkly, two sets of women eyed each other. The ones outside wore storm coats, mufflers, woolly gloves and boots, and shivered anyway; those inside lolled in nothing but incandescent light and a couple of inches of cloth. None of the show-window mannequins had the get-up-and-go to make it to the Caribbean for Christmas, and few of the lady shoppers had the necessary funds. Still, stores across the U.S. last week were piled high with shifts to go wading in, slacks for strolling sandy beaches, blouses for leaning on foreign balustrades, and ball gowns to have shipboard romances in. Most abundant of all were the bathing suits.

Bikinis and maillots, blousons and middies, all spilled off racks and shelves around the country. Styles were simple (fewer turtlenecks and full-length sleeves than last year), patterns bold (with slashes of stripes and oversize polka dots predominating), and colors smashing (incendiary pinks and theatrical splashes of black on white were favorites). But the real news were the models made, at least in part, of fishnet.

The girls on the French Riviera have been slinging the hole-happy stuff over their bikinis for years. Only this season, however, did it cross to native shores to fill in the spaces exposed by plummeting necklines and high-riding shorts, offering new methods of engineering that open vistas in unexpected places. Cole of California used fishnet to screen a deep isosceles plunge ($26), Rose Marie Reid to add a jeweled lace topping to a maillot ($50), while Designer Bill Blass took a big breath, and a giant step, left gaps where gaps had never before been left, and let flesh fill in instead of fishnet.

The selection is as vast as the price range. The view is vastest of all.

WINE

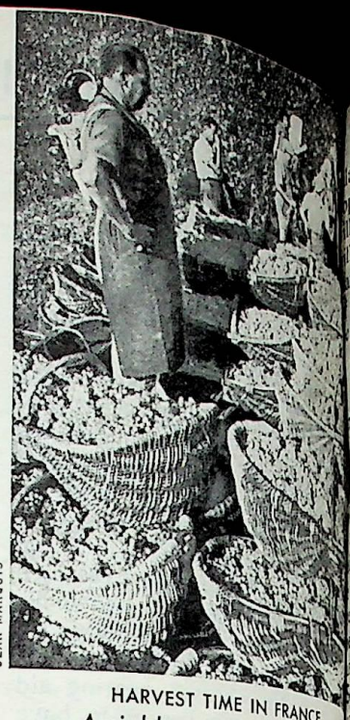
This Is the Year That Will Be

France's Minister of Agriculture Edgard Pisani set would-be wine lovers fermenting last July when he advised colleagues at a Cabinet meeting to lay in a few casks of 1964 because it was probably going to be the best vintage since 1921. To insiders, however, this showed him about as wine-wise as a gas-station attendant in Marseille.

In the first place, 1921 was not all that wonderful, and no one can accurately predict the quality of a vintage two months before the harvest. Even then, prognosis is difficult. The highly touted 1959s, for instance, are already beginning to fade, while the rather rough 1957s are just beginning to achieve real quality; the 1934s, downgraded at first, became splendid in 1939.

But Pisani turned out to be a pretty good prophet after all: 1964, harvested, and much of it still bubbling to fermentation in casks of Bosnian oak, may well be a notable year as well as an abundant one. For all France, it is a happy relief after disastrous 1963—a summer so wet and sunless that many of the great vineyards, such as Château d'Yquem and Château Cheval Blanc, sold their entire harvest as *vin ordinaire*.

Noble Rot. Growth began about 15 days late last spring, but, once started, was spectacular. The summer was remarkable for its sun and dryness, with just enough rain in September to save the younger vines from drying out. Burgundy's Wine Growers Syndicate, keeping close watch on the balance of sugar and acidity in the ripening grapes, set the date for the beginning of the *vendange* (harvest) relatively early, and wine growers who did not delay were lucky. A solid week of rain that began on Oct. 7 stopped harvesting cold (wet grapes cannot be picked for fear that water may contaminate the juice) and halted the *pourriture noble*—the ble rot"—that is necessary for ening Château d'Yquem and sweet sauternes.



JEAN MARQUIS

HARVEST TIME IN FRANCE
Amiable, supple and round.

Beaujolais, best drunk young ready on French tables, should lected with care this year; the was so hot when the harvest Sept. 15 that vintners who failed the precaution of cooling their overnight before squeezing them have inhibited their fermentation, ceases if the temperature of the in the vats rises above 96°.

In Bordeaux the growers lighted. "Really a remarkable *dange*," glowed Henri Martin, of the Interprofessional Council deaux Wines. "I never saw the looking so healthy." No responsible pert would dare say just how great year will be, though Martin admits other great years of Bordeaux were as amiable at first as 1964." The vintage is extremely "supple" (low tannin), therefore may "fade" quickly than a "harder" wine.

Beautiful Harmony. But if the ners are happy about 1964 in Fr in Germany their cup runneth over.

"This is the year that the qu quality law went overboard," ch round, ruddy Rudolph Ohl, one of many's 250 wine commissioners sponsible for tasting and grading country's top wine. Swirling a pale low Niederwallufer *Auslese* in a thin-stemmed glass, then sniffing, ing, chewing, slurping, gargling, finally swallowing it, Ohl dared to 1964 higher than the superb which was, after all, "too one-sided lacked harmony."

The German "noble rot," called *faule*, was plentiful, making possib fruity wine called *Beerenauslese* lected rotten-ripe). Comments on 1964 Rhines, Moselles and Ri ring the changes on the vocabulary winesmanship. "There should be a bouquet, and the wine will be

TASTE

"Camp"

Where are the dandies these days? Not the mere fops and mannered exhibitionists, but the lovers and arbiters of style for style's sake, the cherishers and curators of what's amusing (as opposed to what's serious)—a predilection that is one of the luxuries of affluent societies. They thrived in Socrates' Athens and at the Roman courts of emperors and Popes. The 18th century shone with them, and the 19th century produced the dandy of all time, Oscar Wilde.

Wilde rebutted the industrial revolution with flowing locks and velvet suits; he warded off its fumes with a long-stemmed flower. The modern dandy, on the other hand, revels detachedly and deliciously in the vulgarity of mass culture. And the word is not dandyism any more. According to one of Manhattan's brightest young intellectuals, Novelist Susan Sontag, the word is "Camp."*

"It's Too Much!" The essence of Camp, writes Miss Sontag in the *Partisan Review*, is "its love of the unnatural: of artifice and exaggeration." Tiffany lamps are Camp, she says by way of illustration, and so is a fondness for Scopitone films and the lurid pseudo journalism of the weekly New York National Enquirer. Turn-of-the-century postcards are Camp; so is enthusiasm for the ballet *Swan Lake* and the 1933 movie *King Kong*. Dirty movies are Camp—provided one gets no sexual kick out of them—and so are the ideas of the French playwright Jean Genet, an ex-thief and pederast who boasts about it. "Genet's statement that 'the only criterion of an act is its elegance' is virtually interchangeable, as a statement, with Wilde's 'In matters of great importance, the vital element is not sincerity, but style.' "

In matters sexual, according to Miss Sontag, Camp goes against the grain, cherishing either the androgynous, swoony girl-boys and boy-girls of pre-Raphaelite painting or the plangent supersexiness of Jayne Mansfield or Victor Mature. In art, Camp's exaggeration must proceed from passion and naiveté. "When something is just bad (rather than Camp)," she writes "it's often because the artist hasn't attempted to do anything really outlandish. 'It's too much,' 'It's fantastic,' 'It's not to be believed,' are standard phrases of Camp enthusiasm."

So Bad—So Good. And if this somehow suggests homosexuality, Miss Sontag is not one to deny it. "While it's not true that Camp taste is homosexual taste, there is no doubt a peculiar affinity and overlap. Homosexuals, by and large, constitute the vanguard—and the most articulate audience—of Camp." The reason: it is to homosexuals' self-interest to neutralize moral indignation, and this Camp does by promoting playful estheticism. "The whole point of Camp is to dethrone the serious. More precisely, Camp involves a new, more complex relation to 'the serious.' One can be serious about the frivolous, frivolous about the serious."

Camp, says Miss Sontag, is "the answer to the problem: how to be a dandy in the age of mass culture. The old-style dandy hated vulgarity. The new-style dandy, the lover of Camp, is a lover of vulgarity. Where the dandy would be continually offended or bored, the connoisseur of Camp is continually amused, delighted. The dandy held a perfumed handkerchief to his nostrils and was liable to swoon; the connoisseur of Camp sniffs the stink and prides himself on his strong nerves."

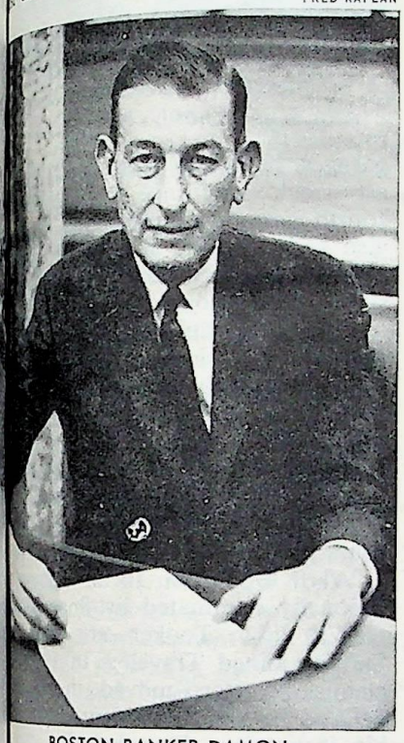
THE ECONOMY

A Strategic Withdrawal

"I turned on the television set and al- "I fell out of my chair," said a ior officer of the powerful First ional Bank of Boston. What caused h consternation was the news of don Johnson's admonition to the on's bankers not to increase their interest rates. In response to the in the Federal Reserve Board's own count rate, the big Boston bank had the day before become the third

FRED KAPLAN



BOSTON BANKER DAMON
From subtle pressures, few bruises.

S. bank to hike its own prime rate, Johnson's pressure changed all . Said the First National officer: the time we got to work the next those of us who run this bank ew what we had to do. Our chances winning this fight were zero." Out nt the First National's increase—and h it, at least for the time being, went e hopes of bankers across the U.S. to e their own rates.

Johnson had not only subdued the kers but, quite unlike the case of esident Kennedy's turnback of the el price rise in 1962, left few visible ers on the business community. Busi- ss leaders, who like to borrow their ney as cheaply as possible, were in mood to complain. Wall Street was heered by the continuing prospect of sy money; the stock market, which fered its worst fall of the year (11 nts) on the day that the Boston bank ed its rate, promptly recovered most the lost ground. Such criticism as re was fell less on Johnson than on the backing and forthing of the First National. "Shame on them," growled Atlanta's Mills B. Lane, president of the Citizens & Southern National Bank, which had raised its prime rate and was left out on a limb.

Patriotism over Profit. Just after the Federal Reserve raised the discount rate a fortnight ago, the Administration used its well-tested jawbone tactics on top Manhattan bankers, who usually set the pattern in the national loan market. Treasury Secretary Douglas Dillon telephoned his old friends and, according to Wall Street insiders, Johnson himself got on the horn to some bank chiefs, notably Morgan Guaranty's Henry Clay Alexander. The Administration satisfied itself that the New York bankers would make no immediate increases, partly because their supply of money was well ahead of the loan demand from cash-heavy U.S. corporations. To keep them in that mood, the Federal Reserve last week pumped more than $1 billion into the banking system.

A couple of other banks outside New York did indeed hike their prime rates from 4½ to 4¾%, but Johnson was unworried because, as one of his aides said, "hell, they haven't got any prime customers to loan to anyway." When the Boston bank risked a jump, there was cause for alarm. The Administration considers the First National to be one of the few non-New York banks with enough power and prestige to lead a nationwide raise in prime rates, as in fact it had done in 1956. Its president, Roger Damon, 58, is a tough-minded innovator who is much more daring than most bankers and likes to upset what he calls "accepted dogma" in banking. To prevent the nation's 16th largest bank from leading a breakthrough to higher rates, Johnson wrote his plea into a previously prepared speech (*see* THE U.S.). He chose the blue-ribbon Business Council for a declaration that a bank-rate rise was unjustified and "might slow down our economic advance." The Boston bankers felt unable to rebuff the President.

Now to Labor. That was all well and good, but the business community now looks more than ever for Johnson to devote equal time to pressuring labor to keep its costs in line. As the bankers were rescinding their plans to raise rates last week, the United Steelworkers' embattled President David J. McDonald demanded a "substantial" pay raise on top of such fringes as double-time pay for overtime and longer vacations. While McDonald put no price on his package, it surely exceeded the Administration's 3.2% guideline. Did McDonald feel bound by the guideline? "I never have and I never will," he snapped. Pittsburgh reckons that it is closer to a long and bitter strike than at any time since the 116-day walkout of 1959-60. The industry's contracts expire May 1, and Johnson may well have a rougher time with the steelworkers than with the friendly bankers.

MANAGEMENT

Soup & Chips

Lyndon Johnson once called it "the greatest group of businessmen in the world," and the Business Council is certainly the nation's leading society of business elite. Its 179 members—most of them chairmen or presidents of great corporations—can usually get the presidential ear; President Johnson last week spoke with them twice. But the private group is far less important for the occasional advice it offers the Government than for the effect its public consensus has on the nation's business psychology. Last week the council elected a new chairman, whose name, face and words will be before the public in the months to come while he acts as spokesman for the nation's top businessmen. The man: William Beverly Murphy, 57, president of Campbell Soup Co.

Cooking Up Sales. Like all the other members of the council, Murphy is first a businessman whose reputation ultimately depends on how he performs as a manager. As boss of the world's biggest soup company, which he joined in 1938 after working for the Nielsen rating service, Murphy has proved his ability. His first job at the Camden, N.J., headquarters was devising new products to cook up more sales. He has stuck to the recipe so well that Campbell's sales and profits have doubled since he became president in 1953, and profits have risen every year. In its 1963-64 fiscal year, Campbell netted $48 million on $660 million in sales, both records.

Campbell not only dominates the U.S. soup market, canned and frozen, but is the nation's largest producer of canned spaghetti (Franco-American),

blended vegetable juice (V-8), frozen meat pies and TV dinners. Not content with selling 300 products in 110 nations, it has introduced 20 new items since August, is busy expanding seven of its 19 U.S. plants. Murphy, who earns a salary of $216,274 a year, also believes in personal diversification. He is a director of A.T. & T. and Merck, a trustee of the University of Pennsylvania and M.I.T. and co-chairman of the Greater Camden (N.J.) Movement. He is also a great soup devotee, has a can of it daily for lunch and dinner, notes proudly that the prices have remained virtually the same for a decade.

Heatless Pressure. A Republican, Murphy was among the 40% of the council members who supported Johnson for re-election. Last week he sympathetically defended Johnson's views on money, and declared after the bank rate rollback that "there was no feeling that the President was putting the heat on bankers." As for the council's future relations with Government, which were somewhat strained when it broke away from the Commerce Department in 1961 after a spat with Luther Hodges, Murphy says: "Our relations with the President are close and good, and we intend to maintain them that way."

HOUSING

Wheel Estate

Nearly a sixth of the new houses being built this year in the U.S. are mobile homes, the product of what the 4,000,000 Americans who live in them affectionately call the "wheel estate" industry. Busily shedding their old image as cramped trailers, mobile homes are moving in rapidly on the market for low-priced housing. On top of gains averaging 25% in 1962 and 1963, the production of such homes has spurted 23% this year. Last week the Mobile Homes Manufacturers' Association announced that the industry built 159,250 units through October—a record equal to 19% of the ten-month starts of private, one-family houses.

Conventional housing's big new competitor has fattened so fast largely because factory-built mobile homes escape such hobbles as archaic distribution of materials, costly on-site construction and building and zoning codes, all of which boost the cost of traditional housing. Today's typical mobile home, a 550-sq.-ft. unit with two bedrooms, a bathroom, kitchen-dinette and living room, sells fully furnished for $5,600 on such terms as 20% down and $70 a month for seven years.

Although mobile homes are built to travel, it takes a truck to haul them (unlike smaller travel trailers, which can be towed by an ordinary auto). Their owners tend to set them on foundations, skirt them with shrubbery and even porches. Manufacturers claim that, rather than mobility, they are selling a prefabricated, delivered-to-the-site house that is easy to relocate. "We are the answer to low-cost housing," says M.H.M.A. Managing Director Edward Wilson. "The home-builders can't do much about it. They're tied. We have moved into a vacuum." The makers of mobile homes have grown into a $1 billion industry of 200 firms, five of which now have annual sales above $30 million.

Although half the industry's sales are to young married couples who need inexpensive shelter, mobile homes are growing bigger and more luxurious. Some carpeted, air-conditioned models command $16,000; 12-ft.-wide units now account for 21% of industry sales *v.* 7% last year. Many of the nation's 20,231 mobile-home parks match such amenities with pools and golf courses. "We were uneasy when we invited Jascha Heifetz to our trailer for a weekend visit," says Mrs. Raymond Kendall, wife of the dean of music at the University of Southern California, "but he had such a good time he invited himself back." For the Kendalls, their oceanside unit an hour's drive from Los Angeles is a second home; for most owners, a mobile home is their only abode. Mobile homes are a long way from becoming the prevailing U.S. way of life, but they are a major part of that life: in Palm Springs more than half the population lives in them.

Beginning with insur- e on the growing number of U.S. porations and families at work oad, it intends to go on from there to ead its umbrellas around the world.

GOVERNMENT

What Kind of Monetary Men?

This month's departure of Robert osa as Under Secretary of the Treas- highlights an important question ut monetary policy in Washington. substantial number of the highest al posts in the U.S. Government soon be held by new appointees. e question that concerns business- n, and that there is no way of an- ring now, is: What kind of men they be?

President Johnson is expected soon appoint a replacement for Roosa, o resigned to take a partnership in banking and investment house of wn Brothers Harriman and write a k on monetary policymaking. Lead- candidates for the job: Fred Dem- , an able economist and president the Minneapolis Federal Reserve k, who leans toward easy credit, l Charles Coombs, vice president of New York Federal Reserve Bank, international monetary expert who ped Roosa line up the $3 billion ergency loan for Britain.

Beyond this, nearly a dozen other portant economic posts in Washing- will soon change hands. At Treas- , a major turnover is in the offing. de from Roosa's job, a successor ill to be named for Henry Fowler, o last spring quit as the second- king Under Secretary. The depart- nt's No. 4 man, General Counsel G. Andelot Belin, intends to return soon his Boston law practice. And Treas- Secretary Douglas Dillon has re- medly served notice that he intends resign by next July.

Two of the three members of the deral Home Loan Bank Board, in- ding Chairman Joseph McMurray, ve announced that they are leaving Jan. 1. Internal Revenue is headed a careerman who is acting only as terim boss. On Johnson's appointment of a new Attorney General, of which there is yet no sign, depends the future of William Orrick Jr., the Justice Department's chief trustbuster. The five-man Federal Power Commission has one vacancy and one holdover member, Vice Chairman Charles Ross, who is serving month to month. Because of President Johnson's longtime Texas ties with oil and gas, Washington is particularly watching his FPC appointments for signs of the direction he will take in his dealings with the regulatory agencies.

In all of these cases, Johnson has given no hints as to what kind of men he is looking for—whether liberal or conservative, consumer- or producer-oriented. The men the President chooses and the policies they make and follow will be of great importance to business and industry.

INLAND'S BLOCK
Like a grocer knows the customers.

STEEL

Competition Moving Inland

A third of the nation's steel and nearly two-thirds of its highly profitable sheet and strip is consumed within 250 miles of Chicago, but only a fourth of U.S. steel is produced in the area. Aware of the opportunities this situation offers in the world's fastest growing steel market, major steel companies are spending nearly $1 billion to expand or build new facilities in the Indiana industrial complex near Chicago.

U.S. Steel is in the midst of a $300 million expansion of its Gary works, and second-ranked Bethlehem has already spent $350 million on its new Burns Harbor installation, where steel-plate production is scheduled to begin this month. Jones & Laughlin is tripling the size of its Hammond mill, and National is turning out flat rolled steel from its new mill at Portage. When all the new facilities are completed, Midwest steel capacity may exceed consumption by as much as 30%. Says a Pittsburgh steel executive: "I don't know who is going to hurt whom, but it is going to be one helluva scramble."

Pricing Advantage. In the midst of the scramble sits the only major steel company with its headquarters and entire production facilities in the Chicago area: Inland Steel. The smallest of the industry's Big Eight, Inland has long benefited from its proximity to Midwest steel consumers. Sixty percent of its output is sold within 100 miles of Chicago, and practically none is shipped more than 400 miles away. This provides Inland with pricing and delivery-time advantages over distant Eastern mills, and has contributed to its enviable earnings record. The company was eighth in steel production during the first nine months of 1964 (setting a new company production record), ranked seventh in sales, and earned sixth place in earnings with a record $49 million. Even more impressive, it was first in net income per ton and second only to National in its percent of return on sales and investment.

Inland has built up a large deposit of good will in its area. Many little consumers, told by other steel companies to "call Inland" for their small orders, have grown larger—and stayed with Inland. By encouraging its executives to participate in civic affairs and all employees to take advantage of a corporate education program—half of its 30,000 employees do, at company expense—Inland has developed an excellent community image that impresses local customers. The company recognizes, of course, that it cannot meet its challenge from the East with good will alone. It is spending $125 million this year for a computerized hot strip mill, a tin-plate cold rolling mill and two 250-ton oxygen furnaces at its huge Indiana Harbor complex in East Chicago, the most concentrated facility in the industry.

The Defense Is Ready. From its 19-story, stainless-steel headquarters in Chicago's Loop, Inland is run by another highly concentrated facility of a sort: Chairman Joseph Block, 62, whose grandfather founded the company in 1893. A pipe-smoking intellectual who surrounds himself and his colleagues with modern art, Block angered competitors in 1962 by holding the price line during the steel crisis. Although he recently came out for steel price rises now, Block is realistic enough to admit that "I don't think there is much likelihood of an across-the-board increase any time soon." He is calm about defending his market—a market he knows the way the old-time grocer knew his customers—and he promises: "We shall give very good account of ourselves." As usual, everyone in Pittsburgh knows exactly what Joe Block means.

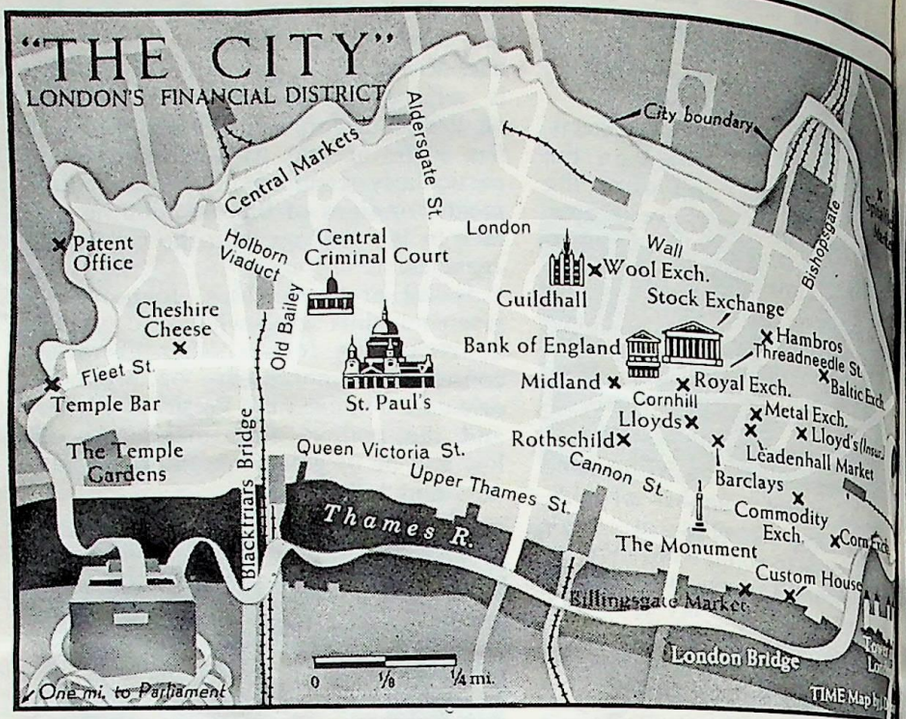
BRITAIN

Citadel of the Commonwealth

There was little in the look of the place last week to suggest that it had been through its most traumatic experience since World War II. Wedged between the Bloody Tower and Temple Bar, the one square mile of London known as the City is not only the financial center of Britain and the Commonwealth but a whole way of life—and that life has endured amid countless crises for more than 500 years. In the narrow streets with the wonderful names—Threadneedle, Cornhill, Cheapside, Poultry, Old Jewry—the rush-hour crowds of sober-suited, bowler-hatted men and chattering typists hurried on their way as usual, emerging from tube stations, buses and chauffeured limousines into the gloom of London's winter day. Brokers lunched rapidly on beer and sandwiches at the mahogany bars of fine old pubs, and the stockjobbers in their silk top hats strode through the streets like characters out of Galsworthy.

Nonetheless, the City had been shaken. It lives and feeds on sterling—and sterling had just had one of the closest squeaks in its history. Just how close it had been was summed up by a top City banker: "The pound was hardly 24 hours from devaluation." Everyone agreed that what had been put at grave risk was nothing less than the survival of London's City as a center of international finance. No wonder the hand that held the sherry glass trembled just a little.

BANK OF ENGLAND'S EARL OF CROMER
The sherry glass trembled.



The Old Lady. Devaluation, the most dreaded word in the City, was headed off by the $3 billion line of international credit that steadied the sagging pound. The danger was by no means over—Britain announced that its reserves had melted in November to a seven-year low of $2.3 billion—but at least the pound was growing stronger (*see* THE WORLD). Whether it continues to do so will depend in part upon the resilient men of London's City. Operating the world's most concentrated and versatile counting-house and the mightiest citadel of money east of Wall Street, they provide Britain with as much as $500 million a year in "invisible" earnings from overseas.

The City's brokers handle 80% of the world's gold marketing, 65% of its ship chartering and by far the largest amount of its international insurance coverage. To the City's major commodity markets, traders from all over the globe come to buy and sell grain, metals, tea, textiles, rubber, wool, peanuts, buttons and hides. Packed into the area of narrow, convoluted streets and lanes, some of which still cannot take wheeled traffic, are also most of Britain's investment brokers and the London Stock Exchange, which lists more issues (about 9,500) than any other exchange in the world.

Even more important are the City's banks, which thrive where various forms of banking operations have been conducted since the Middle Ages. Behind forbidding stone walls broods "the Old Lady of Threadneedle Street"—the Bank of England—which controls the currency that finances 40% of all international trade. Clustered near by, interspersed with some 30 churches built by Christopher Wren, are 150 banking houses with such famous names as Barclays, Midland and Lloyds. British banks have for generations made the whole world their oyster, have extensive and direct knowledge of business conditions and customers overseas. Altogether they have sprouted 500 branches in foreign lands, five times as many as U.S. banks have overseas.

Jargon & Tradition. Many of today's City leaders descend from the merchant bankers who bankrolled Britain's colonial expansion and cleared whole continents in the days when sterling was supreme. The most influential among them is the scion of a 200-year-old banking family: George R. S. Baring, 46, third Earl of Cromer, who as the outspoken and energetic Governor of the Bank of England, was the chief British architect of last fortnight's $3 billion rescue of the pound. At the top of the private banks are scores of modern-day Rothschilds, Schroders, Brandts, Hambros and other heirs to ancient City fortunes. Despite their strong affection for family and school ties, the City is increasingly looking outward for talent to maintain its standing as what Bank Chairman Jack Hambro calls "one hell of a financial mechanism." In the stock-brokerage firms, in fact, a surprising number of the top partners started out as clerks and now occupy posts that pay $11,000 to $45,000 a year.

Once they have reached this level, traders and bankers become part of an in-group with trust in money and in one another. Mysterious to outsiders, including most Britons, the City is cozy and village-like from the inside, speaks its own jargon, and carefully keeps its business confidential. Deals amounting to millions of pounds are often closed

Romblon Island, Philippines.
Problem: Communications isolation.
Solution: A nationwide telecommunications network.

For the first time in the history of the Philippines all the major islands—from northern Luzon to southern Mindanao—will be linked in a major telecommunications network. And for the first time the Philippines will have national communications that meet international standards.

ITT Philippines, Inc., will supervise and coordinate installation of the network. Its backbone will be a troposcatter system supplemented by mainline microwave links and secondary VHF feeder links. All three will provide telephone and high-speed telegraph service. Crossbar telephone switching exchanges will be installed in 27 cities and toll exchanges in four regional centers. Local personnel will be trained to operate and maintain their new equipment.

Vast skills and resources enable ITT to provide equipment that best satisfies the particular requirements of this tropical network. The fact that this equipment will come from ITT System companies in the U.S.A., Australia, Belgium, and Germany testifies to ITT's worldwide capabilities. And *helps explain* why ITT is the world's largest international supplier of electronic and telecommunication equipment.

For information or service, contact your ITT distributor or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: 320 Park Avenue, New York, New York 10022.

with a casual word, but it is a tenet of the City that business is never discussed in such prestige clubs as White's, Pratt's, Carlton or Brooks. All major financial institutions have their own dining rooms, where financial men daily have guests for relaxed lunches. In their offices, the leaders of London's oldest neighborhood conduct their business in a dark-paneled aura of ceremony; there are grandfather clocks, brass cuspidors and stand-up desks about, and the desk lamps of Hambros' partners were converted from kerosene. The City also has some of the most strictly observed traditions in the kingdom, including a troop of soldiers who arrive each night from Wellington Barracks to guard the Bank of England.

Appalled by Bumbles. Beyond all the tradition and trappings, the City's brokers and bankers are realistic men who look with clear eyes on what is happening to Britain's economy. Thanks to the new $3 billion credit, they believe that British business and the government have won a few months' time to increase productivity and step up exports. Though appalled by the government's economic bumbles so far, the City's leaders still show a remarkable amount of support for Harold Wilson's Labor government. The consensus is that once the new government has settled down it will pay considerable attention to the City's views.

Labor may be surprised to learn that these tradition-conscious capitalists believe that they are much more modern and competitive than Britain's highly protected industry. Says Kenneth Keith, chairman of the Philip Hill banking house: "We get protection from nothing, and nobody has any particular sympathy if we go under—and that's good." After all, the City rebuilt itself after the great London fire of 1666, which completely destroyed it, and again after World War II, in which it was more thoroughly blitzed than any other part of London. What is even more difficult, it has managed to prosper despi liquidation of the empire, skyro taxes and several postwar sterli ses. Britain's new ministers will ably find its advice worth listening

CANADA

And a Profit In A Polyvinyl Tree

Power saws ripped through the green stands last week in seven ada's ten provinces, and truck horse-drawn sleighs hauled the trees off to shipping points. It time of year again for Canada known industry, and growers were

ARTIFICIAL CHRISTMAS TREES AT MANHATTAN'S MACY'S
Everything but falling needles and forest smell.

cutting the 15 million Christmas that they will sell this year. How there is a bit of strain in the ment this year for Canada's exp of pine, spruce, Douglas and firs. Reason: artificial trees are ing steady inroads into the lucr Christmas tree market.

Canada sells 65% of her trees U.S., where Christmas tree sales soared into a $155 million annual ness. Now, a Chase Manhattan survey points out, artificial trees taken over 35% of that total and raising their share of it rapidly. U the cheap and flimsy creations of most of the artificial trees are apt polyvinyl wonders that resemble real thing in all but falling needles forest smell. They are not only fi proof—one big selling point—c proof and fadeproof, but can be s away in a box. And though some for as much as $130, most sell for under $25. Fifty thriving artificial companies have grown up in the U to supply the market (*v.* only seven few years ago), and imports are ing from Britain, Germany and Ja

Alarmed by these inroads—even Canada, artificial-tree sales will surp $1,000,000 this year—Canadian growers are trying to retaliate with b ter, less expensive trees. Farmers

and sell wild trees for extra income being edged out by large tree plantations, where as many as a million trees are mechanically planted, weed and harvested, then carefully sized by size and shape. To protect the trees, shippers have begun to wrap them in a new plastic mesh that costs about 25¢ a tree but ensures delivery in good condition. At Montreal's MacDonald College, Dr. A.R.C. Jones is grafting European pines onto Canadian trees to produce a greener, fuller tree that will retain its needles longer.

Canadians also are relying on tradition to help retain their market. "We live in an artificial environment," says Dr. Jones. "The Christmas tree is one of the few things left that is natural."

MILESTONES

Married. John Crosby, 52, the New York Herald Tribune's longtime (1946-) frenetic radio-TV columnist, now London-based girl-watcher, social essayist and sporadic political pundit; and Anne Wood, 26, former fashion writer of Edinburgh's staid *Scotsman*; for the second time; in London.

Divorced. Anthony Quinn, 48, cinemactor (*Requiem for a Heavyweight, Zorba*); and Katherine De Mille Quinn, 51, adopted daughter of the late Cecil B.; in a double decree awarded on grounds of mutual incompatibility, by reason of his eagerness to "do more by my two little boys"—the two sired by his Italian girl friend, Jolanda Addolori, 29, whom he now hopes to wed; after 27 years of marriage, four children; in Juárez, Mexico.

Died. Bobby Marshman, 28, cool, debonair racing driver who had a 27-lap lead in the early laps of the Indianapolis 500 last May when he was knocked out by mechanical difficulties, correctly predicted: "I'll get lucky one day, just you wait and see"; of burns suffered two weeks ago on a Phoenix track when his Lotus-Ford crashed at 150 m.p.h. and exploded; in San Mateo.

Died. William Fels, 48, wry, worldly president of ultra-progressive Benningham College for girls since 1957, who enthusiastically supported such famed Bennington trademarks as the nine-month semester of outside work, the midnight curfew for girls and 6 p.m. quiet-hour for boys visiting in dormitory rooms, explaining to distraught mothers and skeptical colleagues: "If regulations are too strict, you run your students into automobiles and motels"; of a heart attack; in Manhattan.

Died. Arkady Aleksandrovich Sobolev, 61, Soviet Deputy Foreign Minister and longtime (1955-60) delegate to the U.N. who never banged a shoe or threw phony fits but achieved dubious fame in 1956 when he pooh-poohed the Hungarian uprising as a conspiracy by "fascist counterrevolutionaries"; after a long illness; in Moscow.

Died. Sam Stept, 67, composer of Tin Panalities as *Please Don't Talk About Me When I'm Gone* and *I'll Always Be in Love with You,* but best remembered for his World War II smash-eroo, *Don't Sit Under the Apple Tree;* of a stroke; in Los Angeles.

Died. John Burdon Sanderson Haldane, 72, irascible expatriate British scientist who demonstrated that he was his own best guinea pig; of cancer; in Bhubaneswar, India (*see* SCIENCE).

Died. Joseph Morrell Dodge, 74, Detroit banker and a top U.S. economic troubleshooter; of complications following a heart attack; in Detroit. An unbending advocate of sound money and tight credit, Joe Dodge came to the attention of the White House in the early 1940s after he managed to convert a Depression casualty into the prosperous Detroit Bank & Trust Co. (present assets: $1.2 billion). Called upon to try his fiscal therapy on the inflation-plagued economies of postwar Germany and Japan, he became one of the chief architects of their phenomenal booms by counseling devalued currency and balanced budgets. Then as Eisenhower's budget director through 1954, Dodge performed deft surgery on the U.S. budget, whittling almost $7 billion from the deficit left by Truman and making possible the $1.6 billion surplus in 1956.

Died. Alberto Tarchiani, 79, Italy's Ambassador to the U.S. from 1945 to 1955, when he rallied U.S. moral and monetary support for Italy's new republic; an early, outspoken anti-Fascist who, as editor of Milan's influential Corriere della Sera in the early 1920s, and later as an indefatigable agitator exiled in Paris, was so unrelenting a foe of Mussolini's that he eventually found himself near the top of *Il Duce's* must-kill list; in Rome.

Died. Dr. Sidney Haas, 94, Manhattan pediatrician who in the early 1920s found cures for two of childhood's most troublesome ailments, discovering that minuscule doses of highly poisonous atropine would curb colic among infants (it is now also used by ulcer patients), and that a year-long diet of bananas would completely rehabilitate sufferers from celiac disease, which causes such acute diarrhea that one-fourth of its victims used to die from malnutrition; in Orange, N.J.

RELIGION

ROMAN CATHOLICS

Pope as Pilgrim

Yours is a land of ancient culture, the cradle of great religions, the home of a nation that has sought God with relentless desire. Rarely has this longing for God been expressed with words so full of the spirit of Advent as in your sacred books many centuries before Christ: "From the unreal lead me to the real, from darkness lead me to light, from death lead me to immortality."

—Pope Paul VI in Bombay

We are keen students of Catholic theology. We know the way in which St. Thomas Aquinas reconciled Christian with Aristotelian thought. In the same spirit, your council is now trying to reconcile Christian revelation with contemporary culture.

—India's President Radhakrishnan

The fond, impossible dream of Pope Paul VI, that pioneer of papal travel, is that some day he may go somewhere as a "simple pilgrim." That was how he wanted to style his trip to Bombay last week to attend the 38th International Eucharistic Congress. He envisioned himself meeting and perhaps ministering to the poor, the hungry, the sick. Scorning to charter a plane, he simply bought a first-class ticket (fare: $985.20).

But such a pilgrimage could not be. The Vatican, the Indian government, the relentless exigencies of the press, and even Air India foiled the Pope. The airline closed off part of the first-class compartment, provided a raven-haired stewardess in a striped silk sari, and painted the papal coat of arms on the plane. The Indians, as might have been foreseen, discouraged any extensive visits to the poor as an uncalled-for stress on the country's poverty. The Vatican sent along cardinals and priests and supplied tapes of Handel and Vivaldi to be played on the plane. Photographers crowded the plane, and made part of the trip a chaos of flashbulbs.

A Million Cheer. Thus the pilgrimage grew grand. On hand at Bombay's Santa Cruz airport to meet the Pope were India's diminutive Prime Minister Lal Bahadur Shastri, stately, goateed Moslem Vice President Zakir Hussain (wearing white Congress caps that paired with Paul's white skullcap), and the country's leading industrialist, J.R.D. Tata.

A million frantic Indians turned out to cheer the Pope, shoving and pushing wildly to get a glimpse of him. His white Lincoln Continental convertible took an hour and a half to crawl the 13 miles of highway from the airport to the Eucharistic Congress. Giant signs along the route proclaimed India's welcome: LONG LIVE THE POPE, NO GREATER LOVE HATH ANY MAN, JOY ICE CREAMS WELCOME PAUL VI. A bit strangely, a brilliant sign all awash in white lights on

PAUL VI IN BOMBAY

The poor had a message for him, too.

Marine Drive in Bombay blared: BIRTH CONTROL CENTER FOR SEX HEALTH.

Serving Mankind. The next 2½ days were filled with official functions, receptions, prayers at Roman Catholic churches, meetings with Catholic priests and nuns and representatives of India's religious communities—the dominant Hindus, the minority Moslems, Buddhists (*see cover*), Zoroastrians, non-Catholic Christians. Said the Pope to the religious leaders: "We must come closer together. We must come together with our hearts, in mutual understanding, esteem and love."

From far-off Assam came Catholic Naga tribesmen to represent India's poor, coals-to-Newcastle style. They gave the Pope a ceremonial spear. Paul sipped Coca-Cola with India's President Sarvepalli Radhakrishnan. At a Bombay orphanage he knelt to give first Communion to 22 small, crew-cut boys.

At the consecration of six new Roman Catholic bishops in Bombay, the Pope spoke of the mission of the church: "We are obedient to the love of Christ—that immense love, pouring forth upon all peoples, upon all the men of this earth." But this message, so earnestly and eloquently repeated, frequently got lost in the cheers of the crowd, which had essentially come to see the guru, the holy man from the West in the white cassock and skullcap. Many of the Hindus believed that to see the Pope and perhaps touch him would heal them or bring them luck.

Nothing but Good. Although he had mingled only fleetingly with India's poor, the Pope had seen the immense, absolute misery of millions. Along the highway to the airport he saw shacks of cardboard, wood and tin, and dirty puddles of water in which people bathe and wash their clothes. He had seen India's biggest problem—the ever-present emaciated mothers and the hungry children.

On Saturday Pope Paul winged back to Rome for a triumphal homecoming that contrasted with his almost furtive, predawn departure for India. Aboard the Alitalia jet, there was a brief scare when escorting Turkish jets flew too close, but mostly the Pope could relax and collect his thoughts and impressions. In India he had spoken to thousands, had been seen by millions. He had impressed them with his asceticism, humility, devotion to truth, man's welfare and peace. He had stressed the need for social justice, "food, clothing, and decent housing for millions." He had shown that the Roman Catholic Church is universal, bearing its message to Asia as well as the Western world. Assessing the impact of the Pope's trip, the Times of India concluded: "Nothing but good can emerge from his visit."

CLERGY

A Gentle Fundamentalist

To the office at 8 a.m. A day jammed with work: writing editorials, reading books for recommendation by the *Christian Herald's* book club, meeting with the boards of charities that operate a house for Manhattan's derelicts and five orphanages on the rim of Asia. And that night, a birthday get-together with friends to note that he, the Rev. Daniel Poling, editor of the *Christian Herald*, is 80 years old.

From Kenneth Wilson, the *Christian Herald's* executive editor, the octogenarian and the guests heard a eulogy of affection tempered with humor: "If there's a banner to be waved, he'll wave it. If he doesn't have an opinion, he'll get one while you are waiting. When everyone knows it is safer to let the dust settle first, often as not he is helping to create the dust. He has the uncanny knack 99% of the time of being found, when the dust does settle, on the side of the saints. The 1% represents, of course, his vote for Goldwater."

But Not Reactionary. In his score years, Dan Poling has whipp a mountain of dust. When he was school student in Oregon, his t told him: "Make your life count the most." For Poling that meant coming an ordained minister. In he was the Prohibition Party candi for Governor of Ohio (he lost, but mains an unwavering teetotaler). Dutch Reformed clergyman, he served at Manhattan's Marble Colle ate Church, first as pastor and, 1960, as minister emeritus. For the 37 years, he has been editor of *Christian Herald*, pulling it out of fi cial shambles, and building up its c lation to 450,000.

Poling, dubbed a "gentle fundam talist," says he is "conservative th not reactionary in theological mat During the 1960 presidential campa he publicly doubted that John Ke dy, if elected, could resist Vatican sure on his official acts. Later, after nedy made an unequivocal state for the separation of church and Poling declared himself satisfi the two men kept up a warm per correspondence. More recently, he cized Governor Rockefeller's di and remarriage to a mother of young children. In the past few he has taken up a crusade for planning. The *Christian Herald* times raps Catholic knuckles, but employs several Roman Catholics Jews in key jobs.

"But That's Negative!" When on Poling's grandchildren asked him, "H does it feel to be old?" he replied, "H should I know?" He is fit and Light brown eyes twinkle beneath bushy eyebrows. Says he of his proach to life: "I have always had in God, and trust in Him. Daily I re to myself, 'I believe.' I could sa doubt, I deny'—but that's negative a tragedy that we should spend ou ing on the negative side."

EDITOR POLING

99% on the side of the saints.

OVER
4,000,000
TRACTORS

Our new seal of achievement, quality and customer satisfaction

No other company has built so many millions of tractors.

Our four-millionth-tractor record includes all of the farm tractors which have faithfully served agriculture since the beginning of this century—and all of the International crawler tractors at work in both agriculture and construction. In addition to these four million powerful wheel and crawler tractors, we have made tens of thousands of International Cub Cadet® garden type tractors.

No other company has so many millions of satisfied users.

We are justly proud of the millions of IH tractors helping man's basic power needs around the world. Many tractors we have built are still in operation after 30 years or more—lasting proof of outstanding engineering and of the inherent quality found in all International Harvester equipment.

No other company has achieved such accomplishments in the tractor field.

It is impossible to match International Harvester's experience in designing, developing, engineering and manufacturing tractors, either in numbers or in excellence. We are now building tractors with from 7 to 700 engine horsepower!

Our tractors will always reflect this experience, research and quality.

Our future will not be based on the tractors we have built. It will rest instead on the new tractors we produce today and tomorrow. Those tractors, of whatever type they may be, must reflect all of the experience, research and quality knowledge we have gained in building the first four million International Harvester tractors.

We pledge that they will!

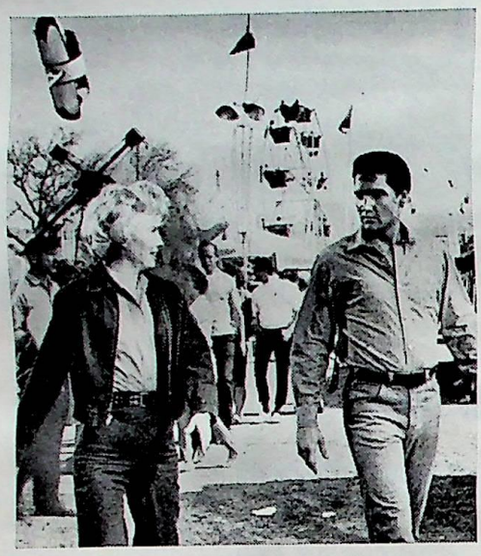
Freak Show

Roustabout. Step right up, folks. It's a carnival, and here come the freaks. Way down there is the midget, way up there is "the tallest man in the world." Behind that bush stands the bearded lady and over in the cutlery department the sword-swallower is just about to



STANWYCK & PRESLEY IN "ROUSTABOUT"
Loose lip on the midway.

show his guts. But say, what's that whatsit wriggling down the midway: that long damp thing with the pale-green skin and the pollywog eyes and the squirmy little mouth.

Sure enough, it's Elvis Presley. Just after the film begins he oozes up to his carnivalentine (Joan Freeman) and attaches that mouth to her face. She staggers back in alarm, but the old softie (Barbara Stanwyck) who owns the show takes a liking to the lunk and pays him to sing pretty for the people. He doesn't sing very pretty, but there are compensations—when he starts singing he stops acting. Anyway, just before the film ends Elvis presents a fairly stiff upper lip, pays off the mortgage, gets the girl. "Git closuh," he instructs her bluntly. "Ah give awff body heat." To doubt it would doubtless be unkind.

True to Form

The Model Murder Case. In England, a tidy little homicide nearly always turns out for the best. A model call girl is felled by an assassin's bullet. Suspicion naturally falls on the TV star next door. But one clue leads to another, and soon Chief Inspector Ian Hendry is up to his large firm chin in a gallery of smooth British character types. If the telly favorite didn't kill the girl, who did? The waterfront drifter she dated? Her neurasthenic mother? The sculptor? The passée opera diva?

Though true to formula, this stout mystery thriller efficiently hooks an audience and holds it. Revelations pile up, marking a trail of drugs, violence and death from posh London digs to homosexual dives to seedy Thames-side riverboats. Actor Hendry follows the spoor without woman chasing or wine tasting, as if James Bond had never been invented. Tough, realistic, dryly humorous, he behaves precisely like a harassed civil servant who can't find time to get to bed with his own wife, much less anyone else's. His performance ends, inevitably, with the declaration: "Everything seems to fit." And everything does. Just like the daily crossword.

Shostakovich Swings

Song over Moscow, for Western audiences, is a cinematic curio, a satirical Russian musical about young love embattled by status seekers, bureaucratic bumblers and the apartment shortage. Giddy and boisterous, the film gulps down its pill of social realist picture-painting and produces some fascinating side effects. It affords a sly peek behind the Iron Curtain, and seems to take all its bows facing West.

The songs are by Soviet Composer Dmitry Shostakovich, who blithely dissolves ideological conflicts in a burst of tuneful Slavic borsch. Occasionally the Magicolor screen becomes a hotbed of artistic freethinking, dissolving into sets that look very MGMsky, if not downright cubistic. The costumes are a Sears, Roebuck fashion show.

Belting it out are a group of rugged country cousins to the *College Swing* types that used to save the varsity show in Hollywood musicals of yore. These kids swing in an unfinished Moscow suburb called Cheremushki, "where skies are blue, and dreams come true," and where an empty flat gets heat in the summertime. "Don't worry, in the winter it'll be cold," quips Boris, a lumpish, curly-topped blaster on the construction crew. With everyone's dream swaddled in Red tape, and keys to the new flats hard to come by, Boris waltzes around a statuesque museum guide. Sergei, the truck driver, serenades the blue-eyed operator of a giant crane. And one hip-swinging blonde (the Betty Grable part) works her wiles on the doughy bureaucrat she has married to improve her standard of living. "There's nothing I wouldn't do for you," she teases. "But how can I do it in two tiny rooms?" Before virtue triumphs, *Moscow* establishes itself as a milestone of sorts. Despite its amateur-theatrical air, it displays the refreshing possibilities of Soviet sociology played solely for laughs.

CORPORATION

FMC...world-wide partner

Developing new ideas, new processes, new products and putting them to work in partnership with progressive people in many nations is a vital part of our business.

Global in scope, FMC Corporation now operates full-scale production facilities located in 13 countries, including diversified operations throughout the United States.

Typical of our world-wide capabilities in the fields of Machinery, Chemicals, Defense, Fibers and Films is a citrus juice processing plant in British Honduras, a hydrogen peroxide manufacturer in Japan, a rugged cargo carrier for the forces of freedom and cellophane for consumer products packaged in Europe. These activities are pictured on the opposite page.

For additional information regarding FMC products and services, write FMC International Information Bureau, P.O. Box 1178, San Jose, California, U.S.A. We welcome your inquiry.

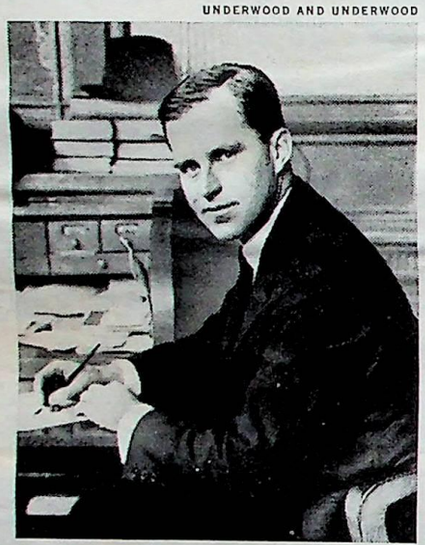
The Driving Will

THE FOUNDING FATHER *by Richard J. Whalen.* 541 pages. *New American Library.* $6.95.

Harvard is beating Yale 4-1. Two outs, last of the ninth. The Harvard pitcher (and captain) beckons to a lanky redhead on the bench to take over first base so that he can win his letter. Yale's last batter grounds out. The captain asks the sub for the winning ball, but he refuses to hand it over. "I made the put-out, didn't I?" snaps Joseph P. Kennedy.

"Joe was the kind of guy who, if he wanted something bad enough, would get it and he didn't care how he got it," recollects Joe's ex-teammate, who tells this story on him. In this case, Joe wanted his Harvard H, and Boston politicos pressured the captain to put him in the game. In other cases, Joe wanted considerably more. What he wanted and what he got are the subject of this fascinating first biography of President Kennedy's father.

UNDERWOOD AND UNDERWOOD



JOE KENNEDY AS BANK PRESIDENT (1916)
Popular with plutocrats.

The book began as an article in FORTUNE (January 1963) that was reprinted in LIFE. Biographer Whalen, an associate editor of FORTUNE, took leave from the magazine to write the book, which he did without any explicit help from Joe Kennedy or any other member of the family. But the available material is voluminous, and the story is vividly told and carefully documented.

Smiles and Spitballs. Grandson of an Irish immigrant, son of a barkeeper-politician, Joe Kennedy grew up in the rough world of Boston ward politics and wanted out. Though most Roman Catholic boys went to church schools, Kennedy's parents were wealthy and ambitious enough to send him to Harvard. There he mingled with Yankee plutocrats among the alumni, kept them supplied with choice tickets to football games. With his flashing smile and disarming frankness, Joe got along with most anyone. On a summer cruise to Europe, he spotted Heavyweight Boxing Champ Jack Johnson in the ship's lounge, promptly bounced a spitball off his massive dome. Johnson turned and glared. Kennedy smiled and introduced himself, danced with Johnson's pretty wife, and left with a card inscribed, "To Joe Kennedy, a mighty fine fellow."

With this kind of brashness, Kennedy fought for and won control of a Boston bank, made himself bank president at 25, and married Mayor John ("Honey") Fitzgerald's daughter Rose. When World War I broke out, Kennedy went to work for Bethlehem Shipyard in Boston as assistant manager, helped the yard break one production record after another. Chief thorn in his side was another ambitious young man, Navy Assistant Secretary Franklin Roosevelt, who drove such a hard bargain that he occasionally reduced Kennedy to tears, and once, when Kennedy refused to deliver two battleships to Argentina until payment was received, F.D.R. ordered the ships towed out of the yard.

Contemptuous of Capitalists. After the war, Kennedy left for more profitable pastures in New York, where he plunged into the stock market, earning a reputation as a clever bear. Always alert for a fast buck, he went to Hollywood in 1926, bought a film company, and started turning out low-budget potboilers. He became banker and confidant to Gloria Swanson, who named an adopted son after him. Kennedy, however, made the mistake of putting her in one of his pictures, *Queen Kelly,* which featured such gamy scenes as a priest administering the last rites to a madman dying in a bordello. The Kennedy-Swanson team split up in acrimony. "I questioned his judgment," Gloria Swanson told Whalen. "He did not like to be questioned."

After making some $5,000,000 in 32 months in the cutthroat movie industry, Kennedy pulled out; he also bearishly pulled out of the stock market in time to save his fortune from the 1929 crash. Fearing revolution and contemptuous of his fellow capitalists for not foreseeing the crash, Kennedy became an early, enthusiastic supporter of his old antagonist Franklin D. Roosevelt. He worked hard on William Randolph Hearst, who controlled the California delegation. Hearst finally came around, and Kennedy liked to boast that he was responsible, "though you don't find any mention of it in history books."

After the election, Roosevelt appointed Kennedy first chairman of the Securities and Exchange Commission. It was a shrewd choice. Kennedy knew his way around the exchanges and could not be bluffed; he was also eager to do a good job. Not only did he vigorously administer a rather clumsily written law; he reconciled business to the SEC and encouraged new capital financing in the depth of the Depression.

WITH JACK (1938)
Proud as a patriarch.

Shattered Career. As a reward [illegible] nedy was named ambassador to [illegible] land in 1938, where he found a [illegible] spirit in Prime Minister Neville [illegible] berlain, another businessman-[illegible] politician, and he eagerly [illegible] Chamberlain's appeasement [illegible] Believing that all the world's [illegible] be solved by clever horse trade, Ken[illegible] dy urged making a deal with [illegible] and he applauded the Munich [illegible] tion. Determined to intervene on [illegible] of Britain, Roosevelt eventually [illegible] on his pessimistic ambassador, [illegible] so convinced of Nazi victory that [illegible] objected to Americans' enlisting [illegible] British armed forces—on the [illegible] that Hitler might retaliate by [illegible] all U.S. citizens when he occupied [illegible] don. By the time he resigned in [illegible] Kennedy had worn out his welcome [illegible] England and was anathema to the [illegible] Deal at home.

His own career in politics [illegible] Kennedy concentrated on his sons [illegible] reers. "His would be the driving [illegible] theirs the legs that would go the [illegible] tance," writes Whalen. Joe contributed [illegible] not money alone but prodigious [illegible] to Jack's various election campaigns [illegible] Staying in the background, not trying [illegible] influence Jack's opinions, he [illegible]

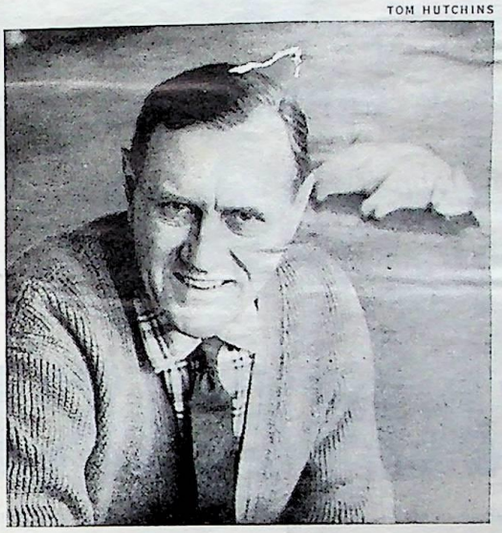
or toilet.

out becoming involved in any process of skin. She withdrew her hand, finally, out of reach of further experience."

Twisting Hands. White's acerbic eye and listening ear allow no part of Australia's mores to go unrecorded. In *Down at the Dump*, he describes the funeral of the town tart with Gogolian rambunctiousness. *Willy-wagtails by Moonlight* is an equally authoritative (and equally comic) account of a dinner party of two couples. The dim hostess, Nora, "made a point of calling her husband's employees by first names, trying to make them part of a family which she alone, perhaps, would have liked to exist." Her more earthy guest, Eileen Wheeler, had been a school chum. "She had tried to tell Nora one or two things, but Nora did not want to hear. Oh, no, no, *please*, Eileen, Nora cried. As though a boy had been twisting her arm. She had those long, entreating, sensitive hands. And there they were

TOM HUTCHINS



PATRICK WHITE
The separateness of man and man.

still. Twisting together, making their excuses. For what they had never done." And the evening climaxes when the visiting couple learns (by hearing the husband's tape recording of bird calls that accidentally runs on to include giggles and soft cries) that Nora's husband has been sleeping with his devoted secretary. Or should climax. In fact, both couples ignore the discovery, and go on drinking.

Here, as always, White's preoccupation is not with character. It is with the silence and void in which the characters live. Grumbled one critic: "Never before have Australians been asked to contemplate such vast ambiguities in their country and their souls."

Last of the Sweaty Saints

THE FRATRICIDES *by Nikos Kazantzakis.* 254 pages. *Simon & Schuster.* $5.

A fervent recorder of wars and revolutions, the late Nikos Kazantzakis knew that progress is often ushered in by violence. But the 1947-49 Greek civil war seemed to him beyond all reason. "The criminals have cut Greece in two, as if she were not alive," cries the priest-hero of his last novel. "And each piece has gone mad and wants to eat the other. I stand alone, deserted, and no matter whose corpse I see, my heart aches; because I see a part of Greece rotting." Kazantzakis' *The Fratricides* is a frantic, sometimes bombastic book, more sermon than novel, written, as it were, at the top of his voice. The old man, who died in 1957, did not go gentle into that good night.

Dancing on Coals. The town of Castello, perched high in the rugged, inhospitable Epirus mountains, has been split by the war. The Royalists still control the village; the Reds have taken to the hills. Every day the two forces meet in bloody, hand-to-hand combat, using rifles, knives, teeth and fingernails. It is because they have lived so close to one another that they fight so fiercely. No one excels Kazantzakis in portraying this love-hate ambivalence. In one memorable vignette, Kazantzakis tells how a group of Royalists and Reds shoot it out one winter's day in a ravine, and then, exhausted and wounded, huddle together for warmth as their lives ebb out.

Only one man in Castello refuses to take sides. Seventy-year-old Father Yánaros is the last of a distinguished line of Kazantzakis heroes—sweaty, seedy, tortured saints, torn between faith and doubt, hope and despair, a yearning for solitude and a compulsion to aid their fellow men. Yánaros travels through life as if on a tightrope, or as he puts it, dancing barefoot on hot coals: "Every saint is a firewalker. And so is every honest man in this hell we call life."

Dreaming of a Last Judgment in which God not only shows mercy to everyone but in which even devils exchange their horns for wings, Yánaros determines to rely on the good will of both sides to end the war. He goes up into the hills one night, offers to surrender the town to the Communists if they promise to spare its inhabitants and allow them freedom. The Communists agree, and Yánaros departs with a fresh understanding of Communism as "the heart of man awakening and growling because it was hungry."

Freedom from God. Father Yánaros returns to town and persuades his fellow citizens to overpower the Royalist leaders and truss them up. The Communists enter the town unmolested, announce that freedom will come "later," and that all their enemies will be shot, including Yánaros. "Night falls upon us and the massacre of night begins," the priest cries. "Now the beasts—birds, mice, caterpillars, jackals—will leap on one another to kill or kiss. God, what kind of world have you created? I cannot understand!"

Kazantzakis is made of sterner stuff than his doomed hero. It is clear from all his works that the greatest [illegible] ness is to be found in the [illegible] fering, or as Kazantzakis [illegible] Crucifixion and Resurrection are one. Man helps God, as [illegible] as He helps

"I Am Disgusted"

So spoke an architect with obvious dislike for tradition and conformity. TIME quoted him, and presented his views on the direction architecture should take in the Modern Living section, gathering place for new ideas on everything from housing to baby formulas. Ideas with merit invariably find their way into TIME. In doing so, they attract the attention of millions of TIME families around the globe—themselves ever receptive to progress and innovation.

Just what is "Service in the Air"

...sober question calls for a similar answer. Through-
...years, service in air travel has been made a matter of
...superlatives. They all sound great—but they tell you

...en, *is* service in airline operation? To us, it's the sum
...less trifles. Making each of them perfect is the secret
success.

...a mosaic: It's a painstaking assembly of countless tiny
Putting every single one in its right place makes the
picture a work of art.
...our tiny stones in the right place is the coffee machine
...and each of our modern jets. The fresher your coffee
...ter its flavour and aroma.

Another: massive silver cutlery and genuine porcelain on all our aircraft. No other setting would do justice to the meals we serve on the way.

Another: the hot towels we offer you on all our long-distance flights to wipe your face and hands—it's so refreshing!

To say nothing of our hostesses and stewards—their skill, knowledge, fluency in languages.

These examples—and scores of others—all imply the same: An independent airline—modern, reliable, friendly—always succeeds in giving you the best there is in everything. Find out how much it means on your next trip: A warm welcome awaits you on board.

Now, Amsterdam Airport's Tax-Free Shopping Centre sells these 11 famous brands of whisky at only $ 2.00 a bottle!

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Why?

I give you another good reason to visit Europe's largest Tax-Free Shopping Centre.

Here you can also save up to 60% on cameras, on tape recorders, on watches, on binoculars, to name just four of several hundred bargains. (Amsterdam has the only airport where you can buy a tax-free car on the spot, too). Besides, since the airport is only 20 minutes from surprising Amsterdam itself, you'll find it easy to reach that city's wealth of additional bargains.

What we're trying to say is that, with Christmas just around the corner, you can hardly afford not to come to Amsterdam to do your Christmas shopping.

You'll have a wonderful time while you're at it, too!

Why are we telling you all this? Because KLM Royal Dutch Airlines is the only airline in the world whose network - 104 cities - centres on Amsterdam.

Going to or via Amsterdam on KLM is easier than on any other airline. Ask your travel agent. He'll tell you.

And have a Merry Christmas.

TELEVISION

Wednesday, December 16

CBS REPORTS (CBS, 7:30-8:30 p.m.).* A program devoted to Cellist Pablo Casals, now almost 88, featuring a visit to his home in Puerto Rico.

Thursday, December 17

PERRY COMO'S MUSIC HALL (NBC, 10-11 p.m.). Filmed in Rome, Perry's show offers the Sistine Choir, Soprano Roberta Peters and Puppeteer Burr Tillstrom.

Saturday, December 19

LIBERTY BOWL GAME (ABC, 12:30 p.m. to end). West Virginia plays Utah at Convention Hall in Atlantic City, N.J., scene of last summer's Democratic National Convention.

BLUEBONNET BOWL GAME (ABC, 3:30 p.m. to end). Mississippi plays Tulsa in Houston.

Sunday, December 20

CBS SPECIAL (CBS, 10-11 a.m.). Metropolitan Stars Giorgio Tozzi, Charles Anthony and Helen Vanni sing Berlioz' *L'Enfance Du Christ* with the CBS Symphony Orchestra.

DISCOVERY (ABC, 11:30 a.m.-12 noon). A look at Liverpool, England, home of the Beatles, Mersey Monsters, Undertakers and other musical mobs.

NBC OPERA (NBC, 3-4 p.m.). Gian Carlo Menotti's Christmas opera, *Amahl and the Night Visitors,* a rebroadcast of last year's performance starring Kurt Yaghjian as Amahl. Color.

NBC CHILDREN'S THEATER (NBC, 4-5 p.m.). Music in the round for six- to twelve-year-olds, encouraging audience and at-home participation. Color.

PROFILES IN COURAGE (NBC, 6:30-7:30 p.m.). Walter Matthau stars in the story of Georgia Governor John Slaton, who in 1915 dared commute a controversial death sentence.

Monday, December 21

THE COMING OF CHRIST (NBC, 8:30-9 p.m.). Fourth annual presentation of "The Coming of Christ," the story of Christ's early years told through some 300 paintings of the late Middle Ages and Renaissance. Color.

Tuesday, December 22

BELL TELEPHONE HOUR (NBC, 10-11 p.m.). Special Christmas program starring Singer Howard Keel, Dancers Violette Verdy and Edmond Novak. Color.

THEATER

On Broadway

POOR RICHARD. Jean Kerr is still wearing the life-of-the-party grin from *Mary, Mary,* but behind the witticisms something sobering denies that life is that kind of party at all. With Alan Bates playing a lyric poet turned wench charmer and lush, the comedy is less funny than *Mary, Mary* but more probingly perceptive.

THE OWL AND THE PUSSYCAT. Diana Sands and Alan Alda give top performances: Sands is a prostitute with a tongue of brass who moves in on a bookish clerk (Alda) in Bill Manhoff's flip and funny version of the contemporary form of the mating dance.

LUV. Eli Wallach, Anne Jackson and Alan Arkin take a slapstick and tongue-wagging jaunt on a suspension bridge in Murray Schisgal's spoof of the theater of the absurd. Director Mike Nichols mixes word gags and sight gags with unerring skill.

OH WHAT A LOVELY WAR. For this music-hall documentary, Joan Littlewood uses laughter to hit where it hurts, blending sentimentality, song and satire. An adroit cast led by Victor Spinetti plays the men and women who lived, joked and suffered through World War I.

COMEDY IN MUSIC. Victor Borge toys with the ivories and tickles his audience in a 1½-man romp with Co-Pianist and Foil Leonid Hambro.

FIDDLER ON THE ROOF. One of the most remarkably versatile talents of the contemporary stage, Zero Mostel breathes nostalgic life into this musical comedy derived from Sholom Aleichem's tales of Tevye and his five daughters.

Off Broadway

THE SECRET LIFE OF WALTER MITTY. Mitty might have difficulty recognizing himself in this musical exercise thinly based on the Thurber character, but a clever cast and fresh song and dance provide a zesty evening.

CAMBRIDGE CIRCUS. A group of zanies have taken the British revue back to beyond-the-fringe lunacy in a parade of hilarious vignettes.

RECORDS

Christmas Music

Never before has the music of all ages been so munificently available. There are eight versions of Handel's *Messiah;* among the best are a dramatic, big-scaled production by Sir Thomas Beecham (RCA Victor) and a more authentic Baroque version conducted by Sir Adrian Boult, with Joan Sutherland (London). LProliferation has also produced such esoterica as Gregorian chants sung by Dominican nuns (Philips), and a class-conscious account of the Nativity written by Scholem Asch and read by Pete Seeger. Other Christmas offerings:

THE PLAY OF HEROD (2 LPs; Decca) is a 12th century church music drama intended at the time "to fortify the faith of the unlettered vulgar." It is sung in Latin under the direction of Noah Greenberg.

HEINRICH SCHÜTZ: THE CHRISTMAS ORATORIO (Angel). Born 100 years before Bach and Handel, Schütz was their musical ancestor, but his oratorio is beautiful in its own right. Hans Thamm conducts his Windsbach Boys' Choir and a small ensemble that gets arresting effects with such archaic instruments as the clarino and the theorboe.

J. S. BACH: CHRISTMAS ORATORIO (3 LPs; Musical Heritage). A few choral passages are muddy, but Fritz Werner and the Pforzheim Chamber Orchestra give the oratorio a moving and bright performance. Tenor Helmut Krebs is an [illegible] tionally expressive Evangelist, [illegible] the voice of Soprano Agnes Giebel floats lightly in a nimbus of violins.

J. S. BACH: MUSIC OF JUBILEE (Columbia). Virtuoso E. Power Biggs has ap-

* All times E.S.T.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

propriated for his organ and a chamber orchestra whatever music of Bach's he felt was jubilant enough. Thus Biggs performs a good many songs without words, including *Jesu, Joy of Man's Desiring* and *Ah, Dearest Jesu* from the *Christmas Oratorio*. Purists will object, but the jubilation is continuous and unrestrained.

SING NOWELL (London) shows that 15th century verses about 15th century "Nowell" fit 20th century music about 20th century Noel. New carols and new arrangements of familiar ones are by leading British composers, including Benjamin Britten, Peter Racine Fricker, Malcolm Williamson. The largely *a cappella* performance by the Elizabethan Singers is accented by fine solos and organ.

CINEMA

TO LOVE. Lust at first sight is good for grand though gross guffaws in Swedish Director Jörn Donner's tale of a repressed young widow (Harriet Andersson) who meets a fast-moving travel agent at her husband's funeral and gives nary a thought to the mourning after.

IL BIDONE. Though it sometimes seems a fumbling first version of *8½*, this Italian tragicomedy about a smalltime swindler (Broderick Crawford) in bishop's clothing stirs interest as the missing volume of Director Federico Fellini's "trilogy of solitude" begun with *La Strada* and ending in *Le Notti di Cabiria*.

THE PUMPKIN EATER. Three husbands, a swarm of progeny and a nervous collapse leave a well-kept wife with an unkempt psyche in this marriage-go-round directed by Britain's Jack Clayton (*Room at the Top*) and played like a house afire by Anne Bancroft.

SEND ME NO FLOWERS. As a suburban hypochondriac who feels the end is nigh, Rock Hudson prepares Wife Doris Day for widowhood, while Tony Randall keeps the fun alive as a macabre neighbor.

SÉANCE ON A WET AFTERNOON. An unhappy medium (Kim Stanley) and her timorous spouse (Richard Attenborough) bumble through a kidnaping plot, and Director Bryan Forbes turns it into one of those throat-drying English thrillers in which every second seems split.

MY FAIR LADY. Bountiful as ever, the musical classic by Lerner and Loewe out of G. B. Shaw retains Professor Rex Harrison as the Edwardian phonetics expert who transforms Audrey Hepburn from a cockney flower peddler into a proper *Lady*.

WOMAN IN THE DUNES. Trapped in a hovel at the bottom of a sand pit, a man and woman find that their hellhole offers the only real freedom in this luminous, violent allegory by Japanese Director Hiroshi Teshigahara.

TOPKAPI. Istanbul is a thieves' carnival, with Melina Mercouri eying the emeralds and Peter Ustinov stealing the laughs in Director Jules Dassin's droll comedy of love and larceny, his best since *Rififi*.

BOOKS

Best Reading

THE FOUNDING FATHER, by Richard Whalen. The facts of Joe Kennedy's career, the fortunes he made in oil and real estate, and his swift conversion of money into power for himself and his sons need no embellishment; his life is a blueprint for the wheeler-dealer and the kingmaker.

HENRY ADAMS: THE MAJOR PHASE, by Ernest Samuels. Covering the last 30 years of Adams' life, this final volume of [illegible] uels' massive biography tells of the [illegible] and thinking that influenced Adams in [illegible] writing of his greatest books, *Mont-Michel and Chartres* and the classic *Education of Henry Adams*.

THE HORSE KNOWS THE WAY, by [illegible] O'Hara. More short stories by one of [illegible] all-time masters of the art. With [illegible] fourth collection in as many years, O'Hara is threatening to cut off the supply to concentrate on long fiction.

SELECTED LETTERS OF ROBERT FROST, edited by Lawrance Thompson. This collection shows the poet's wit, shrewdness, [illegible] —and also the courage that saw him through an unrelenting succession of [illegible] ly tragedies.

A LITTLE LEARNING, by Evelyn Waugh. The first part of the British satirist's [illegible] biography is a warm, impressionistic recollection of childhood, a spirited account of high living at Oxford and a miserable [illegible] as a master in a bleak boys' school in Wales—in fact, almost all the ingredients of Waugh's brilliant first novel, *Decline and Fall*.

HERZOG, by Saul Bellow. The [illegible] an unwanted divorce and custody [illegible] and the psychological desolation [illegible] flict on a man of good will are [illegible] lessly pursued by Bellow.

LIFE WITH PICASSO, by Françoise Gilot. In a rich year for memoirs, this account of the great artist by his ex-mistress [illegible] nine years holds a surprisingly high [illegible] Mlle. Gilot is frank about her own [illegible] tions as well as Picasso's, making [illegible] revelation of living with genius mer[illegible] ful as well as authentic.

MARKINGS, by Dag Hammarskjöld. [illegible] disturbing book is so in demand that [illegible] out of stock across most of the U.S. [illegible] a record of the religious doubt and [illegible] cal exaltation that possessed the late Secretary-General during times of [illegible] and tedium.

OF POETRY AND POWER, edited by Erich Glikes and Paul Schwaber. One of the [illegible] books of enduring significance among [illegible] 60-odd about President Kennedy published since the assassination. It is a [illegible] of poems, written in grief and occasionally in anger, by many of America's [illegible] talented poets.

Why Thailand's Telephone System Is Being Expanded With Ericsson Equipment

The first public telephone exchange in Thailand was installed by Ericsson in 1886.

In the last few years, the Telephone Organization of Thailand has taken decisive steps towards expanding and modernizing the telephone system of Thailand. Since 1960 Ericsson Crossbar equipment has been specified to provide modern automatic telephone service to a total of 32,000 subscribers in Bangkok and other centers.

Telephone administrators in Thailand and more than 70 other countries specify Ericsson when they want the finest in modern systems or components — equipment that features realistic initial cost and negligible maintenance.

LETTERS

Charred Hearts & Politics

Sir: It is expecting quite a lot of the Vietnamese [Dec. 11] to stand by patiently and watch their country slowly disintegrate for a political principle that to them is not only an abstraction but also an invitation to death and destruction. Now, against their will, these people have become the pawns in an ideological struggle between the great powers. It is no wonder that, contrary to Buddhist teachings, violence erupted in this atmosphere of frustration and fear. We fail to see that statics dislike our disregard for their ancient cultures. Expecting them to adopt our attitudes and political institutions can only lead to regression, which may violently alter the course of history.

WILLIAM GILBERT

Skokie, Ill.

Sir: You write about "believers" who tossed hand grenades, and teen-agers "supposedly raised in 'the Middle Way,'" etc. I suppose that your American soldiers who have occupied Viet Nam against the wishes of the people are representative of the Christian and Democratic principle of charity and believe that all people have the right to determine the method by which they will be governed. The fact is that if you were to give the people of South Viet Nam a free choice of government, these people would unhesitatingly throw out the so-called American advisers. Then, without the necessity of "Communist" interference, they would choose a government that would respect all kinds of political and religious ideas without favoring any one of them.

CHIN MEI KAO

New York City

Sir: Your cover story on Buddhism was at times hasty, flip, sarcastic, snide, snippy, pompous, preachy, and in bad taste. With these few exceptions, it was fine.

R. F. BAKER

Sir: In recounting the myth of Buddha's conception, you have supplied us with the granddaddy of all elephant jokes.

ALBERT SACH

Philadelphia

Massacre & Mercenaries

Sir: Your cover story about Dr. Carlson and the Congo [Dec. 4] was all the more moving because of its restraint. Carlson, picked out and identified but carefully not glorified, shines like a good deed in a very naughty world—to whose conscience you spoke very clearly.

JAMES BYROM

St.-Jacques-de-Grasse, France

Sir: As Dr. Paul Carlson's pastor, I wish to express my deepest appreciation for the magnificent way that you told the story of his martyrdom.

ROBERT A. HONNETTE
Rolling Hills Covenant Church
Rolling Hills Estates, Calif.

Sir: Artist Vickrey has captured a look of unbelieving disappointment in the face of the late Dr. Paul Carlson. This is an emotion that clearly expresses the futility of many efforts in the Congo, but was nevertheless an emotion not shared by that indefatigable missionary.

ELLIOTT BRÄM SEWELL

Louvain, Belgium

Sir: The picture of the corpse of Dr. Paul Carlson is an offense to the man, his work, and the mission to which he dedicated his life. You have in this picture brought dishonor to an honorable man.

LANCE A. HERRICK

Evanston, Ill.

Sir: Although not an Afro-American, but nevertheless an American Negro, I was outraged by your reporting of the Congo massacre, with your sophomoric generalizations on the savagery of the blacks on the African continent. I suggest that if Americans were able to remember their own history, they would find these Simbas no more savage than those responsible for Hiroshima and Nagasaki. Perhaps one day when the white people of the West, and particularly the whites of America, can become true humanitarians, then the African states can bemoan the bestiality at Stanleyville.

L. S. SENHOUSE JR.

Newark

Man of the Year

Sir: I nominate the Chairman of the Communist Party in the People's Republic of China, Mao Tse-tung. This insidious and inscrutable leader of one-fourth of the world's population now holds his finger on the trigger of China's newly developed atomic device. He most certainly altered the course of history in 1964.

BERNARD K. FRANK

Portland, Ore.

Sir: The scientists who helped China achieve a place in the Atomic Club.

SHUAIB MIRZA

Rahimyar Khan, Pakistan

Sir: Nikita Khrushchev, since he may never again be eligible.

ROY C. BOYER

Warren, Mich.

Sir: There can be no suspense about your Man of the Year: L.B.J.

LAWRENCE W. PAHL

Chicago

Sir: Barry Goldwater, the man who persuaded millions of Republicans to vote Democratic.

STUART CUTHBERTSON

Glendale, Calif.

Sir: John F. Kennedy, whose memory has been the inspiring force of 1964.

PAUL F. FABERMAN

Piedmont, Calif.

Sir: Ambassador and Mrs. Joseph P. Kennedy, parents of the century, whose two sons were just elected to full-term seats in the U.S. Senate. No other couple ever produced a President of the U.S., three U.S. Senators, a member of the House, an Attorney General, and two World War II heroes, both of whom are now among the honored dead.

ERNEST L. MCLAUGHLIN

Union, S.C.

Sir: U Thant of the U.N.—the man entrusted with the toughest job on earth: keeping the peace of the world in the '60s of the 20th century.

TET KHAUNG

Myingyan, Burma

Sir: The commuter! You should run a story pointing out the woes of us tax-paying, strap-hanging, deficit-burdened, tail-crushed 8-to-6 slobs.

G. G. COONEY

Marshfield, Mass.

Sir: Brooks Patterson.

BROOKS PATTERSON

Detroit

Ire in Omaha

Sir: I do not know why you keep putting your joke section under "Art" in your magazine. Artist Johns [Dec. 4] lets his beer go to his head, his beer cans to the canvas, and your Art section to pot!

W. A. MURDOCK

Omaha

Self-Help in Louisiana

Sir: The fruit-cake manufacturer you mentioned in regard to the Poverty Program [Dec. 4] is the Southern Consumers' Cooperative. A majority of its members and officers are Negroes. For five years, S.C.C. has carried out an intensive program of education in cooperation and economic matters among the extremely poor people, colored and white, of southwestern Louisiana. Eight hundred S.C.C. members have recently raised from their meager incomes the capital to finance a small fruit-cake factory at Lake Charles, La. Since this is a seasonal operation, S.C.C. sought from the Office of Economic Opportunity a $25,000 loan with which it is purchasing equipment for the production of other confections during the off-season. The valiant effort, against great odds, by officers and members of S.C.C. to help themselves out of poverty may be among the standards that prompted Sargent Shriver to approve the $25,000 loan.

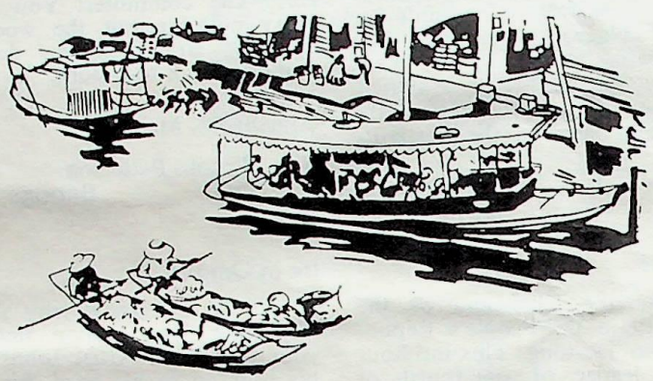
"We're "Best" in Bangkok



Bangkok has long been a favourite port of call for Cathay Pacific and our many Thai friends are full of praise for (among other things) Cathay Pacific's fast frequent flights through the Orient, the wonderful friendly in-flight service, our fine foods and wines and the skilful pilots and crew. Years of experience have given Cathay Pacific unquestioned leadership, so next time you fly, choose Cathay Pacific—finest flight in the Orient.

Advice to the Distressed

Sir: Re your article about courts and mental illness [Nov. 20], legal consignment to a mental hospital means loss of some legal rights for at least one year after discharge. It also means permanent assignment to the list of suspicious characters, at least in the eyes of the average person. This may result in family breakups, loss of job opportunities and, worst, loss of self-esteem. Nothing in this country more clearly endangers personal freedom. Good advice to someone in a state of emotional distress is to try to act normal—particularly if he has been involuntarily into a psychiatrist's office—for he is being watched. Also, he should not express what he is thinking, for it is likely to be irrational anyway.

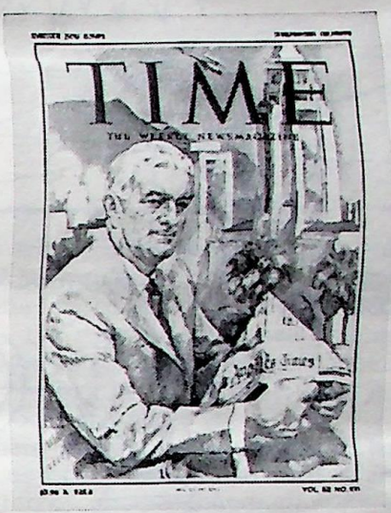
A letter from the PUBLISHER

Bernhard M. Auer

THE Norman Chandlers of Los Angeles this week join a rather select club. In the more than 2,100 issues of TIME, only 16 men and their wives have, until now, been separate cover subjects. With Buff Chandler's appearance this week, some seven years after her husband (July 15, 1957), they become the 17th set.

Most of the other cover couples were government leaders and their wives, such as George V of England and Queen Mary back in the '20s and '30s, or John F. Kennedy (who appeared seven times) and Jackie (Jan. 20, 1961). Among the few nongovernmental couples on the list are the notable names of John D. Rockefeller Jr. and his wife Abby Aldrich, and Albert Einstein and his wife Elsa, who was the subject of a cover story (Dec. 22, 1930) that told how she cared for her great but absent-minded husband. Other couples, such as Alfred Lunt and Lynn Fontanne (Nov. 8, 1937), have appeared on the cover together. And some show business people are somewhat hard to classify: for example, Ava Gardner was on the cover (Sept. 3, 1951) before she married Frank Sinatra, and he made his appearance (Aug. 29, 1955) after they were separated.

Both Norman and Buff Chandler were painted from life by Henry Koerner, who saw Buff as "a goddess hovering over the city" of Los Angeles. He posed her with a model of the new Los Angeles Music Center, used a rich blue cloth to hang in for the city's sky, and added his impressionistic view of Los Angeles at night from the window of his hotel room. When the portrait was nearly complete, Mr. Chandler took a look and found it a good likeness of Mrs. Chandler. Then, possibly



NORMAN CHANDLER

thinking also of his own portrait, he told her in reassuring tones: "Henry, you know, never flatters." Returning the compliment, Painter Koerner, who generally finds men easier to deal with ("Women are more critical"), pronounced both the Chandlers good subjects.

Among the couples in the select TIME cover club, Norman and Buff Chandler are unique in the area of subject matter they represent. Norman Chandler was the subject of a story that turned around the part his Los Angeles Times played in the development of the city, while Mrs. Chandler is the central figure in a Modern Living story because of her great success as a leader in the cause of culture. She is eloquent on the subject. She told her story to Los Angeles Bureau Chief Marshall Berges in a series of conversations, ranging over four days, that ran to 15 hours on a tape recorder. Off that tape came a major part of a story analyzing the remarkable surge of interest and investment in culture that has spread all across the U.S.

THE U.S.

RACES

Two Perspectives—One Goal

Rarely in a single week had two Americans spoken with greater authority and eloquence on the contemporary condition of man. In Oslo, where he accepted the Nobel Peace Prize for 1964, the Rev. Dr. Martin Luther King Jr. spoke with the insight of a Negro who has led his race's monumental struggle without ever losing the faith and idealism that gave inspiration to his people. Half a world away in Washington, Lyndon Johnson talked from the broader perspective of the presidency, where pragmatism, no less than idealism, is a prime quality of leadership. Both men served their purposes well.

In moving, measured cadence, King told an audience that included King Olav V: "I am mindful that only yesterday in Birmingham, Alabama, our children, crying out for brotherhood, were answered with fire hoses, snarling dogs and even death. I am mindful that only yesterday in Philadelphia, Mississippi, young people seeking to secure the right to vote were brutalized and murdered.

"Therefore, I must ask why this prize is awarded to a movement which is besieged and committed to unrelenting struggle; to a movement which has not won the very peace and brotherhood which is the essence of the Nobel Prize."

An Audacious Faith. "After contemplation, I conclude that this award which I receive on behalf of that movement is profound recognition that nonviolence is the answer to the crucial political and moral question of our time—the need for man to overcome oppression and violence without resorting to violence and oppression.

"I accept this award today with an abiding faith in America and an audacious faith in the future of mankind. I refuse to accept the idea that man is mere flotsam and jetsam in the river of life which surrounds him. I refuse to accept the view that mankind is so tragically bound to the starless midnight of racism and war that the bright daylight of peace and brotherhood can never become a reality.

"I believe that even amid today's mortar bursts and whining bullets, there is still hope for a brighter tomorrow. I believe that wounded justice, lying prostrate on the blood-flowing streets of our nations, can be lifted from this dust of shame to reign supreme among the children of men.

"Today I come to Oslo as a trustee, inspired, and with renewed dedication to humanity. I think Alfred Nobel would know what I mean when I say that I accept this award in the spirit of a curator of some precious heirloom which he holds in trust for its true owner—all those to whom beauty is truth and truth, beauty—and in whose eyes the beauty of genuine brotherhood and peace is more precious than diamonds or silver or gold."

UPI

DR. KING & WIFE IN OSLO†
Nobel would understand.

"I Do Not Agree." With equal determination and solemnity, his fists clenched, President Johnson leaned across a rostrum in Washington's Sheraton-Park Hotel and addressed some 400 civil rights and Negro leaders at a Community Action Assembly called by the National Urban League. "One of the Presidents I admire most signed the Emancipation Proclamation 100 years ago," he said. "But emancipation was a proclamation and was not a fact. It shall be my purpose, and it is my duty, to make it a fact." With that, his audience rose and flooded the hall with a torrent of applause.

"Until every qualified person," continued Johnson, "regardless of the house where he worships or the state where he resides or the way he spells his name or the color of his skin—until he has the right unquestioned and unrestrained to go in and cast his ballot in every precinct in this country, I am not going to be satisfied.*

"There are those who say: It has taken us a century to move this far, and it will take another hundred years to finish the job. Well, I am here to say to you tonight that I do not agree. Great social change tends to come rapidly in periods of intense activity and progress before the impulse slows. I believe we are in the midst of such a period of change.

"There are those who predict that the struggle for full equality in America will be marked by violence and hate; that it will tear at the fabric of our society. Well, for myself, I cannot claim

* Toward that end, Johnson announced that he has appointed Vice President-elect Hubert Humphrey to coordinate all federal activities in the civil rights field, including those of the Justice Department's Civil Rights Division, the Civil Rights Commission, the President's Committee on Equal Opportunity in Housing, the President's Committee on Equal Employment Opportunity, and the Community Relations Service.

† Faced by Norway's Crown Prince Harald (left) and King Olav V.

to see so clearly into that future. I just do not agree. I know that racial feelings flow from many deep and resistant sources in our history, in the pattern of our lives and in the nature of man. But I believe there are other forces, that are stronger because they are armed with truth, which will bring us toward our goal in peace. There are our commitments to morality and to justice, which are written in our laws and, more importantly, nourished in the hearts of our people. These commitments, carried forward by men of good will in every part of this land, will lead this nation toward the great and necessary fulfillment of American freedom. In this way, our peoples will once again prove equal to the ideals and the values on which our beloved nation rests."

from Texas. Johnson was in fine fettle. Before toasting the Queen, he introduced nearly everyone at the table: "Our own beloved Chief Justice Warren. The Vice President-elect, Mr. Humphrey. The next chairman of the Committee on Foreign Relations of the Senate—if the Republicans come to power—Mr. Hickenlooper. Our own Secretary of State, Dean Rusk. Our Secretary of Defense, Bob McNamara. Our Secretary of the Treasury, Mr. Douglas Dillon. One of the great leaders of our time, the former Secretary of State, Mr. Dean Acheson. Mr. Lewis Douglas, former Ambassador to Great Britain. Now Lew, you stand up a little longer. There are some girls down here who didn't get to see you . . ."

Wilson congratulated Johnson on his

Fears about the finger.

FOREIGN RELATIONS

Into the Pool

Accompanied by a 23-man team of advisers, Britain's Prime Minister Harold Wilson arrived in Washington last week for two days of intensive talks with Administration officials. This was his first visit to the U.S. since the elections, and it was occasioned by the effort to settle the problems of the nuclear multilateral-force idea proposed by the U.S. and so far embraced enthusiastically only by West Germany. Wilson wanted to "throw our proposals into the common pool of Western thought" —and Johnson wanted to hear him out.

"Stand Up, Lew." There were, of course, the social amenities. To a state dinner Lyndon invited a varied group including Dr. Benjamin Spock, everybody's baby doctor (who confided that he may picket the White House in protest against MLF), Dan Blocker, the strapping "Hoss" of TV's *Bonanza*, Mrs. Robert V. H. Duncan, president of the Daughters of the American Revolution, and nine relatively unknown couples "great victory" in the November election, and referring to his own narrow win, observed wryly: "It may be if we took the elections as seriously as you, we would have had a majority like yourself. All I can say is, if the British people were free to express their votes in your election, your majority would have been even better than it was."

Unity & Sympathy. Partying aside, there still remained MLF. The two leaders hit it off so well in their private talks and in conferences with their advisers that Wilson declared elatedly that the talks were "completely successful" and that "there is a total identity of view between the U.S. Administration and ourselves" on how to approach other allies on nuclear issues.

Wilson and Johnson agreed that the main purpose of MLF, whatever its ultimate form, was to stem nuclear proliferation. Explained Wilson: "The main emphasis has been on our determination to strengthen and unify the joint nuclear responsibilities of our partners and ourselves in such a way as to prevent the spread of nuclear weapons." Without MLF, this reasoning goes, West many might eventually demand its nuclear force; De Gaulle's *force de frappe* is enough of a headache.

But Wilson stood firm on British sistence that an MLF must be than the U.S. proposal for a fleet of ships armed with nuclear manned by crews of mixed He suggested that Britain might mit its entire nuclear deterrent ing V-bombers and Polaris now abuilding, to such a force. and his advisers received this with some interest.

The Prime Minister also softened earlier denunciation of the concept. He is not opposed to manning"; he only objects to posals which recommend dropping fundamental American veto" over firing of nuclear weapons. Wilson sistence on such a U.S. veto was to calm British fears that West many might get its finger on clear trigger through MLF. assured him that the U.S. will veto in any event.

Ends & Means

Always ready with a sharply view of U.S. foreign affairs—and words to express it—is Dean Acheson, ex-Secretary of State and now a son Administration troubleshooter. Amherst College in Massachusetts week Acheson gave his version of to achieve an effective foreign Excerpts:

"The righteous who seek to foreign policy from ethical or principles are as misleading as the ern Machiavellis who would conduct foreign relations without regard What passes for ethical standards governmental policies in foreign is a collection of moralisms, and slogans which neither help guide but only confuse decisions."

Used & Reused. "One of the often invoked and delusive of maxims is the so-called principle self-determination. In the dispute over Cyprus, it has been voked by nearly all parties to the gle to support whatever they were porarily seeking to achieve—by Cypriots to justify revolt against rule, by Archbishop Makarios to port an independent government the whole island, by Greek Cypriots foundation for *enosis* with Greece, by Turkish Cypriots for partition of island and double *enosis*, union of part with Greece and the other Turkey.

"Another set of moralisms and ims crops up to bedevil discussion decision about what is broadly 'foreign aid.' A good deal of it comes from the anthropomorphic to regard nations as individuals and ply to our own national conduct maxims for individual conduct—

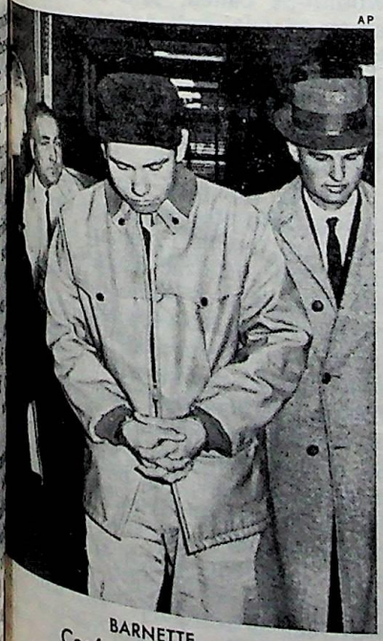
If ...o object that is no different from ...ying that the end justifies the means, ...must answer that in foreign affairs ...nly the end can justify the means, that ...is is not to say that the end justifies ...s means or that some ends can jus... ...anything.

"The end sought by our foreign pol... ...the purpose for which we carry on ...tions with foreign states, is to pre... ...e and foster an environment in ...ich free societies may exist and flour... ...Our policies and actions must be ...ed by whatever they contribute to or ...tract from achievement of this end."

CIVIL RIGHTS

...ategic Retreat

...n September, one month after the ...ies of three civil rights workers were ...nd hidden beneath an earthen dam ...e Philadelphia, Miss., a Justice De... ...ment lawyer went before a federal ...nd jury to seek indictments against ...eral suspects. Instead, the jury in...



AP

BARNETTE
Confession claimed.

...E, DECEMBER 18, 1964

dicted five Mississippians—among them Neshoba County Sheriff Lawrence Rainey and Deputy Sheriff Cecil Price —not for involvement in the triple murder but for violation of the civil rights of local Negroes. Whatever evidence the Justice Department offered in connection with the murder of the civil rights workers was apparently insufficient to convince the jury. The Justice Department lost—and the FBI went back to work.

Investigation teams were beefed up, and President Johnson announced that "substantial results can be expected in a very short time." Public pressure, from civil rights leaders and ordinary citizens alike, also mounted, while various circumstantial stories of how the crime had been committed got into print. The Department of Justice took its time in building a case with FBI evidence, but at last decided to move. Agents had already secured at least one confession—and enough other evidence, apparently, to warrant a roundup. And so, early this month, the FBI arrested Rainey, Price and 19 other men on charges of complicity in the murders (TIME, Dec. 11).

Ice-Cold Evidence. The next step was merely routine: a preliminary hearing before a U.S. commissioner. In such a proceeding, the Government presents just enough evidence to show a prima-facie case against the defendants. This done, the commissioner normally continues the charges and the bonds against the accused, while a federal grand jury decides whether indictments should be brought.

Last week 19 Neshoba County defendants, trailed by 14 defense lawyers, marched into a courtroom in the Meridian, Miss., Federal Building for the preliminary hearing. Looking on was a curious collection of backland farmers in overalls, local Negroes, big-city Northern reporters and a few young civil rights workers—many of whom badly needed haircuts and a fresh change of clothes. The Justice Department lawyer was young (34), crew-cut Robert Owen. At the front of the room sat U.S. Commissioner Esther Carter, a middle-aged, Mississippi-born spinster.

Owen wasted no time introducing a bit of ice-cold evidence. His first witness was Henry Rask, 39, an FBI special agent from Atlanta. Rask said that during three days in November he had quizzed one of the accused, Horace Doyle Barnette, 25, a meat-truck driver who now lives in Cullen, La. "Did you obtain from him a signed confession?" Owen asked. Snapped Rask: "I did."

No sooner had Rask spoken than defense attorneys leaped up all around and objected that the agent's statement was only "hearsay." Miss Carter, who, like many U.S. commissioners, has no formal legal training, furrowed her brow, asked a question, then said: "I will have to sustain the objection of

UPI

COMMISSIONER CARTER
Objection sustained.

the defendant. I don't think it would be admissible."

Dropped Charges. Owen was stunned. He argued that the U.S. Supreme Court has ruled hearsay evidence of this kind to be permissible in a preliminary hearing. "The issue," explained Owen patiently, "is not whether there should be an indictment. The issue before the commissioner is whether or not there is a probability that a crime has been committed and that these people committed it." Miss Carter held firm.

Owen asked for a lunch break, put in a phone call to Acting Attorney General Nicholas Katzenbach in Washington, then returned to the courtroom and made a strategic—and temporary —surrender. "In view of the fact that we feel the ruling is wrong," said Owen to Commissioner Carter, "we will simply not produce any more evidence on any of the cases." With that, Miss Carter dismissed the charges and freed the defendants.

The logic behind the Government's backdown was clear enough: federal attorneys did not want to reveal any more of their painstakingly gathered evidence at the hearings because it would only help defense attorneys plan their strategy for the trial. Thus, while Government lawyers agreed to let the charges be dropped against all 21 men, they just as quickly announced that they would ask that a federal grand jury be convened "as soon as possible" to hear all of the evidence against the accused —in secret sessions without defense attorneys listening in.

GOLDWATER

BURCH

"We don't want to see blood dropped."

REPUBLICANS

Clearing the Underbrush

Dean Burch, a mild-mannered and button-down-neat attorney from Tucson, was plucked out of anonymity in July and appointed by Barry Goldwater to be national chairman of the Republican Party. During the campaign he scarcely gained any prominence. But once Barry's devastating election loss struck home, Burch, 37, suddenly became the G.O.P.'s *cause célèbre* for the year—the shoot-him-down target of Republican moderates and the rallying point for right wingers.

Both Goldwater and Burch realized that the moderates' demands for the chairman's resignation reflected, to a great extent, their desire for vengeance against Goldwater himself (because he carried so many moderates down to defeat). Burch refused to quit, and Barry remained loyal. Looking for influential support, Goldwater asked for a meeting with two other former G.O.P. presidential candidates, Dwight Eisenhower and Richard Nixon.

To the Summit. Barry arrived at Manhattan's Waldorf-Astoria one afternoon last week. In tow was Burch, who waited across the hall from the summit suite "in case I'm needed." He was not. Ike and Nixon tried to convince Goldwater that he would only further damage the party if he insisted on trying to control the G.O.P. through Burch's stewardship as chairman. "Barry," said Ike, "you'll be a bigger man if you recognize the situation."

As Nixon described the talks later: "We agreed that Mr. Burch, as a professional national chairman, had done an efficient and effective job. We also agreed that in an off-presidential election year [1966], and with no man in the White House to back him, the national chairman must have the broad support of the party. We feel, and Senator Goldwater agrees, the national chairman must have this broad support —*not unanimity*, but a majority of one *is not enough.*" Ike's version: "We all agreed that there has to be some clearing away of the underbrush to make it possible through a democratic process to widen the core of the party and of the leadership."

Eisenhower and Nixon may have succeeded in making Goldwater see the light, but he still had his own views on the situation. He told reporters: "We feel unity can be reached by both sides giving in on this. We don't want to see blood dropped on the ground."

Demand for Change. But Burch's blood seemed ready for shedding. In an effort to save himself, he arranged a session with Michigan's Governor George Romney last week, pleaded for support in his cause. After the meeting, he said sadly: "I didn't get any encouragement." Later in the week, Pennsylvania Governor William Scranton declared flatly: "Whether he is a conservative or a liberal or a moderate or a right-handed fiddle player, the national chairman must step down, because that's the only way we can begin to say to Americans that we truly want to become a broad-based majority party."

Indeed, the demand for change was in the wind throughout the party. A meeting of House Republicans scheduled for this week could well result in the displacement of House Minority Leader Charles Halleck, 64, a symbol of conservatism and aging leadership.

In that potentially violent environment of change and challenge, Dean Burch's refusal to step down has now reached absurdly tempestuous proportions. Moderates have begun to realize that if the oust-Burch campaign gets out of hand, the result might alienate G.O.P. conservatives—perhaps even precipitate a third-party movement. Thus, the moderates were hoping that Burch might be eased out with a minimum of fuss and a minimum of bruised conservative feelings.

Time to Withdraw. That could be accomplished next month when the 132-member National Committee meets in Chicago. A key item on the agenda will be a vote of confidence for the chairman, and, as of last week, a weighty majority of members were ready to vote no. Indeed, right now seemed to be a fine time for the young lawyer from Tucson to make a strategic withdr[awal] and allow his party to settle peace[fully] on a chairman who stands for n[o] than one faction of the Party.

Once the mechanics of Burch's d[e]parture are accomplished, the G.O.[P.] can begin again to focus on the infi[nite]ly more meaningful task of findi[ng] man who can reflect the realities [of] presidential success. One measure [of] that success, as the last three Presidents of the U.S.—Eisenhower, Kennedy, Johnson—have shown, is the ab[ility] speak out more or less like a liberal, then, once elected, to act more or [less] like a conservative. With a leader [of] that, the Republican Party can once [again] become strong enough to enter a c[am]paign with confidence.

INVESTIGATIONS

Off Again

The off-again, on-again Bobby B[aker] hearings before the Senate Rules C[om]mittee were off again. Democ[ratic] Committee Chairman Everett J[ordan], who had staved off further Baker s[es]sions through Election Day, adjour[ned] the committee again—this time u[ntil] Congress reconvenes next month.

So far, about all Jordan has pro[ved] is that he will never be any great s[tar] as a Senate investigator. In hear[ings] only last week, Jordan actually f[orgot] that he was chairman of the commi[ttee], cleared his throat and began: "Er, [the] Chairman . . ." A further exampl[e] of general ineptness came when the c[om]mittee tried to pursue the charge t[hat] Democratic Wheelhorse Matt McC[loskey] key had indirectly made a $35,000 [loan] off to Baker. They put McClosk[ey's] auditor on the stand, only to disc[over] that they had the wrong auditor.

About the best Jordan could ad[mit] was a committee decision to call to [the] stand Walter Jenkins, who resigned as a top White House aide last October after his arrest on a morals charge. H[e] would be called, said Jordan, "at the appropriate time." At the moment Je[n]kins was playing golf in Puerto Ri[co].

AGRICULTURE

The Farm "Fix"

Hardly had the November elect[ion] ballots been counted before Agricultu[re] Secretary Orville Freeman began cro[w]ing. "Not since the Roosevelt landsl[ide] of 1936 has a Democratic candi[date] received such an overwhelming endo[rse]ment in rural America!" he cried. F[or] state votes, Freeman said, gave Lyn[don] Johnson a "mandate" for continuat[ion] of the Kennedy-Johnson farm pol[icy]. So rosy were things down on the f[arm], in Orville's view, that he even began to feel perky about his own job, long [the] bitterest plum in the U.S. Cabinet. [So] he in a recent speech at West P[oint], noting that he would soon begin [his] fifth year as Secretary: "That tenu[re], course, is not a record; yet you [will] exactly find five-year Secretaries of Agriculture hanging from trees."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Peasants. Perhaps not, but last week the president of the U.S.'s biggest farmer organization, the 1,647,455-member American Farm Bureau Federation, in effect told Orville that hanging was too good for him.

"Attempts to interpret the results of the election as an endorsement of further Government intervention in agriculture are inaccurate and misleading," declared Charles Shuman. "Farmers," he said, "were influenced by the same overriding issues that affected the voting decisions of other citizens," namely, "peace and prosperity."

While that statement drew enthusiastic applause from the 5,000 delegates to the Bureau's annual convention in Philadelphia, Shuman raised the roof with his hardest-hitting attack yet on the role of Government in agriculture. "No self-respecting farmer wants to become a member of a permanently subsidized peasantry," he stormed, but farmers already are far down the road in their dependence on Government payments for their livelihood." Just how far, Shuman made plain. Nearly 20% of this year's $12 billion in net farm income, or about $2.1 billion, he said, came in the form of direct payments from the federal treasury. For Shuman's money, this places farmers "in the role of beggars beseeching politicians for an annual handout."

Pushers. Shuman felt, moreover, that the Government was making hopeheads of the farmers as well. "I think Government payments have something in common with the narcotics habit," he said. "Once on the habit, the victim becomes convinced he cannot live without the drug. In the jargon of the underworld, he's hooked. He'll do most anything to get his next fix, his next check. The pushers, in this case the Government bureaucrats and committees, constantly work to get more farmers hooked and dependent on payments." The upshot, Shuman said, "is very simple: the more that are hooked, the more the payments are, the more assurance of [bureaucrats], jobs and the perpetuation of the machine in power. It's a sad, sad commentary on the present situation. Well, that's the way of socialism."

THE INAUGURATION

The Man in the Business Suit

F.D.R. is remembered for his navy blue cape, Eisenhower for his Homburg, and Kennedy for the jaunty way he carried the top hat that he really didn't want to wear. Lyndon Johnson wants to be remembered as the man in the business suit. In a break with prevailing custom, the White House announced that Johnson will attend the inauguration wearing "an Oxford grey suit, black shoes and a fedora."

Johnson's decision took Vice President-elect Hubert Humphrey by surprise. Assuming that Johnson would wear the traditional cutaway, Hubert had already dropped by to see Washington Tailor Sam Scogna and get measured for the full-dress attire. Sam, forgetting that only spools rush in where tailors fear to thread, told everybody that the Vice President-elect was his customer for an inaugural outfit. Next thing Humphrey heard was a report that Tailor Sam was making a $175 cutaway for him. Making? cried Humphrey. I'm only renting one—for $12.50!

It took some time to get the misunderstanding straightened out, and the affair ruffled the Vice President-elect's usual good humor. Humphed he: "No. 1, it was a rental. No. 2, he just lost a good customer. No. 3, I'll even quit renting from him if the man can't keep his mouth shut. I've rented from Sam Scogna five or eight years. So have my sons. So has my staff. I've sent him

THE 1964 ELECTION: OFFICIAL RETURNS

This week the U.S. Electoral College convened in state capitals, made the Nov. 3 presidential election outcome official by casting 486 electoral votes for Lyndon Johnson, 52 votes for Barry Goldwater. Official returns, as reported last week by the Associated Press, showed that Johnson won by a record 43,126,218 votes. He got 61% of the total, also a record. An alltime high of 70,621,479 Americans voted as follows:

	Total Vote	Johnson	%	Goldwater	%
Alabama	689,817	*		479,085	69.5
Alaska	67,259	44,329	65.9	22,930	34.1
Arizona	480,783	237,765	49.5	242,536	50.4
Arkansas	560,426	314,197	56.1	243,264	43.4
California	7,050,985	4,171,877	59.2	2,879,108	40.8

Wisconsin	1,691,815	1,050,424	62.1	638,495	37.7
Wyoming	142,716	80,718	56.5	61,998	43.5
TOTAL	70,621,479	43,126,218	61.0	27,174,898	38.5

* The Alabama ballot listed no Democratic electors pledged to Johnson. Alabamians cast 210,732 votes for unpledged Democratic electors; had those votes been for Johnson instead, only 109,631 out of the total 70.6 million votes cast for President would have gone to minor party candidates, a low for third parties in this century. As it turned out, third-party candidates polled only .5% of the Nov. 3 total.

a lot of business over the years, and he's just lost all of it."

Sam was saddened. He tried to explain that he was no longer in the rental business and that Humphrey just had not realized it. He was really very fond of Hubert, he insisted. In fact, said Sam gently, "I wouldn't rent a suit to the Vice President. I'd want him to have a new one."

CALIFORNIA

Au Revoir, Pierre

Winding up one of the shortest U.S. Senate careers in history, California's defeated Democratic Senator Pierre Salinger last week announced his resignation, effective Dec. 31. He will take a job as vice president of Beverly Hills' National General Corp., a highly diversified company that operates movie houses in 16 states, deals in real estate and concert talent, and packages candied fruit. Quipped Salinger, 39: "I may be the youngest living ex-Senator in history."

Salinger also disclosed that California's Democratic Governor Pat Brown had promised to appoint Republican Senator-elect George Murphy, who beat Pierre in the Nov. 3 election, to fill Salinger's vacancy. That would give Murphy a lead in seniority over his first-term Senate colleagues.

DEFENSE

Another Step for Efficiency

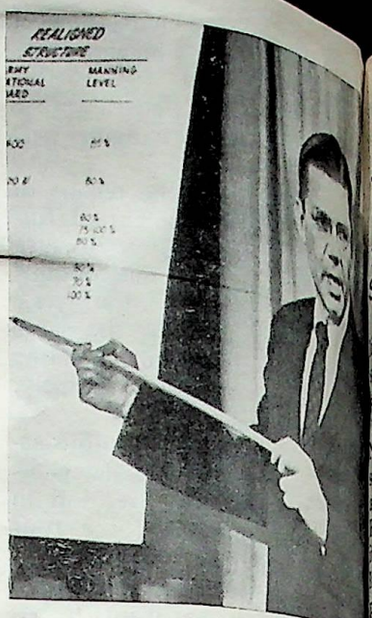
The closing of 95 military installations last month was only one step in Defense Secretary Robert McNamara's plan to streamline and modernize the nation's armed forces. Last week the efficiency-minded Secretary took another giant step: he put the ax to one of the Army's most sacred cows, one that is especially beloved by politicians who like to sport stars and eagles on short summer-training tours.

McNamara ordered disbanding of the Army's Organized Reserve, a collection of 19 divisions and 4,000 smaller units with 300,000 officers and men. Roughly half of the Reserve force will be assimilated into the National Guard, receive new equipment and tougher training. The remainder will be placed in an unassigned stand-by reserve force. McNamara's reasoning: the training and equipment of the Reserve divisions were so inferior that it would probably have required one year after full mobilization to bring them to combat readiness—far too long for the Pentagon's war plans. The National Guard will also undergo drastic surgery: 15 of its divisions will be disbanded. But the transfer of the Reserve to the National Guard will increase Guard strength to 550,000 officers and men in eight ready-to-go divisions and 16 brigades. Through the consolidation, McNamara expects to save $150 million per year.

In further measures aimed at tightening the military establishment, McNamara ordered:

▶ A halt to overseas junketing by members of Congress at military invitation. The latest examples were a tour this month by six Senators and Congressmen to the Pacific, courtesy of the Air Force, and a Navy-sponsored European trip for seven Congressmen. Snapped McNamara: "That will be the last of those trips!" From now on, all such junkets must be okayed personally by the Defense Secretary.

▶ Transfer of key Government and congressional personnel from mobilization-ready military units to the stand-by reserve. This avoids the prospect that important officials and members of Congress might be marched off to camp when they would be needed in Washington. The order spells almost certain extinction for Capt. Hill's famed 999th Air Reserve Squadron, commanded by Major General Barry Goldwater.



McNAMARA
No more military junkets.

▶ Creation of a central Department of Defense Contract Audit Agency to consolidate the contracting functions of all three services into one office under the DOD comptroller.

▶ Appointment of a senior military attaché in each U.S. embassy abroad to coordinate attaché activities and to report intelligence findings directly to the Joint Chiefs of Staff, not to their respective services. Says McNamara, "I guarantee our intelligence will be better."

McNamara's decision meant the striking of the colors of many of the most famous and decorated divisions in the National Guard and Army Reserve, probably including the 32nd "Red Arrow" (TIME, Oct. 13, 1961), the 77th "Statue of Liberty," the 83rd "Thunderbolt" and the 90th "Tough Hombres." McNamara put a stop to an old Army practice of awarding Reserve commissions to newly elected members of Congress. Said he: "We shall not tolerate traffic in commissions." More than anything, the decisions signaled a definite increase in the power of the Department of Defense in moving the U.S. military establishment close to the single-service concept.

Predictably, McNamara's moves brought barks of protest. The Reserve Officers' Association wired President Johnson, demanding that the plans be delayed until "fuller investigation can be made." Louisiana Democrat F. Edward Hébert, chairman of the House Armed Services Subcommittee on Reserve and National Guard Affairs, threatened to hold public hearings. But the figures were clearly on McNamara's side. So too was President Johnson, who agrees with his Defense Secretary that efficiency, not political considerations, should dictate defense policy.

COLD WAR

Those Do-It-Yourself Spontaneous Riots

First come the sign painters, serious little men with paintpots and newly issued brushes, their lips moving soundlessly with the memorized slogans: "Yankee go Home" or "Down with the Neocolonialists and Imperialists" or sometimes, when Britain is involved along with the U.S., "Bugger off, Brit!" Proficient only in the local language, be it Egyptian or Swahili, Russian or Malay, the painters are under considerable pressure. After all, if the epithet they must letter neatly on the embassy wall comes out in misspelled English, it will look bad for their country's image in the news photos published abroad.

Next come the marchers, swinging along with mob gaiety and waving their xenophobic standards at the white faces in the embassy window. Then up roars the jeerleader—often a government information ministry man in a sound truck. The next arrival is apt to be a riot truck, probably provided—though for different purposes—by U.S. AID funds, its sides marked with the agency's symbol of clasped hands. Out come the carefully collected stores of cobblestones, brick halves and rocks. And then the fun begins: curses and shattered glass, bonfires and blazing automobiles, looted snack bars, shredded books, perhaps even an American woman to kick.

Letting Off Steam. The name of this activity is "demo"—standing not for democracy but for demonstration. That, at least, is what it is called by the U.S. embassy personnel who are its most frequent victims. It is played in "nonaligned" and Communist capitals whenever the U.S. or its allies take a tough stand anywhere in the world. Supposedly a "spontaneous" expression of outrage on the part of freedom-loving or newly emerged peoples, the demo is actually a carefully prepared propaganda device, and sometimes a safety valve through which shaky potentates can let off the steam of an uneasy citizenry. As Cambodia's Prince Norodom Sihanouk said after a mob of students and agitators tore up the U.S. and British embassies in Phnompenh last spring: "The riots were inexcusable but comprehensible. They translated the legitimate exasperation of Cambodian youth before the repeated humiliations inflicted on their country by the Anglo-Saxon powers." Of course the riots were comprehensible. Sihanouk had organized them.

Last week demo was the sport in Indonesia, where for the second time in as many weeks a fun-loving mob—egged on by the nation's powerful Communist Party—ravaged a United States Information Service library, ostensibly in protest against the joint U.S.-Belgian rescue mission in the Congo. In Surabaya more than 1,000 jolly Javanese burst into the U.S. Cultural Center, tore down the American flag, smashed furniture, ripped up many of the library's expensive technical and scientific books, and burned it all in a roaring, heartwarming bonfire. Three days earlier, another carefully organized mob had looted the USIS library in Djakarta, destroying a quarter of the books on hand and shredding the American flag. Smashing up an embassy brings a higher score, but USIS installations are easier to get at: unlike embassies, they are in downtown areas, unprotected by Marines, and usually have large, rock-inviting windows.

Less Lambent Flame. In the past month, similar rioting has been visited on U.S., Belgian and British embassies in Egypt, Kenya, Bulgaria, Czechoslovakia and Russia. Like any international sport, the anti-embassy demo has a fixed corpus of ground rules. In nonaligned countries receiving U.S. aid, demonstrators (usually members of the local Communist Youth League) must be assembled some distance from the target to make it harder for Central Intelligence agents to photograph the leaders. Mob leaders should be persons who have been given U.S. State Department "leader grants" to visit the U.S., because the embassy may be too embarrassed to identify them later.

Some mob leaders like to play a special subgame within the demo itself, called "spot the CIA man." This is not too difficult, since Central Intelligence agents are usually conspicuous through their very inconspicuousness. They wheel up quietly in black station wagons, speak softly into their walkie-talkies, and tail the mob at a discreet distance. On the whole, CIA men may not be roughed up, since that might draw too strong a response from Washington. The U.S. can only hope that there are also many agents who are not identified.

In any game as diffuse as demo, ab-

surdities are bound to occur. In Tanganyika, a recent anti-U.S. parade was led by a brass band that, having been trained by U.S. missionaries, could play only one tune: *The Stars and Stripes Forever*. A prime target in any demo is the ambassador's car. In some riot-prone countries, U.S. ambassadors often ask for Checker limousines, since they are steel-lined throughout and the low-octane fuel they use burns with a less lambent flame.

Also Beer Bottles. Missiles employed in the demo vary. When hundreds of Kenyans demonstrated last month in Nairobi against the Congo rescue mission, they concocted their Molotov cocktails in empty Tusker beer bottles. In Eastern Europe, where cobblestones are plentiful, ammunition is usually available in the street outside the embassy under attack. Inkwells are also readily available to students of most demo-prone nations—particularly where the ballpoint pen has not yet taken over. Often the ink comes in varied colors, producing interesting red, blue and green abstract murals—and in Communist countries, where else can modern art be seen?

For arson, there is usually an ample supply of gasoline available from government sources. When the British embassy in Djakarta was destroyed last year, trucks pulled up with 2½-gallon tins that were passed out to the students, many of whom had coolies along to tote the tins for them. The rioters also carried printed schedules that listed the addresses of all embassy personnel, and they systematically ransacked the houses as well.

Killing Reason. In the not too distant past, any one of these incidents might have drawn U.S. Marines or British gunboats. But in today's world, the Western powers simply pick up the pieces and protest verbally. The tab for damages is often picked up later by governments that incited the riots. Both the Russians and the Indonesians last week agreed to pay. And even after Cairo mobs set fire to a USIS library, the Egyptian government was still blithely asking for more American food to feed its people—and may very well get it.

If the whole thing often has the aspect of a sport it is really a lot more serious than that. The destruction of U.S.-provided libraries—in places where scientific and technical books are in extremely short supply—is a calculated act of educational self-mutilation on the part of the governments involved. As U.S. Secretary of State Dean Rusk said angrily last week: "Resort to riot and violence against foreign missions strikes at the heart of the system of diplomatic intercourse. Book burning is a direct affront to knowledge and a denial of the long, slow progress of mankind."

THE U.S. & EUROPE: THE WAITING GAME

THE vision was there when the smoke of World War II lifted. As early as 1946, Winston Churchill gave it breath in summoning the Old World to "make a kind of United States of Europe." In 1947, the Marshall Plan began to give it bone and sinew. In 1950, with the Schuman Plan to pool the Continent's coal-and-steel resources, it began to stir. It envisioned nothing less than a prosperous united Europe athwart one Atlantic littoral, allied with the U.S. on the other side—two giants whose joint democratic and humane stand for freedom everywhere would be more than a match for Communism.

Though the dream is far from dead, it has seldom been more obscure and entangled in controversy than this week as the foreign ministers of the North Atlantic Treaty Organization gather in the great A-shaped building in Paris at the head of Avenue Foch. The U.S. and France seem set on a direct collision course that threatens to wreck NATO. The ostensible object of the trouble is the U.S. proposal to create a multilateral nuclear force of 25 Polaris-missile surface ships—although MLF does not even formally appear on the ministerial agenda. In fact, the malaise goes to the very core of Atlantic relationships, and how they have changed since the vision was born.

The Original NATO. Created in the wake of Communist coups in Eastern Europe and the Berlin blockade in 1949, NATO was originally designed to defend Western Europe against a Soviet invasion. With a joint-command structure headed by a U.S. general, NATO was to have some 50 divisions assigned to it full-time. Today it has only 26, ten of them German, even though nearly all the national armies and navies of Western Europe are "earmarked" for NATO's use in case of war. At the time of NATO's founding, the U.S. was the only effective nuclear power in the world; Europe was still economically prostrate. NATO gave Western European nations a needed sense of military security and, perhaps most important, strengthened their political stand against domestic Communism.

As the Continent began to revive, the U.S. sponsored the European Defense Community, envisioning a common multinational European army. The French vetoed it, but out of its ashes came the Common Market and the resurrected German army. Apart from Western Europe's economic renaissance, perhaps the most significant change has been in its attitude toward the Soviet Union, particularly since the Cuban missile crisis, when the Russians dramatically backed down. This confirmed what most Europeans had long [illegible] to count on: that a Soviet invasion need no longer be feared and that at any rate it could be deterred only by nuclear power. NATO seemed to lose its *raison d'être*, except as far as U.S. troops stationed on the Continent provided hostages to misfortune—to ensure an American nuclear response just in case the Soviets did after all attack.

As the U.S. sought possible countermoves to Russian aggression in Europe other than nuclear Armageddon, Washington kept pressing for more conventional forces and began talking about a "graduated response." De Gaulle saw this as proof that the U.S. would not defend Europe unless the U.S. itself was attacked. So France pushed ahead with its own little atomic program—after all, argued De Gaulle, jealously, Britain had its nuclear force too.

With that the U.S. began a new search for a way to share the bomb with Europe—even though Washington remained convinced at heart that the bomb was unsharable.

Enter MLF. Is the sharing really necessary? Quite a number of Europeans would gladly leave their nuclear defense in U.S. hands, and this probably includes a majority of Britons, possibly even of Frenchmen. But in a larger sense De Gaulle is right in saying that Europe cannot be truly independent unless it can somehow be master of its own life-and-death decisions. MLF is frankly designed to give its members—particularly the Germans—a semblance of participation and control, while retaining for the U.S. the ultimate say on whether or not to push the nuclear button on the ships.

To most military men, MLF has a distressingly gimmicky air. Apart from its vulnerability to attack, there seems something innately absurd about two dozen ships with international crews and a lethal cargo cruising the seas like so many nuclear Flying Dutchmen. The U.S. replies that there is simply no way to set up a land-based deterrent on the Continent with international participation.

De Gaulle sneered at the whole idea—until it suddenly came close to reality when German Chancellor Ludwig Erhard and President Johnson signed the "Texas Communiqué" last June to set up MLF by the end of this year. The U.S. hoped that other NATO nations would join as well. But few showed any interest in the expensive ($4 to $6 billion) project that would add nothing essential to the U.S. nuclear shield over Europe anyway. Britain's Tory government is among the least interested.

UNITED NATIONS

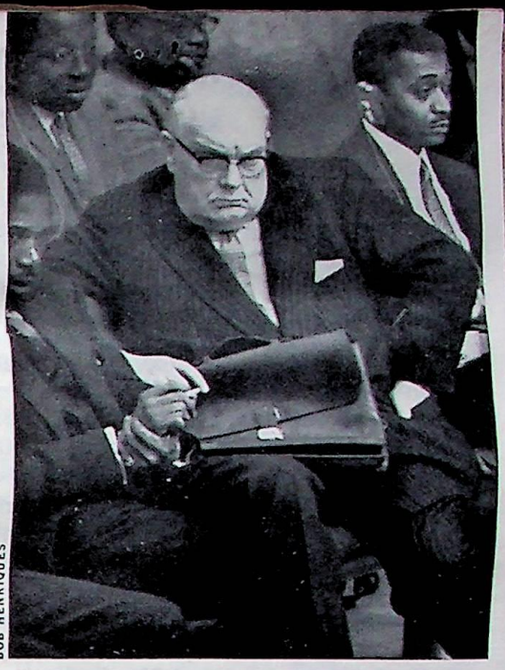
Who Are the Racists?

A crowd of delegates and officials spilled over into the press section and public galleries; ambassadors stood three-deep around the horseshoe table. Never had the chamber been so packed, and seldom had its mood been so ugly. The U.N. Security Council was debating the Congo.

In a flurry of indignation, 18 African states, plus Cambodia, Indonesia, Afghanistan and Yugoslavia, had called on the Council to condemn Congolese Premier Moise Tshombe and his Western allies for last month's U.S.-Belgian rescue operations at Stanleyville. Tshombe's representatives countered by charging that Algeria, Ghana, Egypt and the Sudan were aiding the rebel "government" of Christophe Gbenye.

It would have been easier to make allowances for the Africans so recently emerged from colonial rule if only they had said even one word in condemnation of rebel savagery. But no. Shrugging off the humanitarian aspect of the paratroop drop, they raged on and on about imperialist intervention. "The white is untouchable," sneered Brazzaville Congo's foreign minister. "A white, especially if his name is Carlson, is worth thousands of blacks." Guinea's representative charged that white mercenaries had "massacred hundreds and hundreds of defenseless Congolese" without a murmur from the West, because "their skins were black like those assassinated in Mississippi."

Painfully Close. That was too much for Belgian Foreign Minister Paul-Henri Spaak, one of the U.N.'s founding fathers. With quiet force, he told the Council that such talk was "painfully close to that type of racist feeling which has been so heatedly denounced" by the Africans themselves.



BOB HENRIQUES

FOREIGN MINISTER SPAAK AT U.N.
With contempt for the guilty.

MLF Reconsidered. When Harold Wilson's Labor government took over two months ago, he saw a revised MLF as a means of getting rid of Britain's own expensive nuclear deterrent (largely aging V-Bombers plus three to five Polaris submarines being built). The move might satisfy Labor's strongly antinuclear left wing, save much needed money, and retain Britain's traditional balance-of-power role in European affairs—particularly attractive since Germany seems on the verge of replacing Britain in its "special relationship" to the U.S. Last week in Washington, Wilson tried to persuade Johnson to enlarge the MLF concept by including all the British hardware and renaming the whole thing the Atlantic Nuclear Force. Wilson came away with at least the sense to try it on the Germans.

Charles de Gaulle wants no part of MLF, whether it be the compact U.S. or larger British model. He threatens to get out of both NATO and the Franco-German Treaty if Bonn fails his litmus test for European loyalty. Said a senior French diplomat last week: "If Germany joins MLF in whatever version, she will have left Europe. And Europe there- will not exist. Then, without a Europe, how can there be a partnership between Europe and America?"

The trouble is that De Gaulle does not say what he means by "Europe"—except that in some mystical way it is identical with France and must stay away from "Atlantic" domination.

The Ties That Bind. Bonn sees in the U.S. its only outside hope for some day persuading the Russians to permit the reunification of the German nation. London, shut out of European integration, is caught in a financial crisis that dollar backing can help solve. France, alone of Europe's Big Three, has neither external nor internal troubles requiring the special aid of the U.S., thus can hold out for considerable independence. But Paris frankly acknowledges that despite the incipient French atomic force, it will be dependent for years to come on the American nuclear arsenal for real protection. As one of De Gaulle's leading critics blandly explained last week, the U.S. is expected to keep its forces in Europe and its nuclear bombs ready—without being allowed to interfere in European affairs.

In a sense, the question comes down to a matter of trust. Many Europeans simply do not wholly trust the U.S. to defend them under all foreseeable circumstances, particularly a decade or two hence, when it may be disastrously involved in Latin America, Asia or Africa. And De Gaulle believes that the U.S. has always been "late" in entering European wars; yet the U.S. can reply with equal distrust that virtually since Waterloo, France has been gravely wanting as a resolute military power. *The U.S. must look to a France* after De Gaulle, with a large Communist vote and the political chaos of the Fourth Republic conceivably revived.

In essence, U.S. ambitions for Europe are still contradictory. Washington has plugged for a united Europe since World War II, but certainly not a Europe without Britain, and perhaps not—now that the U.S. has tasted Gaullist policy—a Europe wholly independent and able to go its own way as a super power in world affairs. The U.S. wants Europe to take a greater share in defending itself, but at the same time the U.S. does not want any proliferation of nuclear weapons. In particular, the U.S. would like to satisfy German ambitions for a share in nuclear armaments, but somehow without in fact permitting the Germans actually to have any—since that would endanger dealings with Moscow and frighten Germany's neighbors.

The Ultimate Goal. MLF is a frail vessel for carrying such a multitude of problems. In itself, MLF is not likely to solve the much larger problems between the Old and New Worlds. But if the U.S. as its stubborn champion had made it part of a truly comprehensive and inspiring plan for a future united European force, it would have meant more—and would have deflated De Gaulle's vague talk about "creating Europe." In a sense, both the U.S. and France are wrong in the current controversy, paradoxically not because their policies are so different but because they are so similar. France says that there cannot be a true European nuclear force until there is European unity; in the meantime, De Gaulle expects the rest of Europe to rely on France. The U.S. says the same, and in the meantime expects Europe to rely on the U.S. Only Gaullist delusions of grandeur could suggest that reliance on the U.S. is not safer than reliance on France. But the common fault is that both Washington and Paris slight the ultimate goal of European unity while accusing each other of blocking it.

De Gaulle is convinced that if he waits long enough the Americans will disengage themselves from Europe, proving him right and thrusting the rest of Europe into French arms. The U.S. is convinced that if it waits long enough De Gaulle will pass from the scene, and France will then accept some version of MLF and, for a long time at least, the U.S. nuclear veto. Both the U.S. and Paris are thus waiting each other out and in the process avoiding the real issue. For in the long run, neither French arms nor American arms will suffice if the vision is to be realized and the European nation created complete and whole.

"There is no such thing as a guilty race," said Spaak. "There have only been misguided men and contemptible men. Hitler was a contemptible man, and I regret to say Gbenye is a contemptible man."

Spaak branded as a lie the charge that the rescuers had discriminated in favor of whites and reported that of the estimated 2,000 evacuated, more than 600 were Congolese and Indians —and evacuation of Congolese had been halted at Leopoldville's own request. The real danger to peace, said Spaak, lay not in the Congo action, but in the radical Africans' "scarcely dissimulated will to separate Africa from Europe and even perhaps to pit the black man against the white."

For the Home Folks. In the General Assembly, Soviet Foreign Minister Andrei Gromyko dutifully echoed the African charges, along with the customary catalogue of Russian threats and promises, including a demand that the U.S. abandon its proposed multilateral nuclear force and an offer of a NATO-Iron Curtain nonaggression pact. The Assembly was still operating under its moratorium on voting—self-imposed to avert a showdown over Russia's peacekeeping arrears. And there was quite an interruption when, to protest the appearance of Castro-Communist Ernesto ("Che") Guevara, a Cuban exile fired a bazooka shell at the U.N. Secretariat building (*see* THE HEMISPHERE). But nothing could keep the Assembly from pursuing its primary purpose—talk.

Listed to speak were no fewer than two Presidents, three Prime Ministers, three Deputy Prime Ministers and 83 Foreign Ministers. One by one, in speeches as much for the home folks as for the Assembly, they poured out their national hopes and fears, grievances and ambitions. The Philippines laid claim to a large chunk of Malaysia; Argentina demanded that the British give back the Falkland Islands; and Ireland, thumbing its nose at Britain, said the U.N. was "our best hope for the reunification of the Irish nation."

Free Men. The nations praised their own governments, or pointed proudly to their "unique geographic location," or complained about the world market for their products, or decried the spread of nuclear weapons. Israel and four Arab nations accused each other of aggression. Greece accused Turkey of "inhuman conduct" in Cyprus. Laos accused North Viet Nam of armed intervention. Thailand accused Cambodia of "connivance with certain aggressive forces," urged the U.N. to pay more attention to "the problems of regional peace." Said Thai Foreign Minister Thanat Khoman in one of the session's calmest speeches: "We have to live with these problems day and night, and have to devote every ounce of our energy and attention to them, for they have to do with our future life as free men and women, as well as that of the coming generations."

TSHOMBE ON WAY TO PAPAL AUDIENCE
Trial by crocodile?

THE CONGO

Needed: A Divine Force

A band of Simbas lay in ambush along the road leading into Poko, a small missionary town in the rebel redoubt of the upper Congo. Through "the jungle telephone," an advancing column of white mercenaries learned of the trap, cut through the bush and entered the town from the rear. As their skirmish line entered Poko, the whites were surprised to see the Simbas rush toward them jubilantly, their right arms raised in the rebel salute and shouting the rebel yell of *"Mai Mulele!"* It did not take the mercenaries long to realize that the Simbas took them for Russians, come to fight on their side. The Simbas' disappointment was short-lived: the mercenaries gunned them down to a man.

But help was indeed on its way to the Congo's rebels—and some of it from Russia.

Rebel Airlift. Last week into Khartoum, capital of the Sudan, winged planeload after planeload of arms and ammunition bound for the Congo from Ghana, Algeria and Egypt. Secrecy hung thick as a cloud of Sudanese flies around the British-built Comets and Russian turboprop AN-12s as they transshipped their cargoes to smaller aircraft. Although the Sudanese government cynically claimed that the tarpaulin-covered crates carried nothing more dangerous than "medical supplies," they must have been the world's heaviest bandages.

After transfer at Khartoum, the guns were flown on to Juba, capital of Sudan's Equatoria province, then loaded onto captured trucks and Land-Rovers for a jouncing ride over jungle tracks to the Congo border 150 miles away. With them, said Washington, went at least 40 Algerians, presumably military advisers to Rebel President Christophe Gbenye's wild-eyed warriors. Sensing a chance to make a few easy points with African leaders, Moscow announced that it would replenish any supplies that had been sent to the rebels. Moreover, Algiers' Boufarik airbase was aswarm with Russian technicians and aviators, many of whom no doubt were flying the Juba run, since Algerian pilots have not yet had time to check out on the Soviet-built AN-12s.

Peace Is Something Else. The rebels were also getting help in the United Nations (*see above*). Congolese President Moise Tshombe himself stayed away largely at the urging of the U.S., which did not want the U.N. debate complicated further by Tshombe's presence, which would inevitably antagonize the other Africans. Instead, Tshombe flew into Rome for a 20-minute audience with Pope Paul VI, was greeted by turbulent Red-led riots and rotten eggs, but had better luck in conversations with Italian officials and businessmen, who seemed ready to expand trade with the Congo. "The Congo will soon know peace," he predicted with his unquenchably optimistic grin. "But a Christian peace cannot be achieved with men alone. It needs a divine force. That is why I came to see the Pope and ask him to pray for our country."

The prayers he got, but peace something else again in a war where cruelty is common to both sides. Last week thousands of Congolese suspected of rebel sympathies were herded into the Stanleyville stadium and tried "by proclamation." Those found guilty were taken to the Congo's banks and either shot or thrown in, to be eaten by crocodiles. But the Simbas still took the palm for bloodthirstiness. In one town they raped 19 nuns, including a 60-year-old Dutch sister, then hacked to death an American, Sister Marie Antoinette, before the others' eyes. In Isangi, six Belgians were devoured not by crocodiles but by cannibals.

RUSSIA

Consumers' Budget

It took just 30 seconds for the Supreme Soviet, Russia's moot parliament, to dispose of the absent Deputy for the Moscow district of Kalinin. In two swift, silent shows of 1,400 hands, without a single dissent or abstention, the assemblage in the Kremlin ratified Nikita Khrushchev's dismissal by the party presidium last October as First Party secretary and Premier. But except for a change in style, the Khrushchev spirit was very much present.

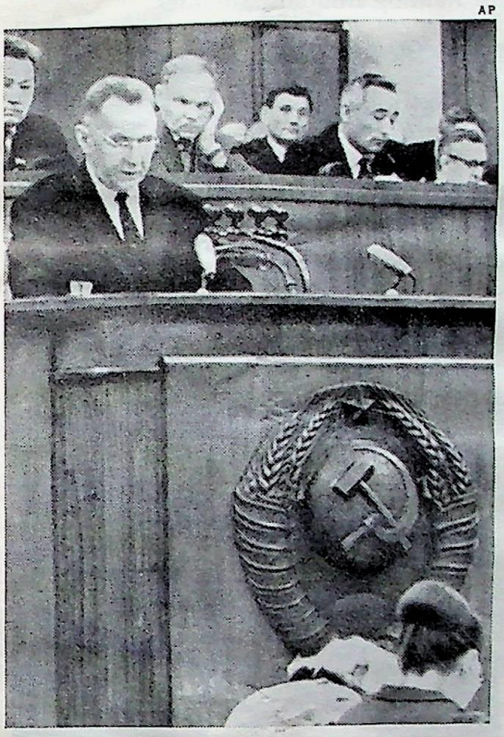
More Fanfare. His successor as Premier, Aleksei Kosygin, delivered the state-of-the-Soviet-Union speech in 80 minutes, unrelieved by Khrushchevian corn pone, invective or grandiloquence. He was brisk, businesslike, and in his remarks on foreign affairs, disappointingly predictable to Westerners looking for new departures under the new regime. He denounced the U.S. and Belgium for "intervention" in the Congo, promised Soviet aid in the event of "imperialist aggression" against North Viet Nam and Cuba. If the Western allies pressed ahead with MLF, he warned, the Warsaw Pact nations would be forced to "consult" on countermeasures. He gave the United Nations a passing plug as a valuable "international forum," but failed to mention whether the Kremlin intended to pay its U.N. dues.

Peaceful coexistence, Kosygin insisted, continues to be the policy of the Soviet Union. To prove it, he said, the Soviet Union plans to reduce its 1965 military budget by $555 million—from this year's $14.6 billion to $14.1 billion. This was being done, claimed Kosygin, because the Kremlin had been told by Washington that the U.S. military budget for next year was being cut too. There had been an informal deal between the U.S. and Russia, Washington denied it. The Soviet defense cuts did suggest that Russia's new regime is not particularly beholden to the military, but just how real the cutbacks will prove to be remains to be seen. A year ago, when Khrushchev reduced military spending with great fanfare, he consistently raised outlays on "science" by precisely the same amount—and government-sponsored science these days usually means rocketry.

More Capital. Kosygin's chief news for the Russian people came in his presentation of a relatively sensible-sounding 1965 budget. It suggested that the new regime wants to go on with "goulash Communism"—but more efficiently, more evenhandedly and less extravagantly than Khrushchev.

Kosygin announced increased emphasis on the production of consumer goods and construction of apartments. While the "metal eaters" of the steel industry are not to be stomped on as Khrushchev tried to do, metallurgy will get a smaller slice of capital outlays than consumer goods or food. The chemical industry is due for a sizable share of capital, though it will not switch to making plastics for consumers with the abandon visualized by Khrushchev. Heavy industry in general, said Kosygin, will have to move into some consumer lines such as "refrigerators, washing machines and television sets."

The new leaders also intend to follow Khrushchev by continuing the move toward a more market-oriented economy, letting consumer demand rather than a bureaucrat's plan dictate product design and quantity. By next year, Kosygin reported, one-third of all consumer-goods plants will make the changeover. Some day the Russians may even be able to afford to be consumers: Kosygin got his loudest applause when he unveiled a round of wage increases for next month.



AP

KOSYGIN ADDRESSING SUPREME SOVIET
Goulash without corn pone?

More Mistakes. The debate following Kosygin's presentation was astonishingly frank. One delegate, to the manifest surprise of the leadership, even mentioned Khrushchev by name, accusing him of the mistake of not facing facts but "presenting the desired as reality" —otherwise known as wishful thinking. He then had the audacity to accuse Kosygin's budget of perpetuating some of the same "upsetting mistakes." Georgy Popov, Leningrad party boss, went even further and came flat out against the new regime's plan to return the control of heavy industry to Moscow direction from the local authority where Khrushchev had remanded it.

All this free speech was unprecedented in Supreme Soviet debates, and Kosygin himself seemed carried away, admitting that some of the criticism was valid. "Mistakes are made," he confessed, adding with masterful and no doubt unintentional understatement: "The structure of the apparatus is sometimes cumbersome."

YUGOSLAVIA

Staying in Power Without Turning Grey

If the deposed Nikita Khrushchev loomed over the outspoken Supreme Soviet meeting in Moscow, his lingering influence was felt even more strongly at the Yugoslav Communist Party Congress in Belgrade, where things were relatively frank too.

Addressing Yugoslav Communist delegates, as well as emissaries from most non-Peking parties abroad, Marshal Josip Broz Tito praised Nikita by name for his destalinization, his promotion of "freedom of expression," and for improving Soviet-Yugoslav relations. This part of Tito's speech never saw the light of day in Russia—frankness can go only so far.

Western reporters in Belgrade were surprised to be admitted to all sessions of the Congress, which had never happened before. They felt, perhaps ungratefully, that the occasion left something to be desired—there was simply nothing to compare to the famed "Sex Congress" of 1952, when one delegate took the rostrum to accuse another of having stolen his wife's affections.

Tito evidently felt confident enough to renew his attacks on the Chinese Reds, even if Moscow has tempered its own; the Chinese, he sneered, had overestimated "their role in the world," and he condemned their "persistent efforts to discredit the policy of peaceful and active coexistence." Tito also sounded relatively secure in dealing with domestic matters, including the age-old feuds among Yugoslavia's many nationalities, which Tito has greatly subdued but not eradicated. Though claiming that "we are among the first countries in the world in rate of economic growth," Tito admitted to inadequate labor productivity and poor administration, although he dodged mentioning the falling value of the Yugoslav dinar, which in three years has gone from 750 to the dollar to 1,000.

He lamented the unruly behavior of the young and their restlessness under Communism, warned that "broader and more frequent distinctions are developing between intellectual and working class youth." Tito was also obviously interested in getting new blood into his government. In the party's most sweeping change to date, the Central Committee was expanded from 135 to 155 members, and 71 new men were appointed, bringing the average committee age down to 45 years from 52.

Despite his 72 years, Tito himself looked remarkably fit, and his hair, doubtless with the help of his barber, still showed scarcely any grey. He betrayed his age only by taking a 45-minute recess midway in his three-hour speech; in the old days, Tito would go on for hours without getting winded. Later, at a press conference, he smilingly knocked down rumors that he was planning to retire.

SOUTH VIET NAM

Fighting the Reds & the Bonzes

From the swamps of the Mekong Delta in the south to the North Vietnamese border, the Viet Cong launched one of their hottest offensives of the war. But even as more Vietnamese and American soldiers died in the unending nightmare struggle against the Communist guerrillas (nine deaths last week raised U.S. killed to 331), South Viet Nam's Buddhists announced their firm determination to destroy what little stability remains in the country.

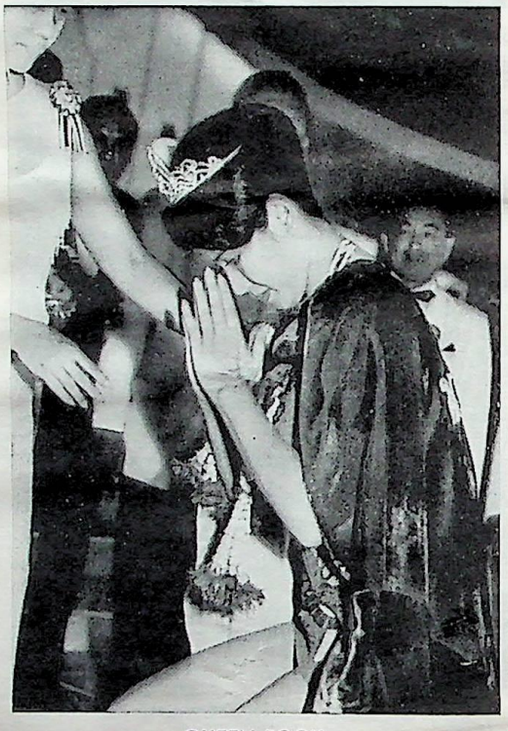
More Aid. Often fighting against great odds, government troops gave an uncommonly plucky account of themselves. In the Camau Peninsula, they lured an elite, 700-man Viet Cong battalion into a trap, killed 115 Reds with a loss of only 27 government dead. Elsewhere in the south the situation worsened considerably, and even the mountain resort area of Dalat, popular as a site for government crisis huddles, is now Communist-infested. Throughout the country, not a day went by without a Communist attack of battalion size or larger. The Reds have scored their most alarming gains in the central provinces, as evidenced by last week's biggest clash: the battle of Anlao.

Nestled in a valley like a miniature Dienbienphu, the government strongpoint was attacked one night when hundreds of Viet Cong overran its two 4.2-mm. mortars, isolated on a nearby commanding hill. In a bitter three-day fight, the Reds virtually wiped out Anlao's 100 defenders. The attackers finally withdrew before air power and 1,000 counterattacking government troops, but there was concern over the capture of Anlao's guns—heaviest mortars the Reds have seized to date.

Back in Saigon after consultations in Washington, U.S. Ambassador General Maxwell Taylor brought word of yet another step-up in U.S. assistance. There were the usual provisions for beefing up South Viet Nam's ground and air forces, plus increased economic aid (current total U.S. contribution: $700 million a year). Reportedly, Taylor now had the authority to support air strikes against Viet Cong supply lines at his discretion. But Taylor made clear that first some political stability must be visible in Saigon. Again the Buddhists (TIME cover, Dec. 11) reminded everybody how dim the prospect seems.

Monks' Ultimatum. Following two days of meetings, yellow-robed monks handed out mimeographed copies of what amounted to a declaration of war against Premier Tran Van Huong's six-week-old government, which suppressed Buddhist riots three weeks ago. Drafted by the Buddhists' top two political bosses, Thich Tri Quang and Thich Tam Chau, the letter branded Huong's regime "execrable," threatened a nationwide campaign of "nonviolent noncooperation" unless "this government of betrayal" is dissolved.

In another letter to Ambassador Taylor, the Buddhists hinted that unless the U.S. withdraws its support from Huong—as it did last year from President Ngo Dinh Diem—Buddhist ire may be turned against Americans. Pointedly the Buddhists warned Taylor: "We affirm that you are responsible, before both the American and Vietnamese peoples, for the existence of the Huong government." Whereupon Chau, Quang and the Buddhists' nominal religious head, Thich Tinh Khiet, announced a 48-hour weekend hunger strike, urging Buddhists to join them in round-the-clock prayer sessions. From Darlac province came an offer of candidates for flaming Buddhist suicides.



QUEEN POOK
A gold cup for forgetting.

THAILAND

Beauty's Comeback

The softest, roundest and loveliest of Thais is a girl named Abhasra Hongskul, 17, who goes by the nickname of "Pook"—which in Siamese means soft, round and lovely. That at least was the decision in Bangkok last week where Pook was proclaimed Miss Thailand of 1964. Drums rolled, bugles blared, balloons soared madly into a velvet sky, and the commanding general of Thailand's First Army announced in martial tones the winner of the coveted gold cup. But the exuberant Bangkok crowds were cheering much more than a one-time drum majorette who packs 116 lbs. into a 35-22-35 frame, punctuated by a pair of eyes that outglimmer the Emerald Buddha. For Pook's crowning marked a watershed in the painful process of forgetting Thailand's late Dictator Sarit Thanarat.

Sarit valued lovely women more than the rarest jade or the whitest elephant. For all that, no beauty contests were permitted during his rule, and as a result, his country had not named a Miss Thailand in ten years. The reason was simple: before he took power, Field Marshal Sarit had pursued beauty contest winners with the same zeal he later applied to Communists. Embarrassed by Sarit's extraterritorial demands, the government simply banned the contest, and when Sarit seized government control through a military coup in 1957, he decided it would look better if the ban stayed in force. This did not prevent him from personally conducting a kind of unofficial and continuing beauty contest, with himself as the prize—a distinction won, according to latest count, by at least 100 young women.

Now, with everyone gradually calming down about the revelations of Sarit's it's equally acquisitive financial dealings (TIME, July 17), his successor, avuncular General Thanom Kittikachorn, is free to revive the competitions. The choice of the new Miss Thailand was almost painfully pure, with a member of the royal family sitting on the panel and each contestant's moral background under scrutiny—several girls of dubious vocation were hurriedly disqualified.

Premier Thanom also eased another Sarit repression: out of Lardyao Prison came 15 Thai journalists who had been jailed for far-left political sympathies. Thanom can afford to be confident. Thailand today is Southeast Asia's most blest country, both politically and economically. A "constituent assembly" is currently drafting a new constitution, and Thanom is planning to hold parliamentary elections some time next year to set up a new civilian regime. Whatever the election outcome, to most Thais the voting will be an anticlimax after the election of Pook.

KENYA

Uhuru to Jamhuri—with Concern

Independence celebrations are as common in Africa as bananas, but last week Kenya outdid itself with its second in a year. For all practical purposes the former British colony gained independence last year, but to facilitate administrative changeovers, Britain retained symbolic sovereignty by making Kenya a dominion. Last week saw the progression from mere *uhuru* (freedom) to *jamhuri* (republic). Though Kenya remains a member of the Commonwealth, Jomo Kenyatta, who had been Prime Minister, duly changed his title to President, replacing Queen Elizabeth as head of state.

At Nairobi Airport, the last British combat troops—80 in all—marched through ranks of the Third Kenya Rifles to the strains of *Lang Syne*, then were whisked aboard an R.A.F. transport. That night, before 50,000 in a Nairobi stadium, Kenyatta's new presidential standard was unfurled—crossed spears imposed on a tribal shield, flanked by a crowing cock.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Visible Disappointments. The celebrations in Nairobi featured a marathon run by Ethiopia's Olympic Winner Abebe Bikila, feathered tribal dancers, and Guinea's *Ballets Africains*, which offered only one disappointment—the girls wore brassières. For all the festive folderol, Kenyans were less than glorious—they are waiting for the jam tomorrow, a year of independence has brought more problems than prosperity. Mr. Kenyatta remains one of Black Africa's more responsible statesmen, and he retains some ties with the West—in the case literally: Kenya's latest postage stamp shows Jomo wearing his old school tie, that of the London School of Economics.

But recently Kenyatta joined other African states in criticizing the U.S.-Belgian rescue operation in the Congo, welcomed Congolese rebel leaders to last week's ceremonies, during which he dedicated a Communist-financed "Lumumba Institute" that will train government party officials in "socialism and patriotism." Also present: a large Red Chinese delegation, which will stay on for trade talks. There are reports that planeloads of Kenyan "students," trained in subversion in Russia and Red China, have debarked secretly at Nairobi Airport.

O.O. Problems. Almost certainly the man behind increasing leftist intrigue is "Mr. Double O"—Oginga Odinga, formerly Kenyatta's Home Minister, who was rounded up as Vice President in Kenyatta's new Cabinet, a post that theoretically limits his powers but in the eyes of most Kenyans makes him heir to Kenyatta. Odinga is a well-entrenched leader of Kenyatta's KANU Party, which is now the only one in Parliament after the country "voluntarily" turned itself into a one-party state; he regularly visits Peking, and he receives Russian and Red Chinese financial support. Perhaps only Tough, able and reasonable Tom Mboya, who became Minister for Economic Planning and Development in the new government, may end up in a position to stop Odinga from succeeding Kenyatta. The question matters because Kenyatta admits to 74—but has been 74 for a long time.

ZAMBIA

Horsemanship

As statues go, Lusaka's bronze monument to Empire Builder Cecil Rhodes is a pretty run-of-the-horse. It weighs seven tons, stands only slightly larger than life size and, with somewhat oxidized symbolism, depicts Rhodes as a naked Apollo, riding fearlessly onward astride a magnificent prancing stallion. Donated to the city four years ago by the Rhodes-founded British South Africa Co., the statue soon became the object of all self-respecting Zambians' hatred. For one thing, the horse's rump was turned disdainfully on the Ministry of Finance building. More important, as far as Zambians were concerned, it was a monument not so much to Rhodes as to the despised Sir Godfrey Huggins, who, as Prime Minister of the now-disbanded Central African Federation, had offered an ill-considered definition of the ideal relationship between Africa's blacks and whites. The two races, Sir Godfrey had said in 1954, should work together like a horse and rider—the whites of course being in the saddle and the blacks under it.

Last week, less than two months after Zambia had gained its independence, the Lusaka city council banned the statue. In a secret vote, it gave it back to the British South Africa Co., which will transfer it to Southern Rhodesia—whose white government is still in a position to guarantee that the two races work together as horse and rider.

LOOMIS DEAN

DAME EDITH
A lifelong pose of distinction.

GREAT BRITAIN

Friend to Peacocks

As she was completing her autobiography last April, Dame Edith Sitwell was asked how she felt. "Dying, but apart from that I'm all right," she replied. A little later, she remarked that as a Roman Catholic (she became a convert in 1955), "I know I ought not to dread death, but I am so conceited that I simply cannot imagine how the world would get on without me." In London's St. Thomas Hospital last week, at 77, Edith Sitwell died of a heart attack, thus putting the world to the test.

Pale Glimmer. The world will miss her as a poet, critic, biographer, social lioness, defender of art, warrior against Philistia. But above all, it will miss her as a great English eccentric. She was 6 ft. tall, with a haunted, Gothic face framed by wimples and toques; her long, narrow hands glimmered palely against brocade and velvet gowns. If at times she seemed to have created a lifelong pose for herself, it was a graceful pose of uncommon distinction. "I don't whine," she once said. "That's why everybody thinks I am enormously rich and have a heavenly time."

Sacheverell Sitwell wrote of his sister: "Her love is poetry, she lives within a phrase." Yet she could desert poetry for a decade to nurse her friend and former governess through a long and fatal illness. She admired and championed fellow poets, but seldom the women they married. In her opinion, "the wives of poets should be selected by a committee of other poets." Even worse than poets' wives were critics. She once wired the *Spectator* that a certain reviewer should, at her expense, be stuffed and put in a glass case. Another critic was coldly rebuffed for a belittling reference made 28 years before.

Kings' Blood. Dame Edith was forever conscious that in her veins ran the blood of Robert Bruce and Macbeth, the Kings of France and the Plantagenets of England. Her family had held land near their pinnacled grey-stone house of Renishaw since 1301. She had a miserable childhood, for her Victorian father disapproved of everything, from her friendship with a peacock to the shape of her nose, which he tried to alter with an iron clamp.

She escaped to London just before World War I, and, with the help of her gifted brothers, Osbert and Sacheverell, soon established a salon in her attic apartment. Her verse ranged from the once avant-garde fun of *Façade* to social comment in *Gold Coast Customs* and religious visions in her late work. Poetry, she thought, "springs from the essential nature of things," and she sought essential things in nature, as with her lines:

. . . those bright birds flock;
the butterbump, the urban
Ranee stork, the turkey-cock
(Red paladin in a turban),
The crane who talks through his long nose,
The plump and foolish quail . . .

Badgered Moon. More memorable, perhaps, than her poems were her occasional comments on life and thumbnail descriptions. Condemning the modern age, she remarked: "We have to pay these enormous taxes to send mice up to badger the moon." D. H. Lawrence, she said, "had a rather matted, dark appearance as if he had just returned from spending an uncomfortable night in a very dark cave." On a Hollywood visit, she met and liked Marilyn Monroe, who "wasn't nearly as sexy as men like to imagine. She was a sad, sad, lonely girl. She would have made a wonderful Ophelia."

Indirectly, Dame Edith also contributed a thumbnail sketch of herself in her book, *English Eccentrics*, in which she attributed her subjects' (and perhaps her own) eccentricity to "that peculiar and satisfactory knowledge of infallibility that is the hallmark and birthright of the British nation."

CHE LEAVING UNITED NATIONS
In Havana, a fight for keeps.

CUBA

Hot Enemies & Cool Friends

The United Nations suddenly had a brand-new trouble spot on its hands last week—the United Nations. In the U.N. Plaza on Manhattan's East Side, massed pickets brandished placards (INVADE CUBA NOW) and jeered at Communist-bloc delegates. A knife-toting woman tried to claw her way inside. Three demonstrators shinnied up a flagpole and hauled down the Soviet flag. A backfiring truck threw cops into a panic. At the climax of the demonstration, an explosion—a real one—resounded on the water side of the sleek, glass-skinned building as a 9-lb. shell splashed into the East River just 200 yds. away. In a weed-strewn lot on the opposite bank, 900 yds. away, police later found a 3.5-in. Army bazooka, still aimed at the U.N., with a Cuban flag taped on the barrel.

The show was mounted by Cuban exiles against Che Guevara, Fidel Castro's Minister of Industries. Che, in burnished black boots and fresh green fatigues, had flown in to denounce the U.S. before the General Assembly for everything from "aggression" in Southeast Asia to Americans' "sexual exhibitionism" at the U.S. Naval Base at Guantánamo. Undeterred by the ruckus outside, Guevara ranted on and on, perhaps in hope of distracting world attention from the troubles back home.

Too Successful. In the past nine months, Castro's regime has been torn by an ugly power struggle between Cuba's old-line, Moscow-oriented Communists and the unorthodox Fidelistas, whom they deride as "adventurers." In recent months, four Moscow wingers have been sacked by Fidelistas from high government posts, while more than 70 army officers have been jailed on charges ranging from treason to conspiring to assassinate Castro.

Early this month, the director of Cuba's failing cattle industry decided to get out while the getting was good, and scheduled a buying trip to Canada, where he defected. (The official insists that Soviet intermediate-range ballistic missiles are still around in Cuba, though Washington denies it.)

Last week Radio Havana flashed the news that Labor Minister Augusto Martínez Sánchez was critically ill with a self-inflicted gunshot wound. The communiqué reported that Martínez had been fired the previous day for "serious administrative errors," added piously that his suicide attempt was "unjustifiable and improper," since a revolutionary must not "deprive his cause of a life that does not belong to him."

Even if Martínez Sánchez had not attempted suicide—or, as rumor had it, been shot during a scuffle in the presidential palace—his summary dismissal from office would have been dramatic enough. A protégé of Raúl Castro, Fidel's brother, he fought at their side in the Sierra Maestra hills, became Defense Minister in Fidel's first Cabinet, was named Acting Prime Minister when the Maximum Leader came to New York in May 1959. That October, Martínez was named Labor Minister and assigned the task of purging Cuba's strongly anti-Communist union leadership. He succeeded too well. For, though Martínez himself subscribed to Fidel's messianic Communism, he allowed militant, old-line party regulars to take over the labor movement—and he paid the price.

"Enormous Needs." Another problem for Fidel is that some of his best friends are losing patience. Old Chum Nikita Khrushchev was growing cool; Russia's new leaders seem even more coldly disposed. In recent months Che and Cuba's President, Osvaldo Dorticós, have both visited Moscow without extracting a new trade agreement from the Kremlin. Yet another top Cuban official was trying to negotiate a new pact last week. Castro is worried about selling his sugar crop, which this year is expected to total some 4,300,000 tons, 10% more than Cuba harvested in 1963 but still far below the pre-Castro average of 5,000,000 tons. With world sugar prices at 2.8¢ a pound, Russia is understandably reluctant to buy Castro's crop at the agreed-on price of 6¢.

Castro's speeches are filled with scathing condemnation of "idiot" farm managers, citizens who "demand very much and give very little," the "tremendous lack of initiative and analysis," workers who sabotage equipment. Plaintively, he admits the nation's "enormous needs for housing, for more shoes, more rice, more fish, more food, more clothing." According to a current joke in Havana, "it will take 20 years for Communism in Cuba to get us back where we were under capitalism in 1959." On to 1970!

THE ALIANZA

Guarded Optimism

Long after the *Alianza para el Progreso* was launched in 1961, many Latins in American governments clung to the convenient belief that it was just another U.S. giveaway project. "It seems well-meaning," as one top Latino put it, "but rather utopian and probably futile." Now, at last, that view seems to have changed. Last week, as diplomats and economists from a score of nations gathered in the Peruvian capital of Lima for the third annual full-dress review of the Alianza, there was encouraging evidence that most Latin American nations now accept its goals and are working to achieve them. Said Colombia's Carlos Sanz de Santamaría, astute chairman of the Alianza's key planning committee: "We have made great strides in stating our problems

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nd in diagnosing them—and we are making a start at solving them."

The problems are as monumental as ever. Galloping population growth threatens to wipe out the hemisphere's slim, hard-won gains in housing, education, health, and food production. In many countries, inflation seems incurable. As always, Latin economies desperately need foreign investment capital. But for all their frustrations, the Latin American nations succeeded this year for the first time in meeting the Alianza's goal of an overall 3% per capita product growth rate. Latin American export earnings rose 8%. And paced by the U.S., which has already invested $3.7 billion in the Alianza, there has been a notable increase in foreign aid to the member nations.

More important perhaps than any statistical balance sheet was what seemed to be a new awareness of what the Alianza can and should be. As Brazil's Minister of Planning Roberto Campos observed: "Neither our fate nor our salvation are in the stars. They are within us ourselves." By meeting's end, nearly everyone shared a new, if guarded sense of optimism about the Alianza's prospects. As Thomas Mann, U.S. Under Secretary for Inter-American Affairs, pointed out, "The Alliance has given us a growing awareness of the social and economic problems we all face, a better understanding of what makes the world go round."

The most straightforward summation of all came from Ecuador's Finance Minister Alberto Quevedo. Said he: "More and more, we Latins are prepared to give in to demands for social justice. A peaceful revolution like the one propounded by the Alliance means that we may lose a good share of our privileges. A violent revolution will certainly mean the total loss of all that we have and cherish."

BRITISH GUIANA

Cheddi's Last Stand

Land Rovers prowled the streets, bristling with British tommies and submachine guns. Army helicopters whirred overhead. Military radios crackled back and forth. It was election day in British Guiana, and Her Majesty's government in Whitehall was determined to ensure that peaceful elections that seemed to be the colony's only hope of ending its three-year reign of racial violence. But not for the first time—hope for stability in British Guiana was thwarted by Marxist Premier Cheddi Jagan.

The election was specifically designed to oust Jagan, whose People's Progressive Party is overwhelmingly supported by Guiana's 295,000 East Indians. To guard against a repetition of the 1961 election, when Jagan won a parliamentary majority with only 42.6% of the vote, the government introduced a system of proportional representation under which he would have had to win a clear majority to return to power. Since no other party is willing to join a Jagan government, the British hoped that the election would result in a coalition headed by Attorney Forbes Burnham, a moderate, pro-Western leader whose People's National Congress Party is backed by his 190,000 fellow Negroes.

Familiar Tale. To a certain point, the election went as planned. Jagan piled up only 45.8% of the vote; Burnham won 40.5% and stood ready to form a coalition with the third-running United Force Party (12%), headed by Portuguese Businessman Peter d'Aguiar. But then Cheddi simply refused to resign. "The election was fraudulent," he announced. "The British government will have to force me out." Unimpressed, the governor formally appointed Burnham Prime Minister.

It was a familiar tale. Jagan, a dentist turned demagogue, founded the P.P.P. in 1950 with his Chicago-born, sometime-Communist wife Janet, and won the colony's first general elections in 1953. Jagan's intemperate demands for independence and deliberately incited sugar strikes forced the British to boot him out after five months. Ever since his return to power three years ago, Jagan has gone out of his way to foment racial passions. When last week's elections were announced in October 1963, his answer was to send his sugar workers out on a savage strike that lasted six months and took 173 lives before 5,000 troops restored order.

Bedtime Reading. By contrast with the P.P.P.'s racist election propaganda, Burnham's campaign focused on such needs as public works projects and agricultural reform. A silk-smooth speaker and one of his country's top criminal attorneys, Burnham earned a law degree with honors at London University, reads himself to sleep in English ("political novels"), French (Lamartine, Corneille), or Latin (Cicero, Tacitus, Catullus). Originally a co-founder of Jagan's P.P.P., Burnham soon soured on Cheddi's Marxist rantings and, fired by his own ambition, set up the anti-Communist P.N.C. in 1957. If his ideas today are sometimes vague, he is an avowed friend of the U.S.—and needs to be, since the backward colony desperately needs U.S. aid.

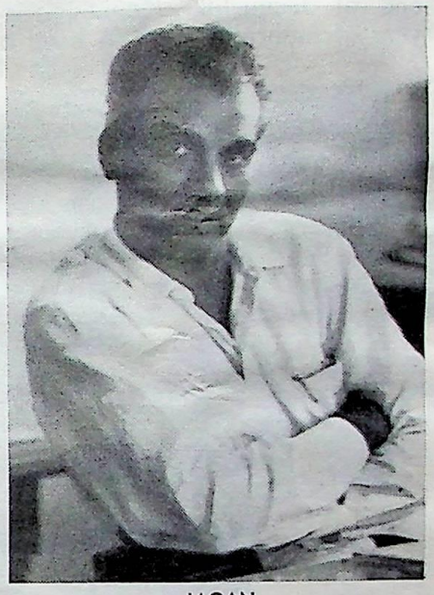
Above all, Burnham is determined to damp down racial hatreds. "Every case of hooliganism will be ruthlessly dealt with," he vows. "We will not condone violence." Nonetheless, the colony may well be in for more violence before Jagan goes back to dentistry.

ARGENTINA

The Unwelcome Mat

Spain's General Francisco Franco allowed Argentina's General Juan Domingo Perón to settle in Madrid five years ago with only one condition: the ousted South American strongman was not to engage in politics. Perón plunged forthwith into a career of remote-control intrigue that reached a ludicrous anticlimax this month when a long-heralded attempt to return home ended in his being sent back to Spain from Rio. Last week Franco decreed that the Argentine would either have to sign a pledge within 30 days forswearing political activity or leave Spain.

MO GARCIA



JAGAN

BURNHAM

Clinging to power with a solid minority.

Though reluctant to abandon his opulent villa near Madrid, Perón is expected to leave Spain as a matter of pride. Where will he go? Peronistas have suggested Switzerland, where he stashed some of his looted millions. Egypt's Gamal Abdel Nasser, Algeria's Ben Bella, and Tunisia's Habib Bourguiba have sent him invitations, and Castro is cooing.

As for Perón's clutch of cronies, they were ordered to clear out of Spain pronto. Four of them did and ran smack into yet another fiasco at New York's Kennedy Airport, where they were promptly bucked back to Madrid because they lacked proper visas. At week's end, they tried a second time with visas, and made it through to Asunción, the capital of friendly neighboring Paraguay. Diehard Peronistas in Buenos Aires claimed that he was an advance party and that Perón might still work his way to Asunción.

STUDENTS

When & Where to Speak

"The students are restless," says University of California President Clark Kerr, and he would beyond a doubt include Mario Savio. Born in New York City, Savio glided through high school at the top of a class of 1,200, spent two years in local colleges shopping for majors, then moved with his Sicilian-immigrant parents to California and entered the university at Berkeley. Soon he was "disenchanted." He "drifted" into the Student Nonviolent Coordinating Committee ("Snick") and last summer joined a Freedom School in McComb, Miss., to teach Negroes poetry, history, math and genetics—"a good subject to show how black and white people are the same."

Back at Cal in September, Savio found a cause to his taste when the university forbade on-campus collections for political ends, including Snick. He also found, in himself, an almost Latin American eloquence (he used to stutter), a sense of demagoguery, and a neat flair for martyrdom. Savio dropped his classes and began to lead a self-styled Free Speech Movement aimed at battering down the university's limits on out-of-classroom expression. His gifts were nicely matched by the university's habit of vacillating between concessions and crackdowns. By early last week, F.S.M. had won most of the freedom a student can use, including political activity and fund raising. The university authorities held out only for the right to add its own punishment to any that courts might take against students for off-campus political demonstrations. To this, angry F.S.M. leaders cried, "Double jeopardy!"

Grandstand Play. At this stage of the dispute, President Kerr assembled the university in its huge open-air Greek Theater to announce that the administration would stand firm. Most students applauded, but to Savio, Kerr's position was "totally inacceptable," and the university was set up for a perfect grandstand play.

Suddenly Savio appeared from nowhere to grab the microphone. Before 13,000 astonished spectators, a campus policeman then grabbed Savio around the throat while another twisted his arm in a hammer lock. They dragged him away fighting, while a reporter thoughtfully held a microphone to his face. Minutes later, Savio was freed, and when F.S.M. partisans yelled "We want Mario," he naturally had to be allowed to make his speech. It was really no speech at all, just a masterfully brief and low-keyed announcement of an F.S.M. rally.

Unnerved, the administration passed the hot potato to the faculty. Next day the Academic Senate, composed of all professors and deans, proposed a capitulation to F.S.M. on the double-jeopardy issue, and a policy that "the content of on-campus speech or advocacy should not be restricted by the university. Off-campus student political activity shall not be subject to university regulation." "This is the best birthday present I ever had," chortled Savio, who had just turned 22, and he acknowledged that if the cops had not dragged him away from the mike, "we would have been dead."

This settlement cannot be effective until approved by the university's board of regents; the only clue to their probable attitude is Chairman Edward Carter's concerned reference to "extraordinary problems created by recent incidents." But to turn it down now means risking more than further protest from Savio and F.S.M.: the Berkeley faculty, which voted 824 to 115 for its proposed solution, cannot lightly be overridden. Moreover, the proposal is not out of line with practice at other U.S. universities which have come a long way toward greater freedom of expression since the day in 1952 when Senator Robert Taft had to stand outside the gates at the University of Illinois to speak to students.

A Spectrum of Freedom. By and large, restrictions are the mark of church-affiliated colleges intent on serving *in loco parentis*, while freedom for students, defined roughly as the rights and curbs of ordinary civil law, is the goal at big, old, and scholastically high-ranking state and private universities.

At Harvard, students choose speakers freely and collect funds on school property for political causes. To avoid excesses, the university relies on a strong tradition that an undergraduate will "conduct himself in a way becoming to a Harvard student," says Dean of Students Robert Watson. Other Ivy League schools have similar attitudes. "If a student gets arrested, that's his problem," says Cornell Dean of Students Steven W. Davis. Columbia's President Grayson Kirk has the right of veto over campus speakers but never uses it; last year students there chartered a Sexual Freedom Forum.

Yale was deeply embarrassed a year ago when Kingman Brewster, then acting president, persuaded students to cancel a speaking invitation to Alabama Governor George Wallace; and now "the administration suffers in agonizing silence rather than tamper with free speech and action," says Yale Daily News Chairman Alexander Sharp. When Princeton undergraduates invited Alger Hiss to the campus in 1956, prompting hundreds of irate letters from alumni, then-President Harold Willis Dodds refused to intervene. "We have sought to resolve this problem not in terms of academic freedom, but in the deeper

terms of human freedom," he said. "To learn the personal significance of fire, the child must burn himself."

Occasionally a tolerant school will use persuasion to prevent a scorching. During the Cuban missile crisis two years ago, Brandeis University urged students to behave with "good taste" and cancel an invitation to Communist Party Chairman Gus Hall.

Lifting the Lid. Big state universities, under the eyes of legislatures, are often a bit more cautious. The University of Colorado this fall at first prevented a student group from selling the fiercely anti-Lyndon Johnson *A Texan Looks at L.B.J.*, then granted permission after thinking it over. Indiana University refused to discipline three members of the Young Socialist Alliance whose indictments under the state antisubversive law for campus speechmaking, quashed by lower courts, have been appealed by the state to the Indiana Supreme Court. Wayne State lifted a ban against Communist speakers on campus, then refused to answer questions put by the House Committee on Un-American Activities. The same pair addressed 300 students at the University of Michigan without incident. "The tighter you put the lid on," says John Gustad, provost of New College, Fla., "the bigger the explosion is likely to be."

Berkeley students have blown off the lid. It now remains for them to follow the traditions of schools that have long allowed a wide range of undergraduate freedom. Mainly, such traditions consist of written and unwritten curbs that preserve the good name of the university, fix orderly procedures (booking halls for speakers, for example), and most important, do not obstruct the basic purpose of the university—providing an education.

PUBLIC SCHOOLS

High Cost of Stinginess

Jacksonville, commercial center of Florida's Duval County, wears all the badges of a prosperous city in a space-age state: bustling expressways, glass-skinned office towers, a rebuilt waterfront. But Duval's high schools are so poor that teachers raise money for supplies by sending students out to sell candy and chewing gum. Low salaries keep the schools short of teachers and shabbily maintained. Textbooks are old; one history hesitantly predicts that man might some day orbit the earth. But stingy spending on schools finally proved to be a costly policy. The Southern Association of Colleges and Schools has disaccredited all 15 of the high schools in Duval County—the first time that the association ever whacked off a whole system.

As in most U.S. cities, Duval school budgets are determined by real-estate taxes. But two-thirds of the county's householders duck out of taxes by virtue of low appraisals of the market value of their properties. When these appraisals are figured at the official assessment rate of 42%, they mostly fall below $5,000, which is then forgiven under Florida's ancient "homestead exemption." Every attempt by worried parents to elect an assessor who would raise appraisals has met defeat. Turning from the polls to the courtroom, a band of determined Jacksonville citizens this week begins testifying in a suit that seeks to force the assessment of all property at fully 100% of market value.

Disaccreditation by the Southern Association put the county's 116,000 high-school students in a jam. Though they can still enter Florida's state-run universities freely, private and out-of-state colleges often require that the applicant be a graduate of an accredited high school. Duval County also worried about its economy: new business nowadays can hardly be attracted to areas with schools authoritatively pronounced to be bad.

SY FRIEDMAN

MacLAINE, HOURIS & NOTRE DAME MEN IN "JOHN GOLDFARB"

Wined, dined and wiggled at.

UNIVERSITIES

The Importance of an Image

Like a venerable bank or a vintage Bordeaux, a great university must be ever watchful of its reputation, and the University of Notre Dame is more watchful than most. Once the school's fame lay in its fightin'-Irish football cult; then the Rev. Theodore M. Hesburgh became president, and the school got academic quality too. This year a great new coach, Ara Parseghian, offered hope of a fine Olympic balance.

Now, says Hesburgh, the hard-won image is endangered by a $4,000,000 Hollywood farce called *John Goldfarb, Please Come Home*, in which Shirley MacLaine and a platoon of harem houris corrupt the Notre Dame football team. Last week in Manhattan, Notre Dame charged foul play, filed an injunction in New York State Supreme Court to block 20th Century-Fox from showing the movie.

Claiming misappropriation and exploitation of its name and insignia, the suit protested that Notre Dame would suffer "irreparable and immeasurable injury" if *Goldfarb* were shown, but the school did not ask for damages. "The University of Notre Dame is not for sale for such uses," said the petition. What particularly annoyed Hesburgh was the way-out plot that depicts Notre Dame players "as undisciplined gluttons and drunks."

The film is about a U-2 pilot who bungles a CIA mission over the U.S.S.R. and bails out in the kingdom ruled by Fawz (Peter Ustinov), a peeved potentate whose son failed to make the Notre Dame varsity. Shirley MacLaine just happens to be at hand as a reporter getting a picture-magazine scoop inside the seraglio. The vengeful Fawz fields a football team of his own and blackmails Goldfarb into coaching it. An eager U.S. State Department sends the Irish to the Middle East, where they are wined, dined, wiggled at, and ultimately defeated (34-29) by the burnoosed bandits of Fawz U.

Fox officials rushed to the defense, calling the film "a zany fantasy, a free-swinging satire." Doubleday & Co., one of two publishers also named in the suit, added informatively that the original book, heretofore ignored by the university, "couldn't be funnier." Everyone waited to see who would have the last laugh, but preview audiences in Hollywood and Manhattan were already spreading the word that *John Goldfarb* had handily out-Foxed itself long before the roar from South Bend. It is not simply a bad movie; it is a truly breathtaking display of tastelessness, ineptitude and wretched humor. [illegible] long written and performed [illegible] sueder. Only with a break like getting sued did *Goldfarb* appear to stand much chance at the box office.

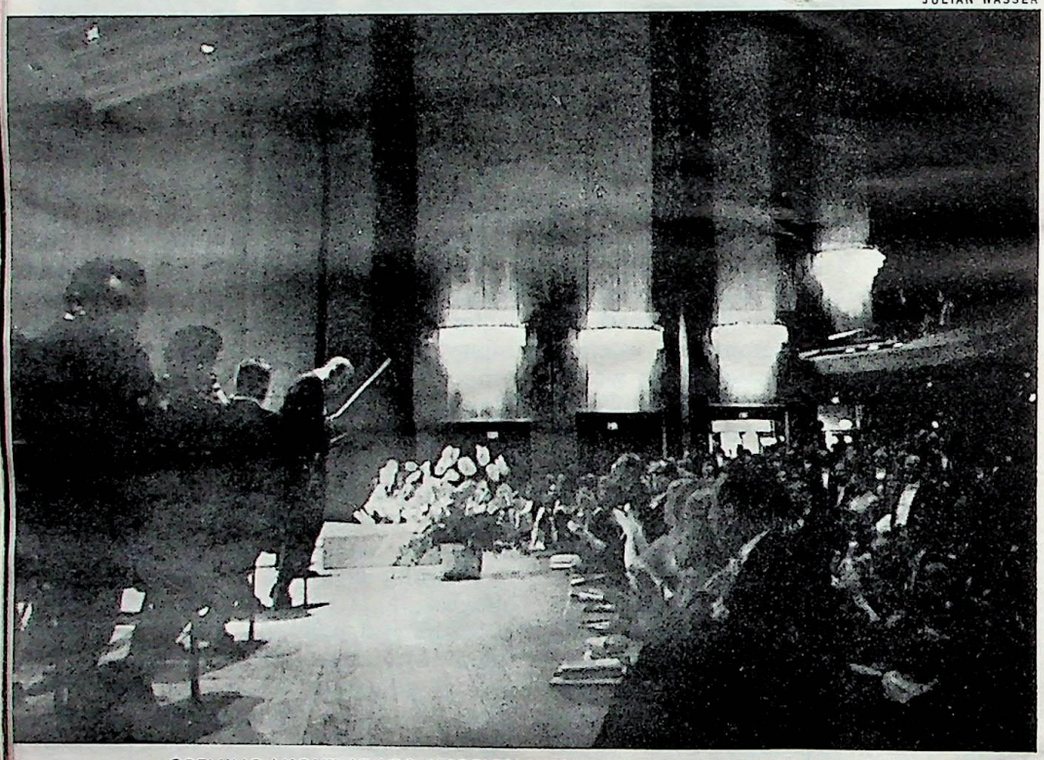
THE CITY

Brightness in the Air

(See Cover)

In a dazzle of diamonds and décolletage, with cinema stars, celebrities and just plain millionaires plentifully on hand, the growing edge of the U.S. population explosion—Los Angeles—welcomed the growing edge of another U.S. explosion—culture. The Pavilion, first and most important building in Los Angeles' new Music Center for the Performing Arts, was open at last, and the crowd that swarmed through Architect Welton Becket's tapered white columns on opening night last week was justifiably moved to civic pride.

JULIAN WASSER



OPENING NIGHT AT LOS ANGELES' MUSIC CENTER: HEIFETZ TAKES A BOW

For a unique city, a new visual axis.

The Grand Hall, with its honey-colored onyx walls, its massive chandeliers, and its two graceful balconies, was a masterful combination of warmth and tasteful luxury. Concertgoers mounted an elegant, cantilevered marble staircase that crossed a pool filled with white azaleas set in the lobby's floor, saw themselves multiplied into infinity in tall wall-size mirrors. Inside, in contrast to the sharp-edged angularities and cool-toned décor of Manhattan's Philharmonic Hall at Lincoln Center, the Pavilion was all curves and warm shades of gold, coral and beige. The unusual dimensions of the auditorium—wider and shorter than most—gave a sense of intimacy seldom felt in a major concert hall; 90% of the seats were within 105 ft. of the stage, and each had clear sight lines.

And there was delight for the ear as well as the eye; from the first bright sounds of Richard Strauss's *Fanfare,* it was clear that the Pavilion was a superb musical instrument. The Los Angeles Philharmonic's brilliant young (28) Indian conductor, Zubin Mehta, showed the acoustics off with one of Respighi's chiaroscuro set pieces called *Feste Romane,* whose chief virtue is that it includes the most delicate pianissimos as well as the most plangent brass. The sweeping gold acoustical canopy carried the sound, clear and unblurred, to the furthest seat. And when Violinist Jascha Heifetz joined the orchestra in Beethoven's *Concerto in D Major,* every member of the audience could feel himself the epicenter of the soaring sound. Some purists felt the timbre of the auditorium to be more on the brilliant or hi-fi side, in contrast to the mellow tones of Europe's more ancient structures. But at intermission time, Cellist Gregor Piatigorsky turned to Jack Benny, sitting just beside him, and said, "Aren't the acoustics wonderful?"

Freighted Occasion. For everyone there—California's Governor Edmund G. Brown, Los Angeles' Mayor Samuel W. Yorty, Cardinal McIntyre, the handsome women and active men sitting in the Founders Circle reserved for donors of $25,000 or more—this was much more than a gala evening. The Music Center is in the heart of Los Angeles, at the center of the cloverleafs that have long been mockingly called the center of the city; thus it is both highly accessible and highly visible, giving Los Angeles a new visual axis, with the building handsomely anchoring the new mall that leads to City Hall. Moreover, the center is recognized as a milestone in the city's cultural aspirations. Immediately after the opening number, Conductor Mehta turned to the audience and with some Indian ambiguity addressed himself to the occasion.

"This is the most unique city in the 20th century," he said. "I do not know it is too late now, in mid-century, to begin a new cultural life. This evening we are going to usher in a new era." When he turned to the star of the evening, he said: "I would like you all to join me in paying homage to the one person who is most of all responsible for the creation of this edifice. Unlike the princes of Florence and the Pharaohs of Egypt, she is a dignified, simple lady."

Dorothy Buffum Chandler sat shyly in her seat, in what has already been nicknamed "The Hook" section of the Founders Circle, while the applause rose around her. Only after four minutes, when her son Otis tugged her to her feet, did she rise and grin happily at the applauding audience. Her husband is Norman Chandler, whose Times Mirror Co. owns the Los Angeles Times, among other things. But the ovation was only her personal due. For "Buff" Chandler had conceived the idea for the Music Center, almost singlehandedly raised a staggering $18.5 million to build it, and organized a company to float another $13.7 million in bonds to finish the job. It was perhaps the most impressive display of virtuoso money-raising and civic citizenship in the history of U.S. womanhood.

But Buff Chandler, though she enjoys plaudits as much as the next, is still well aware that she is only providing the means to a more important end. At the champagne supper afterward there was toasting and talk about her money-raising prowess, about the opulent beauty of the Pavilion, about Los Angeles as a new center of culture that has passed Chicago and is getting ready to challenge New York. But it was Buff Chandler herself who went to the heart of the matter. "What is important here tonight," she said, "is not the fund raising or the building that we are in. The only really important thing here tonight is the music we heard performed. That will go on forever."

Steady Surge. Buff's Music Center is only the most visible symbol of the steady upsurge of interest in matters cultural in a city that has felt itself too long dismissed as an uncouth poor relation of San Francisco. Last season there were more than 500 performances of chamber music in the Los Angeles area, or some 20 a week. A typical weekend calendar this season lists 64 stage productions, 36 music performances, and 97 art shows. U.C.L.A. has launched an enormously successful extension program, which last year drew more than 300,000 Angelenos to the campus at night to attend lectures, dance recitals, concerts, plays and art films. The number of art galleries has doubled in the past ten years, and Los

AN ARAB CAROUSEL apparently inspired Architect Frank Lloyd Wright in 1957 when he and Arizona State University's late President Grady Gammage picked the site for an auditorium for the campus at Tempe. The $2,800,000 hall envelops arriving concertgoers in overlapping circles; the auditorium seats 3,000 in long, wide-spaced arcs of seats unbroken by aisles, and was filled to capacity for the inaugural performance by Eugene Ormandy and the Philadelphia Orchestra, at left.

geles' La Cienega Boulevard has be-
me an art market second only to
New York's 57th Street.

Buff's success has also inspired other
uilding projects, the biggest of which
the new Los Angeles County Art
seum on Wilshire Boulevard. De-
gned by William Pereira, it is all but
mpleted. Costing $20 million in all,
$11 million in private money was
sed by Edward William Carter, 53,
sident of the Broadway-Hale chain
department stores, director of a doz-
companies and organizations, and
airman of the University of Califor-
's board of regents (*see* EDUCATION).
The museum's main pavilion will
use the permanent collection in gal-
ies surrounding a large, four-story
rium. A second building will house
e changing exhibitions, those on tour
s well as those originated by the mu-
eum. The third part of the complex is
n auditorium seating more than 600
r lectures, films, concerts and tele-
ised programs. In the past, several
ajor collections (notably the Avery
undage and the Arensberg collec-
ns) have been given to other mu-
ums in other cities because the donors
t that their paintings could not have
uitable display space in Los Angeles.
w such space is at hand, and already
e Art Museum's board of trustees
s voted a $5,000,000 fund-raising pro-
m for new acquisitions.

"Los Angeles," says Carter, "was
quely ready to spend money on cul-
e. It is a center of artistic and mu-
al activity, and spending money for
ir development is a prideful act. Be-
es, it tends to offset the image that
e place is populated largely by kooks."

Staggering Statistics. But Los Ange-
is only the latest example of what
become a major new trend in U.S.
—listening and looking and reading
doing the things upper-cased as
. The statistics of the change are
ggering.

MUSIC is in the air to the extent that
e number of amateurs playing instru-
nts rose from 19 million in 1950 to
million this year. In the same period,
e number of symphony orchestras
ew from about 800 to 1,300, playing
an audience of some 10 million.
om 1947 to 1964, the number of
ldren studying music at home or in
hool jumped from 2.5 million to 12
illion—an increase of 380%. Last
ar the U.S. public bought 18 million
assical records.

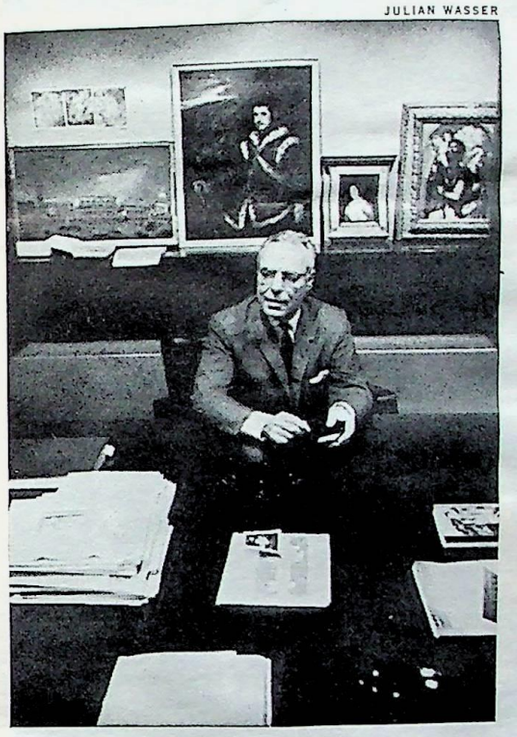
ART galleries are springing up all
er the place. In Phoenix, Ariz., for
stance, there were two in 1950, and
ere are about 18 today. In Manhat-
n, there were 96 art exhibitions in De-
mber 1950 and 236 exhibits in De-
mber 1964. On a recent weekend, the
etropolitan Museum clocked 96,971
sitors, the Museum of Modern Art
1,708, and the Guggenheim 13,701.

BOOKS are now selling at the rate of
$7 billion a year. A 1963 survey by
the National Book Committee estimated that book sales and library circulation have increased three times faster than the population during the previous five years.

• THEATER is no longer limited to Broadway and the road; there are currently 35 playhouses off-Broadway, and there are top-quality repertory companies, such as the Tyrone Guthrie Theater in Minneapolis, the Arena Stage in Washington, and their counterparts in Seattle, Houston, Milwaukee and San Francisco. The stage is not simply a spectator sport; there are reportedly some 5,000 nonprofessional theater groups in the U.S., not counting those in colleges.

• BALLET has become a major U.S. art form. There are 18 professional and

JULIAN WASSER



EDWARD CARTER
The proud were ready.

200 semiprofessional ballet companies in the country, two of which—Balanchine's New York City Ballet and the American Ballet Theater—are rated among the best in the world. Their chief international competition—Russia's Kirov and Bolshoi, Denmark's Royal Danish and Britain's Royal Ballet—consistently play to sellout audiences during their extensive U.S. tours.

• MOVIES no longer mean Hollywood, period, to the man in the street. About 15 years ago, there was no more than a handful of theaters outside New York City specializing in what the trade calls art films—foreign movies, oldtime classics, experimental shorts. The "art circuit" today consists of more than 700 theaters.

Furniture Factory Concerto. Whence comes this sudden surge of national enthusiasm? More education is one answer. Before World War I, 20% of the 14- to 17-year-olds in the U.S. attended high school; in 1964 this has increased to 93.5%, of which 53% go on to college. Enrollment in U.S. colleges increased 102% between 1954 and 1964.

Prosperity is a major factor—and the leisure that prosperity has brought on a scale unknown to any other culture in the history of mankind. And once the trend began, it has been augmented by feedback from all the institutions that serve society. The universities have been reaching out more and more into the communities around them, staging lectures, recitals, plays and debates to which the public is invited. The foundations are handing out more and more money for cultural causes—an estimated $50 million this year. In 1964, for instance, the Rockefeller Foundation made grants to seven symphony orchestras to enable them to extend their seasons one or two weeks, and the Ford Foundation made grants to professional ballet companies from Salt Lake City to Boston.

U.S. business has turned patron in a big way, partly out of tax leniencies, partly out of a new sense of community responsibility. Last year U.S. business supported culture to the tune of $25 million and is expected to spend 10% more in 1964. Chase Manhattan Bank has a $500,000 collection of modern art and gives some $350,000 a year to educational and cultural projects. The Basic-Witz Furniture Co. of Waynesboro, Va., commissioned a concerto by Robert Evett for its 75th anniversary, and General Motors recently sent its employees 600,000 copies of two booklets: *French Impressionism* and *Masterpieces from the Louvre.*

Gown & Town. All this activity needs its housing, and it is getting it. Pity the U.S. architect without an art museum, a symphony hall, an auditorium or a theater on his drawing board—or better yet, the newest thing: a culture center. Many of them have been built by universities to serve both the student body and the civic community. Among the newest and most distinguished are those shown in the preceding color pages:

▶ Monticello College's $2,000,000 Hatheway Hall in Godfrey, Ill., combines physical culture with the other kind: a swimming pool and a gymnasium flank the 1,000-seat auditorium. Finished in October 1963, the "theatron," as it is called because of its steeply banked seats arranged Roman-style around the central arena, is used for lectures and student activities of this small junior college for women, as well as for performances and civic affairs of the community.

▶ The University of Illinois' spectacular $8,350,000 Assembly Hall was financed by two bond issues, the interest on the bonds being paid out of student fees. Opened about a year and a half ago, the mushroom-shaped concrete structure has a capacity of 16,000 permanent seats. The university also plans a $14 million Max Abramowitz-designed

CC-0. In Public Domain. Gurukul Kangri Collection

Digitized by Arya Samaj Foundation Chennai and eGangotri

center for performing arts with four diversified auditoriums for music, ballet and experimental theater.

▶ The Grady Gammage Auditorium on the campus of Arizona State University at Tempe is a tribute to the determination of the university's late president Grady Gammage that Arizona should have at least one public building by the late great Frank Lloyd Wright, who made the state his second home. The auditorium is combined with a four-story music school, which contains a workshop, classrooms, the departmental library, a laboratory for musical education, rehearsal rooms, recording rooms and offices.

▶ Butler University's $3.7 million Clowes Memorial Hall, completed last year, is used by the Indianapolis Symphony Orchestra, as well as the university and the community. Its fine backstage facilities, adjustable-size stage and superb acoustics have made Indianapolis one of the prime stopovers for shows on the road, whereas there used to be a saying that "the two worst weeks in the year were Christmas and Indianapolis."

JULIAN WASSER

CONDUCTOR MEHTA, BUFF, ARCHITECTS BECKET & PEREIRA
With fading memories of an uncouth poor relation.

In a Water Tank. Aside from the academic contribution to the explosion of U.S. interest in the arts, almost no town is too big or too small to be engaged in a new cultural enterprise of some kind. Rocky Mount, N.C., for instance, has converted a round railroad water tank and pumping station into a culture center, with an art gallery on one floor, a theater in another, and classrooms on the third. Honolulu has two brand-new theater-concert halls. Saratoga Springs, N.Y., is building a $3,000,000 open-sided auditorium to make itself the summer home of the New York City Ballet and the Philadelphia Orchestra. In 1965 Trenton, N.J., will have finished a state-financed $6,500,000, four-building culture center that includes a planetarium, as well as a library, a museum and an auditorium. St. Paul has just opened a $3,000,000 Arts and Science Center. Milwaukee is more than two-thirds of the way toward its $6,000,000 goal to finance a center for the performing arts. And in Washington this month, President Lyndon Johnson broke ground for the $46.4 million John F. Kennedy Center for the Performing Arts, designed by Architect Edward D. Stone.

Most of the centers are largely paid for by private funds. The financing of Lincoln Center for the Performing Arts, biggest and most expensive of them all, was bellwethered by John D. Rockefeller III, who may be lukewarm about the arts but believes in enhancing his city. His own contributions have not been made public, but the Rockefeller Foundation gave more than $50 million, and the Campaign Committee is only $10 million short of its $160.7 million goal.

Los Angeles has no Rockefellers or their old-rich counterparts, who feel that contributions to their city's culture are a matter of conscience rather than enthusiasm. But it does have a sense of community pride that New York might envy. And it has Buff Chandler.

Driver Driven. Other driving women in other cities and other times have organized civic enterprises, helped their husbands in business, become the local doyennes of culture. But at 63, Dorothy Buffum Chandler does not quite fit the stereotype. Her blue eyes can still turn suddenly shy, and on occasion she can seem at a loss for words. In achieving her formidable goals, she is less driving than driven—by a restless conscience and a sense of time slipping away while things that need doing are still undone. So driven, she has been too b... consider what the effect may ... the bystander.

To the outsider, she sometimes ... dictatorial. By her lights, she is ... trying to get something done. "... like that makes me cry," says Buff, ... unlike most women of consequence ... disarmingly frank both about ... and the resentment she sometim... arouses. "Inside of me I am very ... and warm, but the position in ... I've been placed, the responsibilities ... have, make it necessary for me to ... very strong and very firm. Often ... had to be the catalyst simply because ... nobody else would make a decision. ... So in my way I've had to be ... more firm and forceful in my approach ... ance and speech than I really would ... like to have been. I know that, and ... not the ideal of the person I set ... to be."

Five-Ply Personality. Buff Chan... does so many jobs that it is hard to ... just what she set out to be. She ... every day with a before-breakfast ... with husband Norman in the ... pool behind their house in the Hanc... Park area of northwestern Los Ang... Then any of several things can hap... She may turn up at her office at the ... Angeles Times (she is a company ... president) or attend a meeting of ... University of California's board of ... gents (she is chairman of the buil... and grounds committee, which ha... yearly budget running into tens of ... lions of dollars among the univers... seven campuses). This may be follo... by an editorial conference on the ... tent of the women's section of ... Times, followed by a dinner for 2... home. Next day there may be a gr... motherly get-together with her two ... dren and eight grandchildren.

Every one of these segments of ... time gets her intense attention. "I d... jump back and forth among unrel... activities," she explains. "If I ... clothes, I set my time and I go out ... put my mind only on shopping ... clothes. If it's time to fix up the ho... I don't just run in and out and try ... sandwich that in—I'll spend a day, ... whatever time is needed, and I w... take phone calls unless they're very ... gent. I'm extremely organized."

So organized, in fact, that the ef... is not always endearing—as she ... knows. "When Buff Chandler walks ... a meeting, the rest of us might as ... go home," says another L.A. comm... lady. One of her best friends, who ... worked with her on the Music Cen... correctly forecast early in the camp... that nobody else would raise ... money but Buff. "First," she said, "... got all the weapons—the Times, ... Chandler name, the real power. S... ond, she's just so competitive that ... couldn't bear the thought of not ... ning the victory all by herself."

Buff admits to the competitive... "I'm most comfortable when ... around men," she says. "Most ...

BUFF IN COLLEGE CHORUS LINE (SECOND FROM LEFT)
So much to do.

just don't seem to be competitive

From Sprint to Shimmy. Dorothy ough." Buffum first learned the joys of compe- uffum in high school at Long Beach, tion. Her father had moved to Cali- self, nia from Lafayette, Ill., when she about a year old, opened a general e and built it into a chain of de- ment stores. Eventually he became er, and Buff became a fine sprinter. didn't take to boys much except to against them and beat them," ad- Buff. She had an anxious sense that e was not enough time. "I'd wake frequently with a feeling that there so much for me to do, but would I have time to get it done?"

The anxiety momentarily quieted en she got to Stanford and discov- d boys ("I don't think I ever missed dance on campus"). In no time, she s voted the campus queen. And when orothy Buffum put on a slinky dress d danced the shimmy—"Well, I real- did it up! I think I was probably the est on campus—or the worst, if you nt to look at it that way."

Fellow Student. Norman Chandler, on of the family that owned the Los geles Times, left college after Christ- s in his senior year so that he could started working on the paper and ry Dorothy. She quit at the end of junior year without a qualm.

Not for Me. They had been mar- ten years and had two children, milla, 7, and Otis, 5, when Buff, as had come to be called, became so ssed by what seemed to be the tinued reluctance of the Chandler ily to accept her that she took up dence for six months in a private chiatric clinic in Pasadena run by Josephine Jackson, coming home a visit about once a week. The ther- was an unqualified success. Says "I had begun to doubt myself, to that there was something wrong me. Dr. Jackson helped me to see Norman's family was not going to nge or destroy me, nor was I going change or destroy them."

With her new confidence, Buff found new restlessness. Her children were re and more away at school. "I was interested in the social life of Pasa- na or in joining the bridge-playing. I ew it was not for me. I was still that girl, believing when I woke up ch day that life was running too fast."

Unexpected Volunteer. So Buff went work for Children's Hospital of s Angeles. The hospital management ought they were getting another half- rted volunteer, but they didn't know ff. She zeroed in on personnel prob- ms. "It seemed to me everybody was derpaid." Before the management new what had hit them, Buff confront- them with proposals for more days longer vacations, higher wages. Then war came, and Norman was lled by the Government to other jobs. e asked Buff to take over some areas of the Times, and she moved into the Times building, setting up a tiny, 1½-room apartment on the top floor. Typically, Buff enrolled in a one-year journalism course at the University of Southern California, held beer bull-sessions for the newspaper staff every night, and reorganized the women's page from a narrow provincial society report to a far-ranging survey of all the arts from decoration to ballet.

Zeal & Budgets. Buff Chandler's public career really began, though, when Actor Jean Hersholt, president of the Hollywood Bowl, was impressed by her zeal on the board of the Southern California Symphony Association and persuaded her to join the board of the debt-ridden Bowl.

Buff was all for culture, but she also had an executive's eye for the balance sheet. Her first vote as a board member was to close the Bowl down. The Bowl closed. But typically, Buff had something more in mind. She enlisted the help of Conductor Alfred Wallenstein and devised a scheme to persuade headline musicians to play with the symphony in the Bowl without fees. In two weeks there were enough pledges to make up a whole season. The Bowl reopened and wound up with a tiny profit.

WITH NORMAN IN 1920
So little competition.

The Bowl was saved, but this still left the Los Angeles symphony without a hall of its own. Early in 1955, Buff called up her friend Grace Ford Salvatori, wife of an industrialist and well known for her entertaining, and suggested that they put on a benefit party to house the symphony.

They landed Composer Johnny (*Body and Soul*) Green as master of ceremonies. Jack Benny, Danny Kaye and Dinah Shore were persuaded to contribute their talents, Christian Dior himself put on a fashion show, and the Ambassador Hotel provided free space. Buff and Grace sweet-talked a Cadillac Eldorado out of General Motors to raffle off, and the evening—still remembered as the Eldorado Party—netted a munificent $400,000.

Sudden Chance. For three years the money sat in a bank while Buff busied herself elsewhere. Then one free day, on a sudden impulse Buff drove 50 miles south of Los Angeles to call on Myford Irvine, an eccentric millionaire she hardly knew whose family owned the famed 93,000-acre Irvine Ranch, now being turned into the world's largest private development, master-planned by William Pereira (TIME, Sept. 6, 1963). Her timing turned out to have been just right: Irvine killed himself within a month—but not before he had pledged Buff $100,000.

She scooped up another $100,000 from a foundation, was promoted to president of the Symphony Association, and persuaded the county board of supervisors to set aside 7½ acres in Los Angeles' projected civic center for a hall to house her orchestra. The county board not only agreed but chose top Los Angeles Architect Welton Becket for the job and undertook to pay his fee.

Battle of the Bar. Buff set herself a goal of $4,000,000, installed a fund-raising staff in what had been the swimming-pool changing rooms behind the Chandler mansion, and began a determined

CC-0. In Public Domain. Gurukul Kangri Collection

Digitized by Arya Samaj Foundation Chennai and eGangotri

AT HOME WITH SON, DAUGHTER & GRANDCHILDREN
Another needed for Nassau County.

assault on every rich Californian she knew. A year later, she called a luncheon meeting of her big-money committee at Perino's Restaurant, prepared to go before them just $250,000 short of her $4,000,000 goal. But on the way in, she spied her old friend, Oilman Edwin Pauley, led him into the bar, and appealed to his patriotism, chauvinism, civic pride, social duty, and the obligation to help out an old friend. Pauley surrendered. Buff was starting out of the bar with his pledge of $125,000 when she spotted another oilman, Samuel Mosher, chairman of the Signal Oil & Gas Co. A few minutes later, she announced triumphantly at the luncheon that the $4,000,000 goal had been reached.

"Once you have the momentum and the excitement going for you, you must keep going or it fades very quickly," says Buff Chandler, who should know. She herself kept plenty of excitement going by constantly enlarging the plans to house the symphony. From a single building, it has become three: the 3,250-seat Pavilion, the drumlike 750-seat Mark Taper Forum for theater-in-the-round, and the 2,100-seat Center Theater. The complex includes two restaurants, private dining rooms, rehearsal halls, studios, set-designing facilities, and underground parking space for 2,000 cars. This meant that she had to raise her own goal to $18.5 million.

But as Buff Chandler is well aware, it's what goes into the building that counts. The Philharmonic's Music Director Mehta is a case in point. When he turned up in Los Angeles as a guest artist, he was such an instant success that Buff and other symphony directors invited him back for another guest appearance—at which Conductor Georg Solti, who had been in Europe at the time and was not consulted, resigned. Buff appointed a committee of top musical figures—among them Cellist Piatigorsky and Violinist Heifetz—which came up with a list of some 20 possible candidates. "I'm a great one for getting all the expert opinion I can," says Buff. "Then, after everybody has registered his view, somebody has got to say 'That's it—let's go.' This is my job." So Mehta it was. In Zubin Mehta's case, it was a job well done. He has made the orchestra one of the best in the country, and his programming last year—mostly modern works—was considered masterly.

Intensely Personal. When Buff is not saying "Let's go," she is getting other people to say it. Well does she know the uses of group appeal: she organized a "Blue Ribbon Committee" of 500 society matrons and housewives to bring in 1,000 people who would contribute $1,000 each (it took them five months, but they made it). "Women work very hard," says Buff, "when you give them a specific goal and a time limit." She has also been successful with a mass pitch, distributing shopping bags called "Buck Bags" to raise $500,000 in contributions, to be matched by another $500,000 by an anonymous donor. Norman and Buff Chandler have not publicized their own contributions to the Music Center, but it is believed that they have given at least $300,000.

Buff can also swing a benefit. To Hollywood stars and moneymen, it seemed presumptuous to ask $250 a ticket just to go to the movies, but they paid it for Buff's benefit première of *Cleopatra*. "No," said Producer Harold Mirisch when she sat down in his office and suggested that he take $5,000 worth of tickets. An hour later, the story goes, he had not only bought the tickets but called his broker and ordered him to buy all the Times Mirror stock he could lay his hands on.

Person to Person. But Buff's main fund-raising gimmick is no gimmick at all; it is to be intensely personal with the extremely rich. As one prac... professional put it: "Let's face it... portant money is raised by impo... people asking other important pe... for important amounts. Asking 2,0... 000 people for a dollar each won't... you $2,000,000; it won't even get... $1,000,000. You need very, very... gifts from very few people." During th... Music Center campaign, Buff kept cr... stantly before her a list of ten to fi... prospects. "If I kept looking at the... whole list," she explains, "I would never... have slept." And it was not just a ques... tion of quantity but quality, because... fund raiser should be at various times... psychiatrist, a psychologist, a marria... counselor, and even a sort of fina... doctor. You have to know the fa... situation at all times. Divorce, illn... death—or just a routine change in... family financial situation—can affe... contribution." Buff even consults as... ogy on occasion. She is not a blind... liever, but she is sufficiently impre... with it to run an astrological chart... every major prospect before she ap... proaches him.

Then there is the question of kno... which motivational buttons to p... "Some people don't care about musi... all, but they want to be in a pres... group, which the Music Center bui... ly is. Other donors like to see t... names on plaques on the walls. ... others like the idea that the Music C... ter will provide employment for m... cians and artists."

Buff found that she averaged ... visits to each major donor ($25,0... more). She is especially sensitive to ... easy disparagement that with her h... band's name and the Times on her s... it is simple to get people to kno... under. She admits that in many instan... the Chandler name has been a h... But she insists that often her connec... with the Times has had just the oppo... site effect. "Out of an hour's appoi... ment with a man," she says, "I m... spend 45 or 50 minutes answering qu... tions about things in the Times that ... challenges or dislikes. And if I'm n... careful in those 50 minutes that I'... talking, then I lose my sale in the ... minutes I have left."

All the Way. The spectacular succ... of the Music Center has spread B... Chandler's fame as a fund raiser acr... the land. Recently she was asked ... her formula by three representatives ... the seven-building, $45.5 million ... F. Kennedy Civic, Educational and C... tural Center for Nassau County, ... also designed by Welton Becket, w... will begin to rise late next year.

"The most important thing," she ... them, "is not a formula but a pe... who will be a catalyst for the proje... someone so dedicated to the p... that he will stay with it until the ... completed. This is something that ... committee or group can do; it ... begin and end with one person ... will stay with it all the way."

Like Buff.

PIANISTS

The Evolution of Emil

Pianist Artur Rubinstein was passing through Odessa one day in 1931 when a piano teacher cornered him and insisted on dragging him off to the local conservatory to hear her pupils. "You know how boring such an ordeal usually is," Rubinstein recalled a few years later. "But by God, there was this boy there, with a mass of red hair and short, with a mass of red hair and freckles—who played . . . I can't describe it. All I can say is, if he ever comes to the U.S. I might as well pack up my bags and go."

In 1955 Emil Gilels came with full trifles and flourishes as the first top Russian artist to perform in the U.S. since Composer Sergei Prokofiev's visit in 1921. Now, at 48, Gilels (pronounced Gill-*ells*) is back for his fifth tour of the U.S. and playing better than ever.

His visits, in fact, comprise a case study in the evolution of a good pianist into one of the great masters of our day. Isolated within one school of music, in this case the Russian, the growth potential of an artist such as Gilels was, like a sapling in a tin can, limited. But with a decade of exposure to the cross-currents of Western musical life, Gilels has spread his roots and matured to a remarkable degree since his U.S. debut. His attack has become more assured. Once objective and calculating, he now plunges deeply into a work with daring abandon, searches out its mysteries, takes chances. A fireplug of a man with square, stubby hands, Gilels foregoes note-picking accuracy for a more fluid use of fingering.

At mid-tour Gilels has drawn rapturous acclaim wherever he has appeared. At Chicago's Orchestra Hall the overflow crowd spilled onto the stage.

ART SHAY

GILELS AT CHICAGO'S ORCHESTRA HALL
Out of the tin can.

Gilels rewarded them with a magnificent performance of his tour de force, Liszt's massively difficult *Sonata in B Minor*. Last week at Seattle's Opera House, the audience awarded Gilels one standing ovation after another.

Gilels, a professor of music at Moscow University, was genuinely touched by the size and fervor of his audiences. Especially, he said, since "Americans have stereo, hi-fi and the best of records. Still they come to the concert hall. The recordings to them are like canned food. A concert is like fresh food."

JAZZ

The Third Thing

Little Herbie Solomon was, everybody said, a square. While the other saxophone players at Brooklyn's Abraham Lincoln High School were trying to imitate the new bebop style of Charlie ("Bird") Parker, Herbie was still practicing to old Illinois Jacquet and Flip Phillips records. You're not with it, Herbie, they said, and refused to let him play with the school's dance band.

But Herbie endured, eventually changed his name and instrument, and, as Jazz Flutist Herbie Mann, has become at 34 one of the most successful jazzmen in the business. This week he was voted the top musician in his field for the eighth consecutive year in the *Down Beat* magazine readers' poll. But, to the inner circle of jazz *aficionados*, Herbie is still not with it. Mainly, says Mann, "because I've committed the cardinal sin of being successful."

Languid Afternoons. With a canny eye on the box office, Mann has attracted a devoted following from "the lay and fringe public" with a unique amalgam of jazz and ethnic music. Last week, in Manhattan's cavernous Village Gate, the Herbie Mann Septet was serving up one of its typical jazz potpourris: gently infectious bossa nova, thumping Afro-Cuban, variations on a North African tribal chant, a Middle Eastern treatment of the theme from *Fiddler on the Roof*, a brooding interpretation of a classical piano piece written in 1888 by French Composer Erik Satie. Mann also introduced a new gimmick: he played a flute improvisation against a tape recording of eerily exotic, centuries-old *gagaku* music, played by the royal musicians of Japan's imperial court, a memento picked up when Mann played with the *gagaku* musicians during a tour of Japan three months ago.

Mann's flute is a sparrow in the treetops, lightly flitting and chirping above a heavy, sensuous beat laid down by the rhythm section On alto flute, the mood is more softly introspective, evoking languid afternoons by the sea. The music is easy on the ears, mildly diverting in its melodic simplicity and ease of approach. Mann plays with eyes closed, standing disjointedly and undulating as

BEN MARTIN

MANN AT THE VILLAGE GATE
Up in the treetops.

if to entwine himself around the microphone, conscious that "some chicks just come to see me move. They're stone-deaf freaks, but I'm not knocking it." He doesn't knock anything, in fact, that might lure people into a nightclub. Last year, to add a little "carnival excitement," he hired two Afro-Cuban dancers who cavorted about the stage showering the audience with confetti. Such tactics, scorned by jazz purists, bring Mann a $50,000 yearly income.

Mann scored his breakthrough when he discovered that the gentle flute, an upstaged squeak in the company of flashy trumpets and saxophones, could best flex its personality against a background of drums. Mann formed an Afro-Jazz Sextet and embarked in 1959 on a highly successful four-month tour of 17 African countries.

Boom-Boom. Back in the U.S. the combo's "ethnic jazz" gained a wide audience. But in the mounting din of his drummers Mann found himself becoming "a sideman in my own group" and he fled to Brazil. He came back playing a new music that helped touch off the bossa-nova craze in the U.S.

"One reason jazz is not salable," says Mann, "is because the musicians and audiences stopped enjoying themselves. People used to swing and be happy in a club. Now they must come out emotionally destroyed. We play simple, enjoyable music. My audience doesn't know it's supposed to be something they shouldn't like. It's not jazz and it's not authentic ethnic; it's a crossbreed, a third thing."

Confident that he has now achieved his life's ambition—"to be to the flute what Benny Goodman is to the clarinet"—Mann is looking for new worlds of music to translate into the third thing. "At the moment," he says, "I'm very interested in American Indian music. There's more to it than boom-boom, boom-boom, you know. The possibilities are endless."

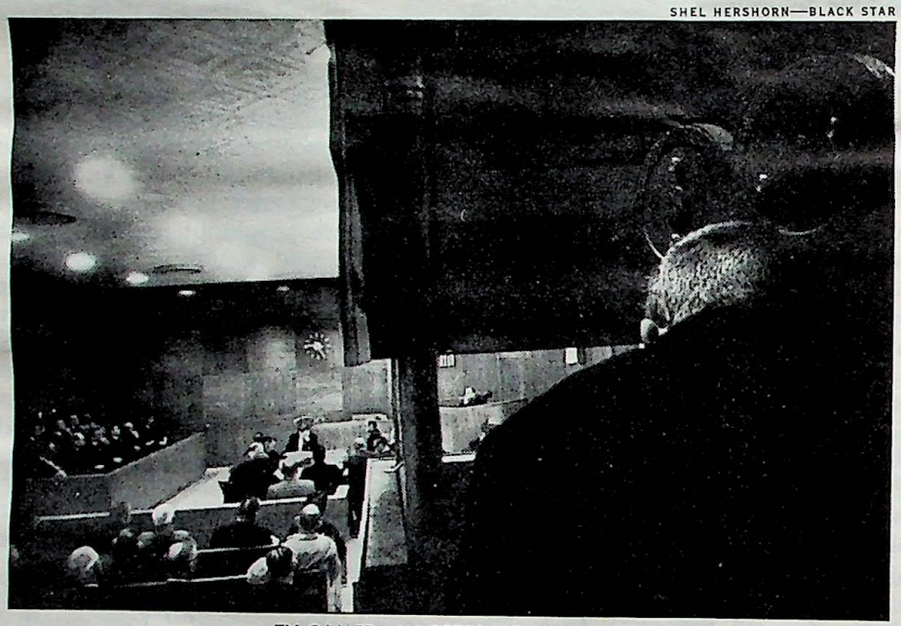
NEWSPAPERS

Free Press & Fair Trial

During his trial on charges of swindling fellow Texans—to say nothing of assorted banks and financing companies—Billie Sol Estes objected vehemently to the presence of TV cameras in the courtroom. His objections were overruled; Estes was convicted and sentenced to eight years. In agreeing to consider his appeal last week, the Supreme Court did not concern itself with Billie Sol's guilt or innocence. The sole question before the court is whether his unwilling TV performance prejudiced his right to a fair trial.

Whatever the eventual decision, it could affect more than TV's tireless insistence on sharing the newsman's right to cover trials. In accepting Estes' appeal, the Supreme Court involved itself in the kind of quarrel that has been stirred up whenever the press, in the exercise of its constitutionally guaranteed freedom, is accused of infringing a defendant's constitutionally guaranteed right to a fair trial.

SHEL HERSHORN—BLACK STAR



TV CAMERA IN ESTES COURTROOM
Not a question of guilt or innocence.

The Lesson of Dallas. The longstanding controversy is picking up fresh impetus. Last week Jon O. Newman, U.S. Attorney for Connecticut, ordered his staff to tell reporters nothing that might prejudice a defendant's rights. "If in doubt," admonished Newman's memo, "keep silent." A New Jersey Supreme Court judge recently imposed a similar silence on every lawyer and policeman in the state. In Rochester, N.Y., two men awaiting trial on gambling charges won a temporary injunction against publication of their police records by a local newspaper. If such intelligence got out, they claimed, it would impair their chances for an impartial trial. After a few days, however, the court canceled the injunction.

Such actions reflect a prevalent opinion that the press is less concerned with impartial justice than with unthrottled crime coverage. It is an attitude that found support in the Warren Commission's report on the Kennedy assassination. "The promulgation of a code of professional conduct governing representatives of all news media," said the commission in summing up, "would be welcome evidence that the press had profited by the lesson of Dallas."

That newspapers often try, and frequently decide, criminal cases well in advance of judicial process is a fact that even editors do not deny. This year a convicted wife-murderer, Dr. Sam Sheppard of Cleveland, was released for retrial after ten years in prison because a federal judge agreed with Sheppard's contention that Cleveland papers had so inflamed public opinion as to destroy all possibility of cool justice.

Six years ago, Chicago papers seemed equally determined to convict a suspected killer. TERRORIST BARRY COOK ADMITS SLAYING WOMAN IN PARK, ran one banner headline that was only part of a noisy press chorus demanding swift court retribution for the crime. This sort of coverage did not abate until Cook's trial jury, obviously unresponsive to newspaper suggestion, acquitted the defendant.

Legal Support. Cook's release despite the energetic newspaper campaign to have him executed, is cited by defenders of the press's habit of trying cases in print. At discussions on press freedom and fair trial, Managing Editor Robert C. Notson of the Portland Oregonian has repeatedly and vainly asked lawyers and judges to name one occasion on which hostile newspaper publicity helped convict an innocent man.

But newspapers are not without support in the legal profession. "My original view that pretrial publicity is generally harmful to our system of justice has withered away," said Claud... Sowle, associate dean of Northwe... University School of Law. "My ... confidence in the wisdom, effective... and good taste of a free press ... grown considerably."

Discussions on the relative rights ... a defendant and the newsman cover... his trial, rarely produce such reasonab... comment. "No s.o.b. judge can tell me what to put in my paper," said a Wis... chusetts newspaper editor, in the co... of a discussion convened to frame ... voluntary code for newspaper cover... of court procedure. Replied the ju... "And no s.o.b. editor is going to ... me into a mistrial."

House Cleaning. As far as the ... is concerned, any censoring of pre... cial pretrial testimony is the co... problem. And the fact is, the pol... lawyers for both prosecution and ... fense, and judges themselves, have ... betrayed a strong inclination to ... cases in the newspapers.

In 1956, when the FBI made ... arrests in the Brink's heist in B... J. Edgar Hoover's announcement, ... ried by both national wire services, ... maturely declared that "intensive ... vestigation by the FBI for the past ... years has resulted in the solution of ... million dollar Brink's robbery. Of ... eleven members of the gang respons... for the robbery, the FBI this morn... arrested six." When word leaked to ... Chicago Daily News that two of ... six cops arrested for burglary in ... were ready to talk in exchange ... lighter sentences, the paper refused ... first to publish the story, even thou... the city's other dailies did. The N... suspected that it came from defense ... torneys interested in getting it prin... so that they could claim a mistrial.

"I would not ask the news media ... change their practices until we in ... legal profession admit that our ow... house is in need of cleaning," sa... James R. Thompson, assistant state ... attorney for Cook County (Chicago, ... Ill. Laws prohibiting prejudicial pr... trial talk by court and law-enforcement ... officials are already on the books in ... states, and these statutes reflect a ... year-old canon of the American B... Association. But the A.B.A. has ne... invoked its canon.

kample, which is followed by half the ailies in the state, suggests that papers efrain from printing court testimony hat has been stricken from the record, retrial confessions, and criminal rec- ords unless introduced as evidence.

But most editors and publishers still sist formal rules of procedures. "I an envision no machinery that would ake possible the absolute enforcement any code without doing violence to edom of the press," says Managing itor Clifton Daniel of the New York mes. His sentiment is heartily en- rsed by Editor Richard W. Clarke of e New York Daily News. "As long as ere's no law prohibiting the publica- on of court information," said Clarke, e'll get it and we'll print it."

COLUMNISTS

ife Imitates Art

"There has been a lot of discussion as o whether J. Edgar Hoover should be sked to resign from the FBI after his ecent remarks about Martin Luther *King* and the Warren Report," wrote yndicated Columnist Art Buchwald ast week. "I can now reveal for the irst time why President Johnson can't sk J. Edgar Hoover to resign. The eason is J. Edgar Hoover doesn't exist. e is a mythical person first thought up by the *Reader's Digest*." Buchwald went on to develop his theme: that even e name was a phony, attached over e years to 26 "hired people" who ok turns posing as the FBI's non- xistent chief.

As usual, Buchwald was only kidding. ut his column, syndicated in 207 news- pers, reaches millions of readers, not of whom saw through his whim- cal jape. Soon newspapers all over ere fielding telephone calls from anx- us subscribers seeking assurance that ere really was a J. Edgar Hoover, or erily offering to prove Buchwald rong. "Hundreds took Buchwald se- ously, and thought he was just mis- formed," reported the Austin (Tex.) tesman.

In Phoenix, a similar avalanche of eader inquiries inspired the Arizona epublic to set the record straight with me whimsy of its own in an editorial titled, "YES VIRGINIA . . ."* Said the epublic: "Telephones have not pped ringing as one after another ller has demanded that we either pre- nt proof that Hoover does in fact ist or else print a retraction. After a orough day-long investigation, the Re- ublic is now in a position to report hat J. Edgar Hoover does in fact exist d is in the best of health. What our vestigators further turned up is the ct that Art Buchwald does not exist. e is a mythical person first thought p by *MAD* magazine."

* A reference borrowed from an 1897 edito- al in the New York Sun, written in response a letter from a worried eight-year-old girl, suring her: "Yes, Virginia, there is a Santa Claus."

For this frustrated tribesman this situation means a delay in communication. The message he has to beat out is urgent. In this manner, primitive methods of communication were crude and unreliable. Modern communication however is speedy, reliable and conclusive.

TELEVISION

Year of the Photo Finish

For the first time in the history of TV's Nielsen ratings, the three major networks last week ended up in as close a thing to a photofinish as statistics are likely to produce: a dead heat between CBS and NBC, each scoring an identical 19.4%* and, only a whisker behind, long-lagging ABC with 19.3%.

Sitting there basking was ABC Network President Tom Moore, who says expansively: "None of it was really a surprise, only a confirmation." ABC's shows are apparently more dynamically mediocre than CBS's, for it is obviously out of CBS that ABC has taken its great equalizing bite (*see chart*). ABC, at any rate, has fresher and less mechanical situation comedies than CBS, and with its two *Peyton Place* programs it has proved to all television that audiences at night like sex and soap as much as audiences do in the daytime.

Score or Drop Out. CBS still has six of the top ten shows, so its loss is not entirely without honor; but where the profits show, in the overall sampling of the total mass of people who watch a given network during a given minute, CBS has lost millions of fans. CBS-TV President James T. Aubrey Jr. has built his success on cold formula: quality be damned, programs either score high ratings or drop out. It would follow that the same criterion might apply to a TV president who lives by such a formula, and rumors are all over the industry that Aubrey's own rating is down—but not enough to be out.

There are 91 regularly scheduled shows in prime time. The top program this season is NBC's *Bonanza,* which has long since outshot all competition to become TV's preeminent Western. On the air five years, *Bonanza* stars Lorne Greene as a late 19th century Nevada rancher who talks softly and with psychiatric insight while combating, say, a half-breed horse thief, who was the heavy in this week's show. The dialogue uses pithy aphorisms ("When you are only half of something, you are really half of nothing"), which eventually works its way toward a modern message: "Never feel guilty about having warm human feelings toward anyone." The episodes are surprisefully plotted and seek variety in the bizarre: next week a knight in armor rides out of the purple sage and rams his lance through a stagecoach door.

Over and Over. The second-highest-rated show is ABC's *Bewitched,* in which Elizabeth Montgomery (TIME, Oct. 30) goes on "twitching her nose into other people's business," as the dialogue put it last week, reassembling broken vases, halting rainstorms, and engineering marriages through her special talents as an authentic but broomless witch. If the ratings are correct, some 32 million people watch this show each week, in which the same sort of thing happens over and over again—something breaks, the girl's nose twitches, the film is run backwards, the broken object is whole again, tune in again next week, same time, same staple.

CBS's *Gomer Pyle,* or *Simple Simon, U.S.M.C.,* has scored third highest in the ratings. Like *Bewitched, Gomer* is a new show this year, and it is unusual for two out of the top three programs to be new ones. But it is not unusual to have an apple of Appalachia like Marine Private Gomer Pyle, played by Jim Nabors, as a high-rated hero. CBS's *Beverly Hillbillies* has a whole basketful, and last year was No. 1 for the second year running. This year it has dropped to 17, and ABC's Moore, who sees programming as a "chess game," thinks, "CBS made a tactical error." Last year it was preceded by *Suspense,* a program aimed at riveting its viewers to one station; this year *Hillbillies* is preceded by *CBS Reports,* fourth from the bottom in ratings.

Sump Pit. The balance of the top ten includes, in order, *The Fugitive* (ABC), *The Andy Griffith Show* (CBS), *The Red Skelton Hour* (CBS), *The Munsters* (CBS), *The Lucy Show* (CBS), *The Jackie Gleason Show* (CBS), and—No. 10—*Peyton Place II* (ABC). The bottom ten shows, naturally enough, include in the sump pit nearly all those that an educated viewer would turn to —CBS's *World War I,* which holds absolute last place, *The Bell Telephone Hour, CBS Reports,* and *Slattery's People,* which is one of the few faintly commendable dramatic shows on the air.

This may be Jack Benny's last ye... From No. 16 a year ago, he has... clined to No. 62. Jack Paar—No. ... to No. 71—is doing worse than Be... Joey Bishop—37, now 89—is d... worse than Paar. Allen Funt's C... *Camera,* No. 13 a year ago, is now ... 34. Into gaps left by dropped sh... NBC will put a popular-music ... called *Hullaballoo* and an imit... *Fugitive* called *Branded,* set in the W... and starring Chuck Conners as a ... credited West Pointer. CBS is d... some elaborate switching, trying o... dozen shows in one another's time ... to see if audiences will respond. ... most notable change involves CBS ... *ports,* which was on the air during ... children's hour, Wednesday at ... E.S.T., and has been moved to Mo... at the adult hour of 10.

ABC's *Peyton Place* situation ... cates, finally, how little the inte... merit of a program has to do wit... rating. *Peyton Place* is broadcast ... a week—the first program ever to ... vide such a test for the meaning ... ratings—and, as continuing night... soap opera, both parts are essentially ... same. Yet *Peyton Place II*—Thurs... 9:30 p.m. E.S.T.—is No. 10 on the ... and *Peyton Place I*—Tuesday, 9 ... p.m. E.S.T.—is No. 30. Clearly, ... time slot a show occupies has as m... to do with ratings as any other fa... Television, moreover, has become ... flavorless and homogeneous that m... people obviously turn it on only to ... time; the viewer's schedule of other ... tivities influences ratings too. *What* ... regularly on the air can be far less ... than *when* the set owner happens to ... watching.

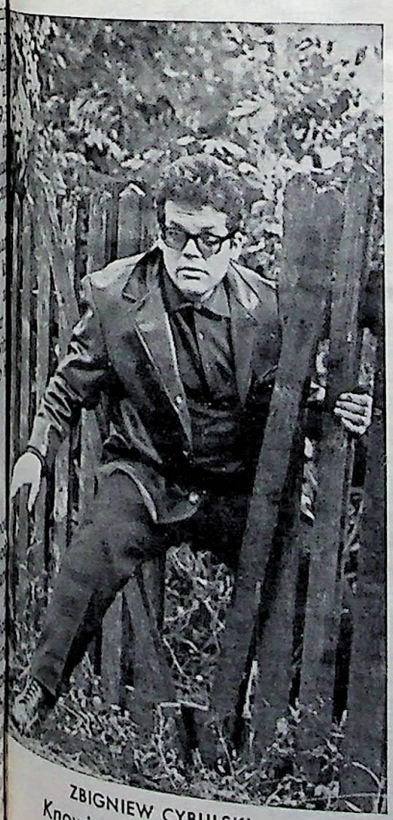
rt of sad it has to close," she said. hen did she feel *Mary's* lease on life as running short? When the curtain went up recently and ten minutes later n outraged voice in the audience cried: My God, I saw this damn thing."

ACTORS

e Man in the Green Lenses

Zbigniew Cybulski may have an unpronounceable name, but women in a ple of dozen countries have develd a sudden passion for linguistics in er to fondle his exotic consonants. land's Cybulski, now 37, is the first rnational film star, in the celebrity se, to come from behind the Iron rtain. He first became known in the st when his Polish pictures *The Gen-tion* and *Eighth Day of the Week* n critical praise in Western countries d *Ashes and Diamonds* took numerous festival prizes. Now he has begun appear in films made in Western nations. His newest is *To Love,* a Swedish diction forbidding the death of sex, which Cybulski and Sweden's Harr Andersson spend four-fifths of their e inventively in bed (TIME, Dec. 4). The trademark of Zbigniew (say ie-nieff) Cybulski has been his sunses with green lenses—worn all the e, day and night, interior or exterior. e glasses rest on the bridge of a nose it is short and running to pug, and ind them is the meaty face of an sually handsome center linebacker, it is not surprising that the only film which he has ever shed his shades is Love, and then only for those moents when they would have been a drance to sensuality. But in his next ish picture, *Manuscript Found in Saragossa,* he plays a Catalonian army captain, and has been forced to abandon his glasses altogether. "But generally," he says, "without my glasses I can only play frightened and unfortunate men."



ZBIGNIEW CYBULSKI
Knowing how to die well.

Relaxed Controls. Despite all that, Cybulski is not a typical film star hiding a bushel of inadequacies under the half-light of tinted glass. He is a good actor and a consummate man of the theater, a stage director, a writer of screenplays, and producer of his own avant-garde theater group. While at Cracow University, he joined a student theatrical group and found his real profession when he toured the Polish provinces. "That was shortly after the war," he says. "The people who had witnessed all the horrors of the Nazi occupation felt mentally sterilized. Reciting to them the verses of our poets, I could read in people's eyes how deeply they were moved and how much longing they had for art."

In the mid '50s, state controls over the Polish film industry were relaxed, and young Polish film makers began to flourish. Cybulski's fame as an actor rose simultaneously. More than any other film, Andrzej Wajda's 1958 *Ashes and Diamonds* established him both in Poland and beyond. He played an underground worker ordered to kill a man whose life he saw no sense in taking; he played the role trenchantly and in the end died himself, miserably twitching, shot down in an empty lot full of rubble. "We've never seen anyone die like that," wrote one French critic. "This extraordinary actor with such an unpronounceable name! But we will never forget the face."

Vistula Sound. Cybulski now lives in Warsaw, is married to a painter whose specialty is icons, and has a four-year-old son. He goes West often. In cinema circles in Paris, he is a welcome bear of a figure. At Les Halles, he once lost his temper and tore singlehanded into a group of German legionnaires. Waitresses have been known to drop their trays at a glint from his green glasses.

Parisian moviegoers once called him *"le James Dean polonnais,"* but producers and directors, who have learned to put up with his rise-at-noon, work-until-4 a.m. schedule, protest that he is far more—"A fine actor, a real comedian, a force of nature who never gets tired, and a true friend." As evidence of the latter they like to cite the story of a group of Polish jazz musicians—total strangers to Cybulski—who told him that if they could not find work they would have to leave France and go back to Warsaw. Cybulski walked the streets with a French friend until he finally booked the Polish combo into a place called the Tabou. For weeks after that, Cybulski carried leaflets around Paris advertising the Tabou's fabulous foursome with the Vistula sound, and proclaiming: "Jazz is not a capitalist exclusive." Nor, for that matter, are legendary film stars.

DRUGS

The Pros & Cons of LSD

"The mind—that seven inches of inner space between the root of the nose and the occiput—is our prized possession; its study on every level is most important," says Los Angeles Psychiatrist Sidney Cohen. The newest and most controversial way of carrying on that most important study is with the aid of drugs that produce hallucinations or illusions. But the responsible hopes raised by serious and cautious research have been matched by wildly visionary claims. Irresponsible misuse of the drugs has led to both scares and scandals.

For all that has been published about the pros and cons of LSD and other hallucinogens, there has been no impartial appraisal by a competent scientist writing in lay language. Now, in *The Beyond Within: the LSD Story* (Atheneum, $5), Dr. Cohen has done the job with commendable skill. Man's drive to find out what his mind is like, says Cohen, besides "including a search for release from the painful realities of disease, disaster and death . . . also attempts to find an answer to the question of how one human should relate to another, and how man should understand his own impermanence. [It] ranges from a hedonistic sensuality to a search for the highest philosophic abstractions, from a tool for deriving scientific data to a sacrament taken to achieve loss of self and union with the ALL."

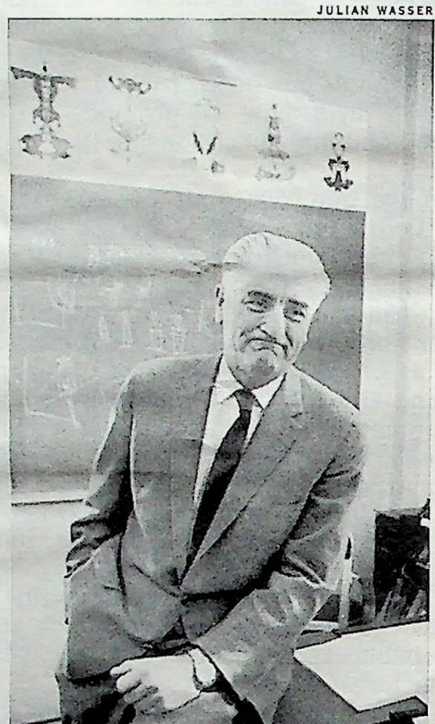
"A Bit of Death." LSD (D-lysergic acid diethylamide) has so far proved no cure for any disease. The overriding interest of both scientists and pseudo scientists in LSD (and, to a lesser extent, in the other hallucinogens) is in its effects on the mind. And these are so fantastic that most experimenters insist words are not the right medium for describing them, but they have devised no better tool for communication.

The all-pervading, almost universal effect is incredibly intensified perception. This may be pleasurable or not, depending on the individual's emotional state. Most people seem to float, and often to be outside themselves, so that they are really two selves. A common feeling is that there is "a little bit of death" in the LSD experience, but usually it is not frightening because the subject is dissociated from himself and can observe the situation dispassionately.

The Smell of Music. One of the unique qualities of LSD, says Dr. Cohen, is its capacity to bring back temporarily the vividness of newness. Subjects who get a lift from the drug describe all colors as bright and gay—a traffic light may become an object of surpassing beauty. If the subject becomes depressed, the colors darken or bleach out. Highly colored geometric tapestries flow past the closed eyes. Time stands still. Hearing becomes intensified; listening to music is a tremendous esthetic experience. Changes in taste and smell are relatively uncommon. But synesthesias—crossovers from one sense to another—are common, so that subjects "hear" colors or "smell" music. Ideas become visible. Thought and emotion are inseparable. Memory is oddly affected: the ability to repeat a set of numbers backward, or do simple tests, is grossly impaired, but long-ago events may be recalled accurately in minutest detail.

Effects on creativity are unclear. LSD subjects create what seem to be masterpieces or make momentous discoveries that are later seen as commonplace or nonsensical. But those who are by nature creative may get a fillip to their creativity through the sense of release from narrow, binding reality. As for whether hallucinogens might be used to establish mind control over the masses, Dr. Cohen dismisses this as a bogy. But he is deeply concerned over the possible use of such drugs in chemical warfare.

JULIAN WASSER



PSYCHIATRIST COHEN
Which way to nirvana?

A Bottle of Bliss. "Is the LSD state a model of madness, a touch of schizophrenia, or is it a short cut to Zen *satori*, nirvana for the millions?" asks Dr. Cohen. His answer: it is certainly not schizophrenia, and it differs from a true psychosis much as a wooden model bridge differs from the Golden Gate. Conflicting reports of diametrically opposite results with LSD are difficult to explain. Some subjects found the experience as horrible as any psychosis and would have no more of it; others, with the same dose, could not get too much. "Was it possible that out of the same bottle madness and supernal [illegible] could be poured?"

It was. Dr. Cohen's explanation is that if a subject takes LSD under laboratory conditions with impersonal attending technicians, if he expects to be temporarily mad and if he gets no assurance, a psychotic state is likely to occur. But in a more relaxed situation with hopeful expectations of his own, the subject will probably have a [illegible]. Dr. Cohen notes that this is true of other drugs: "From the same jug of whiskey come tears for one and laughter for another."

"Majestic Quietude." After an experiment Cohen himself conducted, a doctor wrote: "I had read that a number of people have a painful catatonic withdrawal. I fancied that I would be [illegible] catatonic . . . The first change was a sense of pleasant relaxation. This increased to an indescribable mood of great ease and peace. The problems and strivings, the worries and frustrations of everyday life vanished; in their place was a majestic, sunlit, heavenly inner [illegible]. tude . . . I seemed to have finally arrived at the contemplation of the eternal truth." The doctor suffered nausea and shivering so severe that he needed three blankets. But he accepted these discomforts as a small price for admission to nirvana. And he suffered no catatonia.

At the opposite extreme was a woman psychologist, ordinarily bright and friendly, who had given no thought to a possible catatonic reaction. She had one so severe that Dr. Cohen says it would have been difficult for a psychiatrist to pick her out of a room full of female catatonic schizophrenics.

"Endure Not to Know." If LSD is taken on three successive days, the subject builds up a tolerance for it and gets no effect from the normal second dose, which is only 100 micrograms (1/300,000th of an ounce). After a few days, this wears off, and the same person can take LSD again. The drug is not addicting, though it may be habituating. A second experience is not likely to be a repeat of the first. A woman who had been preoccupied with external matters on her first dose decided on the second, to look into her own soul. Typically, she became two people, but each was herself. One self asked: "What should be my relation to Ultimate Reality, to God?" And the second self answered: "Endure not to know."

To Psychiatrist Cohen, some of the most interesting questions about LSD involve its value as an aid to psychotherapy, especially in the treatment of alcoholics. The main advantage, Dr. Cohen believes, is that the patient becomes better able to accept what are normally painful insights into his own shortcomings. He can observe himself with detachment, and this speeds treatment. There are some patients, though, especially those on the borderline

psychosis, for whom LSD is definitely
ngerous.

Antics & Reaction. In the last few
ears, Dr. Cohen and other reputable
esearchers have been disturbed by
what he calls the "beatnik microcul-
ure" and its abuses of LSD and other
llucinogens. The danger, he says, is
at public reaction against oddball an-
s may set back serious research for
ny years.

It is tempting, he suggests, to say
r one gets from the LSD encounter
at one deserves, but he quotes Aqui-
for a more accurate summation:
uidquid recipietur secundum modum
ipientis recipietur"—our nature de-
mines what we receive. But man-
d will not always know its present
ental limits. "The mind's surmised and
l unknown potential," says Dr. Co-
en, "is our future. The experience
lled hallucinogenic will play a role in
ding us into the future."

PUBLIC HEALTH

$3 Billion Plan

Unless we do better, two-thirds of all
mericans now living will suffer or die
om cancer, heart disease or stroke.
xpect you to do something about it.
—President Johnson, April 17

The 18 physicians and ten other
blic-spirited citizens whom the Presi-
nt thus exhorted when he named them
a special commission reported back
him last week that the U.S. can in-
ed do something about its greatest
lers—but at a price. Under the chair-
nship of Houston's famed Surgeon
chael E. DeBakey, the commission
animously concluded that much needs
be done in several categories.

Pay if Possible. The report began
h the stark facts: in 1963 heart-
ery diseases caused 55% of all U.S.
ths, and cancer 16%. Strokes killed
201,000; diseases of other arteries out-
side the brain combined with diseases
of the heart to kill 793,000. Cancer
killed 285.000. Many of these deaths
were "premature," judged by the fact
that they carried off people under 65.
"Every day," said the commission,
"men and women are dying who need
not die. Every hour, families are be-
ing plunged into tragedy that need not
happen."

This, said a commission spokesman,
is because "medical miracles are in
many instances available only to the
fortunate few who can get to the unique
medical institution or specialist who
can perform that miracle." To make
miracle care available to all, beyond the
areas of the 50 or so medical centers
now providing it, the commission pro-
posed a network of:

▶ High-powered regional "centers"—
25 for heart disease, 20 for cancer and
15 for strokes—for intensive care of
difficult cases and for research into bet-
ter methods of care.

▶ Community "stations" across the na-
tion—150 for heart disease, 200 for
cancer and 100 for strokes, half in ex-
isting medical centers and half in com-
munity hospitals, for immediate diag-
nosis and emergency care.

At both centers and stations, patients
would be expected to pay if they could,
either directly or through insurance. In
other cases, payment would come from
the usual welfare resources. Even so, the
federal treasury would have to find $124
million for these networks the first year,
and the bill would rise to $453 million a
year within five years. This program,
the commission insisted, is not socialized
medicine but an answer to it.

To the Grass Roots. For the long
haul, the commission urged that all the
affected community health services be
integrated with university medical cen-
ters. Special emphasis, it said, must be
given to getting the most recent devel-
opments and techniques of prevention
and treatment to the grass-roots level so
that the practitioners may keep up and
the people obtain the best care possible.
In addition to the $153 million already
appropriated for this year, the commis-
sion recommended that $56 million be
spent on another year of intensified
research into the basic causes of the
"big three" killers. The commission also
asked for $45 million for training tech-
nicians and $52 million for added facil-
ities and resources.

Despite the commission's disclaimers
about "socialized medicine," the plan
was sure to meet stiff opposition on
political grounds. And because of the
estimated $3 billion price for the plan's
first five years, there was immediate
criticism of its costliness. But the com-
mission said it was not asking for a
bit more than the plan was worth. The
annual cost to the U.S. economy from
lack of effective treatment for men and
women in their productive years, said
the commission, runs into the billions
of dollars.

Thin Salami

Ready When You Are, C.B.!, by Susan Slade, is a stopped clock of a comedy. Every once in a while Julie Harris or the playwright shakes the thing and it ticks off a few farcical laughs, but for most of the evening *C.B.'s* immobile face tells no comic time at all.

Julie Harris plays a would-be actress who is too unnerved by auditions to try for any parts. Since her rent-controlled Manhattan apartment costs so little, she sublets it and lives off her tiny capitalistic mite. Her latest boarder (Lou Antonio) is a big Hollywood stag hiding out from his studio. He has been afflicted with a bad case of that

MARTHA SWOPE

JULIE HARRIS IN "C.B.!"
A smarmy boarder.

integrity rash that Hollywood celestials periodically get from banking lots of money.

Lou is an outgoing wench-charmer. Julie is miserly of person and property. She locks up salami in a wall safe, sets rattraps to maim any hand that gropes under the sofa for the hidden vodka, and religiously snaps off lights. Lou breaks into the salami safe and religiously snaps on lights. After this epic depiction of character, Playwright Slade can do nothing but tuck the twosome in bed.

Julie Harris has always had a child's gift for being mischievously amusing and touchingly wistful at the same time, and she displays it again here. Since he is smarmy, rubber-legged, and given to fixed, fatuous grins, Lou Antonio is a more difficult taste to acquire. With comedies like *Barefoot in the Park, Any Wednesday, The Knack, Luv* and *The Owl and the Pussycat* in competition, a play like *C. B.* is not an also-ran but a never-walked.

Finger Exercises in Dread

The Room and A Slight Ache. Harold Pinter's plays not only have plots; they often seem to be plots. He conspires to elude, delude, tease, frustrate, irritate, and mystify the audience, all of course to a highly salutary end. Pinter leads the playgoer very far from home to signify that something at the mysterious heart of human existence consists in being precisely there—very far from home. *The Room* and *A Slight Ache* are early Pinter one-acters of quasi-comic menace, not always dexterous but distinctly absorbing, the work of a man forming his own indelible dramatic signature.

The Room takes place in the cozy, mangy flat of Mr. and Mrs. Hudd. Mrs. Hudd (Frances Sternhagen) tongue-rattles along at a great rate—about the icy weather through which her husband (Clarence Felder) must drive his van, about the unoccupied basement apartment she fears is occupied, about the tea and toast and trivia that mortise daily life. The landlord, who may not be the landlord, enters and reminisces about his mother and sister, who may or may not have been Jewish. After the landlord and the husband depart, a young apartment-hunting couple intrude with the disconcerting news that the Hudds' apartment is supposed to be unoccupied.

Agitatedly, the landlord reappears to tell Mrs. Hudd that a man in a darkened room in the basement demands to see her. The man proves to be a blind Negro (Robertearl Jones) who begs her to come home and implies that he is her father. Mr. Hudd returns, savagely batters the Negro to the floor, and as the curtain starts to drop, Mrs. Hudd turns blind. There are no safe guesses when it comes to Pinter, but a half-safe guess is that the blind Negro is Death or Fate, the ultimate invaders of cozy islands of tranquillity.

A Slight Ache lasts longer but makes its point quicker and clearer. Edward and Flora, a husband and wife, are enjoying a sunlit view of their country-house garden. He (Henderson Forsythe) is a scholar of distant cultures. She (Frances Sternhagen) is a busy suburban bee. Edward is obsessively irked by a human blight just beyond the garden, an aged, decrepit matchseller who haunts the forsaken site from dawn to dusk with no prospect of selling matches. Edward invites the old man into the house to have it out with him. The matchseller looks like a cross between a Skid Row derelict and a desert-baked Bible prophet, and he remains silent throughout the play. For Edward, the matchseller is the mirror image of his fears and failures, and in self-defensive, self-incriminating monologues, Edward crumbles like dry rot.

BUM & HUSBAND IN "ACHE"
A mute guest.

For Flora, the matchseller reflects desires and the need to love and ish a man. Husband and bum re roles, and at play's end, Flora pu matchseller's tray between Ed nerveless fingers and grasps the man's hand in hers.

The spirit of Edgar Allan Poe over these playlets, not only in ing menace, but in the sealed and abodes where characters are filled the breath of death. The actors perfectly attuned to this death's d kingdom, most notably Frances S hagen, who is scrupulously convi as she shifts from the droning dr *The Room* to the animated superf niceties of professional wifeliness *Slight Ache.*

These early dramas were Pinter's ger exercises on the theme of dr Later, he wrote his symphony of in *The Caretaker.* He is a master of theater of equivalence—finding op stage symbols of terror that match fuse with the nameless panic that m ern-day playgoers bring into the th ter with them. What he may hope achieve in the future is a new and tr scending vision that pierces and sub dinates fear.

PAINTING

Grandeur in Decay

Perhaps only a city that grew up around a stockyard could appreciate the art of Ivan Albright, now 67. And last week there it all was, 60 works in Chicago's Art Institute, in a fantasia of wattles, dewlaps and varicose veins, the lifetime work of Chicago's painter laureate. It is an exhibition for strong stomachs. Limbs were blotched and misshapen, rolls of flesh sagged swollen and pocked. In the background of the paintings were tumbles of battered objects, microscopically detailed, and all in ripe decay. Presiding over this exhumation was the master himself, smooth jowled, red cheeked and full of protesting innocence. "What I am really trying to do is to make a coherent statement about life," he said, "one that will force people to meditate a bit. I want to jar the observer into thinking, to make him uncomfortable. But I am not telling him what to think."

Fish from the Freezer. Uncomfortable the viewers most certainly were. Albright, who was tapped by Hollywood to portray Dorian Gray in his penultimate desuetude, collects adjectives like "loathsome," "gruesome," "morbid," "putrescent" and "repulsive" the way other painters collect gold medals. But, he protests, "in any part of life you find something either growing or disintegrating. Let's say I'm equally interested in growth and decay."

Albright, who got his start as a medical illustrator in a World War I base hospital, assembles his painting props with all the care of a pathologist preparing for an autopsy. For one painting, titled *Poor Room—There Is No Time, No End, No Today, No Tomorrow, Only the Forever, and Forever and Forever Without End,* on which he has worked for 21 years, he selected each brick from a yard in Aurora, added a baby shoe lovingly plucked from an ash heap in Warrenville, and topped it off with a corset that belonged to his mother. One still life required him to keep fish in the freezer for three months, taking them out for three hours a day. "As soon as they began to thaw, I would stick them back in the freezer," he explains. Title of this work? *Ah God, Herrings, Buoys, the Glittering Sea.* Why? Confesses Albright brightly, "It sounded better than *A Bunch of Fish.*"

Controlled Chaos. Albright also insists that live models be present while he paints. Among them have been a Mexican-Indian fisherman, a union leader and onetime bootlegger, an 81-year-old Rosicrucian monk, and Mary Lasker Block, the wife of a vice president of Inland Steel.

And yet for all the meticulous care Albright takes (he once painted Lincoln's portrait on each penny in a painting), he is far from being a mere copyist. "Everything in the canvas is fighting," he points out of *Poor Room, etc.* "Some objects are falling, others are rising, others are spiraling in a kind of controlled chaos. I compose in motion. I wish to create tension and conflict." Nor, after the first shock has passed, are his models bereft of their own kind of grandeur. Decay, once faced, gradually loses its morbid horror. Albright seems more the dedicated diamond cutter who positions his gem, then splits it into perfect fragments of glitter and decay. Albright's real goal is thus to make the viewer feel the precise sense of death implicit in life, and that split second when both are terribly real.

THE ECONOMY

Question of Psychology

From their offices just across from the White House, the President's hard-working economic advisers are expected to stay on the job *until they see the* lights blink off in Lyndon Johnson's Cabinet Room. Last week their lights burned even later than usual as the members of the Council of Economic Advisers grappled with a problem that vitally affects U.S. business: how to keep the economy expanding well into 1965. The council members—and many businessmen—are concerned about the calculation that the economy is showing signs of age after its 45-month expansion, and that there is little on the horizon to keep it rising rapidly beyond next year's first half. Business psychology, after all, is an important ingredient in the advance, and no one wants to see it turn bad.

Quite a few experts are warning businessmen against talking themselves into a slowdown. "The majority of forecasters are too pessimistic," said James Cleary, vice president of the Life Insurance Association of America, in a speech in Manhattan. The speculation that a leveling-off in 1965 has already led to a certain nervousness, notably in the stock market. Since reaching an alltime high of 891 four weeks ago, the Dow-Jones industrial average has retreated 27 points. Depressed by the talk, as well as by Britain's financial crisis, it fell 6½ points last week. The usual year-end rally could still occur—the market has risen in 50 of the past 67 Decembers—but last week's decline pretty well dashed the hopes of the bulls who had expected it to crack through by New Year's Eve.

Some Doing. Many businessmen are hoping that Lyndon Johnson's year-end policy statements about the economy will put some fizz back into business psychology. "My guess and my hope is that he will turn up confidence-building statements," said Raymond Saulnier, former chief economic adviser under President Eisenhower.

There is, in fact, plenty of basis for confidence. In industries as diverse as paper, furniture and electronics, top officials last week reported record sales for 1964—and said that they expect to do at least as well in 1965. The steelmakers have already surpassed 1955's production record of 117 million tons and are well on their way to a 125 million-ton year; the automakers last week set an alltime weekly production mark of 223,500 cars. Personal income is rising by an average of almost $2 billion a month, and retail sales, running 5% ahead of last year, are headed for an alltime high at Christmas.

Precisely because the economy has performed so splendidly in 1964, the Government's policymakers realize that it will take some doing to maintain the momentum in 1965. Last week the Commerce Department predicted that capital spending in next year's first half will rise 8%, to an annual rate of $47.7 billion—a good gain, but not as great as this year's 14%. The consensus of economists is that the gross national product, which rose 6.7% this year, is due for an advance of some 5% next year, to $655 billion. While that might seem satisfactory, it would neither significantly increase corporate profits nor reduce unemployment.

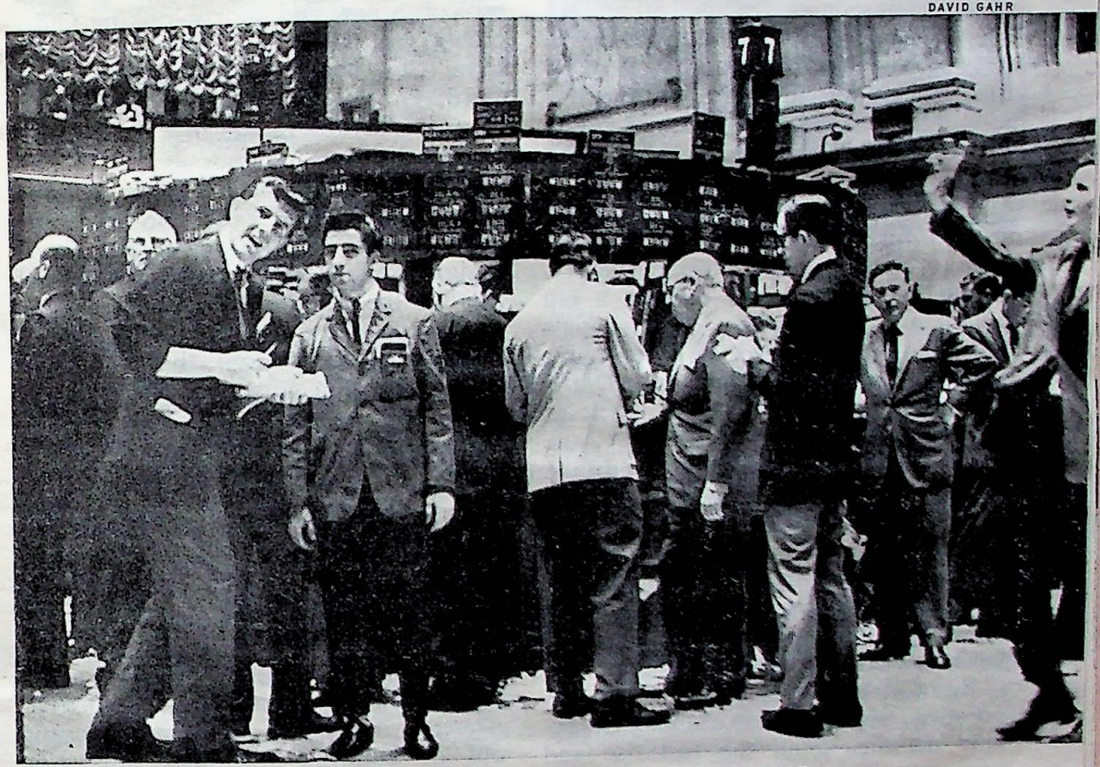
New Approach. To give the economy a greater lift, Chief Presidential Economist Gardner Ackley and his colleagues on the council are readying several plans for further tax cuts, and M.I.T.'s influential Paul Samuelson has strongly counseled President Johnson to push federal spending "above the psychological level of $100 billion." The Administration figures that it will have no trouble cutting excise taxes by as much as $3 billion, but it also plans to revive the concept of "temporary" reductions in income taxes that Congress turned down when it was forwarded by John Kennedy in 1961. Instead of asking for full presidential power to act, as Kennedy did, Johnson has in mind a plan by which the President would only propose a temporary cut, leaving Congress with the power to act upon it. The Government's economists feel that the quick success of the 1964 tax cut, plus Congress' recent tolerance of budget deficits, makes the acceptance of such a proposal "very likely."

WALL STREET

The Profitless Wonder

When the stock of the Communications Satellite Corp. went on the market six months ago at $20 a share, demand for it was so great that brokers rationed it to 50 shares or less per customer and only the favored few got their piece of space. But professional Wall Streeters generally stood aloof, willing to sell it but not so willing to buy. Comsat might become the bluest of space-age blue chips, they said, but that was many profitless years away. The professionals failed to assess properly the romance of space and, as a result, vastly underestimated Comsat's continued attraction for investors. The stock has been rising almost steadily for three months, and last week it soared in a speculative orbit all its own.

DAVID GAHR



COMSAT TRADING POST ON NEW YORK STOCK EXCHANGE
Thrust into orbit by the romance of space.

Flabbergasted Street. Opening on Monday at 55½, Comsat danced all over the tape as the week's most active stock, then closed on Friday at 64⅝. The flood of buy orders twice forced the Stock Exchange to delay Comsat's opening, and trading once had to be suspended for two hours. The Federal Communications Commission ordered an "informal" inquiry to make sure that in the speculative rush foreign ownership had not exceeded its 20% legal limit. The stock hit a record high of 66¼ after Comsat announced plans to start the first commercial service between North America and Europe in May with its "Early Bird" satellite. Wall Streeters were still flabbergasted. "It would have been unpatriotic to expect it to go down," said Merrill Lynch

OLDSMOBILE "HOLIDAY" (SKETCH)
A lead from Da Vinci and a bold step into controversy.

Vice President La Rue Applegate, "but we never expected this run up."

One big reason for the run up is the stock's short supply. Half of Comsat's 10 million outstanding shares have been held from the start by 163 U.S. communications companies; the others are held by more than 200,000 individuals, most of whom still own fewer than 50 shares each and who show little inclination to part with them. Mutual funds and insurance companies have been grabbing large blocks when they could. The Street had expected many of the initial investors to cash in their capital gains as soon as they crossed the six-month tax divide, thus causing a big sell-off and falling prices. Professionals thus sold an estimated 100,000 shares short, borrowing the stock to sell at a high price and figuring to repay it at a lower price. But after Dec. 3, the first date on which investors could take capital gains, the price went higher instead of lower, forcing short sellers to scramble to cover their losses and sending the stock even higher. Many brokers, fearing that Comsat could be riding for a fall, got on the telephones last week to warn their customers away.

Risk-Filled Infancy. The Comsat corporation, whose officers are understandably nervous about the fast rise and anxious not to encourage it, is still not expected to take in a dime for another six months, or show a profit or declare a dividend for at least four years. It has not even decided how much to charge for its services; rate schedules will be submitted to the FCC by Feb. 1. Though Comsat had hoped to own the series of ground stations to transmit satellite signals, the FCC announced last week that it will also consider customer ownership; Comsat must await a ruling on this matter before it can set up any stations. And not until after next May's "Early Bird" tests can Comsat choose which of three possible satellite systems to use in its network. Only when that decision is made, probably late next year, will Comsat be set to push on toward putting a full global communications network into operation by the end of 1967.

Despite all these risks and doubts and delays, investors in Comsat are obviously hoping that they are getting in on what will be the A.T. & T. or the G.M. of the future.

AUTOS

New Drive at G.M.

In Detroit, where secrets are hard to keep, General Motors has for many months been working on a top-secret project: a new and sporty-looking Oldsmobile that will be the first U.S. auto to have front wheel drive since the 1937 Cord. The new car—code-named "Holiday"—is a 1966 model that G.M. plans to introduce next fall.

The Holiday is bound to be controversial. Ever since Leonardo da Vinci proposed one in 1500, men have been designing vehicles with front wheels that provide the traction or driving power, rear wheels that merely go along for the ride. Today, more than a dozen small European cars have front wheel drive, and both Renault and Peugeot announced last week that they would market new models in 1965. But Detroit has always been wary, discouraged by the performance and cost of experimental models. The Holiday is thus a bold G.M. step into an area where rival U.S. automakers and even other G.M. divisions have feared to tread.

Spinning a Problem. Experimental cars tested by Detroit have tended to oversteer on curves, sometimes spinning out of control—a problem that the smaller, less powerful European cars have not encountered. Cars with front wheel drive have also proven less efficient on steep grades, noisier at low speeds. Their power must be transmitted to the independently-sprung and swiveling front wheels rather than to fixed rear wheels, requiring a more complex axle that could cost Oldsmobile $150 more per car than the conventional drive. Says a rival Big Three executive: "Front wheel drive is just not worth the added cost in a conventional American car."

Oldsmobile has apparently solved the mechanical problems, hopes that the advantages of front wheel drive will more than pay for its added cost. Because front wheel power eliminates the need for a long drive shaft and a rear-axle differential, the Holiday will have a flat, low floor without a center tunnel or differential hump, more room for passengers and luggage. Front-wheel traction and more weight at the front will make the car more stable on windy days and on icy roads. Perhaps even more important to Oldsmobile, the novelty of its new car should draw many additional prospects into Oldsmobile showrooms, where they will gape at the Holiday but buy a conventional model.

Wrapping a Drive. To further entice customers, Oldsmobile has wrapped the front wheel drive into a handsome, four-passenger hardtop that will be the biggest yet of Detroit's growing fleet of cars with fastback roofs. The Holiday will be 210 in. long, weigh about 3,500 lbs., come equipped with a 425-cu.-in. engine and cost about $4,400—a price that places it in direct competition with Ford's Thunderbird, which still dominates the luxury sports-car market. To absorb some of the Holiday's development costs, G.M. is making many of its parts interchangeable with the new Buick Riviera, which could be adapted to front wheel drive at a later date.

The Holiday has even created a behind-the-scenes controversy within General Motors. Oldsmobile's new general manager, Harold Metzel, 60, is an enthusiastic devotee of front wheel drive and apparently has been backed by G.M. President John Gordon and Group Vice President Ed Cole. Others in G.M.'s hierarchy are hesitant, and both the Chevrolet and Pontiac divisions have flatly rejected the concept. This dissension is only normal at G.M., where interdivisional rivalry—more than anything else—gives the big corporation its four wheel drive.

MANAGEMENT

Era of the Seven-League Sell

One of the 20th century's great romances is between the businessman and the jet. Of the passengers on U.S. domestic flights, a remarkable 86% are businessmen. Their rush to take advantage of the jet's speed and convenience has not only helped to hike airline bookings and earnings (trunkline passengers so far in 1964 are up 9.4% to 71 million), but is also having profound effects on the very methods of doing

EXECUTIVES ON AMERICAN AIRLINES JET
Higher efficiency and lower hotel bills

siness. "I can reach our principal
stributors in Phoenix, Denver, Salt
ake or Spokane in two hours," says
os Angeles' Thomas A. Welch, west-
rn regional sales manager for Carrier
orp. "What's happened is nothing less
han a revolution."

Here Comes the Boss. Everyone
om chief executive to chief clerk
ems to be flying for the company,
t no one has felt the revolution's ef-
s quicker than salesmen. Once they
lded from stop to stop with a sam-
case jammed into a Pullman berth;
day they jet across greatly expanded
rritories while their sample cases ride
the luggage compartment as air
ght rather than as expensive excess
ggage. In the era of the seven-league
, salesmen also have to be more
ert. Sales managers jet around, too,
d more often than not they skim off
e and previously inaccessible custom-
s for the home-office account. Then
ere are the more frequent visits from
e top. "Any time the boss is in an
rea," says Earl C. Janson, manufac-
uring director of Beckman Instru-
ents, "you're bound to increase the
ergy level."

With jets, bosses move about more
cause they can fly out and back fast
ough to prevent piled-up paperwork.
We now have a tendency to make a
p for a two-day meeting that we
uld have put off before," says Lear
egler Vice President John J. Burke.
Bell & Howell, six ranking officers
ll use the ordinarily dead week after
hristmas for a jet swing to pep meet-
gs in Cleveland, New York and Los
geles, returning to Chicago in time
New Year's with their families.
ny travelers never glimpse the city
which they have been set down, hold-
g their meetings either in airport con-
rence rooms or in the motels that
g every large terminal.

The jet trend brings lower hotel bills
well as higher efficiency. Bankers
d buyers travel to New York's money
d merchandise markets more often,
t for shorter lengths of time. The
ngth of occupancies in Manhattan ho-
ls has dropped from 3 days to 2.2
ys per guest with the advent of the
s. "We go to New York at the drop
a hat," says Vice President Brown
ggs of Hollywood-based Capitol
cords. "The jet has made the whole
ng much more casual."

As Easy as Washington. It is also
using significant changes in corporate
ocedure. Lear Siegler now supervises
even divisions with four corporate
ficers, who spend half their time trav-
ling. International Harvester has dis-
osed of five company planes, since
commercial jets can do the job just
s well. Company travel budgets have
en sharply: the Garrett Corp. of Los
ngeles spends $1,500,000 a year *v.*
500,000 ten years ago.

Many companies now locate their
plants as close as possible to airports,
nd an executive hunting for a home
ends to keep in mind how many min-

utes he will have to allow before flight time. And while some large corporations are closing out now unnecessary branch offices because of the jet's ability to get their men to the territory fast, others are expanding. When small Technical Operations Inc. of Burlington, Mass., acquired a $6,000,000 company in San Carlos, Calif., jet speed was a definite consideration in the deal. "If we couldn't get there readily," says Dr. Marvin G. Schorr, Techops' president, "we wouldn't have got involved. But it's as easy to do business there now as in Washington."

The once heroic 100,000-mile-a-year traveler has been superseded by the 250,000-mile man; both Kaiser Industries President Edgar Kaiser and Loew's Hotel President Preston R. Tisch flew that far last year. Jets also make it possible for prosperous executives to live in one climate and relax in another. Pan Am has a regular clientele of Manhattan businessmen who have bought winter homes in Nassau, jet from snow to sun weekends on an easy 2-hr. 50-min. flight.

INVESTMENT

Getting Comfortable

The $29 billion mutual-investment-fund industry, a glamorous financial phenomenon of the '50s, fell into a long slump after the 1962 stock market dive. Now mutual funds are finally regaining popularity with the investing public. Last week the Investment Company Institute predicted that fund sales, after setting records for five months in a row, will climb 32% this year to an all-time record of $3.25 billion—10% above the old peak set in the 1961 bull stock market. The dollar volume of shares cashed in by investors has dropped from 61% of sales last year to 52% since June, indicating that the public is once again beginning to view the funds with favor.

No Riches. How good is an investment in the funds? While the Dow-Jones industrial stock average climbed 20.7% from January of 1962 to the end of September this year, half of 20 leading diversified common-stock funds did better; five did about the same as the Dow-Jones, five worse.

Over the year ended last September (the latest yardstick used by Manhattan's Arthur Wiesenberger & Co., the industry's Boswell), Penn Square Mutual shot up 29% *v.* a 19% rise in the Dow-Jones industrials, Fidelity Trend rose 27%, and the $744 million Dreyfus Fund, whose symbolic lion gives its sales promotion a distinctive flair, climbed 23%. Among the big funds that emphasize a mixture of growth and income, United Accumulative Fund rose 17% and Affiliated Fund 16%. Massachusetts Investors Trust, the nation's oldest and second largest ($2.1 billion assets), made a 15% gain. But most funds gained closer to 12%, and some, like the $1.8 billion Wellington Fund (up 9%), lagged well behind the leaders.

Despite healthy rises, few of the more than 300 U.S. mutual funds promise to beat the stock averages. Says Vice President William B. Boscow of Investors Diversified Services, whose Investors Mutual Fund is the nation's largest ($2.6 billion): "We're not trying to make people rich. We're trying to make them comfortable." Mutual Fund managers point out that automakers and oil firms account for most of this year's gain in the Dow-Jones industrials, and that many stocks in the average were selling last week at prices uncomfortably close to their 1964 lows: Allied Chemical at 52¼ *v.* a 1964 low of 51⅛, Alcoa at 59⅞ *v.* 59½, American Can at 42½ *v.* 40⅝, A.T. & T. at 66⅞ *v.* 65⅜, Woolworth at 28 *v.* 27. Two key stocks hit new 1964 lows last week: U.S. Steel at 50⅞ and General Foods at 78¼.

Lower Commissions? As the fund industry recovers, of course, the competition sharpens. Lehman Brothers' besieged One William Street Fund, whose redemptions ran $9 for every $1 of sales in the first half of this year, recently became the first big fund to give up the controversial "front-end load" on its contractual plans—under which Lehman deducted an 8½% commission on the entire contract before investing its customers' money. Sears, Roebuck plans to enter the field on a nationwide scale in about 18 months, and insurance companies hope to grab some of the market with variable annuity plans. Many fund managers expect this new activity to produce pressure for lower sales commissions (now typically 6-8½%), but many also welcome the competition. It could, as they see it, spread mutual funds into new areas, notably small towns, where the idea has not yet had much impact.

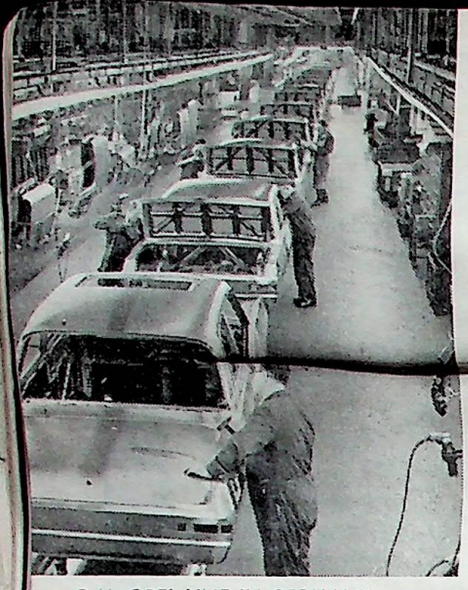
WORLD BUSINESS

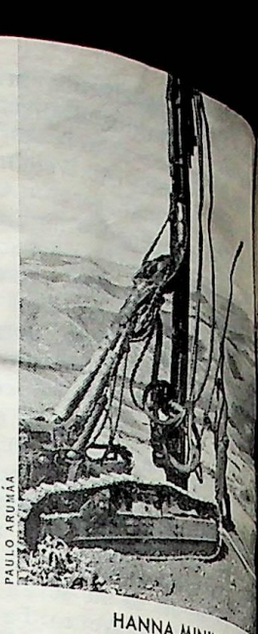


G.M. OPEL LINE IN GERMANY

DAVID MOORE—BLACK STAR

CYANAMID PLANT IN AUSTRALIA

A problem of pride as well as economics.



PAULO ARUMÁA

HANNA MINING IN BR

AMERICANS ABROAD

The Welcome Grows Cool

A change of attitude is taking place on the international scene that has potentially vast consequences for businessmen in the U.S. and in many other countries. In some parts of the world, particularly Western Europe, there is growing concern that heavy investments by U.S. industry threaten to dominate whole economies. U.S. businessmen last year increased their direct investments abroad by $3.4 billion to a record $41 billion. This year the rate is growing even faster, and the ubiquitous Yankee investors are drawing more and more cries of "dollar imperialism."

Ultranationalists in Brazil last week sought to block M. A. Hanna's plans to build a $25 million iron ore port, even though the government seemed determined to approve the deal, and the Supreme Court will rule soon on whether any foreign company has a right to mine in Brazil. In Australia, where U.S. companies are investing at the rate of $4,000,000 a week, the government is under mounting pressure to require part local ownership of foreign subsidiaries. At a special luncheon in Paris, the *crème de la crème* of France's business leaders listened last week to dire predictions that their country may be overrun by an "invasion" of powerful U.S. corporations, whose investment there has risen to $1.2 billion. Said René Sanson of the National Assembly's finance commission: "The potential of the U.S. scares me."

Giant Squeeze. No major country is ready to slam the door on U.S. businessmen, but the welcome is cooling most rapidly where recent American investments have been heaviest. As the flood of dollars shows no sign of receding, European businessmen are increasingly worried about being squeezed out by U.S. corporate giants, which have such a high scale of financing, research and marketing. In West Germany, where U.S. business has a $2 billion stake and General Motors' Opel has become a formidable competitor of Volkswagen, German industrialists are beginning to pressure the government to do something. While Italy still courts investments for its underdeveloped south, a former Cabinet minister has expressed "reservations" about the extent of U.S. capital in Italy. Even in countries that encourage U.S. investment, there has been increasing criticism that American business subsidiaries are a disruptive influence, overpaying and overhiring, then laying off local workers on short notice.

France has raised the loudest outcry, and has followed its words with action. Before French Deputies would endorse a draft of the government's fifth economic plan last month, they demanded that *Le Plan* be rewritten to deal more directly with the "colonization" of France through U.S. investments, which they believe to be the nation's No. 1 economic problem. The Deputies also voted to revise the tax laws to encourage mergers and to require foreign investors to buy stock in French companies only through French bourses, thus preventing another surprise takeover à la Chrysler-Simca.

Whose Caravelle? For the countries involved, there are a lot of complications and irritations in dealing with the problem of the overwhelming American presence. French businessmen concede, for example, that it is too late to regain control of certain sectors of the country's industry that are now dominated by U.S.-owned companies, such as food processing, synthetic rubber, farm machinery and electronic computers. The problem is also one of pride as well as of economics. It was almost more than President de Gaulle could bear when, earlier this year, he learned that he would not be able to promote his China policy by selling Caravelle jetliners to Mao Tse-tung. Reason: too much of the Caravelle's electronic equipment was American, and thus came under the U.S. Battle Act against trading with the enemy. In spite of all the complaints, many countries are unwilling, like France, to get really tough on foreign investors. They do not want to scare off the large infusions of money their economies need to keep growing.

EGYPT

Too Much & Too Little

Along with the Aswan Dam and [illegible] industry, President Nasser's ten-year [illegible] velopment plan has given Egyptians [illegible] bigger appetite. Since the plan was [illegible] ed in 1960, it has added 1,000,0[illegible] workers to the country's payrolls, [illegible] creased both total national income a[illegible] production by about 30%. It has [illegible] given millions of Egyptians the whe[illegible] withal to improve their meager die[illegible] and that fact has created a prob[illegible] that the planners did not anticipate: [illegible] acute food shortage.

Egyptians can now afford to eat mo[illegible] than their farmers can produce. D[illegible] mand for food has been twice as gr[illegible] as expected, and consumption of im[illegible] ported meat has soared 58%. Price[illegible] have spiraled, the black market flou[illegible] ishes and queues for food are an ever[illegible] day sight in Cairo. Last week, face[illegible] with the unpleasant fact that a measu[illegible] of austerity is the inescapable price of [illegible] crash development scheme, the gover[illegible] ment took the drastic step of banning [illegible] the slaughter and sale of meat three [illegible] days out of each week. It's back to co[illegible] and beans for the Egyptians on Sun[illegible] days, Tuesdays and Wednesdays, though [illegible] tourist hotels will still be allowed to [illegible] serve meat daily. Violators could ge[illegible] up to one year in jail. To ease the shor[illegible] age, the government has also set aside [illegible] $90 million in precious foreign exchange [illegible] to import Russian frozen fish and Amer[illegible] ican chicken and canned meats.

SWEDEN

Bankers to the World

Everywhere in Sweden a traveler is [illegible] likely to find *smörgåsbord*, attractive [illegible] women—and the 100-year-old Skand[illegible] naviska Bank. Ranging from a new [illegible] highly computerized branch at Sunds[illegible] vall in the northern timberland to a [illegible] modest cottage draped with a fishing [illegible] net on the island of Tjorn, Skandi[illegible] naviska's 284 branches thoroughly cov[illegible] er the country. While assiduously court[illegible] ing the rural shepherds and woodsmen [illegible] it does not overlook the city folk, either

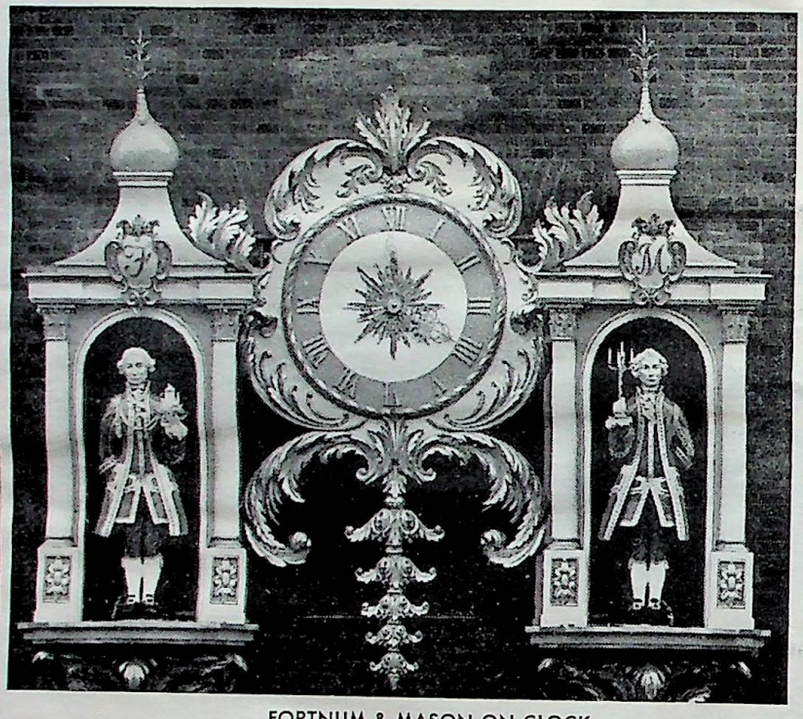
at home or abroad. In the heart of Stockholm, it has for the past two years been bulldozing away hills and laying girders for an eleven-story stone-and-glass palace of money that is currently Sweden's biggest construction job. Last week the bank celebrated the festive "roof laying" at the building, into which it will move next spring, one year ahead of schedule.

Aggressive Thrust. Skandinaviska had to build in a hurry to keep up with its growth in Sweden and around the world. The bank handles one-third of Sweden's currency exchange and finances one-half of its exports. Thrusting aggressively overseas, it has bought an interest in a Moroccan bank, recently acquired control of a bank in Geneva and joined the Bahamas-based World Banking Corp. to gain a toehold in Latin America. It backed construction of a $30 million paper plant in Portugal, and this year became the first Swedish bank since World War II to underwrite a foreign bond issue, for a Norwegian power project. All this activity has helped Skandinaviska in the past ten years to double its assets to $1.5 billion.

Though second in size to the Svenska Handelsbanken and less renowned than the Wallenbergs' Enskilda Bank (TIME, June 7, 1963), Skandinaviska has long been Sweden's foremost international bank and is widely regarded as its most modern and creative financial institution. In its earliest major deals a century ago, it raised money in Germany for Sweden's infant railroad and financed Swedish iron and timber exports. Skandinaviska also bankrolled the worldwide ventures of Swedish Match King Ivar Kreuger to the tune of $65 million, and his collapse in the 1930s almost brought the bank down as well.

Caution & Adventure. Skandinaviska bailed out many of Kreuger's companies in a rescue operation that won it the lasting respect—and the banking business—of such large Swedish corporations as automaking Volvo and the ball-bearing giant SKF. Says Lars-Erik Thunholm, 50, one of the bank's three managing directors: "Caution alone could not make banking a creative force. Caution must be coupled with adventure." By successfully coupling them, Skandinaviska has proved anew that one plus one often adds up to much more than two.



FORTNUM & MASON ON CLOCK
Turning wives into mistresses.

BRITAIN

Ah, Those Colonials

During that "glorious time of great too much," as Poet Leigh Hunt described an English Christmas, the groaning board of the rich and titled is customarily supplied by a unique emporium named Fortnum & Mason Ltd. Fortnum's is the world's only grocery with wall-to-wall carpeting, chandeliers and morning-coated clerks, who preside over stacks of specialty foods that can quickly run a grocery order to sky-high figures. Christmas accounts for 25% of Fortnum's business; last week 700 employees hustled to fill orders from eminent customers for such items as Beluga caviar ($44 a lb.), Stilton cheese, smoked Scotch salmon and *pâté de foie gras en croûte*, flown from Strasbourg. Almost every order includes that centerpiece of British Christmas, Fortnum's plum pudding, 70,000 of which will be sold in London or mailed around the world this year.

Not Quite So British. While all this seems quite traditional, the fact is that the Piccadilly store, dating back to 1707, is changing drastically under the direction of Garfield Weston (TIME, Oct. 26, 1962). Since the Canadian bread and grocery magnate (more than 700 stores in Britain) acquired Fortnum's in 1951, emphasis has shifted away from foods. Britain's bowler-hat and mink-coat contingent can now at Fortnum's for women's wear, clothing, leather goods, linens, eve sets. A toy department offers min Rolls-Royces and hand-carved ro horses. The gifts department has a crystal champagne bucket and a crocodile-skin desk set. There is an antique department in which almo nothing is less than $1,000, and a bo tique with the latest designs by St. La rent. All of this change at first unsettled Fortnum's old customers. "It isn't that we have anything against Canadians," sighed one dowager after Weston ar rived. "It's just that Fortnum's has always been so completely British."

Founded by Hugh Mason and W liam Fortnum, a footman to Q Anne, the store has been, in fact, a ru ning footnote to British history. Fo num's supplied Wellington's offic with hams and butter during the N poleonic Wars and shipped 250 of concentrated beef tea to Flore Nightingale and her wounded in Crimea. At home, Fortnum hampers have always been *de r* fare at Derby Day, Eton-Harrow cr et matches or an Oxford-Cambri boat race. Dickens praised Fortn provender, and Benjamin Disraeli, a hard day in Parliament, was met his wife with "a pie from Fortnum Mason's and a bottle of champag "My dear," he winked, "you are m like a mistress than a wife."

DEREK BAYES
WESTON

Bows All Around. While Weston broadened merchandise lines, tighte operations and increased profits ($5 000 before taxes this year), he made shrewd concessions to Fortnu traditional atmosphere. Cash regist have been installed for the first ti but their bells are muted. A soda fou tain has been added, but its décor decidedly British and it has become popular teatime spot for London m trons. Weston also erected a mammo exterior clock—Britain's biggest sinc Big Ben went up in 1859. From it, o the hour, 4-ft. figures of Founders For num and Mason emerge through bronz doors and bow to each other, seemingl happy that a Colonial has managed change their emporium while maki his own bow to them.

SOVIET UNION

Ads for Ivan

Now that the Soviet Union is thirs ing more of consumers, it is borrow ing another approach from the con sumer-oriented capitalist world—adver tising. The Russians have made a de with the small Manhattan firm of S Koppe to place ads from U.S. compa nies in Soviet trade publications. Pur pose: to step up trade with the U.S. b stepping up trade promotion. Althoug the U.S. has exported some $30 millio worth of goods (excluding wheat) t the U.S.S.R. so far this year, it rema to be seen whether many U.S. compa nies want to buy ads there, and whethe such ads would produce much busines

CONSTITUTIONAL LAW

Second Thoughts on Obscenity

For judges faced with the problem of defining the "dim and uncertain" line between obscenity and constitutionally protected free expression, the Supreme Court has painfully worked out a combination of three tests:

Whether the material is "utterly without redeeming social importance."

Whether to the average person, applying contemporary community standards, the dominant theme taken as a whole appeals to prurient interest."

Whether it also "goes substantially beyond customary limits of candor" to affront the point of "patent offensiveness."*

Unfortunately, no two judges can be counted on to read the test results the same way. After judging John Cleland's 200-year-old *Memoirs of a Woman of Pleasure*, better known as *Fanny Hill*, the New York Court of Appeals recently cleared the all-time erotic bestseller on the ground of "literary value." Applying the same tests to the same book, courts in Rhode Island and Massachusetts banned it. Last week the banners were joined by New Jersey's Bergen County Superior Court Judge Morris Pashman, who found *Fanny* "sufficiently obscene to forfeit the protection of the First Amendment."

Fanny Hill's U.S. publisher, G. P. Putnam's Sons, had asked Judge Pashman to enjoin the county prosecutor from blocking sale of the book in New Jersey under a law that bars distribution of "obscene, lewd, lascivious, filthy or indecent" material. The usual parade of witnesses—psychiatrists as well as literary critics—argued that *Fanny Hill* contained not a single four-letter word. But Judge Pashman was not impressed.

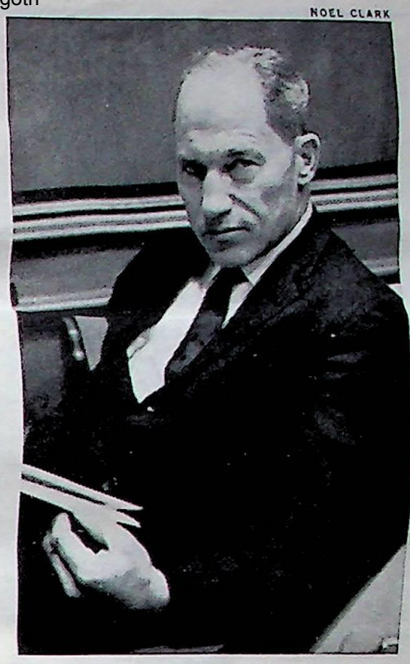
Though "sex is not synonymous with obscenity," he said, *Fanny Hill* makes it so. "Free rein," Judge Pashman added, "should not be given under the guise of constitutional guarantees to vilely depict perversions and sexual adventures as John Cleland saw fit 200 years ago. This is not the way to a better constitutional world; it is rather the path to decay and decline. The Constitution should not be the sword of the shameful profiteer of filth. It must be the shield to protect our sense of moral decency." Next testing station: the New Jersey Supreme Court, which will have to read *Fanny* all over.

*A fourth, unofficial test involves "hard-core pornography," described by one expert as "a succession of increasingly erotic scenes without distracting nonerotic passages."

THE SUPREME COURT

Strict Caution on Miscegenation

The door was wide open. When it ruled on the case of *McLaughlin* v. *Florida*, the Supreme Court could easily have ruled on the constitutionality of all miscegenation laws in the 19 states where they still exist. But strictly speaking, Connie Hoffman, who is a white woman, and Dewey McLaughlin, who is a Honduran hotel worker, had been convicted of only one form of miscegenation. They had violated a Florida law forbidding an unmarried couple of different races to "habitually live in and occupy in the nighttime



NOEL CLARK

JUSTICE WHITE
Postponing the larger issue.

the same room." And the court, so often decried as a ruthless uprooter of social customs, likes to speak strictly and cautiously on issues of sex and morality. It voided the Florida ban on interracial cohabitation, but it postponed the larger issue.

Race & Policy. Arrested in Miami in 1962, sentenced to 30 days in jail and fined $150, Dewey and Connie appealed to the Florida Supreme Court. The trial judge, they pointed out, had specifically denied them the defense of common-law marriage, which Florida recognizes when contracted between persons of the same race. The judge did so on the grounds that Florida bans interracial marriage. The defendants argued that that law was unconstitutional, but the state's highest court, citing an 1883 Supreme Court decision upholding an Alabama law against interracial sexual relations (*Pace* v. *Alabama*), affirmed their conviction.

In the Pace case, the mere fact that white and Negro defendants received equal punishments was enough to convince the Supreme Court that Alabama had not violated the equal-protection clause of the 14th Amendment. But today's desegregation decisions have "swept away" Pace's idea of "equality," said Justice Byron White, speaking for the present court. They have made all racial classification by state laws "constitutionally suspect." To stand, the classification must now be totally reasonable. Race cannot be a relevant factor unless it is necessary to "the accomplishment of a permissible state policy." A state does have almost unlimited power to proscribe sexual offenses, said White. But Florida cannot be allowed to ban cohabitation between unmarried persons of different races—while permitting it between those of the same race.

Future Decision. Justice White's opinion left intact, for now, "what is claimed to be a valid ban on interracial mar-

"HERE COMES OUR FAILURE"

These words were once spoken of France's Jean Anouilh by a director of acknowledged ability—and doubtful foresight. TIME quoted him in a searching article on the playwright. Just such commentary gives TIME's features on famous people authenticity and bite. It's in evidence throughout the wide ranging Show Business section, which gleans theatrical news from every corner of the world. Small wonder millions of families around the world read TIME. It keeps them up-to-date on the very business there's no business like.

riage." Though concurring, Justice Potter Stewart sharply protested what he called the court's implication that such a law might be valid if the state could show "some overriding statutory purpose." Said Stewart: "I think it is simply not possible for a state law to be valid under our Constitution which makes the criminality of an act depend on the race of the actor." Although the majority stuck to the limits of the specific case before it, it seems likely that Stewart's views will be the court's when it finally faces up to the constitutionality of laws affecting interracial marriage.

Test for an Ancient Law

Twice before, Connecticut doctors had asked the Supreme Court to void the archaic law that bans the use of contraceptives in their state. In 1943, when one doctor said the law threatened his patients' lives, the court ruled against him because he failed to prove that it violated his own constitutional rights. In 1961, the court rejected another doctor's appeal for a declaratory judgment on the grounds that he presented an insufficient "controversy." Connecticut, the court told Yale's Dr. C. Lee Buxton, had never prosecuted anyone for violating the law and appeared unlikely to do so.

But the situation promptly changed, and last week the court indicated that Buxton has a case at last. Five months after the 1961 decision, police arrested Buxton and Mrs. Estelle Griswold, executive director of Connecticut's Planned Parenthood League. Fined $100 apiece for dispensing contraceptives at a birth-control clinic in New Haven, the defendants lost their appeal in the state's highest court. Then they went back to remind the Supreme Court of Justice William O. Douglas' sharp dissent in the 1961 case. "The right of the doctor to advise his patients according to his best lights seems so obviously within First Amendment rights as to need no extended discussion."

Enacted in 1879, the law at issue says: "Any person who uses any drug, medicinal article or instrument for the purpose of preventing conception shall be fined not less than $50 or imprisoned not less than 60 days nor more than one year, or be both fined and imprisoned." The law is obviously ignored and flouted by thousands every day, but doctors cringe at the penalty, which applies to them through the state's accessory law that makes a criminal out of "any person who assists, abets, counsels, causes, hires or commands" another to use contraceptives.*

The birth-control statute rests on the power of every state to regulate public morals, and it has until now been stoutly supported by the Roman Catholic clergy, whose flock comprises 46% of Connecticut's population. Dr. Buxton

* Though 29 states regulate birth-control devices and information, only Connecticut forbids the mere use of contraceptives.

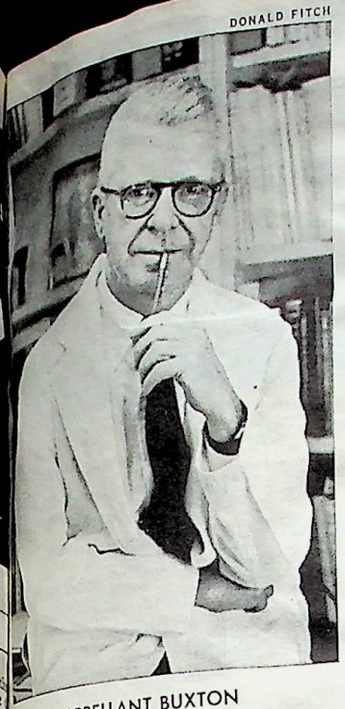
DONALD FITCH



APPELLANT BUXTON
An overriding medical interest?

nd his colleagues argue an overriding terest: that the law threatens health d life.

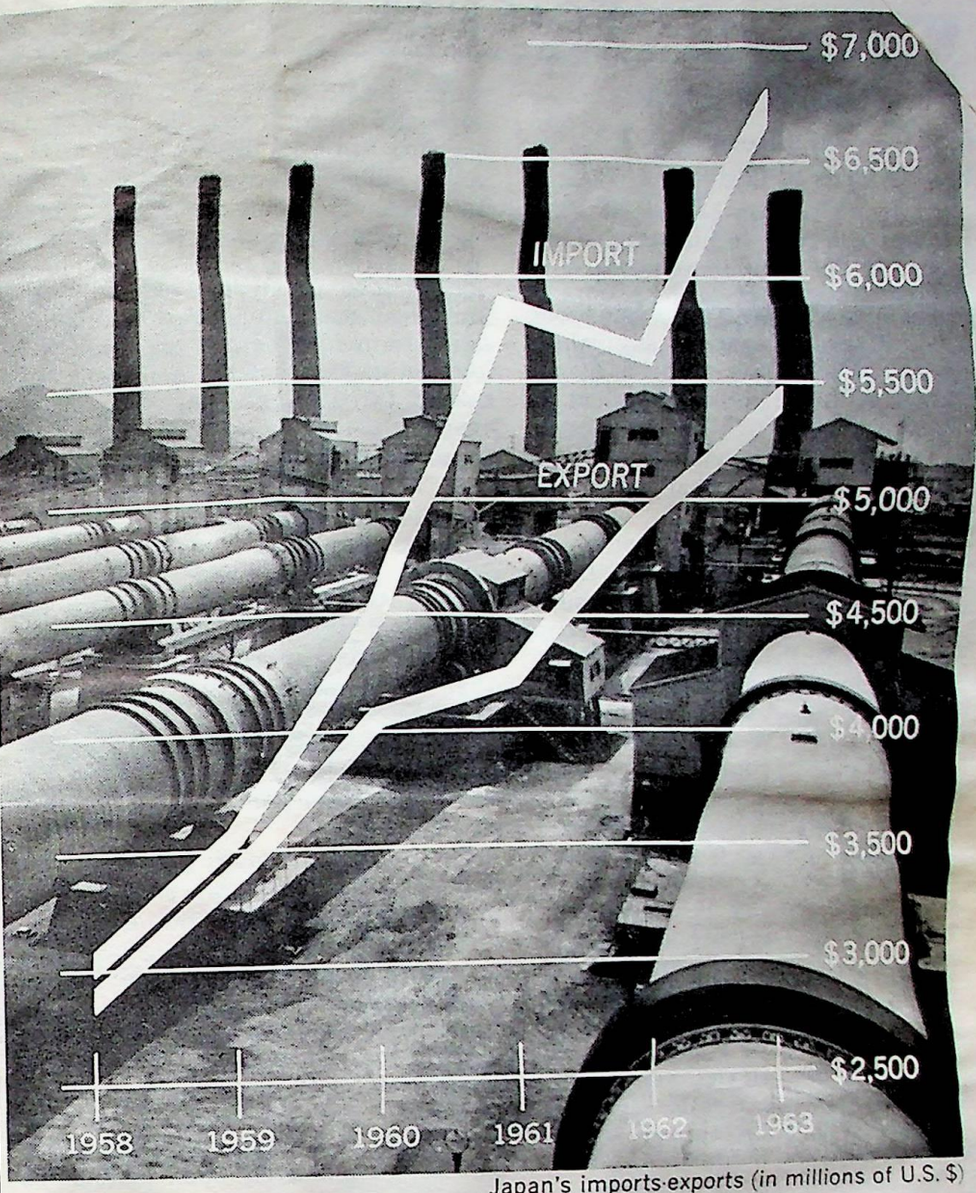
Not only does the law violate the urth Amendment guarantee against easonable search and seizure, says e Law Professor Fowler Harper, but fact that it does exist and can be forced threatens the Ninth Amend-nt's implied right of privacy or what rper calls "freedom from coerced rital conformity in the bedroom." Worst of all, says Harper, the law total-fails to attain its goal of "preventing entious relations between unmarried sons, since the forbidden contracep-e devices may be obtained in prac-lly all drugstores in the state."

LIBEL

Shout from the Times

During his 1962 re-election cam-gn, Washington Democratic State presentative John Goldmark and his Communist wife Sally were loudly cried subversives by the weekly Tona-et Tribune and some local John rchers. When Goldmark lost, he and s wife slapped a $225,000 libel suit on e of their critics. Last winter the trial y denied recovery to Sally, but arded $40,000 to Goldmark on the unds that he was beaten by criticism t overreached the limits of fair com-nt (TIME, Jan. 31).

Last week the Goldmarks got a ock: Superior Court Judge Theodore rner granted the defendants a new ial because "the case was submitted the jury on a basis which the U.S. preme Court has declared is funda-entally wrong." Turner was referring *New York Times Co.* v. *Sullivan*, landmark decision holding that public officials can sue their critics only for a false statement "made with actual mal-ce—that is, with knowledge that it was false or with reckless disregard for whether it was false or not."



Japan's imports-exports (*in millions of U.S. $*)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped over 5,000 overseas firms do $1,500,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write to:

ASTRONOMY

Measuring Moisture For Chances of Life

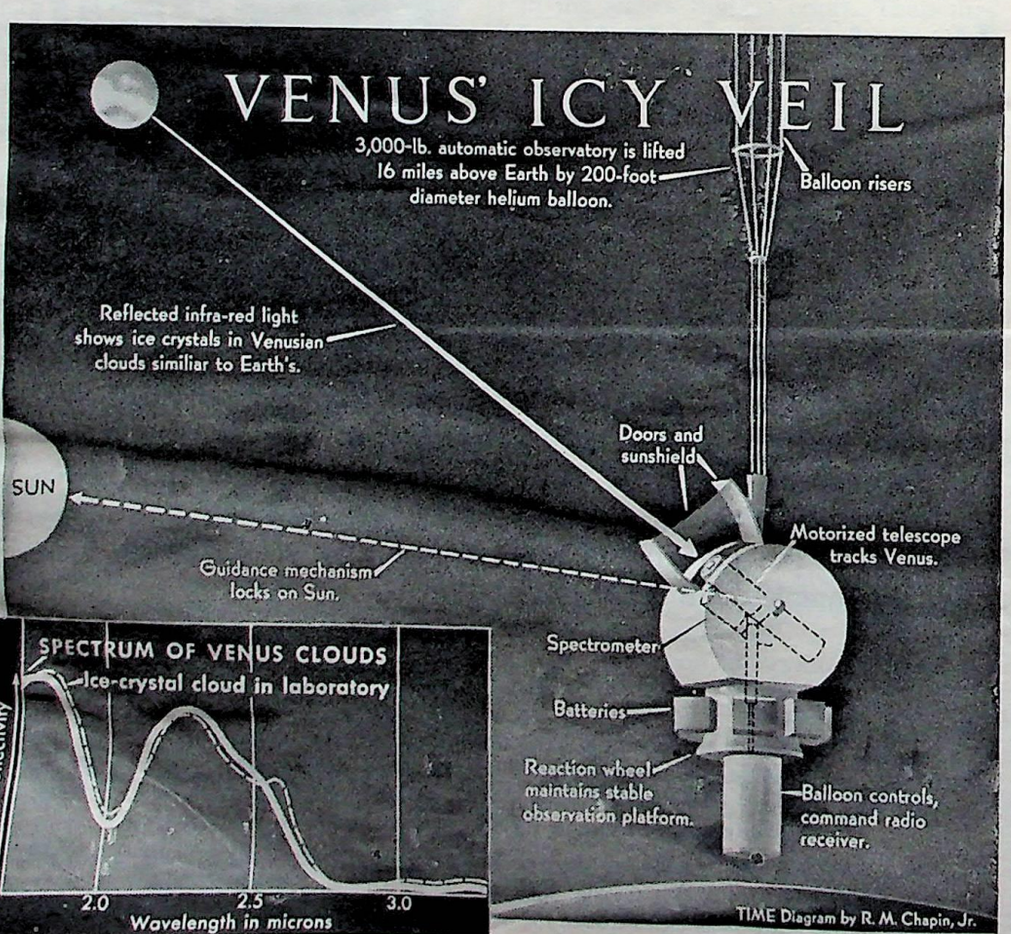
The giant balloon hoisted the Johns Hopkins telescope 16 miles high—high enough to get it up above most of the dust and water vapor in the Earth's atmosphere, high enough for a clear look at the dark-blue daytime sky where stars and planets glow with hardly diminished brilliance. Most important of all, it was high enough for the mechanized scope to scan accurately the infrared rays from the sun that were being bounced off Venus.

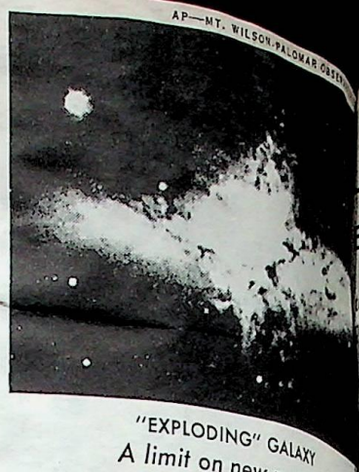
Laboratory Match. Measured by the 180-million-mile voyage of the spacecraft Mariner II that took it within a scant 21,000 miles of Venus (TIME, Jan. 4, 1963), the telescope's short ascent seems puny indeed, and it cost the sponsoring Air Force an insignificant $100,000. But the data it collected before it parachuted back to Earth promises to stir up a lively astronomical argument. Mariner confirmed earlier radiotelescope observations and reported that the Venusian surface is far too hot and dry to support any Earth-type life. The flying telescope got a vastly different slant. After careful analysis, says Hopkins Balloon Astronomer John Strong, he is convinced that the clouds hiding the Venusian surface are made of ice particles, just like the Earth's high clouds. And if Venus has that amount of water around, it may also have some sort of life.

By combining 120 separate spectroscopic measurements, Dr. Strong and his assistants got a smooth curve showing how strongly the Venusian clouds reflect different wave lengths of solar infra-red. This curve matched almost perfectly the reflection spectrum of an ice-crystal cloud observed in the laboratory. It was wholly different from the curves of dust, liquid carbon dioxide, liquid formaldehyde and the other noxious substances that are generally considered to be the content of Venusian clouds.

Far-Fetched Maneuver. Dr. Strong does not reject Mariner figures, only their interpretation. To take the temperature of a planet's invisible surface by radio is, he thinks, a far-fetched maneuver. All sorts of things besides hot rocks and dust can generate radio waves. They may come, for instance, from storms in the thick Venusian atmosphere, which is churned by twice as much solar energy as hits the Earth. Experts on cloud physics are finding that even gently turbulent clouds give off radio waves.

Dr. Strong also doubts the theory that the carbon dioxide known to be present in the atmosphere of Venus must trap sunlight by a "greenhouse effect" and necessarily make the surface too hot for living organisms. The ice crystals in the clouds, he believes, are so highly reflective that they bounce much of the sun's energy back into space before it gets anywhere near the planet's surface. Thus layers of the Venusian atmosphere may be comparatively cool, perhaps as cool as similar layers on the Earth.





"EXPLODING" GALAXY
A limit on new matter?

COSMOLOGY

Procreation in Space

How was the universe created? A
at once, and billions of years ago, s
the "big bang" faction of cosmologi
and not a single atom has been cre
since that explosion. "Continual c
tion" cosmologists take a different t
They believe that the matter in the
verse was created gradually and
being created, probably as neutron
hydrogen atoms in the lonely s
between the galaxies. Not quite s
fied with either theory, Professor
liam H. McCrea of the University
London's Royal Holloway College
offers an improvement on continual
ation. In the *Monthly Notices of the Royal Astronomical Society*, McC
argues that matter is created in
places where matter is thickest,
dense centers of galaxies.

The biggest failing of the stand
version of continual creation, says M
Crea, is that almost no matter has be
found between the galaxies. Accordi
to the theory, there should be 100 ti
as much in intergalactic space as
galaxies themselves. But it was alw
rather silly, McCrea thinks, to assig
to space, which is the absence of ma
ter, the ability to create tangible thing
such as hydrogen atoms. He bases h
own theory on the principle that "co
tinual creation of new matter is a pro
erty of existing matter depending up
its physical state."

In the McCrea universe, the galax
are the breeding place of matter. De
in their hearts new atoms appear, gu
ering together to form new stars
adding to the mass of old ones. Even
tually the galaxy reaches a limit, breaks up and expels into space a clot of ma
ter that forms the embryo of a young growing galaxy. In accordance w
some principle that McCrea does no
claim to understand, new galaxies a
born at the proper rate to fill the vacuo
spaces left by the general expansion of the universe.

Deep in space, many galaxies ha
recently been found that are apparen
exploding. These "quasars" (quasi-st
lar objects), give off more energy th
any other bodies in the universe.
McCrea is right, they have created th
limit of new matter and are in
throes of stupendous parturition.

Esso Operetta

The Umbrellas of Cherbourg is a triumph of taste, spirit and style over a plot drenched with soulful clichés. This flashy, sparkling French musical, in which every word is sung, is attuned to the sensibilities of sad young lovers who like to contemplate futility while walking barefoot in the rain. The film delights the eye, but it gives the mind very little to feed upon.

In rainy Cherbourg, Geneviève (Catherine Deneuve) keeps slipping away from her mother's umbrella shop to meet an ardent garage mechanic, Guy (Nino Castelnuovo). Guy goes off to the war in Algeria, leaving Geneviève pregnant. When she doesn't hear from him, she lets her mother marry her off to a sober young jewel merchant. One Christmas time years later, the lovers meet again briefly and find themselves virtual strangers. Geneviève is now a chic, prosperous Parisienne. Guy has acquired a pleasant wife, a son, and an Esso station he can call his own.

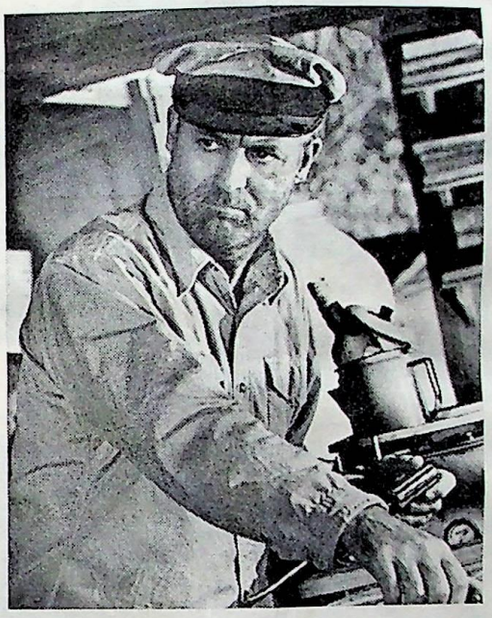
The audience may justly snicker a bit when this climactic encounter is interrupted by a uniformed station attendant who sings: "Shall I fill it up, Madame? Super or standard?" The sound of Muzak lyricism in the score is for the most part standard. There are no songs as such, but the script, in rhyme translated by prosaic subtitles, weaves themes of love and despair into insistent chatter music that accompanies every utterance from *"Je suis enceinte, Maman"* to "pass the sugar."

Despite its seeming effort to imitate operetta, *Umbrellas* is essentially pure style, cleverly edged with pessimism. By exercising a stylistic *savoir-faire* that blithely regards faults as virtues, Director Jacques Demy transforms it into a film of unique and haunting beauty. Suspended in silvery rain above a cobblestone street, the camera peers down at a crimson umbrella that is soon accosted by others into a colorful mosaic. Again, the tumbling of carnival masqueraders past a plate-glass window adds ineffable poignancy to Actress Deneuve's tranquil blonde perfection as she waits for Guy. And in her wedding scene, wearing a maternity bridal gown, she is the exquisite embodiment of every girl who ever traded her first careless rapture for a bit of tangible security. Director Demy not only risks the commonplace, he makes simplicity almost a fetish, disarms the audience with ingenuousness. Like a kid with a handful of bright new crayons, he scrawls his sadly cynical fairy tale across the shabby landscape of the town. Through his eyes Cherbourg becomes a city of promise done up in candy-box décor, where every shopfront, boudoir and corner bistro has been daubed with gentle pastels or vibrant reds, yellows, pinks, blues. This is the way things ought to be, he wistfully suggests, not yet faded with the passing seasons into the greyness of things as they are. Hollywood has been performing such tricks for years, but rarely with so graceful a touch.

Smooth Sailor

Father Goose. The man looks as seamy as an old sea bag. His chin sprouts a day's growth of stubble. Tattered shirttails flap outside his trousers. Coltish Leslie Caron sums him up succinctly as "a rude, foulmouthed, drunken, filthy beast."

The filthy beast is Cary Grant, somewhat whimsically cast as a Pacific island beach bum. World War II has begun,



GRANT IN "GOOSE"
A sprightly stab at crudity.

and Grant greets it with the disdain he might ordinarily show for a stale canapé. Nevertheless, Australian Navy Commander Trevor Howard tricks him into a position as a plane spotter on a remote islet near New Guinea. Soon he has to rescue Caron and her seven giggling schoolgirl charges, who have fled the French consulate at Rabaul.

After a promising beginning, *Father Goose* hits the shoals and settles down as a slick but superficial imitation of *The African Queen*. Its darling juveniles strain their precocity to freshen up the familiar fireworks between a proper young lady and an improper gent. The war itself looks like one of the livelier attractions at Disneyland. Grant and Caron endure pretty little hardships, finally try to get married by a chaplain over short-wave radio during a Japanese strafing attack.

The film's main interest lies in the novelty of a grubby Grant. He is miscast as a Bogart, but he makes a sprightly stab at crudity. When his dinghy starts to capsize with a full cargo of sweet young things, one tiny mutineer bites him, and he throws a capful of water in her face. When Caron slaps him, he lets her have it too. When Trevor Howard informs him that the island has a hidden treasure-trove of good Scotch whisky, Grant starts pawing the turf like Pavlov's dog. His engaging brand of roughhouse finally proves a point that was never seriously in doubt in the first place. Scrub the style and polish off Cary Grant, and what do you find? The real polish underneath.

Knocking Off Fort Knox

Goldfinger. A grey sports car spirals lazily up an Alp. Looks like any other Aston Martin? Look again. This rod has bulletproof windows, and can change license plates at the flick of a switch. Its radioscope tracks a bugged automobile 240 km. away. From vents in the rear it releases a smokescreen and an oil slick. From ports in the grille it protrudes a pair of machine guns. What's more, the rear axle of the chariot is armed with bladed hubcaps that telescopically extend to chew up the rubber of an overtaking vehicle. And if the driver should decide to ditch an obstreperous passenger, he need only press a button: the roof glides back and the jump seat violently ejects the jerk.

In the driver's seat, it goes without saying, sits that gadget-gaga gumshoe, James Bond (Sean Connery). "Ta-ta," he chortles as he charges full throttle into his latest caper. Poor James. Little does he know that he is about to encounter the grand master of all master criminals, "the most evil genius he has ever faced": Auric Goldfinger.

Gold is the operative syllable. Goldfinger is a modern Midas who owns a solid-gold revolver, a solid-gold Rolls-Royce, and a gold-plated girl friend. He is reputedly a "bullionaire," but still he wants more gold; he wants all the gold in the world. To get it, Goldfinger has assembled a ghastly crew of criminal specialists. Among them: Oddjob (Harold Sakata), a Korean karatist whose hands are so strong he can crush a golf ball between thumb and forefinger; and Pussy Galore (Honor Blackman), the person who flies lead plane in Goldfinger's private air force. With their assistance, Goldfinger intends to execute a criminal masterpiece. "Tomorrow," he blandly announces, "we will knock off Fort Knox."

A bit much? Yes, but it's meant to be. Like *Doctor No* and *From Russia with Love*, the two previous Bond bombshells, this picture is a thriller exuberantly travestied. No doubt *Goldfinger's* formula for box-office gold contains entirely too much brass, but who cares? In scene after scene Director Guy Hamilton has contrived some hilariously horrible sight gags. Item: a gangster Goldfingered for liquidation is taken for a ride to the nearest junkyard, where car and contents are seized by a giant claw, dropped into a mighty mangle and ruthlessly crushed into a small square bale of bloody metal. "Ah, yes!" Goldfinger graciously explains when somebody wonders where the gangster is. "He had a pressing engagement."

nly few jewelers carry Omega watches. hose who do are experts. They lected Omega because the watch mmands their professional esteem.

invitation to browse and ask ques-s. They take pride in selling the nd. They take pleasure in merely ing you browse and ask questions. ice how they handle the watches as lay them one by one on the velvet play tray – fondly and respectfully, e an art dealer lovingly placing a sterpiece on the easel. For these are ordinary watches. They are destined be worn for life.

isurely watch buying calls for this ecial setting. Don't be surprised if e sales room of your Omega jeweler s wall-to-wall carpeting and if you are fered a comfortable seat. Omega has commended seven types of chairs to jewelers, including designs by Eero arinen and Charles Eames.

r you will want to be at ease. Mak- a lifetime investment in high ecision requires leisurely reflection. you will be sitting at 25.5 inches ve the floor, the top of the sales nter will be 31 inches high. You thus examine the watches without ing forward.

e hanging lamps above the sales nter are also arranged for your com-. If they were too high, the merchan- would not receive enough light. hey were too low, you would feel e heat of the bulbs.

d-fashioned salesmanship... avant-rde watches. In helping you make r choice, your Omega jeweler will play personal, unhurried salesman-p. You may be a little astonished to d this art still being cultivated in an of self-service and discount houses. s your choice is among hundreds of atch types, the jeweler will proceed iodically. What would your reac-n be if suddenly you were confronted ith a bewildering profusion of watch-den trays?

stead, you will be shown an initial oice of only six models representing e main groups in the jeweler's lection. Together with your jeweler u will now determine the group most kely to appeal to you.

our choice might depend on your b or hobby. Let us suppose that you ve shown a preference for a self-inding Chronometer.

he jeweler will then help you narrow own your choice with a succession of ays containing Omega Constellation hronometers only.

n the process he will explain to you the eaning of the word Chronometer (it fers to a watch that has proved its ceptional accuracy in an official Swiss sting laboratory). And he will draw your attention to the advantages of the self-winding feature (it's not so much the convenience of never having to wind your watch as the fact that self-winding watches are better time-keepers).

Or, depending on your profession or hobby, you might opt for a specialist's watch. For the Omega Speedmaster wrist computer, for instance, designed for production engineers and rally enthusiasts. Or the Omega Seamaster 300, a deep-sea watch for the skin diver.

Foremost Swiss Chronometer. Alone, the Omega Constellation accounts for 61.47% of Switzerland's production of Chronometers—"super" watches that have proved their exceptional accuracy in an official Swiss testing station. Shown here is the new Omega Constellation "C".

How to choose from the largest range of ladies' watches. Even more formidable is the variety of Omega ladies' watches. Here, too, the jeweler will try to pinpoint the customer's preference by first showing her a pre-selection. Among these models will be the Omega Ladymatic, a self-winding watch whose 176-piece movement weighs little more than half a sugar cube (one-tenth of an ounce). There will also be the Omega Sapphette. Its watch-glass is a man-made sapphire whose faceted edge sparkles like a gem. Almost as hard as a diamond, the Sapphette crystal can neither scratch nor break.

For the vast collection of Omega diamond and gold-bracelet creations, many jewelers maintain a special sales counter in the rear of the store. This arrangement assures privacy and security.

Ω OMEGA

In 129 countries, expert service for your Omega. Your Omega jeweler not only helps you select your watch. He not only issues the Omega guarantee. He also takes a personal, lasting interest in your watch.

Here he enjoys the backing of his Omega colleagues in 129 countries. Any one of them will honor your Omega guarantee as though he had issued it himself.

Every Omega jeweler belongs to a unique international club of watch experts, the Omega World Service Organization. Every single member of this global network is thoroughly familiar with your watch.

Wherever business or pleasure may take you (interestingly enough many Omega owners are inveterate globe-trotters), you are therefore likely to find there an Omega specialist to whom you can entrust your watch for maintenance*. Thanks to a worldwide training and exchange program, your watch will receive locally the same care as at the Omega factory in Switzerland.

World's tiniest self-winding watch. The movement of this Omega Ladymatic weighs about 1/10th of an ounce—barely more than half a sugar cube. Yet it contains the 176 parts of a high-precision movement that never needs winding. Omega's collection of self-winding ladies' watches is the world's largest.

Behind the store window, a warm welcome. For the Omega jeweler in your town, your neighborhood, store hours mean open house. Drop in on him the next time you pass by. A warm welcome and a world full of fascination await you behind the red velvet backdrop of his window.

** Maintenance means oiling and cleaning by an Omega jeweler once every two years. This simple precaution assures accurate and reliable timekeeping for decades. Your Omega works 24 hours a day, ceaselessly, yet it only needs a fraction of a droplet of oil every two years!*

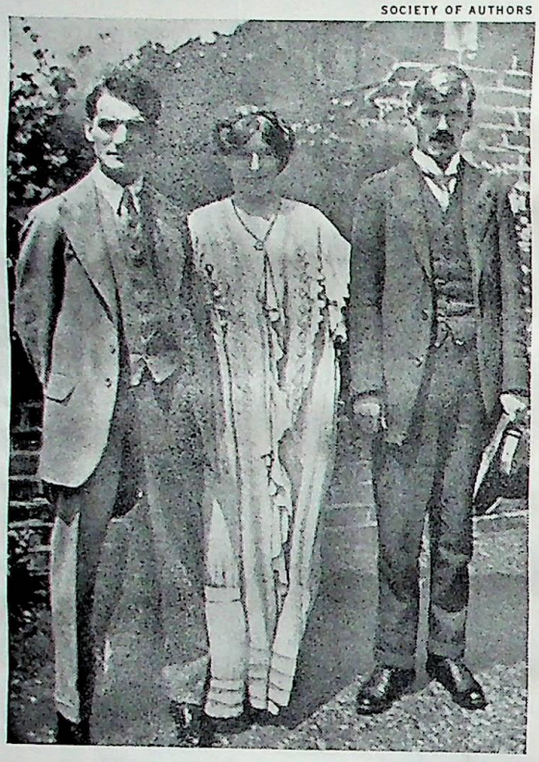
The Fleshly Muse

FRIEDA LAWRENCE: THE MEMOIRS AND CORRESPONDENCE *edited by E. W. Tedlock Jr.* 481 pages. *Knopf.* $7.50

As an early prophet of the century's sexual revolution, in prose and by example, D. H. Lawrence attracted swarms of intense female admirers, several of whom rushed into print right after his death with memoirs whose burden was that only the author understood "Lorenzo's" real self, and only his cloddish wife Frieda stood in the way of some blazing fusion that would make sexual, if not literary, history.

SOCIETY OF AUTHORS



MURRY, FRIEDA & D. H. LAWRENCE
As generous of body as of soul.

Lawrence died in 1930, leaving generations of teen-agers to pore over his lyrical celebrations of sex (*Lady Chatterley's Lover, The Plumed Serpent*) as a mystical force that was its own imperative, displacing petty considerations of established custom, narrow morality or Christian ethic. For 26 years, until her own death in 1956, Frieda loyally supported the image of Lawrence as the ultimate male. But all the while she was writing an extensive fictionalized memoir. In this book, Professor E. W. Tedlock Jr. of the University of New Mexico has tried to patch together her fragmentary memoir into a coherent whole, and has also assembled a collection of hitherto unpublished correspondence by and to Frieda. The result is to transform Frieda from an offstage presence into a compelling personality in her own right.

More than Reality. The memoir itself is lesser Lawrence in philosophy ("Sex is almost the essence of living"), and the style is the still lesser English that might be expected of a Prussian baron's daughter. But the letters are delightful and perceptive. Most startlingly, they reveal that Frieda was at least as sexually uninhibited as Lawrence himself professed to be (which was a good deal more than he was in reality).

In the first year that she left her professor-husband and three children to live with Lawrence, Frieda was admitting that she could be attracted to other men. She and Lawrence, not yet married, set off on a walking trip with David Garnett and his friend Harold Hobson. Before the trek across the Alps was over, Frieda had confessed to Lawrence that she had felt a strong physical attraction to young Hobson, and he to her. Frieda discussed it freely in letters to Garnett, and Lawrence furiously scribbled comments across her letters: "Stinker! Bitch!"

There are many letters reflecting the affair she had several years later with John Middleton Murry, husband of Katherine Mansfield. "Why, I ask myself, was it *you* who should have revealed to me the richness of physical love?" Jack wrote to Frieda many years later, lamenting that he had lacked the courage to steal her from Lawrence. "And the loveliness there was between us came out of the generosity of your soul as much as the generosity of your body."

Inner Torment. The primary value of the collection, however, is in its illumination of the stormy relationship between Frieda, the German aristocrat, and Lawrence, the coal miner's son. Lawrence emerges as much prig as immoralist. But he also amply demonstrates his doctrine that the most lasting relationship between man and woman is "love-hate." She concedes that some inner torment sometimes hurled him "over the edge of sanity. Once, I remember he had his hands on my throat, and he was pressing me against the wall and ground out: 'I am the master, I am the master!' " Her response: "Is that all? You can be master as much as you like, I don't care."

But Frieda has as many self-important feelings as self-effacing ones. She complained to one admirer about "so-called 'men' " whose chastity was "male conceit," and she added: "I know to my sorrow that I am six times the 'man' that any of you are." But with Lawrence's death at 45 of tuberculosis, Frieda was seemingly knocked to her knees: she reported "seeing his greatness whole for the first time." Like "a hero in the old days," he should be "burnt on a funeral pyre," and as his widow, she should "throw herself as a last tribute into the flames."

Where she threw herself instead was into an alliance with a pottering Italian painter and ceramist with whom she lived until she died, the last six years in wedlock. In explaining away her h... and the family of four that were ... in Italy, Friend Aldous Huxley poi... to Frieda's "extreme helplessness w... left alone to cope with a practical sit... tion." It was indeed a fact, never ... tioned in these jottings, that D. H. ... done most of the household's dust... and dishwashing.

Outer Fidelity. For all her ... to Lawrence's person, Frieda ... resolutely loyal to his work. The ... est reservation by a reviewer ... with massive rebuttal. Her husband ... wrote, had "changed the world's ... look on sex for all time," and had ... persecuted "only because the world ... not ready for the new reality."

The world has now accepted ... "new reality," and its views on L... rence's literary skills have consequ... become clear-eyed, discovering that ... prose was often embarrassingly o... blown, his plots contrived, his cha... ters stylized. But Lawrence was at he... a polemicist, driven by an idea, a... that idea lifts and illuminates his ... pages. More than many a more ... craftsman, Lawrence had changed ... manners and morals of the An... Saxon world.

. . .

The Sunday paintings of D. H. L... rence have long been a source of ... centious but frustrated fascination ... cause few people have ever seen th... "I put a phallus in each one of ... pictures somewhere," Lawrence to... painter friend, "and I paint no pic... that won't shock people's castrated ... cial spirituality." The London po... obliged by closing up Lawrence's ... showing in 1929. Now, at last collect... and vended by Viking Press (*Paintings of D. H. Lawrence;* $12.50), the ... forbidden fruit proves to have been ov... dated by onrushing realism. There is ... sampling of candid nudes, but the ... proach is less pornographic or primitive than merely earnest. In the artistic ou... put of Lawrence, 10,000 pictures would have been worth less than one wo...

Pennies can prevent this from happening to you

Working hot metal can be highly profitable—and extremely dangerous.

Metal-working machines, drop forges, die-casting machines and others may carry small streams of potential destruction in their hydraulic lines—flammable petroleum hydraulic fluids.

A minor mishap—a broken line or seal—and flaming liquid and explosive spray can jet through your plant.

That's why the slight additional cost for Monsanto Pydraul* hydraulic fluids can be such a wise investment.

Pydraul will not support combustion.

Pydraul in your hydraulic lines can mean lower insurance costs.

And Pydraul gives you other benefits. It won't sludge or thicken, it's not corrosive, yet Pydraul provides all the lubricating qualities of premium grade, but flammable, petroleum oils.

Pydraul is a performance-proved combination of safety and utility. Try it. You'll like the feeling of security Pydraul can give you.

And if other fluids in your plant are giving you trouble, talk to your local Monsanto representative. Chances are he's got something to help you.

Monsanto, St. Louis, Missouri, U.S.A.

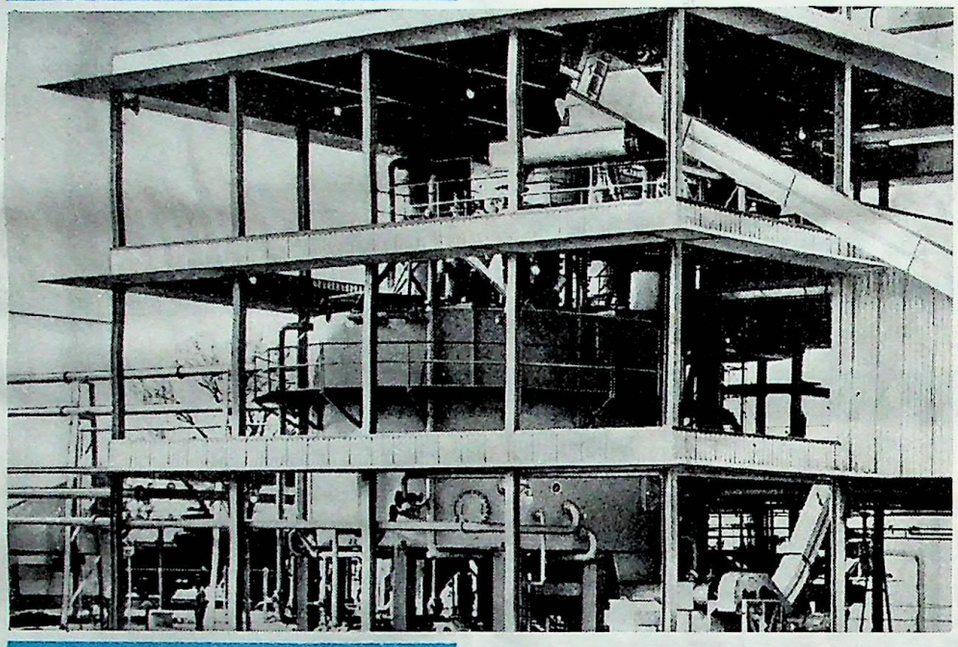
KRUPP



Outdoor ROTOCEL Vegetable Oil Extraction Plant.

Further details are given in our publication No. 49/64 Write for a copy to

LET KRUPP HELP YOU FIND THE BEST SOLUTION

More than 150 years of experience and more than 100,000 employees in modern research centers, engineering and production departments are your guarantee for the highest return on your investment.

KRUPP design and build complete industrial plants, locomotives, heavy trucks, ships, excavators, bulk-handling equipment, cranes, can-making machinery, tools, chemical process equipment, civil engineering structures, etc.

The complete catalog of products and services comprises some 3,000 items. 355 agents represent KRUPP in 116 countries, and KRUPP sales engineers are stationed in many parts of the world.

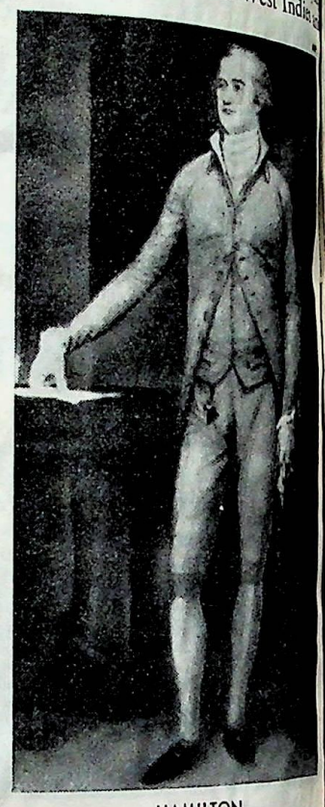
FRIED. KRUPP · ESSEN

The Calculated Deceit

NUMBER 7 by Julian P. Boyd. pages. Princeton University. $4.

James Bond, it turns out, was not the most illustrious man to be assigned number 7 (give or take a couple of zeros) in the records of Her Majesty's Secret Service. His real-life rival, in stature if not in ingenuity, was not only a zealous informant for Great Britain but also, at the very same time, the U.S.'s first Secretary of the Treasury, Alexander Hamilton.

Teetery Credit. A decade after the Revolution, Britain was still denying U.S. ships access to the West Indies,



HAMILTON

Whose effigy was for hanging?

still treating the new nation, economically, as a colony. The policy of Secretary of State Jefferson was to threaten counterembargoes and demand concessions. Hamilton believed that conciliation and appeasement were the only hope. Outtalked in Cabinet meetings, Hamilton set about negotiating with the British on his own. He justified his interference on the ground that the threat teetery credit rating of the U.S. economy required *rapprochement* with the British at virtually any cost.

In preparing the 17th volume of *Papers of Thomas Jefferson*, Editor Boyd reconstructed from scattered documents evidence of Hamiltonian double-dealing so "far indeed beyond the limits of honorable conduct in public office" that Boyd has now rushed out his findings in a separate monograph. He does not remotely suggest that Hamilton was in any sense a British agent. He does argue that Hamilton was so passionately opposed to what seemed to him the pro-British bias of his own Government

THOUSANDS OF EXPERTS AT YOUR SERVICE

AN AIR FLEET UNDER X-RAY. No breakdown or other defect in any type of material can escape from X-Ray and from the special testing beds that ALITALIA employs in the overhauling and maintenance of its fleet. Apart from the most accurate and routine inspections carried out before and after each flight and at every intermediate landing, all ALITALIA planes are subjected to a check for a minimum number of hours equal to those of their service duration. Thus ALITALIA planes are new planes at any time.

that he conspired with a British agent to change it, confiding to him the deliberations of the U.S. Cabinet itself and engaging in a "calculated and continuing use of deception."

Hamilton's go-between was British Major George Beckwith, who was assumed to be Britain's *de facto* Minister to the U.S., but who in fact had been a master spy since 1780 when he arranged the defection of Benedict Arnold. The major and the Secretary rendezvoused five times, Beckwith relaying his information to London in coded dispatches that referred to his high-placed source as "Number 7."

As a Cabinet officer, Hamilton was obligated to inform the President of any confrontations with a foreign representative. But he doctored his reports to further his unilateral policy of entente. When the word from Whitehall was hostile, as in the first rendezvous, Hamilton simply did not report the meeting at all. The memorandums he submitted of later meetings, maintains Boyd, were nothing but "gross misrepresentations." Hamilton's indication that the British favored alliance he calls "deliberate distortion," and his notation discrediting the performance of U.S. Minister to London Gouverneur Morris was "libel."

Compromised Dignity. It is Historian Boyd's argument that Hamilton's machinations "compromised the national dignity and the national interest" of the new republic and weakened its hand in the continuing negotiations with Whitehall. Thus, when an Anglo-American agreement finally emerged in 1794, the U.S. secured almost none of the concessions it had sought, including trade reciprocity in the Caribbean. Its signer, Chief Justice John Jay, was hanged in effigy, and the agreement is still known as "Jay's treaty." But Boyd believes that its name, and the effigy, should have been Hamilton's.

In Search of a Faust

THE CHALLENGE OF MODERNISATION *by I. R. Sinai.* 256 pages. *Norton.* $5.50.

"Backward" is a word no longer used in polite Western circles to describe the underdeveloped nations of the world. Yet this is precisely the word that I. R. Sinai uses, plus some even blunter ones, in an angrily eloquent book on the problems and prospects of the new nations. "The international atmosphere," writes Sinai, "is absolutely clogged with slogans, speeches and books extolling the 'Great Revolution' that has supposedly been brought about in all these populous territories. What we are witnessing in reality is a colorful masquerade, a sort of superior political orgy, superficially exciting but essentially undermining and leading only to a process of dissolution."

Lithuanian-born Author Sinai, 40, is an Israeli citizen who is now lecturing at Manhattan's New School of Social Research. Along with some other realistic observers, he contends that Western imperialism was much too easygoing. Assailed by guilt feelings, sentimentalizing the alien cultures over which they ruled, the imperialists failed to overhaul the social structures of the subject nations. They gave the non-West a taste for Western-style living without supplying them with the economic base or the management training that could provide it. As a result, the former colonies, now touchily proud new nations, are worse off than they were under colonialism.

Time to Give Up Gandhi. Non-Westerners, writes Sinai, fail to understand that the West's envied economic progress is not a matter of technology alone. It rests on character traits developed over centuries of Western history: an assertive individualism; a secure, well-defined ego; a Faustian drive to learn and master.

ALFRED STATLER

SINAI
Ex-colonies never had it so bad.

All of these traits are conspicuously lacking in the non-West; nor are non-Westerners at all sure that they want them. Believing their own propaganda about the "spiritual superiority" of their way of life, they stand with a foot in each world. A leader like Nehru urged, on the one hand, rapid industrialization, and on the other revered the Gandhian ideal of small, self-sufficient communities dedicated to hand spinning. The non-Western personality is in fact schizophrenic, writes Sinai; and in an acid aside, he suggests that psychiatrists might be more useful in the new nations than economists.

Supremacy of the West. Since the new nations must undergo a change of heart before they can progress, writes Sinai, the West is wasting its time with economic aid, which is tantamount to "pouring oil into a motor with ruined cylinders." It is also unrealistic to expect them to be democratic. They are so far behind the West that it takes a strong man to pull them up. Such a leader is likely to be an "exceedingly unattractive specimen," obsessed with the idea of modernization and oblivious to the niceties of diplomacy. And since he has to take so many unpopular steps he cannot take a chance at the polls where he is almost certain to be defeated. Only when a degree of modernization has been achieved can he afford to relax and allow more democracy.

Turkey's Kemal Ataturk proved to be almost the ideal strong man. When he modernized Turkey and pushed it to economic "take-off," he discouraged dreams of national expansion and left his neighbors alone. Though he ruled as a dictator, he prepared the country for an eventual transition to democracy. Turkey is far from perfect today, but it is in much better shape and has much better prospects than any underdeveloped nation. Strong Men Nasser, Nkrumah, Ben Bella, take note.

From Pish to Posh

A TREASURY OF AMERICAN POLITICAL HUMOR *edited by Leonard C. Lewin.* 476 pages. *Delacorte.* $6.50.

American political humor is as old as American politics, and the best of it has been collected in this volume. What strikes a reader as funny, writes Editor Leonard Lewin, depends on what "sacred cow is gored." So he has selected his material from the right, the left and the middle, showing that political wit knows no ideology. Included are David Crockett's tale of how he traded drinks for votes when running for Congress; Artemus Ward on Honest Abe's reaction to his nomination ("Don't bother me, I got 200,000 rails to split before sundown"); and Will Rogers on Wilson ("President Wilson says the Old Testament stayed as it was written and he thinks the League of Nations is just as good authors as it did"). Coming a bit closer up to date, there is H. L. Mencken on Warren Harding's inaugural address ("It drags itself out of the dark abysm of pish, and crawls insanely up the topmost pinnacle of posh"); and a constituent's letter to Texas Congressman Ed Foreman ("My friend over in Terebone Parish received a $1,000 check from the government for not raising hogs. What I want to know is what is the best kind of hogs not to raise hogs on and the best kind of hogs not to raise").

And finally, Lewin quotes Oliver Justice sen's version of the Gettysburg Address as it might have been delivered at an Eisenhower press conference: "We have to make up our minds right here and now as I see it, that they didn't put up all that blood, perspiration and—well, that they didn't just make a dry run here, and that all of us here, under God, that is, the God of our choice, shall beef up this idea about freedom and liberty and those kind of arrangements, and that government of all individuals, by all individuals, and for all individuals, shall not pass out of the world-picture."

The way it is in Orissa

In the state of Orissa, Indian farmers are in a very happy state of mind. They're discovering how to get the most out of their land.

Parts of India, of course, have long suffered severe food shortages. Orissa, unhappily, has had more serious problems than some other Indian states.

Happily, however, the State government and the Government of India have taken a bold, decisive step to remedy the problem. This year, they turned to a foreign firm for technical cooperation. They turned to Japan and to Kubota.

In four areas of India, Kubota has helped to develop elaborate model farms. Staffed with Japanese technicians, fully trained by Kubota, these farms have become training centers for hundreds of eager Indian farmers. They are learning the very latest scientific agriculture methods: Soil chemistry. Proper fertilization. Conservation. How and when to irrigate. Seeding procedures. And many other techniques of modern farming. In short, they are learning how to get the most out of their land.

Why was Kubota selected to participate in this program? Because Kubota's rugged agricultural machinery is especially designed with Asian farming methods in mind. And because Kubota's experts are happy to instruct farmers on how to best use this special equipment.

Asian farmers, using Kubota's tractors, power tillers, irrigation systems, and rice threshers are producing larger crops than ever. And better crops invariably mean happier people.

That's the way it is in Orissa today.

If you would like specific information about Kubota's products and services, please write to Kubota Foreign Trade Department, 22, Funade-cho, 2-chome, Naniwa-ku, Osaka, Japan.

TIME LISTINGS

TELEVISION

Wednesday, December 23

SCOPE (ABC, 10:30-11 p.m.).* "This Way to Santa," a documentary on a Santa Claus who spends most of the year lonely and drifting but gets into his red suit each Christmas for the children.

Thursday, December 24

CHRISTMAS from the Cathedral of St. John the Divine in Manhattan; (NBC, midnight-1:45 a.m.), Mass from St. Patrick's Cathedral in Manhattan; (CBS, midnight-1 a.m.), from St. Luke's Lutheran Church in Manhattan; (ABC, midnight-1 a.m.), Mass from the National Shrine of the Immaculate Conception in Washington, D.C.

Friday, December 25

TODAY SHOW (NBC, 7-9 a.m.). Burr Tillstrom and Kukla, Fran and Ollie, in a special Christmas Day program.

THE ENTERTAINERS (CBS, 8:30-9:30 p.m.). Carol Burnett, Caterina Valente, Art Buchwald and Bob Newhart star in a special Christmas show.

Saturday, December 26

AMERICAN FOOTBALL LEAGUE CHAMPIONSHIP GAME (ABC, 2 p.m. to conclusion). The final contest for the 1964 A.F.L. crown.

Sunday, December 27

NOYE'S FLUDDE (CBS, 10-11 a.m.). A 13th century miracle play, originally performed in the English cathedral city of Chester, reinterpreted by Benjamin Britten.

YEAR END REVIEW (NBC, 4-5 p.m.). An NBC News special reviewing the events of 1964.

YEAR IN—YEAR OUT (ABC, 10:15-11 p.m.). An ABC News special on the events of 1964.

Monday, December 28

CAROL FOR ANOTHER CHRISTMAS (ABC, 9:30-11 p.m.). The first of a series of specials on the U.N., this dramatic show is based loosely on Dickens' *Christmas Carol*, has a script by Rod Serling, a musical score by Henry Mancini, and is directed by Joseph L. Mankiewicz.

Tuesday, December 29

THE MAN FROM U.N.C.L.E. (NBC, 8:30-9:30 p.m.). Madlyn Rhue guest-stars as a lorn lovely who asks Agent Napoleon Solo for help.

PROJECTION '65 (NBC, 10-11 p.m.). NBC News's annual forecast of world events.

THEATER

On Broadway

THE OWL AND THE PUSSYCAT. Bill Manhoff fills every round with comic impact in this verbal slugfest, pitting a fiery, sexy shrew, Diana Sands, against a self-righteous bookstore clerk, Alan Alda.

LUV refuses to keep a straight face before some of the pious obsessions of the contemporary world and stage. Eli Wallach, Alan Arkin and Anne Jackson do honor to Murray Schisgal's comedy and Mike Nichols' direction as they rant and romp on a bridge.

OH WHAT A LOVELY WAR. Every living wordmonger of sacred theatrical clichés would swear that no one could make musical entertainment out of the spilled blood, blind gallantry, and stupefying idiocy of World War I. Joan Littlewood and her amazingly adroit London Theater Workshop company have done it. The re-

* All times E.S.T.

RECORDS

Best Listening: 1964

OPERA: Baritones rarely get the girl, but this year they take the cake. Geraint Evans turns in one of opera's great characterizations as the lecherous old swindler in RCA Victor's *Falstaff*, amply supported by the other singers and by Conductor Georg Solti. In *Rigoletto* (Deutsche Grammophon), Dietrich Fischer-Dieskau, best known for his sorrowful lieder, proves himself equally expressive as the tragic hunchback in a powerful performance led by Rafael Kubelik.

CHORAL: Carlo Mario Giulini masterfully melds the Philharmonia Orchestra, chorus and four soloists into an incandescent Verdi *Requiem* (Angel). Intricate but eloquent, the *Symphony of Psalms* is performed by the CBC Symphony and the Festival Singers of Toronto, spurred on by Igor Stravinsky (Columbia).

ORCHESTRAL: A triumphant beginning to the Boston Symphony Prokofiev series is the big, wartime *Fifth Symphony*, conducted by Erich Leinsdorf. Leonard Bernstein fired up the New York Philharmonic for Liszt's *Faust Symphony* and cooled them down for a lapidary performance of Haydn's *Symphonies 82 and 83* (Columbia). Haydn (in *Symphonies 95 and 101*) also got the benefit of Fritz Reiner's accumulated wisdom and inborn precision in his last recording, made two months before his death (RCA Victor).

FOLK MUSIC: Only two months old, the songs from *Another Side of Bob Dylan* (Columbia) are already being hummed and strummed, for no one in the folk world hits so many responsive chords.

JAZZ: *Big Band and Quartet in Concert* (Columbia) shows off nine virtuosos, playing Monk, with Monk, at Philharmonic Hall. *Dizzy Gillespie and the Double Six of Paris* (Philips) combine acrobatic trumpeting and exhilarating scat singing, while on the dreamier side, there's *Getz/Gilberto* (Verve), the record that introduced the girl from Impanema. *Coltrane's Sound* (Atlantic) sounds great.

MUSICALS: Barbra Streisand, Carol Channing and Zero Mostel are the winners from the Broadway precinct in their cast recordings of *Funny Girl* (Capitol), *Hello, Dolly!* and *Fiddler on the Roof* (both RCA Victor).

CINEMA

THE UMBRELLAS OF CHERBOURG. Every word of dialogue is sung in this sparkling French musical by Director Jacques Demy, who tells a rather foolish fable of young love with taste, spirit and style.

GOLDFINGER. Another slam-bang spoof of Ian Fleming's fiction has James Bond (Sean Connery) testing his mettle with a gilded nude, a shapely henchwoman named Pussy Galore, and a master criminal who plans to pry the gold cu... Fort Knox.

Best Reading

FRIEDA LAWRENCE: THE MEMOIRS AND CORRESPONDENCE, edited by E. W. Tedlock Jr. Essays, letters and fictionalized memories reveal that D. H. Lawrence's wife was herself a typical Lawrence heroine—and in being openly unfaithful to her husband, practiced in fact the sexual freedom that he earnestly preached in fiction—and priggishly deplored in reality.

THE FOUNDING FATHER, by Richard ... Whalen. The facts of Joe Kennedy's career—the fortunes he made in oil and real estate and his swift conversion of money into power for himself and his sons—need no embellishment; his life is a blueprint for the wheeler-dealer and the kingmaker.

THE HORSE KNOWS THE WAY, by John ... O'Hara. More short stories by one of the alltime masters of the art.

SELECTED LETTERS OF ROBERT FROST, edited by Lawrance Thompson. This collection shows the poet's wit, shrewdness, ego—and also the courage that saw him through an unrelenting succession of painful family tragedies.

LIFE WITH PICASSO, by Françoise Gilot. Picasso's penultimate mistress tells in bitterly frank detail of her nine turbulent years with the century's most extraordinary painter-genius and illumines, by her own very considerable artistic knowledge, his views on the art and artists around him.

Chicago

The Way-Out Middle

Sir: Your article on Buddhism with the picture on the cover of the Dai Butsu of Kamakura [Dec. 11] reminds me of an unforgettable notice inside the stomach of the Buddha (which one can climb into, like the Statue of Liberty). It read: "American soldier beware. You are entering the womb of the cosmic forces of Universe." This was in September 1945, and doubtless was a reaction to Hiroshima.

CLARENCE W. BARTOW

Tuxedo Park, N.Y.

Sir: Your statement about "Buddhism's strident inner contradictions" is as naive as saying, "Once a man is an American, he must immediately recognize racial equality because the Constitution of the U.S. recognizes racial equality." Like Americans, Buddhists are human beings. Buddhism forbids killing, stealing, adultery, lying, use of alcoholic liquor. But among those who don't practice the teachings, there are killers, thieves, adulterers, liars, drunkards. It is simply a case of man against religion—just as racial trouble in the U.S. is a case of man against an ideal. As for your statement that many Buddhists secretly believe they "can tame Communism," I have known several Buddhists to turn down Communists who posed as friends by pointing out this or that common denominator in the two "isms" and by saying that Buddhism and Communism are the same. Buddhists call the trick the "Communist killing-by-clinching method." Buddhism has never been a prey to other isms. Buddhism will die a natural death, as Gautama Buddha said, after it has completed 5,000 years.

TIN SWE

Rangoon, Burma

Sir: Although I am not a Buddhist, I interpreted your article on the subject as an unregenerate evaluation of the antinomies of a great religion. The adroitness of this article does not, in my opinion, redeem it from constituting an affront to the exponents of this faith. Antinomianism is not peculiar to Buddhism, but is rather an inherent pitfall in any religion. The deeper the spiritual insight one attains, the more dramatic the manifestations of this particular pitfall might become.

THOMAS C. MCGOWAN

Centerville, Mass.

Sir: Perhaps Madame Nhu, the "Dragon Lady," was right after all. She *said* the Buddhists in South Viet Nam were trying to embarrass the government and cause dissension with their [illegible] aries have tried to [illegible] en these unfortunate people. Unlike Madame Nhu, I do not propose fighting fire with fire, but I have to agree with her that as a group they are certainly exasperating.

(MRS.) ARLENE HALL

Joliet, Ill.

Sir: TIME's article on Buddhism illustrates again the strictures religion imposes on the mind: provincialism rather than a world view, indoctrination rather than real education, persecution of nonbelievers rather than realization of varying viewpoints, fanaticism rather than individualism. Christianity, along with other religions, has the same history—the Spanish Inquisition, the European religious wars, the hanging of Quakers in Massachusetts Bay, and the separation of Christian Negroes and whites in the South.

MILDRED D. MICHAEL

Hanover, Pa.

Death Down South

Sir: I suggest that Sheriff Lawrence Rainey and Deputy Cecil Price [Dec. 18] volunteer for the Peace Corps and serve in the Congo.

M. L. MASON

Littleton, Colo.

Sir: Just the thought of Mississippi scares the daylights out of me. But having a somewhat adventuresome spirit, I'm going to Mississippi this summer, merely to understand how it feels to be in a land where methods of controlling thought and action are probably as strong as those employed by Eastern European Communist states. For protection I'll get false membership cards in the Ku Klux Klan and White Citizens Council. I don't have the guts of Schwerner, Chaney or Goodman.

JOHN L. BAILEY

Pittsburgh

Sir: The "White Knights" of the K.K.K. could well be renamed The Simbas of the South.

MANETTE BUSTANOBY

Syracuse

Sir: I favor dropping an atom bomb on the state of Mississippi. I am ashamed that such a savage state exists in the country.

C. M. MOORHEAD

Bucyrus, Ohio

Sir: While there's Mississippi, how can there be the Great Society?

LEONARD SOLOMON

Indianapolis

Sir: Your reference to Mr. Edgar Killen as a Free Will Baptist preacher is in error and casts a serious reflection on our denomination. Mr. Killen is not, and has never been a Free Will Baptist preacher.

BILLY A. MELVIN
Executive Secretary
National Association of Free Will Baptists
Nashville, Tenn.

Free Speech at Berkeley

Sir: As a Republican and a student, I am very aware of our fine American traditions, including our freedoms of speech and of political action. Every American must always be willing to guard these precious liberties. The students and faculty of Berkeley are doing just this [Dec. 18] and deserve the admiration and support of every American who believes in democracy and the freedoms it guarantees. If it is the "Trotsky groups" and "members of the [illegible] Republican Party and register as a Communist!

RICHARD INLANDER

Berkeley, Calif.

Sir: The "civil rights militants, Trotskyites, and members of a Communist front" do not represent a majority of the students as far as their pro-Communist beliefs are concerned. We realize there are Communist-front groups at Berkeley, but the members of these groups are often the same civil rights workers in Mississippi whom TIME heralds as brave and devoted humanitarians. Why the distinction? The tactics of the students were not those of Castro but rather those of Gandhi.

PETE MOTOLA

University of California
Berkeley, Calif.

Home, Sweet—Home

Sir: I got quite a chuckle out of your use of German in your treatise on sculpture [Dec. 11]. Did you mean *Lebensraum* (room or space to live in), or *Liebesraum* (room to love in)? The implication of the combination was delightful. Miller's *Mary: Walking Sequence*—beautiful!

ERIKA B. PAULSON

Muskegon, Mich.

▶ *It depends on the sculpture. Miller's* Mary *obviously needs both.*

Fallingwater

Sir: May I speak in regard to two men who are not around to speak for themselves? There was no occasion to "talk" my father into building Frank Lloyd Wright's Fallingwater [Dec. 11], now in the excellent care of the Western Pennsylvania Conservancy. My role was to make Wright and my father acquainted, some two years before Fallingwater was designed. From there on, Wright's architecture needed no sales talk, and my father's quality as a client has been appreciatively described by Wright in print. Thank you for your good words about the Aalto room.

EDGAR KAUFMANN JR.

New York City

Consultant Competition?

Sir: The "Executive Peace Corps" [Dec. 4] seems an ironic commentary on the modern concept of free enterprise. There are a number of experienced consultants in the "developing" countries providing the continuity of contact essential to effective consulting who will now be faced with cut-rate competition sponsored by the U.S. taxpayer.

SPRUILLE BRADEN JR.

Bogota, Colombia

Ancient Trade

Sir: The photograph in your Cinema section [Dec. 11] of a slave trader coolly examining the teeth of a naked woman closely parallels the 19th century French

painting *Slave Market*, by Jean Léon Gérôme, in the Clark Art Institute, Williamstown, Mass. [*see cut*].

ALLEN M. BURNHAM

Manhasset, N.Y.

Pitching Camp

Sir: Re Susan Sontag and the derivation of the word Camp [Dec. 17], how the reference to the Aussie term "low saloon" was dug up is beyond me. Camp may be purely New York slang, argot. I first ran across it in the early '30s. At that time groups of homosexuals lived together in apartments they rented en masse. The apartments were called "camps," and by extension the residents thereof were also called camps—I don't know why not campers, but they weren't.

JACK OSWALD

Miami, Fla.

Sir:

A Tiffany lamp is very "low" camp,
Old postcards are Early Heterosexual,
Scopitone's the rage, for those college age,
And Miss Sontag's the square's intellectual.

MAGGAIE RAE

New York City

Sir: By printing your analysis of Camp, you have ensured that Camp will no longer be Camp, if you see what I mean. We philistines will now recognize the unique virtues of vulgarity, while the avant-garde will be driven to rely once more on their taste, if any. Western civilization has again been snatched from the brink.

DAVID W. SIFTON

Patrick A.F.B., Fla.

Sir: You describe Miss Sontag as an intellectual. How could any intellectual have anything to do with these lovers of crass, bourgeois vulgarity, these cutely clipped poodles of the human race, who devote themselves to the cultivation of worthless trivia, making a mockery of man's true greatness, his intellect.

JOHN G. GUINAN

Worcester, Mass.

Sir: Whether the derivation of "Camp" comes from the low "Aussie" saloons, or from the police rating "K.M.P." (Known Male Prostitute), or from the World War II concentration camps, where homosexuality was supposedly rife, "Camp" is here to stay. True—the vulgar and outrageous is Camp. What could be more ostentatious than Victorian "Tatt" and Barbra Streisand and superlatives like "divine," and "delicious." But I must add that the term Camp (Down Under, anyway) is not derogatory in implication.

THE COMPLEAT ANGLER
revised edition!

Fishing is fun—*when they're biting.* But it's fun all day with the new HITACHI WH-999 aboard. There's always a cranny in your knapsack for this super-compact yet super-sensitive out-of-doors sidekick. What's more, a carrying case of top-grade leather gives this fine instrument the protection it deserves.

Sturdy, positive controls keep the WH-999 on the right band and wavelength, and the newly-designed RADAR TUNING screen provides razor-sharp station selection visually. Electronic fine-tuning makes short-wave program selection easier, too. An added feature is the dual earphone jack for tandem listening in privacy.

The WH-999 three-band 9-transistor —The TRUE SPORTSMANS' RADIO, anywhere and in any weather.

Shown below are a few other examples of Hitachi's mastery of electronics. Besides a wide variety of household appliances, Hitachi's 10,000 products include heavy electrical, construction, and transportation equipment and extend to precision electronic instruments and scientific apparatus. If you're interested in any of our product lines, we'll be pleased to send you complete information. Or if you'd like to know more about Hitachi's latest developments in electricity and electronics, you'll enjoy our popular, informative quarterly, Age of Tomorrow.

THE WEEKLY NEWSMAGAZINE
December 25, 1964 Vol. 84, No. 26

THE U.S.

THE PRESIDENCY

Deep Background

On two nights last week, President Johnson played host to small groups of newsmen, gave them "deep background" briefings* into his plans and aspirations for his first full term in office.

Limited Mandate. Despite his overwhelming election victory, Johnson has no grandiose ideas about the extent of his mandate. He considers it a limited one, directing him to steer a middle-road course. He sees his role as that of a catalyst through which a national consensus may develop. Toward that end he will continue to urge such diverse elements in the nation as business and labor, liberals and conservatives, to "reason together"—a technique that has largely accounted for his longtime political success.

Johnson has no illusions about his ability to reshape and reform U.S. life in four years. Although he was an admirer and a protégé of Franklin Roosevelt, he still disparages the zealous young New Dealers who sought sweeping national changes overnight. And one of F.D.R.'s few faults, Johnson believes, was his habit of playing various elements of U.S. society against each other. Johnson seeks accommodation, not conflict.

To Johnson, this concept in no way represents a forfeiture of leadership. It means merely that he is willing to accept slow but steady progress toward the "great society" he envisions, rather than risk a setback or stalemate by trying to knock heads together. Johnson's great society does not consist of some grand philosophic design. Johnson distrusts philosophy. He is a pragmatist, and his interest lies in moving step by step toward clearly attainable goals.

Thus, Johnson frets about the fact that the U.S. population, now 192,807,000, is expected to swell to 350 million in 25 years; he constantly asks himself what, specifically, can be done to keep up with such an increase. He intends to enlist the nation's best brains in a search for ideas on how to create new jobs, how to give employable skills to the many youths who do not go to college, how to cut the commuters' travel time in the nation's congested urban areas. He is convinced that this year's tax cut has spurred the economy, yet he hews to no dogmatic economic theory. At the moment, he is determined to hold down Government spending. Yet, if the economy lags, he has no compunction against greater spending, or a bigger tax reduction, or both. He will do what he feels must be done.

Patience & Prudence. Johnson takes the same flexible approach to foreign affairs. He believes that new leadership in the Soviet Union, West Germany, Britain, India and Italy indicates a world in flux, full of new problems—but also new opportunities for accommodation. Aware that events may not always be to the U.S.'s liking in such a world, he counsels patience and prudence. The tide, he feels, is running in favor of the

AP

THE PRESIDENT WITH BUSINESS LEADERS AT THE WHITE HOUSE*

Facing the next four years without illusions.

* Seated: Outgoing Commerce Secretary Luther Hodges, Alcoa's Frank Magee, Henry Ford II, Johnson, Litton Industries' Charles Thornton, and American Can's William Stolk. Standing: Gardner Ackley, Chairman of the President's Council of Economic Advisors; General Motors' Frederic Donner, John T. Connor, Chase Manhattan Bank's David Rockefeller, U.S. Steel's Roger Blough, Vice President-elect Hubert Humphrey, Connecticut General's Frazar Wilde, Campbell Soup's William Murphy, American Electric Power's Donald Cook, Defense Secretary Robert McNamara, IBM's Thomas Watson Jr., Merrill Lynch, Pierce, Fenner & Smith's Michael McCarthy, A.T. & T.'s Frederick Kappel and CBS's Frank Stanton.

* Direct quotes were banned. So, for that matter, was the fact that the President had held the sessions. But the Associated Press, which was not represented, broke the news.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

West in its competition with Communism. He has faith that world leaders, too, can learn to reason together.

Thus, abroad, Johnson believes that a multilateral nuclear force may emerge among Western allies as a practical means to prevent nuclear proliferation; but he will not try to coerce allies into accepting it. He hopes that the U.S. and French President Charles de Gaulle may find wider areas of agreement, but he is resigned to the possibility that this [illegible] Johnson prudently agreed to renegotiate the Panama Canal treaty as Panama has been demanding—and just as prudently announced the intention of the U.S. to build a second canal (*see* THE HEMISPHERE).

Lyndon Johnson knows that he may be criticized for being too cautious. But he is convinced that his approach ensures progress—and that is his principal interest.

Gracious Host

President Johnson last week invited a few folks to drop by the White House. About 8,000 of them did.

First came eight new ambassadors to the U.S., presenting their credentials. Next it was 155 children, most of them Negroes, from Washington settlement houses. Lyndon joined them for a puppet show in the East Room, was greeted by one boy with an airy "Hi, Johnson"; later, he escorted them to the Blue Room to see an 18-ft. balsam fir Christmas tree, thence to the State Dining Room for ice cream and eggnog.

A.F.L.-C.I.O. President George Meany and seven other labor leaders were put in proper holiday spirits by the President's renewal of a campaign pledge to work for repeal of the Taft-Hartley law's section authorizing state right-to-work laws. Then, after sandwiching in a buffet supper for some 1,500 White House staffers, the President greeted 14 business leaders. As he always does, Johnson impressed the businessmen, and A. T. & T.'s Frederick R. Kappel spoke for them all when he reported that the President "is being extremely wise in his thoughtful evaluation" of the U.S. economy.

Toward week's end Lady Bird Johnson and Muriel Humphrey conducted a White House tour for 1,500 women who had worked as volunteers for the Johnson-Humphrey ticket, and the President was host at a party for reporters accredited to the White House and their families, numbering 4,000. And one chilly night he appeared hatless and coatless before several thousand people gathered on the Ellipse, south of the White House, pushed a button turning on 5,000 red and white lights on a 72-ft. Adirondack white spruce, a gift of New York State.

"At this Christmas season of 1964," the President said, "we can think of broader and brighter horizons than any who have lived before these times. For there is rising in the sky of the age a new star—the star of peace.

"By his inventions, man has made war unthinkable, now and forevermore. Man must therefore apply the same initiative, the same inventiveness, the same determined effort to make peace on earth eternal and meaningful for all mankind.

"These are the most hopeful times in all the years since Christ was born in

[illegible]MINISTRATION

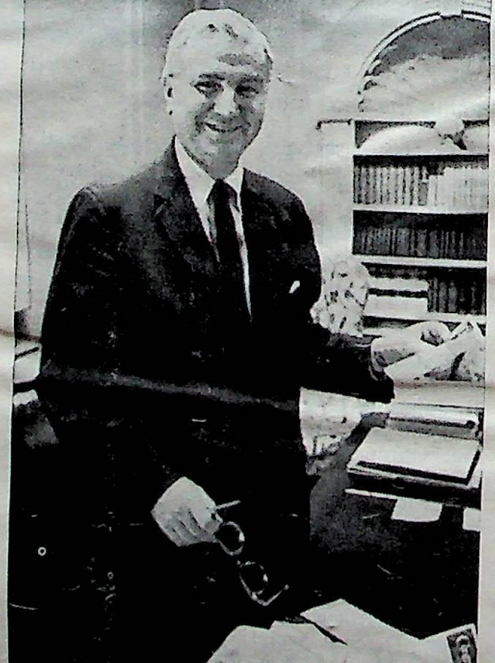
Prescription for Commerce

Nothing annoys President Johnson more than the notion that he cannot get good men to come to work—for him—in Washington. Last week, in his first Cabinet appointment, the President took special pains to disprove that theory: he named John T. Connor, 50, president of the multimillion-dollar drug firm, Merck & Co., as his new Secretary of Commerce to replace Luther Hodges.

Hodges, 66, a former (1954-1960) Democratic Governor of North Carolina who once showed his salesmanship by posing in his underwear to promote his state's textile industry, was in John Kennedy's original Cabinet, made his most notable mark as Commerce Secretary by launching an export expansion program that helped boost U.S. exports from an annual $19.6 billion in 1960 to $25 billion now. But when he was first appointed, Hodges told friends that he would quit after four years. Last week he did—and Drug Executive Connor seemed to fit perfectly the presidential prescription for a replacement.

Who Should? He Should. He is a freewheeling, sharp-speaking man whom other businessmen like to describe as a "maverick," and he has had solid ca-

BEN MARTIN



SECRETARY-DESIGNATE CONNOR
The boss's kind of man.

reers in both Washington bureaucracy and big business. A graduate of Syracuse University ('36) and Harvard Law School ('39), he went to work for a top New York law firm, moved off to Washington in 1942 as a Lend-Lease Administration lawyer, soon switched over to be chief counsel to Dr. Vannevar Bush's Office of Scientific Research and Development, which was then working on the atomic bomb. [illegible] spent a postwar [illegible] aide of the Navy, and in 1947 went to Merck as general attorney. In that capacity he was instrumental in getting his old boss, Bush, signed on as the firm's board chairman.

Connor has never been modest about his talents or about his ambitions. In 1955, when Bush was scouting for a new company president, he asked 30 top Merck executives whom they would like to see in the job. Most picked Connor, and when Connor himself was asked, he said: "I should be the new president." Connor was only 40—and he got the job.

He boosted Merck's research spending to new highs, at the same time in his nine years as president managed to almost triple company profits, from $13 million to $36 million. His salary at Merck is $129,800 a year. He holds 21,000 shares of Merck stock (now $45.50 a share), not counting options, and as of last week he had not decided whether he would keep it (and thereby risk conflict-of-interest criticism), put it in trust or sell it, assuming the Senate confirms his appointment next month.

"Liberal Businessman." Connor has long been one of the blue-ribbon U.S. businessmen that Washington officials tap for aid and advice. After the Bay of Pigs fiasco in 1961, he helped collect millions of dollars worth of drugs that went to Fidel Castro as part of the ransom for Cuban prisoners. He is vice chairman of the Business Council and a member of the Committee for Economic Development.

Politically, he is Lyndon's kind of man. Connor used to describe himself as a New Dealer, now says, "I am an independent Democrat—or a liberal businessman." But when it comes to a conflict between doctrinaire liberalism and business interests, Connor is a businessman first. In 1959, when Tennessee's liberal Democratic Senator Estes Kefauver was chairing an investigation into drug-industry pricing practices, Connor testified with patient, detailed expertise but found he simply could not penetrate the Keef's preconceptions. Connor admitted that the probe, in a general way, was not without merit, but he blasted Kefauver: "He asks loaded questions; he disregards facts that undermine his line of argument; he watches the morning and afternoon press deadlines and introduces a juicy tidbit at a time that defies immediate correction or refutation."

In the past, Connor has argued against the Johnson Administration's effort in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

current Geneva negotiations to reduce tariff barriers across the board by 50%. Last week, after his appointment to the Cabinet was announced, he was still reluctant to back down. Said he: "I consider myself at the midpoint between a strict protectionist and an all-out free trader. I am against arbitrary 50% tariff cuts across the board for U.S. manufactured goods. Each reduction should also be made on a reciprocal basis."

As Commerce Secretary, Connor will head up an awkwardly diversified department that has 33,538 employees, operates on a $4.5 billion budget, and includes the Bureau of the Census, Patent Office, Bureau of Public Roads, Weather Bureau and Area Redevelopment Administration. But the true mission of the Secretary of Commerce cannot be written into an organization chart. In its simplest terms, it is to promote confidence in the Administration among businessmen. That is something at which President Johnson himself works almost full time, and he is awfully good at it. In John Connor, the President should have an able helper.

THE SUPREME COURT

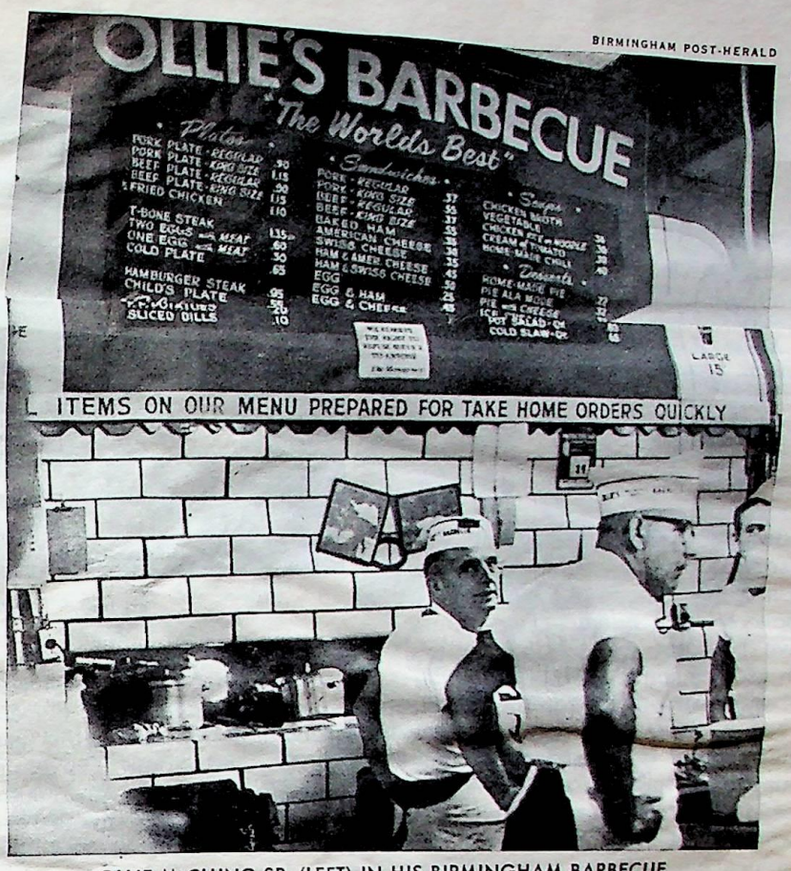
Beyond a Doubt

The U.S. Supreme Court proved last week that, when faced with a matter of truly national urgency, it can make up its mind in a hurry. Little more than five months after enactment of the most far-reaching civil rights act in U.S. history, the court unanimously declared that a key section of that act was constitutional. It thus removed the last doubt about the right of Negroes to equal access to public accommodations anywhere in the nation.

In a legal sense, the court's decision merely reaffirmed a rule of 140 years' standing, holding that the Constitution's commerce clause gives Congress sweeping powers to regulate any activity that even remotely affects commerce among the states. But its potential impact upon U.S. race relations was nonetheless momentous. A Negro can now travel anywhere, stop at any hotel or café and be certain that the law, at least, insists that he be served.

"No Limitations." In an opinion written by one of its two Southerners, Texan Tom C. Clark, the court dismissed arguments by Georgia's Heart of Atlanta Motel and Ollie's Barbecue in Birmingham, Ala., that they could not be compelled to accommodate Negroes under the guise of regulating commerce.

Clark noted that ever since 1824 the courts have consistently upheld a rule by Chief Justice John Marshall in a famous case (Gibbons *v.* Ogden, involving steamboat traffic between New York and New Jersey) that the commerce clause gives Congress a power "complete in itself" that may "be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the Constitution." The only real test of that power, wrote



OLLIE McCLUNG SR. (LEFT) IN HIS BIRMINGHAM BARBECUE
After the shock, five new customers.

Clark, is "whether the activity sought to be regulated is commerce which concerns more than one state and has a real and substantial relation to the national interest."

Clark cited testimony before congressional committees which showed that racial discrimination is a nationwide problem, that Negroes are so uncertain of finding accommodations when traveling that it impairs their "pleasure and convenience" and has "the effect of discouraging travel on the part of a substantial portion" of the nation's 20 million Negroes. Observed Clark acidly: "One can hardly travel without eating."

The fact that the main intent of Congress in passing the act was to deal with "what it considered a moral wrong," does not affect its validity under the commerce clause, Clark ruled. In past cases, such as those involving laws against white slavery and gambling, the court has upheld commerce-clause regulations that had more of a moral than an economic intent. Nor is the size of a specific activity relevant. Thus in 1942 the court upheld the Agricultural Adjustment Act of 1938 as applied to a farmer who sowed only 23 acres of wheat to feed his own cattle. The combined output of many small farmers, said the court, affects the total flow of interstate commerce.

Slavery & Servitude. The Supreme Court also rejected arguments that forcing a motel or restaurant owner to serve Negroes amounts to "involuntary servitude" (which, ironically, is prohibited under the anti-slavery 13th Amendment) for the proprietor. Clark cited the ancient common-law rule that innkeepers must serve any well-behaved person, also noted that longstanding public accommodations laws in 32 states have never been successfully challenged.

The court dealt harshly with the claim that a proprietor who cannot choose his customers as he wishes is deprived of property without the due process of law guaranteed by the Fifth Amendment. In a concurring opinion, Justice William O. Douglas cited with approval the following argument: "The institution of private property exists for the purpose of enhancing the individual freedom and liberty of human beings," and is often restricted for just that reason. "The most striking example of this is the abolition of slavery. Slaves were treated as items of private property; yet surely no man dedicated to the cause of individual freedom could contend that individual freedom and liberty suffered by emancipation of the slaves. There is not any question that ordinary zoning laws place far greater restrictions upon the rights of private property owners than would public accommodations legislation."

This whole line of reasoning was easily applied by the court in the case of the Heart of Atlanta Motel, which fronts on an interstate highway, welcomes white transients, advertises in national magazines, and gets 75% of its guests from outside Georgia. Ollie's Barbecue was a tougher problem, since it is eleven blocks from the nearest in-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

terstate highway, does not advertise, seeks no transients. Although it is in a Negro neighborhood and employs 24 Negroes, it serves Negroes only from a take-out counter. Yet Ollie's beef—some $70,000 worth last year—was purchased from a Birmingham wholesaler who imported it from Hormel meat-packing plants outside of Alabama. Racial discrimination, ruled the court, affects the volume of Ollie's business, President of the Heart of Atlanta Motel, complained: "This makes possible a socialistic state." Ollie McClung Sr., co-owner of Ollie's Barbecue, declared: "I'm shocked."

Yet, despite their distress, Ollie, 48, and his son Ollie Jr., 24, announced that "as law-abiding Americans, we feel we must bow to this edict." Two hours later, five Negroes walked into Ollie's —which grosses some $450,000 annually—and were served. As for the motel, it had begun accepting Negroes under an earlier federal court order, but only five couples had applied so far—probably because its rates are the highest in Atlanta. And even Rolleston took a philosophical view of the eventual outcome of such race controversies. "With my grandchildren, there won't be any problems at all," he said. "They won't even know there were any."

Obliterating the Effect

After deciding that the public-accommodations section was constitutional, the Supreme Court turned to a less significant but more nettlesome legal problem: Could the thousands of sit-in demonstrators who had invaded the South's segregated lunch counters and been convicted under valid state antitrespass laws still be punished for acts that are now undeniably legal? The question split the court's earlier unanimity.

A five-man majority of the Justices declared that the sit-in convictions "and the command of the Civil Rights Act of 1964 are clearly in direct conflict." Referring to a 1934 ruling by Chief Justice Charles Evans Hughes, the majority found precedent to assume that Congress intends "to avoid inflicting punishment at a time when it can no longer further any legislative purpose and would be unnecessarily vindictive." The fact that the sit-in convictions were under state rather than federal law, ruled last week's majority, is "a distinction without a difference." Explained the opinion, also written by Justice Tom Clark: "Since the provisions of the Act would abate all federal prosecutions it follows that the same rule must prevail under the Supremacy Clause which requires that a contrary state practice or state statute must give way."

"No Precedent." Declaring that "the great purpose of the civil rights legislation was to obliterate the effect of a distressing chapter of our history," the opinion concluded that the specific convictions under consideration (cases from Arkansas and South Carolina) "must be vacated and the prosecutions dismissed." The ruling meant that some 3,000 other cases now pending or under appeal in which sit-in demonstrators had acted "peacefully" eventually would be dropped.

In biting dissent, Justice John M. Harlan called the majority's reasoning "revolutionary" in its voiding of state convictions. Justice Hugo Black was even more scathing. "It certainly relieves us of work to abate these so-called sit-in cases," he commented in court. But, he contended in his written dissent: "I do not find one paragraph, one sentence, one clause, or one word in the 1964 Act on which the most strained efforts of the most fertile imagination could support such a conclusion. The idea that Congress has power to accomplish such a result has no precedent, so far as I know, in the nearly 200 years that Congress has been in existence."

"Incomprehensible." In Black's view, such demonstrators still have no right "to take the law into their own hands by sitting down and occupying the premises for as long as they choose to stay," particularly since the very aim of the new law is to "take such disputes out of the streets and restaurants and into the courts."

The decision does not automatically end local prosecution of sit-in cases; civil rights lawyers may have to seek dismissal in specific cases. Yet it does mean that a great variety of civil rights advocates—ranging from Mrs. Malcolm Peabody, 73-year-old mother of Massachusetts' lame-duck Governor, to Mardon Walker, a 19-year-old daughter of a white Navy captain, no longer need fear confinement. Said a relieved Miss Walker in New London, Conn., where she is a student at Connecticut College: "I somehow felt that I would never have to serve 18 months in jail for trying to be served in a restaurant. It just seemed incomprehensible."

The decision also frees some $2,000,000 in bond money posted by individuals and civil rights groups, dating back to the winter of 1960 when a band of determined Negro students first sat down at a variety-store lunch counter in Greensboro, N.C., and refused to move. That money is not likely to remain idle for long. Civil rights leaders plan to use it to push voting-registration drives and—despite general compliance with the new civil rights laws in metropolitan areas—to push into rural Southern hamlets where the law has never even been tested and WHITE ONLY signs still proclaim defiance.

SIT-INS AT CHARLOTTE, N.C., LUNCH COUNTER (1960)
Freed from fear with a $2,000,000 bonus.

THE CONGRESS

Challenge to Charlie

Nearly six years ago, Indiana's Republican Congressman Charles Halleck overthrew aging Joe Martin as his party's House floor leader. In so doing, Halleck got vital help from a small but powerful group of young insurgents, including Michigan's Gerald Ford, who wanted a more aggressive, positive leader. In Halleck, they got all the aggressiveness they could stomach, and very little positivism. Last week Jerry Ford and his rebels were out to oust Charlie Halleck, 64.

As his opening shot, Ford, 51, sent telegrams to Republicans who will be in the next House, asked them to back him against Halleck as minority leader when they caucus on Jan. 4. At a press conference, Ford explained: "It is a question of having new, dynamic, bold, innovating leadership. It is a question of using all the talent that we have available among Republicans in the House."

SEQUELS

Spies' Demise

Two men were convicted by a Newark, N.J., federal court jury early this month for spying for the Soviet Union. One man was a Soviet national named Igor Ivanov, who was working in the U.S. for Amtorg, the Russian trade agency. The other man was an American-born engineer, John W. Butenko, 39, who had been working on highly classified electronic equipment for the International Telephone & Telegraph Corp. FBI agents had trailed Butenko and Ivanov for six months and in October 1963 had arrested the two in the company of two Soviet diplomats. In the Russians' car, in addition to pieces of espionage gear, the FBI men had found Butenko's dispatch case containing top-secret documents.

Last week Federal Judge Anthony Augelli passed sentence: 20 years in prison for Ivanov, and a total of 30 years' imprisonment for Butenko. They were led off to jail, protesting their innocence.

CALIFORNIA

After Sam's Scalp

Congressman James Roosevelt, 57, last week decided to take on a tartar. He announced his candidacy against Los Angeles Mayor Samuel Yorty in next April's municipal primary.* Said Roosevelt in a gibe at Yorty's notable irascibility: "Los Angeles must not be subjected to government by tantrum."

Yorty, 55, is no pushover, not even for the eldest son of F.D.R. A maverick, he started his political career as an ultraliberal California assemblyman but turned conservative, and vociferously anti-Communist, during two terms in the U.S. House and backed Republican Richard Nixon in 1960. That brought threats from regular Democrats to get Sam's scalp, but he went on to win an upset victory for mayor in 1961.

Yorty has reduced discrimination in city hiring, placed qualified professionals at the head of key city departments, and reversed a city ordinance that required housewives to separate cans from all other trash. He defends his record literally from A (for airport—"We made it self-supporting") to Z (for zoo

* The Los Angeles primary is a nonpartisan preference vote, but if any candidate gains an absolute majority, he is automatically elected mayor. Otherwise, the two leading candidates qualify for the general elections the next month.

CALIFORNIA'S ROOSEVELT
Facing a shrewd old hand.

—"The city is getting some rare albino kangaroos"). But his administration has been marred by his constant and noisy fights with the city council, and he is currently involved in a controversial attempt to amend the city charter to give the mayor more power.

Roosevelt, a six-term Congressman, plans to campaign "not as a liberal Democrat but as a man with a bread and butter program for getting things done." He has the backing of Governor Pat Brown, and will have the support of the state's regular Democratic organization. But Sam Yorty is an old hand at knocking over organizations.

OPINION

The Chinese Who?

"The American public," said a report issued last week by the Council on Foreign Relations, "is not well informed about China."

That is hardly the half of it—at least according to a survey of 1,501 people done for the council, a nonprofit institution (board chairman: John J. McCloy), by the University of Michigan's Survey Research Center.

When asked, "What kind of government does most of China have now?" or "Do you happen to know if there is any Communist government in China now?", an incredible 28% indicated that they did not know. Moreover, 39% did not know of the existence of the Nationalist Chinese government. Of those who were aware of the two Chinas, 62% opposed U.S. help to the Nationalists in an attack against the mainland. Seventy-five percent favored the U.S.'s remaining in the United Nations when and if the Chinese Communists are admitted; only 5% would want the U.S. to withdraw.

Shifting its sights to the south, the survey asked: "Have you happened to hear anything about the fighting in Viet Nam?" An astonishing 25% said no.

PANAMA

Dig We Must

President Johnson last week took a step that U.S. policymakers have been talking about for years. "This government," he said at a White House press conference, "has completed an intensive study [illegible] should press forward with Panama and other interested governments in plans and preparations for a sea-level canal in this area. Second, I have decided to propose to the government of Panama the negotiation of an entirely new treaty on the existing Panama Canal."

Wonder of the World. The need for a new canal is growing desperate. In the 50 years since U.S. Army engineers carved the present seaway out of the Panamanian jungle, the canal has proved one of the wonders of the world. Today some 50% of Japan's exports to the West pass through the canal; such South American nations as Ecuador, Peru and Chile depend on it for between 75% and 90% of their total imports and exports. But ships have slowly outgrown the intricate network of three lock systems that carry them across the hump of the isthmus, and trade is expanding far beyond the canal's capacity to handle it. Over the last ten years, commercial traffic has climbed from 36 million tons annually to almost 65 million tons. Today, some ships lie to for 15 hours or more awaiting their turn. The biggest tankers and aircraft carriers cannot squeeze through at all. With the trend to bigger and bigger ships, the canal will be obsolete altogether by the year 2000.

Johnson mentioned four possible sites —all of them publicly discussed on earlier occasions—for a sea-level canal to connect the Atlantic and Pacific without need of locks. One is a 95-mile route in northwest Colombia, another a 168-mile route slicing through Costa Rica and Nicaragua; the remaining two are in Panama itself—one running 60 [illegible], which would need considerable widening and deepening to eliminate the locks. Johnson gave no hint as to which route the U.S. preferred, saying only, "I have asked the Secretary of State to begin discussions immediately with all the governments concerned."

Presumably, the State Department will sound out each government to see if it does or does not want a canal, then negotiate a series of treaties with them that will permit the U.S. to make a thorough study of the possibilities. The test borings and surveys would take about four years. Once a route is decided upon and a final treaty written, construction will get underway. If possible, the U.S. would like to use nuclear explosives to dig the trench. Nukes are faster than dynamite, run one-tenth the cost, and would hold the price for the Colombia canal to $1.2 billion, the Nicaragua-Costa Rica canal to $1.24 billion, or the southern Panama route to $500 million.

Nuclear techniques are obviously impossible in the present densely populated Canal Zone. Bypassing the locks and widening the main Gaillard Cut by conventional methods would cost about $2 billion, would require shutting down the canal for only twelve days over the entire construction span. Whichever route is chosen, a new sea-level canal could be ready for operation within 10 years from the day that work starts.

A Time to Negotiate. The [illegible] point, of course, is what kind of a [illegible] the U.S. can write for control, [illegible] tion and defense of a new canal. [illegible] Panama Canal made Panama a ma[illegible] Yet for years Panamanians have re[illegible] against the 1903 treaty, which [illegible] the U.S. [illegible]-mile Canal Z[illegible] manding a bigger share of the [illegible] and more control of both the ca[illegible] and the zone. Last January's [illegible] kee riots, which left 26 dead (in[illegible] three U.S. G.I.s) showed how d[illegible] passions go. The U.S., as Johnso[illegible] last week, is now willing to re[illegible] 1903 treaty for the remaining [illegible] present canal, striking out the [illegible] word sovereignty and giving [illegible] most of what else it wants, bu[illegible] ing on some form of iron-clad [illegible] control.

How those negotiations go may determine the shape of the treaties a new canal—and whether or not U.S. decides to build in Panama. Costa Rica and Colombia reacted thusiastically to the prospect of nal on their territory. No one to understand that better than Pa[illegible] ma's recently inaugurated Pres[illegible] Marcos Robles. On TV last week told his people of President John[illegible] "transcendental" announcement [illegible] "the happy prospects on this [illegible] day for our nation."

COLOMBIA

The Unspoiled Speck

It is only a flyspeck island off coast of Nicaragua, but last week tiny Colombian colony of San And[illegible] was churning up tidal waves all the back to Washington. More than sporting types from New York [illegible] been flown down to the island by c[illegible] tered plane as expenses-paid guests the El Dorado Hotel. All they had to was buy a few stacks of chips and the hotel's casino a chance to win the price of the junket. The trou came when several guests tried to c in chips, and the hotel refused to th them. The ensuing uproar got so [illegible] that Colombia had to fly in se peacemakers; a U.S. consul hur over, and Washington's Civil Aero tics Board even called for a full review of all such junkets to [illegible] and domestic gambling meccas.*

Any Number Can Play. Gambl[illegible] only the latest racket for San And[illegible]

* Heading for such places as Las Vega[illegible] Bahamas, and South America, the penses-paid junket has become somethi[illegible] big deal with gambling promoters. [illegible] large hotels in Vegas have representati[illegible] fully scouring such non-gambling, bi[illegible] areas as Boston, Hartford, New Yo[illegible] Dallas for "big rollers," offer them [illegible] thing free from soup to nuts if they w[illegible] on down to join the play.

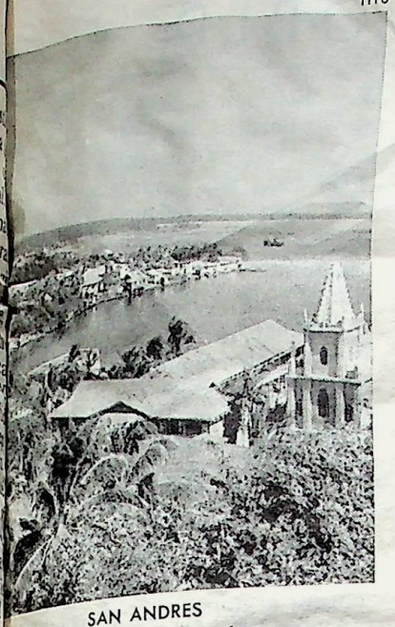
TITO



SAN ANDRES

A hint to go straight.

ought on by hard times. Up to now, island's real business and been smuggling. In 1959, hoping to mote tourism, the Colombian gov- ent made San Andrés a free port, ed that any five-day visitor could $150 worth of goods back to the and without paying a centavo in . Before long, luxury-starved Co- ns were stocking up on every- from perfume, booze and china dios, phonographs and TVs. ainland duties are high, and what cheap on San Andrés brought two three times the price in Bogotá. pletely banned items, such as birth rol pills, turned a 400% profit. lers strapped wristwatches the full h of their arms and legs, stashed band in dirty clothes where in- rs are loath to rummage. Airline s left booty aboard for cooperative tenance men to pick up. And wom- ho weren't pregnant often left San és looking as if they were.

Duty Port in a Storm. From 1960 ough last year, according to one ghtful estimate, 235,000 Colom- s visited San Andrés and returned e with $120 million worth of mer- dise, well over three times the legal That represented a dizzying drain Colombia's dollar reserves. So month the government abruptly med the door. Henceforth, every Andrés traveler could bring back $20 worth of goods—and he could only two trips a year. The ruling d disaster for the island. A wave nkruptcies swept the business dis- Unemployment zoomed. Over o Havana, Fidel Castro eagerly d San Andrés to revolt against "Co- ian imperialism"—and join his unspoiled paradise. Soon the only rs to the island were bill collec- . Things had come to a pretty pass. ch was just when somebody thought he gambling junket idea.

But by last week the new little mon- eymaker seemed headed for the same fate as smuggling. The Colombian government ordered the El Dorado casino closed and intimated that the island ought to try something legitimate for once. That may be difficult. The tourist-folder boast that San Andrés is an "unspoiled paradise" is only too true. The island has yet to be spoiled by a decent electrical system. [illegible] some time before the Caribbean speck is spoiled by tourists.

BRAZIL

Billion-Dollar Booster

Since 1961, the U.S. has poured some $780 million into Brazil only to see most of it disappear down the Amazon. The prospects became so disheartening that Washington aid to the wobbly, leftist regime of João Goulart gradually dwindled to a trickle. Last week, after eight months spent in careful observation of the revolutionary government of President Humberto Castello Branco, the U.S. announced that it is ready to try again with $453 million, a package that makes Brazil the greatest U.S. economic-aid beneficiary of any nation except Pakistan and India. With the addition of expected funds from international agencies and private capital, Castello Branco will be getting a 1965 boost totaling $1 billion.

The U.S. aid will be put up by half a dozen sources, from the Agency for International Development (AID) to the U.S. Treasury. The Brazilians will use it to reduce next year's enormous $475 million budget deficit, to provide credits for farmers and businessmen, and for a host of seriously needed development projects (the A.F.L.-C.I.O. is making a $23 million loan for workers' housing). To make sure the funds go where they should, Brazil has agreed to a regular review of progress, faces a cutoff in the flow of funds if performance is not good. "This is a calculated strategy on which the odds look good," said U.S. Ambassador to Brazil Lincoln Gordon after the agreement was signed. "This time, for the first time, there is support—honest backing for a program from the President on down—and that is what will count."

ARGENTINA

Comfort over Pride

After Spain's General Francisco Franco told Argentina's ex-Dictator Juan Perón, 69, to stop meddling in Argentine politics or get out of Spain, those close to Perón felt that pride would force the aging exile to seek asylum elsewhere. But life is good at Perón's opulent villa in Madrid, and for the moment at least comfort overcame pride. Last week Perón surrendered to Franco's terms, solemnly promising to abstain from all political skulduggery "while I remain in this country."

CANADA

Their Own Flag at Last

The argument dragged on for six months, generated more than 270 windy speeches, produced the longest continuous session of Parliament in Canadian history, and all but divided a nation. Last week the debate over a national [illegible] Prime Minister Lester Pearson calls a flag for all Canadians. All that remained was for Queen Elizabeth to proclaim the new flag as the official emblem of Canada. Then down will come the old Red Ensign with its British Union Jack in the corner. And over Ottawa's Parliament Hill will fly the new banner —a single red maple leaf on a white field with heavy red bars on either side.

To the very end, Opposition Leader John Diefenbaker and his Conservatives fought bitterly against the maple-leaf flag, arguing that it was an affront to Mother Britain to replace the Red Ensign* that had flown for 19 years. Yet Pearson, head of an unsteady minority government desperately trying to unify Canada's divided English and French-speaking populations, persisted and finally had to shut off debate by invoking closure for the first time since 1956.

DOMINION-WIDE

LIBERALS CHEERING MAPLE LEAF

A line for the books.

As the clock ran out, Pearson and Diefenbaker leaped to their feet for one last speech. When Pearson got the floor, he offered half his time to Diefenbaker, who refused, raging: "When the Greeks produce gifts, we recognize what they mean." Pearson was barely audible above the Conservative catcalls, but he got out a line that will join him in the history books as the man who gave Canada its own emblem: "This is a flag for the future."

* A Canadianized version of the British merchant marine flag, the Red Ensign was first flown by Canadian merchant vessels in 1892, became Canada's "unofficial" flag in 1945.

WINNER DE GAULLE*
Setting him up to get his way.

NATO

Off Collision Course

It began as a tale of two deadlines. By far the more *important* was set by Charles de Gaulle, who had stipulated that the Six must achieve a joint grain price by Dec. 15—or else France might pull out of the Common Market. At Brussels last week, his deadline was met to the day, and while this was a victory for De Gaulle, it was also a major victory for Europe (*see following story*). The other deadline had been set against De Gaulle's opposition by the U.S., which had insisted that by year's end, or early next year at the latest, some kind of multilateral nuclear force must be established, possibly even if the U.S. and West Germany had to go it alone. At last week's NATO ministerial meeting in Paris, the U.S. elaborately backed away from the deadline, decided to let Britain, Germany and the rest of the Europeans try to work out for themselves a compromise on some sort of joint force.

This, too, was a victory for De Gaulle—and one which the U.S. had set up for him, because for months the State Department had kept overselling MLF and talking as if the fate of the world depended on it.

After the meeting, the U.S. line was that MLF had been "neither advanced nor retarded." That was nonsense. It had indeed been retarded and, to all intents and purposes, sunk in its original form. The fact became clear when Secretary of State Dean Rusk was still arguing the MLF case in Paris while in Washington President Johnson casually remarked that the U.S. regarded [illegible] as the year's most spectacular rug-pulling operation. But it was also a sound decision not to wreck the Western Alliance by trying to force through a scheme hardly anybody really wanted, and as a result the U.S. and France were talking to each other again.

Lorelei Umbrella. Defense Secretary Robert McNamara started off in NATO's huge conference room, nicknamed the Cathedral, by once again trying to answer the basic Gaullist suspicion that the U.S. might not defend Europe. In case of an all-out war, said McNamara, the alternative of "Europe or the U.S." did not exist in Washington planning. In nuclear terms, an attack on Western Europe would be an attack on the U.S. As proof, McNamara pointed out that the U.S. has placed in NATO more than 800 ICBMs, more than 300 Polaris missiles and hundreds of bombers. The aggregate yield of nukes stored in Germany alone, McNamara added, is more than 5,000 times the yield of the Hiroshima bomb.

In a sense, this made it all the plainer that no additional nuclear gimmicks were needed. But while the Paris delegates continued to discuss MLF and the British proposals for an Atlantic nuclear force (*see* Great Britain), still another little atomic plan was disclosed that made MLF seem positively brilliant by comparison. It was a West German army proposal to create a "nuclear mine belt" along the West German border fronting East Germany. The buried mines would presumably annihilate an invader without forcing him into a nuclear counterstrike because they would not explode on his own but only on West German territory. It was hard to see how this would serve to heighten West Germany's sense of security, since it assumed that the invader would arrive only on land. But both the U.S. and France professed interest, and in fact similar devices are said to be under installation around, of all places, the Lorelei rocks on the Rhine, presumably to flood the Rhine valley to slow an attacker.

Slapped Hard. It was just about the only subject on which anyone gave a hearing to the Germans, who turned out to be the real losers at Paris. Foreign Minister Gerhard Schröder was being more American than the Americans and was still defending MLF when the U.S. had already begun to move away. For his pains, Schröder was [illegible] down hard by the French, who r[illegible] to sign even an innocuous comm[illegible] proposing new approaches to M[illegible] for a possible German settlement.

In two separate talks with D[illegible] Rusk, De Gaulle again explained [illegible] Urals, with Western Europe serving [illegible] a magnet to the rest of the now lar[illegible] Communist continent. If Western [illegible] rope is too closely linked to the [illegible] and locked in a tight Atlantic [illegible] argued De Gaulle, it would be [illegible] to serve this centripetal function. [illegible] countries such as Rumania, [illegible] showing signs of loosening their [illegible] to Moscow, are simply not part [illegible] Atlantic world. It was perhaps the [illegible] cogent argument yet offered again[illegible] "Atlantic Community" concept.

A Member of the Club. In their [illegible] tempts to describe the improved at[illegible] phere between the U.S. and Fr[illegible] the American officials in Paris only [illegible] ceeded in demonstrating De Ga[illegible] diplomatic success. U.S. sources [illegible] a week before Paris had talked [illegible] came away taking strange comfor[illegible] the fact that they had not been "ha[illegible] up." The U.S. hailed as a welcome [illegible] of French conciliation the fact that M[illegible] Namara and French Defense Min[illegible] Pierre Messmer had discussed plans [illegible] coordinating targeting when the Fren[illegible] *force de frappe* bomber fleet com[illegible] into being next year.

It almost sounded as if the U.S. w[illegible] happy that De Gaulle had deigned

COMMON MARKET

Triumph for Europe

"Never in the course of our evolution
ve we taken a decision of such mag-
ude," beamed Walter Hallstein, the
mmon Market's usually understated
sident. "From now on we can only
h forward into a European future,"
imed German Economics Minister
Schmücker. He was stubble-
ed and blanched with fatigue after
marathon bargaining sessions that
lasted 42 hours. "It's a great, great
ss, a great political event," said the
pean Economic Community's farm
Sicco Mansholt, his voice breaking
emotion. Then, at 5:30 on a foggy
rning in Brussels, the diplomats un-
steadily embraced one another.

NATO

ALLIED SESSION
Sinking a wreck.

Halfway Price. The cause for jubilation was an agreement on the Mansholt Plan to create a common market for cereals starting with the 1967 harvest, meaning, as Mansholt explained, "From Schleswig-Holstein to Sicily, we'll have one basic system, one set of rules and prices." Despite their startling success in reducing industrial divisions among themselves in the seven years since the [illegible] harmonizing their farm policies—largely because of the disparity between France's low-cost farm efficiency and Germany's cosseted high-cost output. Mansholt proposed an obvious solution: fix wheat, which is the key to the whole farm price scale, roughly halfway between the German and the French prices, at $106.25 per metric ton.

The Germans stalled for over a year, since the price cut would hurt German farm income to the point of putting as many as a million German farmers out of business and seriously endanger the C.D.U. farm-bloc vote in elections next year. But as French grain surpluses mounted, De Gaulle grew impatient, finally announced two months ago that if the wheat-price issue was not resolved by Dec. 15, France would "cease to participate" in the Common Market.

Only ten months ago, the German Bundestag had voted that German wheat prices would not come down until after 1970. In fact, Chancellor Erhard hoped to reform Germany's outmoded agriculture, and wanted to give in anyway; to do so he needed the excuse of pressure from the French and the U.S. (which wants a common farm policy to enable the E.E.C. to negotiate in the Kennedy Round trade talks). As the pressure mounted, the German delegation at Brussels finally surrendered, enabling the Six to meet De Gaulle's deadline.

Neat Paradox. "All's well that ends well," said Erhard cheerily in Bonn after the Brussels accord, despite pained cries that he had capitulated. "It means new hope for all questions of political and economic integration of Europe." Still, the price for Erhard was high: he promised to pay German farmers some $2 billion in extra subsidies between now and 1970 to enable them to adjust to the lower price levels for their produce. That was enough, presumably, to keep the farmers happy at election time next September.

Even De Gaulle joined in the euphoria, as well he might. The agreement, he said, was a "capital step" along the road to political unity, opening "all sorts of possibilities for the construction of Europe"—provided, he added in a dig at the U.S., that Europe acts "by itself and for itself."

Although France stands to benefit most from a common farm policy, the triumph is really Europe's—proving that not all of De Gaulle's adamant positions are wrong, a fact often overlooked by those who automatically hate anything

REPORTERS ASSOCIATES

HALLSTEIN, SCHMÜCKER & MANSHOLT AT BRUSSELS
Tightening ties to march forward.

De Gaulle does. Thus far, French interests and Common Market progress have neatly coincided, a paradox De Gaulle well understands and adroitly used in forcing the grain-price accord.

What he perhaps understands less well is that as France grows more and more interdependent economically, his declarations of political and military independence are likely to carry less weight. While France may well emerge as the leader of an integrated Europe, De Gaulle will no longer be able convincingly to threaten a French withdrawal if he does not get his way on a specific matter. As long as only the industrial half of the E.E.C. was forging ahead, full economic union was impossible. With the addition of the agricultural half in 1967, the ties that bind the Six will draw so tight that a future threat to leave the Common Market—by France or any of the Six—will be virtually impossible.

UNITED NATIONS

Irresponsible & Repugnant

"Never before have I heard such irrational, irresponsible, insulting and repugnant language in these chambers—and language used, if you please, contemptuously to impugn and slander a gallant and successful effort to save human lives of many nationalities and colors."

Adlai Stevenson, who doesn't get worked up very often, had carefully written the speech, overruled the doubts of some of his aides ("Should we be so rough?"), and sent the words flying like stinging chips of wood across the Security Council's horseshoe table. He had reason to be angry; in both Council and Assembly, the Africans' irrational and

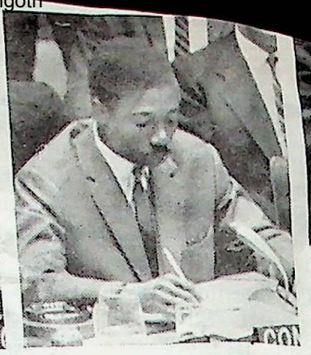
KENYA'S MURUMBI

MBAZUMUTIMA

GUINEA'S BEAVOGUI



BRAZZAVILLE'S ...ANISM?

poured forth, supposedly in support of a complaint to the Council that the Stanleyville rescue operation had been an act of "aggression" and "intervention."

The Accusers. Led by Africa's radical hard core—Ghana, Guinea, Algeria, Mali and Egypt—18 of the continent's 35 nations had signed the complaint. The signatories included the tiny leftist kingdom of Burundi, where Chinese influence is strong, and backwater states that once belonged to France: Central African Republic, Brazzaville Congo, Dahomey, Mauritania and Mali. Also on the list, however, were normally more moderate Ethiopia and the Sudan, and the Commonwealth nations of Kenya, Malawi, Tanzania, Uganda and Zambia, of which better things should have been expected.

Despite the fact that many of the complaining nations, such as Tanzania and Kenya, had in the past relied on outside troops to help them keep order, or had called them in to quell uprisings, the rescue operation was roundly condemned by Foreign Minister Charles-Daniel Ganao of the Brazzaville Congo as "the latest aggression committed by the Americans, the Belgians and the British against the black population."

Ganao charged that the operation's only purpose had been "to exterminate the black inhabitants," but Guinean Foreign Minister Louis Beavogui thought it had been carried out "to keep Africa within the orbit of the imperialist powers," and Kenya's Foreign Minister Joseph Murumbi called it a "sordid collusion, a calculated attempt to impose American-Belgian domination in the Congo." For Tanzanian Foreign Minister Oscar Kambona, it "will go down in history as the meanest, most unwarranted and provocative interference by the Western world in the affairs of the African continent."

Burundi's Foreign Minister Joseph Mbazumutima sneered that Premier Tshombe's white allies consider "the blacks, by definition, killers and liars." And Mali's Foreign Minister Ousman Ba even accused the U.S. of "massive cannibalism."

The Specter. It was a chilling display, and its significance reached far beyond the Congo. "Even such a torrent of abuse of my country is of no consequence compared to the specter of racial antagonism and conflict raised in this chamber," said Stevenson. "I personally need no credentials as a spokesman for racial equality. I say that racial hatred, racial strife, has cursed the world for too long. I make no defense of the sins of the white race. But the antidote for white racism is not black racism."

Stevenson charged that the real interventionists in the Congo were Algeria, Ghana, Burundi and Brazzaville —not to mention the Chinese Reds— who were actively supporting the Congolese rebels against Tshombe's legal government. Stevenson warned: "If every internal rivalry is to become a Spanish Civil War, with each faction drawing in other Africans and great powers from other continents, the history of independent Africa in this century will be bloody and shameful."

The Defender. One of the Africans who publicly agreed with Stevenson was Nigeria's earthy, bulldogged Foreign Minister Jaja Wachuku, who noted that the wild, radical charges were not "the only opinion that exists within the African scene." The only serious question before the Security Council, said Wachuku, was the Tshombe government's own charge "that certain sister African countries have been subverting it, aiding and abetting rebellion within its territory, and indeed doing everything to make it impossible for that state to exist."

Wachuku pointed out that Tshombe had sought U.S. and Belgian support only after all African states had refused to help him restore order: "If your brothers and sisters let you down and you know that you have some faithful friends, you turn to them." ... to the left-wing cry that ... must rally against Tshombe, W... remarked acidly that "it appe... there are people who feel that in ... one must all be of the same ty... same size and the same weig... that our color must be exac... same." Such thinking could on... to trouble, he said: "We have d... shades of black in Africa. Som... very fair, some are chocolate b... some are very dark, and some ... what you might call graphite grey."

THE CONGO

Lumumba Jumbo

I am the Congo, the Congo has made
I am making the Congo.
—Patrice Lumumba

Four years after his death, a lot of people talk as if Patrice Emergy Lumumba were still the Congo. In and out of the U.N., Communist backers seem determined to turn Lumumba into a martyr-saint. Bulgaria and Albania joined last week to praise the "great Congolese patriot" who symbolized the "heart of Africa" and was "brutally assassinated." The Ethiopian and Guinean delegations compared him to Hammarskjöld, while the Mali representative went one better and compared him to Hammarskjöld and John Kennedy.

Throughout the Communist bloc and much of Africa, Lumumba's name, with its rhythm of jungle drums, is invoked by innumerable agitators. It is also borne by hundreds of streets, dozens of schools. Moscow has its Patrice Lumumba Friendship University for foreign students, Belgrade its Patrice Lumumba student home. In Castro Cuba, romantically inclined young Negroes find togetherness in Patrice Lumumba social centers. Last week in Kenya, the brand new $120,000 Lumumba Institute, built with Russian and Chinese money, opened its doors to rehabilitate the minds of Kenyans with a colonial mentality and teach them how to sacrifice themselves for the good of the country and of Africa as a whole."

No Longer Monkeys. Amid all this Lumumba jumbo, the real Lumumba has been almost forgotten. He was, of course, a violent, often eloquent anti-colonialist, and an infectiously fanatic leader. At the 1960 independence ceremony, he seized the microphone to tell Belgium's King Baudouin that "from today, we are no longer your monkeys." He was also the first Congolese politician to think beyond tribal boundaries, the founder (in 1959) of the Congo's first semi-national political movement, its first real pan-African nationalist—and its first Prime Minister. But at the time of his death, most of his countrymen had either never heard of him or disliked him.

He was, among other things, a confirmed embezzler (of some $2,500 in party funds), a monumental drunkard, an almost compulsive liar, and an addicted hemp smoker. More important, he was a disaster as Prime Minister. Although his party barely controlled less than one-fourth of the seats in Parliament, he refused to make the political compromises necessary to form a workable coalition government, quickly alienating almost every important power base in the Congo. Headstrong, unstable and perpetually frenzied, Lumumba never really tried to govern. His army rebelled less than a week after he took office; his Belgian civil servants fled in terror; vital provinces tried to secede; and the land, neither administered nor policed, reverted to darkness. Howling all the while about white imperialism, Patrice Lumumba himself did not hesitate to sell the exploitation rights to the Congo's vast resources to a fast-talking American promoter, friend Kwame Nkrumah [illegible]

worried letter. "Patrice," wrote the "Redeemer," "if you fail, you have only yourself to blame and it will be due to your unwillingness to face the facts of life." The letter arrived too late: President Joseph Kasavubu had fired Lumumba. Lumumba's response was typical. He tried to fire Kasavubu. But the President was supported by the army, and it was Lumumba who stayed out.

For two months Lumumba lived under the protection of a U.N. guard—

LARRY BURROWS—LIFE

MARTYR LUMUMBA
Like Hammarskjöld and Kennedy?

and used the telephone kept open for him by the U.N. to plot his return to power. One night he ducked past his guards and drove off, alone, toward his home town of Stanleyville, where he hoped to lead a revolution against Kasavubu. He was arrested before he got there. His captors, in Congo fashion, saw to it that he was beaten up, jailed, and, at Kasavubu's orders, eventually turned over to the personal custody of his archenemy Moise Tshombe—who either arranged to have him killed or let him die from wounds inflicted by Kasavubu's men.

Had he been wiser, or smarter, Patrice Lumumba would have been 39 this year. And the Congo might well have become a nation with no more than the normal ration of African problems instead of a blood-spattered land of savagery, corruption and anarchy—which is largely what Lumumba helped make it.

SOUTH VIET NAM

Hunger & Desperation

On a rainy afternoon, South Viet Nam's top three monks made separate arrivals at Saigon Buddhist headquarters—Thich Tri Quang in a blue Renault taxi, Thich Tam Chau in a Mercedes, Thich Tich Khiet in a Peugeot. Inside, they lighted incense, lined up before a Buddha, chanting: "We pledge to fulfill our religious duties, to sacrifice ourselves for the defense of religion, to pray for the people and the nation to live in peace."

The *bonzes* thus began a 48-hour fast in their campaign to bring down Premier Tran Van Huong and install a government that would be the Buddhists' puppet. Retiring to bare cells, they squatted in contemplation, taking only orange juice for sustenance. Crowds gathered but the fast failed to fell Huong, and there were reports that low-level talks had begun, aimed at a face-saving compromise.

As the week wore on, however, Buddhist frustration appeared to turn toward dangerous desperation. After his own fast, Tam Chau, the sect's political coordinator, led 500 monks and nuns in another 24-hour hunger strike; before beginning it, a group of the *bonzes* prudently tucked into a hearty breakfast outside their pagoda. Then a Buddhist communiqué claimed that Tri Quang, leader of northern and central Buddhists, was continuing his original fast into a sixth day. Quang is said to like fasting, on grounds that it "clears the head."

Any reasonably clear head should have seen that the Buddhists were gravely hurting the war against the Reds, who pressed their attacks in the coastal provinces, having seized and held much of the Anlao Valley, despite the government's five-battalion drive to dislodge them. But for the moment, the most crucial war was still being fought between the government and the Buddhists. At week's end, the South Vietnamese army reasserted its political power, dissolved the High National Council, a kind of legislative assembly that has been partly under Buddhist influence. Rumors continued that the Buddhists would again resort to fire; the word was out that during their triple fast Quang, Chau and Khiet had drawn lots from a hat for the honor of self-immolation by fire, and that the 80-year-old Khiet had won.

Catholic Exodus

Deliberately or not, the militant Buddhists and the Communists complement each other in South Viet Nam. Caught by both forces are the country's [illegible] million Roman Catholics, who until the overthrow of Catholic President Ngo Dinh Diem were generally considered

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to be enjoying a favored position. They are favored no longer.

In recent months, 20,000 Catholic peasants have descended from the mountainous central region to the coastal city of Quinhon, where most of them now huddle in eleven makeshift camps —5,000 live in the gardens of the local cathedral. Many fled because their villages were overrun by the Viet Cong, others because they feared it was about to happen. For quite a few it was a second exodus: they first moved when the Reds took over North Viet Nam ten years ago. North or South, Catholics are treated more harshly by the Reds than are Buddhists. There are, of course, many Buddhists staunchly fighting the Viet Cong—both Premier Tran Van Huong and Military Chief Nguyen Khanh are Buddhists—but the Catholics as a group have always seemed to be tougher anti-Communists.

Double Jeopardy. In several villages where the Viet Cong demanded anti-government demonstrations, Buddhists complied, but Catholics had to be forced to join at gunpoint. One refugee reported that the guerrillas shot 40 men simply because they were Catholics. Guerrillas frequently harvest a Catholic family's rice crop as "taxes," while Buddhists get off more easily. Some Catholics have been executed for not meeting their prescribed quotas of *pungee* sticks.*

To make matters worse, the Buddhists keep harping on real or fancied persecution under the French and Diem, are waging a campaign of anti-Catholic vengeance in the central provinces. Since Diem's murder, Buddhist gangs have burned Catholic huts. More than once, authorities of Buddhist villages, aware that a neighboring Catholic village was under Viet Cong attack, have delayed fatally in calling troops for help. Many Catholic village administrators have been driven out not by the Communists but by Buddhists—after which the Reds took over without firing a shot. Thanks partly to Buddhist help, the Viet Cong have seized two-thirds of the "new life hamlets" (the new name given Diem's old "strategic hamlets") along the central coast.

Moved to Fight. In some villages, the entire Catholic population will pull up stakes, while their Buddhist neighbors stay behind. But Red roadblocks make getting out difficult for the refugees. Families often have to break up in order to slip away individually, usually by roundabout paths or jungle streams. In Quinhon, where the refugees are arriving at the rate of 300 a day, the homeless receive food from Catholic charities and medical care from American Franciscan sisters—though disease is inevitable in the fetid shantytowns.

Apart from humanitarian concern, U.S. advisers worry that the flight may weaken further the central region's crumbling resistance to the Reds. Most of the Catholic D.P.s ultimately want to reach Saigon, where Father Hoang Quynh, unofficial leader of the North Vietnamese Catholic exile community, is trying to resettle the latest refugees from Communism. More than 2,000 have been transported to the capital by Vietnamese navy ship, and Quynh hopes to found new refugee villages in government-held sectors of the Mekong delta. There is a move afoot among Quinhon's male refugees to organize Catholic self-defense corps and fight alongside government militiamen. In fact, Catholic volunteer units have reoccupied four Red-captured villages.

UPI

FRANKFURT COURT VISITING AUSCHWITZ
How to punish without bending the law.

WEST GERMANY
When Does Justice End?

For the first time in 20 years, German language echoed once a through the cells, bunkers and cre toria of the infamous death camp Auschwitz. It was spoken there by lawyers and a judge from a Frankf war-crimes trial, who had made a sp cial trip to Poland to check the cr bility of testimony given at the trial 21 accused Nazi murderers. Since the end, Poland has kept a portion of t camp intact as a memorial to the es mated 3,000,000 slain prisoners, and the German voices rang out, a Po who had himself been imprisoned Auschwitz shuddered. Later he said closed my eyes and it was as if were yesterday."

Shallow Ditch. The tour was gr grisly for the Germans, as they ma ured distances and angles of vision determine whether defendants co have been heard and identified claimed by their accusers. One gr faced lawyer fled an inspection of dungeons of Cell Block 11, crying can't stand it any longer!" Another la yer became ill after visiting one of gas chambers. All stood mutely at edge of a shallow ditch where the N SS troops had burned corpses on py when the crematoria were filled. Tra of ash and bone could still be seen. On German picked up a yellowed, half burned page printed in Hebrew. It wa the Kaddish—the prayer for the dead.

One of the accused, former SS Di Franz Lucas, who is charged with mak ing life-or-death selections of incoming prisoners, voluntarily accompanied th court officials. Said Lucas: "It was m duty to come. Everyone who has th opportunity should come here and se what racism can lead to."

Embarrassed West. Poland, which still harbors bitter suspicions of Germany was impressed by the court's willingne to make this conscientious journey in the past. A doubting world has lo since been convinced of the determin tion of most West Germans to redre the evil of Nazidom. Nevertheless, fear remains that many of Hitler's l lains may go scot-free.* Under the G man penal code, the statute of limi tion for murder runs out after 20 yea That means that no further prosecutio of Nazi killers can be instituted af May 8, 1965, or 20 years after V day, the first date on which prosec tions were theoretically possible. W seems unusual to U.S. lawyers is th West Germany has a statute of limi tions with regard to murder (it is ba

* Since 1945, German courts have inve gated 30,000 accused Nazis, prosecuted 882, imprisoned 5,243, sentenced 76 to imprisonment and twelve to death (the d sentence was abolished in 1949). More t 700 prosecutions are now under way. Du the occupation, Allied military courts p cuted 5,025 Nazi criminals, condemned to death. Russia imposed an estimated 1 sentences on German war criminals.

WILSON & LABORITES AT PARTY CONFERENCE
How to keep that old Red flag flying.

on a German penal code dating back to 1871).

Dr. Nahum Goldman, president of the World Jewish Congress, complains that there are still "warehouses full" of unexamined Nazi documents. Lawyer Robert Kempner, who was a U.S. prosecutor at the Nürnberg trials points out that the Nazi killers of 4,000 Roman Catholic priests have not yet been brought to trial. The Communists may still be withholding evidence about Nazi criminals in order to embarrass West Germany, once the statute of limitations expires.

In a joint resolution, West Germany's ruling Christian Democrats and the opposition Socialists called on Justice Minister Ewald Bucher to report whether or not the statute should be extended by a constitutional amendment.

Pulled Switches. The problem has been hotly argued. Like the U.S. Constitution, West Germany's constitution bans ex post facto laws—typically, laws passed to render an act punishable in a manner in which it was not punishable before. The Justice Ministry holds that extension of the statute of limitations would be just such a law. Some German jurists disagree: they say that extension is perfectly legal if it covers all defendants, not merely Nazis. But the trial would still be Nazis, and the Justice Ministry sees this as unconstitutional discrimination.

While still eager to catch such big fish as Martin Bormann, Hitler's top deputy, and Heinrich Müller, a boss of the Gestapo, who are repeatedly rumored to be alive in hiding, Bonn claims that an extension of the statute would mainly net unimportant minnows at home, and overburden prosecutors who find it harder and harder to prove specific charges after 20 years. As one official puts it: "If you want to bring to court every railroad man who pulled the switches at Auschwitz, knowing that the trains were carrying Jews to their deaths, there will be no end to the number of people involved in Nazi crimes."

GREAT BRITAIN

Benefit of the Doubt

The British Labor Party's official song is more auld hat than *Auld Lang Syne*. At the party's annual conference in Brighton last week, the leaders as usual linked hands on the platform and (to the tune known in the U.S. as *Maryland, My Maryland*) chanted the quaint lyrics:

The People's Flag is deepest red,
It shrouded oft our martyred dead . . .

There were no Socialist martyrs at Brighton, but Prime Minister Harold Wilson, just back from Washington, had a hard time keeping that old Red Flag flying and showing just the right hue. Wilson's major troubles are two: 1) the continuing, alarming economic crisis, and 2) opposition from his own left, or deep-red wing.

Master Sinner. In deference to Labor's unilateralist disarmers, Wilson had pledged that, once in office, he would not only scrap Britain's independent deterrent but also oppose the U.S.-backed multi-lateral force. However, in his talks with President Johnson in Washington, he had, in fact, not so much opposed MLF as proposed a way of enlarging and diluting it. In reporting on his talks to the party conference, Wilson hedged: he had not committed Britain to MLF, he said, and had entirely "reserved" his position. This was patently less than the whole truth, but enough to mollify Labor's dissidents for the time being. Rasped militant Left-Winger Ian Mikardo: "We are giving the government the benefit of any doubts which exist—but that is not the same as saying there is no doubt."

In Parliament later, Wilson unveiled the proposed ingredients of his suggested Atlantic Nuclear Force: most of Britain's aging V-bombers; the four or five Polaris submarines Britain is building with U.S. assistance; and even some mixed manning, but—hopefully—not on surface vessels, "the least desirable" solution. Wilson suggested that the U.S. add a like number of its own submarines. He would also like to include some U.S.-based intercontinental Minuteman missiles and West Germany-based Pershing short-range missiles, both to be mix-manned. German influence would be much less than in the original MLF, a welcome feature to the anti-German left wing. The whole setup would be commanded by a vague "single authority," in which all member nations would have a veto.

In the House of Commons, Opposition Leader Sir Alec Douglas-Home sharply pointed up the schizophrenia of Wilson's position: "If ownership of nuclear weapons is a sin, we do not gain absolution by appointing a master sinner to deploy the weapons for us, or by joining a syndicate which deals in these weapons." Home added that with "eight or nine fingers on the safety catch, the force would be almost totally incredible as a deterrent."

Sugared Pill. Wilson won a grudging vote of confidence on defense policy, but he faced worse domestic issues. Despite promises of swift progress toward a just, efficient society, Labor's New Jerusalem seemed dishearteningly remote. When pledged pension boosts had to be postponed until spring, Wilson blamed the aftereffects of Tory red tape. Last week Minister for Economic Affairs George Brown flatly contradicted that version, confessed that he had vetoed the increases because Britain simply could not afford them at present. Most of Labor's other campaign promises were imperiled by a continuing ebb of confidence in the pound (*see* WORLD BUSINESS) that forced the government to postpone repayment of $187.6 million due on U.S.-Canadian loans.

Wilson announced that Soviet Premier Aleksei Kosygin will visit Britain early next year on his first Western trip since taking power in October. Wilson himself plans to go to Moscow. But international ambitions will hardly keep Labor's Red flag flying if in the meantime Britain goes bankrupt.

PAKISTAN

Trouble with Mother

"They call her the Mother of the Nation," sniffed Pakistan's President Mohammed Ayub Khan. "Then she should at least behave like a mother." What upset Ayub was that Fatima Jinnah looked so good in pants. The more she upbraided Ayub, the louder Pakistanis cheered the frail figure in her *shalwar* (baggy white silk trousers). By last week, with Pakistan's first presidential election only a fortnight away, opposition to Ayub had reached a pitch unequaled in his six years of autocratic rule.

The Big Stick. White-haired Miss Jinnah, 71, the candidate of five ragtag and usually disunited opposition parties, was picked mainly because she was the sister and confidante of the late revered Mohammed Ali Jinnah, father of his nation's independence. But Pakistan's response to her razor-tongued attacks on Ayub's highhanded ways has surprised and shocked the government. Students throughout the nation staged angry protest marches against the regime, and at least one demonstrator was killed by police in Karachi. DOWN WITH THE AYUB DICTATORSHIP, cried posters in the East Pakistan city of Dacca, where students enthusiastically proclaimed Miss Fatima Jinnah Week. In Karachi, Pakistan's biggest city, student unrest prompted the government to close all the schools indefinitely.

Most legal groups in Pakistan have come out for Miss Jinnah, and were denounced by Ayub as "mischiefmongers." In reply, the Karachi Bar Association overwhelmingly adopted a resolution urging "the party in power to get rid of the notion that wisdom, righteousness and patriotism are the monopoly of their yes men." The usually complaisant newspaper editors defied the regime's attempts to make them endorse a restrictive new press law.

To Ayub's claim that he is trying to develop "basic democracy," Miss Jinnah replied: "What sort of democracy is that? One man's democracy? Fifty persons' democracy?" As for Ayub's charge that the country would revert to chaos if he is defeated, his rival snapped: "You can't have stability through compulsion, force and the big stick."

Running Scared. Actually, Ayub has been a reluctant and benevolent dictator. He has vastly improved the stability of a country that was paralyzed by squabbling politicians before he took over. Considering Pakistan's backwardness and poverty, the Ayub-designed electoral system is not half bad, giving the vote to 80,000 middle- and upper-class electors. While that is a tiny percentage in a total population of 110 million, most of those millions are not only illiterate but totally ignorant of political issues. With heavy support in rural areas, where many Moslem electors particularly disapprove of a woman's candidacy and where Ayub's economic reforms have helped more than in the cities, Ayub is still expected to win the election by some 60% of the vote.

Nonetheless, he is running scared, because Candidate Jinnah has managed to focus every form of discontent in the country. To brake her bandwagon, he abruptly decreed that elections would be held Jan. 2, instead of March, as originally scheduled. Explaining lamely that the situation is "a little tense," the government also rescinded a law specifying that political rallies must be open to the public.

At closed meetings with groups of electors, Ayub answered practical questions sensibly enough, but kept lashing out at the opposition with growing anger. Countering Miss Jinnah's repeated charge that he had been unable to restrain the U.S. from helping Pakistan's No. 1 adversary, India, he set out to portray her as pro-Indian and pro-American. Ayub's campaign, in fact, was turning increasingly anti-American.

Though U.S. aid (about $5 billion since 1951) is vital to the nation's wretched economy, a leading member of Ayub's party cried: "America was our friend and never [illegible] aligned with the anti-colonial movements, we are at cross-purposes with America." As for Ayub, he plainly regretted ever calling elections in the first place. For after six years of insisting that Pakistanis were not ready for democracy, the campaign had shown that Mohammed Ayub Khan probably isn't either.

LOUIS KRAAR

CANDIDATE JINNAH

CANDIDATE AYUB

The opposition looked good in pants.

HUNGARY

The Limits of Liberalization

Through an assiduous campaign of relative liberalization, Hungarian Communist Boss Janos Kadar hoped to erase the image of a Moscow toady that attached to him after Russia's brutal repression of the 1956 Hungarian revolt. He largely succeeded. In addition to other forms of relaxation, including somewhat freer speech and more permissive economic planning, Kadar seemed inclined to ease up on the church. After 18 months of complex and arduous negotiations with the Vatican, he recently agreed to replenish Hungary's dwindling supply of Roman Catholic priests and permit freer practice of religion. But liberalization can go only so far.

Radio Budapest last week announced the arrest of nine men—including two Jesuit priests—for "justified suspicion of having prepared a plot." Chief among them was Father Laszlo Emodi, who in 1961 had been sentenced to seven years in prison for organizing religious instruction for children, but was set free last year in a general amnesty. Two days after the Radio Budapest announcement, the Hungarian Supreme Court sentenced five more persons to jail for "conspiracy against the state and organizing an illegal party."

Hardest hit (with a ten-year term) was Dr. Ferenc Matheovicz, 50, one-time leader of the outlawed Democratic People's Party, who has already spent seven years in prison for his democratic political beliefs. The charge this time smacked of the absurd: Matheovicz was planning to restore the Habsburg dynasty, with himself as Premier. There was a more likely explanation, however. Matheovicz has long been a follower of Hungary's Josef Cardinal Mindszenty, who still lives in self-confinement at the U.S. legation in Budapest, despite long-standing rumors that the regime would let him go free. Last week's sentences show that Kadar, despite his easing of religious restrictions, still cannot afford the resurgence of Catholic political influence.

JOAN & TEDDY KENNEDY
Daddy's hour.

facing (20°) Boston breeze, Teddy Kennedy, 32, cracked brittle jokes ("I just happen to have with me a speech that I didn't get to make at the Democratic convention in West Springfield last June"), then carefully eased into a convertible for a rootin'-tootin' motorcade to the airport. A commercial jet took him to Miami, and the family *Caroline* on the last leg of his odyssey to his two children in Palm Beach. But all that wasn't quite enough for Teddy Jr., 3, who greeted his father with "Carry me piggyback, Daddy?" "I'm afraid you'll have to wait a while for that," said Daddy with what newsmen gamely reported was a smile.

. . .

Nervous about his debut on the Home Service? "Is it likely?" sniffed Winston Churchill, 24. "That hardly runs in the family," considering that his famous grandfather gave the BBC some of its finest hours in World War II. Leaving as little as possible to Mendelian chance, young Churchill started off his daily lunchtime news-and-interviews half hour by asking his first guest, Veteran Pundit Alistair Cooke, "What tips can you give me?" "If you try to be somebody else," cautioned Cooke, "you're lost." So the fledgling commentator skipped politics next day, and interviewed [illegible]

. . .

"It has been a sea of great moments for us all," said the Rev. Martin Luther King Jr., 35, relaxing after a Harlem rally for 8,000 before flying down to say hello to Lyndon Johnson. Perhaps he was recalling his ride along Manhattan's East River drive when harbor fireboats turned on their hoses in an aquatic tribute. But the most emotional moment of the returning Nobel prizewinner's welcome by New York came during his reception at city hall, where King, his wife Coretta and his parents were given a standing ovation by Mayor Robert Wagner, photographers and civil rights leaders. Said Wagner, presenting a Medallion of Honor: "This city has welcomed many world-renowned figures, but I can think of none who has won a more lasting place in the moral epic of America."

. . .

With a certain smile, Graduate Girl Novelist Françoise Sagan, 29, reported in *McCall's* (which invented togetherness) that the latest thing for a two-time loser in the Paris set, like Françoise herself, is to wear both her outdated wedding rings together. That way, a man can tell she is a "dangerous person to become serious about," while if he persists in chasing a three- or four-ring *femme fatale*, he is really saying *bonjour, tristesse*.

. . .

As a boy in Minneapolis, Jean Paul Getty wanted a pony and a mastiff dog for his birthday. He didn't get them, but he still likes "simple, childish things." So when friends gathered at Sutton Place, his 72-room shack outside London, to help him celebrate his 72nd birthday, they gave the thrifty billionaire a pencil sharpener, eraser, appointments book, "and one of those brushes, with a long handle, which enable you to brush the back of your jacket properly." The biggest hit of the day were three portraits of himself, taken by Ottawa's Yousuf Karsh, that he had ordered months ago. "I'm hard to photograph, but he made me look almost human," blushed Getty.

. . .

Though the Secret Service men camped in the basement rumpus room find it cramped, Muriel Humphrey, 52, doesn't want to move from her eight-room home in Chevy Chase, Md., to one of the mansions that Lyndon Johnson thinks more fitting for a Vice President's family. "There are things around this house that would make it hard to leave," she explained in her first press conference since the election, proudly pointing out the handprints of her four children (now grown) that are embedded in the cement by the patio.

. . .

Anxious officials issued instructions to Bangkok residents to get out in the streets and wave when Japan's Crown [illegible] ly Queen Sirikit, 32, [illegible] looks. "A meeting of the chrysanthemum and the jasmine," murmured one Oriental queen-watcher as the two consorts paraded past, and a baby elephant presented to Michiko found her so tasty that he nibbled not only the sugar cane

BANGKOK WORLD

she gave him but her wrist as well. Prince Akihito, meanwhile, being an amateur marine biologist, sneaked off to the fish market for specimens.

. . .

Sherlock Holmes puffed at his meerschaum. "Extraordinary, my dear Watson," he mused. "When Arthur Conan Doyle took down *The Adventures of the Greek Interpreter* from your notes in 1893, he thought his tales about us merely a device to raise funds so he could devote himself to serious literature. We may surmise that he tucked the published manuscript in a child's notebook while visiting friends, and, being notoriously absent-minded, never missed it. Yet strange indeed are the ways of taste. His serious novels are all but forgotten, while Sir Arthur's surviving son, Adrian Conan Doyle, is wealthy enough by virtue of the royalties my cases still engender in 40 languages (and one remarkable invention, television) to pay $12,600 at a London auction to buy the Greek manuscript from—dear me!—an American."

CUSTOMS

In the Cards

In their several ways, from their several stations, and to a multiplicity of mailing lists, the nation's famous and its merely notorious dealt with that common joy-become-chore of the season: choosing and dispatching a Christmas card.

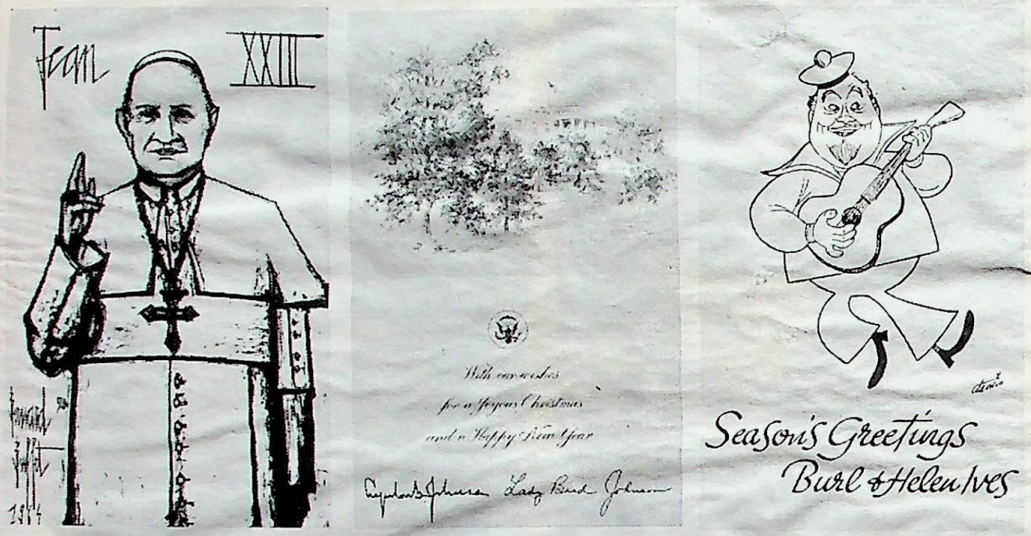
Boston's Richard Cardinal Cushing sent the biggest, a 22-in. by 35-in. reproduction of a portrait of Pope John XXIII by Paris' Bernard Buffet; Theologian Paul Tillich the longest, a two-page personal letter. Postmaster General John Gronouski got his 2,000 cards out early, remembered to zip-code each and every one. Georgia's Governor Carl Sanders, who had bucked voter opinion to back Johnson, discovered too late that the etching of the Governor's mansion had been tampered with—the name Goldwater was scratched in amongst branches of an overhanging tree.

On Observatory Hill. Barbra Streisand, Doris Day and George Burns stuck to traditional toys, trees and reindeer, avoided writer's cramp by having their signatures engraved within. Playwright Edward Albee, who selected a 16th century woodcut, signed his cards by hand, as did New York Herald Tribune Publisher John H. Whitney, Newsman Chet Huntley and Actress Joan Crawford. Hedda Hopper was even more personal about it all, sent cards bearing her own portrait. Mother Jolie Gabor sent photographs of herself and her daughters, included a lengthy message: "Come and have a glass of champagne with me at my fabulous pearl salon . . . my charming girls will be more than happy to give you ideas on how to get or give a glamorous Christmas present from $5 to $5,000."

The Home was a favorite motif, whether it was a photograph of Chief of Naval Operations Admiral David L. McDonald's official residence on Observatory Hill, or a black and white print of a watercolor featuring two oak trees, two girls and two dogs, of the Johnson place on Pennsylvania Avenue.

In the Barn. But the most popular theme by far was the Family. Jerry Lewis bundled his wife and six sons into bright red sweaters; the Robert Kennedys dressed their eight in nightgowns and photographed the assembly in the barn. Debbie Reynolds and group were backed by Santa, Jimmy Stewart and children by a Sun Valley snow scene. Walt Disney didn't stop at one generation, issued an eight-page, red-suede and gold-tasseled folio bearing 17 pictures of "Grandma and Grandpa Lilly and Walt" (aged, respectively, four and eight when photographed), plus children and grandchildren.

Versatile Peter Ustinov sent a hand-drawn cartoon of his family, Director Elia Kazan a hard-cover copy of his late wife's poem in honor of President Kennedy, and Burl Ives went so far as to enclose with his card a sermon by the Dean of Duke University Chapel, entitled "Bethlehem and Bedlam." But along with all the frankincense and myrrh was an ever increasing band of Scrooges—Walter Cronkite, David Brinkley and Earl Warren among them—who continued to cry humbug to the greeting game and sent no cards at all.

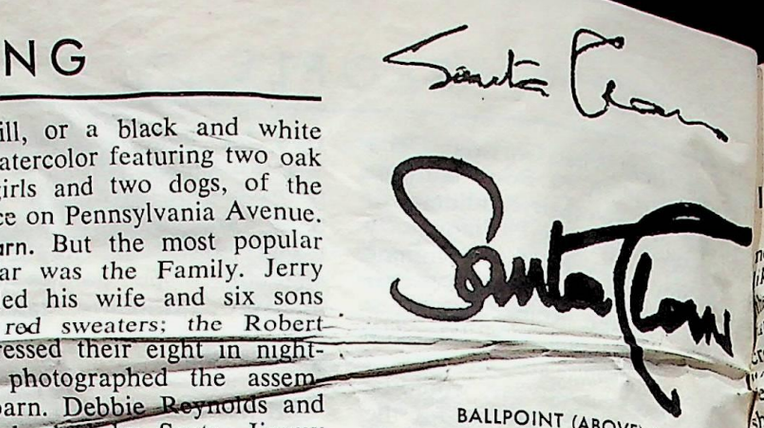


1964 CHRISTMAS GREETINGS: CARDINAL CUSHING'S AT LEFT
Personal portrait and a champagne invitation.

New Look in Longhand

In the good old days when illiteracy was the normal human condition, handwriting was something to be proud of—and looked it. The Declaration of Independence was signed with grace and style, but if John Hancock could see the dim and squiggly john hancocks of Americans today, he might be discouraged about the future of democracy.

Invitation to Flourish. The fine art of handwriting began to splutter into decline with the invention of the fountain pen. In order to hold enough ink, it was a fat, heavy, unwieldy instrument, calculated to muscle-bind the most graceful hand. To make a smaller pen feasible, the manufacturers reduced the flow by tightening up the nibs—thereby eliminating calligraphy's swinging thicks and thins. The end came late in World War II, when a U.S. quartermaster, looking for a pen that would not leak at high altitudes, discovered the ballpoint and ordered millions. At low altitude, ballpoints also had the advantage of being able to forge through vast amounts of carbon paper—a favorite war material of the armed forces.



BALLPOINT (ABOVE) & FIBER
Broader writing and bolder thinking.

The ballpoint not only makes writing a bore and calligraphy impossible, but shows up every early morning tremor. Today, though, the art of handwriting is exuberantly on its way back. The reason is a new kind of pen with a point of chemically treated fiber or nylon, through which the ink flows in broad, brushlike strokes at the lightest pressure—an invitation to arabesque and flourish that the ballpoint never knows.

The Rebellion. The fiber-tipped pens are the hottest counter-top item in years. In Japan, where most of them are made, some 30 companies are turning them out at a clip of more than 500,000 a day and falling behind the demand. The most popular is the 49¢ Pentel, made by the Japan Stationery Co. Ltd.—an old Tokyo company which once specialized in making *fude* (pronounced fooday), the brush that was the traditional Japanese writing instrument.

U.S. manufacturers have rushed in to capitalize on the new look in longhand. Esterbrook brought out a fine-pointed felt-tip pen last January, and in June went so far as to adapt its regular cartridge-fueled pen to a nylon-nibbed version with replaceable point called the Wonder-riter. Other major U.S. penmakers have kept to disposable versions like the Japanese, at about the same 50¢ price. No advertising seems to be necessary. "We just keep ordering more and more, and we're usually out of them," says Gladys Slavitz, co-owner of the Beverly Stationers in Beverly Hills.

President Johnson orders them by the gross, mainly to autograph photographs. Actress Joan Fontaine uses them for everything, as does Vogue's Managing Editor Diana Vreeland, and many another executive large and small. Said one of them last week: "I'm not only writing bolder—I'm thinking bolder."

NIGHTCLUBS

In Old Morocco

To a right-thinking person, an eminent clergyman has said, the place most like Heaven is a crowded streetcar. By these standards, the opening of Manhattan's new El Morocco last week was crowded enough to be Paradise, but the clergyman hadthe same crowd that the sheathed and chinchillaed, they [illegible] up such a jam of international jetters that there was scarcely room for another square-cut diamond. There wasn't room, in fact, for Princess Lee Radziwill to get in the door; the bigger Begum Aga Khan managed it, but she had to have a table set for her on a landing of the stairs.

The Maharani of Baroda's guest list included both outdoor Americans, such as Ceezee Guest and Wendy Vanderbilt, and indoor Europeans, such as Count Vega del Ren and the Baron de Rede. Mary and Sonny Whitney dropped by on their way up from their place in Lexington, Ky. (horses), to their place in the Adirondacks (hunting). Prince Paul of Yugoslavia and Princess Maria Pia, the Porfirio Rubirosas, and the Fiat-fortunate Gianni Agnellis were on hand. Onetime silent screen star Hope Hampton, who has been making opening-night scenes as long as most people can remember, was there in $3,000 worth of white beads; Mrs. Raymond Johnson, whose husband is a Revlon vice president, wore her gold, green and blue sequins on her shoulders; Maxine Leeb (who got married there last June) turned up in a necklace of bird breasts; Mrs. Huntington Hartford, a shy ex-model, all but hid her light under a bushel of ostrich feathers; and Senator (for a few days more) Kenneth Keating wore his well-known white-on-white hair.

Undercover Activities. What were they all doing there? Casing the joint. For zebraed old "Elmo's," Manhattan's choicest dance-and-supper spot from the early '30s until the death of Proprietor John Perona in 1961, was opening under new management.

The new management's name is John Mills, and he is big: 6 ft. 4 in. and 250 lbs. He is also big in the nightclub business, being proprietor of London's most successful version of the El Morocco formula: Les Ambassadeurs, with its subsidiary *discothèque* called The Garrison and its gambling room called Le Cercle. Almost everyone Mills asked advised him not to buy Morocco, which Mr. [illegible] died and his son Edwin moved the whole [illegible] two blocks farther east. And the rise of [illegible] such as Le Club, Shepheard's and Il Mio had diverted the patronage of the restless junior jets. But on the basis of his London record, it could be presumed that Mills knew what he was doing.

On the basis of his early history, no one could have seemed less likely to become a master manipulator of the smart set. Born 50 years ago in Warsaw into a wealthy Polish family, he was educated in Switzerland and Belgium, where he ran a family-owned cigarette factory. At 21 he was heavyweight amateur boxing champion of Europe. When World War II broke out, he joined the Polish army in France, did time in prison camps, escaped, and eventually found himself under orders from Polish intelligence. When he managed to smuggle himself to London, Intelligence arranged for him to open a Polish officers' club.

The food and service were so good that more and more British and Americans began to cultivate Polish friends in order to be invited there. In 1944 Mills bought the exuberantly Victorian mansion just off Park Lane built by Banker Leopold de Rothschild and started a restaurant called Les Ambassadeurs. He operated it as a club, as most London nightspots are because of drinking-hours regulations, made membership available to nearly anyone with an air of urbanity and $30 as initiation fee, payable at the door. Its 10,000 members now include the Duke of Edinburgh, Sir Winston Churchill, the Sheik of Kuwait and Cary Grant. The place exudes an atmosphere of luxury, with its heavy carpets, dark brocades and carved woodwork.

Drums for Tables. John Mills plans to base himself permanently in Manhattan, leaving his even bigger son Robert, 6 ft. 8 in., to run the London end of things. His changes in El Morocco will not disturb old Moroccans' sense of security—the white rubber palms with plastic banana leaves still loom against the [illegible] blue star-strewn sky, the zebra-striped banquettes still make the locale of every photographed celebrity instantly recognizable.

Push through a [illegible] change has been made. [illegible] replica of London's Garrison—[illegible] walls, Wellingtonian sconces, military drums for tables, and real plastic flowers sprouting from the ceiling. Here the young and not so young swingers may Frug, Watutsi, Swim—or just twitch—while an intellectual-looking French disque jockesse spins the 45s.

Presiding over this pleasure dome last week, Kublai Khan Mills was beginning to feel that everything was once again coming up roses. The Begum was using his Rolls-Royce, an oilman had borrowed his Bentley, and all seemed right with the world. The world, that is, of what Mills likes to call VIPIs (Very Important People Indeed). "I think we've made it," said Big John Mills. "Now where are we going to put the sauna?"

THE "WELCOME SERVICE" IS THERE!

Air France does more than fly you to your destination speedily and comfortably. It provides its passengers with a comprehensive range of additional services and facilities — among them the **WELCOME SERVICE.**

DON'T HESITATE TO CONSULT IT

When you arrive, you may want some practical information on the town or city where you're staying, and its environs ; information about hotels, restaurants, museums, doctors, religious services, excursions, etc. The Welcome Service can answer all your queries and give you useful advice to help you make the most of your stay in the locality. Thanks to the Welcome Service, you need never be lost in a strange city.

THE WELCOME SERVICE
OPERATES THROUGHOUT THE WORLD

There are more than 140 Welcome Service offices all over the world. You'll find them at the local Air France offices in major capital cities, and also in such smaller places as Cannes, Nantes, Miami, Cleveland, Paramaribo, and even Colomb Béchar.

SCIENCE

RADIOGRAPHY

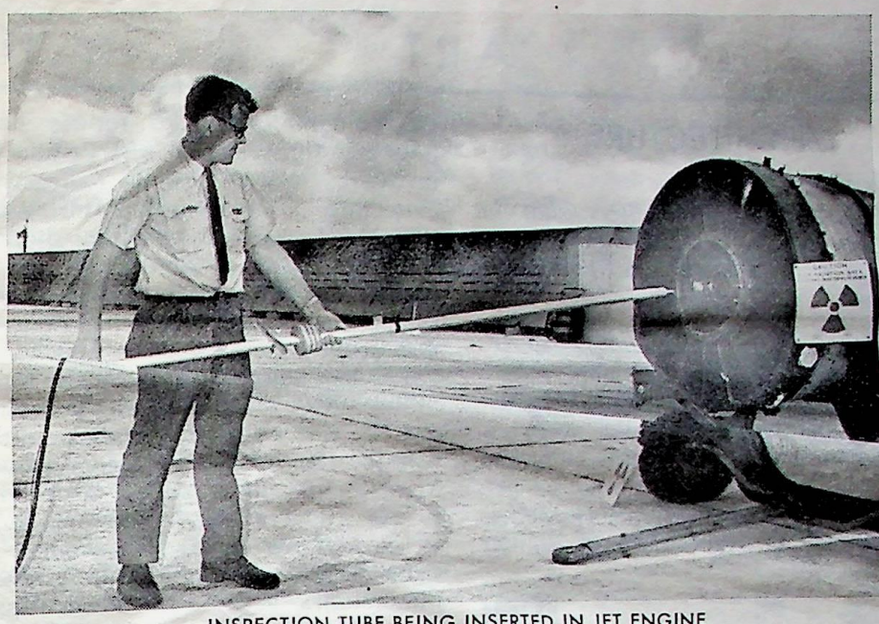
X Rays for Engine Innards

Every month, Eastern Air Lines had been stripping down, inspecting, and putting back together some 90 of the [illegible] that power its planes—a five-day, $500 [illegible] for each engine. Now the price of that [illegible] caution is being reduced rapidly; Eastern has turned to atomic energy to check its engines' hidden parts. Like doctors examining a patient's bones and internal organs with X rays, mechanics are using radioisotopes to make internal engine pictures without taking the engines apart.

The technique was first used for examining welds and joints in everything from bridges to nuclear submarines. Then Technical Operations, Inc. of Burlington, Mass. helped Eastern solve the problem of getting radiographic equipment into the hollow rotor shaft of jet engines by using a 100-curie capsule of iridium 192 that is as small as a pencil eraser but emits gamma radiation powerful enough to pierce the engine's metal innards.

The tiny radiation source is cranked 3 ft. into the shaft. A strip of industrial X-ray film wound around the engine is bombarded by the gamma rays streaming out from the isotope. The result is a detailed X-ray photograph of the hundreds of tough-to-get-at rotor blades that suck air into the engine, compress it and feed it to the combustion chambers.

What isotopic inspection does best is provide a clear picture of the rotor blades deepest inside the engine. These blades are the first to loosen and break free, and when this happens it may mean a complete engine overhaul at a price of $25,000 or more. "Using the isotopic inspection method," says Eastern's System Director of Quality Control Jason Koesy, "we've already caught 14 rotor blades that had begun to work their way loose." Isotopic inspection, which costs as little as five hours and $20 per engine, has already saved Eastern more than $70,000 in maintenance costs. Other airlines are beginning to follow suit.



INSPECTION TUBE BEING INSERTED IN JET ENGINE

Saving both time and money.

CHEMISTRY

Fireproofing from the Dead Sea

High on the list of Israel's slim supply of natural resources are the brains of its scientists and the chemicals such as bromine that can be extracted from the Dead Sea. Making use of both resources, Chemist Menahem Lewin has developed a wood-fireproofing process that may create a new world market for Israeli bromine.

Bubbles & Salts. There are two conventional ways of fireproofing wood and wood products, including paper and fiberboard. One is to coat them thickly with paint that releases carbon dioxide when heated and forms a layer of protective bubbles. This process serves satisfactorily for mild fires, but the bubble layer cannot resist intense or prolonged heat. The other system is to impregnate wood with various salts, but this weakens the wood and adds as much as 25% to its weight.

Bromine has long been known for its fireproofing qualities, but if it combines with wood's cellulose fibers, it weakens them seriously. Dr. Lewin's process gets around this disadvantage by forcing the bromine to attach itself to the wood's lignin, the cement that causes the fibers to stick to each other. The best grades of paper have no lignin, but the types of wood pulp used to make paperboard and wallboard retain enough of it to make Dr. Lewin's process useful.

Pulp & Chlorine. To brominate wood pulp, Dr. Lewin simply adds sodium bromide, which is as stable as table salt, to the solution in a standard bleaching apparatus, then bubbles chlorine through it. The combination of chemicals releases active bromine in a form that attaches itself to the lignin in the pulp. Treating solid wood is a more complicated process, but the results are spectacular. When a piece of brominated wood is put in a hot fire, it does not burn. After a while, a layer of carbon forms on its surface, but carbonization stops as soon as the wood is taken out of the fire. Any structure of brominated wood or wood products is safe from fire unless it is stuffed with highly combustible contents. "We could fireproof Japan," says Dr. Lewin, who sees no reason for false modesty about his achievement.

For all his studies, Dr. Lewin does not yet know in detail how bromine fireproofing works, but in general the action is connected with the way that wood burns. When heat is applied to natural lignin and cellulose, they give off combustible gases that form flames and spread the fire by heating more wood. Somehow, bromine seems to make those gases nonflammable. And with no flames to spread it, combustion stops as soon as the external heat source, such as a lighted match, is removed.

ARCHITECTURE

A Pilgrim's Prize

Q.: Mr. Pei, can you tell us what the new Kennedy library will look like?

A.: No. All I have is a blank sheet of paper.

Q.: There's nothing on that piece of paper?

A.: Nothing at all.

Thus, at a press conference given last week by the Kennedy family, Canton-born architect-icon Ming Pei accepted a commission that any architect would have sold his ancestral home to get: designing the John F. Kennedy Memorial Library at Harvard. Says Painter

THE NEW YORK TIMES

PEI & FRIENDS AT PRESS CONFERENCE
From Coventry, a clue.

William Walton, who, along with Jacqueline Kennedy, served on the selecting committee: "We chose Pei because his work is exciting and expressive, and we felt that he was on the verge of even greater work. He's every architect's second choice—next to themselves."

A man who has avoided headlines while putting his mark on more than 15 U.S. cities, Pei, 47, has won double awards for his dramatic, clean-cut towers and town houses in Philadelphia's Society Hill (TIME, Nov. 6). He is rejuvenating 160 acres of Cleveland, is master planner with vast authority of a $200 million reconstruction project in Boston, has a say-so in the downtown redevelopments in Los Angeles, Oklahoma City, Providence and Columbus. Winning a Federal Aviation Agency commission, Pei has designed a universal trim, pentagonal control tower now being installed in at least 25 U.S. airports. More than any other architect, Pei is engaged in a vast revamping of the U.S. cityscape.

Big Deals & Good Design. Building has fascinated Pei (pronounced pay) from childhood. A Chinese banker's son, he came to the U.S. for his education, won top grades at M.I.T., and was invited by Walter Gropius to teach architecture at Harvard. After World War II, when Communism cut short his childhood dream of rebuilding his homeland, Pei turned to his adopted land's growing problem—the rejuvenation of the city.

Pei had observed that scheme after scheme to beautify America's topsy-built cities failed because the true client was the real estate entrepreneur rather than the aesthetician. Pei signed on with Manhattan Realtor William Zeckendorf to see if a creative balance could be struck between big deals and good design. The working relationship produced Manhattan's Kips Bay Plaza apartments, Montreal's Place Ville Marie and Denver's Mile High Center. But a decade ago, Pei decided it was time to begin striking out on his own: he became a U.S. citizen and set up his own firm.

No Handstands. It is ironic that the commission for a monument should go to an architect who believes that his colleagues are too often overwhelmed with their own edifice complex. Pei holds that doing a handstand in marble on a street-corner site while ignoring the neighbors is an irresponsible posture for an architect. "What's there must influence what comes later," he says. "But architecture must not do violence to space or to its neighbors." Architects must, he believes, "realize that open space is just as important as the shaft, the pile, the solid masses."

While architecture to Pei is not sculpture to live in, he has won the high regard of his profession for the sensitive disciplined design of his individual buildings. His nine award-winning projects number among them Pittsburgh's Washington Plaza apartments, Honolulu's Pan Pacific Center, and the new National Airlines terminal at New York's Kennedy Airport. Pei's projects circle the world from Formosa's Luce Chapel to city planning in Tel Aviv.

While the Kennedy Memorial Library lacks a fixed site or a solid program, it is typical of Pei that he is beginning with such problems as traffic. "If Coventry Cathedral drew 7,000,000 visitors last year," he muses, "what will our problems be in the Boston-Cambridge area?" Pei approaches his prize project as would a pilgrim—from afar, and questioning every painful decision along the way. He is highly aware that more than $10 million in pennies and six-figure pledges has been raised for the library by donations from foreign governments, labor unions, and even schoolchildren around the world. The structure must embrace archives, a museum of material from the late President's 1,000 days, and a Harvard-run working institute for political affairs. Until that faith and those facts are firmly set, nothing is likely to appear on blueprint.

MANUSCRIPTS

A Golden Almanac

Some of the medieval age's greatest treasures are its books of hours, virtually museums within hard covers. These Christian almanacs are crammed with prayers, psalms, and calendars of saints' days. They summarize all that medieval man worshiped and feared, depicted in miniatures wondrous in [illegible] and lavish with gilding. They are the unintentional encyclopedias of their era, and because each is unique, they are almost beyond acquisition.

When such a book does come along, its history is often shrouded in intrigue. Back in 1856, a Paris dealer sold a 193-page manuscript. Dated around 1435, it was recognized by its heraldic symbols as a Book of Hours for Catherine of Cleves, noble daughter of a powerful Dutch duke. For more than a century, no one questioned its completeness. It wound up in 1958 in the Guennol collection, owned by Long Island Investor Alastair B. Martin.

But in early 1963, Frederick B. Adams Jr., 54, director of Manhattan's Pierpont Morgan Library, chanced to find a manuscript from Europe with a title referring to Catherine. It was unmistakably by the same hand as the Guennol version. The library purchased it, and by matching sentence breaks, even stains on the pages, proved conclusively that the two were once one, an uncommonly long Book of Hours illumined with 157 dazzling miniatures. Joined for an exhibit at the Morgan, the reunited book was clearly the finest Dutch manuscript in existence (*see color pages*). Now the halves are separate again.

The master who painted the book is unknown, but he had the sharp eye of a jeweler. Details only 1/32 of an inch are revealed by a magnifying glass as ducks floating on a pond. He portrays hell's horrors with shrieking, Bosch-like surrealism, but more divine images receive less than medieval veneration. Christ's birth and infancy are treated with the tenderness of an uncle. The artist took his greatest liberties in the borders of his illuminations. There he imitates a grape arbor's lattice in textiles and lacework, borders a saint with pretzels that were originally baked to imitate hands clasped in prayer, in a secular study of commonplace reality.

This labor was a wedding present for the duchess. At the age of 13, Catherine was married to the neighboring Arnold, Duke of Guelders. In time, she became vain, violent and overweening. Eventually, with her son, she conspired against her husband. But though the manuscript illuminations speak toward a more secular age, they apply medieval alchemy to make gentle nature glitter with lasting fire. The Cleves master was shrewd but also sensitive, and his work can stir souls. Perhaps Catherine herself was the only one not mindful enough of her Book of Hours.

CHRISTIANITY

The Servant Church

(See Cover)

Behold, I make all things new.
—Revelation 21:5

In Bethlehem of Judaea, most probably between [illegible] B.C., a son was born to a carpenter of Nazareth and his wife. For 20 centuries men have proclaimed this event to be the turning point in the history of the world—that God mysteriously became man in the lowly person of an itinerant rabbi whose life ended in crucifixion, a death reserved for slaves and rebels, on the orders of a despotic Roman procurator.

Scripture says that Jesus Christ, this carpenter's son, triumphed over death's dominion by his Resurrection, and through his teachings revealed the way to eternal salvation. Thus each year, with Christmas trees and carols, tinsel and toys, his followers commemorate the moving and gentle story of the crib in a Bethlehem stable. It is a celebration of eternity's intersection with time and of Christianity's living faith in the promise of Jesus: "Lo, I am with you always, to the close of the age."

A Pre-Reformation Spirit. For many, the most convincing proof that the promise is being fulfilled rests in the churches that bear Christ's name and pay him homage. Divided and fragmented, they yet remain the most durable of man's institutions—together constituting the "ever-reforming church" that in crisis finds within itself the means of rebirth and renewal. And as in the days of Augustine, Francis and Luther, signs show that a renewal is taking shape in Christianity. "There is a kind of pre-Reformation spirit running through the church today," says the Rev. Don Benedict, director of the experiment-minded Chicago City Missionary Society. "It looks as though Christians of today stand on the threshold of great changes in Christendom," adds the Rev. Roger Lloyd, vice-dean of England's Winchester Cathedral. "The prospect of a new Reformation is clearly in sight."

That reformation is most spectacular in Rome, where the Second Vatican Council has unleashed a passion for *aggiornamento* in the most tradition-encrusted of churches. Catholicism's vitality shows in the new liturgy, and in the zest with which a generation of "open church" priests and laymen are calling for more reforms of outdated rules (clerical celibacy, for example), institutions (the Index of Forbidden Books) and teachings (birth control). The renewal at the Vatican has also had a striking impact on the sister churches: it challenges the Reformation faiths to re-examine how reforming they still are. "The ecumenical breakthrough in Catholicism has changed the climate of the times," says Dean Samuel Miller of Harvard's Divinity School.

To many Protestants, ancient divisions now seem so irrelevant, compared with the need for unity, that the churches of Britain, at a historic conference in Nottingham last September, could confidently set a target date for their organic union in 1980. Catholic-Protestant cooperation, the dream of prophetic scholars a decade ago, is [illegible] practice that [illegible] rooted in parish practice. [illegible] scandal when Roman Catholics [illegible] Episcopalians for a service at Cambridge's Christ Church to celebrate the first Sunday of Advent. Liturgy is also bringing the churches together, as Catholics switch to the vernacular and Protestants increasingly restore ceremony to their services. And the big branches of Christianity more and more make common cause in facing the world; last week the Santa Fe Archdiocese announced that it would join the New Mexico Council of Churches—the first time that a Catholic church ever chose to affiliate with the Protestants and Orthodox in the federated National Council of Churches.

Besides ecumenism, two strong catalytic events are changing the chemistry of Christianity. One is recognition that the postwar religious revival in U.S. churchgoing was to an important degree a numbers game—a peacetime reflection of foxhole faith. Justifiably, many critics within the churches wondered whether the Sunday-morning crowds indicated much more than conformism born out of fear of "the bomb." Many of these same critics are now analyzing the evidences of a new *spirit of Christian responsibility* that is transforming many suburban churches, both old neo-Gothic and new fish-shaped. One sign is the number of Christ- [illegible] Bible and [illegible] study groups to read the *Bishop* John Robinson's *Honest to God* and Paul *Tillich's Systematic Theology*. And taking *Christianity seriously* often leads to grappling with contemporary social problems—most notably, the other catalytic issue, *civil rights*.

Today, says the Rev. William Schram of Huguenot Memorial Presbyterian Church in Pelham, N.Y., "the suburb is the most exciting place for a minister to be." In Wilmette, Ill., the First Con*gregational Church has formed* a financial and spiritual partner*ship with* a downtown Chicago parish revived by Don Benedict's Missionary Society. Members of the congregation also welcome underprivileged children from Inner City churches into their homes for

summer vacations, are working in the community to pass open-occupancy covenants. "We broke the barrier of involvement on race," says the Rev. Hugh Saussy of Holy Innocents' Episcopal Church near Atlanta.

New Pentecost. The spirit of Christian renewal in 1964 is searching, questioning, critical—willing to challenge every doctrine and institution of the church. If worship may perhaps be better expressed by folk singing, modern dance or drama, the churches are ready to try. Yet a considerable body of Protestant and Catholic radicals, ranging from bishops to informed laymen,

AP

MODERN DANCE AT PRESBYTERIAN THEOLOGICAL SEMINARY IN LOUISVILLE
The spirit is searching, questioning, critical.

seminarians, believe that the present vitality of Christianity is simply a kind of spiritual Indian summer. Convinced that most of the structures of the church have outlived their usefulness, many of these all-out reformers want a new Pentecost—"a return to the womb and a new birth for the Christian community," in the words of David Edwards, editor of the Anglican SCM Press.

They foresee a day when there may be fewer Christians but more dedicated ones, and when the church will be built around the active cell of believers rather than the territorial parish. It will be a church seeking to identify the sacred in the midst of the profane, attempting to build the Kingdom of God by transforming the organisms of the secular city. In sum, the new church will be a return to the Biblical notion of the "salt of the earth." Germany's great Jesuit theologian Karl Rahner argues that Christianity is already "in diaspora," as the triumphal mass church of Christendom's past evolves into a sectlike community of the dedicated, dispersed throughout the world.

The radicals who predict the disappearance of today's institutional Christianity do so with great equanimity. "I cannot imagine a more enjoyable time to be a Christian," says British Journalist Monica Furlong, herself a convinced Anglican radical. "For while the holocaust is sweeping away much that is beautiful and all that is safe and comfortable and unquestioned, it is relieving us of mounds of Christian bric-a-brac, and the liberation is unspeakable."

Prophets & Persecutions. Such churchly radicalism has the best kind of historical regard, insists Dr. Roger Shinn of Manhattan's Union Theological Seminary. "He was as unconcerned with institutions as anyone could be." Time and again through its turbulent, long history, Christianity has heard the voice of its own angry prophets denouncing the established disorder—St. Paul complaining about the immoralities of Corinth, St. Francis rejecting the pomp of the medieval church, Luther fulminating at the luxury of Rome, Kierkegaard howling vainly against the placid orthodoxy of Denmark's Lutheranism. Time and again, also, Christianity has undergone revolutionary second Pentecosts, and survived by adopting radical new forms of life. The Christian cell of believers, worshiping in the catacombs, brought the church through centuries of Roman persecutions. In the Dark Ages of the 9th century, the fortress monasteries of the Benedictines saved the faith of Europe—and the culture of its Greco-Roman past—from the triumph of marauding barbarians.

The reformers of today believe in total renewal because, in the words of Dr. Harvey Cox of Andover Newton Theological School, "the existing pattern of the church is no longer in touch with real life." One sure sign is that Christianity is not keeping up with the growth of humanity. In the U.S., 57% of the population claim membership in Christian churches. But the rate of increase for most denominations today is somewhat below the general population growth, and many church leaders wonder how many of their faithful are the occidental equivalent of "rice Christians"—those who would [illegible] membership involved faith, commitment or risk.

Elsewhere in the world, the prospects are even worse. By the year 2000, estimates the French Catholic demographer Adrian Bouffard, only 20% of the earth's population will be Christian —compared with 35% in 1900. Moreover, the churches' very existence is threatened in areas where growth is most rapid. In Africa and Asia, for example, the young churches must brave the resurgence of such non-Christian faiths as Islam and Buddhism, the enmity of freedom movements that would eradicate the "white man's religion" as a vestige of the colonial past.

Behind the Iron Curtain, an atheistic authoritarianism has forced many churches back to the catacombs. In Western Europe, church leaders wonder how to evangelize post-Christian pagans for whom towering cathedrals are museums rather than centers of a living faith. Warns the German philosopher and publisher Gerhard Szczesny: "One good salesman, endowed with a sufficient gift of gab and versed in the more recent theological adaptations, might well be capable of converting the European masses to Islam."

The World Come of Age. But the greatest challenge to the churches—one that knows no national borders—is secularization. Dutch Theologian Albert van den Heuvel, head of the World Council of Churches' Youth Department, defines the term as "the process of ever-growing independence from any transcendent control." What it amounts to, in the blunt phrase of Friedrich Nietzsche, is "God is dead."

In a sense, God—the personal, omnicompetent deity of Christendom—has been dying for centuries. His lordship over the world has been threatened by every scientist who discovered a new natural law of organic growth, by every invention of man that safeguarded him against "act of God" disaster, by every new medicine that tamed a disease and solved another mystery of life. But it is the 20th century, the age of technological miracle, that has seen the triumph of the Enlightenment and the apparent banishment of God from the universe—even, thanks to Freud, from the human soul. Writing from his German prison cell in 1944, the anti-Nazi martyr Dietrich Bonhoeffer defined it as "the world come of age," in which "man has learned to cope with all questions of importance without recourse to God as a working hypothesis."

Theologian van den Heuvel warns

turning back from the *that there is* ularization. "The human reality of exegeted God away out of *mind has* questions of existence, and *the* or growing up has more and more *man's* chased the various gods out of their *positions* of control of human affairs. Mankind will not go back to the Old Testament for governing principles of how the world was made, but we will with X-rays trace its physical mysteries world in which we [illegible] microscopes. The *out a God* who plays the role of [illegible] continuous and sovereign Controller of mankind, without whom we could have no bread, no health, no safety."

The church of the future, say the Christian radicals, must be prepared to cope with the implications of a totally secular society: the disaffection of millions who want salvation in this world rather than the next, and who see the church as irrelevant to their concerns; the end of such traditional church rights as tax exemptions; the prospect of finding new ways to speak about divine revelation to the world that scorns the supernatural and cannot hear the voice of Christianity's "dead" God. To prepare for the future and to build the new church, many Christian thinkers are first pondering what their answer should be to the ancient question: "What do you think of the Christ?"

Messiah & Magistrate. The author of the *Letter to the Hebrews* declared that "Jesus Christ is the same yesterday and today and for ever." True enough, but every generation has shaped its own unique understanding of the Saviour. To the first Jewish Christians of Jerusalem, he was primarily the Messiah spoken of by Isaiah and the prophets. The Christos Pantocrator of Orthodoxy was as royal a governor as any Byzantine emperor. Calvinism emphasized the stern lord of the Last Judgment, a magistrate who could govern the theocracy that was Geneva. The most painted figure in the history of art, Jesus has been portrayed in countless forms, from the fat-legged infant in the laps of serene Renaissance madonnas to the majestic risen Lord of Graham Sutherland's tapestry in Coventry Cathedral.*

"If to the seeker after Christ," says Anglican Theologian Harry Williams, "you preach a 4th century Christ, or a 16th century Christ, or a 19th century Christ, you are still giving him a stone instead of the living truth." For many churchmen, the Christ that must be preached to this century was defined by Bonhoeffer: "The man existing for others." The Jesus for now is not so much the Son of God but the Son of Man, not so much the risen Lord of Easter as the suffering servant who agonized in near despair on the Cross, who died that the world might live. The Jesus for now is the Jesus of preaching and of the Passion.

There is nothing un-Biblical in this conception of the Christ. After all, notes Lutheran Theologian Martin Marty, "when they asked Jesus what it was all about, he told the story of the Good Samaritan." St. Paul informed the church of Philippi that "Christ Jesus, who, though he was in the form of God, to be grasped equality with God a thing ing the form of a servant. [illegible]

THE REV. DON BENEDICT IN CHICAGO
Secularization is here to stay.

to Matthew, Jesus warned his disciples: "The Son of Man came not to be served but to serve." And he wished that the church follow in his path. "I have given you an example," he told the Apostles (*John 13:15*) after washing their feet before the Last Supper, "that you also should do as I have done to you."

Serving Society. One implication of this servant Christology is that the church will also be "for others"—ministering to the world, not standing aloofly in judgment against it. "In the 21st century," says Theologian van den Heuvel, "the church should serve society, which also predetermines its form and shape. In the new world, the church should really live the contents of the Gospel, living out its messianic ministry, communicating with society, gearing itself to its needs."

Servanthood calls for a new understanding of the nature of the church: not the "repository of the saved" but what Editor Stephen Rose of the Chicago monthly *Renewal* calls "a community of people, no better than anybody else, but who are trying to be the light of the world." It is a church, Rose adds, that must seek, through service, "to become the center of life, rather than what it now seems to many: a peripheral institution."

The service that the renewal theologians have in mind is considerably more selfless and anonymous than ladies-aid society bazaars, for example, or the impressive relief programs carried on by denominations. One of the most unsettling convictions of modern church thinkers is that Christianity, in a secular society, is far from being the only instrument of divine action. In fact, God may well be more apparent in a purely [illegible] organization or movement —such as the civil rights revolution or the fight against poverty and hunger in the world—than in the actions of the churches.

It is equally possible that the most profound insights into the nature of man and the meaning of life may appear in the work of an atheist rather than a committed theologian. "We know," says Canon Lloyd with dry realism, "that God could do without the Church of England, the Methodists, or even without the Church of Rome."

In an era of what Secretary-General Willem Visser 't Hooft of the World Council of Churches calls "socratic evangelism," Christianity must seek to identify these secular currents of divine action and join them. This, primarily, is a layman's task, and Dutch Dominican Theologian Edward Schillebeeckx argues that Christians must "draft with vision the blueprints of tomorrow, designed for the dynamic shaping of a temporal society worthy of man." Too often, he adds, the church has refused to become incarnate in the world, with the result that "everything connected with the world's development and prog-

* Measuring 72 by 40 ft., Sutherland's *Christ in Glory*, shown on this week's cover of TIME, pictures Jesus surrounded by the emblems of the four Evangelists. At top left, the man (Matthew); at lower left, the ox of St. Luke; at top right, the eagle of St. John; at lower right, the lion of St. Mark. To the right of the seated Christ is the figure of the archangel Michael, patron saint of the cathedral.

ress was left to the people whom we call infidels and unbelievers."

The Four Worlds. In nearly all thinking about the future of the servant church, says Chicago's Don Benedict, "the structural problem is basic." Explains Francis Ayres, director of the Parishfield Community, a training center for Christian laymen near Detroit: "Everyone recognizes that the local congregation is a limited instrument designed for earlier times, and cannot cope with modern society." The reason for the obsolescence of the geographic parish, says Benedict, is that it serves only one of the four "worlds" inhabited by modern man: *the world of his personal relationships. But urban man also inhabits "the world* of work, divorced from the *residential* world, with its own ethos and structures. *Third, there is the pub-*

PIKE OF SAN FRANCISCO
Abandoning the Trinity.

lic sector. Last, there is the leisure world—the second home, spare time." Somehow, argues Benedict, the church must enter all these worlds—as it did, for example, in the Middle Ages.

But how? One answer is the creation of functional rather than territorial parishes—the so-called "guild churches" that would unite a few hundred people with a common interest. Instead of belonging to one church near his home, a man might be a member of three or four worshiping units. Another new instrument of the church is the Christian "cell" of men and women who gather, at work or at home, to study the Bible or discuss the problems of their work. Stephen Rose suggests that the church of the future will still have its cathedrals, as places where the tradition of worship could be preserved with integrity. "Then outside them," he says, "in smaller churches, in houses, in storefronts, there would be centers of outreach, each with a specific function. There would be theaters, galleries, youth clubs, political centers, many of these voluntary and self-supporting."

Restructuring the church means changing the roles of minister and laymen. Many theologians believe that most present-day distinctions between pastor and people will wither away, and that the Pauline notion of the priesthood of all believers will become a living reality. One reason—which Mormons and Pentecostals understand already—is that all Christians will be called to witness in the world. Another is that many clergymen are dissatisfied with the limitations of a ministry that puts them on the fringe of [illegible] divinity [illegible] little interest in entering the parish ministry—and some of those are intellectually no match for the college-bred among their congregations. Many ministers envision the day, and a few have already achieved it, when they will support their parish work by full-time jobs in secular occupations, emulating the worker-priests of postwar France.

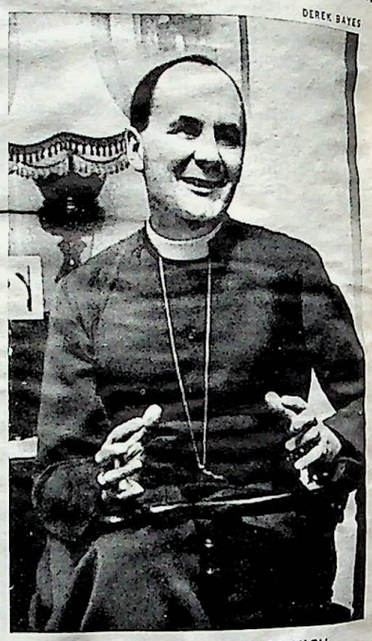
"If the church is to travel sufficiently light," argues Bishop John Robinson, "and to be flexible for a mobile society organized on functional lines, then it must be free to deploy most of its manpower not for servicing units of ecclesiastical plant but for serving within the structures of the world."

Changed Rhythm. According to Princeton Theologian M. Richard Schaull, worship ought to be "an expression in symbol and sacrament of what God is doing to make human life human." Many clergymen, and laymen too, question whether existing patterns of worship are suited to the church of the future. The long weekend and the five-day week have already changed the rhythm of life that made Sunday morning the natural time to pay homage to God. In the 21st century, liturgies may be celebrated—as they were in the early church—in homes or places of work, and rarely on the day of the Lord. David Edwards argues that preaching is on the way out, and that in the future the word of God will be expressed by dialogue rather than monologue: instead of sermons, study-group discussions between ministers and laymen. Already, some ministers and priests are experimenting with unorthodox liturgies. In California, Episcopal, Presbyterian and Methodist ministers have congregated at Communion services in one another's homes. Some U.S. priests have presided at Last Supper-style Masses, following the forms used by 2nd century Christians.

Even more archaic than the form of Christian worship is its language. Says the Rev. Robert Raines, pastor of the First Methodist Church of Germantown, Pa.: "Liturgy is an expression in language of our life before God. We have hymns of the four seasons, of the earth, the sky and rural life. But how many hymns are there about God in the factories? In the city slums? We are living on hymns that are an articulation of life in another term."

The Common Task. When they consider the teachings of the churches, many theologians today are inclined to ask themselves the question put to Ezekiel: "Can these bones live?" How, in the secular era, can the church proclaim Christ in words that the world will hear? There is no easy answer, although many churchmen agree on some qualities that any theology of the future must have. It will be ecumenical. "Renewal is the invitation to a common task," says Hans Küng, Swiss Catholic. It is interdependent. It will be existential. "Theology is overdeveloped in systems and arguments," says French Dominican Pierre Liégé, "and not rich enough in concrete applications to existential problems. As it progresses, it will turn more to the questions of the significance of human life and the application of the Christian message to the existential circumstance." It will also be

DEREK BAYES



ROBINSON OF WOOLWICH
Questioning the God "out there."

open to the insights of science and non-Christian faiths, even to the humanist values—a deep concern for other men's welfare, an intelligently empirical approach to moral issues—of contemporary unbelief.

Beyond that, there is no widespread agreement about how the servant church is to rearrange its cargo of dogma for the hard sailing ahead. Many Roman Catholics and Protestants feel that the primary theological task is re-translation of traditional concepts into contemporary accents, and that to toss doctrine overboard is to betray the faith. Yet an influential minority of Christian thinkers is willing to do just that. It is an unarguable axiom for the Marburg Disciples of Germany's Rudolf Bultmann that Christianity must demythologize—that is, translate the essential elements of the New Testament proclamation into terms that relate to man's existential conflict today, while doing away with nonessentials as so much historical ballast. Advocates of Paul Tillich's method of correlation,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which attempts to find theological answers in the Christian message to the existential questions posed by modern philosophy, are content to ignore dogmas that do not relate to contemporary man's ultimate concern.

Not all the radical theologians who want Christianity to travel light are in the seminaries. Two of the most persuasive are consecrated bishops of the Anglican faith: John Robinson, the suffragan of Woolwich, and James A. Pike of San Francisco. In his bestselling (750,000 copies) *Honest to God*, Robinson proposed, among other near heresies, that Christianity substitute Tillich's concept of God as "the ground of all being" for the old notion of "out there," personal deity. Robinson has carried on his theological demolition work in other areas. *Christian Morals Today* argues for a flexible ethic in which the only commitment is to act out of love for God instead of absolute adherence to an objectively valid set of divine commandments. And in a series of lectures called "The New Reformation?," Robinson argues that when its basic truths are at stake, Christianity should preserve an agnostic silence about certain doctrines—heaven and hell, for example, or the devil and the angels—since "these cannot be painted with the assurance or the detail on the wide canvases beloved of our forefathers."

Packaging v. Product. A similar demand for doctrinal caution is voiced by Pike in his recent *A Time for Christian Candor*. He argues that the church keeps the treasure of its revelation in "earthly vessels," and that it is idolatry to accept as eternally true what is only historically conditioned. He suggests that Christianity abandon the notion of the Trinity, which has now become a pagan tritheism instead of what the church fathers intended to say. To avoid confusion of the "packaging" with the "product," Pike would do away with all spatial images of God, everything that suggests a distinction between the sacred and the secular.

When will the church of the future be born? "We're in it now," exults Jean-Paul Meyer, director of Paris' International Protestant Students' Center, and he may well be right. Every church today has its share of experiments looking ahead to the 21st century. In Germany, for example, the Protestant Evangelical Academies bring Christians together for weekend seminars to discuss, on a thoroughly professional level, such secular issues as urban planning and traffic problems. Mainz-Kastel is the center of Lutheran Pastor Horst Symanowski's yearly industrial seminar for ministers, who divide their time between working on assembly lines and learning the sociology of the factory. The spirit of the worker-priests lives on in the Anglican priests of the Sheffield Industrial Mission, the Japanese Christian industrial evangelists, and in Roman Catholicism's Little Brothers of Charles de Foucauld, laymen under vows of poverty who "shout the Gospel with their lives" in the slums of Paris, Buenos Aires and Santiago.

Put Up or Shut Up. In the U.S., every major city has one or more experimental Inner City missions, many of them modeled on the interdenominational East Harlem Protestant Parish, where Holy Communion is often celebrated around a kitchen table in an apartment, and a team of laymen and clerics spend most of their waking hours combatting the apathy of public officialdom and a poverty-stricken community. The National Council of Churches is supporting an ambitious new program of Christian involvement [illegible] In 15 Mis-

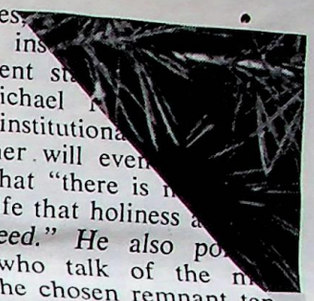
SCULPTURED CHRIST*
In history, it is still Good Friday.

and volunteers will be working with Negro organizations on voter registration drives, seeking to reconcile the white community to civil rights, establishing community centers to train adult illiterates, advising sharecroppers on agricultural techniques. Justifying the project, Bishop Reuben Mueller told the council: "Our day is saying to all of us in the field of religion: 'Put up or shut up.' It is just as challenging as that."

Faith of the Future? Without question, most Christians are not ready to proclaim the death of the church or to embrace the skeletonized faith of the future that some modern-day reformers propose. The World Council's Visser 't Hooft notes that the much-questioned territorial parish has proved to be a va[illegible] bloc countries, [illegible] autonomous ins[illegible] omnicompetent st[illegible] Layman Michael [illegible] even if the institution[illegible] away, another will even[illegible] place, and that "there is n[illegible] organizing life that holiness [illegible] *are guaranteed.*" He also po[illegible] that those who talk of the n[illegible] church for the chosen remnant ten[illegible] sound a trifle holier-than-thou.



For Lutherans, the very notion of a servant church raises a fundamental doctrinal question: What is the place of salvation by faith in a Christianity devoted to good works? And what is to other humanitarian agency? German contemporary [illegible] Thielicke feels that the Gospel may produce "[illegible] lectualized" theologies comprehensible only to doctoral students in philosophy. Other churchmen question whether the theological striptease proposed by Bishops Robinson and Pike amounts to anything more than the rediscovery of classic Unitarianism.

"Either we experiment in faith, or else we fossilize," answers Canon Lloyd, and Don Benedict argues that in order to re-establish its credibility in the secular age the church must emphasize the ethical rather than confessional aspect of Christ. But today's renewal theologians are far more realistic than the Social Gospelers of the first decades of the 20th century who assumed that the church could guide the world on a path of easy progress toward the spiritual transformation of economic life. Christian reformers, says Rose, "take very seriously the sinfulness of man and are skeptical of any pat solution to the tragedy of human existence." Thus they willingly admit that even the most promising of today's ecclesiological experiments are at best interim solutions, and may be doomed to failure.

Failure and sorrow are inevitable ingredients in the drama of human existence. "In the sacred history of man on earth," wrote French Author Léon Bloy, "it is still, alas, Good Friday." But Good Friday was, and is, the prologue to Easter. As usual, it was Bonhoeffer who best expressed the millennial hope for the coming of God's kingdom that lies behind the theology of renewal. "The day will come," he wrote from his prison cell, "when men will be called again to utter the word of God with such power as will change and renew the world. It will be a new language, which will horrify men, and yet overwhelm them by its power."

When will that day come? All that the Christian can know is that the church must ready itself to proclaim the event. Summoned to discipleship, Christianity will be its true self only when it exists for humanity, following the example of the suffering servant who was its Lord and founder.

* A silver-gilt statuette 20 in. high, this work by Italian Sculptor Pericle Fazzini tops a font for holy water used at St. Peter's during Easter.

THE THEATER

Carnage at Coney

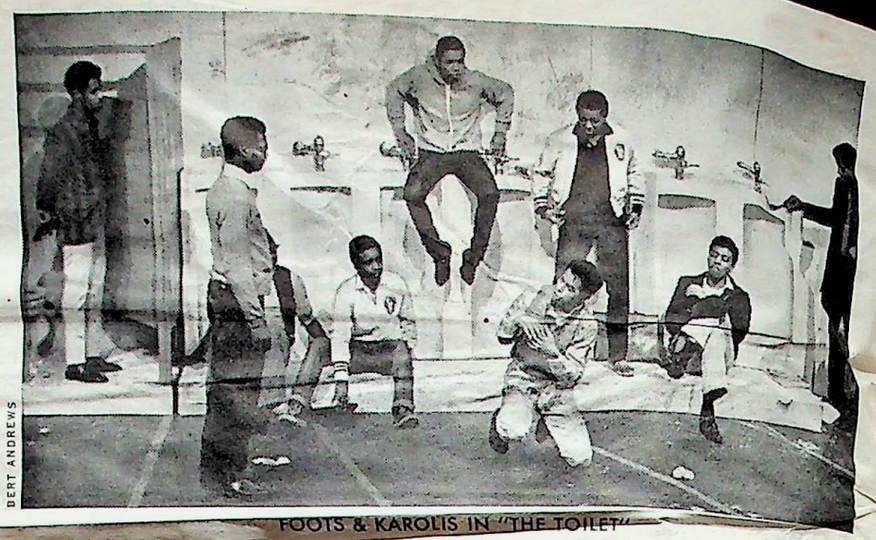
I Had a Ball is a misaddressed musical mailbag. Buddy Hackett, a droll fellow of manic and mournful mien, should be readdressed to oldtime burlesque, where his earthy urbanisms could blue the air like cigar smoke. The frenetically agitated dances should be restored to the speeded-up silent film. The nondescript music should be sent back to recompose itself. The book has never left its natural state—pulp.

The inanimate star of the evening is Sam, a crystal ball that tells the future incorrectly. Hackett, a Coney Island *sharper turned pseudo-Freudian mind-sweeper, has great faith* in Sam ("it comes from Bombay, the farfetched East"). Under Hackett's lunatic gaze, Sam's face turns red, as well it might, since in Act I the crystal ball mismatches two pairs of lovers: an arm-twisting loan shark (Steve Roland) with a *taffy-sweet Ferris-wheel operator* (Karen Morrow), and a glib but honest-hearted Coney barker (Richard Kiley) with a round-heeled golddigger (Luba Lisa). In Act II, Hackett second-guesses Sam; the baddies and the goodies mate up.

Since plot is nought, *Ball* relies on Buddy Hackett for a nightlong transfusion of comic relief. He can fire a salvo of laughter with the whites of his eyes, and step on a dud line so that it explodes, but he has to work so hard to be playful that it kills the fun. Apart from Hackett, only *Luba Lisa* comes out of this Coney Island carnage with talent and personality arrestingly intact. Moving like a sexy-hexy wind-up doll, with the voice of a Jewish Chatty Cathy and the body of Salome, she gives the impression of being cheerfully in debt to the whole male race as she waits for the next man to garnishee her itsy-bitsy, teeny-weeny, pom-pom green *intime* bikini.

FRIEDMAN-ABELES

LUBA LISA IN "I HAD A BALL"
Chatty Cathy in Salome's body.



BERT ANDREWS

FOOTS & KAROLIS IN "THE TOILET"
Sickening punishment in the theater of cruelty.

A Bird Is a Bird Is a Bird

Alfie! by Bill Naughton. A bird is a girl in cockney argot, and Alfie is strictly out for the birds. In this unpretentious and consistently pleasant comedy, Alfie counts the workaday world well lost for lust. He is the modern, international antihero, the man who wants to be kind to everyone and responsible to no one.

As a cockney Casanova, Alfie leaves behind him a trail of broken hearts and gravid wombs. If worse comes to worst, Alfie is game to arrange an abortion, though not quite up to paying for it. In the lost lingo of yesteryear, Alfie is a bit of a cad, and it might follow from this that he is repellent. Quite the contrary. Terence Stamp plays him with enormously ingratiating charm, zest and skill. More important, Playwright Naughton has netted a real character, and reality exonerates itself in the theater, turning moralizing attitudes into carping ghosts at a feast.

Alfie woos and walks out on six birds. One bird is a nesting sort and makes Alfie a father. His idea of child support is to buy a teddy bear. Another is a Venus flytrap. Still another likes to slave for Alfie, and it touches him, but workers are neuters. "Look at it —scrub, scrub, scrub."

Like most moderns, Alfie suffers from overspecialization, and the comedy could use some of the variety and conflict that spice drama. Still, Alfie himself is irresistibly in the tradition of the picaresque novel, and his running asides are canny and constant delights: "If you make a married woman laugh, you're halfway there with her. Mind you, it don't work with a single bird. Get one of them laughin' and you don't get nothin' else." Bill Naughton was a truck driver before he began writing plays, but it is obvious that he kept a sharp eye on a lot of things besides the road.

Spasms of Fury

The Toilet and The Slave, by LeRoi Jones, are one-act spasms of fury. Naked hate, like naked love, is very hard to project or sustain on a stage, but Negro Playwright Jones can do it with venomous intensity.

The Toilet takes place in the lavatory of a boys' high school. There are seven urinals. A Negro boy begins the play by using one of them; near the play's end, a white boy's bloodied head lies in one of them. In between, Jones makes it abundantly clear that he would gladly consign every white man's bloodied head to that identical place.

The form of the play is an act of vengeance. The white boy, Karolis (Jaime Sanchez), has written what can only be construed as a homosexual love letter to a Negro boy named Foots (Hampton Clanton). Foots's eight Negro buddies brutally punch, kick and stomp on Karolis. Directed with nightmarish brilliance by Leo Garen, the play moves like a street-gang rumble. Even mock games with rolls of toilet paper seem to crackle with terroristic menace. The Negroes spew the vilest of obscenities at Karolis and each other. On any absolute scale, the dialogue is air pollution of the highest scatological and pornographic density ever recorded on a U.S. stage. Relative to the play, it is an act of verbal violence, matching and intensifying the drama's physical violence. Just before the play ends, Foots cradles Karolis in his arms on an otherwise empty stage and bathes his battered face, as if to imply that this is an interracial love that dares not speak its name.

The Slave is essentially a kind of Greenwich Villagey talkfest. War has broken out between Negroes and whites, and with the sound of machine-gun and artillery fire in the near distance, a Negro military leader (Al Freeman Jr.) revisits his former white wife, who is now married to a white history professor. Ostensibly, he has come to see his two daughters, possibly to kill them, but mostly to gloat and watch the whites cringe before his oft-waved pistol. At one point, the professor asks if

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

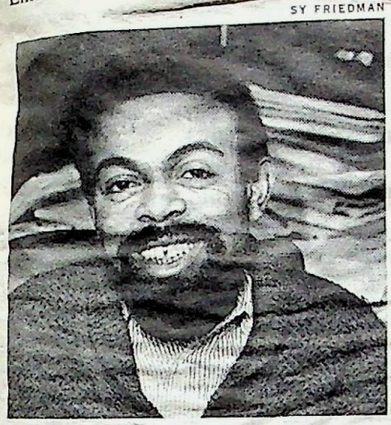
Digitized by Arya Samaj Foundation Chennai and eGangotri

there will be more love or beauty or knowledge in the world after a Negro victory. "That was not ever the point," the Negro retorts. "The point is that you had your chance, darling; now these other folks have theirs."

Jones's plays belong to a relatively new dramatic genre that has been called the theater of cruelty. The theater of cruelty aims to punish an audience, [illegible] its stomach. But when audiences seems like a man who needs an enemy so badly that the nearest friend will do. His true target in these plays is the well-intentioned liberal intellectual with namby-pamby notions of cozy, overnight, instant brotherhood. *The Toilet's* depiction of Negroes as semi-cretinous urban cannibals is calculated to affront precisely those white racial ameliorators who passionately argue that Negroes are not like that at all.

Like Jean Genet, Jones, who is mar-

SY FRIEDMAN



PLAYWRIGHT JONES
Every white man's head in a urinal.

ried to a white woman, has the gift for projecting his fantasy life directly onto a stage. His chief fantasy is retaliation. In these plays, the Negro has the gun. He gives the orders, he slugs, he kills, he wins. Dramatically, the virtue of this is that action follows idea like a dagger thrust without the shadow of explanations, descriptions and rationalizations that fall on drama like a blight.

Jones is an excitingly gifted playwright, but as a Negro writer he is edging toward three pitfalls. The first danger is white tolerance, the avid desire of the white masochists to be openly reviled for the indignities and injustices they feel whites have visited upon the Negro. The playwright who falls into the trap of doing the reviling loses his intellectual honesty and ends up practicing prejudice in reverse. Secondly, a playwright cannot afford to fall into his own foaming rage. To translate experience into art, he must achieve the same detachment from his own wounds that a surgeon would show. Finally, he must be leary of topical sensationalism. A playwright whose moving finger writes only of the temper of his times will find that all his passion will not bring back to life a single word he wrote, once the temper of that time has cooled.

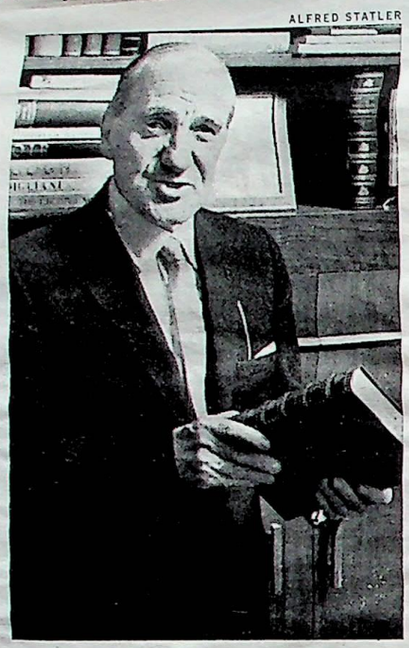
After screening the movie *John Goldfarb, Please Come Home*, the University of Notre Dame haled 20th Century-Fox into New York State Supreme Court on the ground that its $4,000,000 farce "causes irreparable injury to the high prestige, reputation and good will of the university [TIME, Dec. 18]." Warmly agreeing, Justice Henry Clay



ALFRED STATLER

JUSTICE GREENBERG
A clear case of commercial piracy.

Greenberg *last week slapped* a temporary injunction against the film's scheduled Christmas Day opening. "The script is ugly, vulgar and tawdry," said Greenberg. "This is a clear case of commercial piracy."

So valuable are Notre Dame's name and symbols that on occasion it has licensed Hollywood to use them at a tidy profit to itself. Twentieth Century-Fox, however, got no permission before plunging ahead with a film in which a befuddled Notre Dame football team is corrupted by Nubian dancers and walloped by treacherous Arabs coached by a Jewish U-2 pilot working for the CIA in a mythical Middle Eastern country. To the Rev. Theodore M. Hesburgh, Notre Dame's president, whom the film depicts as "Father Ryan," there was only one answer: John Goldfarb, please go away.

"Patently Preposterous." In granting Hesburgh's wish, Justice Greenberg set a precedent that may widely affect publishers and other moviemakers if it survives in higher courts. Because a man's name is a property right, Greenberg might have enjoined the film solely on the ground that Father Hesburgh, who was easily recognizable as Father Ryan, had not given his consent. But Greenberg went farther. A university's name is also a property right, he said. To be sure, others may freely exploit it, and for profit, by virtue of the public's "right to know" and a constitutionally protected free speech and press. "Where, however, the use exceeds the bounds of legitimate public interest," said Greenberg, "the law will enjoin such exploitation."

Twentieth Century-Fox argued that "the plot is so patently preposterous that no one with the slightest sense of proportion could take it seriously." Precisely, said Greenberg. The film is not "a satire, burlesque or any other form of literary portrayal or criticism" of Notre Dame or its team. "The glaringly evident purpose and effect of defendants' 'tacking on' of the name and symbols of Notre Dame were to capitalize on the commercial value such name and symbols had acquired in the minds of the consuming public."

Despite Twentieth Century-Fox's plea that it has millions tied up in the film, it was Greenberg's *opinion* that "the rights of property and of privacy far outweigh any financial consideration." Fox "should have known that it could not appropriate another's property, created as the result of years of sacrifice and endeavour."

Out of the Briar Patch

Indicted by a North Carolina grand jury for committing a homosexual act, Defendant Robert McCorkle pleaded no contest, got a five-year sentence and served only 17 months before being paroled. Max Doyle pleaded not guilty, was tried and sentenced to not less than 20 or more than 30 years in prison.

The oddly disparate sentences were handed down by the same judge, acting under an equally odd state law based on an English statute of 1533 that made homosexuality a capital offense. As adopted in 1837, the euphemistic North Carolina law reads: "Any person who shall commit the abominable and detestable crime against nature, not to be mentioned among Christians, wi either mankind or beast, shall be a judged guilty of a felony, and sha suffer death without the benefit of cler gy." As it stands today, the law omit death and Christians, but prescribes a whopping sentence of up to 60 years.

Disposal Law. Not until Doyle's case had the North Carolina law imposed on adult males a sentence longer than five years. But Doyle, the town transvestite, was something of a public nuisance. Previously convicted for prostitution, he wore women's clothes even at his trial. The court simply disposed of the defendant by sending him to prison for what would have amounted to the rest of his life.

Doyle's sentence was twice as long as the one North Carolina gives an armed bank robber, three times longer than a train robber's, 30 times longer than a drunken driver's. His alleged crime—a single homosexual act between consenting adults—is a misdemeanor in New York; in 24 other states, homosexual offenses are punished only when *openly* committed, as Doyle's was not. The prestigious American Law Institute aims to exempt private "deviate sexual behavior" between consenting adults, punishing only those involving force or corruption of children.

Second Chance. Amid these winds of change, Doyle eventually got his case before North Carolina's liberal U.S. District Judge James B. Craven by petitioning for a writ of habeas corpus. Stunned at the record, Craven suggested there was a violation of the Eighth Amendment's guarantee against cruel and unusual punishment. Restricted by precedents, however, he simply ordered a new trial on the ground that Doyle had been unlawfully imprisoned because his court-appointed lawyer had had only a few hours to prepare a defense. In a scathing order, Craven told North Carolina that imprisoning rather than treating Doyle "is a little like throwing Br'er Rabbit in the briar patch." And he asked: "Is it not time to redraft a crim-

inal statute first enacted in 1533? And if so, cannot the criminal-law draftsmen be helped by those best informed on the *subject*—medical doctors?"

Whatever the legislature's answer will be, Doyle last week stood trial again—in subdued men's clothes—and on the stand readily admitted that he is a homosexual. "By choice?" pressed the prosecutor. "God in heaven knows, no," said Doyle. Said his lawyer to the jury: "[illegible] and I. It could happen of God" [illegible]. The jury acquitted Doyle and set him free after three years in jail.

COURTS

Problem of Quality

Is he an ambassador? Is he a Cabinet member? Though the title has an august ring, a U.S. commissioner is not nearly so easy to define. In Mississippi, for example, a suddenly famous U.S. commissioner has turned out to be a middle-aged spinster totally devoid of legal training, but with the power to release 19 men accused of complicity in the *murder* of three civil rights workers, on the ground that one accused's confession was "hearsay" (TIME, Dec. 18).

Commissioner Esther Carter's ignorance is in the best (or worst) tradition of an ancient office that now requires no special qualifications whatever. In 1793, Congress began appointing "discreet persons, learned in the law" to accept bail in federal cases. The qualifications died in 1896, when Congress handed over the appointments to U.S. district judges. Today's 700 U.S. commissioners may be butchers, bakers or candlestick makers. Yet they function as the federal judiciary's committing magistrates, hold preliminary hearings and determine whether accused persons shall be released or held for trial.

Limited Power. The key test for holding a person is "probable cause"—a fluid concept that Chief Justice John Marshall defined in the 1807 Aaron Burr treason case as "evidence furnishing good reason to believe that the crime alleged has been committed by the person charged with committing it." Such evidence may be no more than an FBI agent's testimony, or the arrest warrant signed by the commissioner himself. The evidence may be inadmissible at the accused's eventual trial. It may be insufficient for indictment by a federal grand jury, which is the sole indictor under federal law. All a U.S. commissioner really determines is whether it seems more prudent to hold a suspect until the grand jury considers the case than to free him.

If the Government has trouble finding evidence, commissioners may grant continuances until the case is better prepared. But they have no power to determine guilt or innocence. According to the Justice Department, Miss Carter was clearly out of line when, on the whispered advice of a local district judge's law clerk, she invoked the trial standard of hearsay evidence. But except in big cities, where most commissioners are seasoned lawyers, such ignorance is probably widespread. According to a recent study, the commissioners of one North Carolina federal district have meted out fines, put defendants on probation and even tried cases for offenses over which they had no jurisdiction whatever. None of the commissioners in question is a lawyer.

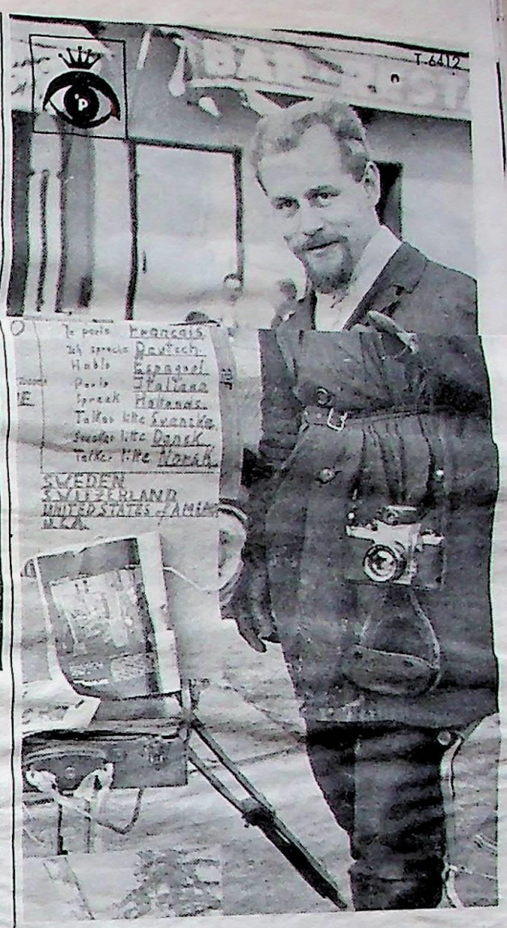
Chaotic Mess. One probable explanation for the poor quality of commissioners is money: they are paid entirely on a fee basis ($6 for signing a search warrant, for example), with an annual maximum of $10,500. Only 25 commissioners hit that level last year; more typically, Miss Carter earned $904. Another problem is that commissioners, who serve four-year terms, are under the thumb of district judges, who may fire them without showing cause. As a result, quality varies widely.

"It's not a system at all," says Warren Olney III, director of the Administrative Office of U.S. Courts. "It's a chaotic mess." Olney points significantly at Detroit, which has not had a U.S. commissioner for 16 years. Detroit's federal judges serve as committing magistrates themselves. "You don't find bail-bond brokers hanging around the courthouse in Detroit," says Olney, which raises the suspicion that maybe one of the commissioners' first functions is to keep bail bondsmen in business." Olney concludes: "Detroit is better off without a U.S. commissioner."

LYNN PELHAM—RAPHO-GUILLUMETTE

LEAVING U.S. COMMISSIONER'S OFFICE*
A search for probable cause.

* Alan Kuhn and Jack ("Murph the Surf") Murphy, two of the accused in Manhattan's spectacular Museum of Natural History jewel theft. Originally held in $20,000 bail by Miami's U.S. Commissioner Edward Swan, the pair found their bonds hiked to $50,000 in New York Supreme Court last week.



Just hold an Asahi Pentax

... AND YOU BEGIN TO UNDERSTAND WHY THIS CAMERA IS THE ULTIMATE CHOICE OF DISCERNING PHOTOGRAPHERS ALL OVER THE WORLD.

Asahi Pentax is a beautifully balanced instrument. It's smooth. Precise. Incredibly accurate. Very easy to handle. It *feels* right. Fast too. It's meticulously constructed for constant heavy handling. And the lenses are outstanding both in appearance and performance. Another real advantage of an Asahi Pentax is its *do-anything* versatility. The comprehensive range of high quality accessories enables you to build up a complete system which prepares you for any demand: from microphotography to extra long range telephotography, high speed action subjects to portraiture. *Just hold an Asahi Pentax at your dealer's soon!*

MUSIC is a matter of interpretation, temperament. It lives only in performance. In reporting on the arts, TIME is concerned with the performer as much as the work; in following all the news, TIME is concerned with the personalities as well as the events.

REPERTORY THEATER

After the Fall

The concept of the repertory company is several thousand years older than Shakespeare: a troupe of actors who can perform in any of a dozen or more plays. By contrast with the one-shot, boffo-or-busto standards of commercial Broadway, the dream of the modern rep company is to produce plays that have merit in dramatic literature but only moderate box-office potential, to try out experimental plays and at the same time serve as a living library of the great classic plays of the past, to take green actors and train them to maturity in roles of all sizes, ages and centuries.

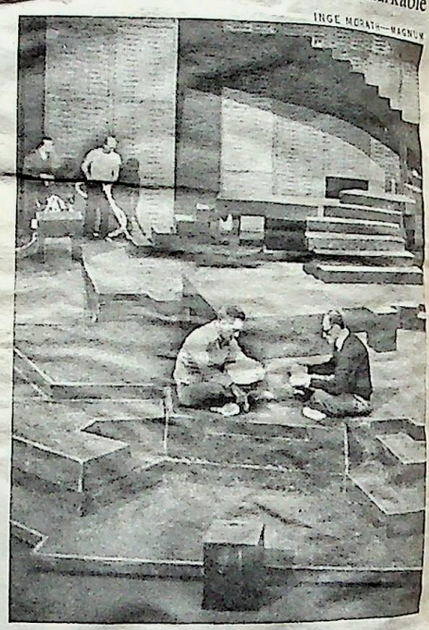
The most ambitious effort in the U.S. to date has been Manhattan's Lincoln Center Repertory Theater, playing for the past year in a temporary Greenwich Village theater and scheduled to move into the Lincoln Center complex next fall. Last week the dream had all but ended. Director Robert Whitehead had been forced out of his job; Director Elia Kazan had followed suit and resigned; and Arthur Miller, the rep company's principal playwright, had given up his association with the theater.

Compounded Errors. What had happened? Critics doubted that the trouble was money. There had been deficits, but they were less than the deficits that had been expected and budgeted. Nor was the massive head-lopping merely a power struggle within Lincoln Center's family of music, dance, opera and theater. Guilty of some miserable productions, the repertory theater had been ultimately damned by its successes; the company that had been created to help revitalize the New York theater has succeeded only in imitating what is already there. News pictures of Miller and Kazan sweating out the "death watch" for daily reviews after an opening illustrated how far they never got from Broadway.

The Lincoln Center rep company began compounding its errors from the outset. When it was set up nearly five years ago, the directors' first move was to go for Broadway brand names and select two of the best: Whitehead, producer of *Bus Stop* among other things, and Kazan, one of Broadway's most celebrated directors, who staged *A Streetcar Named Desire* and *Cat on a Hot Tin Roof*. Arthur Miller, after eight years of silence as a playwright, offered his services, which at the time may have appeared to be a dividend.

Miller Showcase. Demonstrating their Broadway orientation, Elia Kazan and Whitehead selected Miller's *After the Fall* as their first production. Whatever one thinks of the play, the one thing one can assuredly say is that no Broadway producer would have turned it down. A distinct timidity about striking out to new, non-Broadway frontiers was thus apparent at the beginning. The second choice, Eugene O'Neill's *Marco Millions*, served mainly to display the panoramic flexibility of the Washington Square stage, a genuflection to physical plant rather than inner spirit. The third selection, S. N. Behrman's *But for Whom Charlie*, was like buying Broadway goods at a fire sale; Behrman is now 71 years old, and *Charlie* is, in fact, an old man's play, a drawing-room harangue about a great deal in the contemporary world that Behrman finds most offensive.

This season the rep company began with its worst fiasco yet, a revival of *The Changeling* that revealed just how inept the company, as presently assembled, is. For example, Actress Barbara Loden, who seemed to be a remarkable



KAZAN & MILLER ON STAGE
Broadway goods at a fire sale.

find as Marilyn Monroe in *After The Fall*, turned out to be embarrassingly like what one would expect Marilyn to have been if she had ever played Dostoevsky, as she was forever hoping to. And with *Incident at Vichy*—Arthur Miller's new hit—things came full circle. Thus, approximately one year after its opening, Lincoln Center has served as little more than a showcase for Miller, an established Broadway talent.

A curious final irony is that while the Lincoln Center rep group has been failing so clamorously, a repertory company has quietly come to the city's Phoenix Theater that is everything the Lincoln Center group might aspire to be. Called the Association of Producing Artists, it germinated as a professional acting company touring the provinces, now alternates between the University of Michigan and Manhattan. Its current production of Shaw's *Man and Superman* is exquisitely performed, brilliantly thought out, and acted with a thoroughgoing ensemble spirit. A.P.A. took

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

five years to reach its present perfection; Lincoln Center apparently expected its own repertory company to rise full-grown like Athena from the brow of Zeus.

ACTRESSES

"Our Eyes Have Fingers"

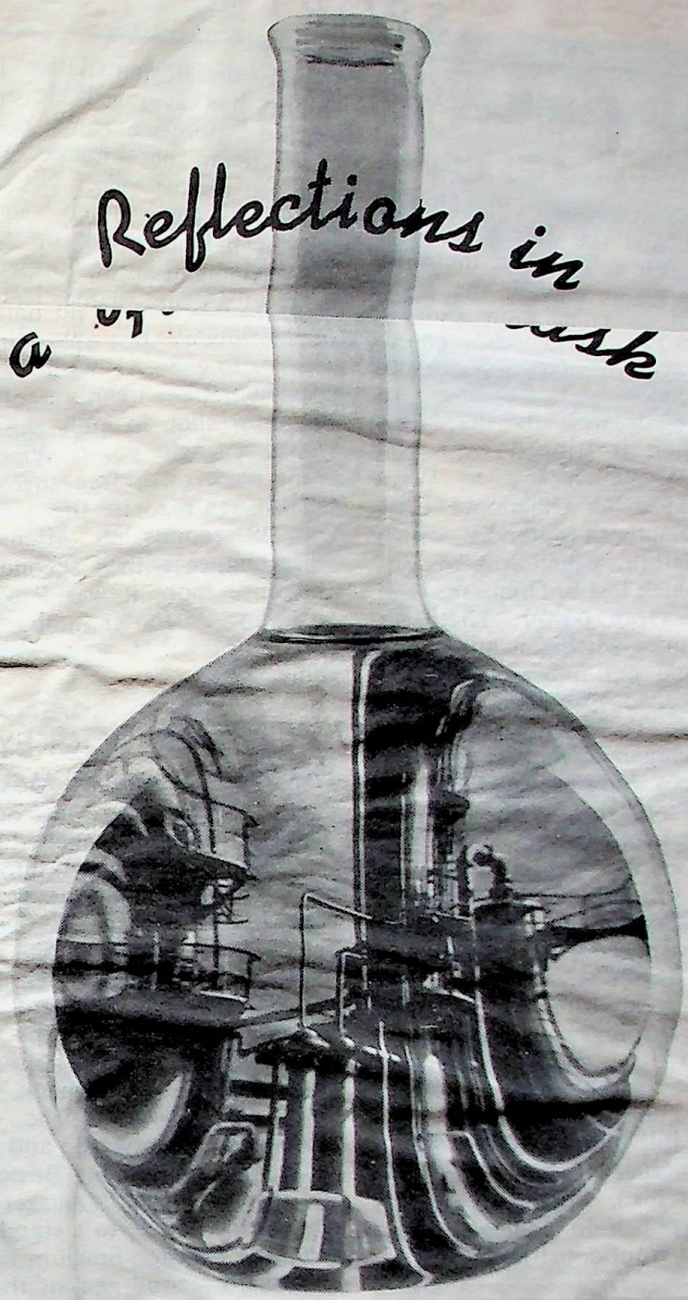
From New York to Puerto Vallarta to Big Sur to Paris, LIFE Magazine Reporter Elizabeth Taylor [illegible] her story in automobiles, hotels, restaurants. From nearly 40 hours of tape came a 6,000-word first-person article, published last week in LIFE. Some passages from her apologia:

"I'm *not* a 'sex queen' or a 'sex symbol,'" said Taylor. "I don't think I *want* to be one. Sex symbol kind of suggests bathrooms in hotels or something. I do know I'm a movie star and I like being a woman, and I think sex is absolutely gorgeous. But as far as a sex goddess, I don't worry myself that way . . . Richard is a very sexy man. He's got that sort of jungle essence that one can sense . . . When we look at each other, it's like our eyes have fingers and they grab ahold . . . I think I ended up being the scarlet woman because of my rather puritanical upbringing and beliefs. I couldn't just have a romance. It had to be a marriage . . ."

First husband was Nicky Hilton: "I got married at barely 18. I really *did* think that being married would be like living in a little white cottage with a picket fence and roses." No. 2 was Michael Wilding, "who was much older than I was." No. 3 was Mike Todd, "a marvelous man. He had a joy, a vitality that was so contagious, so flamboyant. He was a real con artist. He could con the gold out of your teeth." No. 4 was Eddie Fisher: "I really thought for some idiotic reason that Eddie needed me. It turned out all we had in common was Mike."

Cleopatra produced No. 5: "The way I began falling in love with Richard was very funny, really . . . The first day we were to work together, I've never seen a gentleman so hung over in my whole life. He was kind of quivering from head to foot and there were grog blossoms—you know, from booze—all over his face. He ordered a cup of coffee to sort of still his trembling fits and I had to help it to his mouth, and that just endeared him so to me. I thought, well, he really is human. He was so vulnerable and sweet and shaky . . .

"It's so hard to talk about all this," Liz says near the end, "and I'm not sure I should. I have such an ingrained sense of privacy. It sounds like I'm trying to explain myself, justify myself, like most of us do when we make mistakes. And it's so undignified . . . I have paid and Richard has paid through both of our hearts and our guts. Our brains have bled . . . I have learned, however, that there's no deodorant like success."



We can't imagine a more fitting symbol for Toyo Koatsu.

Chemistry's our line . . . production and technique. To 30 countries we supply chemical fertilizers, industrial chemicals, synthetic resins & plastics. Toyo Koatsu production methods and techniques are licensed to the industry of 14 countries.

We produce, or help you produce, chemicals from A.B.S. resin to urea. We're *only* a cable's length away.

COLLEGE BASKETBALL

Shall We Dance?

Who's No. 1? Who's No. Anything? The college basketball season is already a month old, and the only thing anybody can say for sure is that there are thousands of teams playing the game. All it takes is a dance floor and two peach baskets, and the next thing anybody knows there's a team. "We're unbelievably good," said Coach Dave Strack. His team won its first four games, but then it tripped over Nebraska (74-73), which lost to Wyoming, which lost to Oklahoma City, which lost to Southern Methodist, which lost to Vanderbilt, which lost to Virginia Tech, which lost to Duquesne, and so on to the 16th power. That was enough to bounce Michigan out of the No. 1 spot and put unbeaten Wichita in. What happened, of course, was that Wichita lost too. To Michigan last week.

Maybe Michigan is the best after all. The Wolverines have a vacation date in Manhattan—playing in the Holiday Festival tournament—which means that they will be among the few Michigan students who will not spend New Year's Day in Pasadena, watching their football brethren work out against Oregon State in the Rose Bowl. And that is undoubtedly a good thing for Oregon State, because if things get sticky, Michigan's football coach might be tempted to put the basketball team to work. They average 206 lbs. per man.

In Center Bill Buntin (6 ft. 7 in., 232 lbs.) and Guard Cazzie Russell (6 ft. 6 in., 220 lbs.), Michigan has the best one-two punch in college basketball. A rugged front-court fighter in the mold of the Boston Celtics' Bill Russell, Buntin has averaged eleven rebounds and 16.6 points a game. Against Duke —the team that knocked the Wolverines out of last year's N.C.A.A. championships—his clutch shooting (17 points) helped break up a 69-69 tie, give Michigan an 86-79 victory.

ART SHAY—SPORTS ILLUSTRATED

MICHIGAN'S RUSSELL
Bring on the harem girls.

The Wichita game last week was Cazzie Russell's chance to shine. Held to [illegible] points, Wichita was leading 84-81 with 1½ minutes to go, when Russell sank a soft, one-handed jump shot to pull the Wolverines within a single point. Wichita got one point back on a free throw, but Russell hit again to tie the game at 85-85 with 28 seconds left. Michigan got another chance with 4 seconds to play—and once more it was Russell, sinking an arcing 25-footer at the gun for the two points that gave Michigan the game, 87-85.

ICE HOCKEY

The Well-Mannered Mesomorph

Only 35 sec. were left on the clock. The Boston Bruins benched their goalie, sent an extra forward into the game, mounted a desperate attack. But a Chicago player picked off the puck and passed it to a burly blond with No. 9 on the back of his Black Hawks uniform. Gathering it in at full speed, Bobby Hull rocketed down the rink. At the blue line, a Boston defenseman unlimbered a vicious body check. Almost casually, Hull bounced the defenseman aside, leaned forward, and flicked the puck straight into the Boston net. The red light flashed, the buzzer rang; Hull skated off the ice, to a standing ovation from the Chicago Stadium fans. He had scored his second goal of the night, the 250th of his N.H.L. career—and the Black Hawks had beaten the Bruins, 7-5.

Rare Treat. Cheers are a rare treat for the Black Hawks—the only team in the National Hockey League that has never won a championship. "If we won 69 games and lost only one," grouses Goalie Glenn Hall, "the fans would boo us for that one loss." But things are looking up. Last week's victory over Boston was the Hawks' fifth straight. Three nights later, they made it six in a row, shellacking the front-running Montreal Canadiens 6-3, to move within a game of the league lead.

Ask anybody in Chicago how come, and they start talking about Left Wing Bobby Hull, 25, whose sensational scoring streak is the talk of the young season. In 27 games, Hull has scored 27 goals, close to one-third of his team's total and more than twice as many as anybody else in the N.H.L. Against the Canadiens last week, he got two—plus two assists—and only a prolonged slump or injury can keep him from passing Maurice ("Rocket") Richard's mark of

FRED SCHNELL

CHICAGO'S HULL
Send out for cheerleaders.

50, a season record that has been tied twice in 19 years (once by Hull) but never beaten.

Hull is the N.H.L.'s fastest skater (a Canadian research institute clocked him at 28.3 m.p.h. on a typical dash down the ice), and its hardest shooter: his lefthanded slap shot zips toward the goal at 118 m.p.h.—19 m.p.h. faster than the fastest measured pitch-in baseball. Even his backhand tops 90 m.p.h. "Stopping one of Hull's shots on the pads is like being slugged by a sledge hammer," says Toronto Goalie Johnny Bower, and when New York's Jacques Plante tried to block one of Hull's slap shots with his gloved hand, it numbed his arm all the way to the elbow. The research institute concluded that Hull (at 5 ft. 10½ in., 194 lbs.) is a "perfect muscular mesomorph"—which is more or less what his opponents have been saying all along. "Somebody ought to put hobbles on him," growls Detroit's Gordie Howe.

Come to Play. A prodigy from the backwoods of Ontario, Hull signed his first pro contract at 14 (for a bonus so small that "I'm ashamed to mention it now"), cracked the big leagues in 1957 at 18. Since then, he has led the N.H.L. three times in goal scoring, twice in total points (goals and assists). The marks of his trade show on his face; it is cross-hatched with scars, and his two front teeth are gone. But Hull has missed only eight games in his career because of injury. He scored eight goals in the 1963 Stanley Cup playoffs despite a shattered nose and cheekbone, and his manners are practically faultless: so far this season, he has spent only 16 min. in the penalty box.

"Bobby just loves to play this game," says Black Hawks Coach Billy Reay. "He can't get enough of it." Last week against Boston, Hull was on ice a full 35 min.—playing left wing on one Black Hawks line, filling in for an injured teammate at right wing on another line, substituting on power plays when Boston had a man in the penalty box, serving on the Hawks' own special penalty-killing squad. Said Bobby afterward: "I could have gone some more."

GOLF

Welcome to the Club

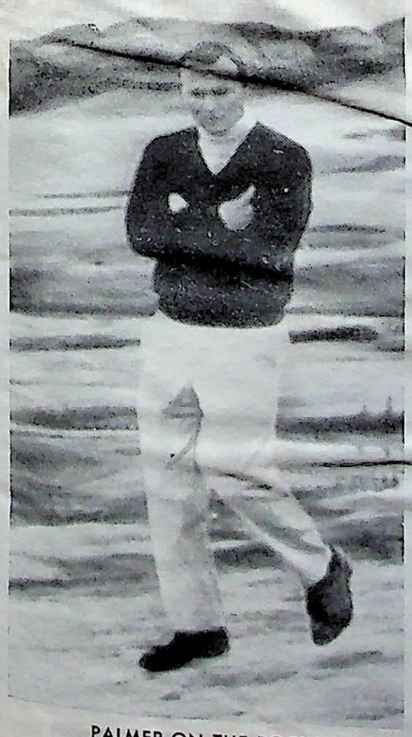
There are football All-Americas, basketball All-Americas, baseball All-Americas, hockey All-Americas, soccer All-Americas, lacrosse All-Americas, *little* All-Americas, high school All-Americas, silver All-Americas, sometime All-Americas and all-time All-Americas. Who needs another All-America [illegible]? At least that was what *Golf* Magazine thought. Last week, after polling 400 sportswriters, it came up with a 1964 All-America Golf Team. It was a little tricky, because golf—man *v.* himself—is hardly a team sport. But that was solved by rooting through the golfer's bag and picking players for their proficiency with specific clubs. Jack Nicklaus thereby became Driver of the Year—a masterpiece of circumlocution, considering that he was good enough with all the clubs to win $113,284 this year.

Arnie Palmer was picked for the long irons, Bobby Nichols for the middle irons, Ken Venturi for the short irons, Billy Casper for putting. The palm for fairway woods went to South Africa's Gary Player—which is a little like naming Australia's Roy Emerson to an All-America tennis team because he won the Davis Cup. Tony Lema took the pitching-wedge award, although he left his wedge in the bag and did most of his pitching with a No. 7 iron when he won the British Open.

Julius Boros got the sort of backhanded compliment that caddies give big tippers: he was picked as the best man out of traps with a sand wedge. "If I hadn't practiced," said Boros modestly, "I couldn't possibly have won. There are many fine wedge players in the game, and none of them got there the easy way."

Now that the ice has been cracked, the possibilities are endless. They could, for instance, give Phil Rodgers the Tannenbaum Award for trying to play his ball out of a spruce tree, taking a quadruple-bogey 8 in the process, and blowing the 1962 U.S. Open. Arnie [illegible] strokes he took in the [illegible] off Pebble Beach, Calif., last January. And how about a Diamond in the Rough for Bobby Nichols, who drove into the rough on nine out of 18 holes at this year's P.G.A. Championship, hit a tree and three traps, still scored a 69 for the round, and won the tournament? One thing, though, about *Golf's* team: it is the richest All-America around. The poorest man on the squad is Julius Boros, and he merely made $28,232 this year.

AP



PALMER ON THE ROCKS
Anyway, he's rich.

SCOREBOARD

Who Won

▶ Tulsa: a 14-7 victory over Mississippi, in the Bluebonnet Bowl at Houston. Tulsa Quarterback Jerry Rhome was the whole show, completing 22 out of 36 passes for 252 yds., running for the first touchdown himself, flipping a 35-yd. pass to Halfback Ed Fletcher for the winning TD. At the Atlantic City Convention Hall, site of last August's Democratic National Convention, Utah trounced West Virginia 32-6 in the Liberty Bowl—first indoor bowl game ever. The temperature was a pleasantly cool 60°, and Utah Halfback Ron Coleman was red-hot: he gained 154 yds. on 15 carries, including a 53-yd. touchdown burst.

▶ Sam Snead and Shirley Englehorn: the $40,000 Haig & Haig Scotch Mixed Foursome golf tournament, at Sebring, Fla. Taking turns hitting the ball, Sam and Shirley, who won one tournament and $19,582 on the ladies' tour this year, shot a final round 65 to beat Dow Finsterwald and Marlene Bauer Hagge by one stroke. Shirley's contributions to the partnership included a 25-ft. putt for one eagle and a 50-yd. wedge shot into the cup for another.

▶ Joey Giardello: a unanimous 15-round decision over Rubin ("Hurricane") Carter, 27, in a middleweight championship fight at Philadelphia's Convention Hall. Carter's looks (shaved head, drooping Fu Manchu moustache) and ring credentials (a one-round knockout of Welterweight King Emile Griffith) were impressive enough to make him the betting favorite at 11-10. But they hardly awed Champion Giardello, 34, who was fighting his 127th professional bout. Counterpunching craftily, scoring heavily with short, chopping hooks, Giardello won a lopsided victory, to the delight of 6,000 home-town fans.

SURGERY

Repairing the Royal Aorta

Music by Muzak was soft and low. *Two Sleepy People* and *So Beats My Heart for You* flowed over the operating room in Houston's Methodist Hospital. But the patient on the table, His Royal Highness Prince Edward Albert [illegible] surgeon Dr. Michael E. DeBakey was scarcely listening as he performed an operation that only a few years ago would have seemed dangerous indeed. He slit open the 70-year-old duke's belly and cut down to the aorta, the body's main artery, on which he found a 4-in. section that had swollen into an aneurysm, much as an inner tube will balloon through a weakness in its rubber wall. In 67 min. of delicate surgery, Dr. DeBakey cut out the aneurysm and replaced it with a length of knitted Dacron tubing.

First Hint. The blood royal is no exception to the rule that blood flowing through the arteries exerts considerable pressure and needs strong-walled vessels to keep it in place. This is especially true of the aorta, largest of all arteries. It is a three-ply tube, about one inch in diameter where it descends through the abdomen, carrying blood for the lower organs and legs. The middle layer (the "media," to anatomists) is muscle, and it is a break in this layer that leads to aneurysms. In the vast majority of cases, the first cause of the break is unknown,* and the beginning of the aneurysm's growth may easily go undetected.

The duke had no hint of trouble until about four years ago. Then, during a routine checkup, Manhattan's Dr. Arthur Antenucci diagnosed an aneurysm that required watching. But it was too small at the time to justify the major surgery that would be involved in its removal. No special diet was needed, no drugs. How little distress the aneurysm caused the duke [illegible] year on his movie, *A King's Story*.

No Rush. But this month the aneurysm grew rapidly. The elastic outer layer of the aorta was being stretched thinner and thinner, with increasing danger that it might burst and loose a fatal flood of blood into the abdominal cavity. Dr. Antenucci ordered X rays, which showed that the aneurysm had increased in size, and within a week had grown bigger than an orange. The beat of the blood pulsing through it could be felt by the doctor's hand. And it was in an especially dangerous location, below the branching of the kidney arteries (*see diagram*). It was time for surgery, but there did not seem to be much of a rush —the duke went to Houston by slow, jolting train.

For Dr. DeBakey, who developed the operation and has already done it 6,500 times, the procedure was routine. But after he made a 6-in. incision through the duke's lean abdominal wall, the surgeon discovered that the aneurysm was even bigger than expected. "The size of a small cantaloupe or large grapefruit," he reported. Instead of a simple balloon shape with a neat "stalk," it was "fusiform," with its base extending along the aorta. Worse, the wall of the aorta had eroded until it was on the point of rupturing.

Skin to Skin. The surgeons put a clamp on the aorta above the aneurysm and another below it. Next, Dr. DeBakey cut out the weakened, ballooning piece of aorta and stitched in the Dacron tube (a material devised to his own specifications). Then he and his assistants opened the clamps to let blood clot in the tiny interstices of the knit. Finally, they took the clamps off for good. It took only 67 min. from the first incision to the closing of the wound ("skin to skin," as surgeons call it). Within 3½ hr., the duke was chatting cheerily with his duchess.

By coincidence, a commoner of uncommon note (and a friend of the duke's) had had the same operation at Lebanon Hospital, Gloria Morgan Vanderbilt, 60, had a fusiform aneurysm cut out by Dr. Joshua Fields, and an even more extensive artery replacement. Her graft, made of nylon-Teflon-Dacron and shaped like an inverted *Y*, was attached at the top near the renal arteries. Its shorter branch was joined to the right iliac artery, and a longer branch on the left extended down into the thigh. At week's end, the patient was doing well.

In both cases, the graft will serve as a scaffolding on which the body will build its own tubing of living cells. This tissue by itself will not be as strong as the original muscle, but the combination of knit and tissue will be stronger. Barring unexpected complications, it will easily last as long as the patients live. And they should be able to get around as well as ever, with negligible discomfort.

The Wandering Bullet

It began as just another hunting accident. Young James W. Kelley, 17, was stalking deer in the Maine woods when his friend's .22-cal. rifle discharged accidentally. Kelley was hit in the head. "I didn't feel a thing," he says, "but suddenly everything went black. I remember falling on my hands and knees and hollering 'I'm blind!' "

At Cary Memorial Hospital in Caribou, X rays showed that the bullet had passed through Kelley's brain from a

* In sharp contrast with hemophilia, which Queen Victoria passed on to many of her descendants, the tendency to aortic aneurysms develops in later life and does not appear to be inherited.

point below the right ear and had lodged in the left side of his skull. Dr. Frederick J. Gregory found that the boy's blindness was the result of bleeding inside the skull that caused pressure on the brain. When the hemorrhage was drained and bone fragments were removed, the boy recovered his sight. As for the bullet, it seemed best to leave it where it was.

Kelley recovered rapidly and was ready to go home. A final decided on a last-minute X ray, a final checkup for safety's sake. The results were astonishing: the bullet seemed to have disappeared. Then another X ray found it—lodged in the right ventricle (lower chamber) of Kelley's heart. Medical annals are full of cases in which wandering bullets have traveled from the chest, say, to such unlikely places as the knee. But the young Maine hunter had set what astounded doctors thought might be something of a record. Having been shot in the head, he wound up wounded in the heart.

Kelley was rushed by ambulance to Maine Medical Center in Portland, where Dr. Clement A. Hiebert had to do a 3½-hr. open-heart operation using a heart-lung machine to remove Kelley's bullet. But no less remarkable than Kelley's survival was the strange and tortuous route that the bullet fragment had followed. Slowed by smashing through his skull, it had landed in the left transverse sinus (a large vein). Then it had "flowed" in the bloodstream along the transverse sinus, down the main jugular vein and superior vena cava, into the right auricle (upper chamber) of the heart and through the tricuspid valve into the right ventricle. Thanks to the heart's muscular contractions, the fragment had worked halfway through the heart wall. If it had gone all the way, Kelley, who was ready to go home last week, would probably have died—just as if he had been shot in the heart in the first place. As it is, he will go home for Christmas.

Slow route through the skull

OBSTETRICS

A Cold Bath for Baby

To the vast majority of obstetricians it has always seemed not only sound medical practice but also plain common sense to keep a newborn baby warm—especially if it has difficulty beginning to breathe. In such cases, doctors have a standard treatment: with the baby held head down, they suck fluids out of his nose, mouth, throat and bronchi, and give oxygen. If after five minutes the baby still does not breathe, they may try artificial respiration or give more oxygen. But with the baby kept warm.

To Anatomist James A. Miller Jr. this seemed like one case in which common sense was dead wrong. Since the brain's extraction of oxygen from the blood is a biochemical process, Miller figured that a cooled brain will consume less oxygen, and be in less danger of damage from oxygen deprivation, than a warmed brain. Working with his wife Faith, also an anatomist, and using guinea pigs at Atlanta's Emory University, Dr. Miller found what he considered proof of his reasoning.

That was back in 1949, and all but a few U.S. obstetricians have remained terrified of putting a baby in an icy bath. But last week the Drs. Miller, now at Tulane University, told a Manhattan meeting of the American Academy for Cerebral Palsy that in Finland, Sweden and Switzerland, 150 babies have been chilled and not killed. The few who have died after cooling almost certainly would have died without it. And among the survivors, cerebral palsy is rare or unknown, whereas among babies who have suffered the same breathing difficulty and have been kept warm, cerebral palsy is common.

Dr. Miller does not advocate chilling as a routine treatment for the newborn. Indeed, he insists that it should not be started until a baby has failed to breathe for five minutes after delivery.* Then, while efforts to start respiration continue, the child should be immersed in cold tap water, flat on his back, so that only his mouth, nose, eyes and untrimmed umbilical cord are out of the water. The baby's blood may be cooled as low as 68°F. If the procedure ever wins wide U.S. approval, chilling might be helpful for several thousand babies a year who would otherwise die or be doomed to live with damaged brains.

Abortion, Legal & Illegal

Every year a million abortions are performed in the U.S., and 99% of them are illegal. Back-room operations, they endanger a woman's health and life. Some 8,000 are done by physicians in hospitals, with a semblance of legality, but even this is often a fiction. The law in virtually all 50 states declares that a therapeutic abortion is permissible only to save the mother's life. In some hospitals, doctors construe this liberally and do an abortion if the woman threatens suicide, especially if she is unmarried or has been raped.

Last week the prestigious, 3,000-member New York Academy of Medicine reported in effect that New York State's—and most of the nation's—abortion laws are hypocritical, and would be a farce if they did not prove fatal to so many women. Most doctors, said the academy's committee on public health, are so afraid of prosecution that safe abortions in hospitals have become fewer and fewer, while dangerous, illegal abortions have become ever more common.

The academy's prescription: amend the law to permit "therapeutic abortion where there is a substantial risk that the continuance of pregnancy would gravely impair the physical or mental health of the mother, or that the child would be born with grave physical or mental defects." As safeguards, the academy would require prior approval of an operation by a committee of hospital doctors, and the abortion would have to be done by a licensed physician under the usual safe, sterile conditions in a hospital.

TOXICOLOGY

Season's Warnings

Christmas has hazards as well as joys, and some of them are subtle poisons, says the National Safety Council. One old wives' tale holds that a tea brewed of mistletoe leaves or berries* is good for the circulation. Far from it, says the council: the tea can ruin even an adult's circulation to the point of killing him. A likelier danger from the floral decorations of a contemporary Christmas is that a youngster will pull off and chew one of the pretty, pointed green leaves of a poinsettia plant. These contain an acrid juice that can also be fatal.

* In adults, oxygen deprivation causes irreversible brain damage within about four minutes. Nature's wisdom gives the newborn an extra ten or 15 minutes.

* Said by Pliny to have been used by Druids as a cure for sterility, mistletoe extract is occasionally injected as a circulatory stimulant.

SIEMENS

If you ask us:

"Aren't you a bit too far off for us?"

We're no further away than the telephone on your desk. Just ring us up! Active in all branches of electrical engineering, the Siemens Group maintains distribution companies or agencies offering full technical service in more than 100 different countries in all parts of the world. There you will find experienced engineers ready and willing to assist you in solving any given problem. The advantages are self-evident: consultation can begin on the spot. Engineers who are familiar with conditions in your part of the world will be in a position to evaluate experience already gained locally in designing the type of system you need.

And, after your system has been placed in service, we will always be on hand if help should be needed: our worldwide network of installation outposts, workshops and storage depots guarantees dependable customer service.

***The Siemens Group* — your experienced partner in all electrical engineering projects**

Destination: Oblivion?

We're not kidding anybody. Carbon paper will always be with us—in some applications it's the only answer. But there are drawbacks. Carbon paper smudges and smears, it comes off on copies, people and things. It's bulky. After you've used it, you have to throw it away.

That isn't true with NCR Paper. Since it makes copies without pigment (it uses a chemical dye), there's no smudging or smearing—nothing extra to throw away. NCR Paper can save you up to ten times its cost. Ask your forms supplier for proof. Then throw away some of your smudgy, smeary, bulky paper.

NCR *Paper* / multiple copies without carbons

U.S. BUSINESS

AUTOS

Bumper-to-Bumper Crop

f all the year-end statements cus-arily made by U.S. businessmen, the heerful came last week from De-The re reason than most to cheer, have spite crippling strikes that cost them production of more than half a mil-n cars, it appears that the industry have its first 8,000,000-car year in tory in 1964. By Dec. 10 the auto-kers had already sold 7,139,135 pas-ger cars; barring disaster, they are ually certain to sell another 465,000 year's end. With sales of 475,000 reign cars counted in, total U.S. sales 1964 will thus come to some 8,079,-00, about 400,000 more than 1963's time high. In achieving this record, e auto industry probably contributed ore than any other single factor to the ntinued advance of the U.S. economy.

Up to 8,700,000. Now that a new rd in 1964 seems reasonably cer-, the big guessing game is about well the industry will do in 1965. week the top men in Detroit took k ahead, agreed that the industry have another bumper-to-bumper but disagreed—to the tune of t 700,000 cars—about just how the year will be. Cautious but mistic, General Motors Chairman deric Donner predicted that 1965 "could well exceed the long-term estimate of 7,800,000 cars and proximate the levels reached in 4." Chrysler President Lynn Town-said flatly that "the industry is now e process of putting two 8,000,000-years back to back," estimated that 00,000 cars will be sold in 1965. erican Motors President Roy Aber-hy agreed that 1965 sales will sur-ss 1964's, predicted that the industry ll sell 45 million new cars in the next years. Henry Ford II topped them : 1965 sales, said he, "may well be high as 8,700,000."

G.M.'S NEW EASTERN HEADQUARTERS
Controversy in the air.

To demonstrate confidence in their predictions, the automakers scheduled the production of 2,600,000 autos in 1965's first quarter—a record for any quarter—and announced vast increases over 1964 in their spending plans. By maintaining what Chairman George Love calls a "conservative dividend policy," Chrysler was able to raise its capital-spending figures by $50 million to $350 million, 80% of which will be spent in the U.S. Ford hiked its program 50%, will spend $400 million at home and $300 million overseas, although President Arjay Miller said that strike-incurred losses had cost the company 10% of its potential earnings in 1964. General Motors' Donner and President John Gordon raised earlier plans to spend $1 billion to $1.1 billion, 20% more than 1964; 75% will be spent in the U.S. Part of G.M.'s capital spending for the next few years will go into a new Eastern headquarters, a controversial 48-story Manhattan tower that will be completed by 1968 on the site of the tradition-encrusted Savoy Plaza Hotel; G.M. has bought half ownership of the new building from its British planners.

1964's auto sales: Compact sales continued their decline, dropping to only 20.1% of the market from 29% in 1963. Their place was largely taken by the intermediates, which captured about 18% of the market. The Pontiac Tempest, the Oldsmobile F-85 and the Buick Special, all of which were upgraded from compact to intermediate in the fall of 1963, made sales gains of 72%, 41% and 26% respectively. Reinforcing this customer trading-up was a further proliferation of optional equipment, ranging from chrome-plated air cleaners to rear-seat speakers. "So many different combinations are available now," says Pontiac Division's General Manager "Pete" Estes, "that we could build 18,184,320 Pontiacs without building two cars alike."

As usual, there were both winners and losers even in a good year. Ford's highly successful Mustang, a quarter of a million of which have been sold since its introduction in April, helped boost the company's sales 9.6% and increase its share of the market from 25.6% to 27.8%. G.M.'s Chevrolet Division, the industry leader, which sold nearly a third of all U.S. cars a few years ago, actually suffered a 5% decline in sales, dropping to 28% of the market. Sales at American Motors, the compact company that has failed to share in Detroit's prosperity, were down 14%. Despite its plight, American is looking toward the new model year with just as much anticipation as its bigger brothers. In March it plans to introduce a fastback Rambler called the Marlin, hoping that it will serve as good bait for the customers who got away in 1964.

WALL STREET

Assessing Gilt

AAA may mean the American Automobile Association to millions of Americans, but to cities, states and corporations in search of money it is a supreme symbol of solvency, the highest accolade Wall Street can bestow. Armed with that much-sought but carefully dispensed rating, a borrower can attract more investors, get by with paying lower interest rates on loans, and generally profit by the blue-chip aura that prime rating bestows in the business world. As more and more local and state governments look to bond offerings for financing—a new record of $10.3 billion in bonds will be offered this year

DAVID GAHR

MOODY'S ANALYSTS IN RATING CONFERENCE

Letters mean a lot.

—a high bond rating becomes all-important. Last week, for example, when the state of California offered the largest tax-exempt issue floated this year, for $150 million worth of school and general construction bonds, its AAA rating quickly attracted all the lenders it needed.

Trusted Guide. Because investors generally follow their decisions to the letter, the few bond houses that judge who will receive what ratings have become powerful and much-wooed forces in U.S. finance. Even before borrowers register their plans with the Securities and Exchange Commission, they call on one or all of the nation's three bond-rating services—Dun & Bradstreet, Moody's and Standard & Poor's. With briefcases stuffed full of balance sheets and revenue and repayment schedules, they are quizzed by committees of experts. Of the two largest services, Standard & Poor's makes 11,000 ratings a year, Moody's 9,000. "It is a judgment of analysts," says Moody's Vice President Edmund Vogelius. "No computer can come up with a rating."

After every detail is weighed, the committee hands down its decision in a terse alphabetical shorthand. At Moody's, which pioneered the rating system back in 1909, the four top grades are Aaa, Aa, A and Baa, ranging from prime quality to faintly speculative. Standard & Poor's goes in for the upper case: AAA, AA, A and BBB. Dun & Bradstreet, which also owns Moody's but makes its own independent assessments, spells out its scale: prime, better good, good, medium good.

The idea of the ratings is to provide investors with a handy, trusted guide to the borrower's ability to repay. Below the top four grades, down through the Bs and Cs, come the outright speculative bonds. A Standard & Poor's C means that the borrower is not paying interest; D is the lowest, warning investors of a default. For the borrower, the difference of one grade can mean a difference of as much as .5% in the interest rate.

No Hesitation. Though the bond houses inspect the same figures and usually arrive at comparable ratings, Moody's has the reputation of being more conservative, while Standard & Poor's gives greater consideration to future prospects. Last October, for example, Moody's bumped New York State from its prime rating of Aaa to a high-quality rating of Aa because of its concern over the state's need to find new sources of tax revenue. Standard & Poor's stuck by its AAA rating, and so did the bond market, which snapped up the New York bonds without hesitation. Deep in debt from urban renewal, Baltimore last month took a one-grade demotion from Moody's, from Aa to A. Dun & Bradstreet, on the other hand, recently decided that Camden, N.J., deserved a promotion to "good."

The importance of a good bond rating became especially clear last week when two separate Mississippi issues were put on the market. Bankers hardly nibbled at the first one, a $24.6 million water-supply-district issue bearing a Baa rating. The rating made the real difference, Wall Streeters insisted, and plea by the National Association the Advancement of Colored Peo investors to boycott the state. The day two Mississippi school-improve issues totaling $8,775,000 were snap up by two New York syndi Moody's (Aa) and Standard & (A) had decided that the school b had enough gilt on their edges.

CORPORATIONS

An Attraction of Opposites

With its National Broadcasting C its soaring business in color televis and its $560 million a year in defe and space sales, the Radio Corporat of America has long been the wor No. 1 electronics company. Its imagi tive and aggressive chairman, Da Sarnoff, has ambitions for RCA to much more than that. Having emerged from six years of losses on computers, RCA has twice this mo raised its bid to grab more of the worl wide computer market now dominat by International Business Machines. its most costly move since entering t field in 1958, RCA brought out a ne line of computers (called Spectra 70 with integrated circuits that it clai are faster and cheaper to make than transistor circuits that run most co puters. Next, it signed a ten-year agree ment with West Germany's giant elec tronics and computer company, Siemen & Halske, to swap patent licenses a technical data in a bid to compete w General Electric in Europe.

Last week Sarnoff arranged another alliance with potentially vast conse quences. In what would be a $140 mi lion stock swap, he offered to absor Prentice-Hall Inc. of Englewood Cli N.J., a leading publisher of textbook and specialized business literature. A though Prentice-Hall's 1963 sales $68.4 million are dwarfed by RCA $1.78 billion gross revenues, the merg could result in revolutionary advanc in communications and teaching met ods by linking electronics with the pri ed word—for instance, computer-co trolled printing at fantastic speeds d livered electrically to homes and offic

Both firms seem to have just th sort of thing in mind. Highly diversifi Prentice-Hall publishes books, loose-le reporting services, newsletters a training materials, and a subsidiary o fers residence and correspondenc courses in brokerage and investmen The company is also developing audi visual devices and programmed mater als for teaching. Says Chairman (& co-founder) Richard Prentice Ettinge "We're going into an era of educatio involving more than books. We'll p our knowledge together and beat every body." Added Sarnoff: "I believe th will advance the art of communication as a whole."

The merger (still subject to approv by both boards of directors and stock holders) was fostered by the hands

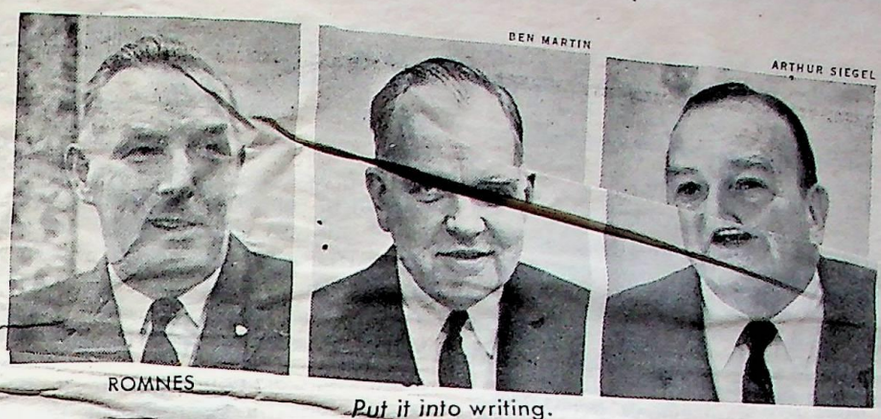
nies. The boss of the $400 million
nt Foods & Industries, he is also a
jor stockholder in McCalls and sev-
l other companies, recently bought
American Broadcasting-Paramount
eatres and acquired a 23% interest in
anada Dry. Simon may crack a few
ecutive heads behind the scenes once
e takes over a company, but his take-
ers have not been marked by public
ncor. Last week, however, he let fly
the former boss of one of his newest
mpanies, excoriating the man in terms
ely heard in the business world.

When he took over last month as
irman of West Virginia's Wheeling
l, said Simon, he found the nation's
th largest steel producer in sorry
e. Wheeling's profits have dropped
most 50% since last year despite a
rise in sales, and its stock has
ped from 41 to as low as 23¼. In
Simon frankly told a special meet
of stockholders in Manhattan, the
pany may lose up to $8,000,000
t year, dividends will have to be
ended for several years, and much
e and new financing may be required
ut the company back in shape. And
was to blame for the mess?

mon laid the blame squarely on
iam A. Steele, 64, the former chair-
n of Wheeling Steel, who resigned a
weeks before Simon took over.

THE NEW YORK TIMES

WHEELING STEEL'S SIMON
Look into the past.



BEN MARTIN

ARTHUR SIEGEL

ROMNES

Put it into writing.

Steele, said Simon, was "not even a good vice president," and his salary of $140,000 a year was "preposterous." Under Steele's direction, said Simon, Wheeling had been "too steel-industry-minded"—it won the praise of the industry for its selected price increases in 1963—and had "wanted to be a good friend and good fellow instead of concentrating on doing a good job."

Simon hinted at possible instances of mismanagement, ordered a three-man committee of review to look into the company's past dealings. The committee's first case: a $70 million Wheeling contract for a Blaw-Knox hot strip mill at a time when, says Simon, Blaw-Knox had little experience in such work—but did have a member on the Wheeling board. Giving Blaw-Knox the order, said Simon, was like "buying an Edsel with a Ford on the board." What did William Steele think of Simon's blast? "Without justification," he said, taking off just enough time from his quail-shooting vacation in Florida to say it.

Three at the Top

Three executives of major U.S. corporations were picked last week for bigger roles of command. The men:

▶ H. I. (for Haakon Ingolf) Romnes, 57, was elected president of American Telephone & Telegraph Co. to succeed retiring Eugene McNeely. Romnes, the Wisconsin-born son of an immigrant Norwegian baker, made his mark at A.T. & T. as an electrical engineer, won six patents in circuit design at Bell Laboratories before moving on to the operating side. As president of Western Electric, A.T. & T.'s manufacturing arm, from 1959 until early this year, he shaved the lead time on orders and deliveries for such critical items as cable. Romnes is a gentle and friendly executive whose great strength is persuasion and persistence; his skill is convincing people that the impossible is possible—and then seeing that it gets done. Moving up from A.T. & T.'s vice chairmanship, he becomes the firm's chief operating executive under Chairman Frederick R. Kappel, who faces mandatory retirement at 65 in January 1967.

▶ Robert P. Williford, 64, who retired last August as the $64,650-a-year vice chairman of Hilton Hotels Corp. (1963 sales: $226 million), was elected the surprise successor to Conrad N. Hilton, 78, as president and chief executive officer. Hilton stepped aside (he remains chairman) only because the SEC and the New York Stock Exchange insisted on separate executives when the company recently spun off its more profitable overseas operations into a separate Hilton International Co. that accounted for $60.3 million of Hilton's 1963 sales. Hilton will continue to head the international branch. Texas-born Bob Williford, a social friend and bridge crony of Hilton, started in 1932 as a $30-a-month room clerk in the original Dallas Hilton Hotel after the Depression collapsed his bond business. Gradually, he became Hilton's closest associate in building the company into the world's largest hotel chain. While Hilton made deals, Williford shaped day-to-day operating procedures. An easygoing executive who campaigns constantly for greater hotel courtesy, he has headed such famous Hilton properties as Manhattan's Roosevelt and Plaza hotels, Chicago's Conrad Hilton and Palmer House. A big color photo of Conrad Hilton dominates his Chicago office.

▶ Henry White Gadsden, 53, will take over as president and chief executive officer of Merck & Co., the big (1963 sales: $264 million) New Jersey pharmaceutical and chemical firm, when his boss, John T. Connor, leaves the post next month to become Lyndon Johnson's Secretary of Commerce (*see* THE U.S.). New York City-born, Yale-educated ('33) Gadsden was a vice president of Sharp & Dohme when it merged with Merck in 1953. As Merck's executive vice president since 1955, with a salary of $124,600 a year, the soft-spoken Gadsden has impressed colleagues with a talent for flawless recall. An administrative catalyst, he likes to have men around him who disagree with one another. Although he gets "many excellent ideas" from "casual chats" with employees on his worldwide visits to Merck plants, Gadsden likes to see things in writing. Says he: "People who can't put ideas into words don't really have a grip on them." Gadsden has a grip on 18,693 shares of Merck (.058% of its common stock), plus retirement incentive and other options on 22,215 shares more.

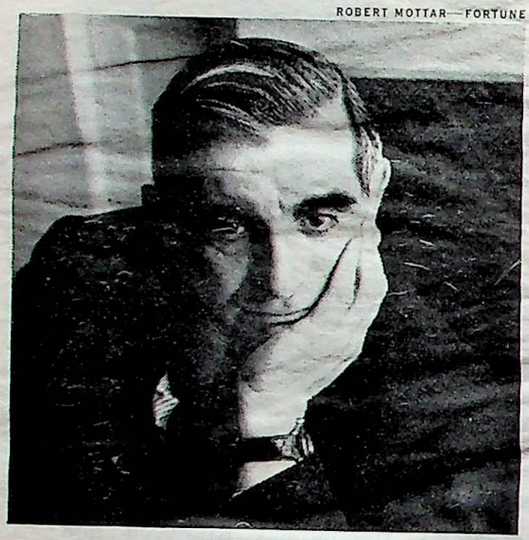
BRITAIN

The Halfhearted Economy

Britain is a tiny land, smaller than Sweden or Italy, but its problems are as vast as its pride. Once the source of the greatest colonial empire since the days of the Romans, it has only with reluctance adapted to an age in which empire has withered—and with it much of the commercial power of a nation that must live by trade or perish. This year has been unkind for Britain; the Labor Party's victory has only served to accentuate problems that the defeated Conservatives had struggled with for months. The pound has been put in peril, confidence in Britain's ability to adjust to the demands of the day has shrunk, and over the island that Blake called a "green and pleasant land" has grown an economic cloud that confuses, frightens and frequently infuriates its stalwart inhabitants.

ROBERT MOTTAR—FORTUNE



SIR LEON BAGRIT
Echoes of peril in an unkind year.

Like a Fire. Last week, only a few weeks after the pound underwent one of its greatest tests of the century, Britain's cloud seemed to darken perceptibly. Talk swept London's City—and the Continent—about the further lack of trust in Labor, about the possibility of the pound's devaluation, and about a deterioration in the balance of trade. Though not all—perhaps not much—of the gossip was solidly based on fact, it burned as persistently and as contagiously as a fire in a peat bog.

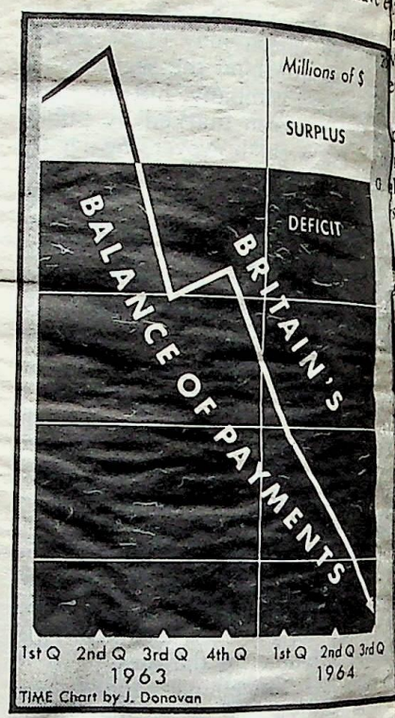
The hard news fed the fire. Britain's government revealed that the trade deficit widened by another $288 million in November. The price of gold was pushed so high by the uncertainty—to the highest level since the Cuban missile crisis—that the Bank of England rushed to support both the securities market and the pound sterling. In a desperate effort to help alleviate its economic problems, Britain announced that it had taken advantage of a 1957 agreement and arranged a postponement of $138.1 million in repayments due the U.S. and $34.3 million due Canada on British reconstruction loans. As if all that were not enough, the General Agreement on Tariffs and Trade (GATT) denounced as "inconsistent" the 15% surtax Britain had placed on imports in an effort to right the out-of-joint balance of trade, and demanded that it be removed. Says Sir Leon Bagrit, the chairman of Elliott-Automation Ltd.: "The British economy is a little like Gulliver in Lilliput, when he could not move because of hundreds of cords holding him back."

Attitude of Insularity. What are the cords that hold back what was once one of the world's most powerful economies—and now is one of its most troubled? There are no great secrets about the failure of the British economy to meet its challenges: its root troubles lie in listless management, the wasteful use of labor, small-scale and inefficient production and indifferent salesmanship. At the heart of these manifestations is less of an inherent economic weakness than a national attitude of insularity, a stubborn refusal from top to bottom to believe that Britain's standard of living—and its standing in a prospering world—depends on how much it can sell to a world that is increasingly choosy about what it buys from whom.

Britain's plight would not be so severe were it not for the nation's present eminence in the world's monetary structure. Such nations as France and Italy are better able to undergo economic crises than Britain, whose sterling is the world's second reserve currency after the dollar. Sterling is thus held temporarily by persons all over the world because of the ease with which it can be used in banking and trading—and many of them tend to unload it as quickly as possible when it seems to be threatened by economic difficulties. Since Britain buys so much more than it sells, three-quarters of its sterling reserves are in foreign hands, a fact that straps the British economy into a straitjacket. The only way out of the jacket is to increase greatly the amount of sterling Britain earns.

Britain needs to import vast quantities of food and raw material to live, but it seems increasingly unable to afford the price of these imports. Although British exports are still among the world's highest and have risen steadily in absolute terms, the nation's share of world exports has been steadily declining. A measure of Britain's plight is that the Beatles' 1963 overseas earnings of $56 million was hailed as a major contribution to the balance of payments. Another measure is that in the past decade Britain has almost exactly reversed positions with Germany, where Britain had 20.9% of world exports of manufactured goods in 1953, and Germany only 13.4%, Germany, by latest figures, has 20.2% v. Britain's 13.7%. In a land that reveres Dickens, Mr. Micawber's terse economics seem very apt: "Annual income twenty pounds, annual expenditure nineteen six, result happiness. Annual income twenty pounds, annual expenditure twenty pounds ought and six, result misery."

No Miracle. Britain's misery lies deep in its industrial and commercial bones. While other European nations have experienced a postwar "economic miracle," Britain's average growth rate over the past decade has been only an unexciting 2½%, among the lowest of Western industrial nations. Its industrial production has increased by only a third in the past decade, while such nations as Japan, France, Germany and Italy have more than doubled production. Improvement in productivity in most branches of British industry has been meager. Britain, in short, has been living considerably beyond her means.



Britain's industry, while boasting some of the world's most efficient companies (such as those in electrical equipment and chemicals) is generally antiquated; three out of every five of its machine-tool population of 1,484,49 are more than ten years old and mo than one in five is over 20 years o While Britain had 75 computers in stalled in 1957 v. 55 for the entire Com mon Market, six years later it had only 550 against the Market's 1,500. U Management Consultant William N Allen has pointed out that it takes three

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

ons to produce a ton of steel *v.* one
erican worker, that shipbuilding in
tain uses about 40% more men than
essary, and that it takes three to
times as long to build a house in
itain as in the U.S. Asked Allen:
Britain a half-time country, get-
half-pay for half-work under half-
ted management?"

Many Britons—as well as others—
that it is. "In this country," says
Leon Bagrit, "there is some resist-
e to change, whereas in ... 'change'
is equated with 'good.'" "What do
need in this country?" asks Joe Hy-
n, chairman of Viyella International.
a word: change, the acceptance of
nge." But no one has better summed
what is wrong with Britain—and
at it needs—than Viscount Watkin-
, the boss of Schweppes Ltd. To sur-
e, he told his countrymen, they must
come "a nation of salesmen."

Bagmen & Touts. The difficulties of
ch a transition can be seen in the
risory names that British give their
lesmen: bagmen, touts, counter jump-
s. The no-sell approach may have been
right in the days when a manufac-
r had only to stamp "Made in Brit-
on his product and wait for the
d to come running for it, but it
not work now. "It certainly won't
r the 1960s," said *The Director,* a
gement publication, "and it could
end of us in the 1970s."

ritain's inability to hold its own in
—while the most dramatic of its
bles—is only symptomatic of the
o-seated attitudes of the British bus-
sman. Britain is operating today at
% of industrial capacity, and at a
1.47% unemployment rate. Under
circumstances, many British exec-
es do not care to expand their op-
ons to scramble for overseas mar-
, where competition is open and
its run to 5% *v.* 15% possible at
me. Of the 6,000 firms in Britain that
port, 200 account for one-half of all
e nation's exports, and fully a third of
e total is accounted for by only 70
mpanies. The remark of I. H. Levi-
n, managing director of the British
oe Corp., is typical of the British
usinessman's attitude: "Exports are
t very profitable, and we can sell all
e want on the home market." Or, as
other British businessman put it, "I
eady have one Rolls. What could I do
h a second?"

British firms, unlike foreign competi-
s, tend to keep their better salesmen
domestic rounds, frequently do not
ther to send salesmen abroad at all,
rely hopefully on agents to sell for
em. Salesmen who do go overseas
en find themselves outnumbered: for
ery British salesman, one survey has
own, there are 2 Germans, 2.3 Amer-
ans and 2.8 Japanese. Salesmen are
equently hampered additionally be-
use their firms neglect to learn the
arket. "Many British manufacturers,"
mplains an Australian department-

BETTMANN ARCHIVE

MR. MICAWBER
In a choosy world, a declining share.

store buyer, "do not even know that American garment sizes are generally used in Australia."

Bad Management. All this adds up to a major failure of British management. Cecil King, chairman of International Publishing Corp., has said: "The standard of management in business in this country is abysmally low. Too many old men cling on long past their ability to contribute anything. Too many jobs are given to school friends or relations." The average age of 100 top British executives was recently given as 61—older than either bishops or members of the Cabinet. Many companies are still family-owned and fusty, and the existence of an "Old Boy" network of gentlemen amateurs discourages the formation of an industrial meritocracy. Many executives lack professional business training—and there are few places where they could train anyway: there are only about 600 management students in the entire country.

While the advance of technology has produced professional managers elsewhere, many of Britain's 500,000 managers are arrogantly suspicious of the new breed of engineers and scientists, and slow to spend money on research. "Of all the countries I know," said Author C. P. Snow, now Parliamentary Secretary of the newly formed Ministry of Technology, "this country respects engineers least." Result: a brain drain that has robbed Britain in recent years of some of its best scientific talent. British managers also tend to look down their noses at the self-made man and in the opinion of Sir George Briggs, deputy chairman of Hawker Siddeley Industries, "to root out the prejudice that trade is non U."

Britain's organized labor has its own set of cobwebs. The archaic trade-union structure, a bewildering complex of 623 unions, is involved in continual controversy over jurisdiction. One firm may have to deal—as does Ford of Dagenham—with as many as 21 different unions within one plant. Still, the lack of notice, severance pay and worker retraining has made British labor among the least protected in all Western countries and often moved workers to resist whatever changes are attempted. This situation encourages overemployment—one of Britain's main labor problems—makes it more difficult and expensive for firms to export, and tends to make all workers progress at the speed of the slowest.

More Than Declarations. To cure such ills, economists believe, Britain must change the very milieu in which its economy operates, acquiring in the process a thirst for efficiency and modernization. The nation that sired the Industrial Revolution two centuries ago needs a new revolution. It can be nothing less than the sort of upheaval that Jean Monnet wrought in France, when in the mid-'50s he was able to shake his nation out of its sloppy practices. The Labor government has made only a beginning: it has offered tax rebates to companies that increase their trade abroad, given new hope and *esprit* to the scientific community. Last week Minister for Economic Affairs George Brown—whose ministry was created by the Labor government—signed with representatives of unions and management a historic declaration of intention meant to keep wages and prices stable.

The deeds and declarations all had a stirring ring, and there are prophecies that Britain is about to rebound. "The giant is now stirring," says Sir Leon Bagrit, "and at last a determined effort to modernize is about to begin." It had better begin soon. In the new world war of hard international trade, the panzers of the more progressive trading nations are often merciless. With too many gentlemen amateurs still in command, the British economy is still badly outgunned.

UNIVERSITIES

The Climate at Berkeley

To mutinous students at the Berkeley campus, the University of California's board of regents last week "reconfirmed" itself as the "ultimate authority for student discipline," and then moved in the direction of granting the major student demand.

President Clark Kerr opened the meeting in the paneled Regents' Room of the University's Los Angeles campus with a long report on such scholarly research as treatment for fruit canker and survival of the condor. Finally, he brought up the subjects that had summoned Governor Pat Brown from Sacramento and newsmen from all over the state. Should the 23 regents under Chairman Edward Carter accept a demand, supported by Berkeley students and faculty, that a committee of professors henceforth pass judgment in student discipline cases? And should the university abandon its regents-conferred right to add its own punishment to any given out by courts to students arrested for illegal action—typically for civil rights demonstrations?

The regents rejected the first proposal by insisting that discipline must remain primarily up to the university administration and ultimately the regents. On the issue of political protests, the regents named a three-member committee to investigate and report next spring. Its instructions are to review university policy "with the intent of providing maximum freedom," including free-speech and due-process protection guaranteed by the Constitution.

One regent summed up the climate of opinion. "Trying to determine what kind of student activity is legal was an ill-conceived stand in the first place," he said. "In the end you have to let the courts decide what is lawful."

Two-Time Winners

Getting a gift of several million dollars "won't make your life any happier," the Ford Foundation's James W. Armsey warns panting university officials. Though the money "is comforting to contemplate, the new level of excellence the grants are designed to help you reach is disturbing and disruptive to achieve." Since 1960, the foundation has generously disrupted ten universities and 47 private liberal arts colleges with gifts amounting to $200 million. Last week Ford raised the total by $18.5 million, awarded matching grants to Brown, Brandeis, and the University of Southern California.

JULIAN WASSER

KERR, BROWN (IN DARK-RIMMED GLASSES) & CARTER AT REGENTS' MEETING

The canker of the fruit, the survival of the condor, and the behavior of the student.

Each school must match the payment within three years—by raising $2 for every $1 of philanthropy in the case of Brown and $3 for every $1 in the case of richer U.S.C. and Brandeis. The rules were familiar. The trio had played the match game before, thus joining a select circle of two-time Ford grant winners.*

▶ Brown, the seventh oldest college in the U.S., earmarked most of its $5,000,000 for construction. Buildings planned or under way range from a graduate-study center and humanities building to a new field house, swimming pool and dining hall for Brown's sister school Pembroke. The gift, said Brown President Barnaby C. Keeney, "is an important event at the beginning of our third century."

▶ U.S.C., which shares the record with Brandeis for matching its earlier grant about two years ahead of schedule, used that money to polish a new reputation for nurturing scholarship as well as football heroes. The administration established cash awards for outstanding teaching and research, revamped the liberal-arts and graduate c lums. U.S.C. will invest its new grant of $7,500,000 in long-ter dowments, use matching funds fo rent operations and plant expansio

▶ Fast-growing Brandeis, having up more than 50 major building years, will slow down the rate o construction. Almost all of its $6,0 000 from Ford will go toward sch ships, fellowships, and endowme more than 30 faculty ch endowment; $400,000). "Here we a teen-ager among the universit ants," said President Abram L. Sach "and we had better be good to wa going steady with the best." With latest gift, he added, "we will secu virtually all our tenured professorsh in one fell swoop. This will make ac demic history."

* Others: Johns Hopkins, Notre Dame.

TEACHING

New Views on Grades

Schools use the word grade in tw quite different senses: as a chronolog cal measurement of class levels and a mark of student performance. By c incidence, there is now a small b growing trend to drop grades—in bo senses. One out of four large-sized scho districts combines first, second and th grades into a single primary unit. Chi dren learn at their own fast or slow pace without competing to hurdle the artificial barrier of promotion, and the only mark they get is the deliberate ly vague judgment of "satisfactory" o "unsatisfactory."

Detroit public schools next term wil try a new kind of ungradedness. Kin dergarten and first grade will be com bined, and a bit later the second grad will be added to the mix. Most chi dren will remain in the big non-gra for three years before entering co ventional third grade, but the new fle ibility will allow some pupils to finish two years while requiring others to ta four.

High schools, while not tempted t eliminate grades as year levels, are u der pressure to eliminate grades marks. New York's influential and form-minded Public Education Assoc tion argues that in some cases ma spur bright, college-bound students take easy courses just to inflate th academic record.

Colleges are also getting leary grades-are-everything competition. T first major school to act is Californ Institute of Technology, which week eliminated freshman grades. C tech's ferociously smart freshmen still take exams and do graded hom work assignments, but at the end of t freshman year students will simply pa or fail. With grades "unattainable," Fa ulty Chairman Ernest H. Swift hope that freshmen "will find it easier to co centrate on the content of their cours This, in turn, may enable them to ma more sensible choices as to the invest ment of their time and energy."

Study in Depth

World Without Sun. Like a giant mollusk, the two-man diving saucer glides toward its parking garage on the floor of the Red Sea. Near by lies a five-room underwater house looking like a huge plumbing joint made of stubby cylinders. Here seven pioneer oceanauts lived and worked for a month during the summer of 1963. Life in and around their pelagic tank town is the subject of this eerie, colorful documentary by Jacques-Yves Cousteau, a successor to his awesome epic, *The Silent World.*

Oddly enough, the film is most absorbing when Cousteau lets his camera or his commentary dwell on the extraordinary detail of his men's day-to-day existence. In the heavy air, laden with double the normal amount of oxygen, cuts and abrasions heal overnight. Beards almost stop growing. In the 86-ft. Deep Cabin, the male larynx, in reaction to helium, produces shrill chipmunk sounds. The men listen to music, keep house, play chess, pamper a parrot, and begin to feel strangely detached from events in the surface world. Jewel-bright sea creatures hover outside the glass windows, coolly observing behavior in the manfish bowl. When divers venture into the abysmal blue depths to explore, they come upon sharks, barracuda, and marine life hitherto unheard of—all recorded in skillful underwater photography that magnifies even minute plankton into glittering monstrosities.

"Alone in the sea at night, I am always afraid," one veteran diver confesses. The audience shares his fear and fascination, and occasionally even his lethargy becomes swimmingly real. It is hypnotic and hilarious to watch a school of scallops, threatened by a starfish, go snapping across the ocean bottom like a herd of stampeding dentures. The film has its faults: it grows repetitious and tries to provide variety with music full of scubadoo cuteness. Thus, by the time the saucer plunges down for a climactic survey of the queer fish and mating crabs found at the 1,000-ft. ready to surrender all the human marine miracles a landlubber can tolerate at one sitting.

OCEANAUTS' HOME IN "WORLD"
Town for the menfish.

Bacchanalian Bash

Zorba the Greek. A wild wind whirls through an open door. A wild old man strides into a dingy waiting room. His face is like a side of cheese the maggots have been at, but his eyes are bright and piercing. "Hollow cheeks, strong jaw, jutting cheekbones, a large voracious mouth, a living heart, a great brute soul not yet severed from Mother Earth"—this is Zorba the Greek. He strides up to a young man he has never seen before and looks deep into his eyes. "I like you," he announces fiercely. "Take me with you."

"Why?" the young man answers with a gasp. He is a timid essayist who takes refuge from life in literature.

"Why!" the old man roars with exasperation. "Will no man ever do anything without a reason? For the hell of it, that's why!"

The hell, the horror, the wonder, the sheer animal delight of it have drawn thousands of readers to a novel called *Zorba the Greek,* a mad magnificat to man composed by the late Nikos Kazantzakis. This translation of the book into an English-language film might easily have changed the author's hearty wine of life into cinematic sugar water. Instead, Director Michael Cacoyannis (*Electra*) has served it up in a grand uproarious Bacchanalian bash.

For the hell of it, as the film begins, the young man (Alan Bates) turns suddenly to the old man (Anthony Quinn) and says yes. "I have a lignite mine in Crete. We can work it together. May God be with us." Zorba lifts his glass. "God," he bellows sturdily, "and the Devil!"

Speak of the Devil and he appears. First night in Crete, the old man turns into an old goat and goes snorting after a dilapidated soubrette of 60 (Lila Kedrova), who followed the British fleet to Crete in her flaming youth and made enough money to retire by entertaining admirals on the bridge. Next day the old man urges his young friend to hold similar converse with the village widow (Irene Papas). The young man is afraid to try. "It would only make trouble," he murmurs. "Trouble!" the old man hoots at him. "Life is trouble. Only dead is not."

KEDROVA & QUINN IN "ZORBA"
Ode to an old goat.

The young man doesn't have to look far. The morning after his first night with the widow, she is grotesquely murdered by the vengeful villagers. Some days later, as Zorba's silly old slut lies dying, bestial peasants burst into her house and strip it while she lies weakly watching, strip it to the walls and leave her there alone with nothing but a bed to die on. And at the climax of the film the mine and all the money the young man has sunk in it go smash in one catastrophic afternoon.

The young man is struck numb with horror; but the old man, though his heart cracks and his eyes weep blood, rises up stronger than ever from every disaster to dance the delirious unremitting dance of life. "Zorba!" the young man cries, "teach me to dance!" The old man rises up, his eyes alight. "You lack madness, my friend," Zorba says softly. "A man must be a little mad to cut the rope—and be free!" A little mad, the young man begins to dance.

Kazantzakis is the Dostoevsky of the Mediterranean, and *Zorba the Greek* is his most popular work. Director Cacoyannis treats it with respect but not with awe. The big moments of the book are all in the film, but the fictional furbelows are trimmed, and some dazzling cinematic doodads added. The camera sees much that Kazantzakis didn't, and the movie is often funnier than the book—Kedrova's minx emeritus, she of the floor-length eyelashes, frequent chins and raucous reminiscences is, for instance, a major comic creation. Zorba, of course, is the heart and soul of the show, and Quinn plays him to hellangone. In his finest frames, at the dominant moments of the drama, he is the fire of life itself, a piece of the sun in the shape of a man.

The Visionary Musician

LANDOWSKA ON MUSIC by Wanda Landowska, edited and translated by Denise Restout and Robert Hawkins. 434 pages. Stein & Day. $7.95.

Few who heard her could forget her. Wanda Landowska saw to that. A tiny black-clad priestess, palms pressed together in prayer, she would float in hushed silence to her altar, the harpsichord. A Romantic who played pre-Romantic music, she got shadings and majestic effects seemingly impossible on her instrument, and no one could equal her in bringing to independent life Bach's intertwined melodies. She took great liberties in interpretation, serenely confident of the backing of the dead composer. "You continue to play Bach your way," she told one musician. "I shall continue to play Bach his way. What I do is comparable to the improvisations of a good jazz band," she explained. "Did Bach, Couperin and Scarlatti play the harpsichord to preserve historical truth or because on this instrument they were able to express passion, joy or despair?"

PHILIPPE HALSMAN

LANDOWSKA
Surprise and suspense.

Corsets & Cats. Landowska died five years ago, aged 80, leaving behind a legacy of great recordings and the articles, scoldings, commentaries and *pensées* that are now gathered together in this book.

She writes about composers and their works as familiarly as she would about people in her family, which of course they were. Scarlatti, she says, "is the only composer who reminds me of the playfulness of a cat, and he does not suffer from this comparison. We all have seen a kitten play with a twig. It is impossible to describe its grace, charm, vivacity and inventiveness." Couperin's work, she observed, has "an immutable and restricted frame. He moves in it with ease, as did the actresses and dancers of the past, even though they were tightly laced in their corsets." As for Saint-Saëns, she noted that he was considered a master of form. "Yes, the form is there, bright, like latticework. But there is nothing in it!"

Alone with Her Rubato. Landowska was constantly musing over the role of the interpreter in music. "One must have visions. The richer the imagination of a musician, the more possibilities of sonority he hears." She insisted that "the idea of objectivity is Utopian. Can the music of any composer maintain its integrity after passing through the living complex—sanguine or phlegmatic—of this or that interpreter?" But at the same time an artist must not go out of bounds, warns Landowska, reminded of the time Gounod had to chide his wife at a funeral: "Be careful; do not cry louder than the widow!"

It was Landowska alone who decided how loud to cry. When a critic complained that he could not follow her in a certain rubato, she thought, "I am perfectly happy, alone with my rubato. Why should you follow me?" Nor did she welcome ghostly interference, however distinguished the ghost might be. She announced that "if Rameau himself would rise from his grave to demand of me some changes in my interpretation of his *Dauphine*, I would answer, 'You gave birth to it; it is beautiful. But now leave me alone with it. You have nothing more to say; go away!' "

In 1950 a former pupil reproached Landowska because she had noticeably changed her interpretations over a period of ten years. Why not? asked Landowska. "What would you say of a scientist or of a painter who, like stagnant water, would stop his experimentation and remain still?" She insisted on surprise and suspense in her performances. The "tragedy" of recordings, she remarked, is that they catch "only one moment, one aspect of an interpretation when there are a thousand and one others, always different."

Arabesques & Soliloquies. Landowska, like a little Polish mother, never stopped giving advice. "There is a certain common way of playing trills which reminds me of an electric doorbell," she warned. An ornament should "fill space with arabesques." How to begin to play a piece? "One has to concentrate and be entirely ready so that when the first note is struck, it comes as a sort of continuation of a soliloquy already begun. Similarly the last note is never the last. It is rather a point of departure for something to come." She was, in a way, describing her own lifework—the continuation of a centuries-old musical soliloquy, and, because of her eloquence, intelligence and devotion, a strong new point of departure.

The Prodigal Painter

JOHN JAMES AUDUBON by Alice Ford. 488 pages. University of Oklahoma. $7.95.

The Frenchman who became the world's most celebrated delineator of birds was himself a bird of paradox. His name, until he anglicized it, was Jean Jacques Audubon. His adopted home was the U.S. And his natural habitat, proclaimed by assuming an additional name, was "La Forest." But a major part of his time was spent in courtrooms eluding creditors, in Europe's royal courts soliciting patronage, and in scientific academies quarreling with competitors.

Alternately driven and dreaming, irresponsible and ingratiating, mean-spirited and maudlin, Audubon was inevitably misunderstood by contemporaries and maintains Biographer Alice Ford, "errantly idealized" by her dozen-odd predecessors. As an antidote, Author Ford has presented, in rather stilted fashion, back-to-back facts that usefully clear away the web of fabrication that the Audubon family did their best to spin.

COURTESY GWENNE STOTT

AUDUBON (BY HIS SON)
Wanderlust and salesmanship.

In-Port Wife. His granddaughters, romanticizing Audubon's own embellished accounts, implied that he might have been France's "lost Dauphin"—the son of Louis XVI and Marie Antoinette, whom she tried to smuggle out of France just before she died on the guillotine. John Audubon was, in fact, the bastard son of a Breton-born chambermaid, and was sired not at Versailles but in Haiti in 1785. The father was Jean Audubon, a captain of French merchantmen and men-of-war. Though he commanded a corvette in Count de Grasse's fleet at the surrender of Yorktown in 1781, Jean Audubon was never, for all his son's boasting, of flag rank or a staff officer in the so-called "Battle of Valley Forge." He was also, despite

d speculations in the Caribbean and nsylvania, ever at sea financially. hen a native insurrection threatened Haitian holdings in 1790, he brought ung John and another love-child (by quadroon) back to his complaisant -port wife in Nantes. She happily dopted both of them.

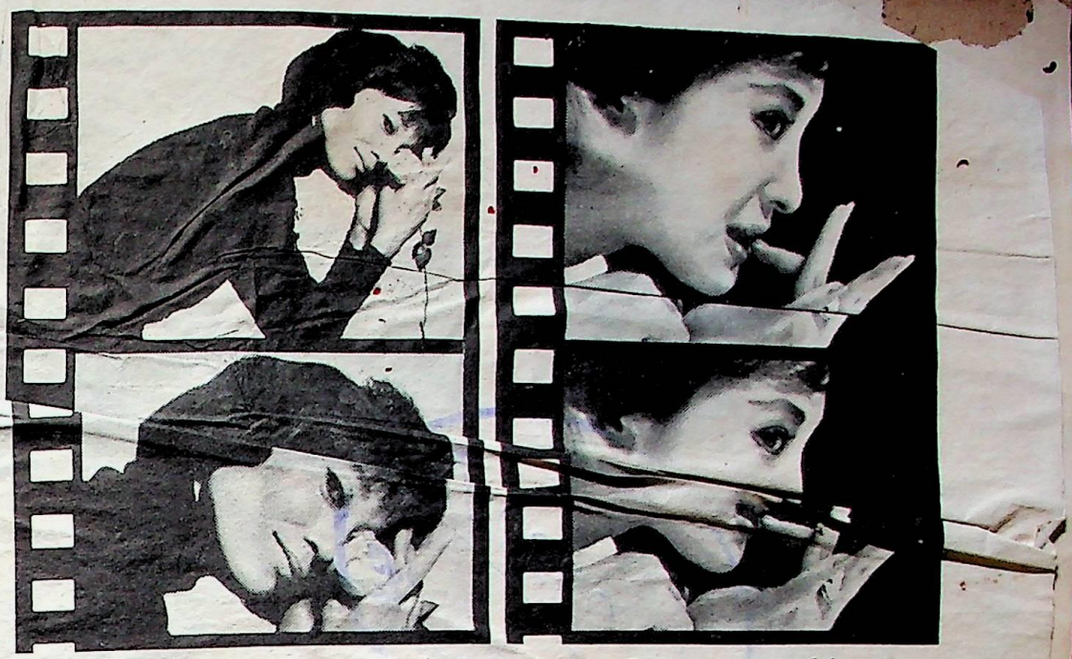
John ... out of maritime training school, and was bundled off to Pennsylia to try his hand at business. He roved even more inept than his father. s first investment was in a frontier ore in Louisville. On a typical day in firm's short, unhappy life, Audun's horse strayed away with a saddle- full of cash while the proprietor lked an unfamiliar warbler into the nebrake. Subsequent business ventures other states and territories also foun- red, leaving Audubon briefly in debt- r's prison.

Peddler in Coonskins. The failures convinced Audubon, at 35, that his real vocation was as a painter and naturalist. He started on the 435 drawings that were to become his masterwork, *The Birds of America*. It was 18 years in the works, and in the meantime he supported himself as a sign painter, debutante's tutor and dancing master. To help feed the two children, his wife Lucy taught school.

When he had completed most of his field work, he sailed to Europe, beginning a frustrating decade of exhibiting his works, painting potboilers for pin money, and overseeing the London engravers who were producing his folio. Most important, of course, was the peddling of it, and at that, Audubon proved to be about the most charming salesman since Benjamin Franklin. His "simplicity" drew the praise of both Sir Walter Scott and Actress Fanny Kemble, though the guard at the Louvre barred the door when Audubon tried to enter in coonskin cap. Baron de Rothschild "hitched his trousers" at the idea of paying $1,000 for the four volumes,* but came around after further cogitation. France's future King Louis Philippe signed up, saying, "This surpasses all I have seen." So did King George IV.

As every ornithologist knows, Audubon was a far better painter than a naturalist. Honors were showered upon him by learned societies in nearly every civilized nation. To his credit, Audubon was not content to rest on his laurels. At 58, he set off on a rigorous sketching foray to the Yellowstone River. By then toothless and unable to eat the buffalo his companions shot, he somehow fattened (by 24 lbs.) on the trip. But once back home in Manhattan, Audubon wasted into senility and then death. His two artist sons, who collaborated on his last work, *Quadrupeds of North America*, squandered their proceeds like the Audubons they were. At 70, Lucy Audubon had no choice but to go back to schoolteaching.

*The 100 surviving sets would now fetch $80,000 apiece.



Zoom from wide angle to tight telephoto. Focus as close as 5 feet.

stop taking amateur movies

[*and start filming professionally*]

If you are really serious about your home movies, you want every scene with perfect light values, colors that come alive whether you shoot indoors or outdoors — movies that are exciting to look at *more* than once. Here is how the new Minolta Zoom 8 makes a technician out of you:

A powerful CdS light meter is built in. It's highly sensitive, measures candlelight to bright outdoors, and is every bit as accurate as the hand-held meters the professionals use. The meter automatically calculates the available light and sets correct exposure for you. You sight and shoot. That's all.

Zoom from wide angle to tight telephoto, pan from dark shadows to bright light. Use slow motion, fast motion or conventional speeds. Focus as close as 5 feet. Zoom 8 acts like a computer automatically adjusting to any situation.

Here is a perfectly balanced 8mm movie camera — light, compact and truly automatic in every respect — equipped with the world-famous F1.8/10-30mm Rokkor lens.

Compare Zoom 8 with any other 8mm movie camera made. Then compare the price.

RUSSIANS ATTACKING AT STALINGRAD
A frozen German was a sled.

The Eastern Front

RUSSIA AT WAR: 1941-1945 *by Alexander Werth.* 1,100 pages. *Dutton.* $10.

Though it ended months before the Atomic Age began, the Russo-German portion of World War II was in almost every way a conflict on a thermonuclear scale. Upwards of 20 million Russian civilians and soldiers lost their lives. Over 3,000,000 German soldiers were killed, wounded, or missing. The U.S.S.R. lost over 60% of its coal production; total industrial output declined by one-half. Whole cities were heroes: the Battle of Stalingrad lasted seven months with as many as 40,000 people killed in one day, while the siege of Leningrad went on for 2½ years and killed nearly 1,000,000.

In the two decades since the war ended, there has not been in English a complete history, in both military and human terms, of Russia's remarkable role. Author Alexander Werth is uniquely qualified to make the attempt. He is an English journalist who was born and raised in St. Petersburg and is perfectly bilingual. He spent all but a few months of the war actually in Russia. As a sympathetic left-wing non-Communist, he was given unusual freedom of travel. He was one of the only two Western journalists allowed into Leningrad during the siege. He kept a day-by-day diary, filed innumerable dispatches to British and U.S. papers, and turned his Russian war experiences into several personal-history books in the '40s. Now he has put it all into one book, drawing also on the voluminous official histories and the published memoirs of commanding officers and common soldiers on both sides of the Eastern Front.

Stuffed with Shredded Paper. Many of the details are unfamiliar and fascinating. Strategically, for example, Werth rates the Battle of Kursk (north of Kharkov), in July 1943, as "Hitler's last chance to turn the tide," and thus as important as Stalingrad the previous year. Werth is at his best in eyewitness accounts of Leningrad or of his tour (in −40° C. weather) through the Stalingrad area just after the mop-up there. The item about Russian children using the stiffly frozen body of a German soldier as a sled makes a one-sentence summary of the horror of war.

Yet, for all its excellences, Werth's book is as irritating as the kind of Christmas present that has dozens of valuable tiny pieces to be groped for in a large box stuffed with shredded paper and excelsior. The style shifts from a somewhat wide-eyed journalese to a plodding heroic prose. The latter parts, it turns out, are lifted in great chunks from his earlier books of reporting. He quotes endlessly from Pravda and Red Star editorials; he stuffs out his pages with Supreme Soviet speeches complete with the ritual enthusiasm of "(*prolonged, storm of applause*)"; he is mercilessly repetitious.

Questions & Exonerations. Worse are the omissions and persistent seeming biases. In his account of Russian unpreparedness for war, Werth does not mention that the Soviets received a clear and correct warning of Hitler's timetable from their trusted agent in Japan, the German journalist Richard Sorge. He gives no more than a sentence to the three-to-four-week delay of the attack on Russia that was caused by Yugoslav and Greek resistance in the spring of 1941, although that delay may well have been the most important single factor in the German failure (by 40 miles and some bad weather) to capture Moscow before winter.

Too often, Werth converts his justifiably high regard for the heroic Russian people into excuse-making for the annies of the Soviet state, such as the confiscation of all private radio receivers or the summary street-corner execution of suspected civilian traitors. His most egregious example is his treatment of the controversy over the tragic Warsaw uprising in the summer of 1944. The consensus of Western historians holds that Stalin apparently held back the capture of that city until the anti-Communist Polish underground was destroyed by the Germans. After a scrupulously fair sawing summary of the argument, Werth, without substantial new evidence, weakly chooses to agree for the most part with the official Soviet self-exoneration.

Taping

NOW, J-M PRESSURE-SENSITIVE AND THERMOSETTING TAPES HELP SOLVE MANY ELECTRICAL AND INDUSTRIAL PROBLEMS

To provide you with one source for all your taping needs, Johns-Manville International now offers every major type of electrical and industrial tape. Be it for splicing, sealing, pipe wrapping, strapping packages or any one of a thousand other uses, there's a J-M Dutch Brand® friction, rubber, paper or plastic tape to meet the individual need. Here, as with all J-M products, you can count on the right materials for the job, as well as on the help of J-M Resident Engineers.

Your Johns-Manville Distributor invites queries on tapes as well as mineral fillers, insulations, friction materials, packings, building materials and filter aids. Contact the J-M Distributor in your country or write: Johns-Manville International Corporation, Box 280, New York, N. Y. 10016, U.S.A. Locations: Beirut • Buenos Aires • Goteborg • Hong Kong • Lagos • Lima • London • Madrid • Mexico City • Milan • Paris • San Juan • São Paulo • Wiesbaden.
